KEY TO PRONUNCIATION

For a full explanation of the various sounds indicated, see the KEY TO PRONUNCIATION in Vol. I.

ā	as in ale, fate.	ch	as in chair, cheese
ā	" " senate, chaotic.	ɔ	" " Spanish Almodovar, pulgada, where it is nearly like <i>th</i> in English then.
ā	" " glare, care, and as <i>e</i> in there	g	" " go, get.
ā	" " am, at.	g	" " German Landtag = <i>ch</i> in Ger ach, etc.
ā	" " arm, father.	h	" <i>j</i> in Spanish Jijona, <i>g</i> in Spanish gila; like English <i>h</i> in hue, but stronger.
ā	" " ant, and final <i>a</i> in America, armada, etc.	hw	" <i>wh</i> in which.
a	" " final, regal, pleasant	k	" <i>ch</i> in German ich, Albrecht = <i>g</i> in German Arensburg, Mecklenburg, etc.
a	" " all, fall.	n	" in sinker, longer.
ē	" " eve.	ng	" " sing, long.
ē	" " elate, evade.	n	" " French bon, Bourbon, and <i>m</i> in the French Étampes; here it indicates nasalizing of the preceding vowel.
ē	" " end, pet	sh	" " shine, shut
ē	" " fern, her, and as <i>z</i> in sir, etc	th	" " thrust, thin.
e	" " agency, judgment	th	" " then, this
i	" " ice, quiet	zh	" <i>z</i> in azure, and <i>s</i> in pleasure.
i	" " quiescent		
i	" " ill, fit		
ō	" " old, sober.		
ō	" " obey, sobriety.		
ō	" " orb, nor.		
ō	" " odd, forest, not		
o	" " atom, carol		
oi	" " oil, boil		
ōō	" " food, fool, and as <i>u</i> in rude, rule.		
ou	" " house, mouse		
ū	" " use, mule.		
ū	" " unite		
ū	" " cut, but.		
u	" " full, put, or as <i>oo</i> in foot, book		
ū	" " urn, burn.		
y	" " yet, yield		
ɐ	" " Spanish Habana, Córdoba, where it is like English <i>v</i> but made with the lips alone.		

An apostrophe ['] is sometimes used as in tā'b'l (table), kāz'm (chasm), to indicate the elision of a vowel or its reduction to a mere murmur

For foreign sounds, the nearest English equivalent is generally used. In any case where a special symbol, as *g*, *h*, *k*, *n*, is used, those unfamiliar with the foreign sound indicated may substitute the English sound ordinarily indicated by the letter. For a full description of all such sounds, see the article on PRONUNCIATION.

THE NEW INTERNATIONAL ENCYCLOPÆDIA

JOVANOVIĆ, yô-vâ'nô-vîch, JOVAN (1833-1904). A leading Servian poet and journalist, well known by his pseudonym, Zmaj. He was born at Novi Sad (Neusatz), where he became notary (1861), after studying law and jurisprudence at Pest, Prague, and Vienna. In 1861 and 1862 he was editor of *Javor* (The Acorn); then took up the study of medicine at Pest, and, after spending six years there, practiced medicine in several cities and especially in Belgrade, from which he moved to Vienna. His poetical work, both lyric and humorous, appeared in many periodicals. In 1864 he founded the humorous *Zmaj* (The Dragon), from which he took his pen name. In 1866 his play *Saran* appeared. Six years later, after the death of his wife and daughter, he published *Djulei uvcoci* (Faded Roses). He edited *Ilustrovaná ratna kronika* (1877-78) during the war between Russia and Turkey, founded the humorous periodical *Starmali* (1878) and the juvenile *Neven* (1880). He was active as translator from Petöfi, Bodenstedt, and other poets. Each of the two editions of selections from his poems (1880, 1887) contains a biographical sketch.

JOVANOVIĆ, STEPHAN, BARON VON (1828-85). An Austrian general, born at Pazariste. He entered the army when he was 17, took part in the Italian campaign of 1848, and in 1852 was transferred to the military diplomatic corps and was sent to Turkey. He served as consul general in Bosnia (1861-65) and after his return to the army (1865) fought in Italy (1866), and as brigade commander in the Dalmatian uprising of 1869, and occupied various positions until 1877. In 1878 he was intrusted with the task of occupying Herzegovina, accomplished it in a few days, and became military governor of the dependency. He put down the revolt in Krivosije in 1882 and was soon afterward transferred to Dalmatia as civil governor.

JOVANOVIĆ, VLADIMIR (1833-). A Servian statesman and author. He was born at Shabatz, and studied at Vienna and Berlin. His radical politics forced him from his post in the Department of Finance and from a journalistic position at Belgrade. He went to Geneva for two years, but became a leader of the Young Servian National Union in 1866 and three years afterward was tried for complicity in the murder of Prince Michael, but was acquitted. In 1872 he became a member of the Skupshtina and

in 1876 was appointed to the Ministry of Finance. He resigned in 1879, but was reappointed in the following year. From 1889 to 1903 he was a member of the Council of State. Jovanović translated into Servian many works on economics, especially Roacher and Mill, and wrote *Les Serbes et la mission de la Serbie dans l'Europe d'Orient* (1870) and *Emancipation and Unity of the Serbian Nation* (1871).

JOVE. See JUPITER.

JOVEITE. See EXPLOSIVES.

JOVELLANOS, hō'vâ-lyâ'nôs, GASPAR MELCHIOR DE (1744-1811). A Spanish statesman and author. He was born at Gijón in Asturias, of an ancient Spanish family, and studied at the universities of Oviedo, Avila, and Alcalá. In 1767 he was made judge of the criminal court of Seville, in 1778 Chief Justice of the King's Court at Madrid, and in 1780 member of the Council of the Military Orders. Here he made the acquaintance of Campomanes (q.v.) and other prominent literati of Spain, became a member of several scientific societies, and wrote his celebrated *Informe sobre un proyecto de ley agraria* (1787). His connection with the adventurer Cabarrus brought about his banishment to Gijón (1790), where he labored for seven years to promote the material, educational, and social welfare of his native province. He was restored to favor for a short time and made Minister of Justice, but, because of his enmity to the favorite Godoy, was presently banished once more to Gijón and in 1801 cast into prison in Majorca, where he remained for seven years. On the French invasion he was released (1808), and when Joseph Bonaparte became King he was offered the portfolio of the Interior. Declining the office, he joined the Patriotic party, was chosen a member of the Central Junta, and helped to reorganize the Cortes. Stung by the violent opposition and hatred he met, Jovellanos retired to Gijón, whence, on the occupation of the town by the French, he escaped to Vega, where he died. He was the author of numerous compositions in prose and verse. Of the latter the most celebrated are the tragedy *El Pelayo* and the comedy of *El delincuente honrado*. Jovellanos was a man of fine spiritual feeling and versatile genius. His fervent desire to restore his country to its former rank in politics and literature inspired all his actions and gained him the love of the best elements in Spain. His *Memorias políticas* (1801)

were suppressed in Spain, but appeared in a French translation in 1825. Consult his *Obras completas* (7 vols., Madrid, 1831-32, and Barcelona, 1839); "La satire de Jovellanos contre la mauvaise éducation de la noblesse," edited by A. Morel-Patro, in *Bibliothèque des universités du midi*, part iii (Bordeaux, 1899); and James Fitzmaurice-Kelly, *Bibliographie de la littérature espagnole* (Paris, 1913).

JOVELLAR Y SOLER, hò-ve-lyär' ē sò-lër', JOAQUÍN (1819-92). A Spanish general and statesman. Born at Palma de Majorca (1819), he finished his military studies (1836), passed through various grades of service in Cuba (1842-49) and in Spain (1849-53), and then accompanied Marshall O'Donnell to Morocco, where, after being wounded in the battle of Wad-el-Ras, he was decorated upon the battlefield and advanced to a colonelcy (1860). He was promoted brigadier general (1863), served as Assistant Secretary for War (1864), was severely wounded while leading his troops against the insurgents in the street fighting in Madrid (1866), and left the country upon the proclamation of the Republic. Returning later in the year, he was sent by Castelar as Governor General to Cuba. In the first cabinet of Alfonso XII he was War Minister, and later he was again Governor General of Cuba, remaining there until the Peace of Zanjón closed the 10 years' insurrection (June 18, 1878). Subsequently he became captain general of the army, President of the Council of Ministers, life senator, and captain general of the Philippines. Decorated with many orders, he was an Officer of the Legion of Honor, and held the following grand crosses: San Fernando, San Hermenegildo, Isabel la Católica, Military Merit (both the red and the white), and the grand cordon of San Benito de Avis in Portugal.

JOVIANUS, jō'vī-ā'nūs, FLAVIUS (CLAUDIUS. Roman Emperor (363-364 A.D.), the son of Varronianus, a noted general of the period. He was captain of the life guards (*comes ordinis domesticorum*) of the Emperor Julian, attending him in his disastrous campaign against the Persians. Julian having fallen in battle, Jovianus was proclaimed his successor by the army. His first task was to save his army, harassed by the Persians and suffering greatly for want of provisions. He reached the Tigris in safety, but found it impossible to cross, exposed as he was to attack from the Persian force. The Persian King Sapor proposed as terms of peace that the Romans should surrender their conquests west of the Tigris, together with the fortress of Nisibis and many other strongholds in Mesopotamia, and should bind themselves not to aid the Armenians, with whom the Persians were then at war. His troops being in great distress, Jovianus submitted and marched westward. He surrendered Nisibis to the Persians; its inhabitants removed to Amida, which became the chief Roman town in Mesopotamia. On his arrival at Antioch he proclaimed himself a Christian and rescinded the edicts of Julian against the Christians, granting protection to such as remained pagans. He upheld the Nicene or orthodox creed, against the Arians, and restored the bishops who had suffered at their hands. He reinstated Athanasius in the see of Alexandria, from which he had been driven by the Arians. Acknowledged by the various provinces, he set out from Antioch for Constantinople, stopping at Tarsus to pay

funeral honors to Julian's remains. Continuing his journey in unusually severe cold, of which several of his attendants died, he reached Antioch, where he assumed consular dignity, and a few days after came to Dadastana in Galatia. The next morning (Feb. 17, 364 A.D.) he was found dead in his bed. Some attribute his death to suffocation from the fumes of a charcoal fire in his room, others to the dagger or poison of an assassin. He was 33 years of age and had reigned seven months. Valentinian I was proclaimed Emperor by the army. Consult: Schiller, *Geschichte der römischen Kaiserzeit*, vol. ii (Gotha, 1887); Seeck, *Geschichte des Untergangs der antiken Welt*, vol. iv (Berlin, 1911); *The Cambridge Medieval History*, vol. 1 (New York, 1911).

JOVILÆ. See JOVILÆ.

JOVINIAN. An Italian heretic of the fourth century. He was an opponent of monachism, of celibacy, and of the maceration of the body by fasting, but himself remained unmarried. He held that Mary, after the birth of Jesus, ceased to be a virgin, that the blessedness of heaven does not depend on the merit of good works, that a Christian cannot sin willfully, but will resist and overcome the devil. He advocated his opinions first at Milan; but, Ambrose forbidding their propagation, he went to Rome about 388. He and those who followed him were condemned and excommunicated in councils held at Rome and at Milan in 390. Pope Siricius confirmed the sentence, and the Emperor Honorius enacted laws against the Jovinians. Their leader was banished to the lonely island of Boa, off the coast of Illyria, where he died before 406. But his opinions spread, and it was said that several nuns in Rome married. Augustine came forth in defense of the orthodox principles and practices of the ascetics, endeavoring by argument to reconcile them with reason and Scripture, and Jerome followed in the same defense. Underneath his heresy there seems to have been a healthy protest against asceticism, but all our knowledge of him comes from Jerome's violent "Adversus Jovinianum," *Nicene and Post-Nicene Fathers*, vol. vi (2d series, New York, 1893). Consult Adolf Harnack, *History of Dogma* (Boston, 1894-1900).

JOVIUS, PAULUS. An Italian humanist and historian. See GIOVIO, PAOLO.

JOWETT, jou'ēt, BENJAMIN (1817-93). A distinguished English scholar and educator. He was born in London and educated at St. Paul's School and at Balliol College, Oxford, where he was elected to a fellowship before he took his degree in 1839, and to a tutorship in 1842, which he held until he became master in 1870. He was ordained deacon in 1842 and priest in 1845. His religious views, originally evangelical, were disturbed by the excitements of the Oxford movement and especially by daily intercourse with W. G. Ward, also a fellow of Balliol. He was carried in the direction of Roman Catholicism for a time, but a reaction set in which took him far into liberal theology. The publication in 1855 of his edition of the Epistles to the Thessalonians, Galatians, and Romans, with the accompanying essays, raised a storm of protest; and when in the same year he was appointed to the regius professorship of Greek, his opponents made a strong manifestation against him and succeeded for 10 years in preventing him from receiving the full income of the office. His essay on the "Interpretation

of Scripture," published in *Essays and Reviews* (1860), committed him still more definitely to the Broad Church movement. His most important and formative work, however, was done as master of Balliol from 1870 until his death, and as vice chancellor of the university from 1882 to 1886; an extraordinary personal influence over his pupils, many of whom occupied later the foremost places in English public life, and a broad conception of the functions of the college and the university enabled him to do much towards shaping the life and thought of his generation. He never aspired to be the leader of a school either in religion or in philosophy, but in many ways, as when he launched T. H. Green upon the study of Hegel, he affected the movements of others. His translations of Plato, Thucydides, and of the *Politics* of Aristotle, especially the rendering of Plato, are recognized masterpieces of English. The admirably written *Introductions* in the translation of Plato did much to popularize the study of Plato in England and elsewhere, the notes and essays in the edition of the *Republic* of Plato have scholarly value. On Jowett's classical scholarship, consult Sandys, *A History of Classical Scholarship*, vol. iii (Cambridge, 1908). Two volumes of sermons appeared in 1899 and 1901 and of theological essays in 1906 and 1907. Consult: Ward, W. G. *Ward and the Oxford Movement* (London, 1889), Tollemache, *Benjamin Jowett, Master of Balliol* (ib., 1895), his *Life and Letters*, by Abbott and Campbell (2 vols, ib., 1897), and *Letters* (ib., 1899), essays in A. C. Swinburne, *Studies in Prose and Poetry* (ib., 1894), and Leslie Stephen, *Studies of a Biographer*, vol. ii (ib., 1898), a biography by Evelyn Abbott, in *Dictionary of National Biography*, supp. vol. iii (London, 1901).

JOWETT, JOHN HENRY (1864-). A British-American clergyman. Born at Halifax, England, he was educated at the University of Edinburgh (M.A., 1887) and at Oxford (1887-90), and was minister of St. James's Congregational Church, Newcastle-on-Tyne (1890-95), and afterward, until 1911, of the Carr's Lane Church, Birmingham. In 1910 he served as president of the Free Church Council. He came to the United States in 1911 to be pastor of the Fifth Avenue Presbyterian Church, New York, where, widely noted for his preaching, he had one of the largest congregations in the country. The degree of D.D. was conferred upon him by Edinburgh in 1910 and by New York University in 1911. His writings include: *From Strength to Strength* (1898, new ed., 1909); *Meditations for Quiet Moments* (1899; new ed., 1906); *Apostolic Optimism, and Other Sermons* (1901; 7th ed., 1909); *Brooks by the Traveler's Way* (1902); *Thirsting for the Springs* (1902); *The Passion for Souls* (1905); *Epistles of St. Peter* (1905); *The High Calling* (1909); *The Transfigured Church* (1910); *The Preacher: His Life and Work* (Yale Lectures, 1912); *Things that Matter Most* (1913); *My Daily Meditation* (1914).

JOWF, jowf, or **DJOWF**. An oasis in the northern part of Arabia, between the Shammar and the Syrian deserts (Map: Asia, F 5 and 6). It has a fertile and well-watered soil, producing dates and other southern fruits. The population is estimated at 40,000. The chief settlement, El-Djof or Djowf-Amir, contains about 500 dwellings and is surrounded by a stone wall. East of El-Djof lies Sekakah, with about

600 dwellings and fine gardens. Jowf is also the name of a district in southern Arabia to the east of Yemen.

JOY, CHARLES ARAD (1823-91). An American chemist, born in Ludlowville, N. Y., and educated at Union College and at the law department of Harvard College. He studied at the universities of Berlin and Göttingen and in 1852 received from the latter the degree of Ph.D. After further study in Paris he returned to America and occupied the chair of chemistry at Union College until 1857, when he was called to a similar position at Columbia, where he remained for 20 years. He was a member of many scientific societies, was in 1866 made president of the Lyceum of Natural History (which developed into the New York Academy of Sciences), contributed to many periodicals, and was one of the editors of the *Scientific American* and the *Journal of Applied Chemistry*.

JOY, THOMAS (1610-78). An American colonist. He was born in Norfolk County, England, came to America in 1635, and settled in Boston, where for many years he was an architect and builder. He took part in the "Child Memorial" agitation of 1646 against the civil and ecclesiastical system of Massachusetts, and after suffering fines and imprisonment, along with his associates, he lived until 1657 at Hingham, after which he again lived in Boston. In 1657, also, he built the town house of Boston, the first important public edifice in New England.

JOYCE, ISAAC WILSON (1836-1905). An American Methodist Episcopal bishop. He was born in Coleraine Township, Ohio, and was educated at Hartsville College. He joined the Northwest Indiana conference of his church in 1859, subsequently being transferred to the Cincinnati conference. He was elected bishop in 1888. In 1892 he had episcopal supervision of the work in Europe, in 1896-97, with residence in China, he supervised all the mission work of China, Japan, and Korea, and in 1903 and 1904 he made episcopal tours of South America. He was president of the Epworth League of the entire church from 1900 to 1904. Consult W. F. Sheridan, *Life of Isaac Wilson Joyce* (New York, 1907).

JOYCE, ROBERT DWYER (1836-83). An Irish-American poet and physician, born in Limerick County. He was educated there and in Dublin, where he went to practice, and where, while practicing, he also taught English literature. In 1866 he emigrated to Boston and published afterward *Legends of the Wars in Ireland* (1868), *Fireside Stories of Ireland* (1871), *Balads of Irish Chivalry* (1872; New York, 1908), *Bland* (1879); but his best poem is the epic *Deirdré*, issued in the "No Name Series" (1876).

JOYEUSE ENTRÉE, zhwa'yéz' än'trá' (Fr, Joyous Entry). An ancient provincial charter of privileges of Brabant, which every duke from the time of Wenceslas, in 1355, was obliged to ratify before his entrance into the capital. John III, Duke of Brabant, having lost his sons, wished to have his daughter and her husband, the Duke of Luxembourg, inherit all his property—Brabant, Antwerp, Limburg, etc. The nobles of Brabant finally agreed, but secured this charter, in 1353, in return, guaranteeing to them a voice in all important matters, freedom of commerce, and certain judicial rights. The abrogation of the Joyeuse Entrée by Joseph II (q.v.) in 1789 led to an uprising in the Austrian Netherlands. It was ratified for the last

time by Emperor Francis II in 1792. Consult Pouillet, *Origines, développements, et transformations des institutions dans les anciens Pays-Bas*, vol. ii (Louvain, 1892).

JOYNES, joinz, EDWARD SOUTHEY (1834-). An American educator. Born in Accomack Co., Va., he graduated M.A. from the University of Virginia in 1853. He became professor of languages at William and Mary College in 1858 and from 1866 to 1875 held a similar chair at Washington College (now Washington and Lee University). After three years at Vanderbilt University and five in the University of Tennessee, he became professor of French and German in the University of South Carolina, retiring as professor emeritus in 1908, after 26 years of service. He was editor of a series of modern language textbooks, of which the *Joynes-Meissner German Grammar* (1887) is best known.

JUAN, hwān, DON. See DON JUAN.

JUAN DE FUCA, STRAIT OF. A passage separating the State of Washington, in the United States, from Vancouver Island. It connects the Pacific Ocean with the Strait of Georgia on the north and Puget Sound on the south (Map: Washington, A 2). It is important as the water route from Vancouver and the Puget Sound cities to the Pacific Ocean. It extends eastward for about 50 miles, with an average width of about 10 miles, and thence east-northeastward for 30 miles, with an average width of over 18 miles, on the north with Georgia Strait through the channels of Washington Sound, and on the south through Admiralty Inlet with Puget Sound. The shores are heavily wooded and usually bold and rugged. The Strait contains several islands in its eastern part, one of which (San Juan) became the subject of a dispute between Great Britain and the United States, the question being whether it was to be regarded as an appendage of Washington Territory or of British Columbia. The question was submitted in 1872 to the Emperor of Germany as arbiter, and he decided that the line of boundary should be run through the Strait of Haro, west of San Juan, thus awarding that island to the United States. Juan de Fuca, a Greek mariner whose real name was Apostolos Valerianos, asserted that he had discovered this strait and navigated it for 20 days. His claim (which is related in *Purchas His Pilgrimages*) was false, but the name has persisted.

JUANES, VICENTE or JUAN DE. See MACIP, VICENTE JUAN.

JUAN FERNÁNDEZ, fēr-nān'dās (called also MĀS-Ā-TIERRA). A group of small islands in the Pacific belonging to the Province of Valparaíso, Chile (Map. World, Western Hemisphere, N 12). It consists of the larger islands of Juan Fernández, or Mās-ā-Tierra (36 square miles), about 360 miles west of the city of Valparaíso; Mās-ā-Fuera (33 square miles), about 96 miles west of Mās-ā-Tierra, and the rocky islet of Santa Clara, off the west end of Mās-ā-Tierra. The islands are of volcanic origin. The highest point in Mās-ā-Tierra is 11,411 ft. (the anvil), 3225 feet; a peak in Mās-ā-Fuera is said to be over 6000 feet high. The larger islands are fertile and well wooded and differ remarkably in their flora and fauna from the mainland. The flora is particularly notable for a very large number of different species. The climate, which is not unhealthful, is similar to

that of Valparaíso, but much more humid; crops of grain are easily raised, and excellent fruits are produced. The inhabitants, however, are not very prosperous, their number is less than 100, and they are chiefly engaged in cattle raising. The islands were discovered by Juan Fernández in 1571. During the sixteenth and seventeenth centuries the group was a resort for buccancers. In Mās-ā-Tierra Alexander Selkirk, a Scottish buccaneer, lived in solitude for four years (1704-08). His story is supposed to have suggested the *Robinson Crusoe* of Defoe. Mās-ā-Tierra was formerly used by the Chilean government as a penal station. A wireless-telegraphy station was erected here in 1914.

JUANG, jōo-ling', or PATUN'. A primitive people of Kolarian (q.v.) stock of the Cuttack country, dwelling about the mouth of the Mahanadi River in northern Orissa. They are considered by some authorities to be the most primitive tribe in Hindustan.

JUAN VERDE. See JOHNNY VERDE.

JUÁREZ. See CIUDAD JUÁREZ.

JUÁREZ, hwā'rēs, BENITO PABLO (1806-72). A President of the Republic of Mexico. He was born at Guelatao in the State of Oajaca, March 21, 1806, being the child of Indian parents, who died when he was four years old. His education was taken in hand by a charitable merchant of Oajaca, who made it possible for him to graduate at the seminary in that town, after which he studied law, and was admitted to the bar in 1834. He was appointed judge of the civil court in 1842, and secretary to the Provincial Governor in 1845. Meanwhile revolution and counter-revolution had succeeded one another in the little State of Oajaca, which in 1846 resumed its sovereignty and placed the executive authority in the hands of a triumvirate, which included Juárez. Shortly after the restoration of the federal constitution, in the same year, Juárez was elected to the Constituent Congress and in 1847 was chosen Governor of Oajaca. His administration was, in the true sense of the term, an era of reform. The finances were put upon a sound basis, necessary public works were carried out, and the economic condition of the state improved by the development of its mineral resources. When Juárez left office in 1852, Oajaca was probably the most prosperous state in Mexico. Upon Santa Anna's return to power (1853) Juárez was exiled in revenge for a refusal to lend himself to the dictator's purposes some years earlier. He spent the next two years in great poverty in New Orleans. The revolution against Santa Anna in 1855 made possible his return to Mexico. He joined the revolutionists under General Alvarez, who, upon becoming President, made Juárez Minister of Justice and Ecclesiastical Affairs. In this capacity he brought about the enactment of a law, known by his name, which suppressed the military and ecclesiastical tribunals and with them all privilege in army and Church. Upon the resignation of Alvarez, in December, 1855, Juárez retired from office, but was named by Comonfort, the successor of Alvarez, provisional Governor of Oajaca, being subsequently chosen to this position by an overwhelming majority. He resigned in 1857, to become Secretary of the Interior and Chief Justice—the latter office being by the terms of the constitution equivalent to the vice presidency of the nation.

On the overthrow of Comonfort, in January, 1858, by the party of reaction, Juárez succeeded

to the presidency and was recognized by all the Mexican states. The Conservatives, however, took the field, and Juárez was compelled to flee to Guanajuato and then to Guadalajara, finally establishing the seat of government at Vera Cruz, where he arrived May 4 by way of Acapulco, the Isthmus of Panama, Havana, and New Orleans. In virtue of his executive authority, he had set up a cabinet, and he proceeded to issue decrees embodying the reforms which had been instituted by Comonfort. His government was recognized by the United States. In the civil war which ensued Juárez's authority was for a time reduced to the city of Vera Cruz, but finally the Liberals gained the upper hand. Juárez's rival, General Miramón, was defeated at Calpulalpam, Dec. 22, 1860, and on Jan. 11, 1861, Juárez entered the city of Mexico. In March he was elected President for four years. Trouble, however, was at hand. The government was bankrupt. Even the confiscation of Church lands failed to remedy the situation, and the decree of July 17, 1861, suspending payments on the foreign debt for two years, led to the allied intervention of France, England, and Spain in December, 1861, and January, 1862. An agreement to protect the interests of foreign debtors led to the withdrawal of the English and Spanish troops; but France was aiming at nothing less than the establishment of a Mexican empire for the Austrian Archduke Maximilian (qv) in the interest of the Napoleonic dynasty, already seeking to strengthen its hold upon the French people by a brilliant foreign policy. Juárez obtained a loan from the United States, and fought the invaders with bravery and skill. On May 31, 1863, however, he fled from Mexico to San Luis Potosí before the victorious French. Step by step, in spite of a determined guerrilla warfare, he was forced to withdraw towards the north to Saltillo, to Monterey, to Chihuahua, and finally in August, 1865, to El Paso del Norte on the United States frontier. Maximilian had in the mean while proclaimed himself Emperor, but at this point the United States government, having established peace at home, found itself free to interfere in behalf of Juárez, whose claims had been from the beginning persistently recognized at Washington. Upon the representations of the United States the French troops were withdrawn (January–March, 1867), and the Republicans immediately succeeded in turning the course of events in their own favor. Maximilian was captured and shot (June 19, 1867), and two days afterward the national troops under Porfirio Díaz entered the capital. Elections were held in December, and Juárez once more became President of the Republic. His administration, however, was harassed by constant attempts at revolution. In 1871 he was reelected to the presidency, but the difficulties of the situation seemed rather to increase than to diminish. Díaz, who had been a candidate for the presidency in 1867, and again in 1871, raised the standard of revolt, and a formidable opposition rose up against Juárez. In the midst of these difficulties he died (July 18, 1872). His distinctive characteristics seem to have been a tremendous will power and the cold impassibility which marks his race in the presence of danger. The sincerity and utility of his reforms, both civil and judicial, are universally recognized. Consult an account of Juárez given in Bancroft, *History of Mexico*, vols. v and vi (San Francisco, 1889–90), also

an excellent biography by Burke, *A Life of Benito Juárez* (London, 1894), Francisco Bulneo, *Juárez y las revoluciones de Ayutla y de Reforma* (Mexico, 1905).

JUAREZ CELMAN, *hwá'ras sél-mán'*, MIGUEL (1844–). A president of the Argentine Republic, born at Córdoba, Argentine Republic. He studied at the university there, became Governor of Córdoba Province, and was elected a senator in the National Congress in 1884. He was a member of the Córdoba clique which played an important rôle in Argentine history and in 1886 was elected by this group to the presidency of the Republic for six years. During his administration speculation in railways and other properties and inflation of the currency terminated in the disastrous financial panic of 1890. Opposition to his administration was carried on by the Union Civic, which was formed for this purpose, and in 1890 a revolution broke out in Buenos Aires. After some desultory fighting, Juárez Celman was obliged to resign in favor of the vice president, Pellegrini.

JU'BA. A river in East Africa, about 1000 miles long, formed by the junction of three main head streams—the Ganana, the Web, and the Dawa—and flowing southeastward, constituting the boundary between Italian Somaliland and East Africa Protectorate (Map Africa, J 4). It enters the Indian Ocean at the town of Kisumu, close to the equator. There is a dangerous bar at its mouth. The stream is of uneven flow, but is navigable to 20 miles above Bardera, where the waters range from 4 to 12 feet deep. The country of the lower Juba is generally level and arid, but is irrigated in districts to yield rice, cotton, etc. Little was known of its head streams until the last decade of the nineteenth century. The Ganana is formed by the Ganale Gudda and the Ganale Guracha. The former rises at a high elevation in lat 7° 30' N. and long 39° E, in south Abyssinia. The Web has its source in the Worgoma Mountains.

JUBA, *ἵουβᾱ* (Lat., from Gk. *Ἰόβας, Iobas*). The name of two African kings whose history is associated with the contest between Cæsar and Pompey and the earlier years of Augustus' reign. 1. King of Numidia, who sided with the party of Pompey and in 49 B.C. cut to pieces a Roman army under Curio, a friend of Cæsar. He then aided the Pompeian leaders, Scipio and Cato; but when the battle of Thapsus destroyed all their hopes (April 6, 46 B.C.), Juba committed suicide. 2. Son of the preceding, taken to Rome as a boy by Cæsar and well educated there. Octavius (afterward Augustus Cæsar) restored to him the kingdom of his father in 30 B.C. and gave him a daughter of Antonius and Cleopatra as his wife. Five years later, when Numidia was made a Roman province, Juba was compensated with the Kingdom of Mauretania, where he ruled until his death in 19 B.C. He was the author of works on a wide variety of subjects, including works on philological matters and on Assyrian, Libyan, and Roman history, and on the history of painting, all of which are lost. Consult Sandys, *History of Classical Scholarship*, vol. ii (Cambridge, 1908), and the article "Juba," in Lübker, *Reallexikon des klassischen Altertums* (8th ed., Leipzig, 1914), with rich bibliography.

JUBÆA (Neo-Lat., from *Juba*, ancient King of Numidia). A genus of palms of the same tribe as the coconut. *Jubæa spectabilis*, a native of Chile, sometimes attains a height of 60

feet and has a wide-spreading crown of pinnate leaves. This is cut off to obtain the sap, which flows freely for several months if a fresh slice of the top be cut off each morning. A good tree will yield 90 gallons of sap, which when boiled down to a thick sirup receives the name of *miel de palma* (palm honey) and is an important article in the domestic economy of the country. The *Jubaea* is the jaggery palm of Chile. The nuts are edible, and the tree is useful in a number of other ways. It is also known as *coquito palm*. See CARYOTA.

JUBAINVILLE, zhū'bān'vèl', MARIE HENRI D'ARBOIS DE (1827-1910) A French historian and Celtic philologist, born at Nancy. He was educated at the Collège Royal of Nancy and at the University of Königsberg. He became an advocate at Paris in 1850, served as archivist of the Department of the Aube from 1852 to 1880, and was appointed professor of Celtic language and literature at the Collège de France in 1882. He was made an Officer of the Légion d'honneur and a member of the Académie des Inscriptions et Belles-Lettres in 1884. After 1886 he edited 20 volumes of the *Revue Celtique*. His publications include: *Études sur les abbayes cisterciennes* (1858), *Répertoire archéologique du département de l'Aube* (1861); *Histoire des ducs et comtes de Champagne* (7 vols., 1859-66); *Cours de littérature celtique* (12 vols., 1883-1902), with others, *Éléments de la grammaire celtique, déclinaison, conjugaison* (1903), *Les Celtes depuis les temps les plus anciens jusqu'en l'an 100 avant notre ère* (1904), *La famille celtique* (1905); *Les Druides et les dieux celtiques à forme d'ammaux* (1906).

JUBBULPORE, jū'būl-pōr' See JABĀLPUR.

JUBBULPORE HEMP. An East Indian fibre plant. See CROTALARIA.

JUBER'NA, or **JUVERNA**. See HIBERNIA.

JUBILATE, jū'bi-lā'té or yōō'bē-lā'tā (Lat., make a joyful noise). 1. A name given to the third Sunday after Easter from the opening words of the Sixty-sixth Psalm used in the mass on that day. 2. In the Church of England and the Protestant Episcopal church, the One Hundredth Psalm used as a chant in the morning service immediately before the Creed.

JU'BILEE (OF. *jubile*, Fr. *jubilé*, from Lat. *jubilans*, from Heb. *yōbēl*, blast of a trumpet). An occasion of extraordinary spiritual privileges in the Roman Catholic church. The name and the fundamental idea are borrowed from the old Hebrew custom (See JUBILEE, YEAR OF). The principal characteristic of the jubilee is the solemn offering to the faithful of a plenary indulgence (see INDULGENCE) on conditions of confession, communion, and visits to specified churches. This is limited, except in special cases, to pilgrims to Rome. An extraordinary jubilee is proclaimed, as a rule, for a short period and may be either for the whole church or for definite localities. The ordinary jubilees, which now occur every 25 years, are proclaimed first for Rome, lasting a year, and then for the rest of the world during the following year. The beginning of the jubilee is marked by the opening with great solemnity of the "holy door" in St. Peter's, where the Pope officiates, while three legates perform a similar ceremony at the churches of St. John Lateran, Santa Maria Magi-giora, and St. Paul Without the Walls. This takes place after the first vespers of Christmas, and the doors are closed again in like manner a year later. Besides the plenary indulgence,

special privileges are given to confessors to absolve penitents from all sins (with one small group of exceptions), even those usually reserved to the Pope or bishops, and to commute or sometimes to dispense from simple vows.

The origin of this observance is traced to Pope Boniface VIII, who issued, for the year 1300, a bull granting a plenary indulgence to all pilgrims coming to Rome during that year, on condition of their penitently confessing their sins and visiting the church of St. Peter and St. Paul, 15 times if strangers and 30 times if residents of the city. The invitation was accepted with marvelous enthusiasm. Innumerable troops of pilgrims from every part of the world flocked to Rome. Giovanni Villani, a contemporary chronicler, states that the constant number of pilgrims in Rome, not reckoning those who were on the road going or returning, during the entire year never fell below 200,000. As instituted by Boniface, the jubilee was to have been held every hundredth year. Clement VI, in compliance with an earnest request from the people of Rome, abridged the time to 50 years. His jubilee accordingly took place in 1350 and was even more numerously attended than that of Boniface, the average number of pilgrims until the heat of summer suspended their frequency being 100,000. Matteo Villani, no fewer than 100,000.

term of interval was still further abridged by Urban VI and again by Paul II, who in 1470 ordered that henceforth each twenty-fifth year should be held as jubilee—an arrangement which has continued ever since to regulate the ordinary jubilee. Paul II extended still more, in another way, the spiritual advantages of the jubilee by dispensing with the personal pilgrimage to Rome and granting the indulgence to all who should visit any church in their own country designated for the purpose, and should, if their means permitted, contribute a sum towards the expenses of the holy wars. In later jubilee years the pilgrimages to Rome gradually diminished in frequency, the indulgence being for the most part obtained by the performance of the prescribed works at home, but the observance itself has been punctually maintained at each recurring period, with the single exception of the year 1800, in which, owing to the vacancy of the holy see and the troubles of the times, it was not held. Consult Loiseaux, *Traité canonique et pratique du jubilé* (Tournai, 1859), De Waal, *Das heilige Jahr* (Rome, 1900), Thurston, *The Holy Year of Jubilee* (London, 1900).

JUBILEE, YEAR OF An institution ordained for the Hebrews in Lev. xxv. 8-55, by which every fiftieth year (i.e., on the completion of seven sabbatical years) the land that in the interval had passed out of the possession of those to whom it originally belonged was restored to them, and all who had been reduced to poverty and obliged to hire themselves out as servants were released from their bondage; there was also a remittance of debts (Josephus, *Ant.*, iii, 12, 3). The jubilee forms an exalted sabbatical year (q.v.), and the land was to be left completely to itself in the former as in the latter, without sowing or reaping of any kind or even gathering grapes. The design of this institution was chiefly the restoration of the equilibrium in the families and tribes. It was to prevent the growth of an oligarchy of land-owners and the total impoverishment of some families. It was proclaimed at the end of the

harvest time, like the sabbatical year, on the tenth day of the seventh month—the Day of Atonement—by the *yobel* (a kind of horn); hence also its name. While the detailed specifications are to be found only in Lev. xxv. 8 ff., there are references to the jubilee year elsewhere (Lev. xxvii 17–25; Num. xxxvi. 4; also Jer. xxxiv 14; Ezek. xlvi. 17) sufficient to indicate that there existed some institution in early days of which the jubilee is the theoretical elaboration. For an agricultural community it is of importance that land should remain in the hands of the tillers, and one can well conceive that even in primitive communities some regulations existed to bring this about. To this economic provision there was added also the religious consideration that the land belongs to the deity residing in it, and to whom the fertility is due, and this furnished an additional reason why the land should not be made an object of commercial speculation. Still, in the elaborate form mapped out in Lev. xxv 8 ff the jubilee was never observed either in the pre-exilic or postexilic period of Hebrew history. The rabbis themselves admit that the jubilee had not been practiced since the time when the tribes on the eastern side of the Jordan were carried away, and this is practically equivalent to saying that it was never held to. It is also significant for the postexilic period that when the sabbatical year was de facto repealed by Hillel's *prosbol* (a legal document entitling the creditor to claim his debt during this period), mention is no longer made of the yobel. It is needless to point out that the system as laid down in Leviticus was only a theoretical development of the underlying principle. If carried out, it would mean two years of no sowing, no reaping—since the fiftieth year would be preceded by a year, the forty-ninth, which would be a sabbatical year and this would imply a third year without a harvest. This consideration is sufficient to show how utterly impossible its observance was. Consult commentaries on Leviticus by Dillmann, Strack, and Baentsch, and the Hebrew archaeologies of Nowack (Göttingen 1907) and Ben-zinger (2d ed., Tübingen, 1907).

JUBILEES, BOOK OF. See APOCALYPTIC LITERATURE

JUCH, *yook*, EMMA (1863–) A dramatic soprano, born of American parents in Vienna, Austria. Educated in music under Madame Murio-Celli, a teacher of New York, she made her operatic debut in London in 1881 and on her return to America was received cordially. In 1884 she was the prima donna of Theodore Thomas's American opera company, afterward organizing a company of her own. In 1894 she married J. L. Wellman, of New York, and retired from the stage.

JUCHEREAU, zhush'rô', LOUIS (called also BARBE), SIEUR DE SAINT-DENIS (1676–after 1731). A French-Canadian soldier, born at Quebec. He went to Louisiana, where he became known as a soldier and a negotiator with the surrounding Indians. In 1700 he was placed by Iberville in command of the fort at the mouth of the Mississippi. In 1714–16 he was in Mexico, where he was unsuccessful in concluding with the Viceroy a treaty of commerce. He commanded an Indian force at the defeat of the Spaniards at Dauphin Island in 1719 and in 1720 was appointed governor of Fort Nachitoches. This fort having been besieged by the Natchez Indians in 1731, he made an attack which re-

sulted in the complete defeat of the enemy and the death of most of their war chiefs.

JUDÆ'A. See PALESTINE.

JU'DAH (Heb *Yehūdāh*, probably 'praised'). The fourth son of Jacob and Leah (Gen xxix 35), eponymous ancestor of the tribe of Judah. He is represented as originating the idea of selling Joseph into Egypt instead of killing him (Gen. xxxvii 26–27) and taking a prominent part in the events that followed (xliii. 3 et seq., xlv. 16 et seq.). He forms a marriage alliance with a Canaanitish woman, by whom he becomes the father of Er, Onan, and Shelah; he was also the father of Pharez and Zarah by his daughter-in-law Tamar (xxxviii). The stories in Genesis about Judah are considered by many scholars as in part the remnants of obscured tribal struggles and alliances, in part legends to which a lesson has been attached. When Judah is portrayed as suggesting the idea of selling Joseph, this incident is interpreted by them as reflecting the culmination of rivalries between Hebrew clans. Originally these rivalries may have existed between Judah and the Joseph tribe in Goshen southwest of the Negeb of Judah, later they revealed themselves between the tribes Ephraim and Manasseh, who were in some way connected with Joseph (q.v.) and Judah. The favorable light in which Joseph is depicted in Genesis may in part be due to the influence of story-tellers and writers in Israel, but it is also evident that the stories have been recast with a view of removing features that reflect too seriously on Judah, and so the latter and Reuben are depicted as seeking to save Joseph from his jealous brothers. The alliance of Judah with a Canaanitish woman is held to be a bit of tribal Judah tradition, accounting for the admixture of Canaanitish elements in the clan. It is not until the days of David that the Judah clan comes into prominence, and the boundaries of the clan as described in Joshua xv are supposed by some scholars to apply to the post-Davidic age. But according to the Book of Joshua, Judah extended eastward to the Dead Sea and westward to the Mediterranean, including the Philistine plain. As there is no period in the history of Judah from David until Hasmonæan times when the Philistine cities were a part of Judæa, the boundary must therefore be regarded either as ideal, implying an empty claim, or else as referring to an earlier time than that of the Philistine invasion (c.1200 B.C.). It is not impossible that Judah struggled with the Awwim and the Afri (cf. W. Max Müller, in *Orientalistische Literaturzeitung*, June, 1913), who perhaps, in spite of the different guttural may be identical with Ephraim, in the Philistine plain before the invasion by the Cretans. But positive evidence of this is as yet lacking. In the north Judah bordered on Benjamin's territory, while the southern limit is represented simply by a line drawn westward from the southern extremity of the Dead Sea. Till David's time the tribe of Judah appears to have been also to a great extent isolated from the tribes of Israel, due in part to the mountainous nature of the Judæan territory and in part to a different origin, or at least a very marked admixture of foreign elements. The kingdom of Judah which David formed consisted of Jerahmeelites, Kenites, Kenizzites, and other tribes, mostly of Idumæan origin, as well as of members of the original tribe of Judah. David (q.v.) succeeded in obtaining control of Israel after

the death of Saul, and Jerusalem, captured from the Jebusites, becomes henceforth one of the great centres of Jewish history. Israel chafed under the southern yoke, and after the death of Solomon again became independent of Judah. Consult: Winckler, *Geschichte Israels* (Berlin, 1895); Ed. Meyer, *Die Israeliten und ihre Nachbarstämme* (Halle, 1906); Haupt, in *Studien* . . . Wellhausen gewidmet (Giessen, 1914).

JUDAH I (c.175-219). Son of Simon II and compiler of the Mishna (q.v.). While a youth, he was admitted to the Sanhedrin on account of his extraordinary knowledge of Jewish law and on his father's death was made its president. Through his knowledge and wealth he succeeded in transferring the whole power of the Sanhedrin to himself. He settled in Sephoris, which during his lifetime became a centre of religious and learned activity. His great knowledge earned him the unique dignity of being quoted simply by his title, Rabbi, and he was further distinguished by the appellation of Ha-Nasi (the prince). After his death he was spoken of as Ha-Kadosh (the holy). The compilation of laws made originally as a textbook for his lectures acquired such authority that it became a permanent standard and formed the basis of the great compilation known as the Talmud.

JUDAH, or JEHUDA (Ar. *Abu'l-Hasan*) (**BEN-SAMUEL**), surnamed **HA-LEVI** (c.1086-?). A Jewish physician, poet, and philosopher of Spain. He was born in Castile and first studied medicine, but afterward devoted himself to philosophy and poetry and became the greatest Hebrew poet of the Middle Ages. His songs breathe a constant longing for Jerusalem, the home of his race; and about 1140 he left his college at Toledo to journey to the city of his lays. The date and manner of his death are unknown; according to tradition, he was slain by a Moslem while singing his song of Zion. In the field of philosophy his chief work is *Al-Khazari*, written in Arabic, in which, in the form of a dialogue, the current tenets of Aristotelianism, Christianity, Islam, and finally Judaism are explained to Bulan, King of the Khazars. The work has little theological or philosophical depth and betrays the essentially poetic mind of its author. It has been translated from the Hebrew version of Jehuda ibn-Tibbon into German by Cassel (2d ed., Leipzig, 1869), and more successfully by Hirschfeld from the original Arabic (Breslau, 1885), who also published the Arabic text with the Hebrew translation of Jehuda ibn-Tibbon (*Das Buch Al-Chazari*, Leipzig, 1887). Ha-Levi's poems have been translated into German by Sachs, *Religiose Poesie der Juden in Spanien* (Berlin, 1845); Geiger, *Divan des Castilers Jehuda Halevi* (Breslau, 1851); Heller, *Die echten hebraischen Melodien* (Trier, 1893). Some of them are found in English in Emma Lazarus' Poetical Works, vol. ii (Boston, 1899), and Nina Davis, *Songs of Exile* (Philadelphia, 1901). The poems of Jehuda ha-Levi are remarkable for their pure Hebrew diction, their exalted sentiments, and their fervor. Consult David Kaufman, *Jehuda Halevi* (Breslau, 1877).

JU'DAH BEN-SAMUEL (?-1217 A.D.). A Jewish moralist and mystic. He was born in Speyer, but in 1195 moved to Ratisbon, where he founded a school and had many famous pupils. His family had come from the East and settled in Germany; among his ancestors

were some well-known cabalists. Many works have been ascribed to Judah which probably were written by other men. A commentary on the Pentateuch is known only by citations in later commentaries. *Sefer ha-Kabod* (the Book of the Divine Majesty) is regarded as a genuine production of his pen. His most important work is *Sefer Hasidim* (the Book of the Pious), of which the best edition is that by Wistinetzki (Berlin, 1891-93). It contains reflections on morality, and ascetic and mystical sentences. Only the first 26 sections are regarded as coming from Judah. Judah and his school made a distinction between the divine Being which is superior to all human perception and the divine Majesty which is revealed to men and angels. He was not a great thinker, like Ibn-Ezra and Maimonides; but his writings reveal a noble character, lofty aspirations, and an ardent desire to discover the deepest truths set forth in the Bible. Consult Zunz, *Literaturgeschichte der Synagogalen Poesie* (Berlin, 1864); Grätz, *Geschichte der Juden*, vol. vi (3d ed., Leipzig, 1894); Schleiermacher in *The Jewish Encyclopedia* (New York, 1901).

JUDAISM. See JEWS; ZIONIST MOVEMENT.

JUDAIZERS, *jū'dā-iz'ēr-z*. A name given to certain of the early converts to Christianity who wished to retain the rites and ceremonies of the Jewish law, particularly circumcision. They were Jews in race and appear to have been of two classes—some considering the law as binding only on Christians who were also Jews, others wishing to make it obligatory on Gentile converts also. The Apostolic Council (see JERUSALEM, COUNCILS OF) decided against the latter view. These Christians were particularly hostile to Paul and were opposed by him with much warmth, especially in the letter to the Galatians. Owing to his influence and the increasing number of Gentile converts, they became less and less important and finally disappeared. See EBIONITES, NAZARENE, PAUL.

JUDAS THE APOSTLE. One of the Twelve Apostles, mentioned only by Luke as the eleventh in both his lists (Luke vi. 16, Acts i. 13). He is probably to be identified with the Thaddæus of Mark iii. 18 and the Lebbaeus, surnamed Thaddæus, of the King James Version of Matt. x. 3 (see THADDÆUS), and with Judas, "not Iscariot," of John xiv. 22. The name of his father (not "brother," as in the King James Version) was James (q.v.). Nothing certain is known of Judas beyond the fact that he was one of the Twelve, and as one of that circle nothing is recorded of him beyond the question contained in the above passage in John—a question which would seem to indicate that he shared in the Nationalist views of contemporary Judaism, which looked for an earthly Messianic kingdom whose establishment would extend to the non-Jewish world. He is not to be identified with Judas the brother of the Lord, for the latter could not fulfill the conditions of eligibility to the Twelve required by Acts i. 21, 22.

JUDAS THE LORD'S BROTHER (named JUDA in the King James Version of Mark vi. 3). One of the brothers of Jesus (Matt. xiii. 55; Mark vi. 3). With the other brethren of Jesus—James, Joses, and Simon—he was not a believer in the Messiah until after the Resurrection (John vii. 5; cf. Mark iii. 21 with 31; Acts i. 14). Beyond the hints that he was in Jerusalem after the Ascension (Acts i. 14) and was a married man (1 Cor. ix. 5), nothing is

known of him in the New Testament, unless, with tradition, supported by some scholars, the Epistle of Jude (q.v.) be ascribed to him. As to the discussion whether he was a full or half brother or a cousin of Jesus, see BRETHREN OF THE LORD, THE.

JUDAS BAR'SABBAS (from Heb. *Yehūdāh*, Judah, and Aram. *Bar*, son, and possibly *shabbta*, sabbath, although other equivalents are possible). A member of the Jerusalem church, who with Silas was the bearer of a decree from the Apostles and elder brethren to the brethren in Antioch, Syria, and Cilicia (Acts xv. 22-33). He is described as a man of eminence and a prophet. Further than this, nothing is definitely known of him. That he was a brother of Joseph Barsabbas is only an inference.

JUDAS ISCARIOT, is-kār'i-ot. One of the Twelve Apostles of Jesus, and the one who betrayed Him, as the Evangelists are wont to add when they mention his name. Iscariot (properly Iscarioth) means 'man of Kerioth.' But the place referred to is uncertain; it may have been in the southern part of the territory assigned to Judah, the Kerioth-Hezron, or Hazor of Josh. xv. 25, the modern *Karjetan*, south of Hebron; or it may have been the Kerioth of Amos ii. 2, Jer. xlviii. 24, the *Kiv-Moab*, or *Ar*, the capital of Moab; less likely is it the modern *Kuraiva*, the *Korea* of Josephus (*Ant.*, xiv, 3, 4), on the northeastern border of Judaea. The father of Judas was named Simon (John xiii. 2) or Simon Iscariot (John vi 71; xiii 26).

Judas was the only one of the Twelve not a Galilean, and his name is put last in all the lists. In the oldest Gospel (Mark) there is no open suspicion against him, or any reference to the position he held among the Twelve, prior to the time of the betrayal. Just before the Last Supper, however, Mark states that Judas, one of the Twelve, went to the high priests to deliver Jesus to them, and when they heard this proposal they rejoiced and promised to give him money, and he began to seek how he might conveniently deliver Him up (xiv. 10, 11). At the supper Jesus predicts that one of the number is to betray Him, but no name is mentioned. After Gethsemane Judas, at the head of an armed force, comes to Jesus and gives Him a kiss, a prearranged sign by which the crowd identifies Jesus (xiv. 43-50). With this kiss Judas passes out of history for the oldest narrative. The other two Synoptists, Luke and Matthew, who here as elsewhere follow in general the narrative of Mark, add, however, at this point new material to the earliest tradition, chiefly of an interpretative character. Luke interprets Mark's promise to give money as an agreement after consultation with the high priests and temple officers, to which Judas assents; and attributes the treason, moreover, to the entrance of Satan into him (xxii. 3-6). Matthew likewise interprets Mark's promise as an agreement and makes Judas say to the priests, "What are ye willing to give me and I will deliver him unto you?" The result of the parleying is that they weigh out or pay him 30 pieces of silver (xxvi. 14-16). Both these details, the immediate payment and the exact amount of money, are preserved only in Matthew. In this Evangelist's narrative of the Last Supper Judas is named as the traitor in the following words: "Is it I, Rabbi? He saith unto him, Thou hast said" (xxvi. 25). Coming to the fourth Evangelist, we find that it is he

alone who indicates any suspicion against Judas before the betrayal. As early in his narrative as vi. 70, Jesus is recorded as saying, "Did I not choose you the twelve, and one of you is a devil?" But nowhere is there reference to money in connection with the betrayal, although it is suggested, in passing, that Judas was the treasurer of the Twelve (xiii. 29). The Evangelist does, however, distinctly ascribe the act of treason to devilish or satanic influence (xiii. 2, 27). In his record of the Last Supper he states that when Jesus had washed the disciples' feet, He predicts His betrayal at the hands of him to whom He gives the bread and bitter herbs dipped in the sauce used at the meal, and after serving Judas with the morsel, He bids him do quickly what he has to do, whereupon Judas, evidently stricken with the consciousness that his purpose was known to the Master, leaves the room to complete his treacherous undertaking (xiii 21-30). To the narrative of the arrest of Jesus in a place well known to Judas, the Evangelist adds further details, but omits the traitor's betraying kiss. Then for John, as for Mark, Judas passes out of history (xviii. 1-8). Two accounts preserved—one by Luke (Acts i. 16-20) and the other by Matthew (xxvii. 3-10)—show the violent death of Judas and the name of the field, *Aceldama*, but reveal differences in the matter of the purchase of the land, the land bought, the reason for the name Field of Blood, and the motive of the story. A still later tradition is the gruesome tale of Papias, which narrates that Judas first tried death by hanging, but was rescued, that later he died a horrible death in his own field.

In view of the criticisms, both ancient and modern, directed against the historicity of the betrayal by Judas, and in view of the divergences in the Gospel narratives, it may be well to call attention to certain facts. It is generally admitted that the Gospel of Mark is the oldest of the Gospel narratives written by a friend and companion of the three prominent missionaries—Peter (an eyewitness of the betrayal), Paul, and Barnabas. In accord with his usual habit to state facts as he knows them and not to make inferences, Mark gives a simple, circumstantial narrative of the betrayal, with not a word about the motives of Judas. In favor of the essential historicity of Mark's narration it is to be remembered that the story is embedded in the oldest tradition, that it is narrated objectively, that it accounts for the sudden disappearance of Judas and the election of Matthias, and that it is the kind of story that no Christian would ever think of inventing. The later Evangelists, as is their habit, introduce reflections and interpretations into their narratives, and give details according to individual inclinations and the purpose they had in view in writing. While Mark states only the facts of the betrayal, with no reflection on the motive and no emphasis on a money agreement with the priests, the later Evangelists add, along with other details, that there was a definite stipulation for a money consideration (Matthew and Luke); that the deed was due to satanic influence (Luke and John) or avarice (Matthew) or both (Luke). Beyond these two hints the Gospels are silent as to motives. Matthew alone records the tradition that exactly 30 pieces of silver were paid, because to him the 30 pieces were the fulfillment of prophecy (Zech. xi. 12, 13, quoted as if from Jeremiah).

Luke is interested in the explanation of the name *Aceldama*, and further in the death of Judas as preparing the way for the election of Matthias. The narrative of the death of Judas has at least this amount of fact—that Judas not simply disappeared, but met a violent death.

In view of the mystery involved in Jesus' apparent knowledge beforehand of the character of Judas and his treacherous purpose, various attempts have been made to show that he had really no criminal motive in his plan. In the days of early Gnosticism it was held that Judas was, as a matter of fact, possessed of a higher spirituality than his fellow Apostles and brought about Jesus' death because he knew it would destroy the power of the spirits of evil and the rulers of this world. Others have held that his act was that of one who firmly believed in Ilm and expected, as the result, to behold Jesus triumphantly establish himself as King—a consummation no doubt ardently desired by many of Jesus' followers. In more recent times it has been suggested that the act of Judas may have been prompted by a desire to place Jesus in a crucial position where He would be forced to save Himself by the exercise of supernatural power. On this view the betrayal was a bold attempt to apply a decisive test to the claim of Jesus as the Messiah. These views, however, are the product of a theological desire to solve the problem of Jesus' relation to the situation and have nothing in any of the narratives to support them.

JUDAS MACCABÆUS. The hero of the Jewish war of independence waged against the Syrian kings in the second century B.C. He was one of five brothers, all distinguished for bravery and skill, sons of Mattathias, a priest of the order of Joarib, whose home was at Modin, a town about 18 miles northwest of Jerusalem. When a detachment of the troops of Antiochus Epiphanes, in the attempt to uproot the Jewish faith, in 168 B.C., reached Modin, Mattathias slew the King's officer, raised the standard of revolt, and with his sons fled to the mountains. At his death, shortly after, he committed the cause to his sons, appointing Judas their military leader. The surname of Judas was Maccabæus (1 Macc. iii. 1), commonly supposed to mean 'the Hammerer,' though this is by no means certain. Judas was, after David, the greatest of Israel's military heroes. With a few thousand followers he defeated four Syrian armies in succession, two of them immensely superior to his own in numbers, and was able, in December, 165 B.C., to restore the Jewish worship at the temple, which had been discontinued for three years. The memory of this event was commemorated in the annual eight-day Feast of Dedication on the 25th Chislew (November-December). From now on until his death Judas was the virtual head of the Jewish people, though he bore no official title. He did not assume the office of high priest as his brother Jonathan did later. Extensive campaigns were undertaken against enemies of the Jews on all sides. The Edomites to the south, the Ammonites to the east, the Arabs, and other people were conquered or punished for maltreatment of Israelites. On the death of Antiochus Epiphanes (164 B.C.), Lysias, guardian of the young Antiochus V, invaded Judæa with an army of 100,000 men and advanced to Jerusalem, after a vain attempt by Judas to check his progress. But

troubles at Antioch compelled Lysias to retire, and Judas took advantage of the opportunity to secure Syrian recognition of the religious liberty of the Jews. This accomplished, Judas worked towards political independence. To this end he dispatched an embassy to Rome proposing an alliance, hoping thereby to secure Judæa against further subjection. The answer came too late, for dissensions among the Jews and the intrigues of the pro-Syrian party had proved fatal to his plans. Though he won a glorious victory over the forces of Demetrius I of Syria, under Nicanor (163-162 B.C.), he was unable to rally the full strength of the Jews against a second Syrian army, and died in battle against hopeless odds at Elasa (161 B.C.). He was buried in the family sepulchre at Modin and succeeded by his more shrewd and political brother, Jonathan (q.v.).

Bibliography. The main sources of information are 1 and 2 Maccabees and Josephus' *Antiquities*, xii. Of these the narrative in 1 Maccabees is the most reliable. Consult: Stade, *Geschichte des Volkes Israel* (Berlin, 1888); Emil Schürer, *History of the Jewish People in the Time of Jesus Christ* (5 vols., New York, 1896); H. Weiss, *Judas Makkabæus* (Freiburg, 1897); Streane, *The Age of the Maccabees* (London, 1898); Wellhausen, *Israelitische und jüdische Geschichte* (Berlin, 1898).

JUDAS MACCABÆUS. An oratorio by Handel (q.v.), first produced in London, April 1, 1747; in the United States, Dec. 5, 1847 (Boston).

JUDAS OF GALILEE. Leader of a Jewish uprising against the Romans. According to the only mention of him in the New Testament (Acts v. 37) he appeared at the time of the census and carried away the people with him, but himself perished, while all his followers were dispersed. Probably he is to be identified with the Judas of Galilee (or Gamala) of Josephus (*Ant.*, xviii, 1.). This Judas, along with Sadduk, resisted the taking of the census under Quirinius (6-7 A.D.), instigated the people in the name of religion to riot and revolution, but met with little success. Josephus does not record his death, but narrates that his two sons, Jacob and Simon, were later put to death.

JUDAS TREE.

JUDAS TREE (*Cercis*). A genus of trees of the family Leguminosæ, named from the tradition that Judas hanged himself on one of them. The common Judas tree of Europe (*Cer-*

ois siliquastrum), a native of the south of Europe and of the warmer temperate parts of Asia, has almost orbicular, very obtuse leaves, and rose-colored flowers which precede them. The American Judas tree (*Cercis canadensis*), a hardy tree, which may reach a height of 40 feet, is very similar, but has acuminate leaves. The flower buds of both species are frequently pickled in vinegar. Both species furnish a black-veined, strikingly beautiful wood, which takes an excellent polish. A third species (*Cercis occidentalis*) occurs in the western United States, and one has been introduced from Japan (*Cercis chinensis*). All the species flower early in the spring and are very handsome in shrubbery.

JUDD, CHARLES HUBBARD (1873-). An American psychologist and educator. Born at Bareilly, British India, he came to the United States in 1879 and graduated from Wesleyan University in 1894. Two years later he took his Ph.D. at Leipzig. He taught philosophy at Wesleyan University (1896-98), was professor of psychology at New York University (1898-1901) and at the University of Cincinnati (1901-02), and served as instructor (1902-04), assistant professor (1904-07), and professor of psychology and director of the psychological laboratory (1907-09) at Yale University, where he directed also the Summer School in 1906 and 1907. In 1909 he became professor of education and director of the School of Education at the University of Chicago. He was president of the American Psychological Association in 1909. Besides translating Wundt's *Outlines of Psychology* (3d ed., 1907), he published *Genetic Psychology for Teachers* (1903); *Psychology—General Introduction* (1907); *Laboratory Manual of Psychology* (1907); *Laboratory Equipment for Psychological Experiments* (1907).

JUDD, GERRIT PARMLEE (1803-73). An Hawaiian statesman, born at Paris, N. Y. He went as missionary physician to the Hawaiian Islands in 1823, with the second body of missionaries sent out from the United States. In 1842 the King induced him to accept a government position, though, in order to do so, he was forced to sever his connection with the mission. From that time until 1853, when he was compelled by popular jealousy to retire, he was one of the most conspicuous figures in Hawaiian politics. He was largely responsible for the organization of a constitutional government in the islands and at various times held different ministerial offices, the duties of which he discharged with so much ability that he became virtually the ruler of the country.

JUDD, NORMAN BUEL (1815-78). An American lawyer and politician, born at Rome, N. Y. He was educated at the high school in his native city and in 1836 was admitted to the bar. He immediately removed to Chicago, Ill., where he began practice, drew up the first charter of the incorporated city in 1837, and was elected its first city attorney. He was county attorney for Cook County in 1839 and in 1844 was elected to the State Legislature, of which body he remained a member by successive re-elections until 1860. Originally a Democrat, he allied himself with the Republican party in 1856, was a delegate to the Philadelphia Convention in that year, and became chairman of the Illinois State Central Committee of the party. He held this position when the second Republican National Convention convened in Chicago in 1860, and to

the adroit political management of Judd, Joseph Medill, and Leonard Swett is probably due, as much as to any other one thing, the nomination of Lincoln for the presidency. In 1861 he was appointed by President Lincoln Minister to Prussia, where he remained until 1865 and successfully exerted his influence to prevent the recognition of the Confederacy. Having returned to America in 1865, he was elected to Congress in 1868 and served two terms. He was one of the committee of managers of President Johnson's impeachment on the part of the House. The most important legislation of which he was the author was the act creating inland ports of entry and providing for shipment of goods in bond into the interior of the country. In 1873 he was collector of United States customs at Chicago. For 20 years before his death the best-known railway lawyer in the country, he was closely connected at one time or another with the development of most of the great Western trunk lines.

JUDD, ORANGE (1822-92). An American agricultural journalist, born near Niagara Falls, N. Y. He graduated at Wesleyan University in 1847, was editor of the *American Agriculturist* from 1853 to 1883, agricultural editor of the *New York Times* from 1855 to 1863, editor of the *Prarie Farmer* from 1883 to 1888, and afterward of the *Orange Judd Farmer*. For many years he exerted a marked influence on the agricultural progress of the United States, and largely through his efforts and financial aid the first State agricultural experiment station was established in 1875 at Middletown, Conn., in the Orange Judd Hall of Natural Sciences, which about that time he had donated to Wesleyan University.

JUDD, SYLVESTER (1813-53). An American clergyman and author, born at Westhampton, Mass., July 23, 1813; died at Augusta, Me., Jan. 26, 1853; a son of Sylvester Judd (1789-1860), the antiquary. Judd, who was brought up in the orthodox faith of New England, was sent to Yale College, whence he was graduated in 1836. Soon after leaving Yale he changed his religious opinions and entered the Cambridge (Mass.) Divinity School, was graduated in 1840, and thereupon became pastor of a Unitarian church in Augusta, Me., where he remained until his death. While a divinity student, he wrote *A Young Man's Account of his Conversion from Calvinism*. He was author also of *Margaret: A Tale of the Real and Ideal* (1845), a romance which had some vogue, being highly praised by Lowell and containing some good descriptions, although a very uneven performance; a chaotic Unitarian dramatic poem, entitled *Philo: An Evangeliad* (1850); another romance, *Richard Edney and the Governor's Family: A Rus-Urban Tale* (1850), a parallel tale to *Margaret*; and *The Church: In a Series of Discourses* (1857). He also lectured on social questions, particularly against intemperance, slavery, and war. He wrote also a *History of Hadley* (new ed., 1905). Consult his *Life and Character*, by Hall (Northampton, Mass., 1882).

JUDE. See **JUDAS THE LORD'S BROTHER.**

JUDE, EPISTLE OF. The last of the 21 Epistles of the New Testament. It is both an exhortation (vs. 3) and a reminder (5) to the beloved readers in view of the presence in their churches of ungodly men who deny Christ as the Lord and are full of lust. The reminder (5-19),

based on references to God's dealings with the ungodly in the past, is methodically arranged in five sections, in each of which the historical case is first stated and then followed by a clause introduced by the favorite apocalyptic "these," indicating the points of comparison between the present ungodly and those of the past, e.g., denial and lust. In these two main points they are like the people in the Wilderness, the fallen angels, and the Sodomites (5-8), but are unlike Michael, who did not blaspheme (9-10); they are like Cain the blasphemer, Balaam the lustful, Korah the denier, but are unlike nature, which follows the divine order (11-13), they are like the ungodly of Enoch (14-16) and the lustful mockers of whom the Apostles spoke (17-19). The exhortation (20-23) bids them not only to preserve themselves in God's love, by building themselves up by faith, prayer, and hope, but also to act aggressively, though lovingly, with the ungodly, to the end that those who are not too far gone may yet be saved. The contents reveal both in language and thought close affinities to apocalyptic literature, especially to Enoch (quoted in 14-15) and Assumption (Testament) of Moses (9), allusions to both of which books appear in almost every verse.

The emphasis on the denial and the lust of the ungodly reveals the presence in the churches of a mischievous tendency which in general may be called Gnosticism, i.e., a one-sided intellectualism which is chary of the ethical imperative. The theoretical aberration does not seem to have advanced so far as the Docetism of the Johannine and Ignatian Gnostics, but seems rather to be Antinomianism, the well-known and popular caricature of Paul's doctrine of freedom. At all events, it is the practical rather than the speculative heresy which receives the brunt of the author's serious denunciations. Unlike the Gnostics of John and Ignatius, who are simply separatists and individualists, caring nothing for brotherly love, these ungodly are both separatists (19) and gross materialists—lascivious, gluttonous (12), and avaricious (11, 16).

The author was on the point of writing a general homily on "our common salvation," but, on hearing of the conduct of the ungodly at the love feasts (12), writes instead the specific reminder and exhortation. Possibly, but not certainly, the people addressed are to be sought in Antioch of Syria, a theory which would account for their acquaintance with Paul and the Apostles, for the prevalence of Gentile vices, and for the apparently sudden appearance of the Gnostics. The style of the author is clear and methodical, influenced largely by the apocalyptic type, with which he is at home. His thought, though mainly Jewish-Christian in tone, is not uninfluenced by the Pauline Christianity. His ethical feeling, with its prophetic emphasis on mercy and love, is vigorous and wholesome. Were it not for the words "brother of James" in the first verse, we should be perplexed to know what Jude was meant, as there were many of that name in the first century. Assuming, however, the genuineness of the words, there is nothing in the rest of the letter which absolutely excludes the traditional ascription of authorship to Jude, the brother of the Lord; for the author still uses freely the Jewish apocalypses, and the Gnosticism is of an incipient, undeveloped character speculatively. There is no reference to the temple, no reference to persecutions. A date be-

tween 70-80 A.D. after Nero and before Domitian is not improbable. That Jude is earlier than 2 Peter may be confidently asserted. It is, however, an open question whether 2 Peter borrowed from Jude or both borrowed independently from a third unknown apocalyptic source.

Chase, in Hastings, *Dictionary of the Bible*, vol. ii (ib., 1899), and James Moffatt, in his *Introduction to the Literature of the New Testament* (ib., 1911).

JUDEICH, יוֹדֵיכִי, JOHANN FRIEDRICH (1828-94). A German forester, born at Dresden and educated in forestry at Tharandt and in political economy at Leipzig. He served in the Saxon and Bohemian forestry departments and in 1862 became head of the new school at Weisswasser, whence four years after he returned to Tharandt as director. His most important work is the textbook *Die Forsternrichtung* (6th ed., 1903). In addition he edited the seventh and eighth editions of Ratzburg's *Die Waldverderber und ihre Feinde* (1876, 1885-95), contributed to Lorey's *Handbuch der Forstwissenschaft* (1887-88), and edited the *Forst- und Jagd-kalender* (1882 et seq.) and the *Tharandter forstliche Jahrbuch* (1867-87).

JUDGE (OF), Fr. *juge*, from Lat. *iudex*, judge, from *ius*, law + *dicere*, to say). One who finds a judgment, especially a presiding magistrate in a court of justice. The proceedings of courts of justice may be: (a) to maintain the order of judicial procedure and make provision for the execution of judgments, (b) to find and interpret the legal rule or rules applicable to each case; (c) to determine what the facts in the case are, or at least what facts shall be taken to be proved.

While all these different functions frequently are discharged by a single authority, they frequently are separated. Representatives of the people, not otherwise connected with the administration of justice, are frequently charged with the decision of questions of fact and sometimes with the decision of questions both of fact and of law. This last separation was regularly made in the Greek democracies, in the Roman Republic, and in the early German tribes. A magistrate who was not simply a judicial officer, but who also had duties of general administration, including, in some instances, military duties—an archon or prætor or prince or hundredman—presided over the administration of justice, but judgment was rendered by representatives of the people—by dikasts or judges, or (among the Germans) by all the freemen. Contrary to our modern usage, the term "judge" was not regularly applied to the presiding magistrate, but to the representatives of the people who actually found the judgment. Among the Germans it was frequently applied to the wise men or law speakers, who suggested the judgment which the folkmoet approved or rejected. The term "iudex" was not applied to the presid-

ing magistrate by the Romans until, in the Imperial period, he had become judge of the law and the facts. The term began to be applied to the presiding official by the Germans when he began (in the Frankish Empire) to obtain a considerable degree of control over the findings of the popular court. The relatively modern usage of describing the presiding magistrate as judge even when, as in English criminal procedure, he has no control over the judgment, is connected with the change which has separated judicial from general administration.

With the establishment of a separate and independent judiciary, placed beyond the reach of governmental interference, it has been found practicable, in all countries except those of the English law, to intrust to the judges the power of decision on the facts as well as on the law in civil cases. In criminal cases, however, the system of popular judgment has not only maintained itself in English law, but, after disappearing for centuries, has been reestablished on the continent of Europe. So recent, however, has been the introduction of the jury system in continental procedure that the inquisitorial traditions of the intermediate period are still strong, and the judge, to English eyes, seems to combine judicial functions with those of a public prosecutor. Cf. COURT, MAGISTRATE.

JUDGE, WILLIAM QUAN (1851-96). An Irish-American Theosophist, born at Dublin. He came to the United States in 1864 and with his father practiced law in New York City from 1872 to 1880. He then founded, with Madame Blavatsky and Colonel Olcott, the Theosophical Society of America, as secretary of which he traveled in South and Central America, the West Indies, and Europe. See THEOSOPHICAL SOCIETY.

JUDGE ADVOCATE. The prosecutor on a general court-martial or military commission. In the United States the Judge Advocate is usually detailed at the same time the authority for the convening of the court is issued and, in specially important cases, is a member of the Judge-Advocate-General's department. In the British army such duties devolve upon a specially detailed staff officer or the prisoner's commanding officer. In district or regimental court-martials the latter officer is usually represented by the regimental adjutant. The prisoner has the right to call on any regimental officer to speak in his behalf. See JUDGE-ADVOCATE-GENERAL; COURTS, MILITARY, MILITARY LAW, under which latter heading the duties of the Judge Advocate in courts-martial are discussed.

JUDGE - ADVOCATE - GENERAL. The head of the bureau of military justice in the United States army. He is the custodian of the records of all general courts-martial, courts of inquiry, military commissions, and of all papers relating to the title of lands under the control of the War Department, except the Washington Aqueduct and the public buildings and grounds in the District of Columbia. The officers of his department render opinions upon legal questions when called upon by the proper authority. The Judge-Advocate-General has the rank of brigadier general and is the legal adviser of the Secretary of War and of the War Department. A similar department exists in all European armies, that of England differing in that the Judge-Advocate-General is selected from among the high civil judiciary. See COURTS, MILITARY; MILITARY LAW.

JUDGES, Book of (Heb. *Shōphētim*, Gk.

xplai, kritai, Lat. *Liber Judicium*). A book of the Old Testament, recording the achievements of a number of leaders at different periods in the early history of the Hebrews, who in the book itself and elsewhere are called judges. (See JUDGES OF ISRAEL.) It cannot be said to be a history, properly speaking. The events recorded in it do not follow each other chronologically, nor is there any other order to be perceived in their arrangement. The contents of the book may be summarized as follows: 1. An introduction, giving an account of the invasion of western Palestine by the several tribes, their conquests and settlements, and the agreement reached with the Canaanites, continuing the narrative from Jos. xxiv. 28 (chaps. i-ii. 5). 2. Chapters ii 6-xii, an account of the deeds of a number of heroes: (a) Othniel ben-Kenaz, a Judæan, in conflict with Cushan-Rishathaim, King of Aram-Naharaim, (b) Ehud, a Benjamite, against Moab, (c) Shamgar against the Philistines; (d) Deborah and Barak against Sisera; (e) Gideon, the Manassite, against the Midianites; (f) Abimelech, son of Gideon, against the Shechemites; (g) Tola, of the clan of Issachar, (h) Jair, the Gileadite (Manasseh?); (i) Jephthah against the Ammonites; to whom are added Ithzan, Elon (of Zebulon), and Abdon (chap. xii 8-15), probably representing clans rather than individuals. 3. Story of Samson and his exploits (chaps. xiii-xvi). 4. Chapters xvii-xxi, two narratives: (a) migration of the Danites and establishment of a sanctuary at Dan, (b) an offence committed upon a traveler by the Benjamites and the revenge taken upon the tribe by a combination formed against it. The stories of Eli and Samuel, who are by Jewish tradition counted among the judges, are told in the First Book of Samuel (q.v.).

A peculiar pragmatism is noticeable in this book. The history of the period is set forth in such a manner as to show the truth of the general thesis that obedience to the laws of Yahwe brings deliverance and prosperity, while foreign oppression and adversity are the signs of Yahwe's anger, caused by disobedience and idolatry. There is, therefore, a curious alternation between periods of foreign invasion and oppression and those of native victories and government by judges, corresponding to the religious attitude of the people. The twelve tribes of the Hebrew confederation are pictured as dwelling in the territory assigned to them by Joshua, but not united except in cases of emergency for self-defense. The loose union among the Hebrew clans is a part of the picture which corresponds to conditions as they existed before the days of Saul, and the two tales added to the Book of Judges (chaps. xvii-xxi) form valuable material for reconstructing a picture of the religious and social culture in the earlier period of Hebrew history. It is evident from these stories that the religious practices and ideas of the Hebrews did not differ materially from those of the surrounding nations. They correspond to the conditions presupposed in the earlier strata of the Pentateuch (q.v.) rather than to those clearly reflected in the later.

So far as the literary structure of the Book of Judges is concerned, it betrays the same composite character as the Pentateuch and Joshua. Some scholars have held that to a certain extent the same sources were used, and that especially the so-called Elohist and Yahwist (q.v.) were drawn upon. There is much to be said, how-

ever, in favor of assuming different sources for Judges from those found in Joshua and the Pentateuch. The stories in Judges are so promiscuous in character, so independent of each other, that it is not easy to assume a systematically arranged source. On the other hand it is also evident that the compilation did not end with the death of Samson, but was carried on into the days of Eli and Samuel. The deliverance from the Philistines and such a farewell address as is ascribed to Samuel (1 Sam. xii) are exactly in the style of the narrative in Judges and of the redactor who added the introduction to Judges. It is therefore safe to assume that this compilation was carried down to the death of Samuel at least, so that the present break between Judges and Samuel is an arbitrary one. Consult the commentaries of Studer (1842), Bertheau (1862; 2d ed., 1883), Keil (1874), Black (1892), Oettli (1893), Moore (1895), Budde (1897), Nomack (1902), Lagrange (1903), Thatcher (1911); Budde, *Richter und Samuel* (Giessen, 1890); Frankenberg, *Die Composition des deuteronomischen Richterbuchs* (Marburg, 1895); and the introductions to the Old Testament by Kuenen, Bleek-Wellhausen, König, Driver (2d ed., 1910), and Sellin (2d ed., 1914).

JUDGES' CAVE. See REGICIDES' CAVE.

JUDGES OF ISRAEL (Heb. *shôphêtim*). A name given to the leaders who at various intervals directed the affairs of the Israelites from the death of Joshua to the reign of Saul. In Tyre and its colony Carthage, *shophet* (*suffete*) was the title of the two chief magistrates, while the term *shapitu* in Assyria seems to have signified a leader of a band. The second meaning seems to correspond more nearly to that in ancient Israel, though after the organization of the Kingdom it naturally came to denote a judicial position. The root *shaphat* means "to judge" and the leader of a tribe, who avenges its wrongs, may always have been thought of as a judge, and judgment upon it. Their names were Othniel, Ehud, Shamgar, Barak, Gideon, Tola, Jair, Jephthah, Ibzan, Elon, Abdon, Samson, Eli, Samuel. The account of their deeds is given in the Book of Judges and the First Book of Samuel (qq v.). Without the last two, whose careers are recorded in the Book of Samuel, the number of judges is 12; with Eli and Samuel, as well as Deborah and Abimelech, the number is 16. Judges are merely a series of heroes and champions, quite independent of one another. Certain recollections of them survived to later times and, combined with legends, folklore, and myth, gradually took shape as a continuous narrative of the exploits of these vindicators or deliverers. Tribal history among the Hebrews, as among Arabs, is largely taken up with disputes and quarrels among clans, with petty wars, with warding off attacks, or with making sallies upon other clans. Of the 16 names included by tradition under the appellation judges, nine are heroes belonging to one clan or the other, of whom some mighty deeds are told; three (Ibzan, Elon, and Abdon) represent clans rather than individuals; one (Deborah) is a prophetess who by her influence brought about a great combination of clans for the attack upon a common enemy; another (Samson) is a semimythical personage, totally different in character from the other judges; a third (Eli) is essentially a priest; while Samuel is an influential seer. It will be seen from this how confusing it is to

group these names together and regard them as performing the same functions. According to tradition, the period covered by the judges is 400 years. The chronological scheme which counts 480 years, i.e., 12 generations of 40 years, between the Exodus and the dedication of Solomon's temple has the appearance of being artificial, but it is not impossible that the Hebrews began their invasion of Palestine in the fifteenth century, as the Tell el-Amarna tablets (q.v.) indicate how vigorously the Habiri are pushing their way into the country in the beginning of the fourteenth century. See JUDGES, BOOK OF, and the articles on individual judges.

JUDGMENT (OF). Fr. *jugement*, from ML. *judicamentum*, judgment, from Lat *judicare*, to judge, from *judex*, judge, from *jus*, right, law + *dicere*, to say). In logic, the act of distinguishing an element within the unity of an object of thought and of recognizing the function of that element as giving character to that object. In the above definition the term "act" means function, without any metaphysical connotation, and the term "object of thought" is not used to exclude objects of perception or of emotion. We may think about what we perceive or about what we feel. When we thus think about our perceptions or our emotions, they become objects of thought, while they may still remain objects of perception or of emotion. We may thus pass judgment upon any objects whatever—objects perceived, remembered, imagined, feared, hoped for, willed, etc.—and the element distinguished within the unity of such an object may be of any description whatever—a sense quality, a sense intensity, an affective tone, or what not. Traditional logic distinguishes within the judgment three parts: subject, predicate, and copula. Not all of these, however, are really parts of a judgment. The predicate is the *element* within the unity of the object of thought, recognized as giving character to that object. Thus, in the judgment "Sugar is sweet," sweetness forms the predicate of the judgment. What the subject of a judgment is has been a moot question. Traditional logic gives only a formal definition, saying that it is that of which the predicate is asserted. But the question arises, Of what is the predicate asserted? In the judgment "man is an animal" there would be no question, perhaps, that the subject is the complex object of thought called man, which an element, viz., animality, *within* the complex is recognized as qualifying. But how about such a judgment as is expressed by saying, "The house I saw yesterday was burned down this morning?" Traditional logic would answer by saying that the subject in this case is completely expressed in the phrase "the house I saw yesterday." If this is true, then the subject in this case does not perform the same logical function as was performed by the subject in the judgment last discussed. The subject here would not be the complex object of thought which an element *within* the complex is recognized as qualifying. It would be a complex which an element *outside* of the complex is recognized as qualifying. Total combustion this morning is not a feature of the complex object of thought which is adequately expressed by the phrase "the house I saw yesterday." It is a feature of the object of thought adequately expressed by the phrase "the house which I saw yesterday and which burned down this morning." Therefore, if the subject performs the same function in

this judgment as in the judgment "Man is an animal," then the subject is the total object of thought which is expressed by the phrase given in the last sentence. This view of the case reduces all judgments, so far as concerns the relation between subject and predicate, to one type which since Kant's day has been called *analytical*. (See ANALYTIC JUDGMENT.) It does not deny the synthetical character of thought in judgment, but holds that the synthesis is all represented in the logical subject, while the analysis is represented, at least in part, in the logical predicate. According to this view, therefore, all judgments may be expressed in the following formula. A certain object of thought, which may be identified by a certain characteristic or complex of characteristics, is further qualified by the mark or marks signalized in the predicate. According to another interpretation of the function of the subject in such judgments, the subject is not the total complex within which the predicate is an element, but it is an object of thought of smaller connotation (q.v.), which the predicate extends by adding to its content. According to this view, some judgments may be expressed in the following formula. A certain object of thought which is expressed by a certain term is in synthesis with another object of thought expressed by another term. This view makes the relation between subject and predicate one of synthesis, and therefore classifies all judgments of this sort as *synthetical*. If concepts were fixed and immutable things, as many thinkers regard them, then the latter view alone would be tenable. But concepts are constantly changing, hence it is perfectly permissible to maintain, as the former view does, that in what are called synthetical judgments the predicate redefines and requalifies the subject. In other words, the synthetical: "... is: a posteriori, is a recognition of a "... of the object of thought. The judgment does not give to the subject new features, but recognizes them as having already appeared in the subject and as therefore necessitating a new analysis. This is true even of Kant's a priori synthetical judgments, i.e., judgments which, it is alleged, combine different conceptions independently of experience. It is a misrepresentation to say that the combination is independent of experience. Peripherally originated experience (= experience due to sense stimuli acting upon the outer and not the brain end of sensory nerves) may indeed have never contained certain elements in certain combinations, yet we may think them as so combined. But we must remember that all experience is not peripherally originated. We have many experiences, e.g., of memory and of fantasy, which are centrally originated. In many such experiences combinations of objects take place pari passu with acts of judgment, but it is important to distinguish between the formation, i.e., the conscious appearance, of such combinations and the analysis of them in "... Now, since we can thus distinguish between the formation and the analysis of combinations, we ought in the interests of clear thinking to avoid calling the formation by a name that historically has been the specific term to designate only this analysis. The word "judgment," therefore, is improperly applied to the so-called acts of synthesis. Judgment, strictly so called, never synthesizes, but always analyzes; but that analysis always presupposes a synthesis, i.e., an appearance of a complex in

consciousness. If, however, by synthesis is meant an act of combining what at first appears out of combination—a meaning which seems to prevail in Kant's works—then analysis does not presuppose synthesis. Sometimes, it is true, elements appear temporarily apart from each other and then subsequently appear in combination; but this is not always the case, and it is convenient to use the word "synthesis" in the sense, not of a subsequent combination of elements at first separate, but of a conscious apprehension of elements in combination. Now the question arises. If synthesis thus defined does not always involve judgment, does it not always involve thought? The answer depends upon the meaning of the word "thought." If one defines the term as Hegel did, viz., as the consciousness of objects in relation, then of course, by the very definition, the question is answered affirmatively. If, on the contrary, one defines thought as Lotze did, viz., as a comparing and judging activity, then the question must be answered negatively. Lotze's polemic against Hegel on this point was due to an entire misunderstanding of Hegel's position. We may gather up the results of this discussion of the nature of the logical subject by saying that it is the complex object of thought recognized in the act of judgment as containing within its complexity the element ... predicate. The logical copula is ... tion of the fact that the element functioning as predicate is included within the complex functioning as subject. In other words, the copula of any judgment is that element in the act of judgment which differentiates it from a mere envisaging of a complex without analysis of it; it is the act of analysis of a recognized synthesis.

An objection which at first sight seems to bear hard against this description of the function of judgment and of the element-... is that it reduces judgment to "... we judge of "the house which I saw yesterday and which was burned down this morning" that it did burn down this morning, we have made no advance, it is claimed. The objection, however, confuses ... with the verbal expression of ... there is some exceptional reason for repetition of the expression of some distinct element in the complex object of thought, such repetition is idle. But when one recognizes a complex object of thought as constituted of certain features, this is not tautology. A recognition and expression of the actual state of facts is not a tautology, but a truth. It will be observed that so far nothing has been said to the effect that the subject is always a noun substantive with its qualifiers, the predicate, an adjective or some adjectival word or phrase; while the copula is always some part of the verb *to be*. The reason for this omission is that such a statement, so far as it is true, is a matter of language, not of logic. But not all of it is true. Not to speak of "... in which there are no adjectives as ... from verbs or from substantives, the copula is always expressed by the whole sentence, not by some part of the verb *to be* or its equivalents in other languages, except in those few cases where some part of that verb is the whole sentence, e.g., *est* in Latin.

The relation between judgments and concepts may be stated thus: No concept (q.v.) can be formed without an act of judgment. Such a concept as that of cat, e.g., is the result of pre-

vious judgments which recognized within certain complex objects of thought certain constant elements. The first objects of thought that appear in the history of any thinker are without doubt individual percepts. Subsequently we have individual objects of memory, of imagination, etc. The comparison of such objects with each other results, when they are alike, in a judgment which predicates of these objects similar qualities. Our concepts are such similar qualities or complexes of qualities as are thought to characterize various individual objects. Thus the concept cat is that complex of qualities which, it is judged, characterize in common the various individual cats. These conceptual elements do not exist in consciousness in separation from the other qualities which go to make the individual percepts, remembered objects, etc. They are merely distinguished from these other qualities. A concept once formed by an act of judgment may be made the basis upon which further judgmental operations are conducted. Thus, once equipped with the concept cat, a scientist may proceed to various zoological judgments about feline characteristics which the ordinary man knows nothing about. Thus, we see that concepts always result from judgments, but many judgments result from the fact that we have previously formed concepts. Judgment is related to reasoning in the following manner: as thought becomes more developed, judgments are made which are recognized as being true because other judgments are true. This complex intellectual process in which a judgment is made and is likewise judged to rest upon the truth of some other judgment is called reasoning.

Judgments are usually divided into three classes: singular, particular, and universal. Singular, or better individual, judgments are those in which the subject is some single object of thought, e.g., this cat. Universal judgments are those in which the predicate is asserted to qualify not only the single object or the several similar objects which psychologically function as subjects, but *all* similar objects, though not present in consciousness at the time of judgment. Thus, in the judgment "All material bodies gravitate," I may have in mind only the image of two individual objects moving towards each other, and may in the judgment be actually analyzing out of the complex image this movement towards each other and recognizing it as characterizing the complex. But this is not the whole of the matter. I recognize this analysis as good not only for this particular complex, but for all other complexes in which material objects are component elements. Such universal judgment is always the result of induction (q.v.). Particular judgments are either summaries of the results of several individual judgments or they are universal judgments in disguise. Thus, when we say "Some vertebrates are mammals," we may mean merely that in past experience we have had some individual percepts in which the character of mammalianism was a feature of vertebrate animals. Or we may mean that beyond the bounds of our past experience likewise there are some mammalian vertebrates to be found. In the latter case we are making an induction, and, if we expressed ourselves adequately, we should say all cats, dogs, horses, monkeys, etc., are mammals. The connection between the qualities of vertebrate-ness and mammalianism is not unconditional, but is conditioned upon the presence of other

qualities which are found only in dogs, etc., and not in fishes and the like. Either because we do not know the qualities or do not care to name them, we say "some vertebrates."

Bernard (New York, 1892); Jerusalem, *Die Urtheilsfunktion* (Vienna, 1895); Marbe, *Experimentelle-psychologische Untersuchungen über das Urtheil* (Leipzig, 1901); Ruyssen, *Essai sur l'évolution psychologique du jugement* (Paris, 1904); Kant, *Critique of Aesthetic Judgment*, translated with seven introductory essays by J. C. Meredith (Oxford, 1911); H. L. Hollingsworth, *Experimental Studies in Judgment* (New York, 1914); M. R. H. King, *Judgment* (ib., 1911); and the authorities referred to under Logic.

JUDGMENT. An intermediate or final determination or adjudication of the rights of the parties to an action or proceeding by a court of justice. Where it determines some of the rights of the parties, but is incomplete because all the questions raised by the issues are not settled or the extent of the relief fixed or defined, a judgment is called interlocutory, as there is something reserved for future determination. For example, if A sues B and the court determines as a matter of law that A is entitled to recover, but the accounts are so complicated that the court finds it necessary to direct a reference and an accounting to determine the exact amount due, an interlocutory judgment directing recovery and accounting will be rendered, and after the amount due has been reported by the referee, a final judgment for such sum will be entered. Several codes of procedure have abolished the use of the term "interlocutory judgment" and designate as an order every direction or determination of the court which is not a final disposition of the action. Under the common-law practice, however, there is a distinction in that an order, as distinguished from a judgment, does not settle any principal question in controversy, but merely some point of practice or some question collateral to the main issue.

A judgment is final when it disposes of or concludes an action so that it is at an end, even though it does not settle all of the rights of the parties. It is usually rendered at the end of the trial of an action, but may be entered upon a default in pleading or as a result of the nonappearance of, or abandonment of the action by, either party, or on a confession of judgment.

In its more technical sense the term "judgment" applies only to the adjudication of a court of law, the term "decree" being employed to describe the determination of a cause by a court of equity. (See DECREE; EQUITY; CHANCERY, COURT OF.) Under most codes of procedure where the former material variances in practice in law and equity have been abolished, the term "judgment" is now generally used to designate the final determinations of the courts in all cases, both in law and equity, but both courts and attorneys constantly use the term "decree" as a matter of description in the older and more accurate sense. Judgments are distinguished from *findings* (see FINDING) of fact or law, in that the latter are only formal expressions of the conclusions of a judge or referee and do not award relief.

Judgments are usually entered or docketed in the office of the clerk of the court in which they are rendered. This consists of an entry of a

brief description of the judgment, containing the names of the parties, designating the successful party, the date of recovery, the date docketed, and the amount awarded therein. The book in which this entry is made is called the docket of judgments, and is a public record, accessible for examination by any person who cares to examine it. If an execution is issued, the return of the sheriff, whether it be satisfied, meaning collected, or settled, or *nulla bona* (no goods) or unsatisfied, is entered opposite the description above referred to.

By statute in most jurisdictions a judgment, after being docketed, becomes a lien on the real property of the judgment debtor. It is subject to all valid prior liens existing at the time it was docketed, but takes precedence over all subsequent liens of any character except those for obligations to the municipal, State, or Federal government, such as liens for taxes and assessments. The public docket gives legal notice of the lien to all persons, just as the record of a mortgage operates, and any intending purchaser who omits to search for judgments against the owner of the property in question does so at his peril, even though he has not actually learned of the judgment, as he is deemed to have constructive notice of all matters of public record. This lien is usually restricted to the jurisdiction of the particular court in which it is rendered, unless a transcript or brief description of the judgment is obtained from the clerk and filed in another jurisdiction in the same State, usually another county, in which case its force is extended to that county. The duration of this lien is usually fixed by statute, otherwise it continues as long as the judgment is in force, unless waived by the judgment creditor. (See RELEASE; ACCORD AND SATISFACTION.) In most States by statute there is a legal presumption that a judgment is satisfied after the expiration of 20 years, but usually it is provided that this may be rebutted by proof to the contrary.

Where a judgment is void or voidable because of lack of jurisdiction of the court, or because of fraud or some irregularity it may be opened and set aside on motion of the judgment debtor. Where it is obtained by reason of a default in pleading or appearance, or by mistake of either party, the court may in its discretion vacate it, direct the proper pleadings to be served or filed, and permit the cause to proceed to trial on the merits. This is usually granted on terms, such as payment of costs by the party applying for the relief.

A judgment may be assigned by an instrument in writing, and the assignee will take all the rights and remedies of the judgment creditor. It will also descend as a part of the assets of a deceased owner. Upon payment of the amount of the judgment and accrued interest the judgment debtor is entitled to a satisfaction piece. See APPEAL; FINDING, OPINION; REPORT; RES JUDICATA. Consult: A. C. Freeman, *The Law of Judgments* (4th ed., San Francisco, 1892); H. C. Black, *The Law of Judgments* (2d ed., St. Paul, 1902); J. R. Rood, *Leading and Illustrative Cases, with Notes, on the Law of Judgments* (2d ed., Ann Arbor, 1909).

JUDGMENT, FINAL. The ultimate trial of the human race when judgment will be passed upon all men according as their works have been good or evil in the present order of things will be brought to an end, and a new dispensation inaugurated. The idea of a coming de-

struction of the world by fire is found among many peoples. (See ESCHATOLOGY; It was especially developed among the ancient Indo-European nations. The worshipers of Ahura Mazda believed that this world-consuming fire would destroy only the wicked, while the good would pass through it unscathed. With this judgment there associated itself gradually in Mazdayasnian thought the expectation of a Saoshyant (the Messiah) who would raise the dead. (See SAOSHYANT.) The various elements of this Persian eschatology found their way into Jewish and Christian speculation. That the conception of the ordeal by fire was thus transplanted is evident from the *Sibylline Oracles*, ii, 252 et seq., viii, 411; Lactantius, *Div. Inst.*, vii, 21, 6; and the same is true of the coming of the Messiah with flaming fire, the resurrection of the dead, and the connection of the Messiah with this resurrection. But these foreign ideas found acceptance because they could ally themselves with already existing tendencies of thought. In ancient Israel the day of a battle which decided the fate of a nation was called a "day of Yahwe" While popularly this day was looked upon as bringing deliverance or victory to Israel, the great prophets before the Exile who on moral and religious grounds regarded the destruction of Israel and Judah by the Assyrians or the Babylonians as inevitable, saw in it a day of judgment upon their people for its sins. In this sense the term is used by Amos and Zephaniah, and the conception is found in Hosea, Isaiah, Micah, and Jeremiah. After the Exile judgment was naturally expected upon the arrogant world power that oppressed the Jews, and the "day of Yahwe" became the day when He would punish the nations and deliver His people. Signs of its coming were eagerly looked for. In Joel the Day of Judgment is preceded by great calamities. The apocalypse of Daniel, written 165 B.C., depicts a scene of judgment in heaven. Thrones are set for the celestial court; the demonic representative of the Græco-Macedonian power in the shape of a chaos monster is condemned, and the angelic representative of Israel in the form of a man receives the Empire. Towards the end of the second century B.C. the judgment upon the angels who sinned by marrying beautiful women (see ANGEL) and the angels of the nations already occupied much attention, as is seen in the older parts of the Book of Enoch and in the apocalypse preserved in Isaiah xxiv-xxvii. As the notion of a celestial judgment thus linked itself to the earlier ideas of a retribution and a change of power on earth, so the new doctrines of a resurrection and a Messiah connected themselves with earlier speculations (see RESURRECTION; MESSIAH), and the grand conception of a universal judgment was formed. It is doubtful whether the step was ever taken in Judaism of ascribing the final judgment and the resurrection to the Messiah. On the other hand, the Persian idea of an ordeal by fire and an emergence of a new heaven and a new earth from the final conflagration may have come through Judaism to Christianity. If the Messiah's kingdom was regarded as of limited duration, the judgment was thought of as following it (Psalter of Solomon). Where the Greek doctrine of immortality (q.v.) was accepted rather than the idea of a resurrection, the judgment of each individual was regarded as occurring immediately after death,

and there was no thought of a general judgment (Wisdom of Solomon; Philo). In the New Testament different views are represented. Whether Jesus himself believed in a final judgment cannot be ascertained. His view of the resurrection (q.v.) renders it improbable. The Evangelists connect the last judgment with His *parousia*, or appearance upon the clouds. The scene of the last assize in Matthew xxiv is remarkable by the emphasis put upon moral conduct, the nations being judged not by their religious beliefs, but by the manner in which they have treated some of their fellowmen, viz., the Christians. The Epistle of Jude follows the teaching of the Book of Enoch on this subject. Second Peter reflects the Persian conception of a world conflagration. James expects the coming of the Messiah to judge the world. The Epistles to the Thessalonians present the thought of a final judgment connected with the *parousia*, when Antichrist and the godless Jews and Gentiles will be destroyed. In other Pauline Epistles "the day of the Lord Jesus Christ" is described as the time when Christ shall return and render unto all men according to the deeds wrought in the body. In the Epistle to the Hebrews, however, the judgment follows immediately after death, and the conception of the future is that characteristic of Alexandrian thought. The same is true of the Johannine writings, in which the current idea is allegorically interpreted and referred to the already existing distinction between the followers of the light and those remaining in darkness. In the ecumenical creeds of Christendom the return of Christ to judge the quick and the dead maintained its place, and the importance of the final judgment was enhanced by the developing doctrine of a purgatory. The rejection of the doctrine by the Protestants tended to fix the eternal destiny of the individual at death; but as the resurrection was not assumed to take place before the final judgment, the latter event still retained some of its significance. The reviving chilastic speculation (see MILLENNIUM) had a tendency to find in the millennial reign of Christ and His saints on earth the judgment of the world. Swedenborg conceived of several final judgments at the end of the different dispensations—the Adamic, the Noachic, the Mosaic, and the first Christian, closing in 1759. Among those who adhere to the doctrine as set forth in the Christian creeds there is much difference of opinion as to the details of time, place, and circumstances. In the view of Catholic theologians a "particular judgment" is passed upon every soul at the moment of death, when the choice made by the human will is irrevocably fixed, and the sentence of God is passed in accordance with its choice. There is general agreement that the final judgment is pronounced upon assembled humanity, and includes in the basis of its award the consequences to the whole race of the acts of the individual. Its purpose is also partly the glorification of God by this public exhibition of His justice. The judge is Christ, not only in His divine but also in His human nature; this triumphant exaltation is considered as the complement of His humiliation to the death of the cross. The place is supposed to be the earth; the time, a secret in the counsels of God until it arrives. In scientific circles Herder's view that the history of the world is the judgment of the world is widely

prevalent. It is expected that the earth will some day become uninhabitable, and the life of the human race will cease, and that ultimately the planet will be destroyed by fire. But this disappearance of the earth is regarded as quite normal and without serious effect upon the life of the infinite universe. JUDGMENT OF DANIEL. See SUSANNA, HISTORY OF.

JUDGMENT OF GOD. See ORDEAL.

JUDGMENT OF PARIS. See PARIS (in Greek legend).

JUDIC, zhū'dék', ANNA DAMIENS, MADAME (1850-1911). A French actress, born at Semur. In youth she was a shop girl in Paris, but entered the Conservatoire, and in 1867 made her début at the Gymnase. The following year, at the Eldorado, she quickly won a popularity which was increased by a visit to Belgium in 1871. Later she appeared at the Gaité and the Folies-Bergère and became a leading attraction at the Bouffes-Parisiens and the Variétés, where she created, among other rôles, Niniche, Mimi, Lili, and Mademoiselle Nitouche. In 1885-86 she went on tour and appeared in all the principal cities of Europe and the United States. After a period of retirement she appeared again as a café-concert singer in 1898.

JUDICATURE ACTS (Fr. *judicature*, from ML. *iudicatura*, *iudicature*, from Lat. *iudicare*, to judge). The usual description of the important legislation of 1873, 1875, 1877, and 1881, whereby the judicial system of Great Britain and the procedure of the courts were radically altered and transformed. The acts comprehended in that designation are the 36 and 37 Vict., c 66, and 38 and 39 Vict., c 77, with amendments in 37 and 38 Vict., c. 83, and in the Laws of 1877, c 9, and 1881, c 68. Most of the courts affected by this legislation were of great antiquity. The Court of Common Pleas (q.v.), the Court of King's (or Queen's) Bench (q.v.), the Court of Exchequer (q.v.), the Court of Admiralty (q.v.), the Court of Probate, and the Court for Divorce and Matrimonial Causes were all consolidated and were declared to constitute one Supreme Court of Judicature. This court was divided into two permanent divisions, one of which, Her Majesty's High Court of Justice, was invested with original jurisdiction of causes, together with appellate jurisdiction from certain inferior courts, which were not abolished; and the other, Her Majesty's Court of Appeal, was given such appellate jurisdiction as might be incident to the determination of any appeal. See COURT.

The most important change in procedure effected by the judicature acts was the provision that law and equity should be concurrently administered by the same court, and that equitable defenses should be allowed in legal actions. The distinction between legal and equitable remedies was not abolished, but the same judge or court was authorized to administer both kinds of relief. These provisions make the powers of the High Court of Justice quite analogous to those of the superior courts of original jurisdiction in many of the United

States under codes of procedure. A further important change in pleading and practice was the abolition of the old forms of action (q.v.). While all the elements constituting a legal claim or defense must be set forth in a pleading, the pleader is no longer confined to an artificial and arbitrary form as before, but is simply required to deliver to the defendant a concise statement of his claim and of the relief or remedy to which he claims to be entitled, or a brief statement of his defense, as the case may be.

A third important change in procedure was a provision that an absolute assignment of contract debts and other rights of action should be deemed to pass all legal and equitable rights and title thereto, provided that notice was given to the person liable, and that the assignee should have all legal and other remedies for the enforcement of such rights. This obviated the necessity which existed under the old practice, of an assignee of a right of action, as a claim for money due, suing in the name of the former owner thereof. By these acts all jurisdiction vested in the judicial committee of the Privy Council (q.v.) upon appeal from any judgment or order of the High Court of Admiralty, or from any order in lunacy proceedings made by the Lord Chancellor, or any other person having jurisdiction in lunacy, was transferred to and vested in the Court of Appeal. See CHANCERY, COURT OF; ECCLESIASTICAL COURTS, FORMS OF ACTION; PLEADING; PRACTICE.

JUDICIAL COMMITTEE OF THE PRIVY COUNCIL. See PRIVY COUNCIL, *Judicial Committee*.

JUDICIAL NOTICE. The recognition by a court of the existence, nature, or truth of something involved in an action, on the theory that it is self-evident, or that it is a matter of such common knowledge as not to require any proof to establish it. The doctrine originated in the civil law and has always existed in the English and American law. It is a rule founded on expediency and convenience, adapted to save time in the trial of an action. The questions as to what facts are matters of such universal knowledge or certainty as to warrant judicial notice being taken of them, rest largely in the discretion of the court, and this is exercised with great caution. In most jurisdictions, by statute, certain matters of both law and fact are required to be judicially noticed, such as the attestation of a copy of a public record by the proper officer under the great seal of the state, or that the publications of the state printer contain authentic copies of the public statutes, etc. In general it is the right and sometimes the duty of courts to take judicial notice of the following facts: the common law and public statute law, the public offices and officers, and the rules of the courts and matters of public record of their own state, the political constitution of their own state government and of the United States; the existence and title of every foreign state and sovereign recognized by the United States; public proclamations of the chief executive of the state or nation, and all matters of such universal acceptance that there can be no dispute in regard to them, such as the divisions of time into years, months, and days, etc. In the absence of statute, where a court has any doubt as to a fact involved in a trial, it has a right to and should require evidence tending to establish it to be introduced.

It is not essential, in order to take judicial notice of fact, that the trial judge should be personally familiar with it at the time of the trial, if before his decision he becomes convinced by his own investigation that it is a general fact never disputed by competent authorities, or where he learns of a statute affecting the case subsequent to the trial. A jury has substantially the same liberty as a court to take notice of matters of fact upon the same principles as govern the courts, but cannot take cognizance of a law without instruction from the court. Neither a court nor a jury can consider in their deliberations any personal knowledge they may have of the peculiar circumstances of a case, unless they are set before them in the evidence, as they are bound to decide solely upon the law and evidence as brought out in the trial. In any case where a court assumes something to be true without proof, either counsel may object and introduce evidence tending to contradict the conclusion of the court. If a court refuses to allow such evidence, the party who offered to introduce it may appeal on that ground; and if the appellate court finds that the trial court erred in this respect, it may reverse the judgment and order a new trial. See EVIDENCE; and consult the authorities there referred to.

JUDICIAL SEPARATION. The termination by judicial decree of the conjugal rights of husband and wife. Colloquially and to some extent in legal usage the term "divorce" has been applied to such a separation, as in the expressions "limited divorce" and "divorce *a mensa et thoro*" (from bed and board), but in strictness divorce is the final and complete dissolution of the marriage bond, sometimes distinguished from the so-called limited divorce by the term "absolute divorce." The right of husband and wife to such freedom from conjugal control was recognized even by the Church, which denied the possibility of a dissolution of a sacramental marriage, separations being granted for adultery and in rare instances for other grave causes. With the general recognition in the United States of the right of divorce for a variety of causes, judicial separation, once the only relief from an intolerable conjugal relationship, has largely lost its importance, though it is still frequently resorted to in England and in such of the United States as confine divorce within narrow limits.

The effect of a judicial separation is to destroy the *consortium*, or right of the husband or wife to cohabitation or the society of the other, and it relieves the husband from his common-law liability for the support of the wife or for debts contracted by her for necessities or in his name. But, as the parties are still husband and wife, neither is at liberty to marry even with the consent of the other, and cohabitation of either with another person of the opposite sex is adultery. Judicial separation has no effect on the property relations of the parties. It does not affect a tenancy by entireties or the right of survivorship in a joint estate nor the wife's dower or the husband's estate by the curtesy. Nor does it affect the husband's rights as guardian of the children of the marriage unless the decree of separation makes express provision for their care and custody. See DIVORCE; HUSBAND AND WIFE.

JUDICIARY, ju-dish'ā-ri. See COURT; JUDGE; MAGISTRATE.

JUDITH (Heb. *Yēhūḏith*, fem. of *Yēhūdah*,

Judah), A Jewish heroine, who has given her name to one of the deuterocanonical books (q.v.). According to the story in this book, Nebuchadnezzar, the Assyrian King, after the conquest of the Medes sent Holofernes with a large army against Palestine. The general demanded the destruction of the temple at Jerusalem, and the people prepared to resist him. When Bethulia was attacked, the people were so famished that their leaders had to promise surrender within five days. During this time Judith, described as a rich young widow of the tribe of Judah, left Bethulia, came to the camp of Holofernes, and captivated the general by her great beauty. A banquet was given in her honor, and as Holofernes lay drunk she cut off his head. On the death of the leader the Assyrian army was thrown into a panic, and thousands were killed by the Jews. The story is purely legendary, although the author introduces several historical personages into his tale, such as Holofernes, a satrap under Artaxerxes, and Bagoas, a contemporary of Holofernes. According to Torrey (*Journal of the American Oriental Society*, vol. xx, pp. 160-172), the form Bethulia is a disguise for Shechem. The purpose of the book, which was originally written in Hebrew, is similar to that of Tobit (q.v.), viz., to encourage the pious Jews to remain steadfast and, despite all temptations and sufferings, to maintain their confidence in Yahwe. Hilgenfeld, Noldeke, Schürer, Wilrich, and Cowley fix the date in the middle of the second century B.C., others, less plausibly, place it in the Roman period and see in the general term references to the conditions prior to Pompey's appearance at Jerusalem (63 B.C.). It is to be noted that the Hebrew versions known, of which there are several, do not represent the original text, but are comparatively late productions based upon the Greek text. Consult the commentary of Fritzsche (Leipzig, 1853), Wace, *Apocrypha*, vol. 1 (London, 1880); Kautzsch, *Apokryphen*, vol. 1 (Tübingen, 1900), and especially Cowley, in Charles, *The Apocrypha and Pseudepigrapha of the Old Testament* (Oxford, 1913).

JUDITH, zhū'dét' (1827-1912). A French actress whose real name was Julie Bernat. She was born in Paris and was a kinswoman of the great Rachel. She made her début in 1845 at Les Folies and appeared at the Théâtre Français four years afterward. Her best rôles were Pénélope, Alcmène, Rosine, Charlotte Corday, and Mademoiselle Aissé. In literature she first appeared as fellow translator from the English with her husband, Bernard Derosne; she then translated from Dickens and under the name Judith Barnard wrote *Le château du Tremble* (1872). Her autobiography appeared in 1911.

JUDSON, ADONIRAM (1788-1850). A pioneer American missionary. He was born at Malden, Mass., Aug. 9, 1788; graduated at Brown University, 1807, and at Andover Theological Seminary, 1810. Becoming inspired with missionary zeal, he joined five other students in addressing a letter to the General Association of Massachusetts expressing their wish to labor among the heathen and asking advice. The result was the formation of the American Board of Commissioners for Foreign Missions. (See MISSIONS, CHRISTIAN.) Mr Judson was sent to confer with the London Missionary Society and ask their aid. On the voyage he was captured by a French

privateer and thrown into prison at Bayonne, but when released prosecuted his errand. After his return he and Messrs. Newell, Nott, Hall, and Rice were appointed by the American Board as missionaries to India or Burma. He was ordained Feb. 6, 1812, and February 19 they sailed for Calcutta. Arriving (June 17), they were ordered by the East Indian government to return home in the vessel which brought them; and, though this demand was modified, they were required to leave soon. Mr. Judson and his wife, having changed their views in regard to baptism, were immersed by Rev William Ward, of Calcutta. This led to the formation of the American Baptist Missionary Union (1814). Mr. and Mrs. Judson went to the Isle of France, afterward to Madras, with the design of reaching Penang, but, being thwarted in their wishes, took passage for Rangoon. Here (1813), alone and without assured means of future support, they entered upon the study of the languages. The Baptist churches of the United States responded to their appeal and supported the mission. Within a few years they gathered a church of 18 members, and won friends among the people. The government, however, had given some tokens of disapproval. Dr. Price, a physician, having joined the mission, was sent for by the King to come to Ava, the capital, and Mr Judson removed thither to act as his interpreter. War breaking out between the East India Company and Burma (1824), Mr. Judson was arrested, thrown into the death prison, and subjected to cruel barbarities. After a year and seven months he was released, in February, 1826, on the demand of Gen. Sir Archibald Campbell. He commenced a new mission in Amherst, Lower Burma, but, an embassy being sent thence to negotiate a treaty which it was hoped would secure religious toleration, his services as interpreter were again required at Ava. In 1827 he removed to Maulmain, where a church was formed. In 1830 Mr. Judson's health failed, and in 1845, because of illness in his family, he returned to America. In 1847, however, he was back in Rangoon. Here he gave himself partly to the preparation of a dictionary and partly to Christian teaching. In 1850, his health having declined almost beyond the possibility of recovery, he was carried in a litter on board ship at Maulmain in the hope that a voyage would benefit him. He died four days later, and his body was committed to the ocean, April 12, 1850. Numerous converts, a corps of trained native assistants, the translation of the Bible and other valuable books into Burmese, the compilation of a Burmese grammar and a Pali dictionary, and a large Burmese and English dictionary nearly completed, are some of the direct fruits of his 37 years of missionary service. Consult his life by Wayland (New York, 1853) and by his son, Edward Judson (ib., 1883, new ed., 1898). Dr Judson was thrice married.—**ANN HASSELLTINE**, his first wife, was born at Bradford, Mass., Dec. 22, 1789. She was married in 1812 and shared with great fortitude her husband's trials and sufferings during the beginning of his service in Burma. While he was imprisoned at Ava, she saved his life by ministering to his wants, and it was largely due to her untiring exertions that he was finally released. Her health was seriously impaired by her hardships at this time. She died at Amherst, Oct. 24, 1826. While on a visit home in 1822, she pub-

lished a history of the Burma mission. Consult her life by Knowles (Boston, 1829).—**SARAH HALL (BOARDMAN)**, Dr. Judson's second wife, was born at Alstead, N. H., Nov. 4, 1803. In 1825 she married Rev. George Dana Boardman and went with him to join the Baptist mission in Burma. Mr. Boardman died in 1830, and four years later she was married to Dr. Judson. She translated part of the *Pilgrim's Progress*, several tracts, and a hymn book into Burmese, and supervised a translation of the New Testament into Peguan. She died on shipboard at St. Helena while returning to America, Sept. 1, 1845. Consult her life by Emily C. Judson (New York, 1849).—**EMILY CHUBBOCK**, the third wife of Dr. Judson, was born at Eaton, N. Y., Aug. 22, 1817. She attained repute as a writer under the pen name of Fanny Forester and was commissioned to write the life of the second Mrs. Judson. She married Dr. Judson June 2, 1846, and the same month accompanied him to Burma. After his death (1850) she returned to America; but her health remained feeble, and, aside from assisting Dr. Wayland in his memoirs of Judson, she could do little literary work. She died at Hamilton, N. Y., June 1, 1854. Consult her life by A. C. Kendrick (New York, 1861). Dr. Judson's son, Edward (qv), erected a church in New York as a memorial to his father and served as its pastor.

JUDSON, EDWARD (1844-1914). An American Baptist clergyman, born at Maulmain, British Burma, a son of the missionary Adoniram Judson. He graduated in 1865 at Brown University, in 1868 was appointed professor of Latin and modern languages in Madison (now Colgate) University, in 1874-75 traveled abroad, and after being ordained to the Baptist ministry in the latter year was pastor of a church at Orange, N. J., until 1881. Thereafter to the time of his death he occupied the pulpit of a New York City church, first known as the Berean Church, later as the Memorial Baptist, and finally as the Judson Memorial. Dr. Judson having erected a large building on Washington Square to house the congregation, equipped with the facilities of an "institutional" church. He lectured on theology at the University of Chicago (1904-06) and on Baptist principles and polity at Union Theological Seminary (1906-08) and was made professor of pastoral polity at Colgate. In 1899 he published a *Life* of his father, and he wrote also *The Institutional Church*.

JUDSON, FREDERICK NEWTON (1845-). An American lawyer, born at St. Mary's, Ga. He graduated from Yale University in 1866 and from the St. Louis Law School in 1871; served as private secretary to Gov. Gratz Brown (1871-73) and as president of the St. Louis board of education (1880-82, 1887-89); was special counsel for the United States in railroad rebate and rate cases (1905, 1910); and was member of a commission to investigate the power of Congress to regulate the security issues of the railroads (1910). In 1912 he served on the arbitration board which settled the dispute between railroads and locomotive engineers in the East. He lectured at Washington University and (1913) was Storrs lecturer at the Yale Law School. In 1907-08 he was president of the American Political Science Association. He published: *Law and Practice of Taxation in Missouri* (1900); *The Taming*

Power, State and Federal, in the United States (1902); *The Law of Interstate Commerce* (1905, 2d ed., 1912); *The Judiciary and the People* (1913).

JUDSON, HARRY PRATT (1849-). An American university president, born at Jamestown, N. Y., and educated at Williams College (A.B., 1870, A.M., 1883). He taught in the Troy (N. Y.) High School in 1870-85 and was professor of history and lecturer on pedagogics at the University of Minnesota in 1885-92. At the University of Chicago he became professor of political science and head dean of the colleges in 1892, head of the political science department and dean of the faculties of arts, literature, and science in 1894, acting president in 1906, and president of the university in 1907. He became a member of the General Education Board in 1906 and of the Rockefeller Foundation in 1913. Besides editing a series of readers, he is author of *History of the Troy Citizens' Corps* (1884), *Cæsar's Army* (1888); *Europe in the Nineteenth Century* (1894; 3d ed., rev., 1901); *The Growth of the American Nation* (1895, 2d ed., 1900), *The Higher Education as a Training for Business* (1896, 2d ed., 1911); *The Government of Illinois* (1900), *The Essentials of a Written Constitution* (1903).

JUDSON POWDER. See EXPLOSIVES

JUDY. The name of Punch's wife in the popular puppet show *Punch and Judy*. She is also called Joan.

JUEL, Jøel, NIELS (1629-97). A Danish admiral, born at Christiania and educated at Sorø. In 1650 he went to Holland and served in the war with England and the Barbary States under Tromp and De Ruyter. He returned to Denmark (1656) and under Obdam and De Ruyter with the allied Dutch fleet fought against Sweden in 1659. But his most splendid fight was in the later war with Sweden, when, after conquering Gothland, he met more than 40 ships of the enemy with his 25, and put them to rout in the battle of Jasmund, between Bornholm and Rugen (May, 1676). Again, in the following year he defeated the Swedish Admiral Sjöblad, who outnumbered him, 36 ships to 25, at the great battle in the Bay of Kjöge. Juel's later years were spent in administrative offices, where he showed great ability, especially in reforming and building up the navy.

JUENGLING, yǔng'ling, FREDERICK (1846-89). An American wood engraver, born in New York City. He studied at the Art Students' League and was the first secretary and one of the founders of the American Society of Wood Engravers (1881). He belonged to the new school, which, for the long lines and regular sweeps of the graver, sanctioned by tradition, desired to substitute short, broken lines and dot-tipping. Sylvester Koehler, in his paper on the "United States" contributed to the important folio volume *Die Radierung der Gegenwart* (Vienna, 1892-93), calls him the "boldest and most inconsiderate experimenter among the pioneers of the new school," but cites his reproduction of "Monticello" as a veritable triumph of wood engraving. Juengling's reproductions of Kelly's illustrations in *Scribner's Monthly* (1877) is regarded by Weitenkamp as making "the first obvious, continued assertion of the new point of view." Consult Frank Weitenkamp, *American Graphic Art* (New York, 1912). See WOOD ENGRAVING.

JU'GA. An acacia whose pods are used in tanning. See **ALGABOVILLA**.

JUG'GERNAUT. See **JAGANNATH**.

JUG'GLER (from OF., *F. jongleur*, from Lat. *joculator*, jester, joker). A performer who exhibits feats of skill and dexterity. The term has broader ramifications; its French form *jongleur* is applied to a class of persons who included musical and literary features in their entertainments, while, on the other hand, men who merely produce illusions by sleight of hand (see **LEGERDEMAIN**) are often known as jugglers. The ancient Romans had their conjurers or wonder workers (*præstigiatores*), their throwers of knives (*ventilatores*), and their players with balls or rings (*pilarii*). In modern times the Chinese and Japanese are skilled jugglers; their feats are more the results of agility and practice than the marvelous performances of the Hindu fakirs, which come more properly under the head of legerdemain. See **FIRE EATING**.

JUGGS. See **JOUGS**.

JUG'LANDA'CÆE (Neo-Lat. nom. pl., from Lat. *juglans*, walnut, from *Jovis*, Jove, Gk. *Zeús*, Zeus, Zeus, Skt *dyaus*, sky + *glans*, acorn, connected with Gk. *βάλανος*, *balanos*, acorn), **THE WALNUT FAMILY.** A family of dicotyledonous plants with about six genera and 40 species, natives of the north temperate zone, the members of which are mostly trees with alternate compound leaves, unattractive, wind-fertilized, monœcious flowers, the staminate in catkins, the pistillate sessile on twigs of the current year's growth. The arrangement of buds is rather unusual, there are often several in a row, and they appear high above the leaf axils. The fruit is a nut. The Juglandacæe are associated with the willow and poplar (*Salicacæe*), birch and alder (*Betulacæe*), and beech and oak (*Fagacæe*), in the assemblage called *Amentifæræ*, or ament-bearing plants, regarded by many as the most primitive assemblage of Angiosperms. The Juglandacæe are distinguished from these by their compound leaves. The timber of the principal genera is valuable, that of the black walnut being in demand for cabinetwork, etc., and the hickory for use where toughness and strength are desirable, as in tools and implements. The chief genera are *Juglans* (the walnuts) and *Hicoria* (the hickories). See **WALNUT**, **HICKORY**, **PLATE OF BRAZIL NUT**.

JUGULAR (joo'gû-lar) **VEIN** (from Lat. *jugulum*, *jugulus*, collar bone, dim. of *jugum*, yoke) One of two veins situated on each side of the neck, in pairs, whose function is to convey the blood from the head to the heart. The external jugular vein on either side is located just underneath the skin and conveys the blood from the external portions of the head and neck; while the internal jugular vein on either side is deeper, lies near the carotid artery, and conveys the blood from the lateral sinus of the cranium.

JUGUR'THA (Lat., from Gk. *Ἰουγούρθας*, *Iougourthas*) (?-104 B.C.) King of Numidia (q.v.). He was the grandson of Masinissa (q.v.), King of Numidia, and was brought up together with his cousins Adherbal and Hiempsal, the sons of his uncle Micipsa, who succeeded Masinissa on the throne. He was finely gifted by nature and well trained in horsemanship and in warlike exercises. In 134 B.C. he was sent by Micipsa to Spain to lead a Numidian force in alliance with the Romans under

Scipio Africanus Minor. At this time he gained the friendship of Scipio and other influential Romans. On the death of Micipsa (118 B.C.) Jugurtha was given a share in the Kingdom with his cousins, but he soon caused Hiempsal to be murdered and drove Adherbal out of Numidia. Adherbal appealed for aid to Rome; but Jugurtha succeeded in bribing many Roman senators and obtained a decision in his favor, freeing him from the charge of the murder of Hiempsal, and assigning to him the western part of Numidia, a district populous and rich, whereas to Adherbal was given the eastern portion, which consisted largely of deserts. But Jugurtha soon invaded Adherbal's dominions and, notwithstanding injunctions by the Romans to the contrary, besieged him in the town of Cirta (112 B.C.) and caused him and the Romans who were captured with him to be put to death with horrible tortures. War was declared against Jugurtha by the Roman people, but, by bribing the Roman generals, Jugurtha contrived for years to baffle the Roman power. At last the Consul, Q. Cæcilius Metellus, proving inaccessible to bribes, defeated him in 109 and 108 B.C., and he was compelled to flee to the Mauritanian King, Bocchus. Marius (q.v.), who succeeded Metellus in the command, carried on the war against Jugurtha and Bocchus, till at last Bocchus, persuaded by Sulla (q.v.), delivered up Jugurtha to the Romans (106 B.C.). The King, after being kept a captive in Africa for two years, was exhibited at Rome in the triumph of Marius (104 B.C.), and was then thrown into the underground dungeon, the Tullianum, to die of hunger (or to perish by starvation). In the war against Jugurtha, Marius and Sulla, the future rival *imperatores*, first gained celebrity. Jugurtha's fame rests chiefly on the masterly essay, *Bellum Jugurthinum*, of the Roman historian Sallust (q.v.). Consult Meinel, *Zur Chronologie des Jugurthinschen Krieges* (Augsburg, 1883), Biereve, *Res Numidarum et Maurorum* (Halle, 1885), Greenidge, *A History of Rome*, vol. i (London, 1904), Pelham, *Essays* (Oxford, 1911).

JÜHLKE, yul'ke, FERDINAND (1815-93). A German horticulturist, born at Barth in Pomerania. He was trained in the Botanical Gardens at Greifswald and in 1854 was appointed royal horticultural inspector and head of an experimental station. In 1858 he purchased a large horticultural establishment in Erfurt. From 1866 to 1891 he was director of the Prussian Royal Gardens, succeeding Lenné. He retired in the latter year. He edited the *Eldenaer Archiv* (1854-59) and wrote many works on gardening, including *Gärtnerische Reiseberichte* (1853), *Gartenbuch für Damen* (3d ed., 1874); *Ueber die Stellung der Botanik zur Landwirtschaft und zum Gartenbau* (1865), *Die königliche Gärtnerei- und Landesbaumschule* (1872). He edited Schmidlin, *Blumenzucht im Zimmer* (4th ed., 1880).

JÜHLKE, KARL LUDWIG (1856-86). A German explorer, son of Ferdinand Jühlke, born at Eldena. He studied law at Tübingen, Leipzig, Heidelberg, and Berlin, and in 1884, as one of the founders of the German Colonization Association, went with Peters to East Africa and explored and annexed the country around Mount Kilimanjaro. He was murdered by a Somali on a second expedition, in 1886. He

published *Die Erwerbung des Kilima-Ndscharo-Gebietes* (1886).

JUIF ERRANT, zhǔwéi é'rǎn', LE (Fr., The Wandering Jew). 1. A famous romance by Eugène Sue (1845). The main plot rests on the contest for a fortune of 150,000,000 francs, which is to fall either to the Jesuits or to those members of the Rennepont family who shall be in Paris on a given date. The Renneponts are the descendants of the Wandering Jew, who, with his sister, is doomed to endure life until the last of his race has disappeared. In the romance the Jesuits employ all means to annihilate the family before the appointed day. The story was dramatized by Sue, and successfully produced at the Ambigu in 1849. 2. An opera by Halévy (1852). See WANDERING JEW.

JUIVE, zhǔwéi, LA (Fr., The Jewess). An opera by Halévy (q.v.), first produced in Paris, Feb 23, 1835, in the United States, April 30, 1860 (New York).

JUJUBE, jū'júb (Fr. *jujube*, from Lat. *zizyphum*, Gk. *ζίζυφον*, *zizyphon*, jujube, from Syriac *zūzfā*, jujube, Pers. *zēfīn*), *Zizyphus*. A genus of spiny and deciduous shrubs and small trees of the family Rhamnaceæ. The common jujube (*Zizyphus sativa*) of the south of Europe, Syria, India, and China is a low tree, which produces a red or yellow fruit resembling an olive in shape and size, and which dried as a sweetmeat forms an article of commerce. *Zizyphus vulgaris* is the common Indian jujube, which forms an important article of commerce. *Zizyphus jujuba* is another common species grown in vari-

JUJUBE.

ous warm countries. The lotus (*Zizyphus lotus*), a Persian or North African shrub 2 or 3 feet high, produces in great abundance a fruit about as large as a sloe and with a large stone, but having a sweet farinaceous pulp, which the natives of some parts of Africa make into cakes resembling gingerbread. A kind of wine is sometimes made from it. Some botanists combine *Zizyphus sativa* and *Zizyphus lotus* into one species. *Zizyphus spina-christi*, another native of the Mediterranean region, is sometimes said to be the plant from the branches of which Jesus' crown of thorns was

made and is therefore called Christ's-thorn and Jews'-thorn, names which for the same reason are also given to *Paliurus aculeatus*. The fruit is about the size of a sloe, oblong, and pleasantly acidulous. Pleasant refreshing drinks are made from the fruits of these trees, and formerly syrup of jujubes was used as a pectoral. Jujube paste of the confectioners at one time contained jujube fruit, but it is now commonly made of gum arabic and sugar without any fruit.

JUJUTSU, jōō'jut'su, or **JIUJITSU**, jōō'-jit'su. A form of wrestling practiced in Japan. See WRESTLING.

JUJUY, juōō-hwé'. A province of Argentina, occupying the northwest end of the Republic, and bounded by Bolivia on the north, by the Province of Salta on the south and east, and by the provinces of Salta and Los Andes and the Republic of Bolivia on the west (Map: Argentina, F 2). Its area is 18,981 square miles. An elevated plain known as the Puna de Jujuy covers all the northwest portion, which is a continuation of the great Bolivian table-land, terminating in a mountain chain, with snow-covered peaks rising to an altitude of over 15,000 feet. This portion of the province has a cold climate, poor vegetation, and is almost uninhabited. On the east side of the range the surface slopes gradually towards the Chaco (q.v.) plains, interspersed by a few inconsiderable mountains. This part has a hot and moist climate, is well watered, and is very productive. The entire province is traversed by the Río Grande de Jujuy, a tributary through Río Bermejo of the Paraguay. The Puna has two large lakes, Toro and Casabindo, the latter of which furnishes an immense quantity of salt. The mountains contain rich mineral deposits, including asphalt, gold, silver, gypsum, quicksilver, and petroleum. Very little, however, has been done towards exploiting the mineral deposits of the province, in spite of the fact that it is connected by rail with the central portion of the Republic. The chief products are sugar, wheat, rice, brandy, and hides. Pop., 1895, 49,713, 1912 (est.), 64,197. Capital, Jujuy (q.v.).

JUJUY. The capital of the Province of Jujuy in northwest Argentina, situated on the Río Grande de Jujuy (Map: Argentina, F 2). The town has a national college, a normal school for women, and other public schools. It is connected by rail with Buenos Aires and owes its importance chiefly to its transit trade with Bolivia, which is carried on by the road leading north through the pass of Las Cortaderas. It was founded in 1592. Pop., 1895, 4159, 1912 (est.), 6000.

JUKES, JOSEPH BEETE (1811-69). An English geologist, born near Birmingham. He graduated at St. John's College, Cambridge, in 1836, and then entered upon a course of practical investigation in geological science. He was geological surveyor of Newfoundland in 1839-40 and was appointed in 1842 naturalist of the surveying expedition of H. M. S. *Fly*, engaged in the exploration of Torres Strait, New Guinea, and the east coast of Australia. In 1846 he was employed in the Geological Survey of Great Britain and contributed to the official report special memoirs on certain districts. He was director of the Geological Survey of Ireland in 1850 and afterward professor of geology in the Royal Dublin Society and the Royal College of

Science at Dublin. Professor Jukes wrote the article "Geology" for the *Encyclopædia Britannica* (8th ed.) and several important works, including: *Excursions in and about Newfoundland* (2 vols., 1842); *A Sketch of the Physical Structure of Australia* (1850), *Popular Physical Geology* (1853); and the well-known *Students' Manual of Geology* (1857; 2d ed., 1862; rev. by A. Geikie, 1872; 5th ed., 1890).

JUKES, THE. A pseudonym used to protect certain worthy members of a family in New York State whose history displays unique conditions of crime, disease, and pauperism. In July, 1874, R. L. Dugdale investigated some county jails in the State and, as a result, made a further genealogical study of this particular family. The two sons of the so-called Max, a backwoodsman, descendant of an early Dutch settler, married two Jukes sisters, one of whom is known as "Margaret, mother of criminals." Out of 1200 descendants 709 were traced, of whom 280 had received public support, 140 were criminals and offenders, serving in all 140 years in prison, and a large proportion were licentious and nervously diseased. The estimated social cost of the family in 75 years was \$1,308,000. This valuable study in heredity was first published as the thirtieth annual report of the Prison Association of New York, under whose auspices the inquiry was made, and more recently in a separate volume (5th ed., New York, 1891). Consult R. L. Dugdale, *The Jukes* (4th ed., ib., 1910).

JUKES-BROWNE, ALFRED JOHN (1851-1914). An English geologist, born at Penn Fields near Wolverhampton. He graduated at St. John's College, Cambridge. From 1874 to 1902, when he retired on account of ill health, he was a member of the Geological Survey, and in this connection he made an extensive and thorough investigation of the Upper Cretaceous rocks of Great Britain. In 1888-89 he investigated the geology of the island of Barbados. The Murchison medal of the Geological Society was awarded him in 1901. His publications include students' handbooks of *Physical Geology* (1881), *Historical Geology* (1886), and *Stratigraphical Geology* (1902, 2d ed., 1912), *The Building of the British Isles* (1888; 3d ed., 1911); *The Cretaceous Rocks of Britain* (3 vols.).

JUKOVSKY, zhōō-kōf'skē, VASSILI ANDREYEVITCH, properly ZHUKOVSKY (q.v.). A Russian poet and translator.

JÜLG, yulk, BERNHARD (1825-86). A German philologist, born at Ringelbach and educated at Heidelberg and Berlin (1844-48). After he had taught in the schools of Heidelberg, Freiburg, and Rastatt, he was appointed professor of classical philology at Lemberg (1851), at Cracow (1853), and Innsbruck (1863). His special study was comparative philology and Oriental folklore. Among his works are the new edition of Vater, *Litteratur der Grammatiken, Lexika und Wortsammlungen aller Sprachen der Erde* (1847), *Die Märchen des Siddhi-kür* (1866); *Mongolische Märchen* (1867); *Ueber Wesen und Aufgabe der Sprachwissenschaft* (1868), *Die griechischen Heldensagen im Widerschein bei den Mongolen* (1869); *On the Present State of Mongolian Researches* (1882).

JULIA. 1. Daughter of Augustus and Scribonia and the Emperor's only child. She was born in 39 B.C. Augustus (then known as Octavianus) divorced her mother a few days

after her birth, that he might marry Livia Drusilla (q.v.), and the child was brought up under her father's care in the strictness and simplicity of his earlier court. At 14 (25 B.C.) she was married to her cousin Marcus Claudius Marcellus, son of Octavia, the Emperor's sister (the Marcellus of Vergil, *Æneid*, vi, 860-885); after his death she became the wife of Marcus Vipsanius Agrippa (q.v.), the Emperor's counselor and friend (22 B.C.). Their children were Gaius Cæsar and Lucius Cæsar, who died in their boyhood; Julia; Agrippina (q.v.), who married Germanicus and became the mother of the Emperor Caligula; and Agrippa, surnamed Postumus, because he was born after his father's death in 12 B.C. Shortly after this event Augustus meditated a new marriage for Julia, and the ambition of the Empress Livia induced him to give her in marriage to Livia's son, Tiberius Claudius Nero, in order to secure his accession to the throne (11 B.C.). The marriage proved unhappy, and the character of Julia is depicted in very unfavorable colors by the Roman historians. Tiberius was adopted as heir to the throne, but Julia was exiled in disgrace by Augustus and was treated almost as a state prisoner. She passed her remaining years in sad confinement, first on the island of Pandataria, then at Rhegium, where she died of consumption superinduced by neglect, at the age of 52 (14 A.D.), shortly after the death of Augustus and the accession of Tiberius. Augustus had ordered that she should not be buried in his mausoleum at Rome. Consult: Schiller, *Geschichte des römischen Kaiserreichs*, vol. 1 (Gotha, 1883), Gardthausen, *Augustus und seine Zeit*, vol. i (Leipzig, 1891), Schuckburgh's note on Suetonius, *Augustus*, 64 (Cambridge, 1896), Kahrstedt, in *Klio* (Leipzig, 1910). 2. Daughter of the foregoing and of Agrippa. She was married to Æmilius Paulus Lepidus, in 1 A.D. In 9 A.D. she too was banished for immorality. She lived henceforth on the island of Tremerus off the coast of Apulia, supported by an allowance from Livia Drusilla (q.v.). She died in 29.

JULIA. 1. A character in Shakespeare's *Two Gentlemen of Verona*, the ladylove of Proteus. 2. The ward of the title character in Sheridan Knowles's *The Hunchback*. She becomes the wife of Sir Thomas Clifford. 3. Sir Anthony Absolute's ward, in love with Falkland, in Sheridan's *Rivals*. 4. In Byron's *Don Juan*, a married woman of Seville who loves the youthful Don Juan.

JULIA DOM'NA (c.167-217). A Roman empress, wife of Septimius Severus and mother of Caracalla and of Geta. She was born at Emesa in Syria and married the Emperor in 187, at Lyons. The contemporary authorities agree in making her fond of literature, but differ widely in regard to her personal character. Dion, whom Gibbon follows, makes her an ideal mother and a power for good during Caracalla's reign, but the more common story makes her unspeakably wicked and describes her unnatural relations with Caracalla. She killed herself soon after the death of her son. Consult the article "Tulius, 97," in Lübker, *Reallexikon des klassischen Altertums* (8th ed., Leipzig, 1914).

JULIAN, CARDINAL (GIULIANO CESARINI) (1398-1444). A cardinal of the fifteenth century. He was born at Rome of noble family, educated at the University of Perugia, and became professor of jurisprudence at Padua. Pope

Martin V made him apostolic prothonotary and advanced him through successive grades to Cardinal Bishop of Frascati. He also appointed him to preach and lead a crusade against the Hussites, which turned out disastrously for the Cardinal (1431). He became president of the Council of Basel (q.v.) and there exerted himself to win back the Hussites by peaceful measures. When the quarrel between Pope Eugenius IV (q.v.) and the council broke out, Julian defended the independence of the council and its superiority over the pontiff, at the same time defending the cause of the Pope against the attacks of many leaders of the Church. Finding the council unwilling to meet his views, he changed his course and became a firm adherent of Eugenius. When the Pope transferred the council to Ferrara (see FERRARA-FLORENCE, COUNCIL OF), Julian resigned the presidency and hastened to the latter place. He was prominent there and at Florence in the negotiations with the delegates of the Eastern church. Later Eugenius sent him to Hungary to stir up a crusade against the Turks. He was killed in the flight after the battle of Varna, Nov. 10, 1444. Consult: Jenkins, *The Last Crusader* (London, 1861); Ludwig Pastor, *History of the Popes*, vols. i, ii (ib., 1899); Mandell Creighton, *History of the Papacy*, vols. ii, iii (ib., 1905).

JULIAN, COUNT. A governor of the Spanish Goths, whose daughter Florinda was said to have been betrayed by King Roderic. In revenge Julian allied himself with the Saracens and changed his faith in order to overthrow Roderic.

JULIAN (FLAVIUS CLAUDIUS JULIANUS), surnamed THE APOSTATE, on account of his renunciation of Christianity. Roman Emperor (361-363 A.D.). He was born at Constantinople in 331 or 332 and was the son of Julius Constantius, the brother of Constantine the Great. He and his brother Gallus, because they were too young to be dangerous, were spared when Constantius II, son of Constantine, massacred the rest of the Imperial family. They were, however, removed to a lonely castle in Cappadocia, where they were subjected to a system of rigorous espionage. Julian's life was very miserable, and the monkish education which he received produced no other result than a strong detestation of the religion professed by his tormentors. He was fond of literature and philosophy, and he instinctively turned away from the rude asceticism, gloomy piety, and barbarous janglings of Homocousians and Homoiousians, to the cheerfulness, refinement, and pure intellectual meditateness of the old Greek philosophers. Some of his teachers appear to have been (secretly) pagans, for the sudden change in the state religion brought about by Constantine the Great had necessitated a great deal of hypocrisy, especially among scholars and government officials. At the age of 20 Julian was at heart a disbeliever in the divine origin of Christianity. After his brother Gallus had incurred the enmity of Constantius and had been put to death (end of 354), Julian was removed by Constantius to Milan, but was subsequently allowed to go to Athens, the home of Greek learning, where he gave himself up to philosophical pursuits. The Emperor, though still jealous and suspicious, presently summoned him again to Milan, gave him his sister Helena in marriage, conferred on him the title of Caesar (Nov. 6, 355), and sent him to Gaul to protect it from the incursions of the Germans. Julian defeated

the Alemanni (q.v.) at Strassburg (August, 357) and compelled the Franks (q.v.) to make peace. His internal administration in Gaul was mild and judicious; he rebuilt cities and reduced taxes. Paris was his headquarters. His popularity in consequence became very great, and, when Constantius ordered him to set out for the East, Julian's soldiers rose in insurrection and proclaimed him Emperor. Julian set out for Constantinople, to oppose Constantius; the latter began his return from Syria, to suppress Julian. The death of Constantius at Mopsucene in Cilicia, Nov. 3, 361, removed the only obstacle from Julian's way, and on December 11 he made a triumphal entrance into Constantinople. He now publicly avowed himself a pagan, but surprised both Christians and pagans by his edict of toleration. Yet he chose most of his officers from the professed followers of the old religion and compelled the Christians to contribute to the restoration of the heathen temples. In 362 he made great preparations at Antioch, in the hope of bringing the war with the Persians to a successful termination, and in the following year advanced to Ctesiphon and across the Tigris, defeating a Persian army which disputed his passage of the river; but want of provisions and treachery necessitated his retreat. He was followed and attacked by the enemy, who were repeatedly repulsed; but in one of the engagements he was mortally wounded by an arrow, and died June 26, 363. Julian was a monarch of great ability. His rule was just, liberal, and humane. He composed, in Greek, a great number of orations, letters (about 80), satires, and also poems (collected and published by Spanheim in 1696 and by Hertlein, Leipzig, 1875-76). Among his lost works are his *Refutation of the Christian Religion*, destroyed by the efforts of Theodosius II, and memoirs of his German campaign and his diary. We possess a series of letters, addressed to literary men, nine orations; a satirical work called *Cæsares*, and the curious *Misopogon* (Beard-Hater), a satire on the immorality of Antioch and a playful account of his own life and manners (the Antiocheans, who were clean-shaven, poked fun at Julian's beard). The best edition of the complete works of Julian is that of Hertlein (2 vols., Leipzig, Teubner, 1875-76); there is an English translation in the Bohn Library, a translation under way (1913 ff.) in the Loeb Classical Library, by Wright, with introduction and bibliography, and a complete French translation by Talbot (Paris, 1863). Consult: Rendall, *The Emperor Julian, Paganism, and Christianity* (London, 1879); Gardner, *Julian, Philosopher and Emperor*, in "Heroes of the Nations Series" (New York, 1895); Dill, *Roman Society* (London, 1899); Muller, *Kaiser Flavius Claudianus Julianus* (Hanover, 1901); and Negri, *Julian the Apostate* (2 vols., New York, 1905); Sandys, *A History of Classical Scholarship*, vol. i (2d ed., Cambridge, 1906); Mau, *Die Religionsphilosophie Kaiser Julians* (1907).

JULIAN, GEORGE WASHINGTON (1817-99). An American political leader, born near Centreville, Ind. He received an academic education, taught school for several years, and in 1840 was admitted to the bar. His political career began with his election as a Whig in 1845 to the State Legislature. In 1848 he became one of the leaders in the Free-Soil movement, was a delegate to the Buffalo Convention in that year,

in the following year was elected to Congress by a coalition of Whigs and Free-Soil Democrats and served until 1861. In 1852 he was the candidate for Vice President on the Free-Soil ticket with John P. Hale. In 1860 he was elected to Congress as a Republican, and he served by reelection until 1871. He was a member of the famous joint committee on the conduct of the war and later was a member of the committees on reconstruction and on public lands, serving as chairman of the latter for eight years. He joined the Liberal Republican movement in 1872 and supported Greeley for the presidency. Thenceforth he acted with the Democrats. In 1885-89 he was surveyor-general of public lands in New Mexico. He published: *Speeches on Political Questions*, which contains a biographical sketch of him by Lydia Maria Child (Boston, 1872); *Political Recollections* (1884); and a *Life of Joshua R. Giddings* (1892).

JULIAN ALPS (Lat. *Alpes Juliae*). The southernmost extension of the Eastern Alps. They extend from the Carnic and Venetian Alps, on the northeast borders of Italy, southeastward through the Austrian coastland towards the Karst (q.v.) Plateau, near Trieste (Map: Austria-Hungary, D 4). They consist chiefly of calcareous slate and dolomite and are extremely rough and wild in configuration, with romantic valleys and waterfalls, and beautiful mountain lakes surrounded by forest-covered heights. Their highest peak is the Triglav, with an altitude of 9394 feet.

JULIAN CALENDAR. See CALENDAR

JULIANUS, SALVIUS (c.92-c.155). A Roman jurist, of the liberal school of Ateius Capito, whose full name was Lucius Octavius Cornelius Salvius Julianus Aemilianus. He held important offices under Hadrian and Antoninus Pius. As praetor, in 131 he codified Roman equity as it then existed. His work was made binding for the future, so that no later praetor could modify the law. Besides this *edictum perpetuum* (see EPICT), his writings are many; in Justinian's Pandects (q.v.) there are many quotations from his *Digesta*. He laid down the legal principle that any ex-praetor had the *jus respondendi*, and that it was not confined to those senators authorized by the Emperor to exercise the right. Consult: Buhl, *Salvius Julianus* (Heidelberg, 1886); Schanz, *Geschichte der römischen Literatur*, part iii (2d ed., Munich, 1905); and the article "Octavius, 14," in Lübker, *Reallexikon des klassischen Altertums*, vol. ii (8th ed., Leipzig, 1914).

JULIBONA, or JULIOBONA. See LILLEBONNE.

JÜLICH, yu'lik (Fr *Juliers*). A town of the Rhine Province, Prussia, situated on the Roer, 18 miles northeast of Aix-la-Chapelle (Map: Prussia, B 3). It has several churches, an officers' school, a sixteenth-century château, a museum, and manufactures of sugar, paper, silk, and leather. Pop., 1905, 6009; 1910, 6633 Jülich was strongly fortified till 1860. It was long the capital of an independent duchy. On the death of the Duke of Jülich without heirs, in 1609, began the Jülich-Cleves War of Succession. In 1610 it was captured by Holland and in 1622 by Spain. The line of counts palatine of Neuburg becoming extinct in 1742, Jülich passed to the counts palatine of Sulzbach, afterward electors of Bavaria. In 1794 it was annexed to

France, but in 1814 was assigned to Prussia by the Congress of Vienna.

JÜLICHER, yu'lik-ër, GUSTAV ADOLF (1857-). A German biblical scholar. Born at Falkenberg, near Berlin, he studied at the University of Berlin and in 1882-88 was preacher at the Rummelsburg orphan asylum. He was docent of Church history in the University of Berlin in 1887 and in 1888 became professor of Church history and New Testament exegesis at Marburg. Besides important contributions to the *Jahrbücher für protestantische Theologie* on the criticism of the Hexateuch, he published *Die Gleichnisreden Jesu* (1888-89) and *Einleitung in das Neue Testament* (1894, 6th ed., 1906), of which an English translation by Janet Ward was published in 1904, and which is one of the few "introductions" to the New Testament of real value, particularly as checking and correcting the similar work of Theodor Zahn.

JULIE, zhu'lé', ou, LA NOUVELLE HÉLOÏSE, là nōō'vél' a'lô'éz' (Fr., Julia, or, the New Heloise) A famous sentimental novel by J. J. Rousseau, written at the Hermitage between 1757 and 1759 and published at Amsterdam in 1761. The story is told in the form of letters between Julie d'Etanges and her tutor and lover, Saint-Preux.

JULIEN, zhu'lyän' An opera by Charpentier (q.v.), first produced in Paris, June 4, 1913, in the United States, Feb. 26, 1914 (New York).

JULIEN, ALEXIS ANASTAY (1840 -). An American geologist, born in New York City. He graduated at Union College in 1859, studied chemistry there for a year, and in 1860-64, while resident chemist on the guano island of Sombbrero, carried on a variety of scientific researches. He served on the Michigan Geological Survey in 1872 and on the North Carolina Survey (1875-78), but from 1865 to 1909 was regularly connected with the School of Mines, Columbia University, as assistant in chemistry, instructor in biology, and (1897-1909) curator of geology. His writings include a report on "Lithology" in the Michigan Geological Survey's *Geology of Michigan*, vol. ii (1872), a "Microscopic Examination of Eleven Rocks from Ashland County, Wis.," in the Wisconsin Geological Survey's *Geology of Wisconsin*, vol. iii (1880), "On the Geological Action of the Humus Acids," in the *Proceedings of the American Association for the Advancement of Science* (1880); and "Building Stones; Elements of Strength in their Constitution and Structure," *Journal of the Franklin Institute* (1899).

JULIEN, zhu'lyän', STANISLAS AIGNAN (1799-1873). A French savant who, though he never set foot in China, became the foremost Sinologist of his day. He was born at Orléans. He early showed marked ability for the acquisition of languages. In 1821 he became assistant professor of Greek in the Collège de France, but was soon attracted to Chinese by the lectures of Abel Rémusat, then professor of Chinese in the same college. In 1823 he brought out a Latin translation of the works of the philosopher Mengtse (Mencius). He was elected a member of the Académie des Inscriptions in 1831, and on the death of Rémusat in the following year he succeeded him in the chair of Chinese. Besides mastering Chinese, Julien applied himself to the study of Sanskrit and Manchu. His works number over two dozen, consist chiefly of

translations from the Chinese, but are accompanied with notes and elucidations of the greatest value. Besides several plays and novels—a department of Chinese literature which first engaged his attention—he produced *Khan-Ing-Pien, Le livre des récompenses et des peines*, accompanied with 400 legends, anecdotes, and stories illustrative of the doctrines and practices of the Taoists (1835); *Résumé des principaux traités chinois sur la culture des mœurs, etc* (1837), *Lao-tseu-Tao-Te-King*, the 'Book of the Way and of Virtue' of the Chinese philosopher Lao-tse, who lived in the sixth century B.C. (1841); *Histoire de la vie de Hiouen-Tsang*, the Buddhist pilgrim, and of his journeys in India between the years 629 and 645 A.D. (1853); *Histoire et fabrication de la porcelaine chinoise*, translated from the Chinese by the order of the Minister of Agriculture and Commerce (1856); *Mémoires sur les contrées occidentales*, by Hiouen-Tsang (1857-59); *Méthode pour déchiffrer les noms sanscrits qui se rencontrent dans les livres chinois* (1861), a work of great value to students of the immense Buddhist literature of China, *Industries anciennes et modernes de l'empire chinois* (1869). In 1841 he had published a volume containing critical discussions of certain rules of position which in Chinese play the same rôle as inflections in other languages. This he later elaborated into his *Syntaxe nouvelle de la langue chinoise fondée sur la position des mots*, which appeared in 1869—an epoch-making work for students of Chinese. This was followed in 1870 by a supplementary volume containing some controverted and miscellaneous matter. He died in Paris.

JULIERS, zhū'yār'. The French name for Jülich (q.v.).

JULIET. 1. In Shakespeare's *Romeo and Juliet* (q.v.), a young girl of the house of Capulet, beloved by Romeo, of the rival house of Montague. 2. The ladylove of Claudio, in Shakespeare's *Measure for Measure*.

JULIUS, jū'lyūs. The name of three popes—JULIUS I. SAINT (Pope, 337-352). His pontificate fell in the most difficult times of the Arian controversy, when the sons of Constantine were persecuting the bishops who remained firm in their adherence to the doctrine defined at Nicæa. Julius gave them unflinching support. He examined the charges against the Eusebian party against St. Athanasius and dismissed them, writing a masterly letter to the accusers. In conjunction with the Emperor Constans he summoned the Council of Sardica (q.v.). His day is observed on April 12. His letters are in Migne, *Patrologia Latina*, viii.—JULIUS II (Pope, 1503-13), Giuliano della Rovere, a nephew of Sixtus IV, who made him Cardinal in 1471. In 1480 he was sent as legate to France, and on his return two years later filled an increasingly important place at Rome, under his uncle and Innocent VIII. Under Alexander VI, however, he was in opposition; and one of his first steps on his elevation to the papal throne was to resume possession of the Romagna, which had been bestowed on Cesare Borgia. Julius himself was beyond suspicion of nepotism or selfish designs for aggrandizement; but his pontificate was chiefly devoted to political and military enterprises for the complete reestablishment of the papal sovereignty in its ancient territory and for the extinction of foreign domination in Italy. In

pursuance of his designs he entered into the League of Cambray (1508) with the Emperor Maximilian, Louis XII of France, and Ferdinand of Aragon; later, when the immediate purpose of the league had been attained, fearing the ambitious designs of Louis, he withdrew and entered an opposite alliance, the Holy League. Louis attempted to force the Pope to call a general council for the reform of the Church, and actually had a synod convoked at Pisa in 1511, with the coöperation of some disaffected cardinals. Julius replied by calling the fifth Lateran Council. (See LATERAN COUNCIL.) The Holy League finally triumphed over France in Upper Italy, and Bologna, Reggio, Parma, and Piacenza were assured to the papal government; but death interrupted the further plans of Julius to break the Spanish power in Italy as well. On the whole, if less concerned with spiritual affairs than his office demanded, he had the qualities of a great statesman and general and was also a liberal and judicious patron of the fine arts. He laid the corner stone of St. Peter's Church and was the patron of Raphael and Michelangelo. Consult his life by Dumesnil (Paris, 1873), Brosch, *Papst Julius II und die Gründung des Kirchenstaates* (Gotha, 1878); Croixton *History of the Papacy*, vol. iv (London, 1887), Klaczko, *Rome and the Renaissance* (New York, 1903); Pastor, *History of the Popes*, vol. vi (St. Louis, 1898).—JULIUS III (Pope, 1550-55), Giovanni Maria del Monte. He was born in 1487 at Rome, made Archbishop of Siponto in 1512 and of Pavia in 1520 and Cardinal in 1536. He was one of the three legates appointed to open and preside over the Council of Trent (q.v.), which he reopened as Pope in 1551 after its sittings had been suspended for two years. He began his pontificate zealously and with high hopes, as when he sent Cardinal Pole to England to reconcile the Kingdom, but when his nephew came upon him he lost his energy, and died in 1555.

JULIUS, jū'lyūs, DUKE OF BRUNSWICK (1528-89). A German prince, son of Duke Henry the Younger, whom he succeeded in 1568 and whose Catholic policy he reversed. In 1560 he had married Hedwig, daughter of Joachim II of Brandenburg. He secured Brunswick to the Reformation, in 1576 founded the University of Helmstedt, and in 1582-84 inherited land from the counts of Hoya and Kalenberg.

JULIUS CÆSAR. An historical play by Shakespeare, written in 1600 or 1601 and published in 1623. It was based on Plutarch's lives of Cæsar, Antony, and Brutus, and, though not the greatest of Shakespeare's classical dramas, it is a tragedy of great stateliness and force.

JULIUS ECHTER VON MESPELBRONN, jū'lyūs ēk'tēr fōn mēs'pel-brōn' (1545-1619). A German Catholic prelate, Bishop of Würzburg, and a leader of the Counter-Reformation. He was born at the castle of Mespelbronn and studied in Germany, at Paris, and in Rome at the Jesuit Collegium Germanicum. In 1579 he founded the Julius hospital and in 1582 the University of Würzburg. In 1573 he became Prince-Bishop of Würzburg. In this post his policy was strenuous: all the Protestant clergy were replaced by Catholics, and the records say that in a single year (1586) there were more than 60,000 converts, and that in three years Protestantism was eradicated from his see. Julius was a prominent member of the Catholic

League (1609). Consult the biography by Buchinger (Wurzburg, 1843).

JULIUS VON DER TRAUN, dër troum. The pseudonym of the Austrian novelist Julius Alexander Schindler (q.v.).

JULLEVILLE, LOUIS PETIT DE. See PETIT DE JULLEVILLE, LOUIS.

JULLIEN, zhü'lyân', ADOLPHE (1845-). A French musical critic, born in Paris. He was educated at the Lycée Charlemagne, studied law, and at the same time acquired a thorough knowledge of music and musical literature. In 1869 he began to contribute to various French musical journals and in 1872 became feuilletonist of the *Français* and subsequently of the *Moniteur Universel*. Among his many important works are: *La musique et les philosophes au XVIIIème siècle* (1873); *Histoire du théâtre de Mme. de Pompadour* (1874); *La comédie à la cour de Louis XVI* (1875); *Goethe et la musique* (1880); *L'Opéra secret au XVIIIème siècle* (1880); *Richard Wagner, sa vie et ses œuvres* (1886); *Hector Berlioz* (1888); *Musiciens d'aujourd'hui* (1892; 2d series, 1894); *Musique* (1896); *Le romantisme et l'éditeur Rendnel* (1897); *Amours d'opéra au XVIIIème siècle* (1909); *Fantini-Latour* (1909); *Ernest Reyer* (1909); *Musiciens d'hier et d'aujourd'hui* (1910).

JUL'LUNDER. See JALANDHAR.

JULY. See MONTH.

JULY, COLUMN OF (Fr *Colonne de juillet*). A fluted column of bronze, on the Place de la Bastille in Paris, dedicated on July 28, 1840, to the "French citizens who fought for the defense of the public liberties on the memorable days of the 27th, 28th, and 29th of July, 1830." The column rests on a round base of white marble. Its square basement bears the inscription, a lion in relief by Barye, the armorial bearings of the city, and the dates of the conflicts. Four bands encircle the column, bearing the names of the 615 who fell in the Revolution. Their remains, together with those of the victims of the revolution of 1848, are contained in the vaults beneath the column.

JULY REVOLUTION. The revolution of July, 1830, in Paris which overthrew the Bourbon dynasty and brought the house of Orléans in the person of Louis Philippe to the throne of France. The policy of reaction following the Restoration, under Louis XVIII (1814-24), had become triumphant under his successor, Charles X, the creature of the clerical faction and the extreme Royalists. A partial indemnity was paid to the nobles whose lands had been confiscated, the Jesuits were readmitted to France, education was put under clerical supervision, and severe measures were enacted against the liberty of the press. These acts naturally aroused popular discontent, but Charles X boldly challenged liberal opinion in the country by calling to the head of affairs Count Jules Polignac, noted as the most bigoted of the advisers of the King (Aug. 9, 1829). Early in March, 1830, the French Chambers assembled, and the Lower House, in its answer to the speech from the throne, demanded the immediate dismissal of the new ministers. Thereupon the Chambers were first prorogued for six months and then dissolved, but the new elections only increased the strength of the opposition. Suddenly, on July 26, a few days before the new legislature was to assemble, edicts were promulgated suspending the liberty of the

press, declaring the elections null and void, and prescribing various changes in the franchise, which would have left little of self-government. The newspapers at once took up the challenge, and on July 27 there was some fighting in Paris. On the 28th the eastern section of Paris was filled with barricades; the insurgents took possession of the city hall and Notre Dame Cathedral and hoisted over them the tricolor. In vain the royal troops, who were under the command of Marmont, captured the different barricades; new ones were immediately built. The soldiers, worn out with their exertions and the heat, fired upon from windows and pelted with everything imaginable, abandoned the east of Paris and retreated. By July 29 the whole of Paris was in the hands of the insurrectionists, who had as their leaders the veteran Lafayette and Laffitte, only then did Charles X withdraw his Ordinances. But the adherents of the Duke of Orléans, Louis Philippe, demanded by means of placards posted everywhere that he should be made King. They had been long intriguing in secret under the leadership of Talleyrand, the old Minister of Napoleon I, who felt himself slighted by the Bourbons, whose restoration had to a great extent been his work. Now the Orleanists felt that their time had come, and late in the night of July 30 Louis Philippe arrived in Paris, and early the next morning was made lieutenant general of the realm. But the Orleanists, led by Adolphe Thiers and the banker Laffitte, were opposed by Lafayette, the commander of the restored National Guard, and the municipal committee, who were Republicans. Louis Philippe, however, won them over, and when Charles X, after abdicating in favor of his grandson, the Duke of Bordeaux, fled, the success of Louis Philippe was assured, and on August 7 the crown was voted to him by the Chambers. The July revolution was the work of the middle classes, who were then moderate Royalists, and the workmen of Paris, who were Republicans. The selection of Louis Philippe, the "Citizen King," and the adoption of a constitution based upon a property suffrage excluding the laboring classes from voting marked a great triumph for the bourgeoisie or middle classes. See FRANCE.

In other countries of Europe the July revolution caused serious disturbance. The first state to be influenced was Holland. Belgium for some time before 1814 had been united to France, but by the Congress of Vienna it was given to Holland. The Belgians revolted against the Dutch in 1830 and succeeded in establishing their independence. (See BELGIUM.) In Poland there was a violent uprising against Russian rule, which was suppressed only after heavy fighting. (See POLAND, RUSSIA.) In some other states there were revolutionary movements on a somewhat smaller scale, for which see GERMANY; ITALY. Consult: Fyffe, *History of Modern Europe*, vol. ii (London, 1886); Lavisse and Rambaud, *Histoire générale*, vol. x (Paris, 1898); Seignobos, *Political History of Europe since 1814* (New York, 1899); Robinson and Beard, *Development of Modern Europe* (2 vols., Boston, 1907-08); C. D. Hazen, *Europe since 1815* (New York, 1911).

JUM'BO. A famous African elephant of gigantic size, captured when young and at three years of age transferred from the Jardin des Plantes in Paris to the Royal Zoological Gardens in London. For 23 years the animal was a

great favorite with English children, and his purchase by P. T. Barnum in 1882 for \$10,000 provoked a general protest. The animal was with difficulty placed on a steamer and brought to America, where for three years he formed one of the chief attractions of Barnum's circus. He was killed in 1885 while crossing a railroad track in Canada. Jumbo was 11 feet, 6 inches in height and weighed 6 tons. His skeleton is preserved in the Smithsonian Institution in Washington and his skin is mounted and stands in the British Museum at Tufts College.

JUMEL, ELIZA. See BURR, AARON.

JUMEL, zhōō'mā'. A town of Hainault, Belgium, 3 miles north-northwest of Charleroi, of which it is an important industrial suburb (Map. Belgium, C 4). It has extensive coal mines, iron furnaces, glass-making and other manufacturing establishments. Pop., 1900, 25,937, 1910, 27,956.

JUMILLA, hōō-mē'lyā. A town of the Province of Murcia, Spain, situated on the river Júcar, about 37 miles northwest of Murcia (Map. Spain, E 3). It is built at the foot of a hill on which are the ruins of a castle, and it has two handsome churches in Corinthian and Ionic architecture. The vine is well cultivated in the vicinity, and the town has some manufactures of soap and brandy. Pop, 1887, 14,334, 1900, 15,868; 1910, 17,467.

JUMMOO'. A town of British India. See JAMMU.

JUM'NA, or **JAMNA**, jūm'na (Skt. Yamuna) A river in India, the principal tributary of the upper Ganges, rising among the Jumnotri peaks in the Western Himalayas, at an altitude of about 11,000 feet. It flows at first south and then southeast through Agra, emptying into the Ganges at Allahabad. Its length is about 860 miles, and it receives a number of large tributaries, chiefly from the right, among which are the Chumbul, the Betwa, and the Ken. The traffic is slight, carrying timber on the upper reaches and stone, grain, and cotton on the lower. Above Agra during the hot season the river dwindles, owing to the Eastern and Western Jumna canals, which are fed by its waters and are used by light river craft and for purposes of irrigation. Both of them rejoin the Jumna at Delhi. In the upper half of its course the Jumna occupies a more prominent position than the Ganges itself, both historically and politically. It was the first to obstruct the path of every early invader from the northwest; hence on its banks were built Agra and Delhi, the two capitals of the Moslem conquerors of India.

JUMONVILLE, zhu'môn'vél', N. COULON DE (1725-54). A French officer who fought in Canada. He joined his brother, a captain, in New France, and was himself the ensign in command of a scouting party of 35 men sent out from Fort Duquesne, the new post built by the French at the head of the Ohio River, to spy upon and if possible warn off an English expedition under Washington. The French and English were still nominally at peace, but these two parties had a skirmish in the woods (1754), in which Jumonville was killed, and this trifling engagement was the opening of the French and Indian War.

JUMPERS. A name given to certain Welsh Methodists, who indulged in leaping, dancing, and other bodily agitations in connection with their religious worship, citing in support of

their practice such passages as 2 Sam. vi. 16; Luke i. 41; Acts iii. 8. They are said to have originated in the congregations of Whitefield about 1760 and to have had followers among the Quakers and Irvingites. They were also called Barkers, because they accompanied the leaping and dancing with groans and incoherent utterances. Discountenanced in England, they emigrated to the United States. Consult Evans, *Sketch of the Denominations of the Christian World* (London, 1811), and Tyerman, *Life of John Wesley*, vol. ii (ib., 1870).—The name Jumpers is also given to a Russian fanatical sect whose alleged religious services consist in extraordinary leaping and are accompanied with physical exercises. Consult Heard, *The Russian Church and Russian Dissent* (London, 1887).

JUMPING BEAN. The seed of any one of several euphorbiaceous plants, including *Sebastiania bicoloris*, *Sebastiania palmieri*, *Sebastiania pringlei*, and *Colliguaja odorifera* (or *Croton colliguaja*), when infested by the full-grown larva of a small gray tortricid moth (*Carpacapsa saltitans*). The seeds are somewhat triangular and not only roll from side to side but move by jerks and jumps. The movements are produced by a plump whitish larva which occupies about one-fifth of the interior, the seed in fact being but a hollow shell lined with silk which the larva has spun. Late in the winter the larva cuts a circular door through the seed, strengthens it with silk and transforms to pupa, the moth soon afterward pushing its way through the prepared door. The larva of another moth (*Grapholitha sebastianiae*) infests the seeds of *Sebastiania palmieri* and produces similar movements. These plants and insects are natives of Central and South America, and the imported seeds are frequently called Mexican jumping beans and in the southwestern United States broncho beans.

JUMPING FISH. See MUDSKIPPER.

JUMPING FROG OF CALAVERAS. THE CELEBRATED. A sketch by Mark Twain (1867), written for the *Californian*. It was his first work to attract wide attention.

JUMPING HARE. A South African rodent (*Pedetes caffer*), the springhaas of the Dutch colonists, which is placed near the jerboas in systems of zoology, but considerably differs from them in that it is larger—as big as a rabbit. It is the sole representative of the family Pedetidae. The head much resembles that of a hare, although the ears are shorter; the form of the body is also like that of a hare, but the hind legs are very long and strong, like those of a kangaroo, and the toes both of fore and hind feet are armed with great claws. Its powers of leaping are extraordinary; it clears 20 or 30 feet at a bound and can make faster time up a slope than down. Three or four young are born at a time. Night is the time of activity, and it makes mischievous inroads on fields and gardens. Its flesh is eaten.

JUMPING MOUSE. One of the most common, interesting, and widespread of North American wild mice (*Zapus hudsonius*), scientifically regarded as a jerboa. (See JERBOA, and Plate of MICE AND JERBOAS.) It takes its name—also that of kangaroo mouse—from the long and strong hind legs and its habit of running in long leaps. It inhabits brushy places by preference and lays up no store in winter, but constructs a warm, ball-like nest, placed in some thick bush or often within an abandoned

bird's nest, where it hibernates during the cold months in a dormancy more profound than that of any other American animal. It is a yellowish-grizzle color above and white underneath and has a very long tail. It is limited to the eastern half of the United States, but similar species exist in western North America and in Europe.

JUMPING PLANT LOUSE. An hemipterous insect of the family Psyllidae, distinguished from the true aphids by the swollen hind thighs, giving this insect its power as a jumper, by the two-jointed feet, and by antennæ with eight or nine joints. Many of the species live exposed upon the leaves of trees and plants, like the pear tree *Psylla*, while others form galls in which they live, such as several of the species which feed upon the hackberry. Most of the jumping plant lice secrete quantities of honeydew (q.v.). The eggs of *Psylla pyricola* (and probably of many other species) are attached to a leaf by a short arm, and each has a long hair-like stalk projecting from its end. There are several generations each year, and the adults hibernate.

JUMPING SHREW. An African shrew of the family Macroscelidae, so called because of the large hind legs and leaping method of progression. The group are also known as elephant shrews (q.v.). The family is represented in all parts of Africa, but not elsewhere, and the most remarkable species are those of the South African genus *Rhynchocyon*, some of which reach a length of 8 inches, besides the long, scaly tail. Their noses are prolonged into tubular nostrils almost as flexible as the trunk of an elephant. They inhabit dry, rocky places, are not numerous, and little is known of their habits.

JUMPING SPIDERS. Any of the medium-sized spiders with short legs of the family Attidae. They capture their prey by leaping upon it. Many of them are brightly colored and live in open places among the tops of low plants. They walk backward or sidewise as well as forward, and some of them jump great distances. They do not spin webs, but some of the species fix a thread to the point from which they leap, so that, should they miss their aim, they will not fall far. Some of the species are very common and may be seen hunting on foliage, fences, or on almost any exposed surface. Consult: H. C. McCook, *American Spiders and their Spinning Work* (3 vols., Philadelphia, 1889-93); J. H. Emerton, *Common Spiders* (Boston, 1902); J. H. Comstock, *The Spider Book* (New York, 1912).

JUNAGARH, जूनागढ़. A native Gujarat state of the Kathiavar Peninsula, Presidency of Bombay, India. Area, 3284 square miles. Pop., 1901, 395,428; 1911, 434,122. The surface generally is level, diversified to the north by the Girnar Hills, with a maximum altitude of 3666 feet. Cotton, sugar cane, and cereals are cultivated. The Gir district contains about 1200 square miles of forest land. Junagarh ranks as a first-class native state, and its alliance with Great Britain dates from 1808, when the then chief agreed with the Bombay government to oppose piracy and allow free commerce with British vessels on the payment of stipulated duties (capital, Junagarh) (q.v.).

JUNAGARH, जूनागढ़. The capital of a native Gujarat state of the same name in the Bombay Presidency, India. It is situated on

the Rajputana Railway, 45 miles north of Veraval, on the Arabian Sea. In the midst of the big-game grounds of the Girnar and Datar Hills, its site is very picturesque. Its royal tombs, Buddhist caves, also the Uparkot, an ancient citadel of the great Asoka (250 B.C.), and the town fortifications, built in 1472, are archaeologically interesting. The modern buildings include the Nawab's palace, the College of Arts (built in 1900), a hospital, a library and museum, and fine modern shops and stores. Pop., 1901, 34,251; 1911, 35,413. Consult Burgess, *The Antiquities of Cutch and Kathiavar* (London, 1887).

JUNCO (Neo-Lat., of uncertain derivation). The generic and now the popular name for the so-called "black" snowbirds of the United States familiar in winter. Half a dozen species are named, besides almost three times as many subspecies, all of which intergrade with one another in a most perplexing manner. One well-marked species (*Junco hyemalis*) belongs to the eastern United States, but all the others are residents of the mountainous portions of Mexico and the western United States. All are small finches, dark slate or ashy above and more or less white below and the beaks white. The nests are built on or near the ground, of grasses, mosses, and rootlets, and are often lined with hairs. The eggs are from four to five in number, bluish white, speckled at the larger end with brown. The common junco of the East is grayish slate color on the head, back, throat, and breast, and pure white on the belly, the contrast between the two colors being very sharp; the two outer tail feathers are white and are conspicuous when the bird flies. It is a common winter visitor as far south as the Gulf of Mexico, and a summer resident from northern New York and Minnesota northward and in the mountains as far south as the Carolinas. It breeds in a nest on the ground, hidden among thickets. See Plate of SPARROWS.

JUNCOS, हुण्को. A town in the eastern part of Porto Rico (Map: Porto Rico, F 2). It has a hospital, good schools, and electric lights. The principal products of the district are sugar cane, tobacco, and tropical fruits, the chief industry is the manufacture of sugar. Pop., 1910, (municipal) 11,692, (urban) 4141.

JUNCTION CITY. A city and the county seat of Geary Co., Kans., 72 miles by rail west of Topeka, at the confluence of the Smoky Hill and Republican rivers, which here unite in the Kansas River, on the Union Pacific and the Missouri, Kansas, and Texas railroads (Map: Kansas, F 4). It is a shipping point for grain, flour, live stock, crushed rock and sand, and produce from the surrounding country, and has extensive limestone quarries, boot and shoe, glove, cigar, candy, sheet-metal, cement-block and harness factories, flour mills, lumber yards, etc. Fort Riley (q.v.), a large government military post, is 3 miles east of the city. The city owns and operates its water works. Junction City was settled in 1858, was chartered as a city the following year, and adopted the commission form of government in 1911. Pop., 1900, 4695; 1910, 5598.

JUNE. See CALENDAR.

JUNE, JENNIE. The pseudonym of the American writer Jane Cunningham Croly (q.v.).

JUNEAU, जुना. The capital of Alaska, 100 miles north by east of Sitka, on Gastineau Channel, opposite Douglas Island (Map: Alaska,

N 6). It is the seat of the Territorial Legislature and courts and Federal officials and is by far the most important city of south Alaska. The population was 1645 in 1910, but more than 5000 permanent white inhabitants were then in the city and its immediate vicinity. The population of the city in 1914 was estimated at 4000. Juneau is modern as to its churches, schools, hospitals, newspapers, fire department, police, drainage, water works, telephonic, telegraphic, and electric services. Its banks, assay office, trading and manufacturing facilities, make it the commercial and supply depot for adjacent mining camps, and it is the transportation centre of south Alaska, steamship lines connecting it with Seattle, Sitka, Skagway and all ports of the Copper River, Prince William Sound, Cook Inlet, and Unalaska regions. More than \$60,000,000 of gold have already been mined from the region in and about Juneau, principally from the famous Treadwell mines, and experts consider that extensions and developments will make it the centre of the most productive areas of gold yields in North America. Consult A. W. Greely, *Hand-Book of Alaska* (New York, 1914).

JUNEAU, LAURENT SOLOMON (1793-1856). An American pioneer, founder of Milwaukee, Wis. Born at L'Assomption Parish, near Montreal, Canada, Aug. 9, 1793, he early went to Green Bay, then a point of importance, and on Sept. 14, 1818, settled at Milwaukee as an Indian trader. He served as agent of the American Fur Company and was the trusted friend of John Jacob Astor and Ramsay Crooks of that great monopoly. He was the first white man to settle in Milwaukee, numerous temporary settlers had preceded him. Among them was Jean Baptiste Mirandeu, a gunsmith, who took up residence about 1790. To Mirandeu cession was made by the Indians of a large tract of land previous to its transfer to the United States government by treaty. Mirandeu's death occurred in March, 1819, when his affairs were yet unsettled, and Juneau obtained possession of the original Indian grant. He caused to be executed the first survey of the village, promoted the building of its first bridge, and was its first postmaster and president. In 1846 he was elected first mayor of the city. With Morgan L. Martin, he donated the ground for the first public square in Milwaukee, and upon it was built the first courthouse in Wisconsin. Unskilled in financial matters, he afterward lost possession of his lands and the wealth thereby represented. He died Nov. 14, 1856. Juneau had 15 children, whose descendants are widely scattered. A bronze statue of him (unveiled July 6, 1887) is in Juneau Park, Milwaukee, overlooking Lake Michigan.

JUNE BEETLE. A name in the southern United States for a green and brown cetonian beetle (*Allorhina nuda*), also known as fig eater. The term is also occasionally applied in the North to the scarabæoid beetles of the genus *Lachnosterna*, which, however, are more properly called May beetles. (See JUNE BUG.) The June beetle is a native of the southern and central United States and in its adult condition feeds upon ripe figs, peaches, pears, plums, and small fruits, such as raspberries and blackberries. It also feeds occasionally on ears of corn and sucks the sap exuding from wounds in the branches of trees. It is nearly as beautiful in color as some of the me-

tallic Brazilian beetles which have been used in jewelry and is a favorite plaything with children, who tie strings to the body and let the beetles fly with a humming noise. In its larval condition it is a white grub, closely resembling the white grubs of the Northern States, but is not nearly so injurious. The white grubs of the June beetle live at or below the surface of the ground, and frequently occur in countless numbers in grass lawns, in strawberry and celery beds, and everywhere where the soil is very rich and the vegetation is vigorous. It is doubtful, however, whether they do any serious damage. Their normal food is decaying vegetation—soil humus. They may occasionally cut off the root of a plant, but are surely not especially injurious in grass lands, although of some damage to celery by soiling the stalks. Where June beetles are numerous and are damaging ripe fruit, they may be attracted in numbers to a little heap of spoiled fruit which has been sprinkled with Paris green and thus may be destroyed.

JUNE BERRY. A North American edible fruit and the tree named from it. See AMELANCHIER, SHADBUSH.

JUNE BUG, or MAY BEETLE. Any one of the large, clumsy scarabæoid beetles of the genus *Lachnosterna*, common in the United States. The adult beetles often do considerable damage to the foliage of young fruit and shade trees, swarming after dark and feeding upon the young leaves, especially in the months of May and June. They are commonly attracted to lights and are familiar objects in houses in June during early summer, buzzing about the light and white walls and frequently falling to the floor. The larvæ are large white grubs which live beneath the surface of the soil and damage the roots of grasses and other plants. When numerous, they are very injurious to the sod of lawns and meadows, cutting off the roots just below the surface of the ground, so that a close sod may be rolled up like a carpet. The best remedy against the larvæ consists in washing a dilute kerosene soap emulsion down into the ground, and for the adults in attracting them to lights placed over pans containing kerosene.

JUNE GRASS. A meadow grass especially valuable for limestone soils. See BLUE GRASS.

JUNG, zhŭn, HENRI FÉLIX THÉODORE (1833-96). A French general and writer upon military subjects, born in Paris. He was educated at Saint-Cyr, entered the artillery in 1853, and spent the next five years in Africa. After taking part in the campaign in Italy, where he was awarded the cross of the Legion of Honor for gallantry at Solferino, he entered the council of the War Minister Lebeuf (1869), but returned to active service during the Franco-Prussian War, rose in his profession till he became brigadier general in 1887, and was appointed Governor of Dunkirk, but retired in 1891. In 1895 he became director of the *Intermédiaire des Chercheurs et des Curieux*. His publications, under his own name or the pen name of Mustapha, include a number of works upon the science of warfare, such as *Le dépôt de la guerre* (1872) and *La république et l'armée* (1892), as well as *La vérité sur le masque de fer* (1873); *France et Rome* (1874); *Bonaparte et son temps* (1880-81); *Lucien Bonaparte et ses mémoires* (1882-83); and a biography of Dubois-Crancé (1884).

JUNG, yung, **JUNGE**, yung'e, or **JUNGIUS**, yun'gi-us, JOACHIM (1587-1657). A German mathematician and naturalist, born at Lübeck. He was educated at Rostock, was professor of mathematics at Giessen in 1609-14, obtained his doctorate in medicine at Padua in 1618, and became professor of mathematics at Rostock in 1625. In 1628 he was appointed rector of the Hamburg Johanneum and resigned the post in 1640. In natural science he concerned himself with physics and more particularly with entomology and botany. He was the first to attempt a classification of plants by genera and species and antedated Linnaeus in a scheme of nomenclature. After long neglect attention was called to him by Goethe. His chief work is his *Doxoscopie Physica Minoris, seu Isagoge Physica Doxoscopica, in qua Præcipuæ Opiniones in Physica passim Receptæ, Breviter Quidem sed Accuratissime Examinantur* (1662). Consult *Martini Fogelin Memoria J. Jungi* (Hamburg, 1657); *Goethes Fragmente über Jungius* (Stuttgart and Tübingen, 1850); Avé-Lallemant, *Des Dr. Jungius' Briefwechsel* (Lübeck, 1863); id., *Das Leben des Dr. Jungius* (Breslau, 1882).

JUNG, JOHANN HEINRICH (1740-1817). See JUNG-STILLING, JOHANN HEINRICH.

JUNG, jüŋ, SIR SALAR (1829-83). An East Indian prince, Premier of the Deccan from 1853. For more than a century his family had occupied the highest positions of state, and Salar began his official career as assistant and successor to his uncle. He found civil and military affairs in a most disorderly condition when he came into power, but he succeeded in reorganizing them, and by keeping Hyderabad quiet during the mutiny he saved the dominion from annexation to British India, except the Province of Berar, which the Nizam had given up in return for the English gold granted to pay his own troops. He was made Knight Grand Commander of the Star of India, and visited England in 1876.

JUNG BAHADUR, ba-hä'dur, SIR, MAHARAJAH (1816-77). An East Indian ruler. In 1843 he became general and chief judge of Nepal under the premiership of his uncle, Matabar Singh; and he was a member of the succeeding ministry of Fateh Jung. In 1846 Jung Bahadur was appointed Prime Minister of Nepal. Despite many attempts to assassinate him, he remained in office, and his power was well-nigh absolute, for the rani (who had first plotted his murder) and the rajah fled the country. Jung Bahadur visited England in 1850; he reformed the penal code of Nepal and Indian mutiny of 1857-58 supported For his services he was knighted and was honored with a visit from the Prince of Wales in 1876, and concessions of territory were made to Nepal.

JUNGBUNZLAU, yung-bunt'slou. A town of Bohemia, situated on a cliff above the Iser, 31 miles northeast of Prague (Map: Austria, D 1). The old and new towns and two suburbs contain an old and a new town hall, a castle built in the tenth century by Boleslas II (now used as barracks), four old churches, a hospital, a museum, a Piarist college, a Gymnasium, a trade and an agricultural school. The town manufactures earthenware, glass, woollens, textiles, car wheels, candles, starch, spirits, and soap. Pop., 1900, 13,500; 1910, 16,337.

JUNGERMANNIALES. See HEPATICÆ.

JUNGFRAU, yöŋg'frou (Ger., maiden). A pyramidal peak of the Finsteraarhorn group in the Bernese Alps, Switzerland, situated on the south boundary of the Canton of Bern, 8 miles west of the Finsteraarhorn (Map: Switzerland, B 2). Its height is 13,670 feet, and it falls steeply on the north and east, its slender and majestic form, and the pure whiteness of the snow with which it is covered, having given it its name. It was first ascended in 1811 by Swiss. In recent years the ascent has been made frequently. The construction of an electric rack-and-pinion road to the summit has been in progress since 1897, and the tunnel station of Jungfrauoch (11,340 feet) was opened in 1912. The remaining distance to the summit is designed to be by lift.

JUNGFRAU VON ORLEANS, yung'frou fön ör'lä'an', DIE (Ger., The Maid of Orléans). A noted romantic tragedy by Schiller, completed in 1801.

JUNGHANS, yung'häns, SOPHIE (1845-1907). A German novelist, born at Cassel. She was well educated, lived some years in England and Italy, and in 1877 married Joseph Schuhmann, a professor at Rome, from whom she separated in 1880. She had written and published poetry and tales from 1869 to 1873, but did not become generally known until 1876 when *Kathe, Geschichte eines modernen Madchens*, appeared. Her other works in the same genre include *Hans Eckberg* (1878), an historical novel of the Thirty Years' War; *Die Erbin wider Willen* (1881); *Die Gäste der Madame Santines* (1884); *Der Bergrat* (1888); *Zwei Brüder* (1889); *Zu rechter Zeit* (1892); *Um das Glück* (1896); *Junge Leiden* (1900); *Hymen* (1902); *Wiesel* (1908); *Gelubde* (1908); *Der geraubte Schleier* (1910).

JUNGHUEN, yung'hoon, FRANZ WILHELM (1812-64). A German physician and naturalist, born at Mansfeld. He studied medicine botany, and geology at Halle and Berlin; commenced his professional career as a surgeon in the Prussian army, afterward joined the French forces in Algeria as a sanitary officer, and finally settled in Java. In the latter country he made valuable researches into the geological, geographical, and botanical resources of the land, and his published works on the subject are highly prized. He visited Holland from 1849 to 1855, but returned to Batavia, where he died. His principal works include *Java seine Gestalt, Pflanzendecke und innere Bauart* (4 vols., 1850-54), and *Die Battalander in Sumatra* (1847). A description of his collection of fossil plants, *Plantæ Junghuhnianæ* (1851 et seq.), was undertaken by several naturalists.

JUNGIUS, yun'gi-us. See JUNG, JOACHIM.

JUNGLE (Hindi *jāṅgal*, from Skt. *jāṅgala* desert). A term employed to designate those often almost impassable thickets of trees, shrubs and reeds which abound generally upon swampy land in many parts of India, and particularly in the unhealthy tract called Terai or Tarayani along the southern base of the Himalayas, and in the Sunderbunds at the mouth of the Ganges. The jungle flora and fauna are very peculiar. Tigers and other beasts of prey, elephants, boars, deer, monkeys, and other quadrupeds, with gigantic snakes, are found in great numbers in these thickets. The moisture and heat carry tropical vegetation beyond its usual limit northward to the lower valleys of the Himalayas.

JUNGLE BOOK, THE. Stories for children.

by Rudyard Kipling, published in *Saint Nicholas*, and collected in two volumes in 1894 and 1895.

JUNGLE CAT, or **CHAUS**, kă'ūs. A well-known wild cat (*Felis*, or *Chaus*, *chaus*) of India, met with in all forested parts from Ceylon to an elevation of 8000 feet on the Himalayas. It is about 26 inches long and has a tail 9 or 10 inches long. In color it is yellowish gray, more or less dark and unspotted, and becoming reddish on the sides of the neck and abdomen; a dark stripe runs from the eyes to the muzzle, and there are obscure bars on the limbs and tail, the ears are reddish black outside, white inside, and slightly tufted. A whitish-brown spotted cat (*Felis ornata*) of the same region is sometimes called the "ornate jungle cat." Both species interbreed with domestic cats. See CAT, and Plate of WILD CATS.

JUNGLE FEVER. Pernicious malarial fever of the East Indian jungles. It was probably first named and described by British residents in India, who fell victims to it. The fever is a tropical malaria due to infection with the æstivo-autumnal parasite. Travelers or new residents are more likely to suffer from it than natives. Its symptoms are grave prostration, impaired memory, somnolence, severe headache, disturbed vision, stupor, and delirium, with a fever of intermittent type. Fatal collapse may occur in three days; or the fever may cease in a few hours, or a second and third attack may follow. Quinine is the most successful drug in the treatment of jungle fever. See MALARIA.

JUNGLE FOWL. A typical gallinaceous bird of the East Indian genus *Gallus*, regarded as the source of our domestic fowls. Four species are known—one (*Gallus varius*) in Java and the islands eastward, another (*Gallus lafayetti*) in Ceylon, a third, the "gray" (*Gallus sonnerati*), and fourth, the red jungle fowl (*Gallus bankiva*, or *gallus*) of northern India and eastward to Cochin-China and the Malay Peninsula. The wild birds have been introduced into Hainan, Java, the Philippines, and elsewhere. This species strongly resembles in plumage the modern black-breasted game fowl, and this is especially true of the variety found in the Malay Peninsula, where, according to tradition, fowls were first domesticated. From that country, it is believed, they were taken to China and domesticated, thereby forming the original barnyard poultry. These wild game fowls live in the forests, not gregariously, but in pairs or small parties, but often come out to feed in cultivated fields and show themselves strong fliers and fast runners. They eat almost everything, and their flesh is excellent. The crow of the cock is short and broken, like that of some bantams, but the cackling and clucking of the hens are similar to those of domestic fowls. Four to seven white eggs are laid in a hollow scratched out at the base of a tree or under a bush.

JUNGLE GHAU, or Ox. A variety of the gayal (q.v.), inhabiting Sylhet and other mountainous parts of the northeast of India.

JUNGLE SHEEP. A sportsman's name for the goatlike animal of the Himalayan region (*Hemitragus hylocrius*). It is called warri-atu by the Tamils and Nilgiri ibex by English sportsmen.

JUNGSMANN, yung'man, JOSEF JAKOB

(1773–1847) A Czech philologist, born at Hudlitz, Bohemia. He studied philosophy and law in Prague, taught at the Gymnasium at Leitmeritz from 1799 to 1815, and thereafter at the Altstädter Gymnasium in Prague, of which he was rector from 1835 until 1845, when he retired. He contributed greatly to the revival of the Czech national sentiment and especially to the intellectual reawakening of his people after a protracted period of inactivity. In order to demonstrate the capabilities of the Czech tongue, he first undertook the translation of some masterpieces of foreign literatures, the most notable of which was that of Milton's *Paradise Lost*, begun in 1800 and published in 1811. This was followed by Chateaubriand's *Atala* (1805), Goethe's *Hermann und Dorothea*, and others. These works may be considered to have laid the foundation of the modern Czech literary style. With Johann Preisl he founded in 1821 the *Krok*, the first scientific periodical in the Czech language. His next important work was a *History of the Czech Literature and Language* (1825), but the crowning effort of his life was the monumental *Slovník Českého jazyka* (1835–39), a complete dictionary of the Czech language, for which he had collected the material for more than 30 years. This work is most important for the comparative philologist. His *Memoirs* were published posthumously.

JUNG-STILLING, yung'-stih'ing, JOHANN HEINRICH (1740–1817). A German author, born at Grund in Westphalia. His original name was Jung. He was a charcoal burner, then a tailor's apprentice, and in 1770 went to Strassburg to study medicine. There he became acquainted with Goethe. He practiced at Elberfeld till 1778, achieving renown by his operations for the removal of cataract, and taught political economy at Kaiserslautern, Heidelberg, and Marburg. He was pensioned by the Grand Duke of Baden and made Privy Councillor. His most important work is his mystic autobiography, which appeared in a series of five works: *Heinrich Stilling's Jugend* (1777), *H. S. Junglingsjahre* (1778); *H. S. Wanderschaft* (1778); *H. S. häusliches Leben* (1789), *H. S. Lehrjahre* (1804). These appeared in revised form under the title, *Heinrich Stilling's Leben, eine wahre Geschichte* (5 vols., 1806). His grandson Schwarz added the volume *Heinrich Stilling's Alter* (1817). His other works are the novels: *Geschichte des Herrn von Morgenthau* (1779), *Geschichte Florentins von Fahlendorn* (1781–83), and *Erzählungen* (1814–15); and on purely mystical subjects: *Theobald* (1784–85; in English, 1846), *Theorie der Geisterkunde* (1808; in English, 1834), and *Scenen aus dem Geisterreiche* (1797–1801). His collected works were published at Stuttgart (15 vols., 1835–39). Consult Petersen, *Jung-Stilling* (Copenhagen, 1890), and Goethe, *Dichtung und Wahrheit* (4 vols., Weimar, 1811–14).

JUNIATA, joo'ni-at'a. A borough in Blair Co., Pa., 1 mile north of Altoona, on the Pennsylvania Company Railroad (Map: Pennsylvania, E 6). It has railroad repair shops and silk mills. Juniata is governed by a council and burgess. The water works are owned by the borough. Pop., 1900, 1709; 1910, 5285.

JUNIATA COLLEGE. A coeducational institution of higher learning at Huntingdon, Pa., founded under the auspices of the church of the Brethren (Dunkers) in 1876. The college began with three students and one teacher in two

rented rooms. It now occupies a campus of 23 acres, with eight substantial buildings of brick and stone. In the college proper there is a four-year course, leading to the degree of bachelor of arts. It has also a preparatory course, a School of Education, and schools of Bible, Music, and Business. The institution places emphasis on the religious side of education and exercises a careful supervision over its students. It had, in 1914, 422 students and 22 instructors. The endowment in 1914 was \$186,000, and the college property was valued at \$250,000. The library contained 26,000 volumes and 4000 pamphlets. The president in 1914 was I. H. Brumbaugh, A.M.

JUNIATA RIVER. A river of Pennsylvania, and the principal tributary of the Susquehanna below the West Branch (Map: Pennsylvania, F 6). It has its sources in Bedford, Blair, and Somerset counties, the chief of its head streams being the Frankstown and the Raystown branches, both of which, like the main stream, flow through much wild and beautiful country. Its course, which is exceedingly sinuous, is generally northeast and then east until it enters the Susquehanna at Duncan's Island, about 13 miles northwest of Harrisburg. Its total length is about 200 miles, and its average fall $3\frac{1}{2}$ feet to the mile. Consult Hoyt and Anderson, *Hydrography of the Susquehanna River Drainage Basin*, United States Geological Survey, Water Supply and Irrigation Paper No. 109 (Washington, 1905).

JUNILIUS. A bishop of Africa, who flourished in the sixth century. He was the author of *Instituta Regularia Divinae Legis* (c.550), one of the earliest introductions to the sacred writings. Junilius himself claimed no originality, but in the introduction to the work stated that he was indebted for the greater part of its contents to a certain Paulus of Persia, supposed to have been Paulus of Bassora, who afterward became Metropolitan of Nisibis. In this work, which is generally called *De Partibus Divinae Legis*, Junilius does not enumerate the Chronicles, Ezra, Nehemiah, Job, Judith, Esther, or the Maccabees among canonical books. Consult the edition by Kilm (Freiburg, 1880); Beeker, *Das System des Kirchenvaters Junilius* (Lübeck, 1787); Kilm, *Theodor von Mopsuestia und Junilius Africanus* (Freiburg, 1880).

JUNÍN, hōō-nén'. An inland department of Peru, bounded by the Department of Huanuco on the north, Cuzco on the east, Ayacucho and Huancavelica on the south, and Lima on the west (Map: Peru, B 6). Area, 23,347 square miles. One of the Andes ranges traverses the department through the centre and divides it into two parts—the western being elevated; the eastern lower and thickly wooded, known as the hot Montaña. Agriculture is in a backward state, the chief products being cereals, sugar cane, and coffee. The mineral wealth consists of silver, copper, coal, and salt, but even the rich deposits of silver which are found in the Cerro de Pasco are neglected. A railroad connects the southern part of the province with Lima on the coast, and several extensions of this line have been projected, which will open communication with the eastern and northern departments. Pop. (est.), 394,000. Capital, Cerro de Pasco (q.v.).

JUNÍN, or CHINCHAYCOCHA, chēn'chik'chā. A lake in the Department of Junín, Peru, situated at an altitude of 13,000 feet. It

is about 37 miles long and 7 miles wide and is drained by the Mantaro River. There are several towns on its shores, and small steamboats ply on it.

JUNIPER (older forms *gynypre*, *jenepere*, from OF. *geneivre*, *genoivre*, It. *ginepro*, *giunipero*, from Lat. *juniperus*, *juniperus*, probably for *junonipirus*, Juno's pear, from *Juno*, *Juno* + *pirus*, pear; also explained as being from *juvenis*, young, and *pirus*, pear; hardly connected with *parere*, to produce), *Juniperus*. A genus of evergreen trees and shrubs belonging to the Coniferales, the largest order of gymnosperms. Junipers number about 30 species, which occur in the mountains and extratropical regions of the whole Northern Hemisphere and constitute the largest genus of the tribe Cupressineæ, a tribe distinguished among conifers by its cyclic (opposite or whorled) leaves. While in the common juniper (*J. communis*) the leaves are spreading needles, in many species the leaves appear as small, overlapping green scales, attached to the stem by one face (conescent). The stamens and carpels occur in different cones, and the two kinds of cones are usually upon different plants. A peculiarity of the junipers is that the small carpellate (seed-bearing) cone ripens fleshy, forming the so-called juniper berry, which of course is not a true berry. The common juniper (*Juniperus communis*), common to northern high latitudes, rarely exceeds a height of 30 feet and in general is only a shrub from 2 to 6 feet high. The abundant, round, bluish-

JUNIPER.

black currant-like fruit takes two years to ripen. On the shell of the nuts are three glands, which abound, especially before ripening, in an essential oil—oil of juniper—present also particularly in the young wood. The wood is yellowish red, brownish in the heart, hard, and fragrant. When of sufficient size, it is much valued for turning and veneering. The dry twigs, roots, and berries are used for fumigation. The berries, which have a strong and peculiar flavor, are much used for flavoring gin, which derives its name from them. They also enter into several medical preparations, being stimulant, sudorific, and diuretic. The bark of juniper may be made into ropes, and in some parts of the Highlands of Scotland the roots are woven into coarse baskets. Oil of juniper, on

JUNIPER

which the medicinal properties of the plant depend, has a specific gravity of 0.839. It is obtained by distilling the unripe fruit or the twigs with water. Six drops are a dose. Spanish juniper (*Juniperus oxycedrus*) grows in arid situations in the countries around the Mediterranean Sea. From its fruit, which is about the size of a hazelnut, and its wood is procured an essential oil of disagreeable odor, called *huile de cade*, which is used in veterinary practice, particularly as a cure for scab in sheep. Virginian juniper (*Juniperus virginiana*), the red cedar, or savin, of North America, is a tree, often 50 to 100 feet high, of conical form, with horizontal branches and very small leaves. Its range is from Lake Champlain to the Gulf of Mexico in sandy or rocky places. It is often planted in pleasure gardens in Europe. The berries are small and bright blue. The heart wood is of a beautiful red color, is valued by turners, coopers, etc., and is extensively used for making lead pencils. The wood is very resistant to decay and on this account is in demand for fence posts. There are often found on the branches gall-like hypertrophies called cedar apples, which are induced by one stage in the life history of the fungus causing apple rust. (See *APPLE, Diseases*.) The Bermuda cedar (*Juniperus bermudiana*), a native of the Bermudas, is a small tree, with very fragrant, reddish-brown wood, which is used for furniture, pencil making, etc., and also for lining cabinets, its odor . . . acks of moths and other insect . . .

Mountains produce several species of juniper—trees of considerable size, beautiful appearance, and valuable wood. The Swedish juniper of our shrubberies is merely a variety of the common juniper. There are a number of other species of *Juniperus* of similar habit and use throughout the world, also many dwarf species that are procumbent or trailing. Among the larger tree forms are *Juniperus chinensis*, *Juniperus ex-celsa*, and *Juniperus recurva* of Asia, *Juniperus procera* of Abyssinia, and *Juniperus californica*, *Juniperus occidentalis*, and *Juniperus mexicana* of the western United States and Mexico. There are also numerous horticultural varieties in cultivation.

JUNÍPERO, *hōō-nē-pā-rō*, MIGUEL JOSÉ SERRA (1713-84). A Franciscan missionary to the Indians of California. He was born on the island of Majorca in the Mediterranean, and when he became a priest (1730), he exchanged his baptismal name, Miguel José Serra, for the clerical one, Junípero. At the age of 36 he sailed as a missionary to the Spanish colonies in America, and from 1750 until 1769 he ministered to nomadic tribes of aborigines in Mexico. Upon the expulsion of the Jesuits from Lower California Father Junípero was ordered to take up their relinquished work, and while he was president of the California missions there were founded the missions of San Diego (1769), San Carlos (1770), San Antonio (1771), San Gabriel (1771), San Luis Obispo (1772), San Francisco (1776), San Juan Capistrano (1776), Santa Clara (1777), and San Buenaventura (1782). He made many long and toilsome wilderness journeys to other stations, but his particular charge was the San Carlos Mission at Monterey, and he had under him 16 missionaries of the Order of St Francis, who by 1780 had converted more than 3000 Indians, instructed them in the arts of peace, and per-

suaded them to give up their wanderings to form agricultural colonies around the different missions. These in turn required military stations or presidios for their protection, and thus the settlement of California was begun. Father Junípero was buried in his own church at Monterey, now in ruins, and Father Palon, his assistant and successor, one of the three enthusiasts who came out with him to America, left behind an interesting memoir, called *Vida de Junípero*. Consult: G. W. James, *Old Missions and Mission Indians of California* (Los Angeles, 1895); B. J. Clinch, *California and its Missions*, vol. ii (San Francisco, 1904); Zephyrin Engelhardt, *Missions and Missionaries of California*, vol. ii, part i (ib., 1912); G. W. James, *Old Franciscan Missions of California* (Boston, 1913).

JUNIUS, *yōō'nē-us*, FRANCISCUS, THE YOUNGER (1589-1677). A German philologist and antiquary. He was born at Heidelberg, the son of Franciscus Junius the theologian. The family having removed to Leyden in 1592, he studied there under his brother-in-law, the celebrated philologist Gerhard Vossius. In 1620 he visited France and in 1621 went to England, where he was appointed librarian to the Earl of Arundel and held that office for 30 years, during which time he studied the Teutonic languages. His greatest work was his *Glossarium Gothicum* (1664-65), in five languages, the English portion of which has been issued separately as *Etymologicum Anglicanum*. He also wrote *De Pictura Veterum* (1637), with an English translation by himself, and published the first edition of the *Gothic Gospels of Ulfilas* (1665), with a commentary. He left his valuable manuscripts to the Bodleian Library, Oxford.

JUNIUS, *jōōn'yūs*, LETTERS OF. A famous series of 70 letters signed "Junius," which appeared in a London newspaper, the *Public Advertiser*, between Jan. 21, 1769, and Jan. 21, 1772. The signature "Junius" had appeared for the first time on Nov. 21, 1768, when Grafton and Camden were assailed for their behavior towards Wilkes. Revised by the author, the *Letters* were reprinted March 3, 1772, by Henry S. Woodfall, editor and printer of the *Advertiser*. In 1812 appeared a new edition, containing 113 additional letters variously signed, which were attributed to the author of *Junius*. The first letter in the first collected edition, which treats of the "State of the Nation," strikes the keynote of the subsequent correspondence. In it the author singles out several leading members of the ministry and boldly denounces their inefficiency. No sooner did the first letter appear than the court party took the alarm. An invisible and dreaded censor was evidently moving among them—one who seemed cognizant of all the proceedings of both Houses, who not only knew intimately the public career of ministers, but was fully informed regarding the follies and the crimes of their private lives. Sir W. Draper, who entered into controversy with this unknown adversary, was in the end overmastered. The Duke of Bedford, Lord Mansfield, and, chief of all, the Duke of Grafton, writhed beneath his lash. The greatest sensation was created by the "Address to the King" (Dec. 19, 1769), in which King George was reminded of the fate of Charles I. Woodfall, as printer and publisher, was prosecuted, but acquitted on a technicality. The style of these letters, though somewhat stiff and

formal, is remarkable for closeness of argument, felicity of illustration and allusion, and brilliant epigram. Whoever Junius was, he had made too many enemies to be safe in acknowledging himself. The letters were ascribed in turn to Burke, Lord Shelburne, Colonel Barré, Lord George Sackville, Wilkes, Horne Tooke, Lord Lyttleton, and several others, but the general opinion now is that Sir Philip Francis (q.v.) was the author. The handwriting of Junius seems to be the handwriting of Francis slightly disguised, though experts are not in full agreement on this point. Junius, as is evident from his letters, knew the forms of the Secretary of State's office, was intimately acquainted with the business of the War Office, attended the House of Commons in 1770, and took notes of speeches, especially of those of the Earl of Chatham; denounced the promotion of Anthony Chamier in the War Office as unjust to Mr. Francis, and was bound by some strong tie to the first Lord Holland. All these circumstances in the position of Junius correspond with the history of Francis. This and similar evidence, however, is wholly circumstantial. That Francis wrote the *Letters of Junius* has never been proved beyond a reasonable doubt. Consult the *Letters*, edited by J. Wade, in Bohn's Library (London, 1854); Chabot and Twisleton, *The Handwriting of Junius* (ib., 1870); G. H. R. Francis, *Junius Revealed* (ib., 1894); *The Francis Letters*, edited by Francis and Keary (ib., 1901).

JUNK (Malay *ajong, jong*, Chin. *chw'an, chw'en, tsw'an*, Cantonese *jonk*, ship). A Chinese vessel, often of several hundred tons. The old-type junks have but one large mast with or without one or more smaller ones. Many modern junks (and perhaps some old ones were also so fitted) have two masts of about equal size. The hull appears ungainly, the stern being high and the bow low, and the lines rather full above water, but the underwater body is often found to be very finely modeled, and the woodwork of the hull strongly and beautifully put together. The sails are made of coarse cloth or matting and bent to a yard, which is hoisted to the top of the mast; their height would render it difficult to make them set flat with ropes only, so that they are stiffened by small bamboo poles placed in a nearly horizontal direction. Most large junks are good sea boats, riding out severe typhoons in safety.

JUNKER, yun'kér, WILHELM (1840-92). A Russian explorer in Africa. He was born at Moscow, of German parents, and studied first at St. Petersburg, then at Göttingen, Berlin, and Prague. In 1869 he visited Iceland and first went to Africa in 1873. Having made short excursions to Tunis (1874) and Lower Egypt (1875), he went, in 1876, from Suakin to Khartum, sailed up the Blue Nile, and made extensive trips in a western direction, returning to Europe in 1878. Towards the end of 1879 he set out on a new expedition into the territories of the Niam Niam and Mangbattu to explore the basins of the Welle and the Bahr el-Ghazal. When he was about to return in December, 1883, after having obtained satisfactory results, his way down the Nile was cut off by the uprising of the Mahdi, and he was obliged to seek refuge with Emin Pasha at Lado. He did not succeed until 1886 in reaching Zanzibar, whence by way of Cairo he returned to Germany and there published the results of his travels under

the title *Reisen in Afrika, 1875-86* (3 vols., Vienna, 1889-91). In 1887 the Royal Geographical Society presented him with a gold medal.

JUN'KIN, GEORGE (1790-1868). An American clergyman and educator. He was born near Carlisle, Pa., graduated at Jefferson College in 1813, and was pastor in the Associate Reformed church in central Pennsylvania, and after 1822 in the Presbyterian church. In 1832 he left the Germantown Manual Labor Academy, of which he had been head, founded Lafayette College, and served as first president of that institution from 1832 to 1841. After three years as president of Miami he returned to Lafayette, and in 1848 became president of Washington College (now Washington and Lee). Although an able defender of slavery, Junkin was strongly Union in his sentiments and resigned in 1861. He was a leader of the Old School Presbyterians. He is best known for his able administration of Lafayette College (q.v.), where he spent more than \$10,000 of his own fortune and his wife's to pay current expenses. One of his daughters married Gen. "Stonewall" Jackson. He wrote *Political Fallacies* (New York, 1863) and several religious works. Consult the biography by D. X. Junkin (Philadelphia, 1871).

JUNK'SEYLO'N'. An island in the Bay of Bengal. See SALANG.

JU'NO AND HE'RA. The Roman and Greek names of the queen of heaven and wife of the supreme divinity. Though alike in many respects, the two conceptions can best be treated separately.

Hera is, in all particulars, a thoroughly Hellenic conception, and the theory of Semitic origin may be dismissed in this, as in most other cases; there is, however, no general agreement as to the derivation of the name or the nature of the goddess. While some see in her an earth goddess, or even the special earth goddess of Argos, and in her union with Zeus a picture of the union of earth (or air, so Plato, who connected her name with *ἀήρ, air*) and heaven, others, especially Roscher, regard her as a moon goddess, and thus especially a goddess of women (whose lives were supposed to be specially influenced by the moon), and from this relation developing into the wife of Zeus and guardian of married life. This latter school derives the name from a root *sarv* or *harr*, to protect (cf. Lat. *servare*), so that the original form would be **EpFa*. Whatever the original nature of Hera may be, there can be no doubt concerning the position she occupies in the Greek religion. She is the consort of Zeus, for the major part of Greece at least. (See, however, **DIONE**, and **Zeus**, under **JUPITER**.) The union of Zeus and Hera, celebrated widely in the "Sacred Marriage" (*ἱερός γάμος*), is the prototype of human wedlock. This marriage is the centre of Hera's worship in all places. As the guardian of marriage, she also assumes guardianship over other phases of female life, and seems to have been regarded often as a goddess of childbirth (e.g., at the births of Hercules and Eurystheus), though this function was usually attributed to Eileithyia (q.v.). The cow was one of her sacred animals, and in later times the peacock was regarded as her favorite bird. The cult of Hera was universal throughout the Greek world, but was especially prominent at a few places, particu-

larly in the Achæan centres, Argos, Mycenæ, and Sparta, which, in *Iliad*, iv, 51 ff., she calls her favorite cities. Argos was one of the oldest and most famous centres of her worship. The sanctuary was situated to the east of the city on a spur of the ridge bounding the Argive plain and nearer Mycenæ than Argos. The old temple was burnt in 423 B.C. A new building was at once erected, which contained a gold and ivory statue by Polycleitus. (See *HERÆUM, THE ARGIVE*.) The priestesses of the temple were matrons and were held in high honor, as it was by the years of the priestess that the Argives dated events. The sanctuary was excavated by the American School of Classical Studies at Athens in 1892 and the following years. (Consult Waldstein, *The Argive Heræum*, New York, 1902.) The rites of Hera at this place included an important festival which seems to have represented the sacred or mystic marriage, as did her festivals at other temples. Next to that of Argos was the famous temple on the island of Samos, of which one column is still standing. Here was a tradition of the birth of the goddess, under a sacred willow, and another annual marriage festival. She was ardently worshiped also on the Læcian promontory near Crotona in Magna Græcia. The best-defined cult of Hera as a marriage goddess was at Platea and on the neighboring summit of Mount Cithæron, where a great festival was celebrated in honor of Zeus and Hera, as it was said that Zeus had carried the maiden Hera from Eubœa to a cave on this mountain. In literature Hera appears not only as the matron and noble queen of the gods, but also, in fact, more often as the jealous, proud, and somewhat shrewish wife, bitterly angered at her husband's numerous infidelities and frequently persecuting the children of her rivals. (See, e.g., *ALCMENE; DANÆ; BACCHUS, HERCULES, IO, LETO; SEMELE*.) These stories of Olympian quarrels do not seem to have influenced the cult. The most famous statue of Hera was that by Polycleitus at Argos, described by Pausanias (q.v.); but no certain copies are known, and this is also true of the representations by other great artists. Indeed, statues or busts of Hera are comparatively rare in our museums. The goddess is represented standing, fully draped, with the sceptre, and in many cases with a veil. Of busts, the oldest is the rude limestone head from Olympia. The most celebrated are probably the Hera Farnese in Naples, once believed to be a copy of the work of Polycleitus, though now recognized as belonging to an earlier period and different school, and the beautiful Hera Ludovisi, in Rome, a work probably of the fourth century B.C., though the date is still much discussed. In reliefs, paintings, and especially on vases, the type of Hera naturally varies much, but in general preserves the character of the matron and queen.

Juno (regarded by many as a shortened form of *Iovino*: cf. *Iovis*, an old name of Jupiter; the words come from a root meaning 'to shine') was throughout Italy the consort of Jupiter and the queen of heaven. The whole worship of Juno shows the closest parallelism to that of her husband. To her the kalends (first) of each month were sacred, and in the earlier belief she also controlled the thunderbolt. This aspect of her cult is shown in her name, *Regina*, but it gradually passed into the background, and Juno became the goddess of

women, especially of wives and mothers; her great festival as *Lucina* (q.v.), who helped in childbirth, was the *Matronalia* on the first of March—the day on which at first, for centuries, the Roman year began—and other prominent celebrations in her honor were in the hands of women. To her women appealed for aid at every crisis. On the Capitol she was not only honored in the shrine of Jupiter, but also had her own temple as *Moneta*, where later the Roman mint was situated. She was worshiped also, especially at Lanuvium (q.v.), as *Juno Sospita*, Juno the Preserver, giver of health and safety, to individual and to state. In later times Greek influence much affected the Roman cult, and the cult of Juno approached more and more closely that of Hera. Consult, in addition to the standard mythologies—Overbeck, *Griechische Kunstmythologie*, vol. ii (Leipzig, 1873); Roscher, *Juno und Hera* (ib., 1875); Preller-Robert, *Griechische Mythologie* (Berlin, 1894); Farnell, *Cults of the Greek States*, vol. i (Oxford, 1896); Fowler, *Roman Festivals* (London, 1899); Gruppe, *Griechische Mythologie und Religionsgeschichte*, vol. i (Munich, 1906); Frazer, *The Golden Bough*, vol. i (London, 1911); C. E. Gayley, *The Classic Myths in English Literature and Art* (2d ed., Boston, 1911); Wissowa, *Religion und Kultus der Römer* (2d ed., Munich, 1912).

JUNOT, zhū'nó', ANDOCHE, DUKE OF ABRANTÈS (1771–1813). A marshal of France. He was born Oct. 23, 1771, at Bussy-le-Grand, in the Department of Côte-d'Or, entered the army as a volunteer during the early days of the Revolution, and distinguished himself in the first wars of the Republic. Napoleon's attention was first drawn to him during the siege of Toulon. Junot accompanied his patron to Italy as aid-de-camp, and at the battle of Millesimo (April 13–14, 1796) he distinguished himself so greatly that he was chosen to carry the captured colors back to Paris. He was later wounded in the head at Lomato, an injury from the effects of which he never completely recovered. In 1798 he followed Napoleon to Egypt, was there created a brigadier general, and particularly distinguished himself at Nazareth, where, at the head of 300 cavalry, he put to flight an army of several thousand Turks. Having been wounded in a duel, Junot was left in Egypt and on the journey back to France was captured by the English. He returned to Paris, however, in 1800, and was made a general of division and commandant of Paris. The latter post was not filled by Junot in a satisfactory manner. After he had served at Arras for a short time, he was sent, in 1804, as French Ambassador to Portugal. He left Lisbon without permission, in 1805, and joined Napoleon in Germany, distinguishing himself at the battle of Austerlitz. For a short time in 1806 Junot was again commandant of Paris, but again showed himself prodigal and extravagant, and finally, in 1807, he was appointed to the command of the army destined for the invasion of Portugal. His army, after undergoing dreadful privations, reached Lisbon December 1, and Junot made himself master of all the strong places in the Kingdom. For his brilliant conduct at this time he was created Duke of Abrantès and appointed Governor of Portugal, although he was entirely devoid of administrative talent; but, being defeated by Wellington at Vimero (Aug. 21, 1808), he

concluded a convention at Cintra for the evacuation of Portugal by the French, returned to France, and subsequently fought in the Peninsula and in Russia. In 1812 he had to bear more of the criticism for the failure of the campaign than he deserved and was stigmatized by Napoleon as deficient in energy and sent to govern Illyria. At this time, however, it became clear that his mind was deranged, and he was brought back to France and was taken to his father's house at Montbard, near Dijon; but two hours after his arrival he precipitated himself from a window and fractured his thigh bone. Amputation was performed; but Junot frantically tore off the bandages, and died a week later, July 29, 1813. Although not without brilliant gifts and charm of personality, he was too much of a *sabreur* to be a successful general and too irresponsible to be an administrator. Consult L. P. Junot, *Histoire des salons de Paris* (6 vols., Paris, 1837), id., *Souvenirs d'une ambassade et d'un séjour en Espagne et en Portugal, de 1808 à 1811* (2 vols., Brussels, 1838); Arthur Chuquet, "La folie de Junot," in *Institut de France, Académie des Sciences Morales et Politiques, Séances et Travaux*, vol. lxxii (new series, Paris, 1909).

JUNOT, LAURE, DUCHESS OF ABRANTES (Laurette de Saint-Martin-Permon) (1784-1838). A French writer, the wife of General Junot, to whom she was married in 1799. She was a social leader at the court of Napoleon I, her salon being frequented by the most prominent personages in political and social life in Paris. Her boundless extravagance brought about complete financial ruin. After the death of her husband, in 1813, she devoted herself to historical writing, and published *Mémoires, ou souvenirs historiques sur Napoléon, la révolution, le directoire, le consulat, l'empire, et la restauration* (18 vols., 1831-35), which, with all their diffuseness, bear witness to her keen observation and sound judgment. Despite the popular sensation produced by these and several other reminiscent works, she sank into misfortune and died in a charitable institution in Paris.

JUNTA, *Sp. pron.* hōōn'tá (*Sp.*, association). The name given in Spain and the Spanish-American countries to a body of persons combined for any political or civil object. The term was formerly applied more exclusively to assemblies of representatives of the people meeting without authority of the sovereign, but has been extended to those of the most strictly legal character. See AYUNTAMIENTO.

JUNTA. A family of printers. See GIUNTA.

JUNTO. The name used of a small coterie of eminent Whig politicians who, under the leadership of Russell, Somers, Montague, and Wharton, exerted great influence on British affairs during the time of William III.

JUON, yōō'on, PAUL (1872-). A Russian composer, born in Moscow. In 1888 he entered the Moscow Conservatory, where his teachers were Hrimaly (violin) and Arensky and Taneiev (composition). After an additional course under Bargiel at the Hochschule in Berlin (1894), he won the much coveted Mendelssohn scholarship. In 1896 he accepted a position as teacher of composition at the conservatory in Baku, on the Caspian Sea, but returned the following year to Berlin, where he settled permanently. In 1906 he became professor of composition at the Hochschule. As a composer, he follows the

ideals of Brahms in his devotion to absolute as opposed to programme music (q.v.). Like the great German master, he cultivates the classical forms and derives much of his inspiration from the folk music of his native land. What saves him from being a mere imitator of Brahms is his originality, strong inventive power, and the decidedly Slavic character of his music. His compositions include a symphony in A, serenade, phantasy, suite, and several smaller pieces for orchestra; a violin concerto; piano pieces, songs. His chamber music, in which field he probably surpasses all his contemporaries, is remarkable not only for its intrinsic beauty, but also for the variety of instruments employed. He is author of an excellent *Praktische Harmonielehre* (1901) and the translator into German of Modeste Tchaikowsky's biography of Peter Tchaikowsky.

JUPATI (jōō'pá-tě') **PALM** (South American Indian), *Raphia vinifera*. A palm which grows on rich, alluvial, tide-flooded lands near the mouth of the Amazon. The stem is seldom more than 6 or 8 feet high; but the leaves, which are pinnate, with leaflets about 4 feet long, are often 50 to 60 feet long, rise vertically from the summit of the stem, bend out on every side in graceful curves, forming a magnificent plume, and are perhaps the largest in the vegetable kingdom. The leafstalks, which are often 12 or 15 feet long below the first leaflets, and 4 or 5 inches in diameter, are perfectly straight and cylindrical. When dried, the thin, hard, glossy outer covering is used for laths and window blinds. The interior part is soft enough to be used instead of cork. One of its forms is the *wine palm* of the west coast of Africa and eastern South America. This is a tree of moderate height with leaves 6 to 8 feet in length. From the trunk of this tree an intoxicating beverage is derived. According to report it forms a very considerable portion of the vegetation in the region in which it grows. Its leaves are made into hats, cloth, and cordage, its leafstalks are used in building houses, fences, etc., and from the crown of young leaves palm wine is obtained. From this species and from *Raphia ruffia* or *Raphia pedunculata* is obtained an important very strong fibre called raffia, which is largely used in nurseries and greenhouses for tying up plants. The fibre has been successfully woven into artistic matings for decorative uses, as well as cloth, which is the almost universal clothing of the natives. See Plate of PALMS.

JUPITER (*Lat.* Jupiter, *Juppiter*, *OLat.* Joupiter, *Gk.* Ζεύς Πατήρ, *Zeus Patēr*, *Skt.* Dyāus Pitar, Father Jove; cf. *Lat.* Diovis Pater, *Diespiter*). The name *Jupiter* is derived from *Lat.* Jovis, *OLat.* Jovos, *Gk.* Ζεύς, *Zeus*, *Skt.* dyāus, sky (connected with *AS.* Tūv, *Oicel.* Týr, *OHG.* Zio, and with *Eng.* Tues-day, and ultimately with *Lat.* deus, *OIr.* día, *Lith.* dévas, *Skt.* dēva, god), and *Lat.* pater, *Gk.* πατήρ, *patēr*, *Skt.* pitar, *OHG.* fater, *Ger.* Vater, Goth *fadar*, *AS.* fæder, *Eng.* father). The chief god of Latin mythology, identified by the Romans with the Greek Zeus. The names are etymologically the same, and the equivalents are found also among the other Indo-European nations, though among none but the Greeks and Romans did they designate the chief divinity. The word *dyāus* means 'sky' (√di- or div-, shine), and there can be little doubt that the divinity thus named is the god of the light and the heavens, whence

JUPITER

2. ZEUS OF OTRICOLI, in the Vatican Museum, Rome.

come the fructifying showers and also the destructive storms and deadly lightning. The fact that the etymology of the name was early and wholly lost to the consciousness of both Greeks and Romans aided in the complete personification of Zeus or Jupiter, and it is only in the later philosophic and speculative poetry that we find the identification of the supreme god with the *æther* or pure upper air, and even then the context is apt to point to pantheism.

Greek. As usual, the Romans borrowed much from the Greeks in their later conception of Jupiter, and it will be best to treat first of Zeus as he appears in Greek mythology. From the beginning of our records Zeus appears as the supreme god, established as the ruler of the universe, whom all the other gods obey, for he is stronger than all of them. He wields the thunderbolt, which in even the earliest art is his almost inseparable attribute. Of the origin of this supremacy nothing is known. It may come from the natural idea of the god of the sky and light, or it may be due to the awe before the power of the thunderbolt, which would secure to its wielder irresistible might. With Zeus were also associated the eagle, the oak (at Dodona), and the wolf (on Mount Lycæus: see below). According to another view, however, *Λυκαῖος*, the epithet of Zeus in this worship, comes rather from a root meaning 'light'; in this view Jupiter is again a god of light, and the wolf is by accident connected with his worship). To Zeus in Homer also belongs the *αἶψα* (q.v.), brandishing which he causes confusion and terror to fall upon his enemies. Closely connected with the idea of Zeus as god of the lightning and thunder is his function as a rain god. As the supreme god, Zeus was the protector of suppliants and the punisher of perjurers. Though Zeus nowhere actively takes part in battle except against such enemies of the gods as the Titans, Typhon, or the Giants, he was honored by the erection after a victory of a trophy which was dedicated to him. He was also a prophetic god, perhaps from the use of lightning in auguries, revealing the future in many ways, as by birds and dreams, or at his oracles. Naturally in the developed Hellenic civilization other functions are especially assigned to Zeus, and he often appears as the guardian of leagues or of public assemblies. Zeus was of course worshiped throughout Greece, and with a wide variety of local observances, but there are a few places where his cult received especial prominence and obtained far more than a local importance. *Dodona* (q.v.) was the seat of a very early worship, called by the Greeks Pelasgian, where Zeus was associated with Dione instead of Hera, and gave oracular responses to those who asked advice, either by the rustling leaves of the oaks, or by casting lots, or by other more complicated methods. The great centre of Zeus worship in Greece was, of course, *Olympia* (q.v.), where from very early times there seems to have been a cult of Hera and possibly of Zeus also, though it is very probable that the latter was introduced from Thessaly, where the home of Zeus was placed on the summit of Mount Olympus. Here also was an oracle, which, however, never attained special eminence. The important feature of this cult was the celebration, every four years, of the great Olympian games. (See OLYMPIC GAMES.) Primitive rites and even human sacrifices appear in connection with the worship of Zeus on Mount Lycæus in Arcadia, where there

was no temple or image, but only two eagles on pillars facing the east in an inclosure on the summit of the mountain which it was forbidden to enter. Here a boy was sacrificed by a priest, who, after tasting of the victim, fled and was believed to be transformed for nine years into a wolf. The rite seems to have been performed even as late as the time of Hadrian. Similar rites existed on Mount Ithome in Messenia, and at Halys in Phthiotis and Orchomenus in Bœotia in connection with the cult of Zeus Laphystius. There are even traces of such savage customs in the Zeus cults of Athens, where the god seems to have been worshiped both as a beneficent and as a cruel deity. (For another Athenian ceremony in honor of Zeus, see DIPOLIA.) His great temple, begun by Pisistratus in honor of the Olympian Zeus, was to the southeast of the Acropolis, near the Ilissus. Passing from Greece proper, we find in Crete a very extensive worship of Zeus which shows many traits pointing to early connection with Asia Minor, especially Caria, and the worship of Rhea-Cybele or Cybele, the great mother of the gods. Here the god was born of Rhea, and here concealed from his jealous father, Cronus, in a cave (either the Dictæan or Idean), where he was suckled by the goat Amalthea, while the armed Curetes (the regular attendants of Rhea) danced and clashed their shields to drown his infant cries. (See CURETES; CORYBANTES.) Here, too, not far from Cnossus, was shown the grave of Zeus. Much here recalls the worship of Dionysus and obviously contains a chthonic element. In general, the god was honored on lofty mountains, as is to be expected from his nature as a god of the sky and also of lightning for it is around the mountain tops that the storm clouds gather. The stories of the birth of Zeus, which have been already mentioned, appear even in Hesiod, who also tells of the overthrow of Cronus and the establishment of the new dynasty by Zeus, who, after hard struggles with the Titans and the Giants, secures his supremacy. In general, the myths about Zeus are concerned chiefly with his numerous love affairs, either with goddesses or with mortals. (See ALCMENE; DANAË; ELECTRA, I; LETO; SEMELE.) In some of these we doubtless have reminiscences of the association in worship of different goddesses with the supreme god, before the unification of religious views had established Hera as his legitimate consort. A large number, however, are due to the desire to trace the descent of the heroes and noble families to the great god. *Διογενής* (Zeus-descended) is a common Homeric epithet of the Achæan princes. In art Zeus was usually represented as bearded and of majestic presence. The artistic type was largely determined by the great gold and ivory statue by Phidias in the temple at Olympia, of which we can form but a slight notion from the late coins of Elis and the description of Pausanias. A fine example of the later type is the well-known Zeus Otricoli in the Vatican. Consult: Overbeck, *Griechische Kunstmythologie und Atlas* (Leipzig, 1871 et seq.); Preller-Robert, *Griechische Mythologie* (Berlin, 1887); and other works cited under GREEK RELIGION.

Roman. Jupiter, under various forms of the name, was worshiped throughout all Italy, and his position as god of the heavens is made even plainer by the epithet *Lucetius* (bringer of light), in the hymn of the Salii, and by the standing phrase *sub Jove* (under the open sky). This aspect of the god is obvious in the earlier

forms of his worship at Rome. He was worshiped as god of the lightning under the titles Jupiter Elicius and Jupiter Fulgur. The Ides, or day of the full moon, were sacred to Jupiter, and in his honor was celebrated the festival connected with the vintage, apparently because the wine was especially dependent on the god of heaven for its increase. His chief sanctuary in Rome was on the summit of the Capitol, where the god was worshiped with Juno and Minerva, as Jupiter Optimus Maximus, and near by was an earlier chapel, said to have been dedicated by Romulus to Jupiter Feretrius, or god to whom spoils of war were brought, which contained only a piece of flint as a sacred symbol, probably of the thunderbolt, whence the god was also called Jupiter Lapis. The same development of the all-seeing and all-powerful god of the heavens to be the protector and guardian of human rights and suppliants which occurred in Greece can also be traced to Rome, where Jupiter was worshipped as the protector of the Fœderales, and the protector of the Fetiales are especially connected with his cult. Here also we find Jupiter a god of battles, whose thunderbolts might be drawn down upon the enemy, and to whom the general who had slain the hostile leader dedicated the *spolia opima*. Jupiter also revealed the future by signs, and on one of the summits of his sacred hill, the Capitol, the augurs had their station. That Jupiter was widely worshiped in the country as giver of fair weather and sender of the rain and storm is natural, but in the Roman state his chief importance lies in the political cult at the Capitol, which came to be the religious centre of Roman rule. Closely connected with this was the worship of Jupiter Latiaris on the Alban Mountain, where was a very ancient sanctuary, apparently once the religious centre of the Latin League.

JUPITER. The largest planet in the solar system, having a mass nearly three times as great as the combined masses of all the other planets. Its orbit is about five and two-tenths times as far from the sun as that of the earth, or at a mean distance of 483,300,000 miles, and its eccentricity is 0.048, the planet's greatest and least distances from the solar centre varying between 462,000,000 and 504,000,000 miles. The planet's mean distance from the earth when in opposition is about 390,000,000 miles, and it moves around the sun in 11 years and 314.92 days, so that the interval between its returns to opposition has a mean value of 399 days, and its orbit is inclined to the ecliptic about $1^{\circ} 18' 29''$. The mean diameter is about 86,500 miles, with a polar compression of about one-seventeenth, thus exceeding the earth in volume a little over 1279 times. One of the distinguishing features of the planet is the belt or stratified changeable band crossing the disk in a direction parallel to the plane of the orbit. The belt varies greatly, being at times narrow, while sometimes almost the whole disk is covered. Months will sometimes pass without any remarkable change in the telescopic appearance of Jupiter's surface, and then suddenly considerable alterations will take place in a few hours. In addition to these changeable bands, more permanent spots sometimes appear. The "Great Red Spot," first seen in 1878, is the most important of these. It is still visible. But the rotation period of the planet cannot be fixed very accurately from observations of the spots, because none of them retains its position with sufficient permanence. The rotation is known, however, to take place in about 9 hours 55 minutes. There can be no doubt but that atmospheric currents on Jupiter materially affect his appearance in our telescopes.

The inclination of Jupiter's equator to the plane of his orbit is $3^{\circ} 5'$, which would fix the changes of the seasons within narrow limits, were the planet existing under circumstances resembling those of the earth, but as the temperature of Jupiter is above redness (how far above is not known), the sun's rays, at his immense distance, can hardly be taken as an element of the surface heat.

Jupiter has eight satellites or moons, as follows.

NO	Name	Discoverer	Date of discovery	Distance in radii of planet	Period	Mass, that of Jupiter being 1	Diameter in miles
					dys hrs min		
5		Barnard	1892	2 55	0 11 57		100 (?)
1	Io	Galileo	1610	5 93	1 18 28	0.00001688	2,500
2	Europa	"	"	9 44	3 13 14	0.00002323	2,100
3	Ganymede	"	"	15 06	7 3 43	0.00008844	3,550

(2d ed., London, 1911), C. E. Gayley, *Classic Myths in English Literature and Art* (2d ed., Boston, 1911), A. W. Cook, *Zeus, God of the Bright Sky* (London, 1914); and the article "Jupiter," in Lübker, *Reallexikon des klassischen Altertums* (8th ed., Leipzig, 1914). For Jupiter as a rain god, Jupiter Pluvius, consult Morgan, "Rain-Gods and Rain-Charms," in *Transactions of American Philological Association*, vol. xxxii (Hartford, 1901). See JUPITER CAPITOLINUS; JUPITER STATOR.

On account of the slight inclination of Jupiter's equator to the ecliptic, and the fact that the planes of the orbits of the first five satellites vary little from the plane of the equator, all of them except Callisto suffer an eclipse at every revolution. The eclipses of the four Galilean satellites are of interest in connection with the velocity of light which was first estimated by means of observation of them by the Danish astronomer Roemer (q.v.) in 1675. Another most interesting phenomenon of the satellites is

that of their "shadow transits." When a satellite passes between Jupiter and the sun, a shadow falls upon the planet. This shadow is analogous to that cast on the earth by our moon in total solar eclipses. (See ECLIPSE.) To an observer at the telescope these satellite shadows appear as tiny dark dots moving across Jupiter's disk. The satellites themselves can also be observed (though with difficulty) projected against the disk of the planet and transiting across. The satellites are also at times hidden or occulted behind the disk. See ASTRONOMY, PLANETS; SOLAR SYSTEM.

JUPITER CAPITOLINUS (Lat., Jupiter of the Capitol), TEMPLE OF. The national shrine of ancient Rome, on the Capitol, dedicated to Jupiter Optimus Maximus, Juno, and Minerva, built, according to the common account, by Tarquinius Superbus and consecrated in 509 B.C. It stood on Monte Caprino, the more southerly of the two summits forming the Capitoline Hill, on a raised platform on the middle of a sacred site, and could be approached only from one side, the other sides being formed by cliffs. The surface of the hill was leveled in the fourth century B.C. by great walls rising from the plain and covered with inscriptions in honor of the god. The temple was a low Etruscan structure, with a periphery of 800 feet, and with a triple row of columns in front, and a cella with three divisions, sacred to Jupiter, Juno, and Minerva. Above the pediment was a terra-cotta quadriga. The building was burned in 83 B.C., and was reconstructed by Sulla and Julius Cæsar. It was again restored under Augustus in 9 B.C., under Vespasian in 74 A.D., and under Domitian in 82 A.D. It was plundered in 455 by the Vandals, robbed of its statues and gilded bronze tiles, and gradually became a quarry for other structures. Fragments were discovered in the sixteenth century, and in the eighteenth and nineteenth centuries other architectural remains which had rolled down the hill were recovered. Consult R. Lanciani, *Pagan and Christian Rome* (Boston, 1893), and S. B. Platner, *The Topography and Monuments of Ancient Rome* (2d ed., ib., 1911).

JUPITER LATIA'RIS. See JUPITER; LATIUM.

JUPITER OF OTRICOLI. See ZEUS OF OTRICOLI.

JUPITER SERA'PIS, TEMPLE OF (so called). This building, situated at Pozzuoli, near Naples, is really not a temple at all, but the public market of Pozzuoli, a circular structure built around a court. Only three of the original 46 pillars exist. They rise out of the water, the pavement of the temple being at present submerged, but they bear evidence of having been at one time submerged to half their height, which is 42 feet. The shafts of the pillars as high as 12 feet are quite smooth; for the next nine feet they are pitted by the boring action of mollusks, still active in the neighboring rocks. The water must have covered this portion of the pillars, and, while the mollusks were busy, the lower 12 feet must have been protected from their ravages by being buried in mud. The alternate raising and lowering of the ground level is evidently due to volcanic action, but the changes of level have been so gradual that the pillars have not been moved from their original position.

JUPITER STATOR (Lat., Jupiter the

Stayer [of flight]), TEMPLE OF. A temple at Rome vowed by Romulus to Jupiter should Jupiter stay the flight of the Romans from the Sabines (Livy, i, 12). In payment of this vow a Corinthian temple was built (296 B.C.) by M. Atilius Regulus. The best evidence places it near the Sacred Way, east of the Arch of Titus. Its site is occupied by ruins of a tower of the Frangipani. Consult R. Lanciani, *The Ruins and Excavations of Ancient Rome* (Boston, 1897).

JU'RA, *Fr. pron. zhu'ra'.* A range of mountains on the west frontier of Switzerland. Beginning in southeast France on the north bank of the Rhone at Saint-Genix, it extends northward, forming the west bank of the river till it reaches the Swiss frontier near Geneva. From that point it follows the boundary line in a long curve towards the northeast, finally passing wholly into Switzerland, and terminating on the south bank of the Rhine west of its confluence with the Aar (Map: Switzerland, A 2). The range thus defined is the Jura proper, but many geographers continue the name north of the Rhine and south of the Rhone, regarding these rivers as simply making two breaks in an otherwise continuous chain. South of the Rhone the chain is known as the Jura Alps and merges with the Alps of Dauphiné and other branches of the western Alps. North of the Rhine an irregular chain extends east of the Schwarzwald through Württemberg and Bavaria as far as the Main River. This chain, called the German, or Swabian and Franconian, Jura, is similar to the Jura proper in the character of its rock formations, but different in its structure, being formed entirely by faulting.

The Jura Mountains proper consist of a series of parallel folds in the strata, forming together a plateau nearly 200 miles long and 20 to 35 miles wide. These folded ridges have in many places suffered transverse fractures, which in the form of steep gorges, known as cluses, add greatly to the picturesque character of the landscape. The general height of the range is 3000 to 5000 feet. It is highest near the south end, west of Lake Geneva, where the Crête de la Neige has an altitude of 5653 feet. Other prominent summits are the Reculet, 5643 feet; the Dôle, 5507 feet, and Mont Tendre, 5512 feet. The east slope falls abruptly towards the lacustrine basin forming the plain of Switzerland and occupied by the lakes of Geneva, Neuchâtel, Bienné, and Morat, westward and northward the slope is more gradual towards the Saône valley.

The Jura Mountains consist entirely of sedimentary strata composed of fossiliferous sandstone and limestone of Mesozoic age. This group of rocks has given the name Jurassic system to one of the main divisions of the geological scale, and in physiography it is recognized as a type of simple folding. Glacial boulders are scattered over the slopes of the Jura in countless numbers.

The climate of the Jura is relatively severe, and large masses of snow remain on the summits during a great part of the year. The slopes are largely covered with pine forests, and agriculture is chiefly confined to the valley bottoms. The principal mineral products of the mountains are lithographic stones, gypsum, and salt.

JURA. An eastern frontier department of France, bounded on the south by the Department of Ain and on the east by Switzerland (Map: France, N., L 6). Area, 1952 square miles.

Pop., 1911, 252,713. Of its surface, two-thirds is covered by the Jura Mountains, which reach their greatest altitude in the department in Noirmont, 5085 feet, the remainder is a low plain about 7 miles wide skirting the west border. The chief timber is in the Forest of Chaux. The chief rivers are the Ain, the Doubs, the Loue, the Valouze, and the Bienne. The soil on the mountains is thin and stony, but yields abundant grass; on the plain it is rich and produces wheat, oats, maize, barley, rape, and potatoes. The wines of Arbois, of Poligny, of Etoile, and of Salins have some reputation. The working of rock salt is one of the chief branches of industry; coal and iron are mined; and marble, alabaster, and lithographic stone are quarried. Gruyère and Septmoncel cheeses are extensively made, and there is a good trade in timber from the forests of Chaux, Serre, and Moisdons. Capital, Lons-le-Saunier.

JURA MOUNTAINS. See JURA.

JURARA, zhōō-rā'rá, or **ARRAU**, ār'rou. An Indian name of the great turtle of the Amazon (*Podocnemis expansa*), the gathering of whose flesh and eggs is important to the natives of the entire Amazon basin. See **TURTLE**.

JURASSIC SYSTEM. A division of the geologic column following the Triassic and immediately preceding the Cretaceous. The name is taken from the Jura Mountains of Switzerland, where there is a great development of the rocks of this system. A fullness of detail is observable in other parts of Europe, but in America the Jurassic strata are of small extent, and in places it is impossible to separate them from the Triassic, for which reason the term Juratrias is employed on the maps of the United States Geological Survey. The main subdivisions of the Jurassic system as developed in Europe are as follows. (a) Lias, or Lower Jura, (b) Lower Oolite, or Middle Jura, (c) Middle Oolite, and (d) Upper Oolite, or Upper Jura. Strata of undoubted Jurassic age are not known along the Atlantic coast of the United States, although some geologists have considered that the upper beds of the Trias are referable to this system, while other authorities would class the Potomac beds as Jurassic. A great area of probable Jurassic sandstone, but lacking fossils, was deposited in an interior sea in Colorado, Wyoming, Arizona, and New Mexico. In California and Oregon there are Liassic beds, while marine Upper Jurassic strata occur in northern Utah, Wyoming, and Montana. Upper Jurassic slates of great thickness and interbedded with volcanic tuffs are found in the Sierra Nevada of California and in British Columbia. In Europe there is an abundance of Jurassic rocks, which were deposited in depressions of post-Triassic time. Those of the Lias or Lower Jura cover large areas of southern and central Europe and also extend in a band across Great Britain. They are generally lacking, however, in northern Russia. In the Lower Oolite much additional land was submerged, and the deposits cover central and northern Russia, Siberia, and the Indian peninsula.

The Jurassic rocks abound in fossils in some areas, notably Europe, where in England alone over 4000 species have been found. The plant life of the Jurassic is similar to that of the Triassic. Among the more important forms were ferns, equisetæ, cycads, and conifers. It was in this era that the cycads attained their maximum development, and tree ferns grew in

great profusion. Foraminifera are found in countless numbers in some of the limestones, as were also the siliceous cases of radiolarians and sponges. Corals were numerous, and sea urchins and crinoids swarmed. There were many delicate forms of life such as crustaceans, limuloids, and insects of several orders which required special conditions for their perfect preservation. These are found in abundance in the homogeneous fine-grained lithographic limestones of Solenhofen, Bavaria. Brachiopods still existed in the Jurassic, and lamellibranchs of the oyster type were very common. The cephalopods were another class which culminated in this era, and included both nautiloids and ammonoids among the coiled forms and belemnites in the straight shells. Among the fishes there was an advance over those of Triassic times. In the class of teleostomes the ganoids continued to predominate, and many were covered with thick, shining scales. Amphibia are known to have existed, but the reptiles were a prominent feature of the Jurassic fauna and so abounded that the period is sometimes called the "age of reptiles." Among them were turtles, lizards (the first true ones known), and ichthyosaurians, or marine reptiles, the European representative being *Ichthyosaurus* (q.v.) and the American one *Baptanodon* (q.v.). Another marine group was represented by *Plesiosaurus*, which differed from *Ichthyosaurus* in having a much longer body and neck and larger paddles. The dinosaurians assumed prodigious proportions, but were of variable shape and size. They included such genera as *Megalosaurus*, *Cetiosaurus*, *Ceratosaurus*, *Stegosaurus*, and *Diplodocus*. The form *Atlantosaurus* reached a length of 100 feet. The Pterosauria were flying reptiles, having a spread of " " " " about 3 feet. They are found in the " " " " slates, together with a more curious fossil, the archæopteryx (q.v.). The latter represents the earliest bird known.

The Jurassic was a time of great geographical change in North America. During this era the Appalachians were subjected to extensive erosion. A gulf spread northward from the southern United States over the great basin region, and a similar sea existed in Canada east of the Cordilleras. At the close of the Jurassic there was a period of mountain making along what is now the Pacific coast. The Sierra Nevada was uplifted and probably also the coast ranges.

The economic products of the Jurassic are few in the United States. The most important are the gold-bearing veins found in the Jurassic slates of California and known collectively as the mother lode. Beds of fire clay and potter's clay are also found. Practically the entire supply of limestone used for lithographic work is obtained from Jurassic deposits near Solenhofen in Bavaria. This is a limestone of remarkably fine grain and extremely even texture, whose equal has thus far been found at but very few localities. Consult: White, "On the Fresh-Water Invertebrates of the North American Jurassic," in *United States Geological Survey, Bulletin* No. 29 (Washington, 1886); Geikie, *Text-Book of Geology* (London, 1903); Chamberlin and Salisbury, *Geology*, vol. iii (New York, 1907). See **GEOLOGY**; **LIASSIC SERIES**; **OOLITE**.

JUREL, hōō-rél', or **KUREL**, hōō-rél'. One of several species of horse mackerels (q.v.) of the family Carangidae, common in the warmer

seas and particularly about the West Indies. Southward the name belongs principally to *Ocaranatus* (see Plate of HORSE MACKEREL), called in Florida horse-eyed jack, but northerly it is applied more frequently to the yellow mackerel (*Ocaran chrysos*), or hardtail. All are excellent food fishes and of handsome appearance. On the Pacific coast this name, as well as horse mackerel, is applied to the related saurels (see SAUREL) of the genus *Trachurus*.

JÜRGENSBURG, BARON CLODT. See CLODT-JÜRGENSBURG, PETER KARLOVITCH, BARON.

JURI, zhōō-ré' 1. A tribe of Arawakan stock (q.v.) between the lower Putumayo (Iça) and Japurá rivers, northern affluents of the Solimões or Amazon, in northwestern Brazil. Some of them are also settled on the Negro. They were formerly the most powerful tribe of the region, but are now nearly extinct. Their tribal mark is a tattooed circle around the mouth. Women tattoo on both cheeks. They are expert in the use of the blowgun and canoe, and build circular huts of poles with dome-shaped roofs of palm leaves. In language and general customs they closely resemble their neighbors the Passé (q.v.) 2 An unimportant subtribe of the Lule (q.v.), on the Río Salado, in northern Argentina.

JURIEN DE LA GRAVIÈRE, zhū'rě-ān' de là grā'vyār', JEAN PIERRE EDMOND (1812-92) A French admiral and historian, born at Brest. He was the son of Pierre Roch Jurien de la Gravière (1772-1849, created vice admiral in 1831). Captain of a corvette in 1841, he became captain of a ship in 1850 and during the Crimean War was created rear admiral (1855). Charged with the expedition to Mexico (1861), he arranged with Great Britain and Spain the Treaty of Soledad (1862), and although Napoleon III refused to keep the terms of the treaty, he did not blame his vice admiral, who was made aid-de-camp and given command of the Mediterranean fleet (1868-70). It was he who managed the flight of the Empress in 1870. In 1871 he was made director of charts in the Naval Office and in 1888 was elected to the Academy. His works, which treat of naval subjects, include *Voyage en Chine pendant les années 1847-50* (1854, often reprinted), *Guerres maritimes sous la République et sous l'Empire* (1847), *Les campagnes d'Alexandre* (1883-84), *Les gloires maritimes de la France* (1888), *L'Amiral Roussin* (1889), *Les Anglais et les Hollandais dans les mers polaires et dans les mers des Indes* (1890), *Le siège de La Rochelle* (1891), *La flotille de l'Euphrate* (1892), *Les gues de mer* (3d ed., 1892). In 1866 he became a member of the Academy of Sciences, and in 1876 he received the grand cross of the Legion of Honor.

JURIEU, zhū'rě-ē', PIERRE (1637-1713). A French Protestant theologian, the son of a minister at Mer, whom he succeeded as pastor, after having visited Holland and England. In 1674 he became professor of theology and Hebrew at the Academy of Sedan, which institution was broken up by the Jesuits in 1681. Exposed to persecution for his writing, he fled to Holland and was pastor of the Walloon church at Rotterdam until his death. He is chiefly remembered as a bitter and rancorous controversialist. His zeal and the self-assertion which marked the expression of his views led him into wordy battles with the theologians so prominent as Bayle, Basnage de Beauval, Bossuet, and Grotius, some

of whom were Protestants. His voluminous writings are now esteemed as little more than curiosities of the period in which he lived, with the exception of a few that are of lasting value. Among these are *Histoire du Calvinisme et celle du Papiisme* (1682) and *Histoire critique des dogmes et des cultes* (1704).

JURISCONSULT (Lat. *juris*, gen. sing. of *ius*, right, law, and *consulere*, to consult). The term *juris consultus*, and also the terms *jurisperitus* and *jurisprudens*, were employed by the Romans to describe a man learned in the law, a jurist. In the Republican period the Roman jurists were men of good family, and usually of independent fortune, who gave legal advice gratuitously, as a method of recommending themselves to the people and obtaining elective office. In the case of the more eminent of these their decisions or responses came to be regarded as authoritative on questions of law and were regularly followed by the judges. In the Imperial period a right of responding (*ius respondendi*) was granted by the emperors to some of the most eminent jurists, and the judges were directed to follow the responses of such patented jurists unless conflicting decisions were submitted. As the right of responding was usually accorded to all the members of the Imperial auditory (the highest court of appeal), the practical effect of the innovation was to force the lower courts to follow the decisions of the auditory. The writings of the Imperial jurists were substantially digests of the case law of the late Republic and early Empire, and from these writings the Digest of Justinian was compiled. (See Muirhead, *Historical Introduction to the Private Law of Rome*.) In modern times the word "jurisconsult" is used on the Continent (but rarely in England or in the United States) as equivalent to jurist. See CIVIL LAW; JURISPRUDENCE, LAWYER.

JURISDICTION (Lat. *jurisdictio*, *juris dictio*, administration of law, from *juris*, gen. sing. of *ius*, right, law, and *dictio*, statement, from *dicere*, to say). The authority of a court or judicial officer to hear and determine a cause of action, or to take cognizance of, and to exercise judicial power in relation to, other matters requiring such supervision and attention.

The jurisdiction of a court—the persons over whom it may exercise its powers, the district or territory in which its process runs, the class of cases which it is competent to entertain, and the remedies which it may administer—is determined by the law of the land, and this, like the law administered by the court, may be common or customary law or may depend on statute. The principal English courts are or, until the passage of the Judicature Acts (1873-1877) were in the same sense of the term, customary courts, their jurisdiction having grown up imperceptibly in the long period during which they exercised their functions. The courts of America, on the other hand, are almost invariably of statutory origin, and their jurisdiction is determined by the constitutional or statutory provisions creating them and defining their powers. The jurisdiction of a statutory court is necessarily confined to the limitations prescribed by such laws or reasonably to be implied therefrom. For example, if a court is created for the express purpose of hearing criminal cases, it cannot assume jurisdiction over civil causes, as they are by implication excluded. There is some controversy as to whether a court has inherent

powers. This arises largely from a confusion of terms rather than a difference of opinion as to the source of authority of judicial tribunals. A court is often vested with general jurisdiction over a certain class of cases, and it is universally conceded that it has such powers as are incidental and requisite to the execution of the relief it is authorized to administer. For example, if a court is created to act as a "court of equity," and nothing further is prescribed as to the limits of its jurisdiction, it can do any act which a court having equitable jurisdiction can do under the practice then commonly accepted. Its powers in such a case are not enumerated, but they are incidental to the general authority given. Therefore judicial tribunals have no inherent powers outside of the jurisdiction expressly vested in them, but have what may be described as powers incidental to the execution of their prescribed judicial functions.

To render the jurisdiction of a court complete in a given case, it must have control or authority over the general subject matter of the cause of action and of the person or property involved. The phrase "subject matter" includes the general subject, or legal classification of rights and remedies, under which the parties claim. Jurisdiction may be in personam or in rem, i.e., over the person or over the thing involved.

The territorial jurisdiction of a court can in no case extend beyond the limits of the state or nation creating it. In general it may be said that a court has jurisdiction of any person who comes within its prescribed territorial limits so that its process may be served upon him, even though he be a nonresident or an alien. Some states provide that their courts may take jurisdiction of certain actions, even though the defendant be without the state, and prescribe a method of service by publication of the process in newspapers, etc.; but this does not give personal jurisdiction, and a judgment rendered in such an action only affects such property as the defendant may have within the state. Most questions affecting real property must be determined within the jurisdiction where the property is situated. However, a court of equity having jurisdiction over the person of the owner of real estate situated in a foreign state may compel him to convey it if he has contracted to do so, thus affecting the ownership of property outside its jurisdiction. Crimes are of such a local nature that a foreign court has no jurisdiction to try a culprit captured outside the state in which the crime was committed. Ordinary debts arising out of contract may be sued upon in the courts of any state having jurisdiction of one of the parties.

Usually the judicial system of a state is so regulated that its various courts do not have concurrent jurisdiction; but when this does occur, the court first assuming cognizance of an action is permitted to proceed with it to a final determination, and the fact that an action is pending in one court is a defense if the same cause is sued on in another. The jurisdiction of the federal courts in the administration of national laws is superior to that of the state courts, and where they conflict the United States courts will stay proceedings in the state courts, as in bankruptcy proceedings.

The effect of lack of jurisdiction of a court over a cause of action is to render a judgment obtained therein absolutely void. Objection to

this defect may be taken at any stage of the proceedings, and a judgment so rendered may be ignored or disregarded by the parties affected thereby. Thus, a decree of divorce granted by a court without jurisdiction leaves the parties married, as before, and imposes no duty on other courts, of the same or of other states, to recognize the validity of the divorce so granted.

The term "jurisdiction" is also commonly employed in England and the United States to describe the district, state, or country within which a tribunal or a judicial system exercises its powers. Thus, in the United States we speak of a foreign country or even a sister state as "a foreign jurisdiction" or "a different jurisdiction," etc.

See COURT, VENUE; CONFLICT OF LAWS; INTERJUNCTION, DECREE, ETC. Consult the authorities referred to under JURISPRUDENCE; CONFLICT OF LAWS.

JURISPRUDENCE (Lat. *jurisprudentia*, *juris prudentia*, knowledge of the law, from *juris*, gen. sing. of *jus*, law, and *prudentia*, knowledge, from *providere*, to foresee, from *pro*, before + *videre*, to see). 1 In ancient Rome, the word "jurisprudence" was used in a sense very close to its etymological meaning. Those men who were so skilled in the law (*juris periti*) that they could foresee its development, declaring what the rule would be in a novel or otherwise doubtful case, were termed *juris prudentes*; and the body of law built up by their concurrent and constant interpretation was *juris prudentia*. In the Republican period these law finders owed their authority to the general recognition of their knowledge and ability (hence *juris consulti*) and not to any official position. From the time of Augustus they were designated by the Emperor, by bestowal of the *jus respondendi*; in the following period they were drawn more and more into the direct administration of justice; and at the close of the second century nearly all the *juris prudentes* were judges in the modern sense of the word. In the Republican and the Imperial period alike, however, the *juris prudentes* developed the law by interpretation, and the *juris prudentia* was practically what English-speaking peoples call "case law" (See CIVIL LAW). Both in France and in Spain the word "jurisprudence" (*jurisprudence*, *jurisprudencia*) is still commonly employed in this sense. Abstractly it means the judicial interpretation of the law; in the concrete it often designates a collection of decisions, or, as we say, "reports." In English, also, the word is sometimes used in this sense, as when we speak of "equity jurisprudence."

2. More commonly, however, especially in modern times, the English-speaking peoples use the word "jurisprudence" to mean what was often called at an earlier period the philosophy of law, and what continental writers now call the theory or the science of the law. An English treatise on jurisprudence, or on the science or principles of law, undertakes to determine what law is, i.e., what are the essential elements in our conception of law; what relation law bears to the cognate social sciences, politics, ethics, economics, etc.; how law originates (popular customs, judicial usage, legislation), and how it ceases to exist (desuetude, change of usage, abrogation, or repeal); how it is applied (with reference to persons, time, and place), and how it is enforced (sanctions). Jurisprudence also analyzes and defines the principal conceptions with

which law operates, e.g., legal relations, rights, and duties. It may undertake to classify law and to construct a system or framework in which every rule of modern law (or perhaps of all law, past and present) shall find an appropriate place. It may—although it more rarely does—attempt to classify all the relations which the law recognizes or creates and which it regulates or orders, e.g., the relations of state and government to other forms of association and to the individual, and the relations of private associations and of individuals to each other. It may—although it still more rarely does—analyze the fundamental conceptions of the family, of property, and of succession. Such detailed investigations must ordinarily be sought in special treatises. English writers on jurisprudence usually confine themselves to what the Germans call “the general part” of legal theory.

Another limitation observable in works on jurisprudence is that they deal chiefly with private law, i.e., with the law which the courts administer in civil cases. It is sometimes affirmed (as by Blackstone) that public or political law lies outside the proper field of jurisprudence and in the field of political science. When this is not affirmed, it is nevertheless noticeable that the attention of writers on jurisprudence is mainly directed towards private law, that their definitions frequently ignore the public-law point of view, and that their categories are private-law categories. Thus, Austin tries to force all public law into the law of fictitious and abnormal persons.

The principal modern schools of jurisprudence are the natural-law school, the analytical school, the historical school, and the comparative school. The differences between the first three are mainly to be found in their views of the nature and origin of law and its relation to ethics.

To the natural-law jurist law is antecedent to the state; to the analytical jurist it is the creation of the state; to the historical jurist state and law are social products, developing side by side, each influencing the other. To the natural-law jurist law is cognizable by pure reason; to the analytical jurist it is the command of the sovereign, to the historical jurist it is the formulated wisdom of the race. To the natural-law jurist law is applied ethics, and, in the extreme form of the theory, that which is not right is not law. To the analytical jurist a law which commands what is ethically wrong or forbids what is ethically right is not the less a law if it proceeds from the political sovereign. The historical jurists accept in this respect the position taken by the analytical school; but they point out that it is difficult for a lawmaker to act otherwise than in accord with the contemporary sense of right, and that laws which run counter to that sense are not likely to be enforced. Historical jurisprudence differs from analytical jurisprudence chiefly in emphasizing the great part played by social custom in developing and establishing law. To the analytical jurists customary law, including judicial custom, is an anomaly. They do not like it; they try to explain it away; they would fain abolish it by covering the whole field of social relations with written codes. The natural-law school has its roots in the Stoic philosophy and the Roman jurisprudence; it was increasingly dominant in Europe from the Reformation to the close of the eighteenth century. (For the principal forms of the theory and the chief writers, see

NATURAL LAW.) It has now few adherents; the largest number, probably, are in the United States.

The theory of the analytical school was first sharply formulated by Hobbes in his *Leviathan*, but it became dominant in the English-speaking world mainly through the writings of Austin. The term “analytical” is purely English; but the views of this school neither originated in, nor are they confined to, England. The tendency to exalt the function of the law was feared on the Continent at the close of the Middle Ages and was associated with the efforts of the national states, as they developed increasing administrative unity, to get rid of the chaos of varying provincial and local customs which had taken form during the Middle Ages—an end which could be attained only by national legislation, and which has been fully attained only by the adoption of national codes. See CODE.

The historical school dates from the nineteenth century. Cujacius in the sixteenth century gave a powerful impulse to the historical study of law, and Montesquieu and Burke in the eighteenth century represented the same reaction against natural-law ideas which Savigny represented in the nineteenth, but the last-named jurist first clearly defined the principles of historical jurisprudence in 1814. The historical method was naturalized in the English-speaking world chiefly by the writings of Henry Sumner Maine. The substitution of historical investigation for a priori reasoning has been so fruitful of results that few European jurists at the present time would admit that they were not adherents of this school.

There is no antagonism between it and the comparative school. This latest school, or tendency, represents only a widening of the field of investigation. Not only is each national law to be studied historically, but the various national systems are to be compared at similar stages or development. As a result of this process, not only may the normal course of legal development be discovered, but that which is universal and human may be separated from that which is particular to a single nation or to a special stage of development, and then, as Jhering hoped, it may eventually become possible to write a history of the law of the world. Thus far chief attention has been given to early law. Some of the best-known workers in this field are Maine, Holmes, Maitland, Ames, Pollock, Fustel de Coulanges, Jhering, Kohler, and Post.

The comparative work of legal historians has been extensively supplemented by that of ethnologists, and especially interesting investigations have been made in early family law. (See MARRIAGE.) The tendency to hasty generalization which inevitably appears in all new lines of research is being checked. In particular it is coming to be recognized that the customs of savages at the present day do not always throw light upon the institutions of prehistoric Europe; backward peoples, as Maitland observes, have probably failed to find the right road. While little comparative work has thus far been done in what may be called the middle periods of legal development, much is being done in the field of modern legislation. The French Société de Législation Comparée has for many years published monthly bulletins and annual compilations of French and foreign legislation; the British Society of Comparative Legislation pays especial attention in its *Journal* to the move-

ment of legislation in the British colonies and dependencies; while the German Vereinigung für vergleichende Rechtswissenschaft is devoting itself more extensively to studies in early law and in comparative historical jurisprudence.

3. A loose use of the word "jurisprudence," which has nothing in common with the meanings above discussed, makes it practically equivalent to law. Thus, writers speak of medical jurisprudence, meaning simply those parts of the law which are most closely connected with medicine, and in the discussion and development of which the collaboration of lawyers and medical men is highly advantageous. It would be equally legitimate to speak of mining jurisprudence.

Bibliography. The following list contains the more recent general treatises in many of which full information will be found concerning the older literature. It includes, also, some of the more recent special works of value. English works: Austin, *Lectures on Jurisprudence* (4th ed., London, 1873); Lorimer, *Institutes of Law: A Treatise of the Principles of Jurisprudence* (2d ed., Edinburgh, 1880); Holmes, *The Common Law* (Boston, 1881); Clark, *Practical Jurisprudence* (Cambridge, 1883); Lightwood, *Nature of Positive Law* (London, 1883); Markby, *Elements of Law* (3d ed., Oxford, 1885); Maine, *Ancient Law* (11th ed., London, 1887); Hastie, *Outlines of Jurisprudence* (Edinburgh, 1888); Pollock, *First Book of Jurisprudence* (London, 1896); Holland, *Elements of Jurisprudence* (9th ed., New York, 1900); James Bryce, *Studies in History and Jurisprudence* (Oxford, 1901); H. Taylor, *Science of Jurisprudence* (New York, 1908); T. E. Holland, *Elements of Jurisprudence* (11th ed., Oxford, 1910); Matland, *Collected Papers* (Cambridge, 1911); P. de Tourtoulon, *Philosophy in the Development of Law* (Boston, 1913); I. Vanni, *Positive Philosophy of Law* (ib., 1913). French works: Fustel de Coulanges, *La cité antique* (9th ed., Paris, 1881); L. Duguit, *L'idée moderne du droit* (2d ed., ib., 1883); Beausserie, *Principes du droit* (ib., 1888); F. Orban, *Cours d'encyclopédie du droit* (Liège, 1895); Boistel, *Cours de philosophie du droit* (Paris, 1899). German works: Goldschmidt, *Uebergriiffe der historischen Schule* (Berlin, 1886); Jhering, *Der Kampf ums Recht* (10th ed., Vienna, 1891); Arndts, *Juristische Encyclopadie* (9th ed., by Grüber, Stuttgart, 1895); Jhering, *Der Zweck im Recht* (3d ed., Leipzig, 1899); G. Maas, *Bibliographie der deutschen Gesetzgebung und Rechtswissenschaft* (Berlin, 1906). For a further special bibliography, see NATURAL LAW.

JURUA, zhō'ru-ä or hō'ru-ä. A tributary of the Amazon. It rises in the Andes Conomamas in Peru, flows northeast through a thinly populated and little known forest region of west Brazil, and after a winding course of about 1200 miles joins the Amazon near the town of Fontebao, in long. 66° W. (Map: Brazil, D 5). It is navigable for one-third of its course and receives numerous tributaries, many of them unexplored. During high water almost the whole of its valley is flooded.

JURY (OF. *juree*, sworn jury, from ML. *jurata*, sworn body of men, from Lat. *juratus*, p.p. of *jurare*, to swear, from *jus*, right, law). A body of laymen who are constituted the judges of the truth of the facts in dispute between the parties to the trial of an action at common law. The exact origin of the jury system is not known

with certainty, various writers having attributed it to different European peoples which at an early period developed methods of trial not unlike the early jury trials in England. It seems probable that the jury in England was derived directly from the Norman institution of recognition by sworn inquest, which was substituted by the Norman conquerors for the method of trial by battle. The *Curia Regis*, or King's Court, might direct the sheriff to select four knights of the county, by whom 12 knights were selected to serve as recognitors, whose duty it was, after being duly sworn, to inquire as to various matters of interest to the new rulers of England which might be subject of public inquiry—as, e.g., matters affecting taxation of a subject. As early as the reign of Henry II (1154-89) it had become customary for suitors in certain cases affecting the title to real estate to apply to the *Curia Regis* for the summoning of recognitors to ascertain either from their own knowledge or upon inquiry from others the truth of the matter in issue, and their verdicts, if unanimous, were accepted as conclusive. It was natural that other questions of fact arising in the King's Court should be disposed of in a similar manner, and the gradual transformation of the recognitors into the common-law jury followed as a matter of course. It is to be noted that originally the jurymen were not only judges of fact, but they were witnesses oftentimes selected because of their knowledge of the customs and the people of the locality, and possibly of the suitors themselves. During the reign of Henry IV, however, we find the judges of the courts of common law restricting the jury to the performance of its function as a judge of fact upon the evidence submitted to it, which is the single function of the jury in modern practice.

The limitation upon and the manner of the exercise of the jury's function will be best understood by tracing the successive steps in the trial of an action, either civil or criminal, at common law before a jury. This jury is commonly called a petit jury, also a common or traverse jury. The first step towards summoning a jury is the issuing of a writ or precept of a court having jurisdiction over jury trials directed to the sheriff and called at common law a *venire facias* (from the language of the writ, meaning 'cause to come'), commanding him to summon citizens residing in the county to attend at a term of court for the purpose of serving as jurors. The jurors thus summoned are then said to be empaneled (from the sheriff's panel, or parchment, containing the list of jurymen). At the trial the selection of the jury is made subject to the direction of the presiding judge. The names of the jurymen are drawn by lot by the clerk of the court, and as their names are called the jurymen take their seats in the jury box until 12 are thus chosen. The parties to the action or their attorneys may then exercise their right to eliminate undesirable members from the jury by means of challenge (See CHALLENGE.) Either party is at liberty to examine the jurors for the purpose of ascertaining whether cause for challenge in any particular case exists. After a satisfactory jury has been drawn, the jury is sworn, and the trial is begun. (See TRIAL.) The attorney for the prosecution in a criminal case, or for the plaintiff or for whichever party has the affirmative in a civil action, then opens the case by a brief

address to the jury, outlining the facts which he intends to prove. He then calls his witnesses, who are examined by him and cross-examined by opposing counsel. The attorney for the defendant then calls his witnesses, who are examined and cross-examined in like manner. In general, during the progress of a trial, all questions of law are to be determined by the court and questions of fact by the jury. The limits of the inquiry as to facts are determined by the pleadings (q.v.) and the rules of evidence (q.v.). Whether evidence is properly admissible or not is a question for the court, but the weight and credibility of the evidence admitted are to be determined by the jury. The court, however, may decide a question of fact without sending the question to the jury, if there is no conflict of evidence on the point. The court may also interpret written instruments received in evidence without the aid of the jury. After all the evidence has been given, if a case is made for the jury (i.e., if there is conflicting evidence or a doubtful question of fact), the counsel for the defendant "sums up" (i.e., addresses the jury, reviewing the evidence in the case and commenting upon it in a manner favorable to his side of the case); he is followed in like manner by counsel for the plaintiff or prosecution, as the case may be. The judge then makes his charge to the jury. The charge is a statement of the rules of law applicable to the evidence in the case, and it is given for the purpose of aiding the jury to render a correct verdict. If properly given, it leaves all question of fact to be determined by the jury, thus frequently requiring nice discrimination on the part of the presiding judge. The jury then retires from the courtroom and is locked into a room until an agreement as to the verdict is reached, or until the presiding judge deems it improbable that an agreement will be reached. In case no agreement is reached, a new trial may be had. All the 12 members of a jury must agree upon a verdict, which in a civil trial may be "for the plaintiff" or "for the defendant," and in a criminal trial "guilty" or "not guilty." The verdict of a jury is decisive and cannot be disturbed unless rendered contrary to law or against the weight of evidence, in which case it may be set aside by the presiding judge, or the judgment rendered thereon may be set aside on appeal. When the jurors return a verdict which is obviously opposed to the principles of right and justice, it is now sometimes called a *false verdict*, although that expression is really contradictory, since verdict means literally, as it formerly did practically, a "true dictum," or saying. See VERDICT.

In certain cases, where there is no serious dispute of fact, but the question involved is one of law, the jury is allowed, on consent of the parties or direction of the court, to find a special verdict which is merely a statement of the facts of the case. This special verdict is then submitted to and decided by the court.

Special juries (i.e., juries specially selected in order to secure jurymen of more than common intelligence) were known at common law and were expressly authorized by the statute 3 Geo. II, c. 25. Statutes in many of our States now provide for the selection of special juries for the trial of cases of great importance or difficulty. See GRAND JURY.

JURY. A contrivance designed temporarily to replace the regular fitting of a ship which has been lost or received such serious injury as to be useless, as, *jury mast, jury rig, jury rudder, jury anchor, etc.*

JUS AC'CRESCENDI. See JOINT TENANCY, SURVIVORSHIP.

JUS GENTIUM, jûs jën'shî-ûm (Lat., law of nations). By the Romans the term was used to designate universal law and included all those rules which were observed by all the nations with which they were acquainted. This body of law included not only what we should call rules of international law, such as the inviolability of envoys, but also rules of commercial law, such as the rule that sale and delivery transfers ownership. For the relation of *jus gentium* to the Roman national law, see CIVIL LAW.

In the Middle Ages *jus gentium* acquired the narrower meaning of the body of rules observed by independent states in their intercourse with each other, i.e., international law (q.v.).

JUS NATU'RÆ, or NATURÆ (Lat., law of nature). Literally, the law of nature or natural law. By the Romans this term was sometimes used as equivalent to *jus gentium*, since the rules observed by all nations were presumably natural rules. Under the influence of the Stoic philosophy, however, they frequently used the term in a purely ethical sense and contrasted natural law, in the sense of natural right or justice, with those rules which, although universally observed, seemed to them wrong and unreasonable. See NATURAL LAW.

JUS PRIMÆ NOCTIS (Lat., right of the first night). A term used in anthropological and juristic literature to indicate the privilege granted by law or custom to other persons than the bridegroom of cohabiting with the bride on the first night or nights after marriage. For the legalized form of this institution as it has been alleged to have existed in the Middle Ages in Scotland, France, and other parts of Europe there is no trustworthy evidence. The legend that the feudal lord in these places exercised such a right over the newly married bride of his vassal is now supposed to have originated in the sixteenth and seventeenth centuries and to have been an incorrect inference from the undoubted license of the feudal lord and from the legal requirement of a fee from the vassal on marriage, which is supposed to have originated in the attempt at commutation of the *jus primæ noctis*. The idea has been called a "learned superstition" and arose partly, perhaps, from the ecclesiastical *droit du seigneur* or *right of the lord* decreed by the Council of Carthage (397 A.D.), enjoining continence in the newly married couple for the first night and later the first three nights after marriage. In the anthropological field there is evidence of a considerable extension among savage and primitive

tribes of the custom of allowing intercourse with the bride to one or more members of the tribe of more or less exalted position. Among some groups of Eskimos and Indians, as well as among certain Central American tribes, this privilege was accorded to the chief of the tribe or to the high priest or the priests, and in some cases where marriage by capture was in vogue, even to those who assisted the husband in the capture of the bride, as a sort of reward for services rendered, and in other cases to all of the guests on the wedding night, on somewhat the same principles of hospitality as govern the offer of wives in primitive tribes to the transient guest. These customs have been considered by some writers, notably Sir John Lubbock, as remnants of earlier group marriage; but this view is contested by Westermarck and others, who hold that there is no evidence to connect it with group marriage, itself a doubtful hypothesis. Consult: De Labessade, *Le droit du seigneur* (Paris, 1878); K. J. L. Schmidt, *Jus Primæ Noctis: Eine geschichtliche Untersuchung* (Freiburg, 1881); E. Westermarck, *History of Human Marriage* (London, 1908).

JUS RELICTÆ (Lat., right of a widow). In Scots law, the right of a widow to a share in the movable or personal property of her deceased husband. This is a vested or absolute right and cannot be defeated by the husband's will; hence the movable estate of husband and wife is called goods in communion, because, on the death of the husband, there is a division of such goods between the widow, the children, and next of kin of the deceased. If the deceased husband leaves children, the goods in communion are divided into three equal parts, one of which belongs to the widow. If, on the other hand, there are no surviving children or grandchildren, then the goods are divided into two equal shares, one of which belongs to the widow. When the husband dies insolvent, the wife cannot claim her *jus relictæ* in preference to the creditors. Though the widow has this right to her *jus relictæ* at common law, yet if she entered into an antenuptial contract by virtue of which she accepted an equivalent provision, her right may be defeated, provided the contract expressly stated the one to be in substitution for the other. In England there is no such absolute right of a widow to a share of a husband's goods, unless he died intestate, in which case she gets a similar share of the personal estate by virtue of the statute of distributions. As to the corresponding right of the wife in England and America to the real property of her husband, see DOWER; JOINTURE.

JUSSERAND, zhū's'-rān', JEAN ADRIEN ANTOINE JULES (1855-). A French diplomat and scholar, born at Lyons and educated in the universities of Lyons and Paris. Entering the diplomatic service at 21, he held a variety of posts—was Councilor of Embassy at London (1887-90), Minister to Denmark (1898-1902), and then Ambassador at Washington, where he became dean of the diplomatic corps. He was made Grand Officer of the Legion of Honor and a corresponding fellow of the British Academy. His works, some of which deal with English literary subjects, include: *Le théâtre en Angleterre depuis la conquête jusqu'aux prédécesseurs immédiats de Shakespeare* (1878); *Les Anglais au moyen âge* (1884), which was crowned by the Academy and translated into English by Lucy T. Smith as *English Wayfaring Life in*

the Middle Ages (1889); *Le roman anglais* (1888); *Le roman au temps de Shakespeare* (1888; Eng. trans. by Miss E. Lee, 1890); in English, *A French Ambassador at the Court of Charles II* (1892); *L'épopée mystique de William Langland* (1893); *Histoire littéraire du peuple anglais des origines à la renaissance* (3 vols., 1895-1909); *Les sports et jeux d'exercice dans l'ancienne France* (1901); *Ronsard*, in series, *Grands Écrivains de la France* (1913).

JUSSIEU, zhū'sé-ē'. The name of a family which for more than a century and a half has numbered among its members some of the first botanists of their age.—ANTOINE DE JUSSIEU (1686-1758) was born in Lyons. He succeeded Tournefort in 1708 as professor at the Jardin du Roi and published various works on anatomy, zoology, and botany, among them an *Appendix to Tournefort* (Lyons, 1719). He made several journeys to foreign countries to collect plants, on which occasions he was accompanied by his younger brother Bernard, who cooperated with him as his assistant.—BERNARD DE JUSSIEU (1699-1776) was born in Lyons. He obtained the degree of M.D. at Montpellier in 1720 and at Paris in 1726, succeeded S. Vaillant as demonstrator of botany in the Jardin du Roi in 1722, and published various works on zoology and botany which at the time were considered valuable. In a brief manuscript, which he forwarded to Linnaeus during his incumbency as superintendent of the gardens at the Petit-Trianon, to which position he was appointed in 1759, he laid the foundation of the natural method of plant classification which was more fully elaborated by his nephew Antoine Laurent.—JOSEPH DE JUSSIEU (1704-79), brother of Antoine and Bernard, was educated for medicine, but became a learned botanist and noted engineer. In 1735 he accompanied an expedition to Peru and stayed in South America collecting natural history specimens until 1771, when he returned to France, having lost the greater part of his collection. He introduced the heliotrope into France.—ANTOINE LAURENT DE JUSSIEU (1747-1836) was born in Lyons and richly deserved the heritage left to him by his learned and disinterested relatives. At the age of 17 he began his botanical studies under his uncle Bernard, and four years later was nominated demonstrator and assistant to Lemonnir, the professor of botany in the Jardin du Roi. He at once began to reform the arrangement of the gardens and collections of plants under his charge and to apply to them his own and his uncle's ideas in regard to the natural method. For 30 years he continued to develop his novel views, and when his *Genera Plantarum*, which he began in 1778, was finally completed in 1789, the natural system was finally established as the true basis of botanical classification. In 1793 he became professor of botany in the newly organized Jardin des Plantes, where he continued to teach till 1826, when blindness compelled him to resign his chair to his son Adrien. During his tenure of office he founded the library of the museum, which is one of the best in Europe. His papers in the *Annales du Muséum* (from 1804 to 1820) and his articles in the *Dictionnaire des sciences naturelles* rank among the most valuable contributions to the literature of botany and embody all the result of his own investigations.—ADRIEN DE JUSSIEU (1797-1853) was born in Paris. For the degree of M.A. which he obtained in 1824 he presented a mem-

oir of the Euphorbiaceæ which attracted wide attention and was followed by equally important monographs upon the Rutaceæ, Meliaceæ, and Malpighiaceæ. His *Embryo of the Monocotyledons* (1844) was to have been followed by a series of papers on similar subjects, but ill health compelled him to relinquish this project. He was also prevented by the same cause from extending his *Cours élémentaire de botanique* (1848) into a complete and general treatise. This was translated into other European languages. In 1831 he was elected a member of the Academy and shortly before his death was nominated to the presidency of that body. He contributed many valuable papers to the *Annales du Muséum*, the *Comptes Rendus*, and the *Dictionnaire universel d'histoire naturelle* and other publications on natural sciences. His influence as a lecturer was of great importance.

JUSSIEU, LAURENT PIERRE DE (1792-1866). A French educational writer and moralist, nephew of Antoine Laurent Jussieu. Among his writings the most popular is *Simon de Nantua, ou le marchand forain* (1818). It passed through more than 30 editions and was translated into nearly a dozen languages. For a work of similar description, entitled *Œuvres posthumes de Simon de Nantua* (1829), he received the Montyon prize. From 1839 to 1842 he was a member of the Chamber of Deputies.

JUSTE, THÉODORE (1818-88). A Belgian historian, born in Brussels. He was very successful in arousing interest in Belgian history and in promoting, as Secretary of the Board of Education, the national method of instruction. Among his numerous works, very unequal in merit, may be mentioned: *Histoire de Belgique* (1840); *Précis de l'histoire moderne considérée dans ses rapports avec la Belgique* (1845); *Précis de l'histoire du moyen âge* (1847-49); *Histoire du congrès national de Belgique, ou de la fondation de la monarchie belge* (1850); *Histoire de la révolution des Pays-Bas sous Philippe II* (1855-63); *Le soulèvement de la Hollande en 1813 et la fondation du royaume des Pays-Bas* (1870); *La révolution belge de 1830* (1872); *Guillaume le Taciturne, etc.* (1873); *La révolution de juillet, 1830* (1883); and the biographical work, *Les fondateurs de la monarchie belge* (27 vols., 1865-81).

JUSTI, yus'tè, FERDINAND (1837-1907). A German Orientalist. He was born at Marburg, educated there and at Göttingen. In 1861 he became docent, and in 1865 professor of comparative philology, at Marburg. He wrote. *Ueber die Zusammensetzung der Namen in den indogermanischen Sprachen* (1861); *Handbuch der Zendsprache* (1864), an edition of the *Bundehesh* (1868); *Geschichte des alten Persiens* (1879); *Dictionnaire kurde-français* (1879); *Kurdische Grammatik* (1880); *Geschichte der orientalischen Völker im Altertum* (1884); *Iranisches Namenbuch* (1895); *Hessisches Trachtenbuch* (1900), and the monograph, "Geschichte Irans von den ältesten Zeiten bis zum Ausgang der Sassaniden," in the *Grundriss der iranischen Philologie*, vol. ii.

JUSTICE (OF, Fr *justice*, from Lat. *justitia*, justice, from *justus*, just, from *jus*, right, law). One of the cardinal virtues of the ancients, and the name for a principal aspect of social and moral duty in all ages. If we inquire into the nature of justice by examining moral and legal judgments current in civilized communities, we find such instances as the following:

it is unjust to deprive a man of his personal liberty, his property, or any other thing by law belonging to him; justice therefore requires us to respect each one's *rights* before the law. Sometimes, however, we call the law itself unjust, in which case we may sympathize even with disobedience to it. It is then supposed that there is some higher law that should have preference—as, e.g., the moral law. Thus, it is conceived by most men at the present day to be unjust to hold human beings in slavery, even though slavery may be countenanced by the law of the land. It is, however, only when the law has failed to keep pace with the growth of public opinion on moral questions that an institution like slavery can be sanctioned by the law and yet condemned as unjust by the most intelligent members of society. Other differences between legal and moral justice arise from the limitations of the law, which cannot expediently undertake to regulate all the details of human life. Only those acts which it is for the welfare of society to enforce by external sanction may properly come under the cognizance of the law; hence there are necessarily many kinds of conduct which are morally unjust, and yet which are not recognized by law as unjust. Moral justice may, perhaps, be defined as allowing each man such freedom of action, security of possession, and realization of expectations based on custom as are compatible with the welfare of society. There is no such thing as absolute justice, if by that is meant any particular method of treatment which any man has a right to expect of society, regardless of the times in which he lives and of the character of his life. Consult: Willoughby, *Social Justice* (New York, 1900); F. M. Stawell, "Modern Conception of Justice," in *International Journal of Ethics*, vol. xix (London, 1908), also authorities referred to under ETHICS.

JUSTICE. In legal language, justice is sometimes identified with law, as when we speak of the "administration of justice" or of "courts of justice." Even in legal discussion, however, the term is constantly used in an ethical sense, as when it is said that a decision is legally correct but unjust. To the layman such an admission is a confession that the law is wrong and should be amended. This, however, is not always true. Law and justice cannot be brought into perfect harmony. It is necessary, above all things, that law be certain; that the individual shall be able to ascertain in advance the results which the law will attach to his acts or his omissions. Perfect justice demands that every controversy be adjudged on its peculiar merits, that the intelligence of each party, the circumstances under which he acted, his ignorance or knowledge, his good or bad intent, and an indefinite number of other considerations be taken into account. Should the law attempt to provide in advance for all these endless variations in so complex an organism as human society—an organism, moreover, which is often in process of change—the law would become so vast in its bulk and so confused in its provisions that it would be impossible for the keenest intelligence and the greatest industry to master its rules; and even then it would be incomplete, since, as Grotius has said, "there can be no finite rule of an infinite matter." Should the courts be empowered to do justice in the single case without regard to the law, there would no longer be any law. In either case an uncertainty, a lack of social

order, would result which would be a greater evil than occasional or even frequent injustice.

The practical solution of the difficulty is found in compromise. The law classifies persons, acts, and relations, and it shapes its rules to suit the average person, the ordinary act, the normal relation. The classification, rough at first, becomes increasingly refined; but in its highest development law deals, and must deal, with generic persons and cases, and not with the real individual or the special case.

Law is not primarily a system of justice, but a system of order. Courts were not established to do justice but to terminate controversy. Equity, as was finely said by Aristotle, corrects the law where the law is defective by reason of its universality; but, historically, equity has never meant anything but a greater approximation of law and justice. In England, as Lord Bacon said, it was "ordained to supply the law and not to subvert the law." Equity draws new distinctions, unknown to the older and cruder law, its precedents harden into rules; and the result is simply a new body of law with a more refined classification of the phenomena of social life. Consult the authorities referred to under JURISPRUDENCE; LAW.

JUSTICE, CHIEF. See CHIEF JUSTICE.

JUSTICE, DEPARTMENT OF. One of the executive departments of the United States, at the head of which is the Attorney-General, appointed by the President for a term of four years. Although the office of Attorney-General was created in 1789 and the incumbent of the office was from the first a member of the cabinet, it was not until 1870 that it was erected into a separate department. By the Act of June 22 of that year the several officers of the Federal government, of whom there were some half-dozen or more, were placed under the supervision of the Attorney-General, with the hope of bringing about greater uniformity in the construction and application of the laws. The Attorney-General is the chief law officer of the government, and, as a member of the cabinet, ranks fourth in the line of succession to the presidency. It is his duty to advise the President on any questions of law that may arise in the course of the administration, and also to give his opinion when requested by any of the heads of departments upon legal questions concerning matters affecting their departments. The opinions rendered by the Attorney-General are from time to time published by the government, and next to the decisions of the courts they are regarded as authority on the points covered. The Attorney-General is the legal representative of the government in all cases at law to which the United States is a party, and may appear in court in person or direct which one of the Assistant Attorney-Generals shall appear, and may employ special counsel to aid in the conduct of the cases in which the government is interested. He is furthermore charged with the general supervision of the United States district attorneys and marshals, directs and instructs them in their duties, and may employ special counsel to aid the attorneys in the prosecution of cases to which the United States is a party. He examines the titles to lands or other property which the government intends to purchase for forts, dockyards, building sites, or other public purposes, and makes an annual report to Congress of the business of the department, including statistical information concerning the civil

and criminal cases tried before the United States courts, the number of pardons granted by the President, the amount of fines and forfeitures imposed, and such other information bearing upon the administration of justice as he may deem proper. Other duties of the Department of Justice are the supervision of the penal and reformatory institutions of the United States, the recommendation of judicial appointments, the examination of the accounts of the marshals, attorneys, and other judicial officers, the investigation of applications for clemency, the administration of the national bankruptcy law, and the supervision of the commission to revise and codify the criminal and penal laws of the United States. In 1868 two Assistant Attorney-Generals were provided for—one of whom assists in the Supreme Court, the other in the Court of Claims. There is also an Assistant Attorney-General for the Interior Department, one for the Post Office Department, and one in charge of Indian depredations claims. In 1870 the office of Solicitor-General was created, the incumbent being ranked as the second officer of the department. He conducts cases in the courts at Washington and, in case of a temporary vacancy or absence of the Attorney-General, acts in his stead. The Act of 1870 also transferred to the new Department of Justice the solicitors from the Interior, Treasury, and Navy departments, and the examiner of claims from the State Department.

JUSTICE, LORD. In England a person invested with the royal authority for limited purposes and for a limited time. From the times of the Norman and Plantagenet kings it has been the occasional practice in England for the sovereign to appoint one or more persons called lords justices to act as his substitutes in the supreme government during his absence from the Kingdom. Subsequent to the Revolution these appointments have been made by letters patent under the great seal, and the authority of Parliament has sometimes been invoked in confirmation of their powers. On five occasions such appointment was made by William III when going abroad, though, while his Queen was alive, he delegated his authority to her during his absence. The statutes 12 and 13 Wm. III, settling the succession on the house of Hanover, provided "that no person who shall hereafter come to the crown shall go out of the dominions of England, Scotland, or Ireland without consent of Parliament"; but this clause was repealed by 1 Geo. I, c. 2, and the first sovereign of the house of Hanover, during five of his absences in Germany, made an appointment of lords justices. George IV, on his visit to Hanover, delegated his authority to 19 guardians, of whom the Duke of York, heir presumptive, was one. On none of the absences of Queen Victoria from the Kingdom was there any delegation of the royal authority; and on one of these occasions Lord Chancellor Lyndhurst stated in the House of Lords that the law officers regarded it unnecessary, in point of law, to appoint lords justices—an opinion in which he concurred. The practice of the Queen in this respect was followed by her successor, Edward VII. In case of the sovereign's minority a regency has generally been resorted to.

The powers of lords justices have usually been limited in the matter of pardoning and relieving criminals, the summoning or prorogation of Parliament, the disposal of public moneys in the

Treasury, and of Church preferments, in the gift of the crown. The lords justices appointed under the commissions of 1719 and 1729 were authorized to continue the existing Parliament by short prorogations till otherwise directed under the royal sign manual, but not to perform the other acts here specified without the special signification of the royal pleasure, except when necessary for the public service. The power to create peers has only once been delegated—by Charles I in 1644; and Lord Herbert, afterward Earl of Glamorgan, in whose favor the right was exercised, was, after the Restoration, compelled to resign by the House of Lords.

Lords justices have sometimes been appointed to carry on the government of Ireland in place of a viceroy, in modern times, this has only been done during occasional absences of the Lord Lieutenant.

JUSTICE, LORD CHIEF. The title given in England to the chief judge of the King's Bench division of the High Court of Justice. It was formerly employed to designate the chief judges of the two great common-law tribunals, the Court of King's Bench and the Court of Common Pleas; but the former of these was, by eminence, known as the Lord Chief Justice of England. Upon the abolition of the Common Pleas division of the High Court in 1881, the chief judge of the Queen's (now King's) Bench division became the sole judicial officer to be invested with the dignity and title of Chief Justice.

JUSTICE CLERK, LORD. A high judicial officer in Scotland, being the second highest judge in point of rank and, in the absence of the Lord Justice General, the presiding judge of the Court of Justiciary. His usual duty is to sit as chief of one of the divisions of the Inner House, called the second division of the Court of Session (q.v.).

JUSTICE GENERAL, LORD. The highest judicial officer in Scotland, also called the Lord President of the Court of Session. Formerly the office of Justice General was a sinecure and not a judicial office, but the title is now, since 1831, associated with that of the Lord President. See COURT OF SESSION.

JUSTICE OF THE PEACE. In Great Britain and the United States, a minor official having both administrative and judicial functions, the latter principally of a criminal nature. In England justices of the peace are appointed by commission of the crown under the great seal, or by act of Parliament or charter, to exercise a certain limited authority in a county or borough. The person who practically appoints to the office is the Lord Chancellor, who in his discretion may include in the commission any person having an estate of £100 a year, clear of all rents and charges. All persons having the above qualification may be appointed justices of the peace; but practicing attorneys or solicitors are not eligible for counties in which they practice. Traditionally the office of justice of the peace is entirely gratuitous. But in modern practice it has been found necessary to deviate from this rule and to appoint in all the cities and many large towns certain paid justices, called stipendiary magistrates, at a fixed salary. In the city of London and certain other places the mayor and certain corporators are constituted by charter justices of the peace by virtue of their office.

The institution of justices of the peace is very

ancient. Previous to 1327 there were conservators of the peace in every county chosen by the freeholders from among the principal men of the county to perform similar duties; but by a statute of Edward III a change took place in the practice, and ever since the election of justices has been exercised by the crown. Gradually the office grew more and more important, statutes being passed from time to time, adding to its duties and jurisdiction, until, in the thirtieth year of the reign of Elizabeth, the form of commission was revised and was settled nearly in the form which is now used. The commission is in the name of the sovereign, addressed to the appointee, by name, directing him "to keep our peace in our county of —, and to keep all ordinances and statutes for the good of the peace, and for the good rule and government of the people, and to chastise and punish all persons that offend against the said ordinances." The commission then authorizes the appointee to inquire "by the oath of good and lawful men, of all manner of felonies, poisonings, enchantments, sorceries, arts, magic, trespasses, forestallings, regratings, engrossings, and extortions whatsoever, and of all crimes and offenses," etc. To these extensive powers conferred by statute were added the more indefinite functions which long custom had vested in justices of the peace, constituting them in large measure the foundation of the peace and order of the state. "The whole Christian world," says Lord Coke, "hath not the like office as justice of the peace, if duly executed." The powers and duties of justices of the peace in England are now mainly governed by a series of statutes enacted during the reign of Queen Victoria (38 and 39 Vict., c. 54; 45 and 46 Vict., c. 50; 11 and 12 Vict., c. 44).

Although the institution of justices of the peace is derived from England, the method employed for their creation differs in the United States from that adopted in the former country and also differs in different States. In some instances they are appointed by the executive, in others elected by the people. Their powers and duties also vary in the different States, but in most they have jurisdiction in minor cases, both civil and criminal. The extent and nature of their powers are usually defined by statute. The distinctive value of this class of magistrates is found in their power to prevent breaches of the peace, and to examine persons charged with the commission of crime or misdemeanor and hold to bail to answer in the upper court, or in default of bail to commit them to jail. In this latter particular their functions are somewhat analogous to those of a grand jury.

J., 1912); E. Baylies (ed.), *Beard's Justices' Manual of Civil and Criminal Law and Practice for Justices of the Peace and Police Justices in New York* (3d ed., New York, 1913).

JUSTICES' CLERK. An officer, generally a solicitor, appointed by justices of the peace in England to assist them in their duties. Owing to the fact that justices of the peace are not trained lawyers (it has been judicially declared in England that there is no presumption that a justice of the peace knows the law of the land), but are, nevertheless, called upon to administer many branches of the law and to construe acts of Parliament, all of which require considerable legal skill, the justices' clerk is a person of much local influence, and in practical effect guides and controls the justices in all purely legal matters. The justices' clerk is, strictly speaking, not a public officer, but in the nature of an employee of the justice. By recent statutes, however, he has acquired a certain official status and is entitled to receive fees in connection with the business transacted by the justice to whose court he is attached. See **JUSTICE OF THE PEACE**.

JUSTICIARY (jūs-tīsh'ī-ā-ri) **COURT.** The highest criminal court in Scotland. It is in reality the criminal branch of the Court of Session, the highest judicial tribunal in Scotland, and not an independent court. Its judges are seven of the judges of the Court of Session—viz., the lord president, the lord justice clerk, and five others appointed by royal patent. Its quorum consists of three judges. It exercises an appellate as well as an original jurisdiction and usually sits in Edinburgh. See **COURT OF SESSION**.

JUS'TIFI'ABLE HOMICIDE. See **HOMICIDE**.

JUSTIFICATION (Lat. *justificatio*, from *justificare*, to justify, from *justificus*, acting justly, from *justus*, just + *facere*, to do). A defense to a civil or criminal action, admitting the facts alleged in the complaint or indictment, but setting forth other facts tending to show that the defendant had a legal right to do the acts complained of, and that, therefore, the cause of action alleged is not sufficient in law. Facts constituting a legal justification may be pleaded in answer to an indictment for an alleged crime, as where a person is accused of homicide and pleads that he committed the act in self-defense, or that he was an officer of the peace and killed the deceased in a reasonable effort to prevent his escape. Under the common-law system of pleading in civil actions, such a plea is said to be by way of confession and avoidance. The facts constituting a legal justification for an act must be fully set forth in an answer and not alleged as a conclusion of law.

Whether a plea of justification can be sustained or not depends upon the nature of the action and the substantive law involved. For example, in an action against a street-railroad company for negligently running over the plaintiff and injuring him, the defendant cannot plead that it had any legal right to do so, even if it can show that defendant was a trespasser upon its tracks. It may however, plead contributory negligence on his part, which would be in the nature of an excuse rather than a strict justification. Pleas of justification are most common in actions for assault and battery, false imprisonment, libel, slander, and malicious prosecution.

Justification is also employed to denote the proof by sureties on a bond or undertaking that they possess the property qualifications required of them by law. See **ANSWER; DEFENSE; PLEA; PLEADING**.

JUSTIFICATION. In theology, the action whereby men are (1) freed from the penalty of sin and (2) treated as righteous by God. The doctrine is based chiefly upon the teaching of Paul, especially in the Epistles to the Romans and to the Galatians. The Apostle begins the former Epistle by exhibiting the universality of sin. All men, Jews as well as Greeks, have sinned and have therefore no ground of acceptance with God upon the basis of righteousness. Works, then, viewed as single holy deeds, performed in obedience to the divine law, and together constituting a flawless life, will qualify no one for justification before the bar of God. Hence God provides a righteousness of His own. Repentant man, exercising faith in Jesus Christ, shall be forgiven and treated as if he had obeyed the law perfectly for Christ's sake. He shall be "declared righteous." This is justification.

The doctrine was first clearly developed in the scholastic period, especially by Thomas Aquinas. It came into prominence in the Reformation and was carefully defined on both sides. The main difference between the Catholic and Protestant forms of the doctrine lies in the interpretation of the second clause of the definition above. The Catholic doctrine is that God makes man righteous, imparts to him something of His own holiness, in the imputation to him of Christ's righteousness. The Council of Trent defines the Roman Catholic doctrine thus: "Justification is not remission of sins merely, but also the sanctification and renewal of the inward man, through the voluntary reception of the grace and of the gifts, whereby man from unjust becomes just" (sess. vi, chap. vii). It thus includes sanctification and is "infused" righteousness. The common Protestant doctrine was that God does not make the justified righteous, but treats him as if he were righteous—a forensic use. It is equivalent to the forgiveness of sins and is different from sanctification. Protestantism emphasized justification "by faith," which, in the words of the Westminster Confession, is "accounting and accepting their [believers'] persons as righteous, not for anything wrought in them or done by them, but for Christ's sake alone."

The historic Protestant doctrine has a second element besides the forgiveness of the sinner embraced under his justification, viz., the imputation to him of the righteousness of Christ. At first this phrase meant only that he was forgiven for Christ's sake, or, technically speaking, the imputation was of the "passive obedience" of Christ. In the scholastic development of the system the imputation came to be conceived as that of the "active obedience" of Christ, or He was said to have obeyed the law for man, and this obedience, imputed to man, made him righteous before God.

Protestant theology generally held justification by faith because faith is the medium of union with Christ, not because it is an act of obedience or a pledge of future obedience. God's acceptance is through Christ alone. There follow upon it peace, assurance, and holiness of life; but these are regarded as the results, not the causes, of justification. Arminianism (q.v.), however, considered that faith justified not as binding men to Christ, but as being an imperfect righteousness, which God accepted in the place of a perfect righteousness, because of His mercy shown to man through Christ. Swe-

denborg (q.v.) bitterly attacked justification by faith in the interests of the direct mystic vision (*True Christian Religion*, §§ 181, 389), but in general Protestants of all schools have held to it. The Ritschlian school (see RITSCHL) has emphasized justification as the basis of the Christian life. It has defined it as the reception of the sinner, conscious of his guilt, into fellowship with God, or the free forgiveness of sin. Consult Buchanan, *Doctrine of Justification* (Edinburgh, 1867); J. H. Newman, *Lectures on the Doctrine of Justification* (3d ed., London, 1874); Ritschl, *Christian Doctrine of Justification and Reconciliation: Positive Development of the Doctrine* (Eng. trans., Edinburgh, 1900); F. H. S. Denifle, *Luther and Luthertum in der ersten Entwicklung* (2d ed., 3 vols, Mainz, 1904-09); F. B. Westcott, *St. Paul and Justification* (New York, 1913). See ATONEMENT, IMPUTATION.

JUS'TIN (Lat. *Iunianus Justinus*). A Roman historian of whom almost nothing is known, but he lived probably in the third century A.D. His work, *Historiarum Philippicarum Libri XLIV*, is merely a collection of extracts from the large work of Pompeius Trogus (q.v.), an historian of the Augustan age, whose history dealt with the rise of Macedonian authority. Though Justin made his selections somewhat at random, his work is of considerable value to us, as the original has perished, it was much used in the Middle Ages. The latest edition is that of Ruehl (Leipzig, 1886).

JUSTIN, surnamed **THE MARTYR** (c100-c165). A Christian apologist of the second century, commonly called Justin Martyr. He was born about 100, in Flavia Neapolis, a Roman city erected on the site of the ancient Shechem, in Samaria. His father, Priscus, was a heathen, and Justin was educated in the religion of his father. He became an ardent student of the philosophy of his age, beginning with the school of the Stoics, but finally adhering to that of the Platonists. According to the story which he himself relates, one day, while wandering along the seashore, he encountered a man of mild and venerable aspect, who led him to the study of the Jewish prophets and the great Christian teacher whom they foretold. The result was his conversion to Christianity, which probably took place at Ephesus about 135. After his conversion he retained the garb of a philosopher, but, as a Christian philosopher, he strove by his writings and his instructions to bring others to the truth which he had himself discovered. From his Jewish acquaintances he got his knowledge of rabbinical literature. He lived for some time in Rome and is said to have been beheaded about the year 165, in the reign of Marcus Aurelius, because he refused to offer sacrifice to the heathen gods. The works of Justin, although not very voluminous, are important for knowledge of Christianity in the second century. The books ascribed to him with certainty are two *Apologies for the Christians*—the first addressed “to Antoninus Pius,” the second “to the Roman Senate”—and a *Dialogue with Tryphon the Jew*, which professes to be the record of an actual discussion held at Ephesus. Some other extant works have been ascribed to him, but on insufficient grounds, and several of his works cited by ancient authors have been lost. The first edition of his works is that of Robert Stephens (Paris, 1551). The Benedictine edition of Justin, by Maran, appeared at

Paris in 1742, and Otto's—the best—at Jena in 1842-46 (3d ed., 5 vols., 1876-81); there is an English translation in the *Ante-Nicene Fathers*, vol. i (New York, 1885). The text of the *Apology* is edited by Krüger (Tübingen, 1904).

Bibliography. C. Semisch, *Justin Martyr: His Life, Writings, and Opinions*, translated from the German by J. E. Ryland (2 vols., Edinburgh, 1843); Purves, *Testimony of Justin Martyr to Early Christianity* (New York, 1889); Flemming, *Zur Beurteilung des Christentums Justinus' des Martyrers* (Leipzig, 1893); Bal-dus, *Das Verhältnis Justinus' des Martyrers zu unseren synoptischen Evangelien* (Münster, 1895); Feder, *Justins des Martyrers Lehre von Jesus Christus, dem Messias* (Freiburg, 1906); C. Martin, *St. Justin, Martyr* (New York, 1911).

JUSTIN I, THE ELDER (452-527). Byzantine Emperor from 518 to 527. His parents were Goths, but he entered as a private into the body-guard of the Emperor and rose to the rank of senator and commander of the Imperial guards under Anastasius I. On the death of the latter, in 518, the army proclaimed Justin Emperor. Feeling that he was unfitted to direct the internal civil administrations, he wisely resigned this duty at first to the quaestor Proclus and later to his nephew, Justinian. His decrees against the Arians led to the break between the Catholics in Italy and Theodoric (q.v.). Some time before his death (Aug. 1, 527) he adopted Justinian (q.v.). Consult J. B. Bury, *Later Roman Empire*, vol. i (New York, 1899).

JUSTIN II, THE YOUNGER (?-578). Byzantine Emperor from 565 to 578. He succeeded his uncle, Justinian I, and had espoused Sophia, the niece of the Empress Theodora, a beautiful and able but revengeful woman. At first he gave promise of a mild rule, but soon his rule became a vacillating one. Through the influence of the Empress Sophia, Narses (q.v.) was dismissed from the exarchy of Ravenna, though the Longobards were meditating an invasion of Italy. These barbarians, on hearing of the disgrace of the one man whom they dreaded, in 568 burst like an avalanche upon Italy. Northern and central Italy was soon in their power. In 574 Justin, who was subject to fits of insanity, decided to name as successor Tiberius, one of his generals. He then retired to private life. Consult J. B. Bury, *Later Roman Empire*, vol. ii (New York, 1899).

JUSTINIAN I, FLAVIUS ANICIUS JUSTINIANUS (483-565). Byzantine Emperor from 527 to 565. He was born probably May 11, 483, in the village of Tauresium in Illyricum. His name was Uprauda, which he changed to Justinian. Although of obscure parentage, he shared the success of his maternal uncle, Justin I (q.v.), being invited at an early age to Constantinople, where he received a careful education. When his uncle was elevated to the purple, in 518, he promoted his nephew to one position after another, and in 527, by the advice of the Senate, proclaimed him his colleague in the Empire. Justin survived the step but a few months, and Justinian was crowned as sole Emperor. His long reign is the most brilliant in the history of the later Empire. Although himself without taste or capacity for military command, he had the skill to select able generals, such as Belisarius and Narses. In his first war—that with Persia—he concluded a treaty by which a long-threatened crisis was

warded off temporarily. But the most important event of these early years was a conflict of the so-called Blue and Green factions in the circus in 532, an outburst of political discontent, which went so far as to elect a rival Emperor, Hypatius. Justinian was struck with dismay and made preparations for flight; but the vigor and determination of his Empress, Theodora (q.v.), arrested the revolt. Belisarius, with a relentless hand, repressed the tumult, 30,000 victims having, it is said, fallen in a single day. By the arms of Belisarius the Vandal Kingdom of Africa was reannexed to the Empire (533-534); and the same general and his successor, Narses, restored the Imperial authority in Rome as well as in northern Italy and a portion of Spain (535-554). The second war with Persia (539-502) was ended by Justinian's agreeing to pay an annual tribute. The Slavs and Huns were constantly attacking the Empire on the north and ravaging its territory, so that, in spite of his conquests, he left a weak empire to his successor. He died Nov. 14, 565.

Justinian was a great builder of aqueducts, fortresses, churches (St. Sophia), quays, harbors, and monasteries. These, together with the sums needed for his wars, involved an enormous expenditure, and the fiscal administration of Justinian, in consequence, pressed heavily on the public resources and on the people. It is, however, as a legislator that Justinian has gained his greatest renown. Immediately on his accession he appointed a committee of lawyers, with Tribonianus (q.v.) as chairman, to collect all previous legislative enactments which were still in force and to compile a code. (See CODE.) The authoritative commentaries of the jurists were next collected, digested, and published under the title of *Pandects* (q.v.). The code was republished in 534 with the addition of Justinian's own Constitutions. The third great legal undertaking was the composition of a systematic treatise on the laws for the guidance of students and lawyers. This was published a month before the *Digest*, under the title of *Institutiones* (i.e., Institutes). It is difficult, from the character of his acts and from the nature of our sources (see PROCOPIUS), to form a just estimate of Justinian. There is no doubt of his ability and industry, but he was unscrupulous, vain, and easily influenced. He was passionately devoted to theology and wrote hymns and controversial works.

Bibliography. For his attitude towards the Church, consult Hutton, *Church of the Sixth Century* (New York, 1897). For his reign and life: Finlay, *History of Greece*, vol. 1 (London, 1877); Thomas Hodgkin, *Italy and her Invaders*, vol. iv (Oxford, 1885); Edward Gibbon, *Decline and Fall of the Roman Empire*, vol. iv, edited by J. B. Bury (London, 1901); J. B. Bury, *Later Roman Empire* (2 vols., New York, 1899); Charles Diehl, *Justinien et la civilisation byzantine au sixième siècle* (Paris, 1901); Holmes, *Age of Justinian and Theodora* (2 vols., London, 1905-07); Andrew Stephenson, *History of Roman Law, with a Commentary on the Institutes of Gaius and Justinian* (Boston, 1912), containing a bibliography.

JUSTINIANAPOLIS. See HADRUMETUM.

JUTE (Beng. *jūt*, from Skt. *jaṭā*, matted hair). A fibre produced from two tropical species of Tiliaceæ, the *Corchorus olitorius* and *Corchorus capsularis*, two plants alike in qualities, though slightly different in appearance,

and sown indiscriminately. From the fibre, which is the cheapest known, are produced gunny bags, gunny cloth, and cordage; and from the finer qualities carpets, shirting, coat linings, etc., are made. It is extensively used for mixing with silk, cotton, flax, and woolen fabrics, but, owing to its inferiority, such use of it is a fraud. India produces practically the entire world's supply of jute. The plants grow in most climates and on all kinds of soil, but rich alluvial lands, and lands subject to salt-water tidal influences, particularly favor its production. It thrives in the Gulf States, but its production in America has not been successful, owing to a lack of inexpensive labor for its culture. It is an exhausting crop for the soil. The plant, if weeded once, requires no more attention till cutting time. Its single stalk grows to a height of 12 feet without branches or leaves till near the top. In India the plant is cut while in flower, about three months after sowing. Cut close to the ground, stripped of leaves and branches, it is tied in bundles and steeped from 10 to 20 days in water, to loosen the fibre by rotting the outer bark. After steeping, the stalks are beaten till only the fibre remains. This is cleaned, dried, and made into drums of 70 or 80 pounds. If for exportation, it is pressed into bales of 300 pounds and upward. Fine jute has a beautiful glossy golden appearance and is soft and silky to the touch. Great importance attaches to length and strength of fibre. See Plate of FIBRE PLANTS, under HEMP.

Jute Manufactures. Jute is spun by processes similar to those employed for flax, but, as it is from 10 to 15 feet long, it is necessary to cut it into three-foot lengths before it can be heckled. The fibre, which is obtained by maceration from the inner bark, also requires to be saturated with whale oil and water, so as to soften and render it more elastic, preparatory to spinning. Heckling is the first of the spinning operations, and its object is to remove the coarser portions of the jute and lay the fibres in parallel order. The heckle is a kind of comb, with sharp-pointed steel teeth from 1 to 2 inches in length. Formerly the work was done by hand, but now heckling machines are used. Recently the heckling process has been omitted, and the jute has been spun directly without heckling off the tow. The heckled strips are next taken to the *spreader*, or first drawing frame, where they are spread upon an endless creeping sheet, so as to supply the jute continuously to another part of the machine, where, by a peculiar arrangement of rollers, it is drawn out, through combs of closely ranged steel pins, into a continuous ribbon, called a *sliver*. A number—say 14—of these slivers are then taken to another drawing machine with steel combs and drawn out into one. In like manner some 20 of these slivers are again drawn into one. The first sliver from the spreader has thus, so to speak, been drawn out 280 times its original length; and by continuing this doubling and drawing, the fibres become thoroughly parallel and equalized. The sliver from the last drawing frame is still further drawn out and at the same time receives a slight twist in the roving frame. Finally the bobbins of rove are taken to the spinning frame, and spun into yarn upon the throstle principle. See SPINNING.

Just as in the case of flax, the jute tow from the heckling process is also spun into yarn, in which case it is first carded by means of a

breaker and finisher card, and then *drawn*, *roved*, and *spun*, as above described.

The larger portion of jute fabrics is woven from yarn of the natural color, but for some purposes it is bleached, and, when used for carpets, it is dyed various colors. It bleaches with difficulty, but is easily dyed. Jute fabrics are not nearly so durable as flax, the jute being more brittle and more easily affected by water.

Jute has been manufactured on hand looms by the natives of India for centuries. They made not only the coarse fabric known as gunny, but a fine material which they used for clothing. They also have made a coarse paper, by beating the fibre into pulp, drying it in sheets, sizing it with rice starch, and polishing it with a stone or shell. Since 1857 there have been a large number of jute mills fitted up with modern textile machinery and driven by steam, the number in 1899 aggregating 33.

The first mention of the word "jute" is in 1796, in the manuscript commercial index of the court of directors of the East India Company. It is the Bengal name used by the natives of Cuttack and Balasore, where the first European manufactories were established in the middle of the last century. In 1829 the total export from Calcutta was 20 tons, value £60. In 1833 it had increased sixteenfold, and about 1864-65 the increased demand caused jute cultivation to extend to other districts, the exportation in 1879-80 reaching 4,026,710 hundredweight. In 1897-98 the amount of raw jute exported was 15,000,000 hundredweight, while the exports of jute cloth had increased in 10 years from 37,000,000 to 307,000,000 yards. The number of mills in India increased from 25 in 1889 to about 59 in 1912, and the number of employees for the same period from about 80,000 to 202,000. The production of fibre increased from 1,860,000,000 pounds in 1889 to 4,212,602,000 pounds in 1914. Of the production in 1909 India consumed 48 per cent, Great Britain 14 per cent, Germany 8 per cent, and the United States about 7 per cent. Prior to its rapid development in India, Dundee, Scotland, was the chief centre of the jute industry.

England, Bombay, and America originally divided the exports of jute, and up to the time of the Civil War North America took the largest share of the gunnies. (See GUNNY.) Jute and gunnies are now exported from Bengal to all parts of the world.

Until 1870 the entire cotton crop of the United States was baled in gunny cloth imported from Calcutta. Gradually, however, an increasing amount of jute product has been made in the United States. According to the census of 1880 there were only four establishments in the United States making a specialty of this manufacture. In 1909 the number had increased to 24. They employed 6664 hands, and the value of their annual product was \$10,795,000. The consumption of jute in the United States in 1909 was 151,791,000 pounds, which represented a decrease of over 25 per cent for the 10-year period. The average value of jute rose from 1.7 cents in 1899 to 2.4 cents per pound in 1909.

The quantity, value, and percentage increase for the 10-year period of some of the principal jute products manufactured in the United States in 1909 as reported by the thirteenth census are given in the table in the next column.

The importation of jute and jute butts in 1914 amounted to 212,666,000 pounds, valued at \$11,-

174,028, and in the same year the acreage planted to jute in India was 3,358,737, an increase of 437,777 acres over 1913. The estimated yield was 10,531,505 bales of 400 pounds each.

PRODUCTS	Quantity in pounds	Per cent of increase	Value	Per cent of increase
Rope	27,749,512	177.2	\$1,566,180	238.
Twine other than binder twine	35,516,217	2015.2	2,557,744	2076.1
Flax or hemp mixed with jute	8,907,403	-31.1	938,312	-15.
Yarns	62,512,247	15.2	4,361,550	35.
Carpets and rugs, square yards.	2,206,114	-25.3	549,221	53.6

The production of gunny bagging, into which jute largely enters, amounted to 69,311,288 square yards, valued at \$3,507,482, for the same year. The importation of jute into the United States grew from 79,703 tons in 1903 to 125,389 tons in 1913. The importation of jute bags grew from \$2,061,000 value in 1903 to \$4,268,000 in 1913, and of burlaps and other jute fabrics from \$14,378,000 to \$37,774,000 in the same period.

JÜTERBOG, yu'tër-bôg. The capital of a district in Brandenburg, Prussia, 27 miles south of Potsdam (Map Germany, E 2). The fifteenth-century church of St. Nicholas, the fifteenth-century Rathaus, the ancient Abbot's House, the Tetzels Chapel, and the walls with three mediæval city gates are notable features. There are cloth, woolen-ware, and cigar manufactures and a considerable trade in wool, flax, and wine. Pop., 1900, 7407; 1910, 7632. Two miles southwest is the field of Dennewitz, where the Prussians under Bulow defeated the French under Ney and Oudinot, Sept. 6, 1813.

JUTES, jüts. A Low German tribe, closely associated with the Angles and Saxons in the conquest of England in the fifth century A.D. Their name suggests that of the northern peninsula of Denmark, and it is customary to trace them to that starting point. Morley suggests, on the other hand, that Jutland is now occupied by Danes and that men from that peninsula settling on the eastern coasts of England in the days of the Angles were called Danes, not Jutes. Moreover, towns in the Danish settlements have the ending "by," as Grimsby, Fotherby, Ashby, etc., but in the Jute region of Kent, Hampshire, and the Isle of Wight there is not a place that has a name ending in "by."

Bede divides the Teutonic conquerors of England into Angles, Jutes, and Saxons, but Procopius in the sixth century uses the terms Angles, Saxons, and Frisians. Study leads to the conclusion that the invaders of the south of England and those of the seaboard of the Scottish Lowlands, the Jutes and Frisians, were the same people.

It is only a short step from Frisians to Formorians or Pomorians, and the Jutes are identified with the Teutonic rovers who from the coast of the Baltic pushed their conquests to the Shetlands, Orkneys, and Hebrides, landing finally on the Irish coast.

In recent years the name of Jute has come into prominence through studies of subracial types persisting in the actual populations of Europe, although historians had well-nigh lost sight of

them as distinguished from their Angle and Saxon kindred. Following traditions, there have been found around Canterbury in Kent, as well as on the Isle of Wight and in south Hants opposite, men and women with peculiarities in physiognomy which are thought to be due to the Jutish blood. Special marks of the Jutish features consist in the form of the nose and mouth "The end of the nose is rounded off somewhat sharply, and the septum descends considerably below the line of the nostrils." The lower lip, more particularly, is thick and deep. The Jutish profile has a strong resemblance to that sculptured in the Assyrian marbles. The population in Friesland was not homogeneous in early times, and it is possible that the Jutes may have migrated to south England in separate bodies, at first, like their neighbors, the Angles. If so, these separate intrusions would go far to account for the perpetuation of the peculiarities of this people in England.

Consult the *Antiquary*, vol. xxix (London, 1894), and W. Z. Ripley, *Races of Europe* (ib., 1913).

JUTLAND (Dan. *Jylland*). A peninsula of Europe, having the North Sea on the west, the Skagger-Rak on the north, and the Cattegat and Baltic Sea on the east. It begins at the river Eider and terminates in the narrow sand spit called Shagen or the Skaw (Map: Denmark, C 2). It is divided into south Jutland or Schleswig, now a part of Prussia, and north Jutland, to which the name of Jutland is particularly applied, and which forms the continental portion of Denmark. North Jutland has a maximum extension from north to south of 186 miles and from east to west of 105 miles. It has an area of 9998 square miles and had in 1911 a population of 1,198,457. The surface is generally low, the highest point, which is also the highest in Denmark, being 564 feet above sea level. It is part of a ridge of hills running along the centre of the peninsula from south to north. The west coast is a continuous sandy beach, behind which are a few low lagoons and outside of which are dangerous bars. The landscape among these dunes and heaths is dreary and monotonous, and the temperament of the people is dull and melancholic. During the last few decades, however, forests have been planted east of the dunes, so that now 6 per cent of the country is tree-covered, and the heath lands are thus slowly being reclaimed for agriculture. There are many bays and fiords on the east coast, and the peninsula is traversed by numerous streams. Cattle raising and dairying are the chief occupations of the people, and oats, barley, beetroot, and rye are raised in considerable quantities. There is a railway line running through the whole length of the peninsula, with a number of east and west branches. It is connected with the Schleswig railway system. Jutland is said to have been inhabited in the earliest times by the Cimbric (q.v.) and was known to the ancients as the Cimbric Peninsula, or Chersonesus. See JUTES.

JUTURNA, FOUNTAIN OF. A celebrated spring at the foot of the Palatine Hill at Rome, named after a nymph of the water, beloved by Jupiter. It has been held that the name was originally *Diuturna* (The Lasting Goddess), or goddess of the perennial spring. The spring lies south of the temple of Castor and Pollux. (See CASTOR AND POLLUX, TEMPLE OF.) At this

spring, in 496 B.C., Castor and Pollux appeared to announce the victory of the Romans over the Latins in the battle of Lake Regillus. (Consult Macaulay, *Lays of Ancient Rome*.) For an account of the remains of the spring, discovered in 1901, consult Hülsen-Carter, *The Roman Forum* (Rome, 1906). Juturna had a shrine also in the Campus Martius, where she was worshiped with the Nymphs. The worship of Juturna was early transferred to Rome from a spring of the river Numicius, near Lavinium. Vergil (*Æneid*, xii) writes of a nymph Juturna, sister of Turnus (q.v.). The springs are now covered by debris, but still flow and discharge into the Cloaca Maxima. Consult Wissowa, *Religion und Kultus der Römer* (2d ed., Munich, 1912).

JUVARA, yoo-vä'rá, FILIPPO (1685-1735). An Italian architect, born at Messina, a pupil of Carlo Fontana. At Turin he built the church of the Superga, the Palazzo Madonna, and other works. The cupola of Alberti's church of San Andrea at Mantua is by Juvara. He died at Madrid, where he built the Royal Palace (1734) for Philip V. His dry but refined style marks a reaction from the extravagances of the baroque. See BAROCCO.

JUVENAL (DECIMUS JUNIUS JUVENALIS). A Roman satirist, born at the Volscian town of Aquinum. The year of his birth is unknown, but it may be taken for granted that he was a boy in the reign of Nero (54-68 A.D.); that he was come to man's estate and was practicing declamation in the time of Domitian (81-96 A.D.); and that he lived almost or entirely through the reign of Hadrian (117-138 A.D.). He seems to have enjoyed a competence. He practiced at Rome as an advocate, and there are some reasons for supposing that he visited Egypt. Among his friends were Martial and Statius and perhaps Quintilian. Little is known of his personal history. An inscription has been found at Aquinum, his birthplace, which mentions a Junius Juvenalis as an ex-tribune in the army and a chief officer of the town, but it is not certain whether this refers to Juvenal himself or to a near relative. His fame rests on his 16 satires, still surviving, which occupy the very first rank in satirical literature and are of the greatest value as pictures of the Roman life of the Empire. They were in large part, however, written long before they were published. Juvenal and Horace respectively represent the two schools into which satire has always been divided, and from one or other of them every classical satirist of modern Europe derives his descent. As Horace is the satirist of ridicule, so Juvenal is the satirist of indignation. Juvenal is not a man of the world so much as a reformer, and he plays in Roman literature a part corresponding to that of the prophets under the Jewish dispensation. He uses satire not as a branch of comedy, which it was to Horace, but as an engine for attacking the brutalities of tyranny, the corruptions of life and taste, the crimes, the follies, and the frenzies of a degenerate state of society. He has great humor of a scornful, austere, but singularly pungent kind and many noble flashes of high moral poetry. The old Roman genius—as distinct from the more cosmopolitan kind of talent formed by Greek culture—is distinctly discernible in Juvenal. He is as national as the English Hogarth, who perhaps gives a better image of his kind and character of faculty than

any other English humorist or moralist. Juvenal has been better translated in English literature than almost any other of the ancients. Dryden translated five of his satires. Dr. Johnson paraphrased two of the most famous (the third and the tenth) in his *London* and *Vanity of Human Wishes*, and the version of the whole of them by Gifford (1802) is full of power and character. A fine edition of the *Satires* with an exhaustive commentary is that of J. E. B. Mayor (2 vols., London, 1889). For the text alone, see the edition of Jahn (4th ed., Leipzig, Teubner, 1910). The best working editions with English notes are those of Lewis, with a good prose translation (London, 1882), Pearson and Strong (Oxford, 1892), Duff (Cambridge, 1898), and Wilson (New York, 1903). An admirable German edition is that by Friedlander (Leipzig, 1895); the Introduction deals carefully with the chronology of Juvenal's *Satires* and with his merits as a writer. For the life of Juvenal and criticism of his works, consult the Introduction to the editions by Duff and Wilson; Ribbeck, *Der echte und der unechte Juvenal* (Berlin, 1865); Martha, *Les moralistes romains* (Paris, 1865); Durr, *Das Leben Juvenals* (Ulm, 1888); Nettleship, *Lectures and Essays* (2d series, Oxford, 1895); Boissier, *La religion romaine*, vol. II (Paris, 1874); id., *L'Opposition sous les Césars* (ib., 1892); Butler, *Post-Augustan Poetry* (Oxford, 1909).

JUVENALIA (Lat neut pl. of *juvenalis*, youthful). Private scenic games, established at Rome by Nero in 59 A.D. to celebrate his reaching the manly age. The actors were distinguished amateurs, and Nero himself appeared unmasked as an actor. Under the later emperors the games held at the beginning of the year at the Palatine were also called Juvenalia. Consult Smith, *A Dictionary of Greek and Roman Antiquities*, vol. I (3d ed., London, 1890), and Furneaux's note on Tacitus, in *Annals*, vol. II (Oxford, 1891).

JUVENCUS, GAIUS VETTIUS AQUILINUS, or AQUILIUS (c.290-c.331). An early Christian poet, probably a Spaniard by birth, of good family, and a Spanish presbyter. His only extant authentic writing is the *Historia Evangelica Versus de Quattuor Evangelicis*, written in hexameters, about 330. The version follows chiefly Matthew and seems to have been made from the Itala (q.v.) for the greater part, though there are occasional signs of the use of the Greek original. The style is pure and the prosody almost classic. Vergil, Ovid, Lucan, and Lucretius are imitated. The best edition is Marold's (1886). The poems *De Laudibus Domini* and *Trumphus Christi* are certainly not by this Juvenus, and the *Liber in Genesim* is of more than doubtful authenticity. Consult: Manitius, *Geschichte der christlich-lateinischen Poesie* (Stuttgart, 1891); Hatfield, *A Study of Juvenus* (1890); Teuffel, *Geschichte der römischen Literatur*, vol. III, § 403 (6th ed., Leipzig, 1913).

JUVENILE COURT. For more than half a century the subject of juvenile delinquency has been a theme of solemn comment by criminologists, philanthropists, prison reformers, and others. Elaborate reports have been presented to legislatures and parliaments. It has also been the subject of frequent addresses at prison conferences throughout Europe and America. The result of all this discussion gradually led to some changes in the law and the attitude of

the authorities in dealing with juvenile offenders. These changes represent the inception of what is now known as the Juvenile Court movement. The credit for its beginnings belongs to no state or individual. It is a growth. It is a necessity occasioned by new conditions of civilization, especially by the growth of great cities. These great congestions of population furnished an unhealthy and unnatural environment for children.

The first item of statutory law brought to bear on the subject is probation. It is the foundation principle of the Juvenile Court and counts for more than all of its other items combined. The credit for its first application must be assigned to Massachusetts. The first law—passed in 1869—required the Governor to appoint a visiting agent, to work not for the child's punishment but for his salvation and redemption. For example, before the child could be committed to any jail or institution, notice had to be given to the visiting agent. He was required to attend at the hearing. His functions and duties were those of a probation officer. Under this act the important part of all that is now done in juvenile courts could have been done and in many cases was done.

The next important item of law was that forbidding the placing of children in jails with older criminals. Particularly between 1830 and 1850 do the reviews and prison reform reports of England, and especially those of some of the New England States, teem with accounts of shocking depravity to which young boys and girls were subjected by indiscriminate confinement in jails with older criminals. During the half century preceding what became more definitely known as the Juvenile Court, a number of States passed laws forbidding the temporary or permanent incarceration of children in the same prison with adults.

The next item of law was the separate trial of juveniles from adults. The purpose was to keep the child as far removed as practicable from the experiences and influences applicable to older criminals. Several States had adopted such laws before the advent of the Juvenile Court proper.

The next important item of law was that permitting an offending child under 16 years of age to be dealt with by what is technically understood as a chancery rather than a common-law criminal-court proceeding. This chancery-court proceeding regarded the child as a ward of the State to be corrected and redeemed rather than merely punished and degraded. A child whose technical offense was burglary or larceny, e.g., was not charged with this crime at all. There was no conviction or stigma attached to him on account of the proceeding, as was the case formerly when the proceeding was conducted in a criminal court. He was brought into court as a ward of the State to be corrected. He was referred to as a delinquent child, as distinguished from a dependent child. His delinquency consisted in the act that under the criminal proceeding might constitute a charge and result in conviction of larceny or burglary. His delinquency might be a condition for which the child was not to blame, as well as an act for which he was to blame. This procedure was not entirely new. Some of the English chancellors had pointed out, more than a century ago, that the state, in its capacity as *parens patriæ* (the overparent), had the right

to deal with its children either as wards to be saved or as criminals to be punished and driven out of society into the confinement of prisons.

This is one of the two or three most recent items added to this system. A number of States have claimed the credit for its first application. The question of credit is still unsettled. Some philanthropists have attributed it to the State of Illinois on the ground of an Act called the Juvenile Court Act, that became effective in June, 1899, and, though applying to the State, was very little recognized outside of the city of Chicago until several years later, when the law was, as a matter of fact, being popularized through agitation and publicity from other sources as well as from Chicago. An examination of the law, however, will show that it is mostly a compilation of the ideas of others that had become embodied in the statutes of other States long before they were ever embraced in or applied through this particular statute; as, e.g., probation, providing separate trials for children, forbidding their incarceration in jails, etc., as provided in laws theretofore existing in other States before they were thus enacted in Illinois. The Juvenile Court Act of June, 1899, in Illinois, among other things provided that the Circuit Court—a court already established—could, in the trial of juveniles, for convenience be designated as the Juvenile Court. No new court was created. Neither was the act of such a character that the same court or the same judge could try adults for contributory delinquency or major offenses against children. There was no contributory delinquent law. The court had no power to enforce its decrees against parents or others who often contributed to or were responsible for the offenses of children. This was a handicap under which that court long labored. Cases against the violators of laws for the protection of children still continued to take the long, tedious course through the district attorney's office, the grand jury, and the criminal division of the Circuit Court, as much divorced from any procedure or connection with the Juvenile Court as separate courts could be.

In the same year (1899) an Act approved April 12 in the State of Colorado permitted the county courts acting as courts of chancery—to proceed against and correct any child between the ages of 8 and 16 years and prescribed that any child "who is incorrigible, vicious, or immoral in conduct, or who habitually wanders about the streets and public places during school hours, having no business or lawful occupation, shall be deemed a juvenile disorderly person" (i.e., a juvenile delinquent person) "and be subject to the provisions of this act." This was the beginning of the elaborate system of laws under which the Juvenile Court of Denver was established.

The act was just as effective as that of the State of Illinois in permitting the filing of petitions or complaints and placing the child on probation. Neither act at the time made suitable provision for paid probation officers. This and other details not covered by these early acts were eventually adopted—many of them in the State of Colorado before they came to the State of Illinois. Both acts were crude, as all such laws are likely to be in their beginnings. They have since been amended and reamended; and many additional acts have been added since

1899, not only in Illinois and Colorado but in other States.

Next in order in the items of law is what is known as the Contributory Delinquent Law. This law was first enacted in the State of Colorado in March, 1903. It has since spread to the State of Illinois and many other States of the Union. Briefly, it provided that any parent, guardian, or other person who caused, encouraged, or contributed to the delinquency of a child should be guilty of a misdemeanor and subject to punishment by a fine and imprisonment. This act, when properly used, may be said to be the keystone in this great structure of laws. It was the first comprehensive law ever passed that was designed to hold to strict accountability not only the parent, but all other persons who by conduct or example might offend against a child or encourage it to do evil. The law was bitterly fought by certain vice elements and eventually had to be amended (in 1907) to sustain the rulings of all the lower courts in applying it to all persons as well as parents. But notwithstanding these attacks it has been completely effective in Colorado as a law to all persons since it was passed in 1903. There are many other detailed items of law being added to the system known as the Juvenile Court. Some of them were enacted in different States before and after the laws of 1899 in Illinois and Colorado were passed. But those mentioned are the most important. They are responsible, as to the law, for the biggest impetus in later years given a movement that has been growing towards its present status for more than half a century.

Less reference has been made in this article to the dependent child. It has had much less to do with the establishment of the Juvenile Court. Statutes concerning the protection of neglected, orphan, or dependent children existed in many States long before there was a so-called Juvenile Court in any State. But the definition of dependency has been so enlarged by the statutes in many States since the advent of the Juvenile Court that in many cases a proceeding for delinquency may be just as appropriate as a proceeding for dependency. This is primarily because the legal status of the delinquent child is very near akin to that of the dependent child. The child in both cases is regarded as a ward of the State.

By these laws the State does not mean that a child under the age fixed for delinquency does not or cannot commit a crime. Such an attitude would be absurd. It is repudiated by the State in its reservation of the right to prosecute for crime. It simply means that for very good reasons the State takes a different attitude towards the offender and provides a different method of procedure for a different purpose.

The Juvenile Court acts proper in most of the other States generally follow the laws of Illinois and Colorado. They define delinquency and dependency. This covers almost every conceivable form of conduct that should invoke the interposition of the State for the protection of the child or for the exaction of greater responsibility from parents, or others. A petition is filed, calling the court's attention to the conduct, condition, or environment of the child. Or, as under the Colorado laws, the petition may be originally filed against the parent responsible for the child, without any case against the child whatever, as is frequently done. In either case

a summons is issued to the parent or person having custody of the child, requiring him to appear before the court. The court proceeds to dispose of the case in a summary manner. Pending its final disposition, the child may be retained by the person having its custody or kept in some suitable place generally a detention home school provided by the authorities. The court is authorized to appoint probation officers, who shall be present at the proceeding, prepared to look after the child, generally in the home of the parent. But this depends upon the disposition of the case. The officer makes investigations and reports in the interest of the child when the case is heard, furnishing such information and assistance as the court may require, after the trial the probation officer takes charge of the child, as may be directed by the court. If the child is found to be neglected, dependent, or delinquent, the court may permit it to remain in its own home, subject to the visitation of a probation officer. If the court finds that the parent or guardian is unfit to care for it and it is for the best interest of the child, the court may appoint some reputable citizen or guardian to look after the child, or place it in a family home, or commit it to an institution or school generally provided by the State for that purpose. The State always retains its right to prosecute for crime, even in the case of the child, and the court may in its discretion permit such child to be proceeded against according to the laws governing the commission of crimes. But this is seldom, if ever, done. Most of the Juvenile Court laws apply to children under 16 years of age, but in recent years the age limit is being raised to 18 years in the case of both boys and girls.

So far very few of the States have provided separate juvenile courts. Most of them designate some regularly established court to try the cases of children and, as in Illinois, provide that for convenience such court may be called the Children's Court, or Juvenile Court. Colorado provided the first and most comprehensive separate court, in 1907, for all cities of over 100,000 population. It was at the time of its formation, from the standpoint of jurisdiction and all the varied phases of juvenile offenses and those contributing thereto, the most complete Juvenile Court of its kind in the world, and, so far as is known, indeed the first so constituted. This court was given absolute and unlimited chancery jurisdiction and as a court of equity could deal with every phase of the case concerning the child, the parent, and any other person offending against the child. It was also given complete and unlimited common-law criminal-court jurisdiction to try all persons who violated laws for the protection of children. That is to say, if a man committed murder, and the victim was a child—under 16 if a boy, and under 18 if a girl—the case of murder could be tried in the Juvenile Court. The jurisdiction is co-ordinate with the other courts because under the constitution it could not be given exclusive jurisdiction, but by coöperation with the other officers, almost all these cases are now tried in the Juvenile Court, where they are heard much more expeditiously and with more satisfactory results. In the sex cases alone the increase in efficiency and in detections, convictions, and punishments is from 100 to 300 per cent over the trial of such cases in the criminal court, as formerly in Denver and now in other cities.

This special court also has jurisdiction of what are known as adult delinquents, i.e., youths between 16 and 21. A somewhat similar court has been recently established in Buffalo, New York. Other States like Indiana, for large cities like Indianapolis, have a separate court that when established was just for the trial of children. There is a disposition in these States to enlarge the jurisdiction of such courts in line with that of the Juvenile Court of Denver. But the kind of court depends a great deal upon the particular city and State, with regard to its constitution and its law and the somewhat different aspects of the same problem. The structure has yet to be completed.

But what is far more important than the structure of the court is the spirit in which it is conducted. Juvenile Court laws only legalize and enhance the opportunity to do certain work for the childhood of the nation that formerly was done by haphazard and without anything like the present effectiveness. It follows, then, that nine-tenths of a Juvenile Court is its judge and its officers. They must be in entire sympathy with its purposes. Without that spirit, properly directed, all of these laws or working tools are of little value. One of the greatest contributions to what is known as the Juvenile Court has been the great amount of work that has been done in the last decade in popularizing its spirit and making it among the people, and making it round the world. Within recent years juvenile courts in some form, closely modeled after those in America, have been established in England, France, Scandinavia, Russia, Germany, and Japan. Indeed, there is hardly a civilized country in which at least the spirit of the movement has not manifested itself. It is a spirit that had been gathering, as shown, during the greater part of a century, but in the last decade, especially with the impetus of the work in Chicago and in Denver, has traveled with more rapid and far-reaching effect than in all the previous years. Its contribution to the general cause of prison reform for adults has also been incalculable.

JUVENILE FORMS. Plants which exhibit forms in early youth supposed to be similar to adult forms in the plant's ancestry. For example, the leaves which follow the cotyledons in many plants, such as the barberry, the locust, and the acacia, are radically different from the leaves which appear later, and it is believed by many that they represent a phylogenetically early type of leaf. Recent experiments have made it very likely that the round basal leaves of *Campanula* are juvenile leaves, and it has been shown that various stimuli are able to cause their production at any time in the plant's life history. (See LEAF.) Juvenile forms are very conspicuous among the conifers. For ex-

sample, in mature pines the needle leaves appear only upon the spur shoots, while in seedlings they occur upon the long shoots. It is among

Showing juvenile leaves.

the cypress forms, however, that the juvenile forms are most notable, and a great amount of work has been done in fixing these forms so that they may remain in adult life. These relatively permanent juvenile forms of cypress-like trees have been known in cultivation for a long time

as species of *Retinospora*. For example, many of the junipers (often wrongly called cedars) show at adult life the characteristic small scale-

like leaves, but in the juvenile stage they develop spreading needle leaves. It is possible to retain this habit of spreading needles in the adult life of a plant. From what is known of the history of gymnosperms, it seems clear that the juvenile stages represent the adult condition of the ancestral forms.

JUVENILE OFFENDERS. Violators of the criminal code who have not yet reached the age of full responsibility. The assumption underlying most penal codes is that responsibility develops gradually. Children below a certain age—10 years in some countries, as in England, 12 years in Germany—are not held accountable for criminal acts, nor subject to punishment by the state. Of children above this minimum age and under a maximum age (16 in most American States, but in some 18; 18 in Germany), only those are subject to punishment who are able to understand the nature and consequences of their acts. Whether such understanding is present or not is a subject for the court to determine in the particular case. Further, there is a tendency in most modern states to discard the principle of punishment altogether in the case of juvenile offenders and to substitute therefor the principle of reformation. Hence the most enlightened practice requires their detention in institutions separate from those designed for the punishment of adult malefactors; separate courts, proceeding upon special rules (see JUVENILE COURT); and the employment of incarceration in institutions only when reformation under a probation system appears improbable. Such enlightened practice is, however, far from general use in any country.

According to the United States Census of 1910, there were, on Jan. 1 of that year, 24,974 juvenile offenders in reformatories as compared with 111,498 prisoners assumed to be of full responsibility. Of the juvenile offenders, 19,062 were males, 5912 females; 21,044 were white, of whom 19,368 were native born; 3855 were negro, and 75 of other colored races. The offenses for which juvenile offenders were convicted included 14 cases of grave homicide, 45 cases of lesser homicide, 321 major assaults, 208 robberies, 2039 burglaries, 6420 larcenies, and 1285 sexual offenses. In 12,958, or over one-half, of the cases the census returns do not specify the character of the offense. The sentences imposed in 16,839 cases were for the period of minority; in 6404 cases, for an indeterminate period.

It is generally believed that juvenile crime is on the increase in most modern states, but the statistics of such crime are so defective, and the classification of offenders undergoing such rapid change, that it is difficult to establish scientifically the tendencies operative in this field. On the basis of the excellent criminal statistics of the German Empire, Dr. Aschaffenburg has compiled the following table:

CONVICTIONS ANNUALLY PER 100,000

	Adults	Minors
1882-86.....	1097	564
1887-91.....	1120	618
1892-96.....	1281	707
1897-1901.....	1298	733
1902-06.....	1321	736

From this table it appears that while crime among adults increased 20.4 per cent relatively to the adult population, crime among minors increased 30.5 per cent.

The German statistics agree with the American in making thefts and larcenies the principal crimes of minors. Petit larceny was the ground of conviction in 297 per 100,000 minors in the population in 1882, and 311 in 1906. Aggravated assault and battery increased in the same period from 48 to 107.

The following table for the German Empire in 1901 indicates the frequency of various offenses at different ages.

OFFENSES PER 100,000 PERSONS

OFFENSES	12-14 years	14-18 years	18 years and over
All crimes and offenses	405.2	919.1	1361.7
Petit larceny	230.4	329.4	208.4
Grand larceny	47.8	65.0	28.2
Receiving stolen goods	14.7	19.7	19.7
Fraud	9.7	41.3	70.6
Simple assault and battery	3.7	25.1	79.1
Aggravated assault and bat- tery	24.9	167.2	274.5
Malicious mischief	30.2	57.2	48.3
Insult	2.6	29.2	165.5
Arson	2.1	2.6	6.9

The table indicates that a larger proportion of children 14 to 18 years of age are guilty of petit and grand larceny, of malicious mischief, and of arson than of the adult population.

The causes of the probable increase in juvenile offenses are complex. The factor of chief importance appears to be the increasing concentration of population in the cities, where poverty is more severe and parental control is less adequate than in country districts. Intensive investigations in various modern cities have shown a close relation between juvenile crime and abnormal parental conditions. Thus Misses Beckinridge and Abbott found that of 14,183 delinquent children brought to court in Chicago between July 1, 1899, and June 30, 1909, 4841, or 34.1 per cent, came from families that were abnormal, i.e., with one parent or both dead or parents separated or divorced, etc. The same investigators made a careful inquiry into the economic condition of the families from which came 584 delinquent boys and 157 delinquent girls. It was found that 38.2 per cent of the boys and 68.8 per cent of the girls came from families that were in extreme poverty, an additional 37.9 per cent of the boys and 21 per cent of the girls came from homes that were normally self-sufficing, though poor. Although comprehensive investigations of the relation between poverty and juvenile delinquency have not been made, it may safely be said that poverty is a chief cause in at least three-fourths of the cases of juvenile delinquency.

A further cause of delinquency, not yet adequately investigated, is congenital mental or moral defect. The application of the Binet test (see MENTAL TESTS) to inmates of reforma-

tories and to children brought before the courts has shown that a considerable proportion, not classifiable as mental defectives according to methods formerly employed, should none the less be classed as such. For such offenders it would appear that existing reformatory methods are inadequate.

JUVENILE REFORMATION. See JUVENILE OFFENDERS, PENOLOGY; JUVENILE COURT.

JUVENTAS (Lat., youth). In Roman mythology, the goddess of young men, whose shrine was in the cella of Minerva in the temple of Jupiter, on the Capitol. When a Roman youth became of age, he brought an offering to Jupiter on the Capitol and paid a small tax to Juventas. Later (c.218 B.C.) the Greek Hebe was introduced to Rome under this name, and it was to her that the temple of Juventas, near the Circus Maximus, was dedicated (191 B.C.). When she was identified with Hebe, her worship became closely associated with that of Hercules, who had married Hebe. Consult Wissowa, *Religion und Kultus der Römer* (2d ed., Munich, 1912).

JUVERNA. See HIBERNIA.

JUXON, WILLIAM (1582-1663). An Archbishop of Canterbury and Lord High Treasurer of England. He was born at Chichester, graduated at St. John's College, Oxford, in 1603, and was appointed vicar of St. Giles's, Oxford, in 1609, and rector of Somerton in 1615. In 1621 he became president of St. John's College and in 1626 vice chancellor. In 1627 he was made dean of Worcester, in 1632 Bishop of Hereford, in 1633 Bishop of London, and in 1635 Lord High Treasurer. He was patronized by Archbishop Laud, in whose views and policies he generally shared without loss of popularity. In the Civil War he adhered to Charles I and was his constant and valued adviser. He attended the King at his trial and execution, was deprived of his bishopric after the death of Charles, and was imprisoned for refusing to reveal what the King had intrusted to him. After the Restoration in 1660 he was made Archbishop of Canterbury. Juxon was prominent in the restoration of St. Paul's. Consult Marah, *Memoirs of Archbishop Juxon and his Times* (Oxford, 1869).

K

K The eleventh letter in the English alphabet. Its form is derived from the Phœnician  and the early Greek K, from which latter there has been little variation.

It was called in Phœnician *kaph*, from a supposed resemblance to the hollow of a hand. This name came into Greek as *kappa*. K was very little used in Latin, its place being supplied by C (q.v.), which had the same sound as K. Accordingly, in the languages derived from Latin *c* was used to represent the hard *k*-sound, but in those languages which came under Greek influence the *k* was retained. See under C.

Phonetic Character. English *k* is a voiceless half-guttural explosive made by a closure part way between the back of the tongue and the roof of the mouth, or between the hard and soft palate, tending rather towards the front than the back of the mouth in present English pronunciation. Its sound is to a great extent expressed in modern English spelling by *c*, and frequently also by *ck*, *ch*, *q*. At present *k* is silent initially before *n*, as *knight*, *knock*. As to origin, initial English *k* comes from loan words from the Greek or other non-Latin sources, as *kinetic*, *khedive*, *kangaroo*. After the Norman Conquest the phonetic value of *c* was uncertain, as the Norman element brought in the *s*-sound of *c*. This gave rise to the use of *k* for the hard sound of *c*, particularly before *e* and *i*, where the value of *c* was the least settled. Owing to historical survivals, *k* is frequently found also in words of Scandinavian, Dutch, or Northern English origin, as *keg*, *kult*, *kirke*, *kipper*.

As a Symbol. In chemistry K = *potassium* (*kalium*). K stands for *knight*; K.B., Knight of the Bath, K.G., Knight of the Garter.

K 2. A symbol sometimes applied to Mount Godwin-Austen (q.v.).

KA, kā. According to the common belief of the ancient Egyptians every man, king, and god possessed after death a *ka*, or genius, a sort of second self, the centre of individual life in the world beyond. Hence "to go to one's *ka*" or "to join one's *ka*" was synonymous with "to die." This *ka* animates the statue of the deceased and receives mortuary offerings. Every king was thought to possess a *ka* on earth by virtue of his divine nature, this *ka* being represented as present with him from his conception and as his protecting spirit or guardian angel. In rare cases it appears that this special privilege was extended to other human beings while

still in this life, an apotheosis being probably the cause. The expression "to go with one's *ka*" seems to have been used only concerning the King. In all cases the *ka* existed during the man's lifetime, but in the spirit world, and not as a part of his personality in this life, the term for the spiritual part of his being, the soul, was *ba*. It is this *ba* that flies away like a bird man at death. There is no other word for "soul" than *ba* in Egyptian. The plural of *ka* seems to be used to designate "vital forces." As to the meaning of the symbol representing *ka*, the two uplifted arms, it may signify protection, or blessing.

KAABA, kā'bā (Ar. *ka'bah*, square house or chamber). The cube-shaped stone building in the centre of the mosque of Mecca, dating from pre-Islamic times and taken over by Mohammed into the new faith. It seems probable that the name originally *ka'ba*, the square stele representing the god Hubal, who was worshiped there. According to Epiphanius, the name of the virgin mother of the god Dusares at Petra was *Xaβov*, and at Tabala in Yemen the name originally designated the white flint stone with a crown sculptured on it which gave its name to the sanctuary (Yemenite Kaaba). The Kaaba has the shape of an irregular cube about 40 feet long, 33 feet wide, and 50 feet high. Its corners are oriented. In the north-east corner, about 5 feet from the ground, is set the famous Black Stone which gives the Kaaba its sanctity. The stone, probably of meteoric origin, is an irregular oval about 7 inches in diameter, composed of a number of broken pieces kept together by cement. It is held in extreme veneration by Mohammedans and is touched and kissed by them in the seven circuits made around the building during the ceremonies connected with the Hajj (q.v.). In the southeast corner a stone of lighter color is also set, but this is not venerated as is the Black Stone. Not far from the latter, 6 or 7 feet above the ground, in the north side of the

building, is the only entrance to the Kaaba, which is reached by movable staircases, one for men and the other for women. The present very ornate ones were the gift of a pious Indian Moslem. This door is opened three times a year—once for men, a second time for women, and a third time to permit the inside to be cleaned. On the northwest side is a semicircular space surrounded by a wall, called *al-Hijr* or *al-Hatim*. Inside the Kaaba there was originally a dry well, above which was the square statue of the god. There is also said to have been a dove made of aloewood. To judge from the account of the Persian traveler Nasiri Khusra in 1035, the interior was once highly ornamented with gold, silver, and costly marbles. There remain to-day the beautiful pavement of massive marble, the Arabic inscriptions which run along the walls, and the lamps of massive gold suspended from the ceiling. Though changes have been made from time to time, the building is substantially what it was at the time of the Prophet. The flat roof dates from his time. When Mecca was besieged by the Ommiads, fire almost destroyed the building, and it was restored to its original form by Hajjaj. In 1611 the walls threatened to fall in, and a girdle of gilded copper was put around them. In 1630 one of the many floods which from time to time devastate the valley in which the Kaaba stands greatly injured the building, and the whole was rebuilt, but with the original stones. The first caliphs covered the building with costly Egyptian hangings, then with red, yellow, green, or white silk. At the beginning of the ninth century the Caliph was accustomed to send three new coverings a year. Up to 1516 the Sultan of Egypt sent such a . . . when he ascended the throne. Since th . . . rule the cover is made of thick black brocade and is sent every year from Cairo at the same time as the *mahmal*, or covered litter, the emblem of royalty. The cover has a golden legend, made up of extracts from the Koran, embroidered around its whole surface 33 feet from the bottom. A special foundation provides the money for this purpose, and the ceremony of sending it out is connected with much pomp.

The Kaaba stands within a space called the Mosque, or the Haram (Holy Place). This was originally quite small, the houses of the city reaching right up to it. This space was enlarged by successive caliphs; al-Mahdi (775-781) built colonnades around the Haram and roofed them with teakwood ceilings. Minarets were added from time to time, the seventh being (it is said) the gift of the Sultan Ahmet I, who was only on this condition permitted to erect a sixth minaret on his own mosque at Constantinople. The space immediately around the Kaaba was surrounded by posts supporting cords upon which lamps were hung. The mosque was rebuilt by Sultan Selim II (1566-74), who substituted the present pointed cupolas for the teakwood ceilings of the colonnades. This mosque, which is very much more imposing than the simple arrangement at Mohammed's time, is unequal in the length of its sides and the angles of its corners. The floor sinks from east, north, and south to the middle; seven causeways run out from the inner circle of the Kaaba to the colonnades. Part of the space and the flooring of the colonnades are of marble. There is a building containing the sacred well,

Zemzem, the only well in Mecca. Northwest of this and opposite the entrance of the Kaaba is the *Makām Ibrahim*, a holy stone of heathen times, originally kept in the Kaaba, then in a stone receptacle under the Kaaba, and now in a box under the cupola of the building. It is used by the imam (leader in prayer) of the Shafites. Other makāms were introduced during the twelfth century. The mimbar (pulpit) was introduced under the Ommiad caliphs; the present one was the gift of Sultan Suleiman II (1549).

Many legends in regard to the origin and history of the Kaaba and the Black Stone are current among the Moslems. Mohammed himself (Koran, sura xxii, 119) connected the building of the first structure with the patriarch Abraham. Other legends refer this building to Adam, who is said to have fashioned it after its prototype in heaven. The Black Stone is said to have been w' . . . but to have turned black, either . . . sins of men or the millions of kisses which have been imprinted upon it.

Bibliography. Burckhardt, *Travels in Arabia* (London, 1829); Burton, *Personal Narrative of a Pilgrimage to El-Medīnah and Mecca* (ib., 1855); Wiustenfeld, *Die Chroniken der Stadt Mekka* (Leipzig, 1861); Simon's *Hurgenie Mekka* (The Hague, 1888-89); *Pèlerinage à la Mecque et à Médine* (Cairo, 1894); Wellhausen, *Skizzen und Vorarbeiten*, vol. iii (2d ed., Berlin, 1897); Grimme, *Mohammed* (Munich, 1904); Huart, *Histoire des Arabes* (Paris, 1912).

KAAB IBN ZUHAIK, kāb ib'n zūh'ār (Ar. *Ka'b*). An Arabian poet of the seventh century, a contemporary of Mohammed. His father, Zuhair ibn Abi Sulma Rabia al-Muzani, was also a poet and author of one of the seven poems of the Muallakat, the great collection of pre-Islamic Arabic poetry. All the other members of Kaab's family (the Muzainah) became converts to Islam, and when his brother Bujair adopted the new faith, Kaab indited a bitter and sarcastic poem which came to the notice of the Prophet, and Kaab was outlawed. By means of a clever stratagem, however, he gained access to Mohammed and recited a famous eulogy, called, from the first two words, *Bānat Su'ād* (Su'ād—a woman's name—fled). Mohammed was pleased and gave the poet his own mantle. Kaab is reported to have died soon after. The two poems referred to are translated by Brockelmann in his (popular) *Geschichte der arabischen Litteratur*, pp. 52, 53 (Leipzig, 1901); the second also by Gabrieli, *Al-Budatān* (Florence, 1901). The best editions of the *Bānat Su'ād* are those of I. Guidi (Leipzig, 1871-74) and Nöldeke, in his *Delectus Veterum Carminum Arabicorum* (Berlin, 1890).

KAALUND, kā'lund, HANS VILHELM (1818-85). A Danish poet, born at Copenhagen. He studied sculpture and painting, but the enthusiasm with which his verses were received on the return of Thorvaldsen (1838) made him decide to take up literature as a profession. His poems, *Kong Haldan den Sterke* (1840) and *Valkyrien Gøndul* (1842), were successful but not profitable, and the same was true of his other works until the publication of *Et Foraar* (1858; 6th ed., 1886), a collection of his best old and new poems. In 1875 his drama *Fulvia* appeared and in 1877 another collection of poetry, *En Efteraar* (4th ed., 1889). A post-

untains and across the District of Peshawar, empties into the Indus, opposite Attock, in Punjab. The point of confluence marks the id of navigation on the Indus, while the butary is navigable from Jelalabad down for its or rafts and is considerably used for nmerce. By means of the two streams there sts an available communication of about 1000 les between the Khyber Mountains and the lian Ocean. The Kabul flows past the cities Kabul, where it is frequently exhausted in nmer for irrigation, and Jelalabad.

KABYLES, kâ-bilz' (Ar. *qabilat*, pl., *qabâ'il*, bes). The Arabic name for "tribe," "union of eral huts," commonly applied to the Hamitic rbers, numbering about half a million and inbiting the table-lands of Algeria. In a nar-v sense Kabylia is restricted to a tract in geria divided by the Sahel River into Great bylia on the west, with the mountains rising 30 feet, and Little Kabylia on the east, with fs 3000 feet above the sea. The Kabyles, ough in speech Hamitic, strongly resemble nth Europeans, being black-haired and brown-d, the color of the skin is white, except for parts exposed to the sun, which are brown ere is, however, a generous sprinkling of blue-d blond individuals suggesting Scotchmen or rth Germans. This blond element has been ngly connected with the Vandals, since its sence is vouched for at a much earlier period. ssauer advances the theory that an autoch-nous Hamitic population was first ousted by nth Europeans from the Iberian Peninsula, o adopted the language of the conquered people d became the ancestors of most of the Kabyles o-day, and that there followed another pre-toric invasion by North Europeans, who asilated with the Kabyles, but preserved their ial purity. The Kabyles are of medium height .677 meters, or 66 inches) and long-headed, th an index of 76.4.

The Kabyles are an agricultural and indus-al people. They use the wooden plow and resh their grain with the tribulum, or harrow th stone teeth. They are good workers in n, brass, and leather, and the women are illful in basketry textiles. No machinery of y kind exists among them. Kabyle pottery all made by women without the use of the eel. The forms are plates, bottles of plain quant designs, teapot forms, pitchers, am-ora, etc. The colors are écu, red, terra cotta, d black. Their ornamentation is made up of infinite number of patterns, in which dots, nt lines, hachures, and geometrical forms are ngled; but there is no evidence of legendary signs. Fresh interest is awakened in Kabyle ttery by its resemblance to the ware found in d European sites, and especially on the Greek ands.

The Kabyle village is similar in structure and stives to those of the Pueblo Indians, but of a gher grade. The notion of terrace building, uch unites habitation and defense, is promi-nt. In the more prosperous settlements the uses cover a hill rising so steeply that the ver houses are commanded from above, the st forming a citadel. The tile roofs, heavy oden framework, squared walls, added stories, d decorated porches, with some evidences of hitectural proportion and ornament, are marks higher culture, but structurally the houses e defective. The interior of the Kabyle house 3 × 15 feet) is divided by a partition wall

into two rooms, one of them at a higher level than the other. In the higher room the family eat, live, and sleep. The lower is a stable for domestic animals and is ventilated into the living room. Granaries of burnt clay are built over the stables. The walls are whitewashed, mats serve for beds, and the fire is in a pit, round which are stones to support the cook-ing pots.

The family is patriarchal, and monogamy is the universal custom. The women and girls go about unveiled and are said to enjoy much greater freedom than their sex among the Arabs. But their life is a hard one, and they are old and wrinkled at 30. The families are organized into 1000 or more septs living in sep-arate villages. The tribes, which form larger units of nations and confederacies, are ruled by Amms, who are commanders in chief in war and civil rulers in peace. They are not despotic, however, since their acts are subject to the re-vision of a council. Beneath the civil rule is felt the influence of secret societies, which are all-powerful in elections and policies.

The religion is a somewhat modified Moham-medanism. Each village possesses one or more mosques resembling enlarged dwellings, not always adorned with minarets. The imam (q.v.) has care of the religious services and the instruction of the young. He is treated with great respect, consulted in important affairs, and is often the arbitrator in family disputes.

Since the French occupation of Algeria and the existence of good government and demand for labor, the Kabyles are coming down from their seclusion and securing employment on the public works and in the cities.

Consult Hanoteau and Letourneux, *La Kabylie et les coutumes kabyles* (3 vols., Paris, 1893), Randall-MacIver and Wilkin, *Libyan Notes* (London, 1901); Bertholon and Chantre, *Recherches anthropologiques dans la Berbérie orientale* (Lyons, 1913); Lissauer, "The Kabyles of North Africa," in *Annual Report of the Smithsonian Institution* (1911); Van Lennep, *Etudes d'Ethnographie Algérienne* (Paris, 1911-12); Stuhlmann, *Ein kulturgeschichtlicher Aus-flug in den Aures* (Hamburg, 1912). See LIBYANS.

KACHH, kûch. An inlet of the Arabian Sea. See CUTCH, GULF OF.

KACHH. A principality of British India. See CUTCH.

KACHH GUNDAVA, gûn-dâ'vâ. See CUTCH GUNDAVA.

KACZKOWSKI, kâch-kôf'skê. ZYGMUNT (1826-96). A Polish writer of historical and social romances, born at Bereznia, Galicia, and educated at the University of Lemberg. With the revolution of 1848 he emerged into public life, and in 1861 the publication of his news-paper *Głos* led to a short imprisonment, followed by a lengthy sojourn in Paris. He afterward re-turned to Vienna and fully occupied himself with literary pursuits. His numerous novels, marked by charming style and fidelity to his-tory, include *Bitwa o Horonczanken* (1852), *Le tombeau de Neczuii* (1858), and *Le porte-feuille de Neczuj* (1883). They belong to a cycle, the central figure of which is Count Neczuj, a personification of the old Polish aristocracy as viewed by the author. Another group of novels, dealing with the events which led to the revolution of 1848, includes *Drwiwożona* (The Strange Woman, 1855), *Bajronista* (Byronist,

1855), and *Wnuczena* (Grandsons, 1858), which is considered Kaczkowski's masterpiece. *Anuncyata* (1858), *Sodalis Marianus* (1858), and *Le Comte Rak* are among the best known of his other novels.

KADAPA, or **CUDDAPAH**, kūd'dā-pā. The capital of a district of the same name in Madras, British India, situated near the south bank of the Penner, 161 miles northwest of Madras (Map: India, D 6). The site is low and hot (average summer temperature 100° F). There is trade in cotton, cotton cloth, and indigo. Pop., 1901, 16,432; 1911, 17,807.

KADELBURG, kā'del-burk, GUSTAV (1851-). An Austrian dramatist and actor, born at Budapest. He made his début in Vienna at 17; played at Berlin from 1871 to 1883, with the exception of two seasons; toured in the United States; and from 1884 to 1894 was engaged at the German Theatre in Berlin. Soon afterward he left the stage and became manager of the Volkstheater in Vienna. Later he removed to Berlin. He wrote many comedies and farces, including *Liebesdiplomaten*, *Endlich allein*, *Schützengel*, and *Im weissen Ross* (with Blumenthal), translated into English as *The White Horse Tavern* and played with great success in New York. He also translated plays from the English. In 1899 appeared *Dramatische Werke von Franz von Schonthan und Gustav Kadelburg* (4 vols.).

KADEN, kā'den, WOLDEMAR (1838-1907). A German folklorist and writer on travel, born in Dresden. He became a teacher, was head of the German School at Naples (1867-73), and was professor of German in the Lyceum and at the Gymnasium of that city (1876-82). He is best known for his descriptions of Italy: *Wandertage in Italien* (1874); *Unter den Olivenbäumen*, folklore from southern Italy (1880); *Skizzen und Kulturbilder aus Italien* (2d ed., 1889); *Pompejanische Novellen* (1882); *Die Riviera* (2d ed., 1891), with Nestel; *Italiensche Gypsfiguren* (1891); *Auf Capri* (1900); and of Switzerland: *Die Gotthardbahn und ihr Gebiet* (3d ed., 1889) and *Durchs Schweizerland* (1895). His further work in folklore includes *Volkstümliches aus Südtalien* (1896-97), *Sagen der Quichua-Indianer* (1895), and *Sagen der Guarani-Indianer* (1895).

KADESH BARNEA. A city where Israel is said to have encamped before entering the promised land (Deut. i. 2, 19, ii. 14, ix. 23; Num. xxii. 8, xxxiv. 4, Josh. x. 41, xiv. 6, xv. 3). Hence Moses sent forth the spies, according to Num. xxxii. 8. It is unquestionably identical with the Kadesh where Miriam died and whence Moses sent messengers to the King of Edom, according to Num. xx. 1 ff. The importance of this place has been strongly emphasized by Wellhausen and Eduard Meyer. Kadesh Barnea may have been the centre of the tribe of Levi and its Yahwe cult for some time after the expulsion of the Hyksos from Egypt and the Hebrews from Goshen. Like the brother tribe, Simeon, settled north of it, Levi was probably overthrown by the Jerahmeelites. When these entered into alliance with David and became a part of the Kingdom of Judah, Kadesh Barnea was counted as its southernmost city, the boundary running south of it, evidently along the Wadi el-Kades. It is probably referred to in Judith v. 14, and according to William of Tyre and the *Gesta Dei per Francos* Amalric I went "even to Kadesh Barnea which is in the desert" (c.1167 A.D.).

Ain Kades, already visited by Rowlands in 1842, was identified as Kadesh Barnea by Trumbull in 1881, and his enthusiastic and highly imaginary description led to a general acceptance of the identification. Ain Kades is situated in lat. 30° 37' 30" N. and long. 34° 31' 55" E. Schmidt, however, who visited the place in 1905, thinks that Ain Kuderat, northwest of Ain Kades, is more likely to have been the ancient Kadesh Barnea, as it is the Ain par excellence in this region, an ample stream flows forth from it, and there are near it an impressive tell and ruins of ancient structures. He interprets Kadesh as 'devotee' and understands Barnea as the Amoritic name of a man meaning 'Hadad waves.' Consult: Trumbull, *Kadesh Barnea* (New York, 1881); Lagrange, in *Revue Biblique Internationale* (Paris, 1896); Eduard Meyer, *Die Israeliten und ihre Nachbarstämme* (Halle, 1906); N. Schmidt, "Kadesh Barnea," in *Journal of Biblical Literature* (Boston, 1910); Wellhausen, *Israelitische und jüdische Geschichte* (7th ed., Berlin, 1914).

KADI, kā'dā. See CADI.

KADIAK, kād-yāk'. See KODIAK.

KADIAK BEAR. See BEAR.

KAD/MONITES (Heb. *Kadmōni*, easterner). A people mentioned in Gen. xv. 19. They are the inhabitants of the land called Kedem, and are themselves described as Bene Kedem, or "children of Kedem." In the story of Sinuhe, which comes from the twelfth dynasty (c.2300 B.C.), the hero flees to Kedem, where he spends a year and a half. It is evidently located east of the Arabah (qv) and the Dead Sea. Numbers xxiii. 7 suggests that the "mountains of Kedem" are synonymous with Edom, as we should undoubtedly read instead of Aram. According to Gen. xxix. 1 Jacob went to the land of the Bene Kedem. Tradition understood this as a journey to the Aramaeans, and it is altogether probable that the Kadmonites, living in the Syrian desert and in the mountains of Seir, were Aramaeans. Consult Eduard Meyer, *Die Israeliten und ihre Nachbarstämme* (Halle, 1906).

KAEGI, kāg'i, ADOLF (1849-). A Swiss philologist, born at Bauma. He was educated at Leipzig and Tübingen. In 1877 he became professor of Sanskrit, and of classical and Indo-Germanic philology in the Gymnasium of Zurich and in 1883 at the university. His writings, besides the historical work, *Kritische Geschichte des spartanischen Staates von 500 bis 431 vor Christo* (1873), and his attempts to simplify the study of Greek in his *Griechische Schulgrammatik* (4th ed., 1895, 9th ed., 1914), and *Griechisches Übungsbuch* (1893-95), are mainly in the field of Sanskrit philology: *Siebenzig Lieder des Rigveda übersetzt* (1875), in collaboration with Geldner and Roth, *Der Rigveda* (2d ed., 1881); *Die Neunzahl bei den Ostariern* (1891). He also wrote *Alter und Herkunft des germanischen Gottesurteils* (1887). His short *Greek Grammar for Schools* reached its twenty-fourth edition in 1914. He prepared also editions 9-11 of Autenrieth's dictionary to Homer (1901-08), and editions 10-13 of Benseler's *Griechisches Schulwörterbuch* (1896-1911).

KAEMPFER, kēmp'fēr, ENGELBERT (1651-1716). A German traveler. He was born at Lemgo, Westphalia, studied medicine and natural science at Königsberg, and in 1683 visited Persia as secretary to the Swedish Ambassador. While in Persia, he made the first modern sci-

entific excursion to the Baku peninsula. Having received an appointment as surgeon to the Dutch East India Company in its naval service, he accompanied the fleet to the East Indies and Japan. He returned to Europe in 1693 and devoted himself to the preparation of his voluminous notes for a comprehensive history and description of Japan and Siam. His *History of Japan* first appeared in an English translation made from his German manuscript (London, 1727), then in French (The Hague, 1729), next in Dutch (Amsterdam, 1733), and last in German (Lemgo, 1777). A new edition in English was published in 1906. The greater part of his writings is preserved, still in manuscript, in the British Museum.

KĀF, kâf See CĀF

KAFFA, kâf'fa. One of the tributary states of Abyssinia, situated in the southwestern part (Map: Egypt, D 6). Area about 5000 square miles. It is mountainous, with fertile valleys, and is drained by the Omo River. Dense forests cover the hill slopes. Some sections are well cultivated, the coffee plant being indigenous and said to have derived its name from the country. The natives belong to the Galla race and profess a corrupt kind of Christianity. Capital, Anderacha. Kaffa was subjugated to Abyssinia in 1895. Bonga and Jimma are the most important cities.

KAFFA, **CAFFA**, or **FEODOSIA**. A seaport town and watering resort in the government of Taurida, Russia, on Kaifa Bay, indenting the southeast shore of the Crimean Peninsula, 62 miles east of Simferopol (Map: Russia, E 6). It is the terminus of a branch line to Dankoi, connecting with the Russian railway system. The town, surrounded by vineyards, noted for the quality of their grapes, is fortified by walls and a citadel, has a Russian cathedral, a museum of antiquities housed in a former mosque, and remains of the palace of the former Crimean khans. The most remarkable building in the city is the fortress-like Armenian church built by emigrants from Ani in 1327. There are also Lutheran and Roman Catholic churches and a mosque. It has a commodious and sheltered harbor with ample wharfage, oyster fisheries, and domestic manufactures of carpets, rugs, soap, and caviar. Since 1894 Kaffa has become the chief commercial port of the Crimea. Theodosia or Feodosia was a thriving Milesian colony and the granary of ancient Greece; in the thirteenth century it became a trading port of the Genoese, known as Kaffa. It was captured by the Turks in 1475 and by the Russians in 1774. Pop., 1897, 27,238, 1912, 37,961.

KAFFRĀRIA, kâf-frā'ri-ā. A name given to the part of the Province of the Cape of Good Hope lying east of the Kei River. It was formerly an independent native kingdom of South Africa, was annexed to Cape Colony (see CAPE OF GOOD HOPE) in 1875, and is now incorporated as East Griqualand, Transkei, Pondoland, and Tambuland Area, about 22,000 square miles. Pop., 1911, 834,644. Grain and cattle are raised.

KAFIR (kâf'ir) **BREAD**. A name given to several South African species of *Euphorbia*, of the natural order *Cycadaceae*, which, like many others of that order, have much starch in their stems and afford food to the natives. They are also called bread trees. See **ZAMIA**.

KAFIR CORN. A variety of nonsaccharine sorghum. See **ANDROPOGON**; **SORGHUM**, *Nonsaccharine*.

KAFIRISTAN, kâf'ir-rê-stân' (Pers., land of the infidels). An eastern province of Afghanistan, south of Badakshan and west of the Chitral, between about 34° 30' and 36° N., and 70° and 71° 30' E. (Map: Afghanistan, O 5). The area is supposed to be approximately 5000 square miles. On the north is the Hindu Kush. The country, conspicuously mountainous and rugged, is notable for its narrow valleys and elevated passes. The climate is hot in summer and in winter most rigorous. Along the valleys cereals and fruit are cultivated, especially grapes, from which a wine of great local repute is manufactured, the chief occupations, however, are pastoral, and there are herds of cattle, sheep, and goats. Until 1855 it was known of this region, inhabited by various pagan tribes, who maintained a wild independence. It was subdued in 1895 and annexed to Afghanistan by the Ameer Abd-ur-Rahman, who forced Mohammedanism upon the people. The Kafirs, whose number is unknown, differ from their neighbors in feature, complexion, and customs. They are independent and warlike, being frequently at war with one another, and their simple patriarchalism is comparable with the earliest-known governmental institutions in Europe. Most of them are probably descended from eastern Afghan tribes who in the tenth century fled before Mohammedan invasion to this rugged region. The inhabitants who preceded them are probably represented in the modern population, particularly by the Presun tribe. Besides the Presungalis, the present inhabitants may in general be divided into the Shiah-Posh (the most numerous) and the Waigalis. The dialects of the Shiah-Posh, with many dialects is that of the Presun and Wai languages, which are virtually unknown to Europeans—and the Presun perhaps is unknowable, so great appears to be its difficulty—have no similarity to each other or to the language of the Shiah-Posh. None of these languages has a written literature. The Kafirs are a hardy, active people, but immoral, covetous, jealous, and of generally low culture. The women, practically without rights and held in small respect by their masters, do most of the labor. Some have seen in the Kafirs, unnecessarily, a large Greek admixture. Probably the majority of the people, despite the enforcement upon them of Islam, retain in secret the old degraded paganism. Consult Robertson, *Kafirs of the Hindu-Kush* (London, 1896).

KAFIRS, kâf'irz. Tribes of negroes, belonging to the great Bantu family inhabiting the southeastern coast of Africa. They are tall (1.715 meters), slim, and well built; skin of various shades of dark brown; hair thick, harsh, and woolly; nose broad and flat; lips thick; strong skin odor. Skull capacity, 1453 cubic centimeters; cephalic index, or ratio of head width to head length, 72.5. Under the general title are included the Ama-Xosas, of West Kafirland; Ama-Tembu (Tambukies), of Tambuland; Ama-Mpondo, of Pondoland; Ama-Baka, Ama-Mpondosi, and Ama-Xexibe, of East Griqualand; and Ama-Fingui, of Finguland, west of Tambuland. At one time their dominion covered a wider territory than at present, and doubtless in their turn they had driven out the original Hottentot and Bushman aborigines. The Kafirs are for the most part cattle breeders, though they raise millet, maize, yams, melons, and various vegetables, which with milk

form their diet. They eat meat only when fighting, and cattle are a medium of exchange, a bride costing from 10 to 100 head. Their houses are cone-shaped and are grouped in villages called kraals; but the care of their immense herds demands much moving about. In this connection it is worthy of mention that primitive methods of irrigation were in vogue. The women are the farmers and drudges, and their industrial apparatus is of the rudest sort. The Kafir is essentially a warrior. His lifelong feuds with the Bushmen and his later wars with Dutch and English have developed in him mental and physical qualities far above those of the true negroes. His weapons are the knobkerrie, or striking and throwing club, and assegais, or lances for hurling or for thrusting, and he carries a decorated shield of oxhide almost as high as the wearer. The warriors formerly wore toga-like cloaks of leopard skins or oxhide and paid great attention to dressing the hair. The government of the Kafirs is an absolute chieftaincy, the tribes all being under the hereditary sovereign, or *Inkose*, who is father, legislator, administrator, chief justice, and commander in chief. There is, besides, a supreme council of chiefs, over which he presides, and their decisions are the law of the land. The family, the clan, and the tribe are each responsible for all the actions of their members. In religious beliefs the Kafirs are on a much higher plane than most other African tribes. This is shown, e.g., by the delegation of a maiden daughter of the chief as custodian of the sacred fire, whose office was to purify the herds. Somewhat elevated conceptions of a future life were entertained by the Kafirs. Their type of religion was an advanced grade of ancestor worship. A dead chief was buried in the cattle kraal with an extended ceremony of interment and mourning. The spirit of the dead is supposed to return and take part in the councils of the tribe, being represented by a branch of his clan tree in which the spirit is thought to be present. Consult Theal, *History and Ethnography of South Africa before 1795* (3 vols., London, 1907-10).

KAFTAN, kâf'tân, JULIUS (1848-). A German Protestant theologian, born at Loit, Schlewig. He was educated at Erlangen, Berlin, and Kiel; in 1873 became professor of theology at Basel, and 10 years afterward at Berlin, where he was rector in 1905-06. He is regarded as a representative of the Ritschlian school of theology. His more important works are: *Die Predigt des Evangeliums im modernen Geistesleben* (1879); *Wesen der christlichen Religion* (2d ed., 1888); *Die Wahrheit der christlichen Religion* (1889, Eng. trans., Edinburgh, 1894); *Brauchen wir ein neues Dogma?* (3d ed., 1893); *Christentum und Philosophie* (3d ed., 1896); *Christentum und Nietzsches Herrenmoral* (3d ed., 1902); *Dogmatik* (6th ed., 1908).

KAGA, kâ'gâ, or **KASHU**. A province on the west coast of the island of Hondo, Japan. It now forms part of the ken or Prefecture of Ishikawa. It was formerly the seat of Mayeda, the richest daimyo in the Empire, whose income was rated 1,027,000 koku of rice. His capital was Kanazawa, which has a population (1908) of 110,994. The town is 5 miles from the sea, has broad clean streets and fine public gardens, and is a place of great industry. It has a steam silk-reeling factory. The special products are inlaid bronzes, and the famous Kaga por-

celains, called by the Japanese *Kutani-yaki* (nine-valleys ware), from the name of the village Kutani, where this ware was first made about the middle of the seventeenth century, the mark Kutani-yaki being still retained, though much of the Kaga ware is made in several other places in the province, as at Enuma and Nomi, as well as in Kanazawa. This ware is decorated in gold and a soft russet red and is very attractive. The seaport of Kanazawa is Takama, and there are other important towns in the province. On the southeastern border rises the superb Hakusan or Shroyama, i.e., White Mountain, with a height of 8921 feet. The most important river of the province is Teboni-gawa.

KAGOSHIMA, kâ'gô-shê'ma (Jap., Basket Island) The chief city of the Province of Satsuma in the island of Kiushu, Japan, and the seat of the government of the ken or prefecture of the same name, which includes the provinces of Satsuma, Osumi, and Hyuga (Map. Japan, B 8). It was formerly the seat of the feudal barons of the Shimadzu family, one of the most powerful in the country. Kagoshima lies on the north-westerly side of a deep inlet of the same name. On a small island in the Gulf of K. . . . and directly in front of the city, is . . .

volcano Takura-jima. It is about 4000 feet high and has been active for a long time. On Jan. 12, 1914, the volcano erupted, causing considerable damage to the city and other nearby towns. The town itself covers considerable ground, has wide, clean, well-kept streets, includes among its most important industries the manufacture of cotton, silk, pottery, and glass, and exports rice, tea, camphor, and cedarwood. On the shore and forming a kind of suburb is Tanoura, where the famous cracked Satsuma ware—a kind of faience—is made. On Aug. 15, 1863, Kag. . . . was bombarded and burned by a British squadron as punishment for the murder (by military retainers of Shimadzu Saburo of Satsuma) of H. L. Richardson, an Englishman, in September of the preceding year, both the Shogun's . . . and the daimyo having failed to punish the murderers or give any satisfaction. It was here also that the great Satsuma Rebellion, under Field Marshal Saigo Takamori, broke out in 1877. The city was promptly taken by the Imperial troops, recaptured by the insurgents some months later, and finally captured by the Imperialists Sept. 24, Saigo and the rebel leaders being defeated with great slaughter and the rebellion crushed. Pop., 1898, 53,481; 1908, 63,640.

KAGU, kâ'gōō (native name). A remarkable bird (*Rhinocetus jubatus*) peculiar to the island of New Caledonia. It is gray above, paler below, with black markings on the wings and tail. The head carries a long crest, and the bill is bright red. It was formerly found all over the island, but is now confined to the more unfrequented parts, where it lives in the mountainous ravines and hides in holes and under stones. It is often kept in captivity in the East, in parks and zoological gardens. It is nocturnal and feeds on snails and other mollusks, insects, and the like. It resembles a rail in its general form, but is more like a heron in some of its habits. In its internal anatomy it shows so many and such peculiarities that its relation to other birds is still a matter of doubt. Its nearest relatives would seem to be the sun bitterns of South America, with which it is usually associated in the same order with

cranes. (See Newton, *Dictionary of Birds*, New York and London, 1893-96.) This resemblance is heightened by the fact that, like the sun biter, the kagu in courtship or in moments of excitement will execute a variety of violent gesticulations and dance about, displaying the otherwise concealed spottings on its wing quills, spreading its wings and tail, and even holding the tail or the tip of a wing in its bill, as if to make it more conspicuous. Nothing is known as to its breeding habits, nest, or eggs in a wild state, but it has laid and once reared young in captivity. Both sexes unite in forming a rough nest of twigs and leaves, and one or two eggs are laid. Thirty-six days are required for incubation. See Plate of BUSTARDS

KAGUAN, ká'gwan. See COBEGO.

KAHLE, ká'le, PAUL (1875-). A German Semitic scholar. He was born in Hohenstein, East Prussia; was educated in Marburg, Halle, and Berlin, taught and preached at Braila in Rumania (1902-03) and in Cairo (1903-08); became privatdocent at Halle in 1909; was an assistant of the German Evangelical Archaeological Institute in Jerusalem in 1909-10, and then became librarian of the German Oriental Society (Deutsche Morgenländische Gesellschaft). Kahle published: *Samaritanisches Pentateuchtargum* (1898, 1901); *Zur Geschichte der hebraischen Punctuation* (1901); *Der masoretische Text des alten Testaments* (1902); *Die arabischen Bibelübersetzungen* (1904); *Masoreten des Ostens* (1913); *Aulad-Al-Bedunen* (1913). *Bauernzahlungen aus Palastina* (1914).

KAHLENBERG, ka'len-bërg, LOUIS (1870-). An American chemist, born at Two Rivers, Wis. He graduated in 1892 from the University of Wisconsin, to which, after taking his Ph.D. at Leipzig in 1895, he returned as instructor (1895-97), later becoming assistant professor of physical chemistry (1897), professor (1900), and head of the chemistry department (1907). He was appointed associate editor of the *Journal of Physical Chemistry* and of the *Journal de Chimie Physique* and served as president of the Wisconsin Academy of Sciences, Arts, and Letters (1906-09) and as vice president of the American Electro-Chemical Society (1902-07, 1910-12). Besides monographs and articles dealing mainly with electrolysis, osmosis, and solutions, he is author of *Laboratory Exercises in General Chemistry* (1907; 3d ed., rev. 1911); *Outlines of Chemistry* (1909); *Qualitative Chemical Analysis* (1911), with J. H. Walton, *Chemistry and its Relations to Daily Life* (1913).

KÄHLER, ká'lër, MARTIN (1835-1912). A German Protestant theologian, born at Neuhausen, near Königsberg, a brother of Otto Kähler, a general and military historian. He was educated at Königsberg, at Heidelberg, Halle, and Tübingen. After four years as docent at Halle he became professor at Bonn (1864) and in 1867 returned to Halle, where he was appointed professor of New Testament exegesis and of dogmatics. His works include the biographies of Tholuck (1877) and Müller (1878), *Das Gewissen* (1878); *Galaterbrief* (2d ed., 1893); *Die Wissenschaft der christlichen Lehre* (3d ed., 1905); *Hebraerbrief* (2d ed., 1889); *Der sogenannte historische Jesus und der geschichtliche biblische Christus* (2d ed., 1896); *Der lebendige Gott* (3d ed., 1906); *Der sogenannte Epheserbrief des Paulus* (1894); *Dogmatische*

Zeitfragen (1898; 2d ed., vol. i, 1908, vol. ii, 1908); *Die Herrlichkeit Jesu* (1901); *Das Kreuz, Grund und Mass für die Theologie* (1911).

KAHN, kân, GUSTAVE (1859-). A French poet, novelist, and critic, born at Metz. He studied at the Ecole des Chartes and at the Ecole des Langues Vivantes Orientales. As early as 1880 he began publishing articles in reviews. This pursuit was interrupted by a visit to Africa, but in 1886 he founded *La Vogue*. The same year, with the collaboration of Paul Adam and Moréas, he founded *Le Symboliste*. In 1888, while one of the editors of the *Revue Indépendante*, he published a number of important critical articles. In 1897, with Catulle Mendès, he organized the matinées of poets, first at the Odéon Theatre, then at the Antoine and Sarah Bernhardt theatres. The object of these was to encourage the younger writers of symbolistic tendencies. His claim that he originated *vers libre* has been contested. He was made an Officer of the Legion of Honor. Among his collections of poetry are: *Les palais nomades* (1887); *Chansons d'amant* (1891); *Premiers poèmes* (1897), particularly important because of the preface. Novels: *Le roi fou* (1895); *Les fleurs de passion* (1900); *L'Adultère sentimental* (1902). His *Symbolistes et décadents* (1902) throws much light upon the works of poets belonging to that school.

KAHN, OTTO HERMANN (1867-). An American banker and promoter of opera. He was born at Mannheim, Germany, received a collegiate education and his training in banking in that country, and for five years was connected with the London branch of the Deutsche Bank. Coming to the United States in 1893, he was then with the banking house of Speyer & Co. for two years, traveled in Europe in 1895-96, and after 1897 was a member of the later prominent banking firm of Kuhn, Loeb & Co. He was chosen a director in various railroads and trust companies and became widely known for his interest in operatic productions, as chairman of the board of directors of the Metropolitan and Century opera companies, a director of the Boston Opera Company, and vice president of the Chicago Grand Opera Company. In December, 1914, he resigned from the board of the Century.

KAHNIS, kâ'nës, KARL FRIEDRICH AUGUST (1814-88). A German Lutheran theologian. Born at Greiz, he was educated at Halle, became a lecturer at Breslau in 1842, and assistant professor at Halle in 1844, and after 1850 was professor of theology at the University of Leipzig. In 1860 he became canon of Meissen. Although he belonged to the party of Old Lutherans, Kahn is a liberal theologian. His works include: *Die Lehre vom heiligen Geist* (1847), *Der innere Gang des deutschen Protestantismus seit Mitte des vorigen Jahrhunderts* (1854, 3d ed., 2 vols., 1874; Eng trans, 1856); *Die lutherische Dogmatik* (3 vols., 1861-68; 2d ed., 2 vols., 1874-75), his most important work. Consult Winter, *Dr Karl Friedrich August Kahnis* (Leipzig, 1896).

KAHOKA, kâ-hô'ká. A city and the county seat of Clark Co., Mo., 20 miles west of Keokuk, Iowa, on the Burlington Route (Map: Missouri, E 1). It trades in the products of the surrounding farming and stock-raising country and has grain elevators, cement-block factories, a milk condensery, etc. The city owns the water

works and electric-light plant. Pop., 1900, 1818; 1910, 1758.

KAHULĀUI. See HAWAIIAN ISLANDS.

KAIAIANIAN, kī-ā'ni-an (from Pers. *Kāi*, Av. *Kavi*, King). Name of an ancient Iranian or Persian dynasty, partly legendary, but merging into an historical line, which ruled over Persia after the Peshadian, or great mythical dynasty of Iran. The last members of the Kaianians are certainly contemporaneous with the later Achaemenian monarchs and are to be identified with them, although the Persian traditions connected with their names and reigns are more fanciful and imaginative than are the annals of the Greeks. Regarding the earliest Kaianians there is much uncertainty, owing to the lack of authentic records, but Persian tradition ascribes the founding of the Kaianian line to the stand taken by the great legendary hero Rustam, the leader against Afrasiab of Turan, when he placed Kai Kobad (Avestan, *Kavi Kavāta*) on the throne of Iran and established the much-honored house. The designation Kaianian is due to the title Kai prefixed to each name in the dynasty.

The successor of Kai Kobad was Kai Kaus (Av. *Kavi Ušan*), and he in turn was followed by Kai Khosru or Khusru (Av. *Kavi Husravah*), whom Persian tradition, apparently in vain, seeks to identify with Cyrus the Great. This king's reign, like that of the other Kaianians, but more in length, is described in the *Shāh Nāmah* (Book of Kings) by Firdausi (q.v.). Next followed Luhrasp, and then came his son Gushtasp, who has been identified, on insufficient grounds it seems, with Darius Hystaspis. (See **DARIUS**.) In Gushtasp's reign the prophet Zoroaster appeared. After Gushtasp came Bahman, or Vohuman, i.e. Ardashir Dirazdast, whose rule is to be identified with that of Artaxerxes Longimanus. (See **ARTAXERXES**.) Similar historical identifications are now to be made between the Kaianian Darah or Darab and Darius Nothus, and between Dara and Darius Codomanus. (See **DARIUS**.) According to the artificial chronology of the Pahlavi Bundahishn (vol. xxx, nos. 6, 7), the accession of Kai Kobad, or the first Kaianian, would be placed as early as 1005 B.C., and the reign of Kai Vishtasp would extend over 120 years. So we find it in Firdausi, Masudi, and Albiruni. A reign of such extravagant length is apocryphal and points rather to a dynasty. The fall of the Kaianian power came to pass through the invasion of Alexander the Great and the consequent overthrow of the Persian Empire. Consult: Dubeux, *La Perse* (Paris, 1881); Jackson, *Zoroaster, the Prophet of Ancient Iran* (New York, 1889); Justi, *Iranisches Namenbuch* (Marburg, 1895); id., "Geschichte Irans," in *Grundriss der iranischen Philologie*, vol. ii (Strassburg, 1896-1904). See also **PERSIA, History**.

KAIBAB PLATEAU. See **GREAT AMERICAN DESERT**.

KAIBA RIVER. See **MODDER RIVER**.

KAID. See **SHEEP LOUSE**.

KAJETUR (kī-é-tóor') **FALL.** A waterfall in British Guiana, formed by the waters of the Potaro River, an affluent of the Essequibo. The river plunges with a sheer descent of 741 feet over a hard ledge of rock 370 feet wide, whose underlying softer layers are worn back into an enormous black cavern, against which the white spray appears with wonderful effect. The surrounding scenery is grand and picturesque; the

escarpment has been worn into a huge amphitheatre, with rocky sides surrounding the whirlpool below. It was discovered in 1870.

KAIFENG, kī'feng, or **KAIFONG.** A walled city of China, capital of the Province of Honan (q.v.), 11 miles south of the Hoang-ho or Yellow River and about 450 miles southwest of Peking (Map: China, K 5). Formerly known as Pienliang, it was the capital of the country from 960 to 1129. It covers a considerable area; its most noticeable feature is a 13-story pagoda of brown glazed brick. It was formerly an important city, but many misfortunes have crippled it and for a long time it has had little commerce or industry. The suburbs, where the business is mostly done, are large and have a large transit trade with Fanchang and other ports on the Han River. **Kaifeng** is on a branch line a little east of the Hankow-Peking Railway, completed in 1905. Pop., about 200,000. It has been overwhelmed 14 times by flood, 9 times by earthquake, 6 times by fire, and 11 times taken by assault. In 1642 it was inundated by its own friends, having been besieged for six months by 100,000 rebels. The general who came to its relief conceived the idea of raising the siege by laying the surrounding country under water. With this end in view he broke down the embankments by which the Yellow River is kept in its course (the bottom of the river being higher than the surrounding country), and, while he succeeded in drowning the rebels, the city was overwhelmed and 300,000 of the inhabitants drowned. Here are found the remnants of a colony of Jews who entered China during the Han dynasty or earlier, and claim descent from the tribe of Asher. They were discovered in the seventeenth century by the Jesuit missionary Matteo Ricci. In 1164 they had built a fine synagogue, with Imperial permission, but in the numerous disasters which have overtaken the city this and several others which had followed were ruined, and now little remains but debris to mark its site. They were visited in 1850 by a native Christian deputation, sent by the Bishop of Peking, Dr. Medhurst, of the London Missionary Society, who obtained some of their Hebrew Scriptures and transcribed two of their historical tablets which still remained. When they were visited later, the remaining rolls of the Law were purchased. They had taken to eating pork however, and they are now scarcely distinguishable from the Chinese population. They now have but a confused recollection of their ancient traditions. The Chinese call them the Blue Mohammedans, also *Tao Kin Hwug* (the sect which plucks out the sinew), in allusion to a well-known Jewish custom. This strange colony is now only a few hundred in number, in a poverty-stricken state. Efforts are being made to rehabilitate it and rebuild the synagogue.

KAI KATU KHAN, kī ká'tu kán. See **MONGOL DYNASTIES**.

KAILAS, kī-lās'. The highest peak of the Gangri Mountains in Tibet. It is situated near the Indian boundary, between the sources of the Indus and the Brahmaputra, and has an altitude of over 22,000 feet. It is held in high veneration by the Hindus, who consider it the abode of the gods, and do homage by walking around the base, generally a three weeks' journey.

KAILĀSA, kī-lā'sá. The most important of the rock-cut temples at Ellora, near Auranga-

bad, about the tenth century A.D. The exterior of the temple is separated from the original granite cliff in which it was cut by a broad passage, with ponds, obelisks, colonnades, and sphinxes. The walls are covered with sculptures of colossal figures. The entrance hall, 137 by 88 feet, with several rows of columns, leads to a chamber 244 by 147 feet, containing the sanctuary, cut from a single block. The roof is supported by four rows of columns, with colossal elephants. The temple, with a pyramidal dome, measures 101 feet by 56. Its height varies from 16 to 90 feet. On its walls are sculptured images of all the Indian divinities, and scenes from the Mahabharata and Ramayana. The style of its architecture is Dravidian (Consult Ferguson and Burgess, *Cave Temples of India* (London, 1880)).

KAILYARD' SCHOOL. A nickname applied to the writers whose themes are drawn from peasant life in Scotland. The term is taken from the motto of Ian Maclaren's *Bonnie Brier-Bush*, "There grows a bonnie brier-bush in our kailyard."

KAIMAKAM. See CAIMACAM

KAIN, JOHN JOSEPH (1841-1903). An American Roman Catholic archbishop. He was born at Martinsburg, Va. (now W. Va.); was educated at St. Charles's College, Ellicott City, Md., and at St. Mary's Seminary, Baltimore, and was ordained in 1866. For several years his parish duties extended over eight counties in West Virginia and four in Virginia. He was consecrated Bishop of Wheeling in 1875 and was made coadjutor to Archbishop Kenrick of St. Louis in 1891, administrator of the archdiocese in 1893, and Archbishop in 1896.

KAINITE, kī'nīt, or **KAINIT**, kī'nīt (from Gk. *kainós*, *kainos*, new). A hydrous magnesium and potassium chloresulphate, composed of magnesium sulphate, potassium chloride, and water of crystallization. Its crystals are monoclinic and have a vitreous lustre. When pure, the mineral is colorless, but from impurities it usually varies from white to dark red. It is easily soluble in water and has an astringent taste. It generally occurs in granular masses, being chiefly found at Stassfurt, Germany, and in Galicia. It is useful in the arts on account of its potassium constituent and is extensively used as a fertilizer, imports into the United States about \$2,000,000 yearly.

KAINOZOIC kī'nō-zō'ik. See CENOZOIC.

KAINZ, kints, JOSEPH (1858-1910). An Austrian actor, born at Wieselburg in Hungary. He first appeared on the stage in Vienna in 1873; played three years at the Court Theatre at Munich (1880-83), and in 1883 was engaged by the German Theatre in Berlin for a period of 16 years. He returned to Vienna in 1899, visited America several times, played Romeo; Mortimer, in Schiller's *Maria Stuart*; Ferdinand, in the same author's *Kabale und Liebe*; and Alceste, in Molière's *Misanthrope*. Consult Gregori, *Joseph Kainz* (2 vols. Berlin, 1905).

KAIPING, kī'pīng'. A small town in the Province of Chili, China, lying 80 miles northeast of Tientsin, in lat 30° 36' N. and long. 118° 10' E. It is of note only as being the centre of a coal field, though the coal is not of the best quality and is used only as a steam coal. The mines are connected by rail with Peh-tang on the Pei-ho, a distance of 40 miles. This was the first real railway in China and later was extended to Tientsin, thence to Paotingfu,

capital of the province, to Peking, and northeast to Shanhaikwan, where it meets the Manchurian railways and through them the Trans-Siberian. A rate war in 1911 between the two mining companies led to an amalgamation in 1912. The combined output was 3,190,115 tons, with coal in sight of 10,769,000 tons. Gross profits for 1912-13 were \$2,934,736; net profits \$1,655,748. Eleven thousand persons are employed.

KAI-PING, kī'pīng'. A town of Manchuria in the Liao-tung peninsula, about 30 miles southeast of the port of Niuchwang and on the Port Arthur railway. It was taken by the Japanese under General Oku, July, 1904, during the Russo-Japanese War (qv).

KAI-POMO, kī'pō'mō. See KATO

KAIRA, kī'rā. The capital of a district of the same name in the Northern Division, Bombay, British India (Map. India, B 4), near the confluence of the two small rivers Watruk and Seree, 20 miles southwest of Ahmadabad. It is surrounded by a wall with bastions. The public buildings include a beautifully carved Jama temple, a large Anglican church, a courthouse of Doric architecture, a clock tower, library, and reading room. The city existed in the fifth century, while its foundation is supposed to date from 1400 B.C. Pop., 1901, 10,392, 1911, 7,399.

KAIRWAN, kīr-wān' (Ar. *kairuwān*, from Pers. *kārawān*, caravan, or resting place). A town in Tunis, 30 miles southwest of Susa (with which it is connected by rail) and about 80 miles south of the city of Tunis. It is situated in a treeless plain, covered in part by salt marshes, some distance west of a stream flowing south to Sedi el-Heni Lake (Map Africa, F 1). About 670 A.D. the Mohammedan General Ukbah, after having conquered north Africa, selected a site in the midst of a dense forest, then infested by wild beasts and reptiles, as the location of a military post. It was to keep in check the Berber hordes and was selected far from the sea in order to avoid danger of attack. This "resting place" soon developed into a city, which the fertility of the region made celebrated for its olive groves and luxuriant gardens. Fifteen years after its founding it was besieged by an overwhelming force of Berbers and fell into their hands after Ukbah had been killed in battle. It was later recaptured and though more than once besieged remained for four centuries the "holy city," the Mecca of north Africa. In the tenth century the city was embellished by the Aghlabites, later it suffered considerably from the rivalry of Mahdiyyah and then of Tunis, but in the eleventh century, as the capital of the Siride Muizz, was still famous for its wealth and prosperity. About the middle of that century, however, the Fatimites of Egypt instigated the Egyptian Bedouins to invade this part of Africa. Kairwan, attacked and taken, was so utterly destroyed that it never afterward regained its former position, it continued, nevertheless, to be the centre of theological study. In 1881 it was taken by the French without much difficulty, though much opposition had been expected from the religious zealots. It was then newly fortified and made the capital of a "contrôle civil."

It is surrounded by a high brick wall, pierced by five main gateways and surmounted by towers; the circuit is about 3500 yards and almost forms a hexagon. Until the French occupation

access to the city was difficult for non-Mohammedans, but visitors at present have little trouble in entering even the mosques. There are about 80 ecclesiastical structures; numerous tombs of saints and warriors, for the dead are brought from afar to be buried in the "holy city"; and about 30 mosques, of which six are important ones. The Ukbah Mosque, which was rebuilt in 827, is in the northern section of the city and is one of the most magnificent and sacred in Islam, being considered one of the four gates of Paradise. It contains about 430 antique Roman columns of marble, granite and porphyry, with horseshoe arches; the ceiling is flat, of dark wood; in the centre of the immense court, which is surrounded by a double colonnade, is a marble fountain over the sacred well, which is supposed to communicate with the Zemzem at Mecca; the mihrab is tiled; the sanctuary double, with 10 arches in one direction and 17 in the other. The chief manufactures of the place are copper utensils, carpets, morocco leather, oil of roses, saltpetre, and potash, the handsome bazars are well stocked, and the caravan trade is of considerable importance. Pop. about 25,000.

KAISARIEH, kī'sā-rē'e. A town of Asiatic Turkey, situated in the Vilayet of Angora, a short distance from Mount Argæus and 160 miles southeast of Angora (Map: Turkey in Asia, C 2). It has narrow and crooked streets and is partly surrounded by walls. There are a mosque, dating from 1238, and extensive bazars. The chief occupation of the inhabitants is trade, for which the city is well adapted on account of its location, exporting hides, carpets, fruit, and raisins. Kaisarieh is the seat of a Greek bishop, an Armenian archbishop, and a Roman Catholic bishop. In the town are a high school, a kindergarten, and an American mission doing medical and educational work. Pop. (est.), 50,000, of which 26,000 are Turks. Kaisarieh occupies the site of the ancient Cæsarea in Cappadocia.

KAISER, kī'zēr (OHG. *keisur*, AS. *cāsere*, OS. *kēsūr*, Goth. *kaisar*, Gk. *kaisar*, *kaisar*, emperor, from Lat. *Cæsar*, referring especially to Gaius Julius Cæsar). The German equivalent for Emperor. Under the early Roman Empire the acknowledged heirs to the throne added the name Cæsar to their own in honor of the "divine Julius." Diocletian (q v) made it distinctively a title and bestowed it on the two associates and successors of the senior emperors, or Augusti. On the division of the Roman Empire (395 A.D.) the title was borne by the emperors of the West and of the East. It passed away in the West with the dethronement of the last Emperor (476 A.D.), but was revived in 800, when Charles the Great was crowned Roman Emperor in St. Peter's at Rome. From this time dates the association of the Roman Imperial title with the kingship of a "barbarian" nation, first the Franks and then after 962 the Germans. (See HOLY ROMAN EMPIRE.) From Otto the Great to Francis II the King chosen by the German nation as King of the Romans became Emperor of the Holy Roman Empire—at first by consecration at Rome, but later through the very act of election. It was customary, however, for the German King of the Romans to be chosen during the lifetime of the Emperor, on whose death he succeeded to the higher title. Charles V, whose coronation took place at Bologna in 1530, was the last German King to be crowned in Italy.

Until the end of the eighteenth century the opinion was prevalent that there could be but one Christian Emperor. After the downfall of the Eastern Empire, in 1453, the Sultan also assumed the title of Emperor; but the German Emperor recognized this rival title only in 1718. This recognition was followed by the assumption of the title of Czar by Peter the Great in 1721. After the coronation of Napoleon I as Emperor of the French, in 1804, Francis II of Austria adopted the title of Emperor of Austria and in 1806 dropped that of Holy Roman Emperor. In 1851 Napoleon III took up the pretensions of Napoleon I as successor of Charles the Great. In Germany the revival of the title of German Emperor by the Nationalist movement of the revolution of 1848 was unsuccessful; but after the Franco-Prussian War in 1871 King William I of Prussia assumed the title of German Emperor, which carries with it only a restricted Imperial prerogative and must be distinguished from the older title of Emperor of Germany. In 1876 the Queen of England assumed the title of Empress of India, and since 1877 the Sultan of Turkey has called himself Osmanic Emperor. See CÆSARISM, CZAR; EMPEROR.

Bibliography. Julius Ficker, *Das deutsche Kaisertum* (Innsbruck, 1861), id., *Deutsches Königthum und Kaiserthum* (ib., 1862), Von Sybel, *Die deutsche Nation und das Kaiserreich* (Düsseldorf, 1862); Kuepper, *Nationaler Gedanke und Kaiseridee* (Freiburg, 1898); Lackmann, *Das Kaisertum* (Bern, 1903). James Bryce, *Holy Roman Empire* (New York, 1911).

KAISER, ISABELLE (1866—). A Swiss author, born in Beckenried on Lake Lucerne and educated at Geneva. She first wrote in French, publishing the volumes of verse *Ici-bas* (1888), *Sous les étoiles* (1890), *Des ailes!* (1897), and *Le jardin clos* (1912), and the romances *Cœur de femme* (1891); *Sorcière* (1895), which was a story of witchcraft, *Héro* (1898), the scene of which is laid on Lake Lucerne, *Notre père qui êtes aux cieux* . . . (1899), a sketch of urban poverty; *Vive le roi!* (1903), a story of the Vendée, *L'Éclair dans la voile* (1907); *Marcelle de Flue* (1909). Her work in French received a prize from the French Academy. She also wrote in German—a novel *Wenn die Sonne untergeht* (1901), poems called *Mein Herz* (1908), a romance *Die Friedensucherin* (1908), *Der wandernde See* (1910), and *Von ewiger Liebe* (1913).

KAISERSLAUTERN, kī'zērs-lou'tērn. A prominent and thriving town of the Bavarian Palatinate, Germany, situated on the Wald-lauter, 42 miles by rail west of Mannheim (Map: Germany, B 4). It has a fine new church of St. Mary, a fourteenth-century Protestant church, hospitals, an industrial museum, and a municipal theatre. The most prominent church is the Protestant. Its schools include a Gymnasium, manual-training shops, an industrial school, agricultural school, and a teachers' seminary. The principal industries comprise spinning factories (worsted and cotton), one employing 1600 hands, and manufactories of structural steel, sewing, and other machines, boilers, car wheels, safes, blank books, illuminating oils, lumber, bricks, bells, furniture, and shoes. There are also extensive railway shops, ironworks, and quarries. The trade in lumber and fruit is extensive. The town is of ancient origin. In 1152 Frederick Barbarossa built a fine palace

here. It was demolished during the Spanish War of Succession. Kaiserslautern became a free Imperial city in the thirteenth century, but lost its independence in 1357, when it passed to the rulers of the Palatinate. It became French in 1801 and passed to Bavaria in 1816. It was the seat of the provisional government during the uprising in the Palatinate in 1849. Pop., 1900, 52,306, 1910, 54,659.

KAISERSWERTH, kí'zërs-vért'. A town in the Rhine Province, Prussia, situated on the right bank of the Rhine, 6 miles from Düsseldorf. It is chiefly important for the house of evangelical deaconesses established by Theodor Fliedner (q.v.) in 1836 and now having branches all over the civilized world. It has small manufactures of silk, paper pulp, aniline dyes, bricks, and dairy stuffs. Pop., 1910, 2804.

KAISER WILHELM CANAL. See CANAL.

KAISER-WILHELMSLAND, kí'zëi-víl'hëlms-lánt'. The German portion of New Guinea (q.v.). Area, 70,135 square miles. Taken by Australian forces Sept. 25, 1914.

KAJANUS, ká-yá'nus, ROBERT (1856-) A Finnish composer, born at Helsingfors. In 1877 he entered the Leipzig Conservatory, studying under Richter, Jadassohn, and Reinecke. After graduation, in 1880, he spent two more years studying in Paris and Dresden, where his first orchestral works were performed. In 1886 he founded in his native city an orchestral association, which he soon brought to such a degree of efficiency that in 1888 he was able to produce for the first time in Finland Beethoven's Ninth Symphony. Under his leadership the association grew steadily, was later incorporated as the Helsingfors Philharmonic Orchestra, and is to-day one of the finest bodies of instrumentalists in Europe. In 1897 he became director of music at the University of Helsingfors. He was the first of the serious Finnish composers to strive consciously for distinct national expression. Among his principal works are two symphonic poems, *Aino* and *Kullervo*, two Finnish *Rhapsodies*, an orchestral suite, *Sommererinnerungen*; several cantatas, piano pieces, and songs.

KAKA, ká'ká (Maori name, meaning 'parrot,' onomatopoeitic in origin). A parrot of the New Zealand genus *Nestor*, by some regarded as a family (Nestoridae). This group contains large, handsome parrots, with beak greatly prolonged (especially in the upper mandible) and compressed, and tongue tipped with a "brush" of fine hairs. Two species are extinct—*Nestor productus*, formerly of Phillip Island, and *Nestor norfolcensis*, once numerous on Norfolk Island. The existing species are two—the kaka proper (*Nestor meridionalis*) and the kea (*Nestor notabilis*, q.v.). The kaka inhabits both islands of New Zealand, but recently has become reduced in numbers, since it is very unsuspicious of harm and is slow of flight. Its general color is brown, with a grayish cap, yellow ear coverts, and a tinge of red on the rump, abdomen, and under surface of the wings. (See Plate of PARROTS AND PARAKEETS.) It inhabits the forests and feeds on juicy berries, nectar brushed from large flowers by means of its tongue, and grubs obtained by stripping off bark or tearing to pieces decaying wood and growing epiphytes. It is social and noisy and breeds in hollows of trees. Consult Buller, *Birds of New Zealand* (2d ed., London, 1888).

KAK'ABEK'A FALLS. A picturesque cat-

aract of the Kaministiquia River, Ontario, Canada, 14 miles west of Port Arthur, situated near its mouth on Lake Superior. The falls are 150 yards wide and 130 feet in height.

KAKAPO, ká'ká-pó' (Maori name, meaning 'night parrot'), or OWL PARROT. A nocturnal, ground-keeping parrot (*Stringops habroptilus*) of New Zealand, also called "ground" and "night" parrot. It is about as large as a raven, green, marked with yellow and black, and has a quaint owl-like aspect. The kakapo takes possession of a hole as a home and nesting place, but also seems able to dig a burrow for itself. Its food is almost entirely vegetable and is gathered mainly on the ground. The flesh is more delicate than that of any other parrot. Since white men settled in New Zealand, this interesting bird has almost disappeared from the northern island and is rare in the middle island. It is the only known bird having large wings which does not use them for flight. When it does fly, its movements are more like those of a flying squirrel than of a bird. The great pectoral muscles, the keel of the sternum, and the furcula have atrophied and disappeared. Consult Hutton and Drummond, *Animals of New Zealand* (1905).

KAKAPUSHI. See HIMALAYA.

KAKAR, ká'kár. See MUNTJAC.

KAKE, ká'kê. See TLINGIT.

KAKHYENS, kák-hi'enz, **KHYEN**, or **KA-KAU**, ka-kou' The name applied by the Burmese to certain primitive tribes of the mountains of Arakan and northern Burma as far as the frontiers of Assam and Tibet. See CHINS.

KAK'KE, kák'ká' (Sinico-Japanese, leg affection, from Chin *Kieh*, leg + *K'í*, air, humor). A specific disease endemic in certain parts of Japan, and believed to be identical with the beriberi of India, the Malay Peninsula and Archipelago, and Brazil. It was first described in 1715 by a Japanese physician who found it endemic in Yeddo and Kyoto, but rare in other places. It has spread since then and is now found in many other localities, becoming at times epidemic. It affects the lower extremities and is characterized by numbness of the skin of the legs, loss or impairment of motive power, the swelling of the legs, especially over the shin bone, cramps in the calf of the leg, frequently dropsy, and in some cases it affects the heart and may then prove rapidly fatal. The origin and causes of the disease are unknown. Consult: Chamberlain, *Things Japanese* (London, 1891); Anderson in *The Transactions of the Asiatic Society of Japan*, vol. vi (Yokohama, 1878); Baelz and Miura, "Beriberi oder Kakke," in Mense's *Handbuch der Tropenkrankheiten* (Leipzig, 1905). See BERIBERI.

KAKODYL. See CACODYL.

KALA AZAR, ká'lá á-zár', **FEBRILE TROPICAL SPLENO-MEGALY.** A disease characterized by low fever and sores, the spleen and many fluids containing small bodies with two nuclei, one-third the size of a red blood corpuscle (Leishman-Donovan bodies). The disease is widespread in India, especially in Assam, where it exists in its severest epidemic form. It occurs, however, throughout the East, from Algiers to China. Leishman discovered the parasite in 1900 and published his observations in 1903. Wright, of Boston, found the parasite in scrapings from "Delhi sore," and in 1905 P. Manson suggested that "Oriental sore" may be the analogue of vaccination, for its fluid contains Leishman bodies and

its occurrence prevents kala azar. "Oriental sore," found where camels are numerous, has been perpetuated by the Jews of Bagdad, who have inoculated it for many generations. It is probably kala azar passed through camels. The bedbug is now believed to carry and transmit the disease. The mortality rate is exceedingly high.

KALABAGH. See SALT RANGE.

KALAFAT, kă'lă-füt'. A strongly fortified town of Rumania, situated on the left bank of the Danube, opposite the Bulgarian town of Widdin, 155 miles west-southwest of Bucharest (Map: Balkan Peninsula, D 3). With the Rumanian capital it is connected by railway. It figured prominently during the Russo-Turkish War of 1828-29, when the Russians lost here in battle 10,000 men. Pop., 7113.

KALAHARI (kă'lă-hă'rê) **DESERT.** A vast region in South Africa, forming parts of the territories of German Southwest Africa, Cape of Good Hope, and Rhodesia, and extending to about the parallel of lat. 21° S. (Map: Cape of Good Hope, E 4). Its boundaries and area have not been determined, but its dimensions are about 400 miles from east to west and 600 miles from north to south. It consists of a large basin or depression of the great South African plateau and has a general elevation of from 3000 to 4000 feet. It has the character of a desert only along the borders. The rains which prevail there from August to April, together with a copious supply of ground water, produce a considerable vegetation in the interior, which in places takes the form of extensive forests of thorny trees and shrubs. In the eastern part of the region there are a number of deep basins, which fill up with water during the rainy season. The desert is inhabited only by stray bands of Bushmen and Bechuanas, of whom some are known as Bakalahari. The elephant, giraffe, lion, leopard, and a few other animals of the tropical regions are found mostly in small numbers and are partly protected by law. The native melon constitutes one of the chief food supplies of the natives as well as of their cattle.

KALAKAUA, kă'lă-kou'ă, DAVID (1836-91). A King of the Hawaiian Islands (q.v.).

KALAMATA, kă'lă-mă'tă. A seaport, archiepiscopal see, and capital of the Nomarchy of Messenia, Greece, on the Nedon, 1 mile from its mouth, near the head of the Gulf of Messenia, 17 miles southwest of Sparta by rail (Map: Balkan Peninsula, D 6). The town is surrounded by orange, fig, mulberry, and olive groves, the products of which it exports in large quantities. Silk is manufactured and exported; the principal imports are foodstuffs. The harbor, though it has been improved, is still much exposed. The first national assembly of Greece was held here, in 1821. In 1825 it was pillaged by Ibrahim Pasha. Pop., 1907, 15,397.

KALAMAZOO, kă'lă-mă-zoo'. A city and the county seat of Kalamazoo Co., Mich., 49 miles south of Grand Rapids, on the Kalamazoo River, and on the Michigan Central, the Lake Shore and Michigan Southern, the Chicago, Kalamazoo, and Saginaw, the Grand Rapids and Indiana, and three other railroads (Map: Michigan, D 6). It is the seat of Kalamazoo College (Baptist), opened in 1855, and of the Western Michigan Normal School, founded in 1904. Among other noteworthy features are the Michigan Asylum for the Insane, the public library, Nazareth Academy (Roman Catholic), St. An-

thony School for Feeble-Minded, Todd Museum of Art, Central High and Manual Training School, and the Y. M. C. A. building. The principal industries are celery and peppermint growing and the manufacture of paper, windmills, wagons and buggies, boilers and engines, saw-mill machinery, caskets and coffins, corsets and other articles of women's wear, electric signs, fishing tackle, heaters, stoves, sleds and folding chairs, railway supplies, society regalia, and cigars. The growth of the paper industry has been especially marked. The government is vested in a mayor and a unicameral council, annually elected, and subordinate administrative departments, all except the school board, which is chosen by popular election, being governed by committees appointed by the mayor. The city owns and operates its water works and electric-light plant. Settled about 1829, Kalamazoo was incorporated as a village in 1843 and was chartered as a city in 1884. Pop., 1900, 24,404, 1910, 39,437, 1914 (U. S. est.), 45,842.

KALAMAZOO RIVER. A river of Michigan, which rises in southwestern Jackson County, near the south boundary of the State, and, after a generally northwesterly course of about 100 miles, empties into Lake Michigan at Saugatuck (Map: Michigan, D 6). At its mouth, which is an excellent harbor for vessels of 100 tons, it is 350 feet wide and 10 to 15 feet deep, and it is navigable for 50-ton vessels 38 miles to Allegan. The river furnishes extensive water power. The cities of Battle Creek and Kalamazoo are situated on its banks.

KALAN, ABRAHAM. See CALOVIUS, ABRAHAM.

KALAND. See CALAND.

KALANGS, kă-längz'. A primitive Javanese people, of whom but few survive and about whose physical characters considerable difference of opinion has existed. Consult Meyer, *Die Kalangs auf Java* (Leipzig, 1877).

KALAPOOIAN. See KALAPUYA.

KALAPUYA, kă'lă-poo'yă, or **CALLAPOOYA**. A group of tribes, constituting a distinct stock, formerly occupying the greater portion of the Willamette River valley in northwestern Oregon. Although at one time numerous, they were never prominent in history, being of unwarlike character, so that by the constant inroads of the coast tribes and the later cruelties of the white pioneers they have been almost exterminated. Some small bands, known officially as Lakmiut, Mary's River, Santiam, and Yamhill, are gathered upon Grande Ronde reservation in the same region. They formerly subsisted largely upon bulbous roots of water plants, practiced head flattening, but not tattooing, had a mild system of slavery and some curious customs, the bride's relatives stripping the bride and all his relatives, male and female, of their clothing and appropriating it to themselves. They are now citizens, civilized and self-supporting, raising grain and hay and deriving a considerable income from the sale of their native basketry, though numbering but 106. Consult Lewis, *Tribes of the Columbia Valley and the Coast of Washington and Oregon* (Lancaster, Pa., 1906).

KALATHARRAL. See CALAHORRA.

KALB, kălp, CHARLOTTE VON (1761-1843). A German literary woman, best known as a friend of Schiller. She was born, a Marschalk von Ostheim, at Waltershausen and in 1783 married Heinrich von Kalb. She met Schiller at

Mannheim in 1784, and in 1787 he went on her account to Weimar. At one time the poet proposed to marry her; after his marriage the poet Hölderlin, a tutor in her family (1793-94), succeeded Schiller in her maternal affections. Afterward Jean Paul became her ideal, and she is portrayed as Linda in his *Titan*. After much misfortune she went in 1820 to Berlin and there, totally blind, was sheltered by Princess Marianne. Her memoirs, under the title *Charlotte*, were republished at Stuttgart in 1879, and her letters to Jean Paul and his wife were edited by Nerrlich in 1882. Consult her novel *Cornelia* (1851), containing autobiographical elements, edited by her daughter Edda (1790-1874); Kopke, *Charlotte von Kalb* (Berlin, 1852), especially, Klarman, *Geschichte der Familie von Kalb auf Kalbsrieth* (Erlangen, 1902), and Ida Boy-Ed, *Charlotte von Kalb. Eine psychologische Studie* (Jena, 1912).

KALB, JOHANN, BARON DE (1721-80). An officer in the American Revolution. He was born at Huttendorf, Bavaria, entered the French army as a lieutenant in 1743, and became a captain in 1747 and a brigadier general in 1761. In 1768 he was sent by France on a secret mission to England's American colonies and in 1777 accompanied Lafayette to the United States and offered his services to Congress. In September, 1777, he received a commission as major general and until the spring of 1780 served in New Jersey and Maryland. In April, 1780, he was sent to join the Southern army as second in command to Gates, and, at the battle of Camden (q.v.) on August 16, was mortally wounded, dying three days later. Lafayette laid the corner stone of a monument to him at Camden in 1825, and a statue of him, by Ephraim Keiper, was unveiled at Annapolis in 1887. Consult Kapp, *Leben des amerikanischen Generals Johann Kalb* (Stuttgart, 1862), an English version of which was privately published at New York in 1870, and which is presented in condensed form in Greene's *The German Element in the War of American Independence* (New York, 1876). Consult also Smith, *Memoir of the Baron De Kalb* (Baltimore, 1858).

KALBE, käl'be. A town in the Province of Saxony, Prussia, situated 18 miles south of Magdeburg, on the left bank of the Saale. Spinning and weaving, and manufactures of stoves, paper, wool, and sugar, are carried on. Pop., 1900, 12,281. 1910, 12,088.

KALBECK, käl'bék, MAX (1850-). Pseudonym, Jeremias Deutlich. A German dramatist, librettist, and critic. He was born and educated at Breslau. After a few years at Munich he was appointed keeper of the archives in the art museum of his native city and in 1880 went to Vienna, where he became associated with the *Wiener Allgemeine Zeitung*, the *Presse* (1883), the *Montags-Revue* (1890), and the *Neues Wiener Tageblatt*. His earliest published work was in the field of lyric: *Aus Natur und Leben* (2d ed., 1872); *Nächte* (2d ed., 1880); and *Aus alter und neuer Zeit* (1890). More important was his critical writing: *Neue Beiträge zur Biographie des Dichters Günther* (1879), on Wagner's *Nibelungen* (3d ed., 1883), and *Parsifal* (1883), *Wiener Opernabende* (1885), and *Opernabende* (1898). He adapted for the German stage Massenet's *Le Cid* and *Werther*, Verdi's *Otello*, and works of Smareglia, Mascagni, Smetana, and Tschaiikowsky; and wrote *Die Maienkönigin* (1888), *Das stille Dorf*

(1898), *Nubia* (1898), and a life of Brahms (1904).

KALKCREUTH, kälk'roit, LEOPOLD, COUNT (1855-). A German portrait, genre, and landscape painter. He was born in Düsseldorf, son of Stanislaus Kalkcreuth (q.v.), and was a pupil of Struys at Weimar and of Benczur in the Munich Academy. From 1885 to 1890 he was a professor in the Weimar Art School, from 1895 to 1899 in the Karlsruhe Academy, and after 1899 in the Academy of Stuttgart. Although his work includes portraits, such as those of Count Eulenburg-Liepenburg and Lieutenant General von Grolmann, and landscapes, he is chiefly known as a painter of the German peasantry. He paints with a powerful and direct naturalism (q.v.), but with a more

Among his pictures are: "The Fish Auction", "The Old Salt on the Beach"; "Schloss Klein-Oels," National Gallery, Berlin; "Old Age," Dresden Gallery, "Rainbow," New Pinakothek, Munich; "Thunder-Clouds" (1899), in the Karlsruhe Gallery.

KALKCREUTH, STANISLAUS, COUNT (1821-94). A German landscape painter, born at Kozmin (Posen). From 1840 to 1845 he was a lieutenant in the First Guards Regiment, stationed at Potsdam, where he was a pupil of Wegener. He then resigned from the service, and studied under Krause in Berlin and Schirmer at Düsseldorf. His earlier works obtained for him from Frederick William IV of Prussia an appointment as professor, and in 1859 he organized the art school which was opened at Weimar in 1860, remaining its director until 1876. Subsequently he established himself at Kreuznach and in 1883 at Munich. Extensive travels, particularly in the Alps and the Pyrenees, furnished the material for his numerous pictures of idealized mountain scenery. Although celebrated in their day for nobility of form and skillful light and shade effects, they now seem hard and dry. They prominently include: "Lac de Gaube" (1855), "Canigou Valley" (1856), "Rosenlani Glacier" (1878), all in the National Gallery, Berlin; "Lake in the Pyrenees" (1858), Königsberg Museum. The Orangery, near Potsdam, contains a series of 25 landscapes by him.

KALE (Scottish variant of *cole*, AS. *cāwl*, Icel. *kāl*, OHG *kōl*, *chōli*, Ger. *Kohl*, cabbage, from Lat. *caulis*, cabbage, Gk. *καυλός*, *kaulos*, stalk; connected with Lat. *cavus*, Gk. *κοῖλος*, *koilos*, hollow, or **BORECOLE** (Ger. *Kohl*). A cultivated variety of *Brassica oleracea*, differing from cabbage in the open heads of leaves, which are used for culinary purposes and also as food for cattle. There are many subvarieties. Most of the kinds are biennial, like the cabbage, but some may be reckoned perennial, as the Milan kale (*chou de Milan*), and are frequently propagated by cuttings. Kale is much cultivated as a winter vegetable. The mode of cultivation nearly agrees with that of cabbage. For illustration, see Plate of CABBAGE.

KALE, SEA A vegetable grown for its edible shoots. See **SEA KALE**.

KALEEGE, ká-lěj', or KALIJ. A native name given to a group of rather small pheasants inhabiting the hills along the southern front of the Himalayan Range from Kashmir to Bhutan and thence through Burma and southern China and south to Siam and Annam. There are about a dozen species of the genus *Gennarus* (or *Euplocamus*), characterized by medium size, generally dark but richly glossy plumage, and

recumbent crests, with the sides of the head naked. The males have spurs. Horsfield's kaleege of Assam is the darkest and most typical. The white-crested and black-crested are well-known forms in northern India, much pursued by sportsmen; and the Chinese silver pheasant (*Gennæus nycthemerus*) is the most striking in appearance, as its upper plumage is white, ornamented with dark markings. It has long been reared in European parks. The most aberrant member is Swinhoe's kaleege (*Gennæus swinhoei*) of Formosa, while the most generalized form is the lineated kaleege (*Gennæus lineatus*) of southern Burma. The group is of especial interest as illustrating the rather rare phenomenon of feral hybridization, this occurring in a widespread fashion in Burma, between the above-mentioned Horsfield's and Chinese silver and the lineated kaleege. Consult Beebe, *Zoologica*, vol. i, no 17 (New York, 1914). See PHEASANTS, and Plate of PHEASANTS.

KALEIDOSCOPE, kâ-lî'dô-skôp (from Gk. *καλός*, *kalos*, beautiful + *εἶδος*, *eidos*, form + *σκοπεῖν*, *skopein*, to view). An optical instrument invented by Sir David Brewster in 1816. It consists of a tube containing two plane mirrors placed lengthwise along the axis and hinged together along one edge, so as to make with each other an angle which is an aliquot part of 180°. One end is supplied with an eyeglass, and the other is closed by two glass plates, at a small distance from each other, and between which are placed little fragments of glass or other colored objects. The eye looking into the tube perceives these objects multiplied as many times as the angle which the reflecting planes make with each other is contained in the whole circumference of a circle, and always symmetrically disposed. The slightest shaking of the instrument produces new figures, and it is not only a pleasing toy, but has been used to suggest designs and patterns for carpets, wall papers, and other fabrics.

KALEND BRÜDER. See CALAND.

KAL'ENDS (Lat. *kalendæ*, abbrev. *kal.*, or *k.*, from *calare*, Gk. *καλεῖν*, *kalein*, to summon; connected with OHG. *holôn*, Ger. *holen*, AS. *gehalian*, Eng. *hale*; not akin to Eng. *call*). The Romans made a threefold division of the month into Kalends, Nones (*Nonæ*), and Ides (*Idus*). The Kalends always fell upon the first of the month, in March, May, July, and October, the Nones fell on the seventh, the Ides on the fifteenth; in the remaining months, the Nones came on the fifth, the Ides on the thirteenth. The Kalends were so named because it was an old custom of the college of priests on the first of the month to summon (or assemble, *calare*) the people to inform them of the festivals and sacred days to be observed during the month; the Nones received their name because they were the ninth day before the Ides, reckoned inclusively (cf. Lat. *nonus*, ninth). The derivation of *Idus* is uncertain. This threefold division also determined the reckoning of the days, which were not distinguished by the ordinal numbers first, second, third, etc., but as follows: those between the Kalends and the Nones were termed "the days before the Nones"; those between the Nones and the Ides, "the days before the Ides"; and the remainder, "the days before the Kalends" of the next month. Thus, since the Ides of January were on the thirteenth of that month, a Latin writer would term the next day the "nineteenth before

the Kalends of February," reckoning inclusively, i.e., reckoning in both the fourteenth of January and the first of February. January 31 was termed *pridie Kalendas Februarias* (the day before the Kalends of February); January 29 was called, by the inclusive reckoning explained above, "the third day before the Kalends of February." There was, in Roman reckoning, no "second day before the Kalends of February." Similar terms were employed, of course, in all the other months.

For the expression *ad Kalendas Græcas*, see GREEK KALENDS. The Roman Kalends and the Ides were often appointed as days for payment of rent, interest, etc. See CALENDAR. Consult Gildersleeve-Lodge, *Latin Grammar* (Boston, 1894), and Allen and Greenough, *New Latin Grammar* (ib., 1903).

KALERGIS, kâ-lër'gès, DEMETRIUS (1803-67). A Greek soldier and statesman, born on the island of Crete. He was educated at St. Petersburg and afterward studied medicine in Vienna and Paris. Upon the outbreak of the Greek revolution in 1821 he went to Greece, distinguished himself in the War of Independence, and was taken prisoner by the Turks. He was very active in the revolution of 1843 and was general and adjutant of King Otho, but resigned in 1845 and was forced to leave the country. He went to London, where he remained until 1848. Unsuccessful in his attempts at stirring up another revolution in Greece, he went to Paris in 1853. In 1854 he was made Minister of War in the Mavrocordatos ministry, but fell into disfavor and resigned. In 1861 he was sent as Ambassador to Paris and took an important part in the negotiations which obtained the Greek throne for George of Denmark from the Bavarian dynasty.

KALE SULTANIE, kâ-lâ' sul-tâ'nâ-n'. A town of Asiatic Turkey. See CHANAK KALESSI.

KALEVALA, kâ'lâ-vâ'lâ. See FINNISH LANGUAGE AND LITERATURE.

KALEVIPOEG, kâ-lâ'vâ-pæg (Esthon., son of Kalev). The representative epic poem of the Esthonians. Like the Finnish *Kalevala*, this epic is based upon popular songs, which were collected by Kreutzwald (1857-59) in the form in which they are now known. Unfortunately the material used by the editor was destroyed, and it is impossible to determine how much of the poem is the real product of folk fancy. The text, with German translation, is found in *Kalevipoeg, eine estnische Sage*, translated by Reinthal (Dorpat, 1857-61). Consult Kirby, *Hero of Esthonia and Other Studies*, vol. i (London, 1895).

KALGAN, kâl-gân' (Mongol, barrier), or in Chinese *Chang-ka K'ow*, from the name of the gate in the Great Wall near by. A walled city in the Chinese Province of Chili (or Pechili), situated about 130 miles northwest of Peking, a short distance south of the Great Wall; lat. 40° 50' N, long. 114° 54' E.; 2810 feet above the level of the sea (Map: China, K 3). Lying on the main route across Mongolia from Peking to Kiakhta in Siberia, it is a very important centre of the overland tea trade in which many thousands of camels are employed. Kalgan is also the point where trade is diverted west to Shensi and Kansu. It is connected by rail with Peking. It does an immense business with the Mongols. Its chief product is soda. Like all great trading cities of China, its suburbs are quite extensive. Pop. (est.), 70,000,

including a number of Russian merchants and several missionaries. The valley in which it stands is well cultivated and contains many populous villages.

KALGUYEV, käl-goo'yev. An island in the Arctic Ocean. See KOLGUYEV.

KALHANA, käl'hä-na. A Sanskrit author, famous as having written the chronicle of the kings of Kashmir, known as *Rājataranginī* (q.v.).

KALI, käl'ä (Skt. *kālī*, black). 1. One of the names of Parvati, especially in southern India and Bengal. Under this title she is represented as of hideous aspect, four-armed, with bloody and protruding teeth and tongue, wearing a necklace of skulls, girded with a serpent and standing on the body of her husband Siva. She has a famous shrine (Kali Ghat) near Calcutta. She is worshiped with bloody sacrifices, sometimes of human beings. Kali is the goddess of epidemics, particularly of cholera. (See THUG.) 2 In the story of Nala and Damayanti, the personification of the die, who caused Nala to lose all his possessions in the game of dice with his brother Puskara.

KALICH, käl'ish, BERTHA (1874-). An American actress, born at Lemberg in Galicia. She studied singing at the Lemberg Conservatory, made her début in Yiddish comic opera in 1890, sang in Yiddish at the Bucharest National Theatre in 1891, and first appeared in New York in 1894. She first played in English at the American Theatre in 1905 in the title rôle of *Fédora*. Subsequently she starred in *Monna Vanna* (1905); *The Kreutzer Sonata* (1908); *Sapho and Phaon* (1907); *The Witch* (1910); *A Woman of To-Day* (1910); *The Light of St Agnes* (1912); *Rachel* (1913).

KALIDASA, käl'ä-dä'sä. The name of the greatest dramatic and lyric poet of India and one of the foremost poets of the world. He is best known to Western fame as author of the beautiful play *Sakuntalā*, but he is entitled to lasting renown also through his other poetical works. The precise date at which he lived is subject to much discussion. Hindu tradition places him as early as the first century B.C., but most Occidentals have found reasons for believing that he lived as late as the sixth century A.D., although the tendency at present is to place him earlier than this rather later date, but not so early as the traditional date. The whole question is connected with the era of King Vikrama, or Vikramaditya, in whose time he flourished and at whose court in Ujjain he was one of the "nine gems." Legends regarding Kalidasa are still preserved at this ancient city, which was once a famous capital and literary centre in King Vikrama's Augustan age. See VIKRAMA; UJJAIN.

As a dramatist, Kalidasa was the author of three plays. The most famous of these, *Sakuntalā* (Recognition of Sakuntala by the Ring), aroused the interest of literary Europe and an enthusiastic panegyric from Goethe when it was first translated by Sir William Jones in 1789. The second play, *Vikramorvaśī*, is a dramatic and romantic episode of the rescue of a nymph by the heroic king with whom she falls deeply in love. Less important is the third drama, *Mālavikā and Agnimitra*, the incident of a king's love for a dancing girl who turns out to be a princess in disguise. Kalidasa's lyrical masterpiece is the *Mēgha-dūta* (Cloud Messenger), in which a cloud is made the envoy of

an absent lover to his distant sweetheart. The *Ritu-samhāra* is a poem on the changes of the Indian year. Two artificial poems were also composed by this gifted Sanskrit poet: the *Kumāra-sambhava* (Birth of the War God), in 18 cantos, and the *Raghuvamśa* (Line of Raghu), in praise of the lineage of the great hero Rama, Prince of India (See the articles under these titles.) There are also some other poetical compositions ascribed to Kalidasa, but they are probably not genuine or are of doubtful authenticity.

The literary merit of Kalidasa's work is unquestioned. His artistic form is masterful; his fancy is rich and luxuriant, and his feelings true and tender.

Bibliography. For details regarding Kalidasa's date and life, consult: Bhao Daji, "On the Sanskrit Poet, Kālidāsa," in the *Journal of the Bombay Branch of the Royal Asiatic Society* (Bombay, 1860); Huth, *Das Zeitalter des Kālidāsa* (Berlin, 1892); Sevratne, *Life of Kalidasa* (Colombo, 1901); Beekh, *Ein Beitrag zur Textkritik von Kālidāsa's Meghadūta* (Berlin, 1907); Ray, "Age of Kalidasa," in *Journal of Asiatic Society of Bengal*, vol. iv (Calcutta, 1908). Editions and translations of Kalidasa are numerous; consult the list given for the dramas by Schuvler, *Bibliography of the Sanskrit Drama* (New York, 1906). More recent editions are: Foulker, *Kālidāsa. A Complete Collection of the Various Readings of the Madras Manuscripts* (4 vols., Madras, 1904-07); Pansikar, *Kumārasambhava*, with the commentary of Mallināth and Sitārām (5th ed., Bombay, 1908); Cappeller, *Sakuntalā, kürzere Textform mit Anmerkungen* (Leipzig, 1909); Hultsch, *Meghadūta*, with the commentary of Vallabhadeva (London, 1911). The *Sakuntalā* alone has been rendered into more than a dozen different modern languages. Among the English versions may be mentioned those by Sir William Jones, *Sacountalā, or the Fatal Ring* (Calcutta, 1789, London, 1790, 1870); Monier-Williams, *Sakuntalā, or the Lost Ring* (6th ed., London, 1890); Edgren, *Shakuntalā, or the Recovered Ring* (New York, 1894). For a good bibliography of Kalidasa's lyric and narrative poems, with a discussion of his date, see Macdonell, *History of Sanskrit Literature* (London, 1913).

KALIDE, käl'ä'de, THEODOR (1801-63). A German sculptor, born at Königshütte, Silesia. He was a pupil of Schadow and afterward of Rauch. His groups of figures and animals combined are the most successful of his works; they include "Child and Swan" (for the Schlossgarten in Charlottenburg), and his masterpiece "Pacchante on a Panther," in the National Gallery, Berlin. He also carved the "Dying Lion" on the Scharnhorst Monument in Berlin.

KALIJ. See KALEEGE.

KALILAH (käl'älä) AND DIMNAH, dīm'nä. See BIDPAI.

KALINGA, käl-ing'gä. A powerful head-hunting tribe inhabiting the Kalinga subprovince of northern Luzon. A part of the tribe has been Christianized and now closely resembles its neighbors in the Cagayan valley. Another part is still almost unknown, and its members have been, until recent years, tree dwellers. Excellent work in iron is done in some of the villages, while a crude agriculture is practiced throughout the belt. In physical type, language, culture, and beliefs they seem more

closely related to the Tinguian people of the Abra than to the Igorot, who live to the south See PHILIPPINE ISLANDS.

KALINNIKOV, ká-lín'í-kóf', WASSILI SERGEVICH (1866-1901). A Russian composer, born at Voina (Government of Orlov). From 1884 to 1892 he attended the music school of the Philharmonic Society at Moscow, where he studied under Ilyinsky and Blaraberg. During the season of 1893-94 he officiated as conductor of the Italian Opera at Moscow. Symptoms of consumption caused him to resign and take up his residence in the Crimea, where he devoted himself entirely to composition. His untimely death at Yalta, on Jan 11, 1901 (O. S., Dec 29, 1900), deprived Russia of one of her most gifted and promising composers. His works comprise two symphonies, in A and G minor; two symphonic poems, *The Nymphs*, *Cedar and Palm*; two intermezzi; a suite for orchestra, incidental music to A. Tolstoy's *Tsar Boris*; *Russalka*, a ballad for soli, chorus, and orchestra; a prologue to the unfinished opera *1812*; a string quartet, piano pieces, songs.

KALISCH, ká'lish, DAVID (1820-72). A German humorous poet. He was born at Breslau, became a collaborator on Oettinger's *Charivari* at Leipzig in 1846, and in 1848 assisted in the founding of *Kladderadatsch*, the famous political comic journal of Berlin. His farces are very popular in Germany, and a collection of his songs has been published in the *Berliner Leierkasten* (1857; n s., 1863). Consult Ring, *David Kalisch* (Berlin, 1873).

KALISCH, Isidor (1816-86). An American Jewish rabbi, leader of the radical and reformed party. He was born at Krotoschin, Prussia, studied at Berlin, Breslau, and Prague, and in 1849 came to the United States. He worked in Cleveland, Milwaukee, Indianapolis, Detroit, Leavenworth, Newark, and Nashville, and spent his last years in Newark (1872-86). Kalisch attained prominence in theological circles by his *Wegweiser für rationelle Forschungen in den biblischen Schriften* (1853), by his criticism of Leeser's English version of the Bible, and by his attack on *Jewish Belief in a Personal Messiah*. He was active as a translator, publishing *Nathan the Wise* (1869), *Sepher Yezirah* (1877), Munz's *History of Philosophy among the Jews* (1881), and *Ha-Tapnach*, from a Hebrew version of a pseudo-Aristotelian tract, as a Talmudic law code, and as a poet in German and Hebrew. Of his poems, the best known is *Schlachtgesang der Deutschen*, written in his student days.

KALISCH, MARCUS (1828-85). An English biblical critic, born at Treptow in Pomerania and educated in Berlin and at Halle. He left Germany in 1849 because of his sympathy with the rising of the previous year, went to England, became secretary to Rabbi N M Adler and tutor to the Rothschild family. His great work was the uncompleted commentary on the Pentateuch, including *Exodus* (1855), *Genesis* (1858), *Leviticus* (1867-72). He also published a *Hebrew Grammar* (1862-63); German poems under the title *Leben und Kunst* (1868); *Biblical Studies*: I, *Balaam* (1877); II, *Jonah* (1878); and a work entitled *Path and Goal* (1880), in which he attempted to bring together characteristic thoughts and sentiments of representatives of different religions.

KALISH, ká'lesh (Pol. *Kalisz*). The westernmost Government of Russian Poland, cover-

ing an area of 4377 square miles (Map: Russia, A 4). It is almost entirely flat and is watered chiefly by the Warta and the Proсна. The climate is moderate and healthful, and the soil fertile and on the whole well cultivated. Agriculture is the main occupation. The manufacturing industries are unimportant. The chief manufactures are liquors, sugar, textiles, paper, etc. Pop, 1897, 844,358; 1912, 1,245,200, of whom about 80 per cent were Poles, about 8 per cent Germans, and the remainder Jews and Russians. Capital, Kalish (q.v.)

KALISH. Capital of the government of the same name in Russian Poland situated in the low yet picturesque valley of the Proсна, near the Prussian frontier, 149 miles west-southwest of Warsaw (Map Russia, A 4). The grand monument erected by Nicholas I in 1841 in commemoration of the alliance of Alexander I and Frederick William III concluded there in 1813, and many valuable works of mediæval sacred art in some of its Roman Catholic churches, are the interesting features of Kalish. Distilling, milling, tallow melting, weaving of cloth, sugar refining, and the production of woollens, leather, and tobacco are its principal industries. There are several annual markets. Pop, 1904, 46,796; 1912, 52,562, chiefly Poles and Jews. Kalish is one of the oldest Polish towns. In 1706 the Swedes were defeated here by the Poles and Russians. Kalish was occupied by the Germans soon after the outbreak of the European War of 1914. It was used by them as a base for the later attack on Lodz (q.v.), during which it was the scene of some very severe skirmishing. See WAR IN EUROPE.

KAL'ISPEL, or **PEND D'OREILLE**, pán dō'rá'y'. A Salishan tribe, formerly holding the territory along Pend d'Oreille lake and river in Idaho and Washington. They formerly crossed the mountains annually to hunt the buffalo in the plains. Through the influence of the Jesuit missions established among them about 1844 by Father De Smet, they advanced rapidly in industry and civilization. The greater portion are now confederated with the Flatheads and Kutenai upon the Flathead reservation in Montana, while a few others are roving in northwestern Washington, the total population of the tribe being 564. See SALISHAN STOCK.

KAL'ISPELL. A city and the county seat of Flathead Co, Mont., 120 miles north of Missoula, on the Great Northern Railroad, and on Flathead Lake (Map Montana, B 1). It is situated in a region noted for its great natural scenic beauty, and contains a Carnegie library, a Government Weather Bureau Station, and a hospital. The city has spent considerable money in building boulevards to Glacier National Park, 37 miles distant, and automobile roads around the lake. The chief industries of Kalispell are farming, horticulture, lumbering, and mining. The water works are owned by the municipality. Pop, 1900, 2526; 1910, 5549.

KALIYUGA, ká'lē-yōō'gà (Skt., age of strife). In Hindu chronology, the fourth or last of the periods contained in a mahayuga or great yuga. (See YUGA.) It may be compared to the Iron age of classical mythology. It consists, according to Indian belief, of 432,000 solar-sidereal years and began Feb. 18, 3102 B.C. The relation of the four yugas being marked by a successive physical and moral degeneration of created beings, the kaliyuga is the worst of all

The Hindu followers of the Tantras interpret the kaliyuga as the age of Kali (q.v.), the terrible consort of Siva.

KALK, kälk. A town in the Rhine Province, Prussia, on the Rhine, opposite Cologne, with which it is connected by street railway. It has a pilgrimage church, a Gymnasium, and manufactures of machinery, boilers, electrical apparatus, chemicals, porcelain, steel plates, and agricultural implements. Pop., 1900, 20,606, 1905, 25,478. Kalk was a part of Deutz until 1867, when it became a separate community. In 1881 it was made a city and was taken into Cologne in 1910.

KALKAR, käl'kär, CHRISTIAN ANDREAS HERMAN (1802-86). A Danish theologian. He was the son of a Jewish rabbi and was born in Stockholm, but accepted Christianity in 1823 and became a Danish pastor and author of many books, of which the following on missions may be mentioned in German translation *Die evangelischen Missionsbestrebungen in unseren Tagen* (1867), *Geschichte der römisch-katholischen Mission* (1867), *Geschichte der christlichen Mission unter den Heiden* (2 vols., 1879-81). He also wrote on linguistic and biblical subjects and took part in the revision of the Old Testament section of the Danish Bible.

KALKAR, or **CALCAR**, JAN STEPHAN VON (1499-1546-50). A German painter of the Renaissance. He was born at Calcar in the Duchy of Cleves. Fleeing to Venice with the daughter of a Dordrecht landlord, he was there, in 1536-37, the pupil of Titian, whose manner he adopted so thoroughly that his works are difficult to distinguish from his master's. Subsequently he went to Naples, where he became acquainted with Vasari, who bestows high praise on him, and where he died. His rare portraits, very delicate in feeling, excellent in drawing, and colored in a clear, warm, and somewhat reddish tone, justify the favorable testimony of . . . best authenticated example is the Cologne Councilor Melchior von Brauwiller, in the Louvre. Other examples are in the Berlin Museum; the Pitti Gallery, Florence (two ascribed to Morone); the National Gallery, London, and at Padua. During his residence in Venice Jan Stephan designed the admirable illustrations for the famous work of Vesalius, *De Humani Corporis Fabrica* (1543).

KALKAS, käl'káz, or **KHALKHAS**. A people dwelling in northeastern Mongolia, forming one section of the eastern . . . They number some 250,000 and according to Haddon are typical nomads of the steppes. Consult Haddon, *The Races of Man and their Distribution* (London, 1910).

KALKBRENNER, kälk'brén-nēr, FRIEDRICH WILHELM MICHAEL (1788-1849). A German pianist, born while his mother journeyed from Cassel to Berlin. He was taught music by his father, a composer of contemporary popularity, and later studied at the Paris Conservatory, where he won first prizes in 1801. At Vienna he studied under Clementi and . . . made many successful concert . . . went to London from 1814 to 1823, after which he settled in Paris. In the latter city he became a partner in the Pleyel piano factory. Kalkbrenner was a pianist of exceptional technique, but his interpretations lacked depth and emotional power. As a pioneer in the modern methods of using the pedals, in the independent development of the fingers

and wrists, and especially in the use of the left hand, he was of lasting importance. He composed many pianoforte pieces, of which the only ones of modern value are his *études*.

KALKOWSKY, kal-kōf'ské, ERNST (1851-). A German mineralogist, born at Tilsit and educated at Leipzig. He traveled widely, studying geology and mineralogy, in 1886 became professor at Jena and director of the mineralogical museum, and in 1894 professor in the Dresden School of Technology (in 1898 also director of the royal mineralogical museum). He wrote *Die Gneissformation des Eulengebirges* (1878), *Elemente der Lithologie* (1886), and many valuable contributions on mineralogy, crystallography, and geology.

KÁLLAY, kōl'li, BENJAMIN VON (1839-1903). An Austro-Hungarian statesman. During his youth he made an extensive trip through the Near East and became thoroughly acquainted with the conditions existing there. From 1869 to 1875 he was Consul General at Belgrade and soon urged a vigorous Oriental policy for Austria and the Slavic countries. He was departmental chief in the Foreign Ministry in 1879, acting Minister of Foreign Affairs in the interval between the death of Haymerle and the appointment of Kalnoky, and in 1882 became Minister of Finance and charged with the reconstruction of Bosnia and Herzegovina after then occupation. This office he filled with great ability till his death, a period of 21 years. He wrote a *History of the Serbs* (1877, in German, 1878) and on Russia's policy in the East (1878 and in German the same year).

KALM, kálm, PERE (1716-79). A Swedish botanist and traveler, born in Angermanland and educated at the universities of Abo and Upsala. A friend of Linnæus, who recommended him to the Swedish government, in 1748 he was sent to North America for the purpose of making investigations in natural history. He remained abroad three years and on his return to Sweden published an account of his travels under the title *En resa til Norra Amerika* (3 vols., 1753-61, new ed., 4 vols., 1904 et seq.). Translated into English by J. R. Forster, this appeared as *Travels into North America* (3 vols., 1770-71; 2d ed., 1772). It was also published in German, French, and Dutch. In 1752 Kalm became professor at Abo. The genus *Kalmia*, indigenous to North America, was named for him.

KÁLMÁN, kal'man. A king of Hungary. See KOLOMAN.

KALMAR, kal'mär, or **CALMAR**. The capital of Kalmar Län, Sweden, situated on the Kalmar Sound, opposite the island of Öland, and about 200 miles south-southwest of Stockholm (Map Sweden, F 8). It is built partly on the mainland and partly on two small islands. It has a public park and several fine promenades and is regularly built. The most notable building is the seventeenth-century cathedral, built by Nicodemus Tessin in the style of the Italian Renaissance; on a peninsula outside the city stands the famous Kalmar Castle, a square building with five towers, the chamber of King Eric XIV, and an historical museum. It dates from the twelfth century, was considered the strongest fortification in Scandinavia during the Middle Ages, and was the scene of many important historic incidents. Kalmar has a seminary and a school of navigation and is the seat of a bishop. Industrially it has progressed slowly, the principal articles

of manufacture being matches, tobacco, and paper, but it has a good harbor, with shipyards, and a lively foreign and coastal trade. Pop., 1901, 12,715; 1911, 15,796. Kalmar is a very old town and figured in the wars between the Danes and Swedes. In 1397 the treaty, brought about by Queen Margaret, the daughter of Waldemar III, establishing the Kalmar Union, by which the crowns of Denmark, Norway, and Sweden were to remain united under one sovereign, was concluded here.

KALMIA, kál'mi-á (Neo-Lat., named in honor of Pehr Kalm). A genus of North American plants of the family Ericaceæ, consisting mostly of evergreen shrubs, generally with corymbs of beautiful red, pink, or white flowers, the corollas of which resemble a wide shallow bell. They delight in a peat soil. *Kalmia latifolia*, the mountain laurel or calico bush, ranges from New Brunswick to Louisiana, occupying large tracts on the Alleghany Mountains. It grows to the height of 30 feet, and the wood is very hard. The leaves are poisonous to many animals, and the honey of the flowers possesses noxious

KALMIA.

properties. A decoction of the leaves, it is claimed, has been used with advantage in cutaneous diseases. *Kalmia angustifolia*, sheep laurel, sheepkill, lambkill, or wicky, is a common species from Newfoundland to Georgia. Its leaves are narrower and are pale or whitish underneath, its flowers smaller and more crimson than those of the previous species. It possesses the same properties as the foregoing. *Kalmia hirsuta*, a dwarf species, occurs in the pine barrens from North Carolina to Missouri. There are about six species in North America and one in Cuba. See Plate of FLOWERS.

KALMUCKS, or **CALMUCKS** (Russ. *Kálmick*, Tatar *Khalimak*, renegade). A west-

ern branch of the Mongol race, inhabiting chiefly the eastern part of Tibet around Koko-nor and East Turkestan, the western part of the Russian Government of Astrakhan, and the Province of the Don Cossacks. According to the Russian census of 1897 (the latest) there were in Russia 190,648 people speaking the Kalmuck language. The majority of them were living in south-eastern Russia, viz., in the Kalmuck Steppe of the Government of Astrakhan, in the territories of Don and Tersk, and in the northern part of the Government of Stavropol. They are generally divided into four tribes: the Khoshots, found chiefly around Koko-nor and in the Kalmuck Steppe along the right bank of the Volga, in the Government of Astrakhan; the Dzungars, once inhabiting Sungaria (named after them), which they left after the conquest of that province by China in the eighteenth century; the Dorbots, found chiefly in the Kalmuck Steppe and the Province of the Don Cossacks; and the Torgots, formerly the chief Kalmuck tribe in Russia, of which, however, only a small portion has remained, the majority having returned to Chinese territory in 1771. In his pure state the Kalmuck is short of stature but stocky, with a large head covered with straight black hair, a flat round face with narrow, slanting eyes, high cheek bones, and a flat nose with round nostrils. The complexion is swarthy, and the chin is covered only with a scanty growth. In height the Kalmucks average 1.650 meters, and their cephalic index, or ratio of head width to head length, is 86.7. The Kalmucks of Russia are Buddhists excepting a small number of Christians and Mohammedans. They are nomadic in spite of the numerous attempts on the part of the Russian government to convert them into agriculturists. They live in tents (*kibitkas*), which are grouped into *aymaks* and *uluses*, the former being governed by elected and the latter by hereditary chiefs. Prior to the reforms of 1892 the lower classes were tributary to the hereditary chiefs, but in that year all class privileges were abolished, and the Kalmucks were placed directly under the rule of the Russian government, whose authority, however, is manifested only in the exaction of an annual tax of six rubles per *kibitka*. The Russian government appoints a *sama*, who is the chief of the Russian Kalmucks and has his headquarters in Bazar, a Kalmuck city on the Volga near Astrakhan. The Kalmucks of the Province of the Don Cossacks are gradually being assimilated and are subject to the same military obligations as the Cossacks. The Khoshots first made their appearance in European Russia in the seventeenth century, and were joined in the following century by the Torgots after their expulsion from Sungaria. In 1771 the Kalmucks living east of the Volga (mostly Torgots), partly provoked by the oppressive treatment of the Russian government and partly in the hope of reconquering Sungaria, started eastward to the number of 169,000 and reached Sungaria after eight months of indescribable hardships, resulting in the loss of over one-half of their number. Finding Sungaria still occupied by Chinese troops, they surrendered to the Chinese government and were established in East Turkestan. The language of the Kalmucks is a branch of the Mongol-Uraltaic family. The Kalmucks possess written laws and a literature which consists chiefly of myths, poems, and historical narrative. The

epic poem *Dshangariade* was translated into German by Golshtinski (St. Petersburg, 1864). A collection of folk tales was translated into German by Tülg in 1857 (Leipzig, 1866). The Société Finno-Ougrienne recently published a French translation of the *Kalmükische Märchen* by G. J. Ramstedt (Helsingfors, 1909). Consult: Bergman, *Nomadische Streifereien unter den Kalmücken* (4 vols., Riga, 1804-05); Wenjukow, *Die russisch-asiatischen Grenzländer* (Leipzig, 1876); Howorth, *History of the Mongols*, vol. i (London, 1876).

KÁLNOKY, kál'nó-ki, GUSTAV, COUNT (1832-98). An Austro-Hungarian statesman, born at Lettowitz, Moravia. He entered the diplomatic service in 1854 and was attached to the legations at Munich, Berlin, and London. In 1871 he was temporarily in charge of the Austrian Embassy at Rome, and from 1874 to 1879 he was Minister to Copenhagen. In 1880 he was made Ambassador to St. Petersburg. In the following year he took the post of Minister of Foreign Affairs of Austria-Hungary, made vacant by the death of Baron Haymerle. His policy was directed towards strengthening the friendly relations with Russia. In 1882 he was instrumental in bringing Italy into the Triple Alliance (with Austria and Germany) on the basis of the territorial integrity of the three countries. In 1890 the highest Italian order, Santissima Annunziata, was conferred upon him. He resigned his post in May, 1895, in consequence of a conflict with the Hungarian Premier, Baron Bánffy, regarding ecclesiastical affairs in Hungary and was appointed member for life of the Upper House. Consult *Memoirs of Francis Crispi*, vol. ii (London, 1912).

KALOCSA, kó'lo-shó. A grand commune of Hungary, situated 3 miles from the left bank of the Danube, 100 miles by rail south of Budapest (Map Hungary, F 3). It has an attractive cathedral with two large towers, an archiepiscopal palace with a library of 70,000 volumes and a herbarium, a Gymnasium, a teachers' seminary, and an astronomical observatory. Pop., 1900, 11,380; 1910, 11,738, mostly Magyar Catholics, who are chiefly engaged in the fisheries on the Danube and in the breeding of cattle.

KALOG, kál'og. The great Alaskan sculpin (*Myoxocephalus*), 1½ to 2½ feet long. See SCULPIN.

KALONG, ká'lóng (East Indian name). A fruit-eating bat. See FOX BAT.

KALOUSEK, ká'loo-shék, JOSEPH (1838-). A Bohemian historian, born at Wamberg. He was educated at Prague, where he became professor of Bohemian history. His works in Czech and German deal mostly with the history of Bohemian law, such as *Einige Grundlagen des böhmischen Staatsrechts* (1870); *Ceské státní právo* (Bohemian Public Law, 1871; 2d ed., 1892); and a treatise on the Bohemian law of inheritance (1894). More purely historical are *Behandlung der Geschichte Premysl Ottokars* (1874); *Karl IV* (1878); *Regni Bohemiae Mappa Historialis* (2d ed., 1894); *Documenta et Registra Civitatis Albr Aqua* (1889). After 1886 he was editor of the *Archiv Cesky*, a periodical for Bohemian history.

KALPA, kál'pá (Skt., period of time, ritual, from *kalp*, to be fitting). In Hindu chronology, a day of Brahma, which, according to Indian belief, is a period of 4,320,000,000 years of mortals and measures the duration of the world

This kalpa consists of 1000 *maháyugas*, or great ages, each of which is divided into four *yugas*, called, in chronological order, *Kṛta*, *Treta*, *Dvāpara*, and *Kali*. The *Kali* is the shortest and last *yuga* and comprises 432,000 solar years; the *Dvāpara* is double in length, the *Treta* triple, and the *Kṛta* quadruple. The golden age was in the *Kṛtayuga*, but in succeeding ages a degeneration took place, until the *Kaliyuga*, of which the present time forms a part. See *KALIYUGA*.

KALPA-SŪTRA, kál'pá sū'trā (Skt., ritual manual). In Vedic literature, the name of those Sanskrit works which treat of the ceremonial referring to the performance of a Vedic sacrifice. (See *VEDA* and *SŪTRA*, where books of reference are mentioned.) In Jaina literature it is the name of the most sacred religious work of the Jainas. (See *JAINISM*.) The author was Bhadrā Bahu, and the work was composed apparently in the seventh century A.D. Consult Stevenson, *The Kalpa-Sūtra and Nava Tatra* (London, 1848); Jacobi, *The Kalpa-sūtra of Bhadrabahu* (Leipzig, 1879); Weber, *Sacred Literature of the Jains*, translated by Smyth (Bombay, 1893); Schubring, *Das Kalpa-sūtra, die alte Sammlung jainistischer Mönchsvorschriften*, containing introduction, text, translation, and glossary (Leipzig, 1905); Macdonell, *History of Sanskrit Literature* (London, 1913).

KALPI, kál'pá. See CALPEE.

KAL'SOMINE, or **CALCIMINE** (Lat. *calx*, limestone). A composition of zinc white and glue sizing mixed with water and applied as a finish to the plastered ceilings and side walls of rooms. By adding coloring matter any color desired may be produced.

KALTAG, kál-täg'. An Alaskan native village on the north bank of the Yukon River, with a population of 147 in 1910 (Map Alaska, G 3). It is the east end of the Kotzebue Sound portage, the land route from the valley to Nome and the Seward Peninsula.

KALTENBORN-STACHAU, kál'ten-börn-stä'ou, HANS KARL GEORG VON (1836-98). A Prussian general and minister, born at Magdeburg. He was a member of the topographical corps in 1861, fought in the campaigns against Denmark and Austria, and served as major in the Franco-Prussian War. He was made a battalion commander in 1874 and a lieutenant general in 1888. In 1890 he succeeded Verdy as Minister of War and carried through successfully the programme of two years' service and an increase of the regular forces by 70,000. He retired in 1893.

KALTENBRUNNER, kál'ten-brün'nër, KARL ADAM (1804-67). An Austrian poet, born at Enns. He was long connected with the government printing establishment at Vienna. His poems in dialect are his best and include *Oberösterreichische Lieder* (1845-48). He also wrote *Die drei Tannen* (1862), a very successful drama. From manuscripts were published *Ob der Enns und Austria und Geschichten aus Oberösterreich* (1880). Consult Josef Wihan, *Karl Adam Kaltenbrunner als Mundartlicher Dichter* (Linz, 1904).

KALUGA, ká'loo'gá. A government of Great Russia, bounded by the government of Moscow on the north, Tula on the east, Orel on the south, and Smolensk on the west. Area, 11,942 square miles (Map Russia, F 4). It has a flat surface, and the soil is mostly sandy. The

chief river is the Oka, which traverses Kaluga for about 200 miles. Agriculture is the chief industry and hemp the chief agricultural product. The output of cereals is hardly sufficient to meet the domestic demand. Kaluga has vast forests, which are exploited to some extent. There are a number of mines producing iron ore and copper; phosphorite and china clay are also worked. The manufacturing industries are rapidly developing. The chief manufactures are paper, leather, spirits, hempseed and linseed oil, matches, and iron products. The commerce is also important and is carried on to a large extent through the Oka River. Pop., 1912, 1,430,400. Capital, Kaluga.

KALUGA. Capital of the Russian government of the same name, situated on the left bank of the Oka, 95 miles southwest of Moscow (Map: Russia, E 4). It has an Orthodox cathedral, numerous churches, a convent, and a theological seminary. There are extensive manufacturing establishments of leather, sailcloth, wax candles, and hempseed and linseed oil. The commerce is of considerable importance and is carried on mostly with St Petersburg and the Baltic ports through the Oka, the Volga, and the Neva. Pop., 1889, 40,500; 1905, 51,939; 1911, 54,894. During 1859-68 the town was the residence of Shamył when a political prisoner.

KAMA, ká'má. A river of Russia, the principal affluent of the Volga. It rises in the eastern part of the Government of Vyatka, flows at first north, and then, passing into the Government of Perm, turns southwest and generally maintains that direction down to its confluence with the Volga, about 40 miles south of Kazan (Map: Russia, H 3). Its total length is 1170 miles, and it is navigable from the mouth of the Visherka, 760 miles. Its principal navigable tributaries are the Visherka, Tchušovaya, and Byelaya from the left and the Vyatka from the right. In the spring the Kama increases to several times its ordinary width, flooding the adjacent country. The Kama is very rich in fish, especially salmon. It is ice-free for over 200 days in the year. The traffic is very extensive, the principal article of trade being timber. The Kama is connected by a canal with a tributary of the Dvina, thus forming a part of the great waterway connecting the Caspian with the White Sea.

KĀMA, or **KĀMĀDĒVA,** ká'má-dá'vá. The Hindu Cupid, or god of love. He was the son of Brahma, according to some Sanskrit . . . or of Dharma, Virtue, according to . . . one occasion when trying to tempt Siva, who was undergoing extraordinary acts of asceticism, Kāma was reduced to ashes by a flashing gleam from the third eye of the enraged god. (See SIVA.) This is one of the reasons why Kāma is known as "the limbless god" in Hindu poetry. His wife Rati (voluptuousness) was so grieved at his loss that Siva became touched by her sorrow and promised that Kāma should be born again as the son of Krishna and Rukmini. The child was now called Pradyumna, another name for Cupid. Kāma is armed with a bow made of sugar cane; it is strung with bees, and its arrows, five in number, are blossoms of flowers which overcome the five senses. His banner is decorated with a fish, and he rides on a parrot or a sparrow, the symbol of voluptuousness. Consult: Dowson, *Hindu Mythology* (London, 1879); Wilkins, *Hindu Mythology* (ib., 1900);

Macdonell, *History of Sanskrit Literature* (ib., 1913).

KAMAKURA, ká'má-kō'rā (Jap., sickle cache, or storehouse). A seacoast village in Japan, 12 miles south of Yokohama, in a valley inclosed by hills, with entrances from each point of the compass (Map: Japan, A 2). It was founded in the seventh century A.D. Yoritomo, the famous general, who became Shogun in 1185, made it his capital, and it remained for nearly 400 years the political centre of Japan, the residence of most of the shoguns, and the scene of much bloodshed and unrest. Having so often suffered by fire and civil war, it has little to-day to attest its bygone greatness. It had ceased to be a town of any importance long before Iyeyasu conquered the Kwanto and fixed his residence at Yeddo (Tokyo). It is now a place of great resort for its natural beauties, its still large number of famous relics, and its Shinto and Buddhist shrines. One mile distant stands the famous bronze image of *Dai-Butsu* (Great Buddha), 49 feet, 7 inches high, cast in the year 1252 A.D. and visited annually by thousands of tourists, both native and foreign.

KAMĀ'LA, ká-mā'lā, or **KAMEE'LA,** ká-me'la (Hind. *kamila*). A medicine fairly efficient against tapeworm. It consists of the orange-colored powdered glands and hairs from the capsules of *Mallotus philippinensis*, a small tree of the order Euphorbiaceae, which grows wild in Abyssinia, Australia, eastern China, southern Arabia, and India.

KAMAL-UD-DIN ISMA'IL ISFAHANI, ká'mül-ud-dén es'mā-él es'fa-ha'nē (?-1237). A Persian poet. He was born at Isfahan, the son of Jamal-ud-Din Abd-ur Razzak, himself a poet of some merit, and was carefully educated. Not only talented, but wealthy, Kamal-ud-Din was noted for generosity and public spirit until his confidence was abused by those whose benefactor he had been. He became misanthropic, and, assuming the garb of a Sufi, he retired to a hut in the suburbs of Isfahan. Here he won the esteem of those by whom he was surrounded, and when the army of the Mongol Uktai Khan, the son of Genghis Khan, seized the city, the poor concealed their treasures in a well in the courtyard of Kamal-ud-Din's hermitage. A young Mongol accidentally discovered this fact, and, in the attempt to force the poet to give yet more money, Kamal-ud-Din was tortured to death, writing, according to tradition, a quatrain of expostulation on his wall with his own blood. He was the author of a treatise on the bow and of other works, but his fame rests on his *Diwān* (edited in lithograph at Bombay), which comprises eulogies of his patrons, as well as ghazals and quatrains. Selected quatrains have been translated into English verse by Gray and Mumford in their *Hundred Love-Songs of Kamal-ud-Din of Isfahan* (New York, 1904). Consult Browne, *Literary History of Persia* (New York, 1906).

KAMBĀLU, kām-hā'lōō, **KAMBALUC,** **KANBALU,** **CÁMBALU,** **CAMBÁLECH** (Mongol *Khanbalgh*, the Khan's city). Various forms of the name of the capital of China during the Mongol or Yuen dynasty, founded by Kublai Khan. It was captured by Genghis Khan in 1215; in 1264 it became the residence of Kublai and continued to be the capital until 1368, when the Mongols were driven out by Hung-wu (q.v.). It corresponded in part to

that portion of Peking which is known as the Tatar City. It was visited and described by Marco Polo and other Europeans in the thirteenth century and was the archiepiscopal seat of Friar John of Montecorvino. Consult Henry Yule, *Cathay and the Way Thither* (Hakluyt Society, London, 1866), and Marco Polo, *Travels* (New York, 1904).

KAMCHATKA, kám-chat'ká. A peninsula at the eastern end of Siberia, extending in a southerly direction between Bering Sea and the Sea of Okhotsk from lat 51° N to about 60° N. It is about 700 miles long and varies in width from 70 to 250 miles (Map Asia, S 3). Area, 104,433 square miles. The northern part is an extension of the great northern lowland of Eurasia, the tundra. The remainder of the peninsula is chiefly mountainous—physically an extension of the Stanovoi Mountains, but of different origin. The central ridge does not extend through the entire length of the peninsula, but only to about lat 57° N. East of the central ridge is the volcanic chain. The highest point of the peninsula is the extinct volcano Itchinskaya (16,920 feet). There are known to exist 12 active volcanoes in Kamchatka, all east of the central ridge, and 26 extinct volcanoes, also mostly in the eastern part of the peninsula. The highest of the active volcanoes are the Klutchevskaya (over 16,000 feet) and the Great Shivel'yutich (over 10,000 feet). The mountains are clothed in snow, which gives rise to glaciers. The southern part of the central ridge is composed chiefly of granites, syenites, porphyries, and crystalline slates, while in the north Tertiary sandstone and volcanic rocks are most prominent. The volcanic origin of the peninsula is also manifested by the numerous hot springs. The rivers of Kamchatka mostly take their rise in the central chain and flow either into Bering Sea or the Sea of Okhotsk. An exception is presented by the river Kamchatka (325 miles long), which flows northeast through a valley between the central range and the volcanic chain, and then turns eastward, emptying into Bering Sea. While the annual average temperature is very low, the winters are not very severe. The climate of the western part of the peninsula is perceptibly colder than that of the eastern part, the difference being due to the floating ice and cold currents of the Sea of Okhotsk. The annual average temperature at Petropavlovsk (on the east coast in about lat. 53° N.) is about 36°, ranging from about 54° in July to 18° in January. In the valleys of the interior the range is somewhat greater. The precipitation is very abundant, and winter lasts for about nine months. Kamchatka, notwithstanding, has a rich flora. With the exception of the tundras in the north, the surface is covered with extensive forests, both coniferous and deciduous. The grasses are characterized by unusual height. The fauna differs somewhat from that of the mainland. The chief wild animals include the bear, the fox, the sable, the ermine, etc. Along the coasts are found the fur seal, the walrus, and many varieties of fish. Of minerals, Kamchatka has native copper, iron, and sulphur—none of them worked. The principal occupations of the inhabitants are fishing and hunting, all attempts at agriculture having practically failed on account of the unfavorable climatic conditions. Fish is the staple of the peninsula. The commerce is controlled by a trading company, and most of the imports come

from the United States. Barter trade prevails almost exclusively outside of Petropavlovsk, the capital. The population, 7270 in 1900, is composed of Kamchadales, Koryaks, Tchukchis, and Russians. The Kamchadales are found in the central and southern parts of the peninsula. They are about 4000 in number and speak a language regarded by some authorities as standing almost by itself. Physically they belong to the Siberian section of the Mongolian race and are small-statured but strongly built. The Kamchadales are fishermen and hunters. Of the appearance, manners, and morals of the Kamchadales, the earlier writers have transmitted no very pleasing record; but Erman (1833, 1871) and Kennan (1870, 1879) praise their hospitality, honesty, and good behavior. Their musical and dramatic talent was noted by Steller in the latter part of the eighteenth century. Their native religion was a well-marked shamanism. The Kamchadales are becoming more and more Russianized, and the religion of most of them is now nominally the Orthodox. Like many other Siberian peoples, they are by no means so near disappearance as is commonly supposed. The Koryaks and the Tchukchis are found chiefly north of 57° and still profess shamanism to some extent. The Russians are found in Petropavlovsk, which has the best roadstead of the peninsula, Verkhne-Kamchatsk and Nizhne-Kamchatsk, in the valley of the Kamchatka River, and a few other settlements. The Russians first came into Kamchatka at the end of the seventeenth century and founded a number of settlements at the beginning of the nineteenth century. Consult *Petermanns Mittheilungen* (Gotha, 1891); De Benyovsky, *Memoirs and Travels*, translated by Nicholson (New York, 1893); Hamilton, "Kamchatka," in *Scottish Geographical Magazine*, vol. xv (Edinburgh, 1899), with bibliography; R. J. Bush, *Reindeer, Dogs, and Snowshoes* (New York, 1871); George Kennan, *Tent Life in Siberia* (ib., 1910). See KORIAKS, LAMUTS, TCHUKTCHIS.

KAME. The name given to low hills composed of glacial sands and gravels arranged in stratified order. Kames frequently occur in the vicinity of the terminal moraines that mark the retreat of the continental ice sheets of the Pleistocene period. They were formed probably by the streams which issued from the edge of the ice and which deposited their burden of mud and sand along the ice front. The subsequent retreat of the glacier has left them as more or less isolated hills and ridges which range from a few feet to 100 feet above the neighboring surface. See DRIFT, GLACIAL PERIOD.

KAMEHAMEHA, ká-má'há-má'há. The name of several kings of the Hawaiian Islands.—KAMEHAMEHA I, called NUI (the Great) (1736-1819), was the first King of all the Hawaiian Islands. For the details of his reign, see HAWAIIAN ISLANDS.—KAMEHAMEHA II, called LIHOLIHO (1797-1824), has also been fully treated under HAWAIIAN ISLANDS.—KAMEHAMEHA III, called KAUIKEAOULI (1813-54), succeeded his brother Kamehameha in 1824. While under the influence of William Richards (q.v.) he issued in 1840 the first written Hawaiian constitution, which was replaced in 1852 by a more perfect instrument. Kamehameha III was repeatedly involved in difficulties with foreign countries. The British Consul, Richard Charlton, labored persistently to secure the annexation of the islands by his country, but ulti-

mately was disavowed by Great Britain. France also threatened the country, so that in 1851 the King placed his kingdom provisionally under the protection of the United States.—KAMEHAMEHA IV, called ALEXANDER LIHOIHO (1834-63), ascended the throne in 1855. He was one of the most beloved of his dynasty. The country suffered during his reign on account of the impossibility of concluding a treaty of reciprocity with the United States. During his reign the English language was introduced in place of Hawaiian in the public schools.—KAMEHAMEHA V, called LOT (1830-72), was the last of his dynasty. He was reactionary and in 1864 promulgated a constitution of his own. See HAWAIIAN ISLANDS.

KAMEHAMEHA, ORDER OF. An Hawaiian order with three classes, in honor of Kamehameha I, founded in 1864 by Kamehameha V. Its insignia are a white enameled cross with gold rays surmounted by a crown. The device is *E Hookanaha* (Be a man).

KAMEKE, kă'me-ke, ARNOLD KARL GEORG VON (1817-93). A Prussian general. He was born at Pasewalk, entered the army in 1834, and was Prussian attaché at Vienna from 1856 to 1858. He became colonel in 1861, major general soon after, and was chief of staff to the Second Army Corps in the Austrian campaign of 1866. During the Franco-Prussian War he fought as lieutenant general in command of the Fourteenth Infantry Division at Spichern and Gravelotte, captured a number of fortresses, such as Montmédy and Mézières, and had charge of the engineering operations around Paris. The former fort of Woippy near Metz was named after him. From 1873 to 1883 he was Minister of War.

KAMEN, kă'men. A town of Germany See CAMEN.

KAMENETZ-PODOLSK, ká-me-nyèts' pò-dòlsk'. Capital of the Russian Government of Podolia, situated on a peninsula formed by the Smotritsch, an affluent of the Dniester, 235 miles northwest of Odessa (Map: Russia, C 5).. It is divided into two parts, one situated on an eminence and the other at the foot of the elevation. The city is the seat of an Orthodox and of a Roman Catholic bishop. The Roman Catholic Cathedral of SS. Peter and Paul, built in 1361, is surmounted by a minaret added by the Turks, who used the edifice as a mosque from 1672 to 1699. To the west of the town is the once strongly fortified castle, surrounded with massive castellated walls. The fortifications were razed in 1813. There are two theatres, an Orthodox and a Roman Catholic theological seminary, a monastery, and two convents. The commerce and manufactures are insignificant. Pop., 1912, 49,611, of whom nearly 50 per cent were Jews. Kamenetz-Podolsk was one of the principal fortresses of Poland. In the seventeenth century it was for a time in the possession of the Turks. In 1795, after the third partition of Poland, the town became Russian.

KAMENZ, ká'mén'ts. A town of the Kingdom of Saxony, Germany, situated on the Black Elster, 21 miles northeast of Dresden (Map: Germany, F 3). It has four fine churches, including one Wendish, a town hall with a library and collection of ecclesiastical antiquities, and a hospital dedicated to the memory of Lessing, who was born here in 1729. There is also a cloth-makers' school. The chief products of Kamenz are cloth, hats, printing machinery, ce-

ment, pottery, and glassware. Pop., 1900, 9726; 1910, 11,533.

KAMERUN, ká'me-rōon', or **CAMEROON**. A German protectorate on the west coast of Central Africa, bounded by Lake Chad on the north, French Congo on the east, French Congo and the Spanish Río Muni on the south, and the Bight of Biafra and Nigeria on the west (Map: Congo, Belgian, B 1). Area 305,000 square miles. The narrow coastal plain, about 200 miles long, is flat, partly swampy in the southern part. In the north the land rises to 13,000 feet in the volcanic mountain group of Kamerun. Between the coast region and the hinterland extends an elevated region from 90 to 125 miles in width, covered with impassable forests. The hinterland, or interior, which has not been fully explored, is a vast grass-covered plateau ranging in altitude from 2000 to 4000 feet and assuming a more mountainous character in the north towards Adamawa (q.v.), where it attains an altitude of some 9800 feet. The country is watered by many rivers flowing to the coast and, as a rule, interrupted by numerous rapids. The chief of these rivers include the Sanaga, draining the central part of the country and entering the ocean south of Duala; the Kamerun, which flows through the mountainous region of the same name and is joined at its mouth by the Mungo and a number of other streams, the Njong, south of the Sanaga; and the Djah, in the south-western part of the colony. Along the coast lowland much rain, mostly in two seasons corresponding to our winter and summer, and a high temperature make a *d'été* especially for the foreigner. To the north, and the temperature, because of the altitude, is moderated, so that safer conditions of living exist.

The inhabitants of the interior, especially towards Adamawa, are well advanced in agriculture. They cultivate large farms of corn, tobacco, manioc, yams, etc. The European plantations are confined to the coast region and produce chiefly cacao, tobacco, coffee, and rice. Only the first two products are raised in sufficient quantities for export. In 1912 there were about 40,000 acres in plantations, of which about 25,000 acres were under cacao. The development of the colony has so far been very slow, although in natural resources Kamerun ranks probably first among German colonial possessions. One reason for this slow advancement is found in the lack of labor, and in the fact that German authority is hardly recognized beyond the coast region. The natives, who under ordinary circumstances would furnish the necessary labor are reluctant to work on German plantations, on account of the cruelty manifested by individual planters. Another and more important reason is that the inhabitants of the hinterland, the most intelligent in the colony, are still tributary to the Emir of Yola, and their trade goes mostly to British Nigeria. The military forces maintained at present in the colony are not sufficient to establish German authority in the interior, and communication between the coast region and the interior is maintained only through the natives. In spite of these unfavorable circumstances the trade of the colony is growing, although, as in most German colonies, the imports are increasing at a faster rate than the exports. The chief exports are rubber, palm oil and kernels, ivory, cocoa, cola nuts, and tobacco. The imports consist largely of textiles,

food products, hardware, beverages, instruments, machinery, etc. The exports rose from \$882,017 in 1896-97 to \$5,500,000 in 1912, while the imports increased during the same period from \$1,403,190 to \$8,100,000. The chief seaport is the city of Duala, formerly known as Kamerun. The shipping amounted in 1912 to 1,733,000 tons, over one-half of which was carried in German vessels.

The colony is under the administration of a Governor appointed by the crown and assisted by a council of three representative merchants. There are four districts—Duala, Victoria, Edea, and Kribi. The seat of the government was removed, in April, 1901, from Duala to Buca. The military force of the colony consists of 1100 colored troops and 100 whites. The revenue, chiefly from customs, is about \$3,700,000, to which the German government adds about \$1,500,000 annually. Besides Duala and Buca, the chief settlements in the coast region are Victoria and Rio del Rey. The total length of railway in 1912 was 150 miles. Duala is connected by cable with Bonny in Nigeria and thus with Europe. The population of the colony is estimated at 3,650,000. The inhabitants of the coast region and forest regions belong to the Bantu (q.v.) race and consist of a number of tribes, among which the Dualla are prominent. The Dualla are engaged in trade and agriculture and do some wood carving. The inhabitants of the interior are Sudanese, intermingled with Fulah.

In July, 1884, several German merchants by treaty with the native chiefs of Duallaland obtained possession of that region, which they transferred in the same year to the German government. The boundary lines were fixed by treaties with Great Britain in 1885, 1886, and 1893, and with France in 1885, 1894, 1901, 1902, 1908, and 1911. Scandals in connection with maladministration and the oppression of natives were brought to light in 1906. Kamerun was invaded by a British expeditionary force during the European War of 1914, and several small towns were captured. See WAR IN EUROPE.

Bibliography. Various articles in the *Globus* (Brunswick, 1879 et seq.); Allan, *The Land of Duallas; Life in the Cameroons* (Newcastle, 1885); Reichenow, *Die deutsche Kolonie Kamerun* (2d ed., Berlin, 1885); Buchner, *Kamerun* (Leipzig, 1887); Schwarz, *Kamerun* (2d ed., ib., 1888); Hübler, *Zur Klimatologie von Kamerun* (Munich, 1896); Dominik, *Kamerun* (Berlin, 1901).

KAMERUN, kă'me-rōōn', or **CAMEROON**. A mountain group of Africa, considered to be the highest elevation on the west coast of that continent (Map: Congo, Belgian, A 2). It is situated in the western part of the German Protectorate of Kamerun, in lat. 4° to 4° 28' N. and long. 9° to 9° 30' E., and occupies an area of about 760 square miles. The mountains are of volcanic formation and reach, in their highest peak, Albertspitze or Fako, an altitude of 13,370 feet, where snow appears. The extinct volcanoes number about 28. The lowest slopes are inhabited and are covered with dense forests of palms and other trees.

KAMES, HENRY HOME, LORD. See HOME.

KAMICHI, kă-mě'chě. See SCREAMER.

KAMIMURA, kă'mě-mōō'ra, HIKONOJO, BARON (1849-1916). A Japanese admiral, born in Satsuma. He commanded a cruiser in the Chino-Japanese War of 1894-95, became vice

admiral in 1903, and on the outbreak of the Russo-Japanese War received command of the second Japanese squadron. On Aug. 14, 1904, he engaged the Russian Vladivostok cruiser squadron off Ulsan in Korea, sank the *Rurik*, and compelled the other two vessels to retreat to Vladivostok. (See RUSSO-JAPANESE WAR.) For his services he was made Baron and was decorated with the Grand Cordon of the Rising Sun and the First Class of the Golden Kite. Later he was promoted to be a full admiral (1910), commanded the first squadron, and in 1911 was made Supreme Military Councilor.

KAMINISTQUIA, kă'mi-nis-ti-kă'a. A Canadian river, rising southwest of Lake Nipigon, Ontario, flowing south and east into Thunder Bay, Lake Superior, at Fort William (Map: Ontario, H 8). On its course occur the Kakabeka Falls (q.v.). The Kaministquia and its tributaries formed routes from the northwest by which Indians brought their furs to the traders.

KAM'LOOPS (confluence). An incorporated city and the capital of Yale District, British Columbia, Canada, situated at the confluence of the north and south branches of the Thompson River, 250 miles by rail northeast of Vancouver, on the Canadian Pacific Railway (Map: British Columbia, D 4). It was founded by the Northwest Fur Company in 1811; it was incorporated in 1892 and is the distributing centre of a large grazing, mining, hunting, and sporting district. It has lumber mills, a cigar factory, brewery, bottling plant, brickyard, cold-storage plant, railroad and machine shops, municipal water works, a fire department, park, and electric lighting plant. It also contains the district courthouse and jail, the land and registry offices of the Dominion and Provincial governments, a Roman Catholic convent, an old men's home, and a hospital, and is a favorite health resort. Points of interest in the vicinity are Kamloops Lake, an Indian village at the base of Paul's Peak (3570 feet), and mineral springs. Pop., 1911, 3772.

KAMLOOPS TROUT. A variety of the steelhead (*Salmo gairdneri*, var *kamloops*) found in Thompson River, Okanagan and Kootenay lakes, and other waters of southern-central British Columbia. See STEELHEAD.

KAMMERSEE. See ATTERSEE.

KAMPANERTHAL. See CAMPANERTHAL.

KAMPEN, kămp'en. A town of the Netherlands, Province of Overijssel, near the mouth of the Yssel, at the terminus of the Netherlands Central Railroad (Map: Netherlands, D 2). The old fortifications have been converted into pleasant walks, only the ancient gateways, one of them dating from the fourteenth century, being retained. The fourteenth-century church of St. Nicholas is regarded as one of the three best examples of mediæval architecture in Holland. The Roman Catholic church of St. Mary, built in the fourteenth century, and the town hall, restored in 1543, with library and art collection, are also notable. Among the educational institutions are a Dutch Reformed theological seminary, a Gymnasium, a school of design, and a military school. The town manufactures machinery, harness, paper, and bricks, engages in shipbuilding, and has a good trade in dairy products. Steamers run daily to Amsterdam, Deventer, Enkhuizen, and Zwolle. The town owns Kampen Island, the revenue from which practically pays all expenses of govern-

ment and relieves the people of taxes. Kampen was formerly one of the Hanseatic towns, with a flourishing commerce, which declined when sand filled up the mouth of the Yssel. Since the middle of the nineteenth century the river has been kept open by means of jetties, and the town is again prospering. Pop., 1900, 19,664; 1910, 19,745.

KAMPEN, kām'pen, NIKOLAAS GODFRIED VAN (1776-1839). A Dutch scholar and historian. He was born in Haarlem, was reared in Germany, made an extensive study of languages and literature, and was for a time connected with the editorial staff of the *Leidsche Courant*. In 1816 he was appointed professor of the German language in the University of Leyden, and in 1829 professor of the Dutch language and literature in the Amsterdam Athenaeum. He published: *Geschiedenis van de fransche heerschappij in Europa* (1815-23); *Beknopte geschiedenis der letteren en wetenschappen in de Nederlanden, enz.* (1821-26); *Geschiedenis der Nederlanders buiten Europa* (1831-33), and other works. Consult the biography by Muller (1840).

KAMPF, kämpf, ARTHUR (1864-). A German portrait, historical, and genre painter. He was born at Aix-la-Chapelle and studied under Janssen at the Dusseldorf Academy. At first regarded as the successor of Menzel in the field of historical painting, Kampf quickly developed strong individuality and turned to modern life for his material. His color is harmonious, but subordinate to his draftsmanship, which in power and sureness is his best quality. Ranking as one of the foremost portrait painters in Germany, he is especially known by his portraits of Emperor William II, a fine specimen of which was exhibited in the Metropolitan Museum, New York, in 1909. Among his historical compositions are: "Blessing the Volunteers of 1813," Karlsruhe Gallery; "Frederick the Great Speaking to his Generals," Dusseldorf Gallery; "A People's Sacrifice, 1813," Leipzig Museum. His other works include "Two Sisters," Ravené Gallery, Berlin, and "Benevolence," both exhibited at the Metropolitan Museum in 1909; "Before the Chapel of Kevlaer," Dresden Gallery; "Bridge Building"; mural paintings in the County Hall (Kreishaus) at Aix-la-Chapelle and in the New Royal Library at Berlin. Professor Kampf was elected president of the Berlin Academy and received great gold medals at Berlin, Dresden, and Barcelona.

KAMPF UM ROM, kämpf um röm, EIN (Ger., A Struggle for Rome). The best-known novel by Felix Dahn (1876).

KAMPHAUSEN, kämp'hou'zen, ADOLF (1829-1909). A German Protestant theologian, born at Solingen and educated at Bonn. In 1855, as private secretary to Bunsen, he assisted him in his great *Bibelwerk*. At the same time he was privatdocent at Heidelberg, and in 1863 he became professor of theology at Bonn. He was especially prominent in the revision of Luther's version of the Bible and wrote: *Das Lied Moses* (1862); *Die Hagiographen des alten Bundes übersetzt* (1868); *Das Buch Daniel und die neuere Geschichtsforschung* (1893); *Die berichtigte Lutherbibel* (1894); *Das Verhältnis des Menschenopfers zur israelitischen Religion* (1896); *The Book of Daniel*, a critical edition of the Hebrew and Aramaic text (1896).

KAMPTULICON (from Gk. καμπτός, *kamp-tos*, flexible + οὔλος, *oulos*, thick). A kind of

floorcloth, made of india rubber and cork. Powdered cork is heated and kneaded up with the caoutchouc and then made into sheets by passing through cylinder rollers heated with steam.

KAMPTZ, kām'ts, KARL ALBRECHT CHRISTOPH HEINRICH VON (1769-1849). A German statesman, born at Schwerin, Mecklenburg. He began his public life in the service of his native state, but in 1804 accepted a position as associate judge at the court of Wetzlar and thenceforth continued in the service of Prussia. He became widely known through the burning of his *Code of Police Law* by the students at the Wartburg Festival in 1817, and in 1820 he made himself universally disliked by the German Liberals because of his zeal in carrying out the reactionary policy of Prussia which followed the murder of Kotzebue. From 1832 to 1838 he was Minister of Justice. His works include: *Kodex der Gendarmerie* (1815), a number of works on Mecklenburg and Prussian law, including *Civilrecht der Herzogtümer Mecklenburg* (1805); *Aktenmasse Darstellung der preussischen Gesetzrevision* (1842); *Zusammenstellung der drei Entwürfe des preussischen Strafgesetzbuchs* (1846).

KAMTCHATKA. See KAMCHATKA.

KANĀDA, ka-nā'da (Skt., atom eater, from *lana*, atom + *ad*, to eat). A celebrated thinker of ancient India, founder of the atomic school, or Vaiseshika (from *viesha*, particularity) system of Hindu philosophy. His name seems originally to have been bestowed upon him as a nickname, but, if so, it has supplanted his real name. Besides this he was also dubbed Atom Devourer, Kapa-bhaksha, Kapa-bhu. According to some he was identical with the sage Kaśyapa, as holding the individuality of single spirits as distinct from the Supreme Spirit. Consult Macdonell, *History of Sanskrit Literature* (London, 1913). See VAISESHIKA.

KANAGAWA, kā'na-gi'wā (Jap., golden stream). A prefectural town of Japan, on the Bay of Tokyo, near Yokohama (Map: Japan, F 6). It is on the Tokaido, or East Sea Road, which connects Tokyo with Kyoto, and also on the railway. Pop., about 16,000. Its only importance is the fact that it was the official site of the treaty port, but, being on the great highway along which the great daimyos and their numerous armed retainers were daily passing (foreigners were unnecessarily exposed to their hostility and constant attacks), the Japanese government was much pleased when the foreign community moved "across the Strand" to Yokohama.

KANAKA, kā'nā-kā or ka-nāk'ā (Hawaiian, man). A term used at first by the white sailors and traders to designate the natives of the Hawaiian Islands, and later on all Polynesian slaves, contract laborers, etc. Some ethnologists (e.g., Peschel in 1874) employed the term to denote the Hawaiians, others (e.g., Quatrefages and Topinard in 1870-78) spoke of the "Kanaka or Polynesian race," using it in the widest sense. It is now in colloquial use in the sense of Polynesians generally; it is rarely used in the Pacific islands except in the French possessions, where *canacque* is the common designation of all the islanders regardless of race.

KANANUR, kā'nā-nōr', or **CANNANORE**. A municipal seaport and military station of the Malabar District, Madras, British India, 58 miles north of Calicut (Map: India, C 7). The town stands at the head of a bay with an an-

chorage 2 miles from the shore. Once a great mart, Kanatur has lost much of its importance. It manufactures cotton textiles. Besides pepper, grain, and timber, the neighborhood produces immense quantities of coconuts, which are largely exported northward. Kanatur has been a British possession since 1783, when it was taken from Tippu Sultan. Pop., 1901, 27,811; 1911, 28,957.

KANARESE, kân'a-rêz'. The southwestern section of the Dravidian peoples of southern Hindustan. They number some 10,000,000 and inhabit the table-land of Mysore, a part of southern Bombay, and the Kanara county on the southeast coast north of the Malayalam. They are one of the civilized Dravidian peoples, possessing an alphabet derived from the ancient Hindu and a written literature, some of whose chief works go back to the twelfth century. Their language, like the Tamil and Telugu, is a member of the Dravidian group of tongues, and it serves as the vernacular of over 10,000,000 persons. See DRAVIDIANS.

Bibliography. There are several Kanarese poetical anthologies, one was published by Kittel (München, 1874). A sketch of the Kanarese literature will be found in the introduction to the grammar of the language issued by Rice, *Nāga Varmā's Karnātaka Bhāṣa-Bhāṣana* (Bombay, 1884). Consult also B. L. Rice, "Kanarese made Authors," in *Royal Asiatic Society Journal*, vol. xv (n. s., London, 1883), A. S. Mud-Bhatkal, *Modern Kanarese Grammar Explained in English* (Karwai, 1899); Ferdinand Kittel, *Grammar of the Kannada Language in English* (ib., 1903), British Museum, Department of Oriental Printed Books and Manuscripts, *Catalogue of the Kannada, Badaga, and Kurg Books*, compiled by L. D. Barnett (ib., 1910). For a lexicon, consult Ferdinand Kittel, *Kannara-English Dictionary* (München, 1891), and J. Bucher, *Kannara-Engl. Wörterbuch* (ib., 1899).

KANARIS, ka-nā'ris, KONSTANTINE (1790-1877). A native of the island of Ipsara, in the Greek Archipelago, distinguished for his exploits in the Greek War of Independence. In June, 1822, he blew up the Turkish admiral's ship in the Strait of Chios to avenge the cruelties which the Turks had perpetrated on the Greeks of that island. In November of the same year he burned the Turkish admiral's ship in the harbor of Tenedos. His native island of Ipsara having been ravaged, he took revenge (August, 1824) by burning a large Turkish frigate and some transport ships which were carrying troops to Samos, and thereby saved Samos from the calamity which Chios and Ipsara had undergone. In 1825 he formed the bold design of burning the Egyptian fleet in the harbor of Alexandria, where it lay ready to carry troops to the Peloponnesus, and only an unfavorable wind prevented his success. In 1827 he represented his island in the National Legislature and later was appointed to important commands by Capo d'Istria. In 1848 he was Minister of Marine and president of the cabinet, took part in the revolution of 1862, and held office repeatedly under the new King, Prince George of Denmark, his last official position being that of president of the cabinet and Minister of Marine from June, 1877, till his death, on September 15.

KANAUJ, kā-nouj', or **KUNNOJ**. An ancient city of British India, capital of the per-

gunnah of the same name, in the District of Farrukhabad, 65 miles north-northwest of Lucknow, on the Kali Nadi, about 5 miles above its junction with the Ganges. At present the place is little more than an expanse of ruins covering a semicircle at least 4 miles in diameter. The few poor people now in the city live in mud huts built up against the old walls. The present town is about 1 mile long and ½ mile broad, with a ruined fort of no great antiquity. The most remarkable buildings are two handsome Mohammedan mausoleums, erected in honor of Bala Pir and his son about 1650. Kanauj (formerly Kānyakubja) was formerly one of the greatest as well as the oldest of Indian cities, and Lower Bengal is said to have been Hinduized as early as the ninth century B.C. by five Brahmans from this place, from whom all the Brahmans in the Lower Provinces now claim to trace their descent. Until about the twelfth century A.D. it continued to be the chief city of India, despite its capture both by Mahmud of Ghazni and Muhammad of Ghuri. In 1193 it was attacked by Muizz-ud-Din Muhammad ibn Sam, Sultan of Delhi, and of the house of Ghuri, who defeated the King of Kanauj and overthrew his monarchy. After this the history of the place consists only of a succession of disasters.

KANAWHA (kā-nā'wa) **RIVER**. A large river of West Virginia. Its head stream, the New River, is formed by the confluence of three streams in Ashe County, northwestern North Carolina, whence it flows north-northeast and then northwest through the western part of Virginia, where it breaks through the Blue Ridge and Alleghenies (Map, West Virginia, C 3). After joining the Gauley River in Fayette Co., W. Va., the name of Kanawha (formerly Great Kanawha), flows for about 100 miles through a picturesque region abounding in coal, salt, and iron, and joins the Ohio River at Point Pleasant, after a total course of about 400 miles. Its drainage area is 20,211 square miles. By means of a system of movable and fixed dams, begun by the Legislature of Virginia in 1821 and continued since 1873 by the United States government, at a cost, up to 1913, of about \$5,600,000, slack-water navigation has been made possible throughout its course.

KANAZAWA, kā'nā-zā'wā. The capital of the Province of Kaga, Japan.

KANBALU.

KAN'CHIL (East Indian name). The smallest of the deilets or chevrotains (q.v.) of the family Tragulidae, which inhabits the Malayan Islands, and especially Java, whence its name (*Tragulus javanicus*). It is less than a foot high, and is grayish reddish on the sides, the underparts a dark stripe running up the breast. It lives in the thickets of the jungle or rocky places. During the day it is in hiding and displays such astuteness generally that the Malays have a saying, "cunning as a kanchil."

KAN'DAHAR', or **CANDAHAR**. The capital of the province of the same name in Afghanistan, situated in the southeastern part of the country, about 300 miles southwest of Kabul (Map, Afghanistan, M 7). This, the largest city of Afghanistan, lies at an elevation of nearly 3500 feet. It is well built, with straight and wide streets and fine buildings, surrounded by a strong wall with bastions and a citadel. It has a good water supply. There are more than 175

mosques and 1600 bazars. The chief products are silk and felt. The exports are wool, cotton, asafoetida, fruit, silk, and horses. In the vicinity are situated numerous gardens yielding large quantities of fruit. The trade is chiefly with British India. Pop. (est.), 30,000. Kandahar is supposed to have been founded by Alexander the Great. For 13 centuries little is known of the place. Down to 1747, when the native rule was permanently established, Kandahar, with brief and precarious intervals of independence, was held in turn by Tartary, India, and Persia. Kandahar was occupied by the British in 1839, and after the fatal retreat of the army from Kabul in 1842 it was successfully defended by General Nott. It was again entered by the British in 1879. In the following year it was besieged by Ayub Khan. General Roberts performed a memorable march from Kabul and relieved the town, which he entered on Aug. 31, 1880. On the following day he dispersed the army of Ayub Khan.

KANDAVU, kán'da-vōō'. One of the Fiji Islands (q.v.).

KANDY, kán'dē. A fortified town in the centre of Ceylon and former capital of the island, situated 82 miles by rail northeast of Colombo (Map: India, D 8). It lies around an artificial lake on the top of a hill and contains many ancient monuments, including the palace of the former King of Kandy, a building of large dimensions and a fine sample of native architecture, now partially occupied by the government. There are a number of ancient temples, among which the finest is the *Daladé Málagáwa* (the Temple of the Tooth), named so on account of the supposed tooth of Buddha which it contains. This temple also deserves attention for its ancient manuscripts, written chiefly in Pali and Sanskrit. A number of splendid modern buildings have been erected, including the Victoria Jubilee Commemoration Building. In the vicinity are situated the famous botanical gardens of Peradenia. Pop., 1901, 26,519, 1911, 30,148. Consult: Cave, *The Ruined Cities of Ceylon* (London, 1900); G. J. A. Skeen, *Guide to Kandy, with Maps: A Handbook of Information* (Colombo, 1903); T. B. Parnatella, "Sumptuary Laws and Social Etiquette of the Kandayans," in *Royal Asiatic Society, Ceylon Branch, Journal*, vol. xxi (ib., 1909).

KANE. A borough in McKean Co., Pa., 94 miles by rail east by south of Erie, on the Pennsylvania, the Baltimore and Ohio, and the Kane and Elk railroads (Map: Pennsylvania, D 3). It is a resort, attractive for its elevated site (2210 feet), healthful climate, and good hunting and fishing. It contains the Kane Summit Hospital. Kane has large glassworks, bottle works, lumber mills, and manufactures of brush handles, saws, cutlery, screen doors and windows, etc., and is situated in a region rich in oil and natural gas. Pop., 1900, 5296, 1910, 6626.

KANE, ELISHA KENT (1820-57). An American Arctic explorer. He was born in Philadelphia, received an academic training in that city, entered the University of Virginia, but later pursued a course in medicine at the University of Pennsylvania, graduating in 1842. In July, 1843, he was appointed an assistant surgeon in the United States navy and sailed for China on the *Brandywine* with Caleb Cushing, United States Minister. At Peking he acted as legation surgeon, and after an expedition to the Philip-

pine Islands practiced privately in China. He served on the west coast of Africa in 1846-47 and returned to the United States in time to take part in the Mexican War, in which he distinguished himself. In May, 1850, he sailed for the Arctic Ocean with the first expedition sent out by Henry Grinnell (q.v.), of New York, under the command of Lieut. E. J. De Haven, in search of Sir John Franklin (q.v.). The two ships, the *Advance* and the *Rescue*, in company with eight English ships searched the region around Lancaster Sound. On their return the *Advance* and *Rescue* were beset in the middle of Wellington Channel. They drifted 1050 miles, into Baffin Bay, and after eight months extricating themselves from the ice, returned to New York in September, 1851. With the idea that great results might be accomplished by a polar expedition scientifically planned, Kane began to interest others. Henry Grinnell and George Peabody came to his aid, and on May 30, 1853, he sailed northward in command of the *Advance*, accompanied by Dr. Isaac I. Hayes as surgeon. Kane sailed with a double object—to search for Sir John Franklin and to extend northward the discoveries of Inglefield (q.v.). He proceeded directly up Smith Sound to lat. 78° 43' N, and he wintered in Van Rensselaer harbor, from which point he and Dr. Hayes conducted sledge expeditions, as a result of which much geographical knowledge was obtained. One of these sledge journeys led to the discovery of the famous Humboldt glacier (79° 12' N.) In June, 1854, another party reached Cape Constitution, in lat. 80° 35' N, from which open water was seen. In May, 1855, the *Advance* was abandoned, and the party after a boat journey of 1200 miles reached Upernavik, whence they returned to the United States with Lieutenant Harstene, U. S. N., and a squadron sent for Kane's rescue. The expedition resulted in adding more to the knowledge of the Arctic regions than any single expedition previously undertaken, and Dr. Kane received medals from Congress, the Royal Geographical Society, and the Société de Géographie. He published *The United States Grinnell Expedition* (1854) and *The Second Grinnell Expedition* (1856). Consult William Elder, *Biography of Elisha Kent Kane* (Philadelphia, 1857); also for domestic life, W. . . . ; Fox, *Love Life of Dr. Kane* (New York, 1886); A. W. Greely, *American Explorers and Travelers* (ib., 1894).

KANE, JOHN KINTZING (1795-1858). An American jurist and politician, born in Albany. He graduated at Yale in 1814, studied law, and after 1817 practiced in Philadelphia. In politics he was at first a Federalist, but soon became a Democrat, was an ardent supporter of Jackson, and vigorously attacked the United States Bank. He served on the commission of 1832 to settle French indemnities. In 1846 he was appointed District Judge of Pennsylvania. Kane was an able judge, but his commitment of Passmore Williamson for contempt under the Fugitive Slave Law made him very unpopular. He was from 1856 until his death president of the American Philosophical Society. He was the father of Elisha Kent Kane (q.v.).

KANE, PAUL (1810-71). A Canadian artist and traveler. He was born in Toronto, was educated at Upper Canada College, and studied art in the United States (1836-40), and afterward in Rome, Florence, and other Italian cities. He returned to Toronto in 1845, and then trav-

eled extensively in the Hudson Bay Territory and the Northwest, sketching and making notes on the physical appearance and habits of the various Indian tribes with whom he came in contact. In 1848 he returned to Canada with a valuable collection of Indian curiosities and nearly 400 sketches, from which he made many oil paintings. A collection of the latter was purchased by the Canadian government for the Parliament Buildings at Ottawa, and another collection is in a private gallery in Toronto. Kane embodied many of the results of his experiences and studies in the following books: *Incidents of Travel on the North-West Coast* (1855); *Notes of a Sojourn among the Half-breeds and Walla-Walla Indians* (1856); *The Chinook Indians* (1857); *Wanderings of an Artist* (1859).

KANEKO, *kā'nā-kō*, KENTARO, VISCOUNT (1853-) A Japanese statesman, born at Fuknoka and educated at Harvard University, where he graduated in 1878. He became Secretary of the Japanese Senate (1880), private secretary to Marquis Ito, then premier (1885), and, after traveling abroad to investigate constitutional systems, Chief Secretary of the House of Peers (1890). In 1891 he was sent to Switzerland as a delegate to the International Law Conference. Subsequently he was appointed Vice Minister (1894) and Minister (1898) of Agriculture and was Minister of Justice in 1900-01. On the outbreak of the war with Russia in 1904 he came to the United States in an unofficial capacity to arouse American sympathy for the Japanese cause. In this he was eminently successful. To his intervention, as agent for Marquis Ito, was generally ascribed the successful outcome of the peace negotiation at Portsmouth in 1905. (See RUSSO-JAPANESE WAR; KOMURA.) Kaneko had been made Baron in 1890, after the war he was created Viscount, was decorated with the Order of the Rising Sun, First Class, and was appointed Privy Councillor. Harvard honored him with the degree of LL.D.

KANEM, *ka'nēm* or *kā'nēm'*. A former vassal state of Wadai, Sudan, occupying the territory along the north and east shores of Lake Chad (Map: Africa, F 3). Its area is estimated at from 27,000 to 30,000 square miles. Pop., about 100,000, consisting of Tibbus, Kanembus, Kanuris and Arabs. The chief settlements are Mao, east of the lake, and Mgigimi, at its northwest end. The State of Kanem was founded in the ninth century, became Mohammedan in the eleventh, in the twelfth extended from the Niger to the Nile, reaching south beyond Lake Chad. It declined, and became a dependency of the Kingdom of Bornu (q.v.). Kanem is now incorporated with the French Territory of Chad, founded in 1900.

KANGAROO'. Any one of several large marsupials. The name was given by Captain Cook, the navigator, to a big animal with a small head and fore limbs, but very large tail and hind limbs, secured by him at Endeavor River, on the northeast coast of Australia, in July, 1770. Although he distinctly says that "kangaroo," as he spelled it, was the native name, the word is apparently unknown to any of the now living aboriginal tribes. It has, however, passed into all European languages with very little change. When Captain Cook's specimens reached Europe, they were first described as monster jerboas, but Schreber recognized the relationship to the opossums, and called the

creature *Didelphys giganteus*. Very soon afterward (1791) Shaw created a new genus for the species and named it *Macropus*, in allusion to the very large feet, contrasted with the small fore limbs (hands), and thus has arisen the name *Macropus giganteus*, which designates the common gray kangaroo of Australia. With the settlement of that continent, and the increased knowledge of its fauna, the name "kangaroo" was extended to all similar animals until at the present time it is the popular designation for several score species of mammals occurring not only in Australia and Tasmania, but in New Guinea and a number of the smaller near-by islands. These species resemble one another so closely in most important characters that they are considered as a subfamily, the Macropodinae, of the family Macropodidae, the largest of the six families of marsupials.

Structure. The distinguishing anatomical features of the kangaroos are as follows. The dental formula is $i \frac{2}{1}, c \frac{0 \text{ or } 1}{0}, p \frac{2}{1}, m \frac{2}{1}$, the canine teeth being generally absent; the foremost upper incisors are the largest, there are

DENTITION OF A KANGAROO

well-developed eyelashes, the stomach is large and sacculated, like the large intestine, and there is a large cæcum, the first toe is wanting, while the second and third are very small and included in the skin of the fourth, which is very large and powerful, much larger than the fifth; forefeet with five digits, tail long, stout, and hairy; head small with elongated muzzle; ears long and ovate, pouch well developed, concealing the four teats.

Food and Habits. Kangaroos are entirely herbivorous and seem to replace, in the Australian region, the deer and antelopes, which are entirely wanting there. They are naturally timid and inoffensive and rely on the keenness of their senses and the rapidity of their flight for escape from their enemies. They often sit erect, supporting the body on the tripod formed by the tail and two hind limbs. In this position they are alert to see, hear, or smell, and when alarmed move off quickly by successive leaps, the force of which is derived from the powerful hind legs. Under ordinary conditions the distance of each leap rather exceeds the total length of the animal, but when in full speed, each leap may be three or four times the entire length, moreover, the leaps may exceed in height that of the animal when sitting erect. Most kangaroos live in open glades and upon plains, but some of the smaller species are forest lovers, and others frequent rocky places. When hard pressed by dogs, the larger species defend themselves by kicking or striking with the hind foot. The powerful claw of the fourth toe will cut a dog like a knife, and one blow, fairly delivered, will kill the average hound. Kangaroos have been, and are still, so constantly hunted

that in many districts they are now exterminated. In other districts they seem to be on the increase. They are hunted not only for the flesh, which is excellent eating, and the hides, which make valuable leather, but also on account of the damage which they do by their peculiar method of grazing. The big incisor teeth of the lower jaw clip the grass or leaves like a pair of shears. Thus, kangaroos nibble the grass and other plants much closer to the soil than sheep or cattle. Although not exactly gregarious, kangaroos are often seen in large numbers where satisfactory food is abundant. Under such conditions one or more of the old ones keep a sharp lookout for danger.

The number of young produced at a birth is usually one or two, but may be three. When born, they are very small (an inch or less in length), blind, naked, and entirely unable to help themselves. They are taken by the mother, with her lips, and placed in the pouch on a teat to which they firmly cling with the mouth, the windpipe being so arranged that swallowing and breathing do not interfere with each other. The young do not suck the milk, but it is pumped down their throats by the action of the muscles of the mother. In the pouch the young remain for weeks or even months, gradually increasing in size and assuming the adult form. As they mature, they occasionally leave the pouch, but they keep near the mother and return to her whenever danger threatens. At this time they are frequently seen with the head thrust out of the pouch in which they are being carried. In captivity kangaroos are gentle and timid, cases are known where they have been frightened to death. Unlike the opossum and other marsupials the kangaroo can be taught circus and other tricks.

Species. The best-known species of kangaroo is the one to which reference has already been made, the common or gray kangaroo (*Macropus giganteus*), also called boomer, forester, and old man. It is one of the largest species, an old male, when erect on his hind feet and tail, standing 7 feet high, but the females are only about two-thirds as large. The color is usually dull yellowish brown, paler beneath, darker on the tail, but the exact shade varies greatly, and generally the pelage has a distinctly grayish cast. The name "gray" kangaroo distinguishes it from an allied slightly larger form, the great red kangaroo (*Macropus rufus*), so called because the fur of the neck of the male is tinged with a carmine-like secretion. The latter species also differs from the common kangaroo in having the muffle entirely free from hair. There are numerous other species of this same genus, of which *Macropus brunni* deserves special mention. This species is remarkable for the fact that it is found farther north, thus nearer the equator, than most of the other members of the genus, its habitat being in the Aru Islands and Great Key, near New Guinea. The northernmost habitat of a *Macropus* is the island of New Ireland, northeast of New Guinea, where *Macropus browni* is found, while in the island of Misol, west of New Guinea and near the equator, there occurs another kangaroo (*Dorcopsis muelleri*), representing a Papuan genus, characterized by small ears, large naked muffles, well-developed canine teeth in the upper jaw, and other peculiarities of dentition. Another Papuan genus of great interest is *Dendrolagus*, which includes the tree kangaroos (q.v.). These curious little

kangaroos feed on bark, leaves, and fruit, and are found only in the forests of New Guinea. The hare kangaroos, found only on the grassy plains of Australia, form the genus *Lagorchestes* and are small, long-limbed, short-tailed creatures, which make "forms" like those of the hare. The rock kangaroos (q.v.) or rock wallabies of the genus *Petrogale* are also confined to the Australian mainland and differ very little from the smaller species of *Macropus*, but inhabit rocky regions and make their retreats in caves and holes. There are three species of kangaroo in which the tail terminates in a horny point, the use of which is still unknown. They are designated the spur-tailed kangaroos and constitute the genus *Onychogale*, confined to the Australian mainland.

Remains of kangaroos are found fossil in the Pleistocene strata of Australia, but they are mostly referable either to *Macropus* or *Petrogale*. Some of these were larger than any of the now living kangaroos. Three genera are known which have no living representatives, and of these *Palorchestes* is notable as the largest known member of the subfamily. Consult: J. Gould, *Monograph of the Macropodidae, or Family of Kangaroos* (London, 1841); Buch, *Wanderings of a Naturalist* (ib., 1865); Sir Joseph Banks, *Journal*, edited by Hooker (ib., 1896); B. Haller, "Ueber den Grosshörnrmantel des Kanguruh (*Macropus rufus*) eine Erklärung für das Fehlen des Balkens," in *Heidelberg Akademie der Wissenschaften, Sitzungsbericht, Mathematisch-naturwissenschaftliche Klasse* (Heidelberg, 1911).

KANGAROO APPLE (*Solanum aviculare*). A plant, native of Peru, New Zealand, Australia, and Tasmania, in the two latter countries its fruit is called kangaroo apple and is used as food. When unripe, it is acid and produces a burning sensation in the throat, but when fully ripe, a condition indicated by the bursting of the skin, it is mealy and subacid. It is eaten raw, boiled, or baked, and is prized by the natives.

KANGAROO BEAR. The koala (q.v.).

KANGAROO GRASS (*Anthistura ciliata*). One of the most esteemed fodder grasses of Australia and cultivated in India. It attains a height of 3 feet, affords abundant herbage, and is much relished by cattle. The genus is allied to *Andropogon*. The awns are long and twisted. *Anthistura gigantea*, *Anthistura frondosa*, and *Anthistura membranacea* are other Australian species to which the name "kangaroo grass" is given. They are all nutritious grasses and are considered valuable for pasture.

KANGAROO RABBIT. See HARE.

KANGAROO RAT. A rat (*Perodipus ordi*) of the arid southwestern United States, with very long hind legs and great leaping powers. It is a member of the large family Heteromyidae and is related to the jerboas. The present species is yellowish buff above, blackish on the rump, sides of nose, spot behind each ear, band across the thighs, and underparts white; tail very long and tufted. Length of body about 4¼ inches. It is an active, restless, nocturnal little creature, digging intricate burrows, and storing up large quantities of sunflower seeds and similar provender for winter. The name is applied in Australia to species of marsupials belonging to the genera *Potorous*, *Caloprymnus*, *Bettongia*, and *Hyppymnus*.

K'ANG-HI, k'ang'hé', or **K'ANG-HSI**, shé

KANGAROOS

1. PARRY'S WALLABY (*Macropus Parryi*).
2. GREAT RED KANGAROO (*Macropus rufus*).
3. BLACK TREE KANGAROO (*Dendrolagus ursinus*).

4. BLACK WALLAROO (*Macropus robustus*).
5. BLACK-GLOVED WALLABY (*Halmaturus manicatus*).
6. YELLOW-FOOTED ROCK WALLABY (*Petrogale xanthopus*).

(lasting prosperity) (1655-1722). The second Emperor of the *Ta Tsing* (great pure) dynasty established on the throne of China by the Manchu Tatars, the first having been Shun-chih, his father. Shun-chih died in 1661, and K'ang-hi's reign, according to custom, begins to be reckoned in the following year. Being only eight years old, a regent was appointed. At 14 he assumed the reins of government and used the power vested in his hands with prudence, vigor, and success. Before he was 20, a great rebellion broke out, led by the Chinese Wu San-Kuei, and at one time the Emperor had left to him only the provinces of Chili, Honan, and Shantung. He was finally successful, aided by the death of Wu San-Kuei, and also by the powerful cannon manufactured for the Imperial armies by the Jesuits. He extended his dominion to Khokand, Badakhshan, and Tibet. He simplified the administration, increased the number of provinces to 18, and consolidated his power in every part of his vast dominion, and thus became more celebrated than almost any other modern Asiatic monarch. Personally he was well disposed towards Christianity and has been made known to all the world. The calendar was reformed in 1669 by the Jesuit Verbiest, and an Imperial census of China in 1701 gave the number of inhabitants as 105,000,000. He subdued many tribes, settled by treaty the northern frontier between China and Russia (1679), had the Empire surveyed by the Jesuit missionaries, and commerce with foreigners, the East India Company having been allowed to establish an agency in 1677. Christianity was officially recognized in 1692, but in 1698 the Pope decided against K'ang-hi, as to whether Chinese Christians might continue ancestor worship. This angered K'ang-hi, and in 1716 an edict banished all missionaries who disagreed with him. He was a great patron of both literature and art. Many large and important works were brought out under his own personal supervision. These included the great Imperial Dictionary of Chinese with a vocabulary of over 40,000 characters; a concordance to all literature, known as the *Pei-Wên-Yun-Foo*, in 110 thick volumes, two great encyclopædias, one of which, the *K'un-t'ao Shu-Ts'eh-Ching*, printed from movable copper type, is in 5020 volumes. Under his patronage and encouragement art flourished and attained a vigor and perfection that has never been approached since. His posthumous or temple name was Shih-ti, Hwang-ti. Consult Rémusat, *Les empereurs asiatiques* (Paris, 1829), and Giles, *China and the Manchus* (Cambridge, 1912).

KANG-KAO. See CANCAO.

K'ANG-WA, käng'wä', **K'ANG-WHA**, or **K'ANG-HOA** (Jap., river flower). An island lying at the mouth of the Han River in Korea and very important as guarding the water approach to the capital, Seoul. For ages it was the place of refuge for the court during the many invasions of the country. Modern methods of warfare have made the island less valuable as a stronghold. As long as Korea was independent, the archives of the government, in duplicate, were kept at the island in a fortified monastery by Buddhist monks who were subsidized and acted as a sort of clerical militia. In October, 1866, the city of K'ang-wa was stormed and looted by the French under Admiral Roze in revenge for the execution some months previously of nine French Jesuit missionaries in

Seoul. The French marines attempting to storm the monastery, which was defended by 5000 Koreans, were driven back with great loss. In 1871 Admiral John Rodgers, with a United States squadron, having had his survey boats fired upon, landed a force of 759 men under command of Winfield Scott Schley (q.v.), which attacked and captured the five forts. On Sept. 19, 1875, the Koreans fired upon some Japanese marines, mistaking them for French and Americans. The next day the Japanese stormed the fort, and soon after Kuroda (q.v.) with a squadron of warships arrived off the island, and with Inouye (q.v.) secured the treaty by which the two nations entered into relations of peace and commerce. The island is rich in ancient monuments and very interesting to the student. On the headland above the forts stormed by the Americans the Koreans have erected tablets to the memory of their compatriots. Consult: Trollope, in the *Transactions of the Korean Asiatic Society* (Yokohama, 1901); Hamilton, *Korea* (New York, 1907); W. E. Griffis, *Corea, the Hermit Nation* (ib., 1911).

K'ANG YU-WEI, käng yoo'wä' (c.1858-). A Chinese scholar and reformer, born in Canton. He became a Chin-shih (doctor of literature), the highest in China, and was the author of a new commentary on the Chinese classics. He came under the influence of the missionaries and made himself acquainted through their books with the history and philosophy of Western nations and became the leader of the party of Reform. He had a large following among students in several provinces, who called him the Modern Sage. A book he wrote on modern Japan brought him to the attention of the Emperor Kwang-hsi. He was received in audience and immediately became the chief adviser to the Emperor and the guiding spirit of the reform movement of 1898. But K'ang and the Emperor attempted too much in the way of reform. The plot to seize and imprison the Emperor Dowager Tzu-hsi, which was necessary for the success of their plans, completely failed. Tzu-hsi gained the ascendancy and practically deposed the Emperor. A furious reaction set in against all reformers, many of whom were imprisoned or beheaded. K'ang, forewarned in time, managed to escape and fled to Hongkong, Singapore, and elsewhere. While in exile, he joined the Pao Huang Hwei (empire reform association), which aimed at reforming China along modern lines. This association spread to England and America, where it was visited and advised by its founder. K'ang played a prominent part in the revolution of 1911 which overthrew the Manchus, and he became one of the noted men of the new China.

KANITZ, kã'nits, FELIX PHILIPP (1829-1904). An Hungarian ethnologist and archaeologist, born at Budapest and educated at Vienna. He traveled through Germany, Belgium, France, and Italy, and after a trip to the South Slavic countries gave himself up almost entirely to the art and ethnology of Albania, Herzegovina, Servia, and Bulgaria. His more important writings are: *Die römischen Funde in Serbien* (1861); *Serbiens byzantinische Monumente* (1862); *Reise in Südserbien und Nordbulgarien* (1868); *Serbien* (1868); *Donau-Bulgarien und der Balkan* (3d ed., 1882); *Katechismus der Ornamentik* (5th ed., 1896); *Römische Studien in Serbien* (1892).

KANITZ, kã'nits, HANS WILHELM ALEXAN-

DER, COUNT VON (1841-1913). A German politician, born at Mednicken. He studied law at Heidelberg and Berlin and became a member of the Prussian Lower House in 1885 and of the German Reichstag in 1889. He became best known as a defender of protective tariffs and of agricultural interests and as the author of the *Import Kanutz*, a paternal measure enjoining on the government the purchase and sale of all imported cereals. This bill came up once in 1894 and thrice in 1895 and was defeated by heavy pluralities. He wrote: *Aphorismen über Getreidezölle* (1879), *Die preussischen Ostprovinzen und die Zollreform* (1880), *Die Festsetzung von Mindestpreisen für das ausländische Getreide* (4th ed., 1895).

KANIZSA, kō'ne-zhō, Nagy (big). A royal free town of Hungary, situated on the Kanizsa River, in the County of Zala, 136 miles by rail southwest of Budapest (Map: Hungary, E 3). It has a Piarist and a Franciscan cloister, a trade school, and a higher Gymnasium. There are a number of important distilleries. The town has a considerable trade in agricultural products and live stock. Pop., 1900, 23,978; 1910, 26,524, mostly Catholic Magyars.

KANIZSA, Ó (old). A grand commune in the County of Bács-Bodrog, Hungary, situated on the right bank of the Theiss, about 15 miles south-southeast of Szegedin (Map: Hungary, G 3). Tobacco, wheat, and millet are raised extensively in the vicinity. Stock raising and shipping are other occupations. Pop., 1900, 16,532; 1910, 17,018, mostly Catholic Magyars.

KANKAKEE, kân'kâ-kê'. One of the two rivers whose junction in Grundy Co., Ill., forms the Illinois River (Map: Illinois, K 3, and Indiana). It rises in English Lake, Starke County, north Indiana, and flows west-southwest to near the city of Kankakee, Ill., where it turns north-west, joining the Des Plaines River (qv) to form the Illinois. See *Twenty-second Annual Report of the State Geologist of Indiana, 1898*, pp. 55-65.

KANKAKEE. A city and the county seat of Kankakee Co., Ill., on the Kankakee River, 54 miles south of Chicago, on the Cleveland, Cincinnati, Chicago, and St. Louis, the Illinois Central, and the Chicago, Indiana, and Southern railroads (Map: Illinois, J 3). The river, broad and deep at this point, furnishes excellent water power, which is used for manufacturing purposes, as well as for generating electricity for city lighting and the operation of street railways. It is spanned by a fine bridge at this point. Some of the most important manufactures are plows, buggies, furniture, sewing machines, and iron beds. There are also carriage and wagon factories, grain elevators, stone quarries, a brewery, household furnishings and ornament works, brick and tile works, and establishments producing foundry and machine-shop products, wire, flour, mattresses, cigars, hosiery, pianos, etc. Kankakee has also considerable commercial importance as a distributing centre. The Kankakee State Hospital for the Insane, accommodating more than 3000 patients, is situated here. Other fine structures are the arcade, opera house, public library, high school, county jail, courthouse, St. Joseph's Seminary (founded in 1860), emergency hospital, conservatory of music, and Y. M. C. A. building. Electric and Riverview parks are the two principal pleasure grounds. At Bourbonnais Grove, a suburb 3 miles distant, is St. Via-

tor College, founded in 1868, with about 300 students, one of the most prominent Roman Catholic divinity schools in the West. Settled in 1853, Kankakee was incorporated in the following year. The government, as provided by the charter of 1892, revised in 1895, is vested in a mayor, chosen every two years, and a unicameral council, which elects boards of health and of local improvements and the customary administrative officials. Pop., 1900, 13,595; 1910, 13,986; 1914 (U. S. est.), 14,150.

KANNEGIESSEB, kân'ne-gê'sêr, KARL FRIEDRICH LUDWIG (1781-1861). A German author, translator, and critic. He was born at Wendemark, was educated at Halle, and taught from 1807 to 1843. He translated Beaumont and Fletcher (1808), the *Divina Commedia* (5th ed., 1873), Dante's lyrics (2d ed., 1842), and many others, ranging from Horace's Odes, Anacreon, and Sappho to Chaucer, Byron, and Scott, also the *Heland*. He wrote lyrics and dramas and was famed as an exegete of Goethe, a selection from whose lyrical verse he edited (1835) with valuable notes.

KANO, kân'no The name of a province and its capital in the Kingdom of Sokoto, now a part of the British Northern Nigeria in West Africa. The district lies between 11° N. and 13° N. and Bornu. In 1905 the District of Katagum was incorporated with the province. Area, about 31,000 square miles. It is rich in tropical fruits and is perhaps the most pleasing part of equatorial Africa. There are about 2,250,000 inhabitants—Fulans, Hausas, and slaves. Kano, the capital, lies 230 miles east-southeast of the city of Sokoto (Map: Africa, E 3). It is surrounded by walls 40 feet thick and contains the palace of the Emir. It is an important trading point, being visited by merchants from the northern countries of Africa and even from Arabia. Here is manufactured most of the leather marketed as morocco. A blue cotton material made by the natives is a prominent article of export. Sandals, shoes, weapons, grain, leather goods, indigo, cola nuts, saltpetre, ivory, and ostrich feathers are the staples of trade. Pop., about 100,000.

KANPUR. See CAWNPORE.

KANSA, kân'sâ See KAW.

KAN'SAS, kân'zas (from the Kansas Indians, called by themselves *Kanze*, a word said to refer to the wind; popularly known as the Sunflower State). One of the north central States of the United States. It lies exactly in the centre of the country, between long. 94° 37' and 102° W., its north and south boundaries are formed, respectively, by the fortieth and the thirty-seventh parallel. The State is bounded on the north by Nebraska, on the east by Missouri, on the south by Oklahoma, and on the west by Colorado. It has the form of a parallelogram with straight sides, except at the northeast corner, which is cut off by the Missouri River. Its dimensions are 408 miles from east to west and 208 miles from north to south; its area is 82,158 square miles, giving it the thirteenth rank in size among the States of the Union.

Topography. Kansas reflects two great regional influences. The first of these, and the greater, is that of the central prairies of the United States. The second is that of the frontal plain of the Rocky Mountains. Its surface rises gradually from an altitude of 750 feet in the extreme eastern part to about 4000 feet on the west boundary. The average altitude is about

region are wide belts of limestone of various shades somewhat loosely textured and easily wrought, while excellent sandstones are yielded by the Dakota group of the Cretaceous formation and by a large portion of the Tertiary series in the west.

Mining. The two principal mineral products of Kansas are fuels—coal and natural gas—these constituting nearly 45 per cent of the value of minerals produced. The coal-producing area is entirely in the eastern part, and the two leading counties in its production, Cherokee and Crawford, which have more than 90 per cent of the total, are in the extreme southeast. The production of coal in 1913 was 7,202,210 tons, valued at \$12,036,292. There was a small increase in production in 1914. In 1913 a total of 12,479 men were employed in the coal mines. The development of the natural-gas resources is largely part of the history of the decade 1900–10, for, although some gas was produced as early as 1886, it did not assume any importance until 1901, when the value amounted to about \$660,000. The production in 1913 was 22,884,547,000 cubic feet, valued at \$3,288,394, which was less than half of the value of the gas produced in 1909, the year of maximum production. Since 1909 the production of natural gas declined at approximately the same ratio it increased. The principal counties in the production of natural gas are Montgomery and Wilson. The oil fields of Kansas are a part of the Kansas-Oklahoma fields, which in turn form a part of the great mid-continent field. The production of petroleum has shown a marked falling off. The maximum was reached in 1904, and the production continued to be large in 1905–07. In 1904 it amounted to 4,250,779 barrels. In 1913 the production amounted to 3,375,000 barrels, valued at \$2,248,283, an increase of 49 per cent in quantity and 105 per cent in value over that of the preceding year. The production in 1914 showed a slight increase. Having been developed on the supposition of an abundant supply of gas, the decline of the production of the cement and zinc industries has somewhat followed that of the fuel. The year of maximum production of cement was 1910, when the output of Portland cement amounted to 5,655,808 barrels, valued at \$5,359,408. The production of Portland cement in 1913 amounted to 3,291,818 barrels, valued at \$3,286,861. A small amount of natural cement is also made. Clay products are of great importance, but these also declined in 1911–12 on account of the decreased production of gas. In 1913 the value of the clay products, exclusive of pottery, was \$1,919,910. The principal product from the clay-burning kilns is vitrified brick, in the production of which Kansas ranks fourth. The value of the recoverable metallic content of zinc ores in 1913 was \$1,129,856 and amounted to 10,088 tons. Other important mineral industries are salt mining and evaporating, stone quarrying, and the mining and calcining of gypsum. In the production of salt Kansas ranks fourth, and in zinc sixth. The less important mineral products are lead, lime, mineral waters, pumice, sand and gravel, sand-lime brick, sulphuric acid from zinc smelting, and zinc and lead pigments. The total value of mineral products in 1913 was \$27,312,563.

Agriculture. The principal soil is a brown silty loam, well adapted to the production of general farm crops. In the eastern half of

Kansas the rainfall is sufficient for the maturing of all crops, the normal annual precipitation ranging from 25 to 35 inches. In the western half the normal annual precipitation ranges from 15 to 25 inches and is sufficient to produce a good growth of grass on the ranges and to mature grain crops under intensive cultivation. Irrigation is practiced in the stream valleys of the western part, chiefly along the Arkansas River for 75 miles east from the Colorado line.

Of the land area, 82.9 per cent was in farms in 1909. Out of a total approximate land area in 1910 of 52,335,360 acres, the land in farms constituted 43,384,799 acres. The improved land in farms in 1910 was 29,904,067 acres, and the average number of acres per farm 244. The percentage of land in farms has risen from 34 in 1860 to 82.9 in 1910. The total value of farm property, including land, buildings, implements, and machinery, domestic animals, poultry, and bees, was \$2,039,389,910 in 1910.

In average size the Kansas farm increased from 171 acres in 1860 to 244 acres in 1910. A decrease occurred between 1860 and 1870, but since that time the increase has been continuous, averaging almost 2.5 acres per year. Of the total number of farms in 1910 (177,841), 112,443 were operated by owners and managers and 65,398 by tenants. In 1880, 16.3 per cent of the farms were operated by tenants. This proportion has shown continuous and rapid increase during the following decade, and in 1909 about 37 out of every 100 farms were thus operated. Of the 177,841 farm operators in 1910, 150,346 were native whites, and 25,804 were foreign-born whites. Germans were by far the most numerous of the foreign-born white farmers.

The following table shows the acreage, production, and value of the principal crops in 1914, as estimated by the United States Department of Agriculture.

CROP	Acreage	Prod. bu.	Value
Corn	5,850,000	108,225,000	\$68,182,000
Oats	1,760,000	58,960,000	24,763,000
Wheat	8,660,000	177,200,000	168,340,000
Barley	240,000	5,880,000	2,764,000
Rye ..	50,000	1,000,000	800,000
Hay	1,650,000	*2,492,000	18,441,000
Potatoes	72,000	4,464,000	8,437,000

* Tons

Of the several hay and forage crops, wild, salt, or prairie grasses rank first in acreage, representing in this respect more than two-fifths of the total for all hay and forage crops. Alfalfa comes next, with about one-fourth of the total acreage of hay and forage.

Vegetables form an important agricultural industry. In 1909 the total acreage of potatoes and sweet potatoes was 132,665, and their value \$1,308,333. In 1914 potatoes and sweet potatoes and yams, the acreage of vegetables was 48,757 and their value \$2,964,000. The growing of sugar beets is conducted on a considerable scale. The acreage planted to this product in 1909 was 5,511, the product 50,736 tons, and the value \$256,262. Of sorghum cane there were grown 60,821 tons, from which 260,680 gallons of sirup, valued at \$112,374, were made. The orchard fruits grown in 1909 amounted to 1,447,849 bushels, valued at \$944,631. The most important

in quantity and value were apples; the production amounted to 1,356,438 bushels, valued at \$807,865. There were produced also in that year 6,317,684 pounds of grapes, valued at \$184,673. Of small fruits there were grown 5,477,274 quarts, valued at \$454,200. The most important of these in quantity and value were blackberries and dewberries, and, second, strawberries.

Live Stock and Dairy Products. Western Kansas is an important dairying and stock-raising region. The insufficient rainfall renders the cultivation of cereals uncertain, and the greater part of the area is divided into ranges for the growing of cattle. The great number of cattle used by the slaughtering plants in Kansas City creates an enormous demand, which stimulates to a large extent the cattle industry in the State. On Jan. 1, 1915, the number and value of live stock were estimated by the United States Department as follows: cattle, other than milch cows, 1,768,000, valued at \$75,140,000; milch cows, 726,000, valued at \$46,101,000; sheep, 316,000, valued at \$1,548,000; swine, 2,656,000, valued at \$26,826,000; horses, 1,132,000, valued at \$105,276,000; mules, 233,000, valued at \$23,766,000. The total number of fowls of all kinds in 1910 was 15,736,038, valued at \$7,377,469. The dairy cows on the farms on April 15, 1910, numbered 736,107. The milk produced in 1909 amounted to 172,742,767 gallons, from which butter amounted to 29,647,881 pounds and valued at \$1,200,000 was made. The total value of milk, cream, and butter fat sold and butter and cheese made in 1909 was \$13,091,739.

Manufactures. Kansas is essentially an agricultural State, and the manufacturing industries have been largely the outgrowth of its extensive agricultural resources, while in recent years they have been further stimulated by the development of rich zinc and coal mines and by the discovery of oil and gas. In 1909 the total value of manufactures was \$325,104,000. The growth has been rapid, owing chiefly to the growth of the flour-mill and gristmill industries, and meat packing and the products of flour mills and gristmills. Other manufacturing industries, however, show considerable growth. In 1909 Kansas ranked fourteenth, having advanced from thirty-first place in 1859. Only a small percentage of the total population is engaged in manufactures. In 1909 the value of products per capita was \$192. The accompanying table gives a comparative summary of manufactures in 1909, compared with 1904. Only those products valued at more than \$500,000 are included in this table.

The slaughtering and meat-packing industries include wholesale slaughtering and meat-packing establishments and those engaged in the manufacture of sausage, but not the numerous retail butcher shops, which slaughter a large number of animals. They include the manufacture of many by-products. In 1909 the State reported 12.1 per cent of the total value of slaughtering and meat-packing products of the United States and in this respect is surpassed only by Illinois. The importance of the industry is indicated by the fact that in 1909 it gave employment to 24 per cent of the average number of wage earners and reported products whose value represented 50.9 per cent of the total value of products of all the manufacturing industries.

The flour-mill and gristmill industry is second in importance. Kansas is one of the leading

wheat-growing States and ranks third in the value of flour-mill and gristmill products.

The industries connected with the smelting and refining of zinc since 1889 have been due largely to the discovery of gas and oil and also of coal in the same locality as the zinc ore. In 1889 there were only four establishments devoted to this industry, with products valued at \$964,000.

An industry deserving special mention is the manufacture of glass. The development of this is due directly to the discovery of large quantities of natural gas. Starting later than 1900, the industry had grown so that in 1909 the State ranked eighth in the value of its glass products. Kansas is one of the few States engaged in the production of salt and in 1909 ranked fourth in the value of this product. Nearly one-tenth of the value of the salt products of the United States in 1909 was produced in Kansas.

The total number of wage earners in 1909 was 44,215, 40,838 male and 3377 female. The wage earners under 16 years of age numbered 235, of whom 195 were males. For nearly half the wage earners in the State in 1909 the usual hours of labor were 60 a week.

The most important manufacturing cities are Kansas City, Wichita, Topeka, Leavenworth, Atchison, Pittsburg, Fort Scott, and Lawrence. Kansas City is the leading manufacturing city, with products valued at 50.5 per cent of the total in the State in 1909. Wichita ranks second and Topeka third.

Transportation. Kansas has admirable transportation facilities. The State is so situated geographically that it is traversed by several important railways which connect the industrial centres of the Mississippi valley with points in the West and Southwest. The Missouri River on the northeast boundary is the only navigable river. In former years the State suffered greatly from a lack of railway connection with the Gulf ports, but this has been remedied. The total mileage operated by railways in 1914 was 12,344. The longest mileage was that of the Atchison, Topeka, and Santa Fe, 3890. The Missouri Pacific Railway Company had 2868 miles of track; the Chicago, Rock Island, and Pacific, 1491; the St. Louis and San Francisco, 903, and the Missouri, Kansas, and Texas, 684. The Public Utilities Commission has general charge of railway rates. There were, in 1912, 21 companies operating electric railways, and there were 493 miles of single track of such railways.

Banking. The banking business was greatly affected from 1885 to 1891 by the wave of speculation which swept over the West. Among the chief assets of the State banks were heavy loans on overvalued real estate. These banks were unrestricted in their activity by any control. With the panic of 1893 there ensued a general foreclosure of mortgages, and dozens of banks suspended. The first comprehensive banking law was passed in 1891, when the office of bank commissioner was created. The present banking law was passed in 1897. It contains stringent provisions in regard to investments, overdrafts, liability of shareholders and directors, and cash reserve. These and other regulations have placed the State banks upon a solid foundation, and they share the confidence of the people equally with the national banks. Private banks cannot be established and only two are now in existence, and they conform to the State law. There is

COMPARATIVE SUMMARY FOR 1909 AND 1904

THE STATE—ALL INDUSTRIES COMBINED AND SELECTED INDUSTRIES

INDUSTRY	Cen- sus	Num- ber of estab- lish- ments	PERSONS EN- GAGED IN INDUSTRY		Capital	Wages	Cost of mate- rials	Value of prod- ucts	Value added by manu- fac- ture

a law guaranteeing bank deposits, the operation of which has been satisfactory. There were, in 1914, 212 national banks, with a capital of \$12,367,500 and individual deposits amounting to \$85,205,893. There were 945 State banks, with a capital of \$19,390,300 and deposits subject to check amounting to \$118,208,207. There were in the same year eight trust companies, with a capital of \$900,000. The incorporation of savings banks is authorized by the law, but practically none exist, as all commercial banks operate savings departments.

Government. The present constitution went into operation on Jan. 29, 1861. Amendments to the constitution may be proposed in either legislative House and must receive a two-thirds vote of all the members elected to each House. They must then be submitted to the electors of the State and be approved by a majority of the electors voting. When more than one amendment shall be submitted at the same time, they shall be so submitted as to enable the electors to vote on each amendment separately, and not more than three amendments shall be submitted at the same election. Two-thirds of the members elected to each branch of the Legislature concurring, propositions for calling a constitutional convention shall be submitted to the electors at large, and, if agreed to by a majority, the Legislature shall provide for the same at the next session.

Legislative.—The legislative power is vested in a House of Representatives and a Senate. The number of Representatives and Senators is regulated by law, but must never exceed 125 Representatives and 40 Senators. The House of Representatives consists of one member for each county in which at least 250 legal votes were cast at the next preceding general election. Sessions of the Legislature are held once in two years, beginning on the second Tuesday of January of each alternate year, with the session of 1877. Members of Representatives are elected for two years and members of the Senate for four years.

Executive.—The executive department consists of a Governor, Lieutenant Governor, Secretary of State, Auditor, Treasurer, Attorney-General, and Superintendent of Public Instruction, who hold office for two years. The supreme executive power of the State is vested in the Governor. The Lieutenant Governor is President of the Senate.

Judiciary.—The judicial power of the State is vested in a supreme court, district courts, probate courts, justices of the peace, and such other courts inferior to the supreme court as may be provided by law. The supreme court consists of seven justices, who are chosen by the electors at large for terms of six years, and who are privileged to sit in two divisions. Three justices constitute a quorum in each division, and the concurrence of three are necessary for a decision. The justice who is senior in a continuous term of service is chief justice. The State is divided into five judicial districts, in each of which there is elected a district judge. He holds office for four years. There is in each county a probate court, the judge of which holds office for two years. Two justices of the peace are elected in each township with a term of office of two years.

Suffrage and Elections.—A constitutional amendment adopted Nov. 5, 1912, provided that "the rights of citizens of the State of Kansas to vote and hold office shall not be abridged on

account of sex." Every person over 21 years of age who is a citizen of the United States or of foreign birth who has declared intention of becoming a citizen conformably to the laws of the United States, is a qualified voter if a resident in the State six months, and in the township or ward 30 days next preceding the election. A primary law passed in 1908 provided for the nomination of United States Senators and for candidates to elective offices, either by a primary or by independent nominations as provided by existing statutes. This law also made provision for the date on which primaries shall be held, these varying with the cities of the different classes and the various forms of government. Elections for State officers are held on even-numbered years and for municipal officers on odd years. A separate official primary ticket for each political party is printed and provided for use at each voting precinct. The person receiving the greatest number of votes at a primary is a candidate of that party, for any office other than that of United States Senator, at the next ensuing election. The candidates for United States Senator receiving the highest number of votes in the greatest number of representative and senatorial districts of the State are declared by the State Board of Canvassers the nominees of their respective political parties for that office. The act designates the composition of the party council, the day of its meetings, and its duties.

Local and Municipal Government.—Cities are divided into three classes according to population, viz., first class, over 15,000; second class, under 15,000 and over 2000; third class, not exceeding 2000. By law the larger cities having the commission form of government have five commissioners and the smaller only three. Each commissioner is under bond to protect the city from financial loss through incompetence, neglect, or dishonesty. The commission-governed cities have in most cases the usual features of initiative, referendum, and recall. Cities have the power to vote for a commission form of government, and, at the end of 1914, 40 cities in the State had so voted. The largest of these were Coffeyville, Fort Scott, Hutchinson, Independence, Kansas City, Lawrence, Leavenworth, Parsons, Pittsburg, Topeka, and Wichita (qq.v.).

Miscellaneous, Constitutional, and Statutory Provisions.—Corporations can only be created under general laws, but all such laws may be appealed or amended. Contributions to political campaigns by corporations are prohibited, and newspapers are prohibited from printing campaign literature unless over the signature of at least two officers of the corporation or committee. A child-labor law limits the number of employment for children under 14 years of age, and the hours of work for persons under 16 years of age. The sale of cigarettes and the use of tobacco by minors in any form are prohibited. In 1911 the Legislature passed a workmen's compensation act and an employers' liability act applicable to railroad corporations. Desertion by a husband or parent is punishable by a maximum penalty of two years of hard labor in a reformatory or penitentiary. A Law passed in 1909 modified the prohibition amendment to the constitution of 1880 by prohibiting the sale of intoxicating liquors for any use whatever except sacramental purposes. The same Legislature enacted a law against white-slave traffic.

Finance. A large public debt was created between 1861 and 1871, owing chiefly to the extraordinary war expenses and also to the difficulty of collecting taxes. This debt in 1865 amounted to \$517,000 and in 1870 to \$1,403,000. In the latter year a movement began for the reduction of expenditures and the increase of taxation, and from that date the financial condition of the State was improved. Beginning in 1880, the State adopted the policy of purchasing its bonds for the various permanent funds so as to reduce its net indebtedness. The State's steady increase of population, with the decline in the amount of the debt less sinking-fund assets, has reduced the debt per capita very materially. In 1880 the total debt of the State was \$1,182,000, and in 1912 it amounted to only \$370,000. The receipts from all sources for the fiscal year ending June 30, 1913, amounted to \$8,471,318, and the disbursements to \$8,025,250. At the close of the fiscal year ending June 30, 1913, there was in the treasury a balance of \$1,735,276. The receipts include the direct State tax, receipts on account of payment of bonds and interest due the several State school funds, fees of State offices, insurance-fund receipts, fees of all State charitable and educational institutions, United States aid to the State agricultural college, and miscellaneous fees.

Militia. The organized militia of the State includes the first brigade of infantry, comprising first and second infantry, first provisional company of infantry and second provisional company of infantry, a battery of field artillery, a company of signal troops, and a detachment of sanitary troops. There were, in 1913, 1694 enlisted men and 130 officers enrolled in the militia. Males of militia age, from 18 to 44 years, in 1910, numbered 370,227.

Population. The population by decades from 1860 has been as follows: 1860, 107,206; 1870, 364,399; 1880, 996,096; 1890, 1,428,108; 1900, 1,470,495; 1910, 1,690,949. The estimated population on July 1, 1914, was 1,784,897. In 1890 the State ranked tenth in population, but in 1910 had dropped to twenty-second. The population per square mile in 1910 was 20.7. By far the greater proportion of the population consists of native-white persons (1,270,057 in 1910). The native whites of foreign or mixed parentage numbered 292,105, and the foreign-born whites 135,190. The largest number of foreign-born whites were natives of Germany, 34,506. From Russia came 15,311, from Sweden 13,309, from Austria 12,094, and from England 11,256. Those living in towns of 2500 or more numbered 493,790 in 1910. The rural population in 1910 numbered 1,197,159. The population was in 1910 divided by sex into 885,912 males and 805,037 females. The males of voting age numbered 508,529. The smallness of the increase in the population in each decade from 1890 is due largely to the emigration of settlers to what was at that time the adjoining territory of Oklahoma and to Indian Territory. There was a large improvement from 1880 to 1890 as a result of the "boom" which occurred in the entire trans-Missouri region in the latter part of the decade. As Kansas is centrally situated and one of the last of the Mississippi valley States to be settled, the population is more representative of every part of the country than that of most of the other Western States. This condition was especially accentuated in the early period of settlement due to the slavery

struggle—both the North and the South having attempted to secure control of the field. (See *History*.) Owing to the dryness of its soil and climate, the western third of the State is very sparsely inhabited. There are no large centres of population, and the percentage of urban population as noted above is consequently small. Kansas City and Wichita are the only places which in 1910 had a population of 50,000 or over. The population of Kansas City in 1910 was 82,331 and of Wichita 52,450. Topeka, the capital, had a population of 43,684. The other larger cities and 1910 populations are Leavenworth, 19,363; Atchison, 16,429; Hutchinson, 16,364; Pittsburg, 14,755; Coffeyville, 12,687; Parsons, 12,463; Lawrence, 12,374; Independence, 10,480; Fort Scott, 10,463.

Education. The State from its earliest settlement has been one of the most progressive in its educational policy. Although there is a great preponderance of rural population and a consequently serious problem to meet, the percentage of illiteracy is small. In 1910, of a total population 10 years or over of 1,322,562, 2.2 per cent were illiterate. Only four other States—Iowa, Nebraska, Oregon, and Washington—had in 1910 a lower percentage of illiteracy. Among native-born whites the illiterates in 1910 numbered only 0.8 per cent of a total population of 10 years or over. Among foreign-born whites the percentage was 10.5 per cent, and among negroes it was 12 per cent (in 1900, 22.3 per cent).

According to the thirteenth census the school population in 1910 (ages 6 to 20) was 515,156. Of these an average of 363,695 attended schools. Out of the school population, 388,371 were native-born whites, 99,790 of foreign or mixed parentage, 10,321 foreign-born whites, and 10,047 negroes. According to the report of the State Superintendent of Public Instruction the total school population in 1912 was 510,273. The total enrollment in that year was 395,064, and the average daily attendance 298,128. The number of male teachers employed in 1912 was 2639; female teachers numbered 11,464. The average monthly salaries of teachers in rural schools was \$52.11 and in graded schools \$67.25. The average length of the school term was 31 weeks. The total expenditure for school purposes in 1912 was \$11,158,255.

The progress and development of high schools have been remarkable. From 1907 to 1912 the number of high schools increased 100 per cent, the enrollment increased 100 per cent, and the teaching force increased 120 per cent. The courses in these high schools have been broadened and liberalized with a view to conserving the interests of that great majority of pupils whose formal training ends with the high school. There were, in 1912, 189 high schools maintaining normal training courses and 96 high schools offering courses in agriculture and domestic science. In addition to this, many schools offer commercial courses. The establishment of township high schools has been undertaken. The courses in these schools have in view rural conditions and rural needs. In recent years there has been a decided awakening among the people of the State as to the needs of the rural school. The Legislature of 1911 passed several important measures looking to the improvement of these schools. In 1911, 124 new rural school buildings were erected, and, in 1912, 142. In 1913 there were 83 consolidated schools, representing 200

original districts of the ordinary type, and in 52 of these schools work of high-school grade was conducted.

There are State normal schools at Emporia, Hays, and Pittsburg. The latter is a manual-training normal school. Other State institutions include the University of Kansas at Lawrence, the Kansas State Agricultural College at Manhattan, School for the Blind at Kansas City, School for the Deaf at Olathe. These institutions are under the control of a State board of administration created by the Legislature of 1913. The private institutions for higher education include Baker University at Baldwin, Bethany College at Lindsborg, Campbell College at Holton, the College of Emporia at Emporia, Cooper College at Stirling, Fairmount College at Wichita, Friends University at Wichita, Highland College at Highland, Kansas Wesleyan University at Salina, McPherson College at McPherson, Midland College at Atchison, Ottawa University at Ottawa, Southwestern College at Winfield, Washburn College at Topeka, and Western University at Quindaro.

Charities and Corrections. Charitable institutions are under the supervision of a State board of control, and the penal institutions are controlled and supervised by a State board of corrections. They include the Topeka State Hospital, the Osawatimie State Hospital, the Larned State Hospital, the State Hospital for Epileptics at Parsons, the State Tuberculosis Hospital at Norton, the State Home for Feeble-Minded at Winfield, and the State Orphans' Home at Atchison. The penal institutions include the State Penitentiary at Lansing, the Industrial Reformatory for Young Men at Hutchinson, the Boys' Industrial School at Topeka, and the Girls' Industrial School at Beloit. There are two patriotic institutions, the State Soldiers' Home at Fort Dodge and the Mother Bickerdyke Home Annex at Ellsworth. There are also a large number of private institutions engaged wholly or partly in charitable work, receiving aid by appropriation. These institutions are all under the supervision of a State board of control. In 1911 a board of penal institutions replaced the directors of the penitentiary and managers of the Kansas industrial reformatory. Convicts of the State are employed in building public roads, and it is unlawful for convicts to work for private citizens.

Religion. The Methodists are the largest religious body in the State, having more than twice the membership of any other Protestant denomination. Among the large number of other sects represented, the most important are the Roman Catholics, Baptists, Presbyterians, Disciples of Christ, Lutherans, Congregationalists, and Friends.

History. Among the Indian tribes who lived within the present boundaries of Kansas were the Shawnees, the Osages, the Omahas, and, of later arrivals, the Kickapoos and the Illinois. In 1541 a small force of Spaniards and Indians under Coronado traversed the region from southwest to northeast, but no results followed this expedition. The country remained unexplored till 1719, when it was visited by Frenchmen from Louisiana. In 1803 the greater portion of what is now Kansas passed into the possession of the United States as a part of the Louisiana Purchase; the southwestern section of the State was ceded by Texas to the Federal government in 1850. The region was explored by Lewis and

Clark in 1804, Lieutenant Pike in 1806-07, and Lieutenant Long in 1819. Fort Leavenworth was erected in 1827, and four years later the Baptists founded a mission to the Shawnees near the Missouri River. Emigrant trains on the way to California crossed the region as early as 1844; and the army of General Kearney, intended for the invasion of Mexico, set out from Fort Leavenworth in 1846. In 1854 the population was estimated at 700. The region formed a part of the Territory of Missouri till 1821, remaining unorganized from that year till 1854. When it was proposed to organize the Territories of Kansas and Nebraska (see KANSAS-NEBRASKA BILL), the supporters of slavery incorporated in the act of organization a declaration repealing the Missouri Compromise of 1820, and leaving the question of slavery to be decided by the inhabitants of the Territory in framing their constitution. The Act, passed in May, 1854, thus removed the barrier to the extension of slavery which had been created by Congress 34 years previously, and to the maintenance of which during all that period both the Northern and Southern portions of the Union had held themselves to be "forever" bound. The plea by which it was sought to justify this act was that the Compromise of 1850, which had been adopted by Congress as a final settlement of all the differences respecting slavery which then existed, operated as a virtual repeal of the Missouri restriction.

Before the bill had passed through Congress, immigrants from Missouri and Arkansas and from the Northern States entered Kansas, and the struggle for its possession began. On June 10 a proslavery meeting declared slavery existent in the Territory. In September immigrants from Missouri and Arkansas founded Leavenworth and Atchison, while colonists from New England sent out by the Massachusetts Emigrant Aid Society settled before the end of that year at Lawrence, Topeka, Osawatimie, and other towns. On October 7 A. H. Reeder, appointed Federal Governor of the Territory, arrived in Kansas. In the same month a force of Missourians made an unsuccessful attempt to drive the antislavery men from Lawrence. On Nov. 29, 1854, at an election held for the choice of a Territorial delegate to Congress, armed bodies of men from Missouri took possession of the polls and cast 1700 votes out of a total of 2843. On March 30, 1855, an attempt was made to elect a Territorial Legislature, and again the Missourians appeared in large numbers and elected proslavery delegates from every district. The number of proslavery votes was 5427 out of a total of 6218, though it was well known that the number of legal voters in the Territory was less than 3000. Governor Reeder set aside the returns from six of the districts and ordered new elections, which resulted in the choice of Free State delegates. The first Territorial Legislature assembled at Pawnee, July 2, 1855. The Proslavery party had a majority in this body and expelled the members who had been chosen at the second election ordered by the Governor. The statutes of Missouri were adopted in the main. Acts were passed making it a capital offense to assist slaves, in escaping either to or from the Territory, and felony to circulate antislavery publications or to deny the right to hold slaves, also requiring all voters to swear to support the Fugitive Slave Law. In July Governor Reeder broke off all relations

with the Legislature and became an active partisan of the Free State party. He was succeeded, on July 31, by Wilson Shannon, who in turn gave way to John W. Geary in September, 1856. The Free State men, meanwhile, refused to acknowledge the legality of the Territorial government, and initiated a movement for establishing a State government without an enabling act on the part of Congress. A convention of Free State men met at Topeka, Oct. 23, 1855, and adopted a State constitution prohibiting slavery after July 4, 1857, but excluding negroes from the State. An election was held December 15, and the constitution was accepted. The Proslavery party, however, abstained from participation. An election for State officers and a Legislature under this constitution was held Jan. 15, 1856, and Charles Robinson was chosen Governor. It was the object of the Free State party to avoid armed hostilities with the proslavery government of the Territory, so as not to come into conflict with the United States authorities. The attempt, however, of the Territorial sheriff to seize a prisoner at Lawrence resulted in his being shot. The leaders of the Free State men were thereupon indicted for treason and imprisoned, and on May 21 a mob of proslavery men sacked the town of Lawrence. The massacre of five men on Pottawatomie Creek by John Brown and his sons, on May 23, 1856, marked the beginning of civil war, which continued through the month of June till the United States troops suppressed the combatants. On July 4, 1856, the Free State Legislature met at Topeka, but was dispersed by the Federal forces. A second attempt on the part of the Legislature to convene at Topeka, Jan. 6, 1857, led to the arrest of its members. Gov. Robert J. Walker, who had replaced Governor Geary in March, 1857, succeeded in making terms with the Free State men, who abandoned the Topeka constitution and agreed to take part in the election for a Territorial Legislature in October, 1857. The Free State party triumphed at the polls; but the Proslavery party had in the meanwhile summoned a convention which, on Nov. 7, 1857, adopted the Lecompton Constitution (q.v.), guaranteeing the possession of all slave property already in Kansas, and submitted to the electors (December 21) that clause only which legalized slavery for all time. The provision was accepted by the Proslavery party, the Free State men declining to vote, but when the Lecompton Constitution as a whole was submitted to the people, Jan. 4, 1858, it was decisively rejected and defeated indirectly, for the second time, on August 2, at an election ordered by Congress on the so-called English Bill, a compromise measure. Immigration from the North in the meanwhile had made the Free State men overwhelmingly preponderant. In the same election in which the Lecompton Constitution was rejected for the first time, they succeeded in capturing the Territorial government. On July 5, 1859, a constitutional convention met at Wyandotte and adopted a constitution prohibiting slavery (July 27). This was ratified October 4 by a vote of 10,421 to 5530. On November 8 delegates to Congress and members of the Territorial Legislature were chosen, and on Jan. 29, 1861, Kansas was admitted into the Union.

In the Civil War Kansas sent into the field a larger number of soldiers, in proportion to its population, than any other State. The eastern part of the State lay exposed to the incursions

of Confederates from Missouri. On Aug. 21, 1863, Quantrell's guerrillas raided the town of Lawrence and killed a large number of the inhabitants. The cessation of war was followed immediately by a great influx of immigrants. Railway development began in 1868, and by 1872 there were more than 2000 miles of railway track in operation. Between 1878 and 1880, widespread excitement and dissatisfaction among the negroes of the South led to the migration of 40,000 of their number to Kansas. Prohibition became an important question in politics after 1880; the movement encountered great opposition in the . . . but by 1890 the principle was well established in the State, though in the large cities the antiliqor laws were not zealously enforced. The influence of the Farmers' Alliance (q.v.) after 1888 brought the State into conflict with the railway companies and led to the passing of antitrust laws in 1889 and 1897.

In politics Kansas has belonged for the most part to the Republicans, who failed to carry the State in only three elections from the Civil War to 1906. In 1882 the Democrats won on an anti-prohibition platform, and in 1892 and 1896 the People's party and Democrats, in fusion, elected their ticket. In the winter of 1893 the Republicans and the Populists each proceeded to organize an independent Legislature. The dispute was terminated by the intervention of the militia and the courts. The struggle of independent producers and the oil trust for the possession of the Kansas oil field led, in 1904-05, to a congressional investigation of the prevailing commercial conditions. At the same time the State Legislature declared the Standard pipe lines common carriers, fixed maximum railway charges for transporting oil, and voted to establish a State oil refinery, which was later declared unconstitutional.

Population found in Kansas prolific soil, and the growth of this party was facilitated by the passage of the new primary law which went into effect in 1908. In the primaries of that year W. R. Stubbs and Joseph L. Bristow, Insurgent Republican candidates for the nomination to the offices of Governor and United States Senator respectively, were successful . . . majorities. In the election on Nov. 3, 1908, Stubbs received 197,298 votes; Bryan, 161,086; Debs, Socialist, 12,420. Mr. Stubbs was elected Governor by a plurality of nearly 35,000. A Republican Legislature was chosen which elected Mr. Bristow to the United States Senate. The Insurgents continued to gain in strength, and in the primaries of 1910 Governor Stubbs was renominated, and the results in other offices showed almost universal success for this faction. They were equally successful in the election following, and Governor Stubbs was reelected by a majority of 16,000 votes. The election for municipal offices held in 1911 was noteworthy on account of the large number of Socialists chosen. They elected the mayor in Girard and a number of officers in Fort Scott. In this year two Democrats were chosen to succeed Republican Representatives who had died. At the election on Nov. 5, 1912, the Democrats carried the State for President. The vote was as follows: Wilson, 143,663; Roosevelt, 120,210; Taft, 74,845; Debs, 26,779. For Governor, Hodges, Democrat, received 167,540; Capper, Republican, 167,511; and the Socialist candidate, 24,804. The Legislature was returned Democratic. The gubernatorial contest was the

closest in the record of the State, an official count being necessary before determination could be reached. Judge William H. Thompson, Democrat, was chosen United States Senator by the new Legislature. In 1914 the Republicans regained a large part of their strength. In the November election Arthur Capper, Republican, defeated Governor Hodges, while the Progressive vote fell off nearly 40,000. Charles Curtis, who had defeated Senator Bristow for the Republican nomination for the Senate, was elected for the term beginning March 4, 1915. This was the first election of the State in which women participated. The following is a list of the Governors and the parties to which they belonged

TERRITORIAL

Andrew H. Reeder	1854-55
Wilson Shannon	1855-56
John W. Geary	1856-57
Robert J. Walker	1857-58
James W. Denver	1858
Samuel Medary	1858-60
Frederick P. Stanton	1860-61

STATE

Dobbs, *Kansas Voters' Manual* (Wichita, 1913); also reports of Kansas State Historical Society, State Board of Education, and other State departments.

KANSAS, UNIVERSITY OF. A State institution for higher education at Lawrence, Kans., founded in 1866. The student body of the university has increased greatly in recent years. In 1895 it had about 630 students. This number had increased in 1914 to over 2400. It is the only institution in Kansas which concerns itself with practically nothing less than higher education of the college or university type. The university was organized in 1864 and opened in 1866. It has departments of engineering, music, law, pharmacy, and a preparatory department. There is also a school of medicine. The university is supported entirely by the State. Since 1913 the university has done a large amount of public-service work for the State. It gives the time of one full professor to the Public Utilities Commission; the time of one man to the State Board of Health, in connection with water supply and sewage disposal; the time of one full professor to the development of State fish hatcheries, to the State Board of Health the time of three men in drug laboratories, two in the food laboratories, two men in the water-analysis laboratory, and the greater part of the time of one man to pathological work for the State. The university and the high schools of the State form practically one system. The faculty numbers about 200. It has an endowment of about \$150,000 and an annual appropriation of about \$500,000. The library contains about 85,000 volumes. The president in 1914 was Frank Strong, LL.D.

KANSAS CITY. The largest city in Kansas and the county seat of Wyandotte County, situated on both sides of the Kansas River, at its confluence with the Missouri, opposite and adjoining Kansas City, Mo. (Map Kansas, H 4). It is on the Chicago Great Western, the Missouri Pacific, and the Union Pacific railroads, and on two interurban electric lines which furnish freight and passenger service for a large traffic. The city covers an area of 17 square miles and is built on bluffs, plateaus, and river bottoms. It is noted for its large stock-yards, slaughterhouses, and . . . plant and, with the exception of . . . most important live-stock market in the United States. It has also important grain and flour interests, the railroad and mill elevators on the Kansas side having a grain capacity of 8,965,000 bushels, and there are railroad-car and machine shops and extensive manufactories of soap, flour, barrels, boxes, structural steel, railroad iron, car wheels, scales, foundry products, etc. The manufacturing interests represent a production valued at \$175,000,000 annually, with a capital investment of \$45,000,000, and give employment to some 15,000 persons.

The Kansas River, from the bed of which an enormous amount of high-grade building sand is produced, is spanned here by 14 railroad, vehicle, and street-car bridges. There are 20 parks and playgrounds, comprising an area of 250 acres. Of these, City Park is a remarkably beautiful natural park of 100 acres. In the business district, adjoining the well-known Wyandotte Indian Cemetery, is Huron Park, in the centre of which is situated the Carnegie library. Thirty miles of boulevards have been planned. More than one-third of these were developed in 1914, and provisions made to carry on the work under a definite annual expenditure. Kansas City is the seat of the Kansas City University (Methodist Episcopal), opened

in 1896, Western University (colored), and the State Institution for the Blind. There are two large hospitals and other smaller ones, three fine high schools, and more than 40 grade and parochial schools. The city's income in 1913 was \$3,430,000, while its payments amounted to \$3,258,000, the chief items of expense being: education, \$394,000; police department, \$82,000; fire department, \$130,000; and water-supply system, \$74,000. The city owns the water works, which represent an investment of \$2,000,000, and the electric-light plant. The municipality adopted the commission form of government in 1909. Kansas City was chartered in 1886, when the former municipalities of Armourdale, Kansas City, Wyandotte, and Armstrong were consolidated under the present name. The oldest of these cities was Wyandotte, settled by the Wyandotte Indians in 1843. White settlers came soon after, and in 1858 it received a town charter. The following year it was incorporated as a city. The place was the scene of considerable agitation during the Kansas-Nebraska trouble, the convention which drew up the Kansas constitution having met here in July, 1859. Pop., 1890, 38,316; 1900, 51,418; 1910, 82,331, including 10,344 persons of foreign birth and 9286 negroes; 1914 (U. S. est.), 94,271.

KANSAS CITY. An important railroad centre in Jackson Co., Mo., at the junction of the Missouri and Kansas rivers, on the Missouri-Kansas boundary line, 235 miles direct and 280 miles by rail west by north of St. Louis, on the Chicago and Alton, Atchison, Topeka, and Santa Fe, Burlington Route, Chicago Great Western, Chicago, Rock Island, and Pacific, Chicago, Milwaukee, and St. Paul, Kansas City Southern, Missouri, Kansas, and Texas, Missouri Pacific, Union Pacific, St. Louis and San Francisco, and Wabash railroads (Map Missouri, B 2). Within the city these roads form the Kansas City Terminal Railway Company, which operates a Belt Line some 30 miles in length and which furnishes intercommunication among them. The company is just completing a comprehensive system of freight and terminals which will cost upward of \$10,000,000.

A part of the plan includes the new Union Station, to be used in common by all of the roads and which will cost \$6,500,000. This is one of the largest union stations in America. Two other roads—the Kansas City, Mexico, and Orient and the Missouri, Oklahoma, and Gulf—are built to within a short distance of, and are planned to enter, the city. To facilitate railroad transit three great bridges have been constructed across the Missouri River, and another one has been authorized (1914) by Congress. Railroad facilities are supplemented by transportation on the Missouri River from Kansas City to St. Louis by the Kansas City-Missouri River Navigation Company. This company is owned by the citizens at large, its cash capital of \$1,200,000 having been raised by popular subscription. It operates a regular service of steamers and steel nonsinkable fire-proof barges and provides water transportation to the sea via the Missouri and Mississippi rivers to New Orleans. The street-railway system consists of 281 miles of tracks, and universal transfers are given. Kansas City is rapidly growing as an interurban railway centre, there being 8 lines in operation, with 180 miles of tracks, and numerous lines proposed.

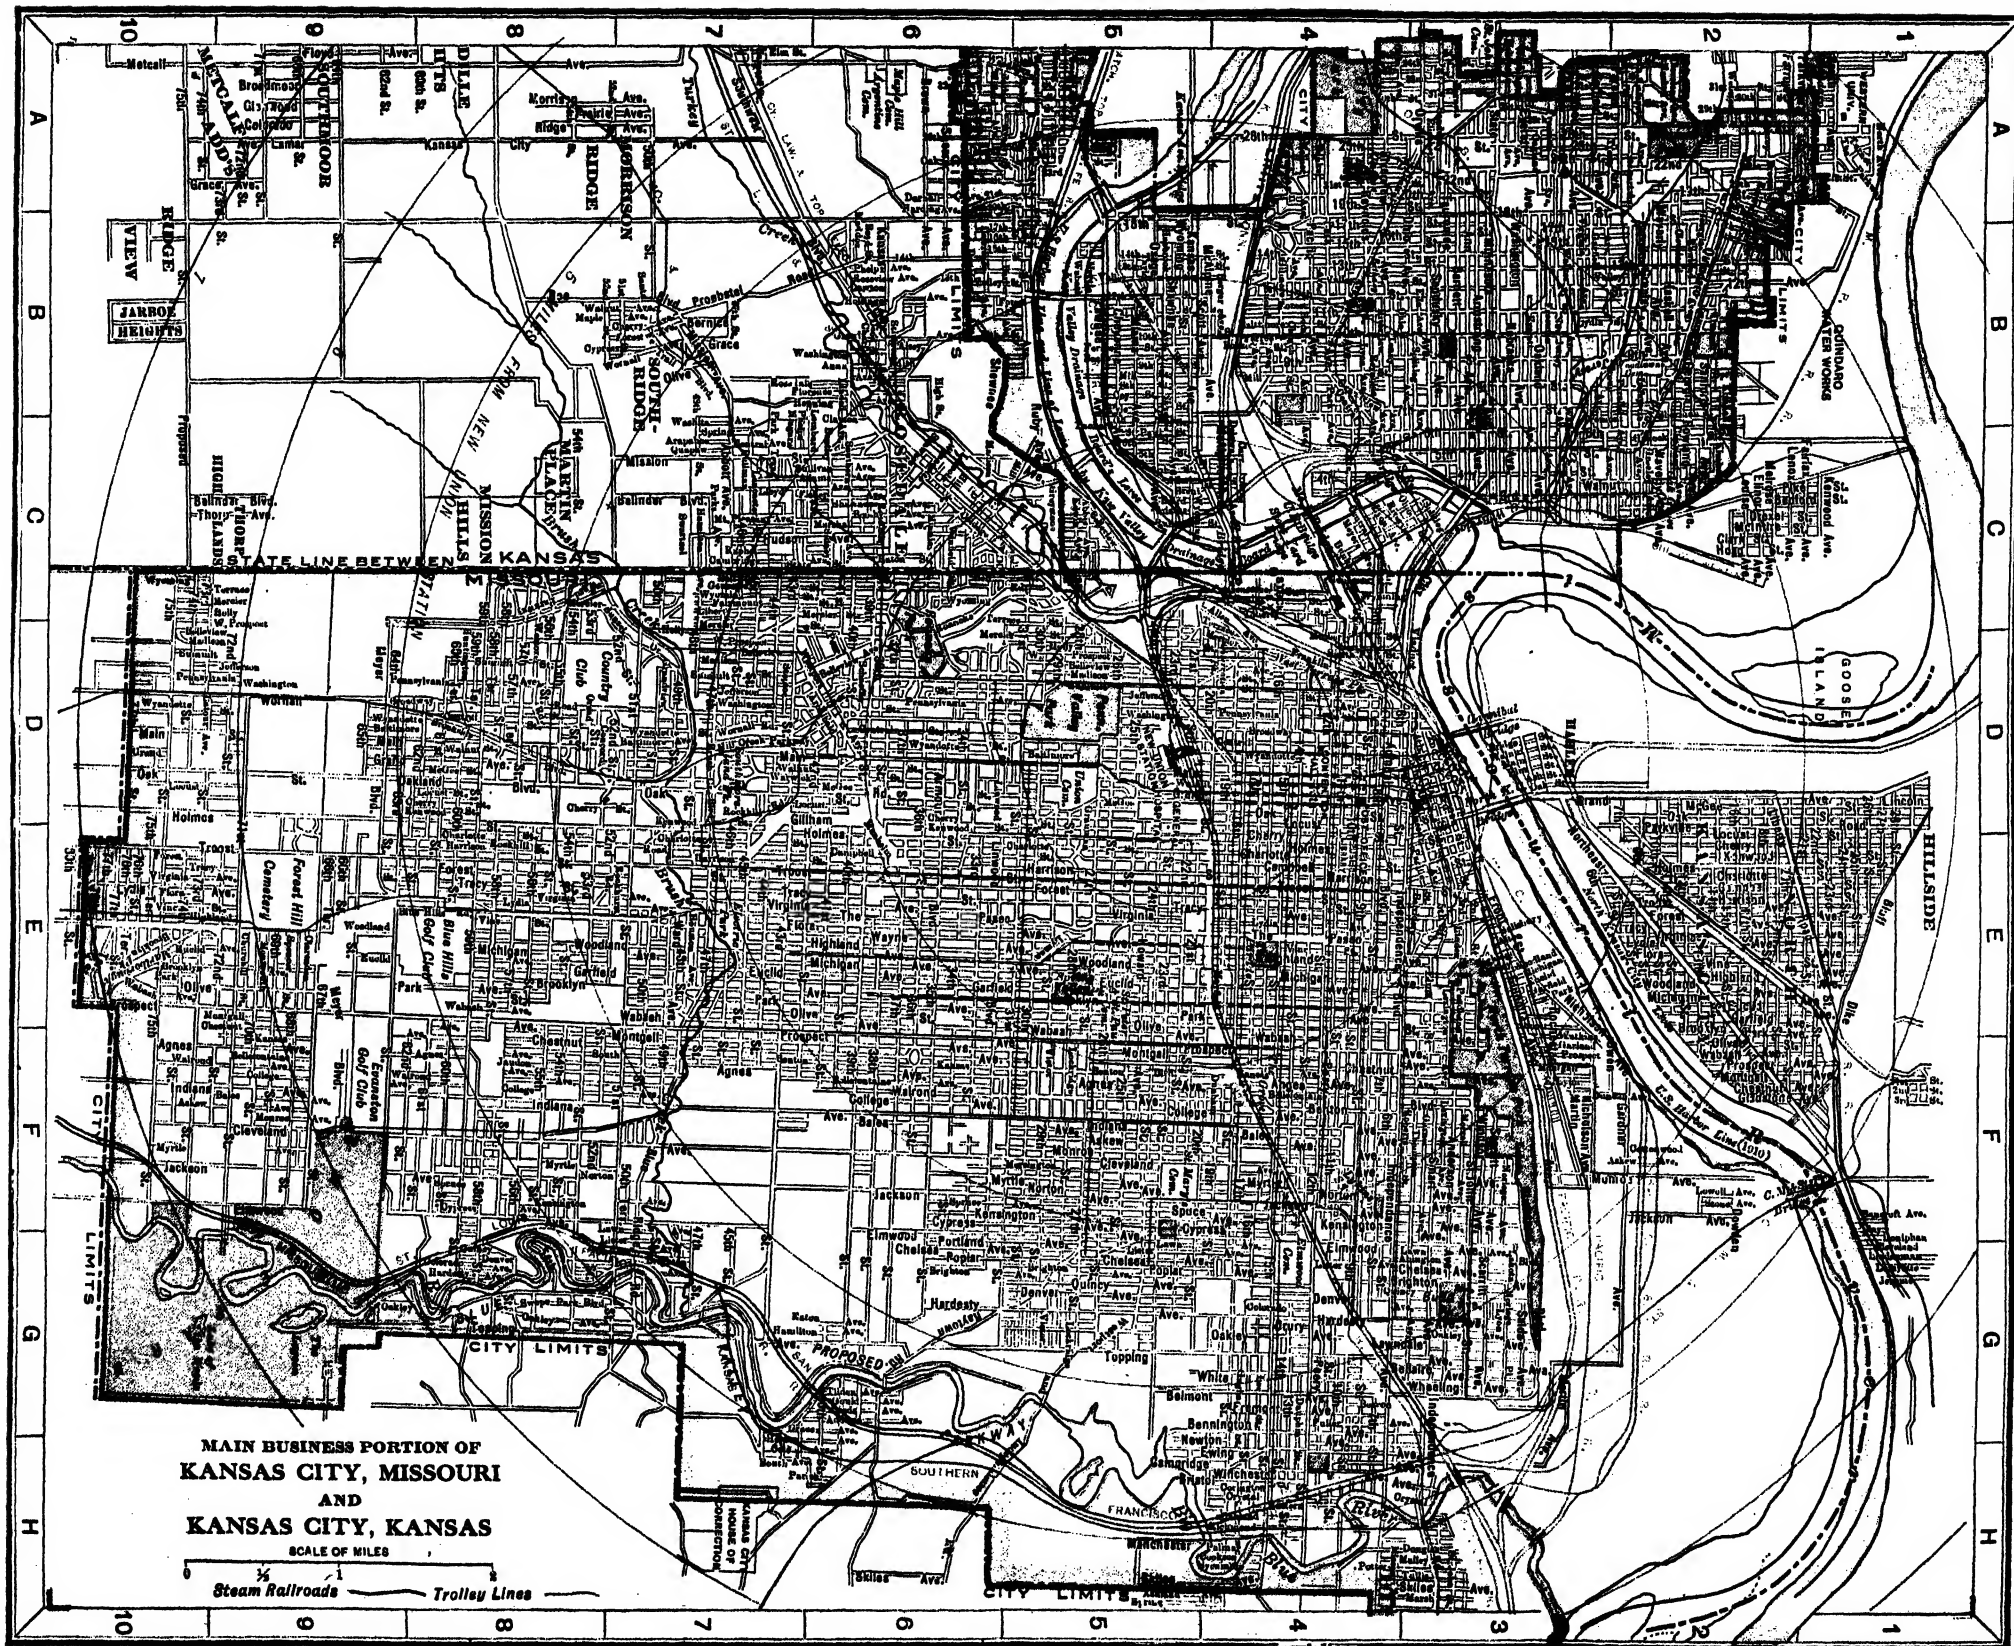

Kansas City is picturesquely situated on

three elevations. The manufacturing and wholesale districts are, in the main, on the first and are separated from the central business or retail district, which is on the next elevation, by high bluffs, the two elevations being connected by tunnels and ornamental viaducts. The residential sections are on the third and highest elevation. The bluffs admit of splendid landscape treatment and are mostly a part of the park and boulevard system, the famous Cliff Drives running along them. Out of the total street mileage (600) there are 400 miles of paved streets, the paving being largely of asphalt, brick, and macadam. Among the notable public structures are the Union Station, United States Custom House, City Hall, Court House, Board of Trade Building, Live Stock Exchange (which is the largest building devoted exclusively to live-stock offices in the world), Y. M. C. A., General Hospital, and high schools (of which latter there are six). There is also a United States Weather Bureau Station.

A comprehensive system of public schools is supplemented by institutions for special training in medicine, nursing, osteopathy, law, engineering, dentistry, music, business, dressmaking, and industrial sciences. There are a number of parochial schools and academies of high standing and numerous private and preparatory schools. The University of Missouri, the University of Kansas, William Jewell College, Park College, and Baker University are within a few hours' ride. The Board of Public Welfare operates a municipal farm, where men who are petty offenders work out their fines in the open air and where farming, truck gardening, quarrying, and building construction are taught. The board also operates a woman's reformatory and welfare loan agency, maintains a housing commission and a free legal-aid bureau, and has general oversight of charities and corrections and public dance halls. The Juvenile Court (a division of the Circuit Court) maintains a boys' hotel, a girls' industrial home, and a farm for boys (all of these for neglected or abandoned children) and administers a widows' pension fund provided by the county. The Jewish Educational Institute, the Helping Hand Institute, and the Institutional Church are effective aids in social welfare work. Kansas City's park and boulevard system is extensive. Fifty miles of parked boulevards connect 2600 acres of public parks within the city limits, the largest of which is Swope Park, containing 1331 acres. There are a number of public amusement parks.

In Kansas City is located the Federal Reserve Bank of District No. 10, which includes the States of Kansas, Nebraska, Wyoming, Colorado, one-half of New Mexico, one-half of Oklahoma, and one-fourth of Missouri. Bank clearings for 1914 were \$3,015,810,567, an increase of 174 per cent in 10 years. In monthly clearings it has ranked, during recent years, between fifth and sixth in the cities of the United States.

As a distributing point for a vast agricultural region to the west and south, Kansas City controls large wholesale interests, its jobbing trade being very extensive. In grain, live stock, and meat packing Kansas City, Mo., and its sister city Kansas City, Kans., are closely allied, the two cities forming practically one industrial and commercial community with the same street-car system, the same telephone service, and the same freight and passenger terminal. Kansas

City is the largest winter-wheat market in the world and the second market (primary) in receipts of general grain in the United States. It has elevator capacity for over 18,000,000 bushels of grain. It is the largest market and distributing point for hay in the world. Flour milling is extensive, the output for 1914 being 2,178,800 barrels. The total value of live stock marketed in 1914 was \$208,000,000, and the sale of products from packing houses in 1914 aggregated \$178,000,000. The shipments of stocker and feeder cattle during 1914 amounted to \$50,000,000. Kansas City ranks first as a mule market. It ranks first in the sale of yellow-pine lumber and third as a general lumber market, this business amounting to \$40,000,000 a year. Its coal business is extensive and amounts to \$28,000,000 a year, and its lime and cement business to \$13,500,000 a year. Greater Kansas City has approximately 1200 factories, with a cash investment of \$100,000,000. The value of the products of these factories in 1914 was \$319,000,000, and the employees numbered 40,000. The greater city ranks tenth in the value of manufactured output and is rapidly growing as a manufacturing centre.

The government is vested in a mayor, elected biennially, a bicameral council, and administrative departments as follows: board of park commissioners, appointed by the mayor; board of public works, board of public welfare, and chief and assistant chief of the fire department, appointed by the mayor, subject to the consent of the council; board of police commissioners, consisting of the mayor, ex officio, and two members appointed by the Governor of the State; a school board, chosen by popular election. The city spent in 1914, in maintenance and operation, \$3,910,549, the main items of expenditure being \$483,877 for the fire department, \$475,847 for the police department, \$1,206,869 for the water works, \$186,433 for street cleaning, \$217,243 for street lighting, \$320,357 for health conservation, \$110,993 for parks and gardens, \$140,968 for charity and corrections. In addition to the above there was spent for schools, including new buildings, \$2,856,954. The net public debt Jan. 1, 1915, was \$4,158,000, and the assessed value of all taxable property was \$189,844,810. The water-works system has cost to date approximately \$10,000,000.

The first permanent settlement at Kansas City was made about 1820 by a small company of French fur traders, headed by François Chouteau. In 1838 the town was laid out, and in 1850 it was incorporated under the name Town of Kansas. This name was changed to Kansas City in 1889. It is popularly supposed that Kansas City took its name from the State of Kansas, but that is an error. The earliest settlement was called simply Kansas, originally spelled Kan-sas, for the Kansas Indians, who were called by the French fur traders Kahns. All of the territory to the west was, at that time, known as the Nebraska Territory, and the name Kansas applying to the State came considerably later and probably from the same source as the name of the city. The first post office was established in 1845, the first telegraph entered the city Dec. 20, 1858, and the first newspaper, the *Kansas Ledger*, was printed in 1851. Ground for the first railroad in Kansas City was broken July 25, 1860. This was called the Pacific Railway, which afterward became the Missouri Pacific. The first passenger train

from the east entered Kansas City over this road on Sept. 25, 1865. Construction for the first railroad west of the Missouri River was started at Kansas City on Aug. 10, 1863, by the Kansas Pacific Railroad Company, now known as the Union Pacific Railroad Company, and the first passenger train went out of Kansas City for a short distance over this road on Nov. 28, 1864. Pop., 1860, 4418; 1870, 32,260; 1880, 55,785; 1890, 132,716; 1900, 163,752; 1910, 248,381; 1914, 281,911. Of the population, 61.8 per cent are white of native parents, 18.3 per cent white with foreign or mixed parents, and 9.5 per cent negro.

KANSAS INDIANS. A Siouan tribe. See Kaw.

KANSAS-NEBRASKA BILL. In American history, a bill passed in 1854 by the United States Congress for the organization of the Territories of Kansas and Nebraska. Upon the admission of Missouri into the Union in 1821, the vast region lying between that State and the Rocky Mountains was left unorganized. Stephen A. Douglas introduced a bill for this purpose in the House in December, 1844, and bills in the Senate in March, 1848, and December, 1848, but no action was taken by either House. Finally, in February, 1853, a bill for the organization of the "Territory of Nebraska" passed the House, but was not acted upon by the Senate. On Jan. 4, 1854, Douglas, chairman of the Senate Committee on Territories, reported from that committee a new bill, accompanied by an explanatory report. The bill contained the provisions usually embodied in bills for Territorial organization, and in addition prescribed that if the Territory, or any portion thereof, when admitted as a State or States, "shall be received into the Union with or without slavery, as their constitution may prescribe at the time of their admission." The report, however, went further and maintained that the compromise measures of 1850 had established principles which should govern all future legislation on similar subjects, and in particular had established the principle that "all questions pertaining to slavery in the Territories, and in the new States to be formed therefrom, are to be left to the decision of the people residing therein, by their appropriate representatives, to be chosen by them for that purpose." This, the so-called principle of "popular sovereignty," would, if strictly applied, obviously have nullified the essential part of the Missouri Compromise of 1820 (qv), which directly prohibited slavery north of lat. 36° 30'. On January 23 Douglas introduced a new bill, embodying an amendment which had been proposed by Senator Dixon, of Kentucky, on the 16th. This new bill provided that the Territory was to be divided into two parts to be called Kansas and Nebraska, and stated specifically that the slavery restriction of the Missouri Compromise, "being inconsistent with the principle of non-intervention by Congress with slavery in the States and Territories, as recognized by the legislation of 1850, commonly called the compromise measures, is hereby declared inoperative and void, it being the true intent and meaning of this act not to legislate slavery into any Territory or State, nor to exclude it therefrom, but to leave the people thereof perfectly free to form and regulate their domestic institutions in their own way, subject only to the Constitution of the United States." The bill occasioned a

prolonged and acrimonious debate, centring upon the abrogation of the slavery restriction of the Missouri Compromise, but finally passed the Senate on March 3 by a vote of 37 to 14, despite the vigorous opposition of such men as Sumner, Chase, Everett, Wade, Bell, and Seward. After a long debate the bill, slightly amended, passed the House, on May 8, by a vote of 113 to 100. The Senate agreed to the House amendments on the night of May 22, and the bill became a law, by President Pierce's signature, on May 30. The combined Territories, thus organized comprised a region which now constitutes Kansas, Nebraska, Montana, North Dakota, South Dakota, Wyoming, and part of Colorado—a total area of nearly 500,000 square miles.

The Kansas-Nebraska Bill is chiefly significant in American history from its having caused a renewal of the contest between the North and the South over the slavery question, which had been regarded as settled, for many years at least, by the compromise measures of 1820 and 1850. It stirred the passions of the people of both sections, gave rise to bitter and protracted controversies both in and out of Congress, and doubtless considerably hastened a resort to arms. The historian Rhodes has given the following estimate of the results of the passage of the bill: "It is safe to say that in the scope and consequences of the Kansas-Nebraska Act it was the most momentous measure that passed Congress from the day that the Senators and Representatives first met to the outbreak of the Civil War. It sealed the doom of the Whig party, it caused the formation of the Republican party on the principle of no extension of slavery, it roused Lincoln and gave a bent to his great political ambition. It made the Fugitive Slave Law a dead letter at the North, it caused the Germans to become Republicans, it lost the Democrats their hold on New England; it made the Northwest Republican; it led to the downfall of the Democratic party." Consult: A. B. Hart, *Documents Relating to the Kansas-Nebraska Act, 1854* (New York, 1894), Rhodes, *History of the United States from the Compromise of 1850*, vol. i (ib., 1896), Von Holst, *Constitutional and Political History of the United States*, vol. iv (Chicago, 1899), Smith, *Parties and Slavery*, in the "American Nation Series" (New York, 1906), Burgess, *The Middle Period 1817-1858*, in the "American History Series" (ib., 1908). The text of the bill may be found in the *United States Statutes at Large*, vol. x.

KANSAS RIVER. A river of Kansas, formed by the confluence of the Smoky Hill and Republican rivers in Geary County, whence it flows generally eastward and empties into the Missouri River at Kansas City (Map: Kansas, F 4). The basin comprises the richest portion of the State; most of it is under a high state of cultivation and produces a large variety of crops. The river's banks are sandy, and the channel generally is close to one shore or the other. The principal tributary is the Blue River, which rises in southeastern Nebraska, flows southeast and south, and joins the Kansas at Manhattan. Other tributaries are the Solomon and Saline. The total length including the Smoky Hill branch (which heads in eastern Colorado) is about 650 miles.

KANSAS STATE AGRICULTURAL COLLEGE. A coeducational institution of learn-

ing established in 1863 at Manhattan, Kans., under the provisions of the Congressional Land Grant Act of 1862. The college owns 748 acres of land near Manhattan, valued at \$185,000, and leases 522 acres in addition. The greater part of these grounds is used for experimental work and permanent orchard, forest, and garden plantations. The college also has at Hays, Kans., a branch agricultural experiment station with about 3600 acres of land. It also has branch stations at Garden City and Colby with 320 acres of land each, and at Dodge City and Tribune with 160 acres each, and leases a number of other tracts for demonstrational purposes. Four-year college courses are offered in agriculture; mechanical, civil and highway, electrical, and agricultural engineering; architecture; home economics; and general science. These courses lead to the degree of bachelor of science. A four-year course in veterinary medicine leading to the degree of doctor of veterinary medicine is given. A secondary school of agriculture is maintained which offers three-year courses in agriculture, home economics, and mechanic arts. Several short courses in home economics and agriculture are offered. In 1914 there were 190 on the board of instruction, the total attendance was 3027, including 64 graduates, 1598 in college courses, 370 in the summer school, and 658 in the school of agriculture. The endowment was \$491,746, and the income, \$871,145; the value of the buildings, \$965,974, and the total value of the college property, \$1,980,000. The library contained 47,400 bound volumes and 25,000 pamphlets. The college publishes a weekly, the *Kansas Industrialist*, and several series of bulletins. The president in 1914 was Henry J. Waters, LL.D.

KANSAS WESLEYAN UNIVERSITY. An institution for higher education, founded in 1885 at Salina, Kans., under the auspices of the Methodist Episcopal church. The institution opened for students in 1886. It maintains a college department, academic, education, elocutionary, and art departments, a college of music, and a college of commerce. The college of liberal arts offers classical, scientific, philosophical, and literary courses. The campus comprises 28 acres, and the principal buildings are the Administration Building, the Carnegie Science Hall, the Ladies' Dormitory, and Roach Home, the president's house. There are also laboratories, museums, and other buildings. The productive endowment of the university in 1914 was about \$105,000. The total enrollment in all departments was about 1400 students, and of these about 300 were in the academic and college departments. In 1915 a campaign to raise an endowment of \$500,000 was in progress. The library contains about 12,000 volumes. The president in 1914 was Rev. Robert P. Smith.

KANSU, kán'sŭ. The most westerly of the northern tier of Chinese provinces. It lies west of Shensi (q.v.), of which it originally formed a part, and is bounded on the north by the territory Ordos Mongols, and the Desert of Gobi, on the south by Szechwan, and on the southwest by Koko-nor (Map: China, H 4). From the time of K'ien-lung (1757) until the Mohammedan rebellion of 1865, its jurisdiction extended westward as far as Ili, and included the T'ien-shan Pe-lu, a distance of about 2200 miles from Lanchowfu, the capital of the province. Since the suppression of the rebellion all this

Central Asian territory has been formed into a new dominion known as *Sinkiang*, or the New Frontier, and this new province forms the western boundary of Kansu. Its area is estimated to be 125,400 square miles, and its population 5,000,000.

It is in the main mountainous, but a few fertile valleys are found where good crops are raised. From Lanchowfu westward level ground begins, and the narrow belt which forms the departments of Kanchowfu and Suchowfu is very fertile and produces much grain. In the 18 miles from Suchow to the fortified gate of the Great Wall, called Kia-yu Kwan (10 miles beyond which the wall comes to an end), agriculture becomes less general. Tobacco is the finest product of the province, which, however, is rich in minerals, and rivals Shansi in both the richness and the extent of its coal fields. It takes from the eastern provinces cotton and wheat and sends back tobacco (its own product), medicines, furs, skins, wool, felt, cattle, sheep, and mules, mostly the product of Koko-nor and the Mongol territory. The province derives its name from the first syllables of Kanchow and Suchow. Its export trade consists mainly of sheep and camel wool, which is sent by way of Mongolia to the city of Tientsin on the coast. A small amount of foreign goods comes into the province by way of Hankow. The opium poppy was formerly extensively grown and still is, but the authorities are taking strenuous measures against its cultivation.

KANT, *kánt*, IMMANUEL (1724–1804). One of the greatest and most influential German metaphysicians. He was the son of a saddler, of Scottish descent, and was born at Königsberg, April 22, 1724. He studied philosophy, mathematics, physics, theology, and other subjects at the university of his native town and, after spending nine years as a private tutor in several families, took his degree at Königsberg in 1755 and began to deliver lectures as privat-docent on logic, metaphysics, physics, politics, and mathematics. Later he added courses on physical geography, anthropology, natural theology, and pedagogy, and one year he lectured on mineralogy. In 1762 he was offered the chair of poetry at Königsberg, but, though in some need of the salary, he wisely declined because he was not fitted for the place. The next year he obtained a position of assistant librarian on a salary of 62 thalers, and, though he had now become well known and greatly esteemed for his scholarship, he did not obtain a professorship until 1770, when he was appointed to the chair of logic and metaphysics, as an inducement to keep him in Königsberg, now that he had received calls to Erlangen and Jena. In 1778 he had a call to Halle, which he declined, to remain at Königsberg till his death, Feb 12, 1804. Kant's private life was uneventful. He was a bachelor and never traveled. He was a man of unimpeachable veracity and honor, austere in his principles of morality, though kindly and courteous in manner, a bold and fearless advocate of political liberty, and a firm believer in human progress. He sympathized with the American Colonies in their struggle against England, and with the French people in their revolt against monarchical abuses. As a lecturer he was popular. Herder says that his lectures were characterized by deep thought, wit, and humor. They were said to have been

much more dogmatic in tone than his writings and to have had moral and religious edification in mind as well as the imparting of information.

In philosophy he developed slowly. His views did not seem to take anything like final form till he wrote his greatest work, *Kritik der reinen Vernunft*, which was first published in 1781. By this time he had effected in philosophy what he called a Copernican revolution. "Our suggestion," he writes, "is similar to that of Copernicus in astronomy, who, finding it impossible to explain the movements of the heavenly bodies on the supposition that they turned round the spectator, tried whether he might not succeed better by supposing the spectator to revolve and the stars to remain at rest. Let us make a similar experiment in metaphysics with *perception*. If it were really necessary for our perception to conform to the nature of the object, I do not see how we could know anything of it a priori; but if the sensible object must conform to the constitution of our faculty of perception, I see no difficulty in the matter. Perception, however, can become knowledge only if it is related in some way to the object which it determines. Now here again I may suppose, either that the *conceptions* through which I effect that determination conform to objects, or that objects, in other words the experience in which alone objects are known, conform to conceptions. In the former case I fall into the same perplexity as before, and fail to explain how such conceptions can be known a priori. In the latter case the outlook is more hopeful. For experience is itself a mode of knowledge which implies intelligence, and intelligence has a rule of its own, which must be an a priori condition of all knowledge of objects presented to it. To this rule, as expressed in a priori conceptions, all objects of experience must necessarily conform, and with it they must agree" (Preface, trans by Watson). This passage shows that Kant started with the assumption that there is a priori synthetic knowledge, i.e., as he defined it, knowledge of universal and necessary truths. (See ANALYTIC JUDGMENT, A PRIORI) His mathematical training had taught him to regard the truths of mathematics as universal and necessary, while Hume had convinced him that any merely dogmatic assumption of universality and necessity was unwarranted. His problem now was how to escape dogmatism and yet justify the making of universal synthetic propositions, such as that two and two make four. This problem he solved to his satisfaction by making the world of experience in part a product of the intelligence that passes judgments. Space and time are forms of perception, i.e., the frameworks within one of which, at least, objects must be arranged before they can be perceived. They are conditions of the possibility of phenomena. This they could not be unless they were imposed upon phenomena by the perceiving agent. But not only must objects be perceived in order to be known, they must be conceived also. This act of conception is warranted only if objects, before being presented in experience, are worked into order by the same intelligence that in judgment unconditionally predicates this order of them. The forms of perception are space and time; the order produced by intellectual spontaneity is constituted by four great principles of synthesis—quantity, quality, relation, and modality—and each of these appears in three-

fold form. Hence we have 12 categories or pure conceptions of the understanding, viz.: (1) unity, (2) plurality, and (3) totality; (4) reality, (5) negation, and (6) limitation; (7) inherence and subsistence, (8) causality and dependence, and (9) community; (10) possibility and impossibility, (11) existence and nonexistence, and (12) necessity and contingency. These categories are discovered by examination of the functions of unity in judgment, i.e., by examination of the different ways in which the mind, in judging, predicates unity or order of the world of experience. Now the fundamental contention of Kant is that these categories must be principles employed in the construction of the world of experience if they are to be legitimately employed in the cognition of that world. This is the idealistic element in his system; the world we know is, in its form, a perceptual and intellectual creation, the work of the mind. He calls this idealism transcendental, i.e., it relates only to the conditions of the possibility of knowledge; it is not transcendent, i.e., it does not relate to any existences lying behind experience and therefore beyond the reach of knowledge. And yet, though the system is transcendental idealism, it is an empirical realism, i.e., it maintains that the real world of *experience* is a world *really* constituted in accordance with principles which science discovers. Thus, time is empirically real because the world *we know* is really a time world. But along with this empirical realism and transcendental idealism there goes hand in hand an agnosticism which denies the possibility of knowing anything whatever of another world of being—the world of things-in-themselves. These things-in-themselves affect our sensibility and thus give rise to sensations, which fall into the forms of perception and are organized by the categories into the world of experience. But what these things-in-themselves are we can never know. If reason attempts to make any assertion with regard to them, it falls into hopeless inconsistencies and inextricable confusions, paralogisms, and antinomies. And yet reason is ever striving to go beyond experience. The world of experience is never complete, it is a *progressus* and a *regressus ad infinitum*. But reason craves completeness. It has ideas which find no embodiment in experience, because “they demand a certain completeness which is beyond the reach of all possible empirical knowledge.” But neither may these ideas be thought to find embodiment in things-in-themselves, for in this case judgment would transcend its proper experiential limits. They are not empirically or transcendently real, but neither are they transcendently ideal, for they are not conditions of the . . . of knowledge. Thus excluded from . . . classes, Kant finds a function for them as *regulative principles* for the conduct of the understanding in its search for knowledge, telling us not to be satisfied in our attempts to reduce experience to order unless we should *complete* the systematization. But complete it we never can. The ideas are warnings “not to regard any single determination relating to the existence of things as ultimate.” But we may not substantiate the ideas by claiming that the completeness unattainable in experience is actual beyond experience. This would be transcendental subreption, and though natural and difficult to avoid, it may be under-

stood to be fallacious when it is seen that thus a *regulative* principle is changed into a *constitutive* principle. There are three such ideas—that of the absolute or unconditioned unity of the thinking subject, that of the absolute unity of the series of conditions of phenomena, and that of the absolute unity of the condition of all objects of thought whatever. The last, when substantiated and individualized, become the transcendental ideal, i.e., the idea of a totality of reality (*omnitudo realitatis*), an *ens realissimum*, *ens originarium*, *ens summum*, *ens entium*, all of which are epithets given by scholastic theology to God. “By such a use of the transcendental idea, however, theology oversteps limits set to it by its very nature.” All traditional proofs for the being of God, which Kant reduces to three—the ontological, the cosmological, and the physico-theological proofs (see GOD)—he criticizes as fallacious: “The Supreme Being is for purely speculative reason a mere ideal, but still a *perfectly faultless ideal*, which completes and crowns the whole of human knowledge. And if it should turn out that there is a moral theology, which is able to supply what is deficient in speculative theology, we should then find that transcendental theology is no longer problematic, but is indispensable in the determination of the conception of a Supreme Being” (Watson’s trans.). In his ethical works Kant does finally arrive at such a moral theology as the final postulate of morality.

His ethics is frequently called rigoristic, i.e., it refuses to : . . . (1) moral value of natural inclinat . . . is good but the good will, and the good will is the will to do an act because it is in accordance with duty. “Duty is the obligation to act from reverence for law.” The law is that “I must act in such a way that I can at the same time will that my maxim should become a universal law.” The obligation to obey this law is unconditional. The moral imperative is categorical. There are no *ifs* and *buts* in the case. It does not even depend upon the peculiar constitution of human nature. It is a necessary law for all rational beings, and as such a priori. “Its foundation is this, that rational nature exists as an end in itself.” Man thus imposes upon himself the universal system of laws to which he is subject, and “he is only under obligation to act in conformity with his own will.” This constitutes the autonomy of the will. But this autonomy is not correctly conceived unless correlated with the conception of a kingdom of ends, i.e., the systematic combination of different rational beings through the medium of common laws. The autonomy of any will is thus not capricious, but rational, its rationality consists in its ordered and systematic connection with other autonomous wills. “Morality, then, consists in the relation of all action to the system of laws which alone makes possible a kingdom of ends.” This whole conception of the categorical imperative is possible, says Kant, only if man’s will is not a mere phenomenon conditioned by causal laws. Freedom is thus a postulate of the moral order. We do not *know* ourselves to be free; for knowledge is possible only within the limit of experience. But we must *think* ourselves as free. “In thinking itself into the intelligible world, practical reason does not transcend its proper limits. as it would do if it tried to know itself directly

by means of perception. In so thinking itself, reason merely conceives of itself negatively as *not* belonging to the world of sense." "There is but a single point in which it is positive, viz., in the thought that freedom, though it is a negative determination, is yet bound up with a positive faculty, and, indeed, with a causality of reason which is called will."

This free causality of the will cannot be explained, for "we can explain nothing but that which we can reduce to laws, the object of which can be presented in a possible experience." "While, therefore, it is true that we cannot comprehend the practical unconditioned necessity of the moral imperative, it is also true that we can comprehend its incomprehensibility; and this is all that can fairly be demanded of a philosophy which seeks to reach the principles which determine the limits of human reason." But virtue or action in accordance with duty, though the supreme, is "not the whole or complete good which finite, rational beings desire to obtain. The complete good includes happiness." This involves "the union of virtue and happiness in the same person." But "the connection of virtue and happiness in a system of nature, which is merely an object of the senses, cannot be other than contingent, and therefore it cannot be established in the way required in the conception of the highest good." Such a union is possible only if there is "perfect harmony of the disposition with the moral law," but of this harmony "no rational being existing in the world of sense is capable at any moment of his life." Yet "such a harmony must be possible, for it is implied in the command to promote that object", hence we must assume "an infinite progress towards perfect harmony with the moral law," and this involves immortality as a postulate of morality. But "the moral law leads us to postulate not only the immortality of the soul, but the existence of God," for there must be a cause "able to connect happiness and morality in exact harmony with each other," and God is the only conceivable cause of this kind. Thus, the postulates of morality are God, freedom, and immortality. All this reasoning involves the assumption of two separate worlds—the world of sense, of phenomena, and the world of intelligible but unknowable realities. But Kant was not content to rest in this absolute separation. He tries to bring these two worlds together. The beauty and the seeming purposiveness of nature make it probable that mechanism, the principle of the world of experience as governed by the conception of cause, and teleology, the principle of the world of intelligible realities as a kingdom of ends, are not incompatible. They may be united in a single principle, which, however, because of the limitations of our reason, we cannot formulate.

It now remains to say something of Kant's place in the development of science. We have already seen that Kant's lectures were not confined to philosophy. Indeed, his services in the theory of science were probably as great as in the realm of philosophy. It is only necessary to refer to Kant's anticipation of Laplace (q.v.) in the view that the solar system has developed from a primitive gaseous material with rotatory motion. Kant went further and suggested that the fixed stars might be systems, like the solar system, which have arisen in the same way. This theory was worked out in the *Allgemeine*

Naturgeschichte und Theorie des Himmels (1755) 44 years before the appearance of the *Mécanique céleste* (1799–1825) of Laplace.

In addition to the works mentioned by name above, Kant wrote numerous books and essays, among the most important of which are the following: *De Mundi Sensibilis atque Intelligibilis Forma et Principis* (1770); *Prolegomena zu einer jeden künftigen Metaphysik, die als Wissenschaft vordringen können* (1783); *Grundlegung zur Metaphysik der Sitten* (1785); *Metaphysische Anfangsgründe der Naturwissenschaft* (1786); *Kritik der praktischen Vernunft* (1788); *Kritik der Urtheilskraft* (1790) (these last two works, together with the *Kritik der reinen Vernunft*, contain the gist of Kant's whole philosophy); *Die Religion innerhalb der Grenzen der blossen Vernunft* (1793); *Metaphysik der Sitten* (1797). In addition there are works on physical geography, neural pathology, æsthetics, ethnography, anthropology, history, criticism, meteorology, politics, logic, and pedagogy. Kant's complete works were edited by K. Rosenkranz and F. W. Schubert (12 vols., Leipzig, 1838–42), by G. Hartenstein (8 vols., ib., 1867–69), and by Kirchmann (8 vols., Berlin, 1868–73). A superb edition, published under the auspices of the Royal Prussian Academy of Sciences, began to appear in 1900 (Berlin). Among English translations of Kant's works mention should be made of the *Critique of Pure Reason*, translated by J. M. D. Meiklejohn (London, 1854) and by Max Müller (2d ed., ib., 1896); *Prolegomena and Metaphysical Foundations of Natural Science*, translated by E. B. Bax (ib., 1883, 1909); *Philosophy of Law* (Edinburgh, 1887) and *Principles of Politics* (ib., 1891), both translated by W. Hastie; *Critique of Judgment*, translated by J. H. Bernard (London, 1892); *The Philosophy of Kant as Contained in Extracts from his own Writings*, selected and translated by J. Watson (New York, 1894, new ed., 1908); *Critique of Practical Reason, and Other Works on the Theory of Ethics*, translated by T. K. Abbott (London, 1898, 6th ed., 1909); *Cosmogony*, translated by W. Hastie (ib., 1900); *Dreams of a Spirit Seer*, translated by E. F. Goerwitz (ib., 1900); *Educational Theory of Kant*, translated by E. F. Buchner (Philadelphia, 1904); *Kant's Critique of Æsthetic Judgment*, translated, with seven introductory essays, by J. C. Meredith (Oxford, 1911); *Eternal Peace, and Other International Essays*, translated by W. Hastie (Boston, 1914).

Bibliography. J. C. Fichte, "Kant's System of Transcendentalism," in *New Exposition of the Science of Knowledge* (New York, 1869); J. P. Mahaffy and J. H. Bernard, *Kant's Critical Philosophy for English Readers* (London, 1872–74; new ed., 2 vols., 1889); R. Adamson, *On the Philosophy of Kant* (Edinburgh, 1879); J. Watson, *Kant and his English Critics* (Glasgow, 1881); J. H. Stirling, *Text-Book to Kant* (Edinburgh, 1881); H. Renouvier, *Critique de la doctrine de Kant* (Paris, 1906); Borowski, *Immanuel Kant, ein Lebensbild* (Halle, 1907); H. A. Prichard, *Kant's Theory of Knowledge* (New York, 1909); R. M. Wenley, *Kant and his Philosophical Revolution* (ib., 1911); H. S. Chamberlain, *Immanuel Kant, a Study and a Comparison with Goethe, Leonardo da Vinci, Bruno, Plato, and Descartes*, translated from the German by Lord Redesdale (ib., 1914). For bibliography consult Adickes, *Bibliography of Writing by Kant and on Kant* which have appeared in Germany up to the End of 1887," in the *Philosophical Review* (Boston, 1892 et seq.). *Kant-Studien*, a periodical devoted to the study of Kant, has been irregularly issued since 1897.

KANTEMIŔ, kân'tyê-mêr'. A noble family of Moldavia, three of whose members attained the dignity of Prince of that country. The most celebrated was DEMETRIUS KANTEMIŔ (1673-1723), who became Prince in 1710. He entered into an alliance with Peter the Great of Russia for the purpose of throwing off the Turkish supremacy. Peter's unfortunate campaign beyond the Pruth (1711) compelled Demetrius to flee to Russia, where he was treated with the most distinguished honor and played a part in the intellectual life of the capital. He was one of the founders of the St. Petersburg Academy and the author of several works on Moldavian and Turkish history, among which are *Descriptio Moldaviae*, *Hronicul Romino-Moldovlahilor* (incomplete), and *Historia de Ortu et Defectione Imperii Turcici*. His son was the well-known Russian satirist Antioch Kantemir (q.v.).

KANTEMIŔ, ANTIOKH DMITRIYEVITCH (1708-44). A Russian satirical poet and diplomatist. Of Moldavian descent, he was born at Constantinople, was brought up in Russia, and at an early age became an officer of the Preobrazhenski Regiment, owing to the special interest Peter the Great took in him. At the age of 23 he was sent as Minister to Great Britain and in 1738 to France, where he met Maupertuis, Montesquieu, and other writers. A man of considerable erudition and wide culture, he was a great favorite at his diplomatic posts. An ardent lover of the classics, he made numerous translations from Horace, Juvenal, Anacreon, and others, and himself wrote satires, in which, like Horace, he lashes the vices and shortcomings of contemporary society, but not individuals. His best-known satire, *To my Intellect*, derides the stupidity of striving after the superficial gloss of external civilization and attacks the obscurantists of the day. With Kantemir begins the pseudoclassical period of Russian literature, and his labors in the way of versification have an historical value, as his verses, though a great improvement on their predecessors, still keep the syllabic metre, utterly foreign to the spirit of Russian, which knows no long and short vowels, but stress accent only. His works were published in 1762. His *Satires* first appeared in a French translation (London, 1749), from which was made the German translation by Spilcker (Berlin, 1752). The best edition is by Yefremov (St. Petersburg, 1867), with introduction by Stoyunin.

KANURIS, kâ-nûrêz. Sudanese Negroes

dominant in Bornu and Kanem, Chad Basin region, Central Africa. They are slightly mixed with Hamites of the desert and have negroid features, while their speech is modified by Tibbu. There are three and a half millions of them, divided into many tribes. All these are Mohammedanized. They are described as melancholy, dejected, and brutal. With their broad faces, wide nostrils, and large bones, the Kanuris make a far less agreeable impression than the Hausas, especially as the women are among the ugliest in all Negroland. See SUDAN, *Ethnology*.

KAOLIANG. See ANDROPOGON.

KAOLIN, kâ'ô-lîn (from Chin. *Kaoling*, high ridge, the name of a hill in China, where the clay is found). A term properly applied to white-burning residual clays, but incorrectly and loosely used by some to include all white-burning clays. Kaolin proper is formed primarily by the weathering of granite, or pegmatite; less frequently from schist, feldspathic quartzite, and even limestone. In all except the last, the change involves the decomposition of feldspar, resulting directly or indirectly in the formation of some hydrous aluminium silicate, often identifiable as kaolinite. Kaolin is a soft clay, of variable but usually low plasticity, burning to a pure white color, and of high refractoriness. The deposits usually are worked by open cuts or shallow shafts, and the crude clay is prepared for the market by freeing it of quartz and other impurities by a washing process. An analysis of washed kaolin from North Carolina shows the following composition in per cent: SiO₂, 45.70; Al₂O₃, 40.61; Fe₂O₃, 1.39; CaO, 0.45; MgO, 0.09. Na₂O, K₂O, 2.82. H₂O, 8.98; moisture, 0.35. The chief use of kaolin is for the manufacture of white earthenware and porcelain and also wall tile, for which purpose it is mixed with varying amounts of quartz, feldspar, and ball clay (q.v.). For filling paper the kaolin must be white in its unburned condition, sufficiently plastic, and free from grit. In the United States kaolin is mined in several of the Eastern States, including Pennsylvania, Delaware, North Carolina, and Georgia. The most productive deposits are those of Cornwall, England. In 1912 the United States output of kaolin was 25,852 short tons, valued at \$220,747. The production of paper clay in 1912 was 119,857 short tons, valued at \$522,924, but all of this is not true kaolin. The total imports into the United States in the same year were 278,276 tons, valued at \$1,629,105, mostly from England, France, and Germany. Consult Ries, *Clays, Occurrence, Properties, and Uses* (New York, 1908), and id., "Origin of Kaolin," in *Transactions of the American Ceramic Society*, vol. xiii (Columbus, Ohio, 1911). See CLAY.

KAOLINITE, kâ'ô-lîn-îl. A hydrated aluminium silicate which forms the chief constituent of clay. See CLAY.

KAPELLMEISTER, kâ-pêl'mts-têr (Ger., chapelmaster). The director of music and choir trainer in a royal or ducal palace. The position was regarded as one of much honor and of considerable importance. To-day the name "kapellmeister" is used only as synonymous with conductor (q.v.).

KAPILA, kâ'pê-lâ. An ancient Hindu philosopher renowned in Sanskrit literature as the founder of the Sankhya system of rationalistic philosophy. According to Buddhistic legends he must have lived before the time of Buddha, or

not later than the middle of the sixth century B.C. His name is closely associated with Kapilavastu, in northeastern India, where Buddha was born. There seems to be no just reason for doubting the reality of Kapila's existence, as has been done by some, even though the so-called *Sāmkhyasūtras* be considered to be of much later origin than his time. His teaching was entirely dualistic, admitting only two things, both without beginning and end, the realm of spirit and of matter. For Kapila as a historic personage, consult Garbe, *Sāmkhya und Yoga* (Strassburg, 1896), and the edition of sutras ascribed to Kapila, together with the commentary by Garbe, *Sāmkhya-pravacana-bhāṣya* (Cambridge, Mass., 1895). Consult Macdonell, *History of Sanskrit Literature* (London, 1913). See SANKHYA.

KAPNIST, káp'nist, VASILII YAKOVLEVITCH (1756-1823). A Russian poet, born in Obukhovka. He was a friend of Derzhavin (qv) and a member of the Russian Academy. Besides some unimportant satires, odes, and epigrams, he wrote *Yabeda* (Pettifoggery), a comedy dealing with the abuses of Russian justice, written in alexandrines. The play had an immediate success, and many of its characters and lines are proverbial in modern Russia. It was for a short time suppressed by Czar Paul, and Kapnist narrowly escaped Siberian exile.

KAPODISTRIAS. President of the Greek Republic. See CAPO D'ISTRIA.

KAPOK'. A Javanese fibre plant. This name is applied to several species of trees belonging to the family Bombacaceæ, formerly included in the Malvaceæ, the most common ones being species of *Cecba* and *Bombax*. In Java *Cecba pentandra* is the most common species. In Africa in addition to this species several species of *Bombax* yield kapok. The fibre is silky, but is not adapted to spinning. Its principal use is for filling pillows, cushions, mattresses, and similar articles, the exports from Java being about 40,000 bales annually. The unusual elasticity of the fibre prevents its permanent matting when used as a filler. See ERIODENDRON.

KAPOSI, kô'pô-shi, MORITZ (1837-1902). An Austrian physician and dermatologist, born at Kaposvár. He was educated at the University of Vienna (1856-61), where he became docent in dermatology and syphilis (1866), and was associated with Hebra in his clinic (1866-71) and succeeded him in 1881 as its head. His great work in collaboration with Hebra was *Handbuch der Hautkrankheiten* (1872-76). His own works on cutaneous diseases include: *Die Syphilis der Schleimhaut der Mund-, Nasen- und Rachenhöhle* (1866); *Die Syphilis der Haut und der angrenzenden Schleimhäute* (1872-75); *Pathologie und Therapie der Hautkrankheiten* (5th ed., 1899); *Pathologie und Therapie der Syphilis* (1891); *Handatlas der Hautkrankheiten* (1898-1900).

KAPOSVÁR, kô'pôsh-vár. The capital of Somogy County, southwest Hungary, 28 miles northwest of Fünfkirchen (Map: Austria-Hungary, E 3). It is a garrison town, is well built, has a Romanesque cathedral, a convent, a state Gymnasium, a county hall, and a hospital. Cement works, a sugar refinery, wine presses, brick kilns, and a tobacco factory are its chief industrial establishments, while stock raising is largely carried on in the neighborhood. It is an important horse market. Pop., 1900, 18,218; 1910, 24,124.

KAPP, káp, FRIEDRICH (1824-84). A German-American publicist and historian, born at Hamm, Westphalia. He studied law at the universities of Heidelberg and Berlin and practiced in the courts of Hamm and Unna until 1848. Engaging in the revolutionary rising at Frankfurt in September of that year, he was forced to take refuge in Paris. Later he went to Geneva and in 1850 came to New York, where he practiced his profession until his return to Germany in 1870. He acquired great influence among the German-speaking people of New York, became interested in the slavery question, and was a Republican presidential elector in 1860. As a result of his efforts to protect immigrants, he was appointed one of the Emigration Commissioners of New York in 1867 and wrote a book, *Immigration* (1870), showing the economic value of foreign immigration. After his return to Germany he was in 1872 elected a member of the Reichstag by the National-Liberal party. He wrote much both in German and English, and his books are based upon careful research. His works include: *Die Sklavenfrage in den Vereinigten Staaten* (1854); *Leben des amerikanischen Generals F. W. von Steuben* (1858; Eng. ed., New York, 1859); *Geschichte der Sklaverei in den Vereinigten Staaten* (1861); *Leben des amerikanischen Generals Johann Kalb* (1862; Eng. ed., New York, 1870); *Geschichte der deutschen Einwanderung in Amerika* (1868); *Friedrich der Grosse und die Vereinigten Staaten* (1871); *Aus und über Amerika: Erlebnisse und Tatsachen* (1876). He also wrote on the soldier traffic by German princes in the American Revolution.

KAPP, GISEBERT (1852-). A German-English electrician, born at Mauer, near Vienna, and educated at the Zurich Polytechnic. He was engaged as mechanical engineer in Augsburg, Vienna, and Pola, in 1875 went to England, and in 1882 was made director in the Crompton Works at Chelmsford. In 1894 he became lecturer on electrical engineering at Charlottenburg. After 1905 he was professor of electricity at the University of Birmingham, England. In 1886-88 he was Telford medalist, and he served as president of the Institution of Electrical Engineers and in 1913 as president of the engineering section of the British Association. His electrical inventions include several measuring devices. Kapp wrote: *Electric Transmission of Energy* (1886); *Dynamos, Alternators, and Transformers* (1893); *Transformatoren für Wechselstrom und Drehstrom* (2d ed., 1900); *Elektromechanische Konstruktionen* (2d ed., 1902).

KAPPEL, káp'el. A village in the Canton of Zurich, Switzerland. It is noted chiefly as the place where the reformer Zwingli was killed, in 1531, in a battle between Protestants and Roman Catholics. The village contains a monument erected to his memory. Pop., 1900, 697; 1910, 688.

KAPTCHAK. See KIPTCHAK.

KARA, kâ'ra. A short river of north Russia, forming the boundary line between European and Asiatic Russia (Map. Russia, K 1). It falls into the Kara Sea, an inlet of the Arctic Ocean.

KARABACEK, kâ'ra-bâ'chêk, JOSEPH VON (1845-). An Austrian Orientalist. He was born at Graz and became professor of Oriental history and allied subjects in the University of Vienna. His writings include: *Bei-*

träge zur Geschichte der Mazjaditen (1874); *Die persische Nadelmalerei Susandschird* (1881); and the books dealing with the Archduke Rainer Papyrus, *Der Papyrusfund von El Faijûm* (1882), *Katalog der Theodor Grafischen Funde in Aegypten* (1883), and *Ergebnisse aus dem Papyrus Erzherzog Rainer* (1889).

KARACHI, kâ-râ'châ, or **KURRACHEE**. An important seaport, the capital of Karachi District and of the Sind Division, Bombay Presidency, British India (Map: India, A 4). It is situated in the Indus Delta, 90 miles southwest of Hyderabad. It is a terminus of the Northwestern Railway. As the mouth of the Indus (q.v.) is barred by sand banks, Karachi is virtually the terminus of the traffic of that river and has become, as predicted by Sir Charles Napier, "the gateway of Central Asia." Its spacious harbor, covering 237½ acres, is protected by extensive breakwaters. The wharves, docks, and landing place are on the former island of Kiamari, now connected with the city over the Napier mole, 3 miles long. The public buildings comprise the government house, municipal offices, courthouse, Bank of Bombay, Bank of India, Sind College, high school, Frere Hall, Masonic Hall, markets, a dispensary and hospital. It has a high school for Mohammedans, a convent school, and an engineering school. The cantonments on the east contain the artillery barracks and arsenal, and the Napier barracks, with 1500 men. A good road 3 miles long connects with Clifton, on the south, which has a pier and an extensive sandy beach, frequented by excursion parties and noted for the turtle hunting it affords during the autumn season. Seven steamship lines assist commerce, the city has annually export trade amounting to almost \$50,000,000 and is the third seaport of India. Karachi has also an active inland trade with Kashmir, Turkestan, Afghanistan, and Tibet. The chief manufactures are carpets and the famous Sind silverware. It has three large cotton compresses, the workshops of the Northwestern Railway; also extensive fisheries and oyster beds. It exports hides, tallow, oil, wool, cotton, wheat, and tea, and imports metals, hardware, silk, and woolen goods. It is the seat of a United States consular agent. The city's growth and development date from its cession to the British government by the Talpur Amirs in 1843; the previous fort and village had existed since 1725. Pop., 1901, 116,663; 1911, 151,903. The district has an area of 11,970 square miles; pop., 1901, 446,513; 1911, 521,721. Consult Baillie, *Kurrachee, Past, Present, and Future* (London, 1890), and J. F. Brunton, "Karachi," in *Royal Society of Arts, Journal*, vol. lxi (London, 1913).

KARADŽIĆ. See **KARAJITCH**.

KARAGAN, kârâ-gân (Russ. *karagan*). A fox of Tartary; perhaps identical with the corsac (q.v.).

KARAGASS, kârâ-gäs'. A people of Samoyed stock in the District of Nizhni Udinsk, Government of Irkutsk, Siberia. They are practically extinct, having but little over 200 in 1888, although they still distinguished five clans. Consult an account of the Karagass in *Globus* (Brunswick, 1887); the Russian account by Salesskj is resumed in the *Archiv für Anthropologie* (ib., 1901).

KARA GEORGE. A Servian patriot. See **CERENY GEORGE**.

KARAGEORGEVITCH, ALEXANDER. See ALEXANDER KARAGEORGEVITCH.

KARAHISSAR, kâ-râ'his-sâr'. A city of Asiatic Turkey. See AFTUN-KARA-HISSAR.

KARAISSAKIS, kâ-râs'kâ-kês, GEORGIOS (1782-1827). A Greek soldier, born at Agrapha. He joined Ali Pasha, of Janina, but left him in his last war with Turkey and fought on the side of the Turks. In the revolution he sided with the Greeks and fought bravely. He quarreled with the provisional government, only to come to its aid after Missolonghi (1826). He won a great victory at Arachova and was mortally wounded in an attempt to capture the Acropolis (1827). Consult his biography by Paparrhigopoulos (Athens, 1877).

KARAITES, kâ'râ-its. See **QARAITES**.

KARAJAN, kâr-ra-yân, THEODOR GEORG VON (1810-73). An Austrian philologist born in Vienna, of Greek parentage. He studied in his native city, was employed in the Department of War and Finance from 1829 to 1841, and thereafter in the Imperial library, of which he was made custodian in 1854. He became a member of the Academy of Sciences in 1849, its vice president in 1851, and its president in 1866. In 1850 he was given the chair of the German language and literature at the University of Vienna, but was obliged to relinquish it at once on account of religion. Among his many important philological works, his editions of specimens from early German literature deserve especial mention, notably, *Frühlingsgabe für Freunde älterer Litteratur* (1839), *Michael Behaims Buch von den Wiencn* (1843); *Deutsche Sprachdenkmale des zwölften Jahrhunderts* (1846), *Zwei bisher unbekannte Sprachdenkmale aus heidnischer Zeit* (1858); *Abraham a Sancta Clara* (1867). Consult article by Vahlen in the *Almanach der Wiener Akademie*, pp. 195-213 (1874).

KARAJITCH, or **KARADŽIĆ**, kâ-râ'jêch, VUK (WOLF) STEFANOVITCH (1787-1864). The founder of the literary language of the Serbo-Croats and of their literature. He was born at Trshitch in Servia. His parents were, however, Montenegrins. He learned to read from letters scribbled on shotgun paper with a reed pen dipped in a solution of gunpowder. At 17 he was the "most learned lad" in the neighborhood. At Karlowitz (Austria) he learned Latin, Old Church Slavonic, and German. Three years later he returned to Servia, served as scribe in the Belgrade Council, was later made judge, but had to leave for Vienna in 1813 after the Turks quelled the rising in Servia. In Vienna he wrote an open letter to Kara George, leader of the unsuccessful uprising, *On the Fall of Servia*. Urged on by the Slavic scholar Kopitar (q.v.), Karajitch published a collection of Servian popular songs in 1814 (*Mala prostonarodna Sloveno-Srbska Pjesmarica*, 2d ed., 1815) and then *A Grammar Based on the Popular Tongue* (*Pismenica Srbskoga jezika po govoru prostoga naroda*, Vienna, 1814). In 1818 he published his *Servian Dictionary Explained in German and Latin* (new enlarged ed., 1852), important from both the lexicographic and the folkloristic points of view. A revised edition of his *Grammar* was prefixed to the *Dictionary* and then translated by Jakob Grimm (q.v.) in 1824. In his *Grammar* and *Dictionary* Karajitch abandoned the Cyrillic alphabet for the Latin with diacritic marks borrowed from the Czech alphabet, and a few

new letters, and used a strictly phonetic spelling. He also urged the adoption of the popular tongue in place of the archaic style used by the writers of his time. He visited Russia in 1818, made many friends among the Russian scholars, and then returned to Serbia to establish the primary schools on a more rational basis. From 1826 to 1834 he edited the annual *Danica* (Morning Star). In 1829-30 he codified Serbian law for Prince Milosh, but soon left Serbia, owing to the Prince's despotism. He traveled in Dalmatia, Montenegro, and Croatia until 1839, when he returned to his fatherland. The rich material collected in his wanderings was embodied in *Popular Serbian Proverbs* (1835; 2d ed., Vienna, 1849), *Popular Serbian Songs* (*Srpske Narodne Pjesme*, vols. 1-11, Leipzig, 1823; vol. iv, Vienna, 1823), followed by *Serbian Songs from Herzegovina* (1866), *Serbian Folk Tales* (*Srpske Narodne Priповetke*, 1853), and *Examples of the Serbo-Slovenian Languages* (1857). He also wrote some historical works (*Miloš Obrenović*, 1827) and translated the New Testament into Serbian for the British Bible Society (1847). Many of the songs collected by Karajitch have been translated into German (by Talvj, Gerhard, and others).

KARAKAL. See CARACALU.

KARAKORAM (ka'ra-kō'rūm) (or MUSTAGH) MOUNTAINS. A range of Central Asia, extreme northwestward extension of the Pamir system (Map: India, C 1). It branches off from the Himalayas proper near the headwaters of the Indus and extends along the right bank of that river through the whole of its northwest course, covering the northern half of the Province of Kashmir, India. Its northwest termination is at the Pamir, where it meets the Hindu Kush. It consists of a number of lofty ridges, and the whole region is very elevated, the valley bottoms being 10,000 to 15,000 feet above sea level. The numerous peaks include some of the highest in the world, and from them great glaciers flow. Mount Godwin-Austen is 28,265 feet above the sea, and there are at least four others with a height above 25,000 feet. Some of the valleys are connected by lofty passes, one of which, the Karakorum Pass, in lat 35° 30' N., long. 77° 50' E., has an altitude of 18,550 feet.

Bibliography. Sir W. M. Conway, *Climbing and Exploration in the Karakoram-Himalayas* (2 vols., London, 1892), Oscar Eckenstein, *The Karakorams and Kashmir. An Account of a Journey* (ib., 1896); F. B. Workman, *In the Ice World of Himalaya* (ib., 1901); id., *Ice-Bound Heights of the Mustagh* (New York, 1908); id., *Call of the Snowy Hesper* (London, 1910); Filippo de Filippi, *Karakoram and Western Himalaya, 1909: An Account of the Expedition of H. R. H. Prince Luigi Amadeo of Savoy, Duke of the Abruzzi* (2 vols., ib., 1912).

KARAKORUM, kā'ra-kō'rūm (Mongol *Kara-Kuren*, black camp). The capital of the Mongol Empire before the establishment of the court at Peking. It is situated near the Orkhon River in Mongolia, north of the Desert of Gobi, not far from the present Urga. It was one of the principal camps of Genghis-Khan and became the official capital of the Empire in 1234. It was visited by Marco Polo, but its situation was unknown to Europeans until 1889, when it was discovered by the Russian explorer Yadrintsev. Only the ruins now remain, spread over a space 6 miles in circumference. Karakorum was con-

nected by canals with the Jirmanta River. In 1902 this region was again visited by C. W. Campbell.

KARAMAN, kā'ra-mān', or **CARAMAN**. A town of Karamania, in the southern part of Asia Minor (Map: Turkey in Asia, B 3). It contains a mediæval castle, two mosques, and ruins of an old medresse, or college, showing traces of remarkable architectural beauty. The chief products of the town are coarse cotton and woolen stuffs, and hides. It is connected by rail with Constantinople, via Konia, and the trade of the town is progressing in consequence, the transit trade being considerable. The population is estimated at 9000. Karaman is the ancient Laranda.

KARAMANIA, kā'ra-mā'nē-ā, or **CARAMANIA**. A region in south Asia Minor, covering the central and eastern part of the modern Turkish Vilayet of Konieh (Map: Turkey in Asia, B and C 2). It reaches Lake Tuz Tcholli in the north, the Taurus Mountains in the south, the Sultan Dag in the west, and the outliers of the Anti-Taurus in the east. It is an elevated plain, with a barren, sandy soil and a few short rivers, which lose themselves in the desert or empty into the large salt lakes around the borders of the region. The climate is hot and dry in the summer and raw with some rain in the winter. In ancient times a very rich district, it is now sparsely settled by nomadic tribes whose chief occupation is cattle raising. Karamania was subjugated by the Turks in the fourteenth and fifteenth centuries.

KARAMNASSA, kā'ram-nās-sā. A river in the Province of Bengal, British India. After a course of about 150 miles it enters the Ganges from the right. It is subject to floods and has been known to rise 25 feet in a night. The river is repugnant to all caste Hindus, who have to be carried over without being touched by the water, and its name signifies "the destroyer of religious merit."

KARA MUSTAPHA, kā'ra mus'tā-fī (?-1683) A grand vizier of Turkey. He was the son of a spahi and was educated by Mohammed Kiuprili. After the death of Ahmed Kiuprili in 1676, Mohammed IV made Kara Mustapha Grand Vizier. He proved to be incapable and was defeated repeatedly in the various wars. He is especially remembered for his siege of Vienna in 1683, where, in order not to be compelled to share the prospective booty with his soldiers, he delayed the assault so long that John Sobieski of Poland arrived on the scene in time, and together with the German princes inflicted a crushing defeat upon the Turks. The Sultan finally ordered Kara Mustapha to be strangled.

KARAMZIN, kā'ram-zēn', NIKOLAI MIKHAILOVICH (1766-1826). A Russian historian and novelist, born near Simbirsk on the Volga. His father, an officer of Tatar descent, sent him to Moscow, where he learned French and German as well as a little English and Italian. In 1781 he entered the army, but left it two years later to take up literature as a profession. He worked with Novikov (q.v.) during 1785-88 and went abroad in 1789. The 18 months he spent in France, Germany, Switzerland, and England were described in his *Letters of a Russian Traveler* (1790-92, in the *Moscow Journal* of which he was editor; published separately in 1797-1801 in 6 vols.). These letters, which produced at the time a great impression, were modeled on

Sterne's *Sentimental Journey* and introduced to Russia a new literary style. In the same periodical appeared also his first novels, of which *Poor Liza* (1792) is the most important. Among the others *Natalya, the Boyar's Daughter* (1792) and *Martha the Viceregent* (1793) were over-sentimental tales dealing with a sort of Arcadian shepherds under Russian names; yet their success was great. When the publication of the *Moscow Journal* had to be discontinued owing to relentless censorship, Karamzin published the *Pantheon of Foreign Literature* and the *Pantheon of Russian Literature*, two collections of masterpieces. In 1803, after publishing various periodicals, he was appointed historiographer, with a salary of 2000 rubles per year, and all archives were placed at his disposal. He then busied himself with his *History of Russia*. The first eight volumes appeared in 1818, and the whole edition of 3000 was sold out in 25 days. The four later volumes (the last, unfinished, comes down to 1811) were published in 1818-29. Its chief thesis was that Russia flourished when autocracy prevailed and was weak when autocratic power was on the decline. The importance of this work lies in the notes copied from documents now lost and in its artistic presentation of the subject matter. Karamzin's chief service in Russian literature is his untiring and successful labors to establish a literary language on the basis of colloquial usage, thus freeing it from the Latinisms and Germanisms introduced by the poet Lomonosov (q.v.) and from Old Church Slavonic influence. As a historian, he was merely a popularizer who presented in good literary form the conclusions warranted by the researches of others.

The best (5th) edition of Karamzin's works is that of 1845. In French appeared *Histoire de l'empire russe* (11 vols, 1819-26), *Lettres d'un voyageur russe* (1867), *Voyage en France* (1885), and others; while his Russian history was also translated into German, Italian, and other languages. Consult an excellent study of Karamzin by Y. K. Grot, in his *Works*, vol. iii (St. Petersburg, 1866), and S. I. Ponomarev, "Material for a Bibliography of the Writings of Nikolai Mikhailovitch Karamzin," in St. Petersburg Academy of Sciences, *Sbornik*, vol. xxvii (St. Petersburg, 1883), both in Russian.

KARANKAWA, ká'rán-ká'wá. An extinct tribe of Indians formerly occupying the vicinity of Matagorda Bay on the coast of Texas. From the few remains of their language they appear to have constituted a distinct stock. They are first definitely mentioned by the French explorer Joutel, in 1687. Shortly afterward, in consequence of the seizure of some of their canoes by the French, they attacked Fort St. Louis and killed or carried off every person of the small garrison. At this time they are said to have been cannibals. The greater portion remained uncompromisingly hostile to all white men as well as to most of the surrounding tribes, with the result that their number rapidly dwindled. In 1805 they were still estimated at 500 men. In 1818, 300 Karankawa warriors attacked and fought a pitched battle with 200 of Lafitte's pirates and were only repelled with the aid of artillery. Before the close of the Texan War of Independence they had been nearly wiped out by the American settlers.

About the year 1843 the small remnant, some 50 in number, removed to Mexico, whence they were expelled a few years later on account of

continued depredations, making their camp near Hidalgo, Tex., where the last of them were exterminated by Mexican ranchers in 1858.

The Karankawa appear to have been utter and irredeemable savages, but withal possessing a rare courage and magnificent physique. The men wore only a breechcloth, the women a deer-skin skirt, and both sexes tattooed the face. Their houses were mere shelters of poles, over which skins were fastened on the windward side. They subsisted on game, wild fruits, and fish. They made some pottery and had a festival at which they drank the "black drink" from the yaupon while dancing to the sound of flute, rattle, and notched stick. Consult A. S. Gatschet, "The Karankawa Indians," in Peabody Museum of Archaeology and Ethnology, *Papers*, vol. ii (Cambridge, 1901).

KARA (ká'ra) **SEA**. The portion of the Arctic Ocean inclosed between the island of Nova Zembla and the Russo-Siberian mainland. It is roughly oval in shape, about 1000 miles long and 400 miles broad, and opens into the main ocean in the northeast (Map Arctic Region, G 2). It communicates with the ocean in the west by the narrow Matochlin Strait and in the southwest by the Yugor and Kara straits on either side of Vaigach Island. Shallow in the northeast, it reaches a depth of 600 feet near and in the Kara Strait, where navigation is hindered by ice and fogs. The principal inlet to the sea are Kara Bay and the Gulf of Obi, which inclose the Yamal Peninsula. It was known to the Russians from very early days and was first visited by ships from west Europe in 1580, when Pet and Jackman pushed through Kara Strait. In recent years Russia has endeavored, by surveys of Kara Sea and study of its ice conditions, to use it as a reliable sea route from Europe to the great Siberian rivers. The pioneer work for this purpose was done by Captain Wiggins. Consult Henry Johnson, *Life and Voyages of Joseph Wiggins* (New York, 1907).

KARASU-BAZAR, ká-rá'soo-bá-zár'. A town in the Crimea, Russia, situated 28 miles east-northeast of Simferopol (Map Russia, D 6). It has narrow and crooked streets and with its numerous khans and minarets presents a decidedly Oriental appearance. In the vicinity are situated many gardens, and the town is one of the principal centres of the fruit trade in the Crimea; tallow, wool, and hides are also considerable articles of trade. Pop, 1897, 12,961; 1912, 13,526, composed mainly of Tatars, Armenians, Greeks, and Karaites.

KARATCHEV, ká-rá-ché'. The capital of a district in the Government of Orel, Russia, situated about 56 miles west-northwest of Orel (Map: Russia, E 4). It contains a number of oil presses and carries on a trade in grain, hemp, and oil. It dates from 1146. Pop., 1912, 21,300.

KARATEGIN, ká-rá-tá-gén'. A mountain district in Central Asia, forming the northeast Province of Bokhara (Map: Asia, Central, O 3). It stretches with an area of 4100 square miles along the south slope of the Hissar and Alai, the southwest extension of the Tian-Shan Mountains, and along the valley of the Waksh or Kizil-su River, an affluent of the Amu Darva. The mountains here rise to a height of 18,000 feet, and the climate is continental, warm in summer and severe in winter. The slopes and valleys are best suited for cattle raising, but agriculture is also carried on. Wheat, corn,

hemp, and cotton, melons, and other fruits are produced. The inhabitants number about 100,000, chiefly Tajiks in the settlements, with a number of nomad Kirghiz in the country. The capital is Harm, or Garm, on the Kizil-su. Karategin was an independent khanate until 1877, when it was incorporated with Bokhara, which is under the suzerainty of Russia.

KARATHEODORI, ka'rà'tá'ô-dô'rê', ALEXANDER, PASHA (1833-1906). A Turkish statesman. He was born at Constantinople and was the son of a physician and philologist, Stephen Karatheodori. After studying in Paris, he entered the diplomatic service of Turkey. In 1876 and 1877 he was employed as counselor by Safvet Pasha, Minister of Foreign Affairs. In 1878 he took part in the preliminary negotiations over the Treaty of San Stefano, and in the same year he was sent as one of the commissioners of the Porte to the Congress of Berlin. On his return (November, 1878) he was appointed Governor-General of Crete, and in December he became Minister of Foreign Affairs, the first Christian to fill that post. He resigned in 1879, was nominated Prince of Samos 1885-95, and in 1895-96 was Governor-General of Crete, but had to resign because of the uprising which began in the latter year. See CRETE.

KARAULI, ka-rou'lâ. A native state of India. See KERAULI.

KARAVELOFF, kâ'ra-vâ'lôf, PETKO (1840-1903). A Bulgarian statesman, born at Kalof. He was educated at Moscow, where he taught for several years. Soon after his return to Bulgaria (1878), he was appointed Vice Governor of Vidin. He took a prominent part in politics at the head of the Liberals, and in 1880 became Minister of Finance and at the close of the year head of the cabinet. When the constitution, framed in 1879 by a national assembly of which he was vice president, was overthrown by the coup d'état of 1881, he left Bulgaria and did not return until 1883. He was again Premier (1884-86) and on the forcible abdication of Alexander was appointed member of the regency. He was in favor of a union with Rumania. On the accession of Ferdinand (1877), his power waned, and in July, 1892, he was sentenced to five years' imprisonment for conspiracy, but he was pardoned three years afterward and was elected to the National Assembly (Sobranje). Once more he became Premier in 1901, but, forced out in 1902 by an attack on his financial policy, then retired.

KARAWALA, kâ'ra-wâ'lâ, or **CARAWILA** (East Indian name). A viperine snake of southwestern India and Ceylon (*Hypnale nepa* or *Ankistrodon hypnale*), closely allied to the American copperhead. It is of small size, rarely exceeding 20 inches in length, and has the extremity of the upturned muzzle covered with scales. The poison acts slowly and yields to remedies quickly applied. See VIPER, and Plate of FOREIGN VENOMOUS SERPENTS with SNAKE.

KARCZAG, kôr'tsâg. A town of the County of Jozs-Nagy kun Szolnok Hungary, 35 miles southwest of Debreczin, on the Szolnok-Grosswardein State Railroad (Map. Austria-Hungary, G 3). It is the seat of a judicial district, with much farming and truck raising. In the neighboring swamps large quantities of tortoises are caught, the shells of which are used in domestic manufacture. Pop. 1900, 20,896; 1910, 22,996, mostly Reformed Magyars.

KARELIANS. A Finnish tribe of east Fin-

land proper and Russia, chiefly in the provinces of Olonetz, Archangel, and Tver; height 1.680 meters in Finland and 1.642 meters in Russia. They are brachycephalic, of good figure, and have regular features, with light curly hair and blue eyes. At present they number upward of 1,000,000. The Karelians represent the most advanced type of Finns, being warlike, active, thrifty, and honest. They are farmers, but the country is sterile, and famines are frequent. The national epic of Finland, called Kalevala, is a collection of Karelian folk songs. Poetry and music are cultivated, and the poetical language is smooth, with a copious vocabulary. See FINNISH LANGUAGE AND LITERATURE.

KARÉNINA, ANNA. See ANNA KARÉNINA.

KARENS, kâ'rénz. A people related by physical characteristics, as well as by language, to the Burmese, but of a more primitive type. They inhabit the mountainous regions of Arakan, Pegu, and Tenasserim and large districts in Upper Burma, numbering altogether more than 1,000,000, of whom about a quarter are said to be Christians (the result of American missions). Their earlier habitat is said to have been Yunnan, whence they followed the Mons into Burma. The Karens are capable of considerable civilization and possess many estimable qualities. The heathen Karens are nature worshipers. Where not influenced by the Burmese, etc., the Karens seem to have been *non* *non* *non*. There is increasing literature in Karen since the reduction of the language of the Christian communities to writing by the missionaries. In 1847-50 Wade published in Karen a four-volume *Thesaurus of Karen Knowledge, comprising Legends, Traditions, Customs, Superstitions, Demonology, etc.* Besides Mason, *Civilizing Mountain Men* (London, 1862), and other early works, may be mentioned Macmahon, *Karens of the Golden Chersonese* (London, 1876), Colquhoun, *Among the Shans* (ib., 1885), Smeaton, *The Loyal Karens of Burma* (ib., 1887). See INDO-CHINESE.

KARIKAL, kâ'rê'kâl'. A province of French India, on the Coromandel coast, on the estuary of one of the branches of the Kaveri, within the limits of the British District of Tanjore, Madras (Map. India, D 7). Area, 52 square miles. Karikal, the chief town, is 150 miles south of Madras, is well built, and carries on a considerable export and import trade with Ceylon and Europe. It has a poorly protected harbor. Pop. (town), 1912, 19,505. The colony was ceded to the French by the Rajah of Tanjore in 1749. It subsequently fallen into the hands of the British, it was restored at the general peace of 1814, on condition that it should not contain a fortification nor have a garrison, unless for purposes of police. It is situated at Pondicherry, the capital of French India. Pop. (of possession), 1901, 56,595, 1912, 60,872.

KARIMATA, kâ'rê-mâ'tâ. See CARIMATA.

KARL, TOM (1846-1916). An American operatic tenor. He was born at Dublin, Ireland, studied singing in England under Henry Phillips and in Italy under Santuz and Trivulzi, made his début at Milan, and for many years sang in Italian opera. In 1871 he came to America with Parepa-Rosa for a season in English opera. In 1887, with William H. MacDonald and Henry Clay Barnabee, he formed a light-opera company known as the Bostonians, which for many years was famous throughout the United States, especially for its Gilbert and

Sullivan productions. It was in DeKoven's *Robin Hood*, however, that Karl was at his best. In this piece George B. Frothingham, one of the original members of the Bostonians, had sung the part of Friar Tuck 5601 times before his death in 1915. Karl retired from the operatic stage in 1896, but continued to sing in concert and gave vocal instruction. For a time after 1899 he was director of the Operatic School connected with the Academy of Dramatic Arts at Carnegie Hall, New York. Later he settled and taught in Rochester, where he also directed amateur light-opera productions.

KARLI, kar'lé. A renowned Buddhist rock temple, the largest and, perhaps, the finest in India, at the village of the same name, 25 miles southeast of Bombay, on the road to Poona. The entrance is in a perpendicular wall of rock 850 feet in height at an elevation of about 2400 feet above sea level. Before the vestibule stands a great column surmounted by four lions. The broad entrance leads to a hall 126 feet long, 45½ feet broad, and 46 feet high, with a semi-circular roof. The chamber is divided by two rows of 16 columns into a nave and two side aisles. A *dagoba*, or shrine, stands out at the end of the nave. The capitals of the columns are richly decorated and have the shape of an inverted bell surmounted by two elephants, each supporting two figures. Smaller caves at the sides were probably the dwelling places of monks or hermits.

KARLINGS. A dynasty of Frankish kings. See CAROLINGIANS.

KARLMANN. See CARLOMAN.

KARLOWICZ, kär'ló-vich, MIEZYSLAV (1876-1909). A talented Polish composer, born at Wiszniewo (Lithuania). From 1890 to 1895 he studied with private teachers in Warsaw and from 1895 to 1900 with H. Urban in Berlin (composition). In 1894 he became director of the Music Society of Warsaw, but resigned after two years, settling in Zakopane (Galicia) and devoting his entire time to composition. Through his early death—he was buried under an avalanche—Poland lost a composer of more than ordinary talent. Indeed, he must be ranked as one of the most conspicuous figures in the history of Polish music. He wrote a symphony in E minor, the symphonic poems *Returning Waves*, *Three Old, Old Songs* (a symphonic trilogy), *Stanislaw and Anna of Oswiecim*, *Sad News*, a Lithuanian rhapsody; a concerto for violin; a serenade for string orchestra; a sonata and a prelude and double fugue for piano. He also published a number of newly discovered letters of, and documents relating to, Chopin (in Polish and French).

KARLOWITZ, kär'ló-vits (Hung. *Karlóca*, Croat, *Karlovec*). A town of the County of Syrmien, Croatia-Slavonia, Hungary, on the right bank of the Danube, 8 miles south-southeast from Peterwardein (Map: Hungary, F 4). It is the seat of an archbishop of the Greek Oriental church and has a Greek cathedral, the Archbishop's palace, a Roman Catholic church, a theological seminary, a higher Gymnasium, and a lyceum. It is the convention place of the Servian congress of churches. Its red wine and plum brandy are well known and it has fisheries and raises many swine. Its historical fame is due to the treaty concluded here with the Sultan in 1699, by which Austria was awarded the territory between the Danube and the Theiss, as well as Transylvania. Russia came into the pos-

session of the Sea of Azov region, Poland regained Kamenetz, and Venice obtained the Morea and a part of Dalmatia. Pop., 1900, 5643; 1910, 6342, mostly Croats and Serbs.

KARLSBAD, kärls'bát, or **CARLSBAD**.

One of the most celebrated watering places of Europe, situated in the northwestern part of Bohemia, on both banks of the Tepl, at its junction with the Eger. It is 1165 feet above the sea and 116 miles by rail west-northwest of Prague (Map: Austria, C 1). It lies in a narrow valley, inclosed by wooded heights. It is a picturesque, well-laid-out town, with a number of fine streets, a magnificent park, a splendid French Renaissance Kurhaus, two theatres, churches of different denominations, and several elegant cafés. The town has good schools, a museum, and monuments to Goethe and Schiller. The Sprudel colonnade is a striking iron and glass structure, while the Mühlbrunnen colonnade, with its 103 monolithic columns, is a fine example of the classical style. The mineral springs for which Karlsbad is famous are 19 in number and range in temperature from 165° F. to 47° F. The oldest and best known is the Sprudel (165°), located on the right bank of the Tepl. The waters of Karlsbad are clear, odorless, radioactive, and salty and are chiefly used for drinking purposes, but there are some bathing establishments, including mud baths. The chief ingredients are sulphate of soda, carbonate of soda, and common salt; the waters are efficacious in cases of dyspepsia, rheumatism, gout, etc., and are exported extensively. The springs issue from a hard rock and form a kind of crust known as Sprudelstein or Sprudelschale, which serves for the manufacture of various useful articles and ornaments. The salt obtained from the water is shipped in very large quantities, as are also Sprudel soap and Sprudel pastilles. About 2,500,000 bottles of mineral water and 80 tons of Sprudel salts are exported annually. Karlsbad is essentially a fashionable resort. It is visited annually by over 68,000 guests. There are manufactures of porcelain and glass ware, liquors, needlework, and various products associated with agriculture. Pop., 1900, 14,640; 1910, 17,446.

Local legend ascribes the discovery of the hot springs of Karlsbad to Charles IV in 1347, but their curative properties were known long before. The waters healed the wounds he had received at Crécy, and he built a hunting seat here, bestowing many privileges upon the town. The waters of Karlsbad were used only for bathing until about 1520. The first Kurhaus was built in 1711. In 1707 the town was raised to the rank of a free royal city. In 1810 a conference arranged by the German states was held at Karlsbad, resulting in the issue of the Karlsbad Decrees (q.v.).

Bibliography. Fleckles, *Der Karlsbader Kur-gast* (2d ed., Karlsbad, 1880); Cartellieri, *Karlsbad als Kurort* (ib., 1888); id., *Karlsbad, die Stadt und ihre Umgebung* (ib., 1888); Friedenthal, *Der Kurort Karlsbad topographisch und medizinisch* (Vienna, 1895); Oswald, *Karlsbad und Umgebungen* (12th ed., Berlin, 1896); Schnee, *Karlsbad als Terrainkurort* (Karlsbad, 1900); Ludwig Sipoez, *Karlsbad: Its Springs and Spring-Products* (7th ed., ib., 1904); F. R. von Gentl, *Guide to Karlsbad*, translated from the German by H. S. Lanoridge (Vienna, 1909).

KARLSBURG, kärls'burrk (Hung. *Gyulafehérvár*). A royal free city of the County of

Unter Weissenburg, Transylvania, Hungary, on the right bank of the Maros, 50 miles south of Klausenburg, in an agricultural and stock-raising country (Map: Hungary, H 3). There is a fine Gothic cathedral dating from 1443, an archaeological museum, an episcopal palace, a seminary, and an episcopal Gymnasium. The district is noted for excellent wines. Karlsruhe is near the site of the ancient Apulum. Pop., 1900, 11,507; 1910, 11,616, nearly all Magyars and Rumans.

KARLSHAMN, kårls'håm. A seaport of the Län of Blekinge, Sweden, on the Baltic, 30 miles west of Karlskrona (Map: Sweden, E 8). It has extensive docks, a nautical school, large distilleries and manufactures of tobacco and leather, and is an export centre for granite, lumber, charcoal, and fish. It was founded in 1664. Pop., 1901, 7100; 1911, 7209.

KARLSKRONA, kårls-krö'nå, or **CARLS-CRONA**. The naval headquarters of Sweden, and capital of the Län of Blekinge, situated near the five small islands in the Baltic, 238 miles south-southwest of Stockholm (Map: Sweden, E 8). Its streets, although in many places steep, are wide and straight, it has several parks and promenades, fine granite docks, and a large, deep harbor. Among its educational institutions are a high school, a deaf-mute institute, and a nautical college with a fine building after the Florentine Renaissance. The manufactories consist of anchor works, tobacco, cloth, hat, and match factories, and the trade of the city is large. The harbor is provided with arsenals and shipyards; the navy yard is one of the largest and best in Europe and is defended by strong fortifications. The town imports textile fabrics, oil, tobacco, sugar, food-stuffs, and coal, and exports various sorts of lumber, also fish, whortleberries, paving stones, pig iron, and sheet iron. The water supply is drawn four miles through an aqueduct from the mainland. Pop., 1901, 23,955, 1911, 27,434. Karlskrona was founded by Charles XI in 1680.

KARLSRUHE, kårls'róo'e. The capital of the Grand Duchy of Baden, Germany, situated 5 miles east of the Rhine and 39 miles by rail north-northwest of Stuttgart (Map: Germany, C 4). The older part of the city is laid out in the form of an open fan, the streets radiating from the palace as a centre. The streets are wide and well paved and adorned with many excellent monuments. The principal square is the Schlossplatz, with six fountains and Schwanthaler's statue of Grand Duke Karl Friedrich. The finest street is the Kaiserstrasse, 72 feet wide and about 1½ miles long. Karlsruhe has played a distinct and important rôle in the evolution of modern German architecture. The city has six Evangelical and four Roman Catholic churches, an Old Catholic church, and two synagogues. Of the religious buildings, the most interesting are the Evangelical town church (1817), containing the ducal tombs; the Roman Catholic town church (1808), built in the style of the Pantheon; the Early Gothic Roman Catholic Liebfrauenkirche (1891); the Evangelical Christuskirche (1900); and the Roman Catholic Bernharduskirche (1901). The palace (1751-76) is in the French Mansard style and has an octagonal tower 145 feet high. The eastern wing contains the Zähringen Museum and the ducal stables. At the western end, and connected with the palace by an arcade, is the Court Theatre, built in Romanesque style in 1851-53.

The new palace of the Crown Prince is conspicuous. The educational institutions of Karlsruhe are comprehensive and excellent. They include in part a technical high school, school of forestry (the oldest institution of its kind in Germany), a Gymnasium, three seminaries for teachers, an engineering school, a school of architecture, a conservatory of music, and an art school with a museum. The Karlsruhe School of Art was founded in 1853 and has been influential in Germany. The Hall of Art contains an extensive and interesting collection of modern paintings, engravings, and frescoes. The United Grand Ducal Collections comprise, besides their historic library of 190,000 volumes, ethnological, zoological, geological, mineralogical, and antiquarian specimens. Karlsruhe is the seat of numerous scientific, artistic, and industrial organizations, benevolent institutions, and the higher administrative institutions of the grand duchy, and is the residence of the Grand Duke.

The manufacturing industries have attained considerable importance since the Franco-German War. Karlsruhe manufactures locomotives, machinery, wagons, siphons, stoneware, plated goods, paper, stoves, arms, etc. The large trade of the town is facilitated by a canal system. Pop., 1871, 36,582, 1880, 49,301; 1890 (with Muhlburg, annexed in 1886), 73,684; 1900, 97,185 (of whom, 50,630 Evangelical, 43,063 Roman Catholic, and 2576 Jewish); 1910, 134,313. The rapid increase is due to the growth of trade and manufactures. Karlsruhe is the result of princely ill humor. Margrave Karl Wilhelm, displeased with his residence at Durlach, built a hunting seat in the Hardtwald in 1715, where the palace of Karlsruhe now stands. After a few years it became the residence town. In 1848 and 1849 the town took a prominent part in the revolutionary movements in the grand duchy. Consult Weech, *Karlsruhe, Geschichte der Stadt und ihrer Verwaltung* (3 vols., Karlsruhe, 1893-1901).

KARLSTAD, kår'l'ståd, or **CARLSTAD** (Swed., city of Charles). An episcopal city, capital of the Swedish Län of Vermland, situated on the island of Tingvalla, at the north end of Lake Venern, 164 miles west of Stockholm (Map: Sweden, E 7). The surrounding country is called the Swedish Switzerland. It is connected with the mainland by two large bridges, is well built, has a teachers' seminary, a cathedral, and manufactures iron, machinery, tobacco, and matches, and also exports wooden ware and iron. Pop., 1903, 13,579; 1911, 17,192. The city was founded in 1584 and rebuilt after the fire of 1865. A conference between Sweden and Norway was held here in 1905 to decide on the discontinuance of the union between these countries.

KARLSTADT. A German reformer. See CARLSTADT.

KARLSTADT, or **CARLSTADT** (Hung. *Károlyváros*). A royal free city with municipal rights in the County of Agram, Croatia, and Slavonia, Hungary, 32 miles southwest of Agram, at the junction of the Kulpá and three small rivers (Map: Hungary, D 4). Karlstadt is strongly fortified and has an old castle, a Franciscan monastery, a large armory, and is the seat of a Greek Oriental bishop. It also has a higher Gymnasium and a military school and has a distillery and a turbine rolling mill. Pop. (district), 1900, 14,941; 1910, 16,112.

KARL THEODOR, tã'ô-dôr (1839-1909). A Bavarian Duke and ophthalmologist, born at Possenhofen. He attained the rank of general in the Bavarian army, but later turned to medicine and graduated M.D. at the University of Munich. By a special decree of the German Imperial Chancery he was permitted to practice medicine and, specializing in diseases of the eye, became one of the most famous of European ophthalmologists and was author of several treatises. One of his sisters was the Empress of Austria, wife of Francis Joseph. He was married first to Princess Sophie of Saxony and after her death to Princess Maria Josefa of Braganza.

KARLUK, kâr-luk'. See KODIAK.

KARMA, kâr'mâ (Skt. *karman*, deed, act, from *kar*, to do). Designation of the Hindu doctrine of moral retribution and reward accomplished through a series of rebirths. All states and conditions in this life are the direct consequence of actions done in a previous existence; every deed or action (*karman*) done in the present life determines our fate in the reincarnation that is to follow. Human life is but the working out of *karman*; upon this all depends. This was in early times the doctrine of the Brahmins and of the Buddhists, and it has remained a typical feature and characteristic trait in the faith and philosophic thought of India.

Bibliography. Hopkins, *Religions of India* (Boston, 1895); Warren, *Buddhism in Translations* (Cambridge, Mass., 1896); Rhys Davids, *Buddhism. Its History and Literature* (New York, 1896); Max Müller, *Six Systems of Indian Philosophy* (ib., 1899); Johnston, *Karma* (ib., 1900); Hopkins, "Modifications of the Karma Doctrine," in the *Journal of the Royal Asiatic Society* (London, 1906-07). See METEMPSYCHOSIS.

KARMARSCH, kâr'mârsh, **KARL** (1803-79). A German technologist, born in Vienna. He studied at the Polytechnic Institute of his native city and in 1821 became an assistant there. In 1830 he was called to Hanover to establish and direct a polytechnic school which was opened the next year. He retired in 1875. Among his publications are *Handbuch der mechanischen Technologie* (6th ed., ed. by Fischer and Müller, 1887-97), and, in collaboration with Heeren, the *Technisches Wörterbuch* (3d ed., ed. by Kick and Gintl, 11 vols., 1874-92).

KARMATHIANS. See MOHAMMEDAN SECTS.

KARMÖ, kâr'më, or **CARMÖ**. A low-lying island of Norway, situated at the entrance to the Buknfjord, in the North Sea, 16 miles north-northeast of Stavanger (Map Norway, C 7). It is separated from the mainland by a narrow strait, has a length of 21 miles, a breadth of 5, and an area of 68 square miles. It is sparsely inhabited. The largest settlements are Skudeneshavn and Kopervik, with populations of 1204 and 1447 respectively, the inhabitants of which are engaged chiefly in fishing for herring. The population of the island in 1910 was 11,996.

KARNAK, kâr'nâk. A village of Upper Egypt, on the east bank of the Nile, in about lat. 25° 50' N. It is situated on the northern half of the site of ancient Thebes, and close to it lie the ruins of a group of temples which, with their walled inclosures and the avenues of sphinxes connecting them, extend over a space of nearly a mile. The most important of these

temples, that of the god Ammon of Thebes, was founded in the early part of the twelfth dynasty, probably upon the site of an older structure. The original Sanctuary was erected by Useratesen I. After him other rulers—Thothmes I, Seti I, Thothmes III, Amenhotep III, Ramses I, II, and III—added to the building. After the expulsion of the Hyksos (q.v.), when Thebes became the capital of Egypt, Ammon became the chief god of the land, and his ancient temple acquired the dignity of a great national sanctuary. The Pharaohs of the eighteenth and nineteenth dynasties lavished vast wealth upon it, enlarging it and adorning it with sculptures and paintings. Under Ramses II it was practically completed, though additions were made to it by many subsequent monarchs down to the time of the Ptolemies. It stood within a walled inclosure, measuring about 1500 feet in either direction, which also contained several smaller temples and a sacred lake. An avenue of ram-headed sphinxes led from a landing place on the river bank to the main entrance, a huge pylon (370 feet in breadth and 142 feet in height) built in the time of the Ptolemies. A gateway between the massive towers of this pylon gives access to the great court, which measures 276 feet in length and 338 feet in breadth. Within the court colonnades run along the walls on either side, and in the centre, in a line with the entrance, stood 12 colossal columns arranged in two rows, erected by the Bubastid kings of the twenty-second dynasty. Six of these columns are still in a good state of preservation. In the left-hand corner of the court, near the entrance, are the ruins of a small temple built by Seti II, while to the right a temple built by Ramses III pierces the wall of the court near its upper end and extends for some distance outside. A second pylon gate, the work of Ramses I, forms an entrance from the court into the great hypostyle hall, built by Seti I and his son, Ramses II. (For illustration, see ARCHITECTURE.) This great hall, one of the grandest works of Egyptian architecture, is 171 feet in depth by 338 feet in breadth, and its roof was supported by 134 columns arranged in 16 rows, the two central rows being considerably higher than the rest. The roof of the nave or central portion of the hall was supported by the two central rows of columns and by square pillars resting upon the adjoining rows of columns on either side, the spaces between the square pillars being left open for the admission of light and air—the earliest example of a clearstory. The height of the nave from floor to roof was about 78 feet, while that of the lateral portions measured some 46 feet. Both columns and walls are richly decorated with reliefs and inscriptions, many of which still retain the brilliant colors with which they were painted. The reliefs on the outer surface of the walls represent the victories of Seti I and Ramses II in their Syrian and Libyan campaigns. Of special interest are the representations of the siege of Kadesh on the Orontes by Ramses II, and the inscriptions containing the treaty of peace concluded by the same monarch with the Hittites, and the so-called Epic of Pentaur celebrating the prowess of the King at the battle of Kadesh. The text of the former inscription, with a translation and commentary, was published by Prof. W. M. Müller, in *Mittheilungen der Vorderasiatischen Gesellschaft*, vol. vii, part v (Berlin, 1902). From the upper end of the hypostyle hall a pylon gate, built by Amenophis

KARNAK

PORTAL OF EUEGETES I AND ENTRANCE TO THE TEMPLE OF CHONS BUILT BY RAMESES III

III and now in ruins, leads to an open court, in the centre of which is an obelisk (76 feet high) erected by Thothmes I. Near it lie the fragments of a companion obelisk erected to the same monarch. Beyond the obelisks are the ruins of a pylon erected by Thothmes I, and beyond this the remains of a court adorned with columns and with colossal statues of Osiris. In the centre of this court are two great obelisks erected by Queen Hatasu. One of them has fallen; the other, which still stands erect, measures 97½ feet in height and is the tallest Egyptian obelisk in existence. (See OBELISK.) From this court a pylon gate, built by Thothmes I, gives entrance to a similar court, and thence another pylon, the work of Thothmes III, leads to a vestibule opening into the sanctuary, which is adorned with reliefs representing religious subjects and is surrounded by a number of small chambers. To the rear of the sanctuary are the scanty remains of the oldest portion of the building, the temple of the twelfth dynasty. Farther back are the hypostyle hall of Thothmes III and a number of smaller halls, corridors, and chambers. From the central court containing the obelisks of Thothmes I, a succession of courts and pylon gates leads to an entrance in the southern side of the great temple inclosure, and thence an avenue of sphinxes leads to the ruined temple of the goddess Mut and the sacred lake behind it. In the southwestern corner of the great inclosure is the temple of the Theban moon god Chons (q.v.), built by Ramses III and embellished by several of his successors. A fine pylon (60 feet high) forms the entrance, and from it an avenue of sphinxes ran in a southerly direction until it intersected a similar avenue leading from Luxor (q.v.). From the intersection another avenue ran eastward until it met the avenue leading from the temple of Ammon to that of his divine consort Mut. To the north of the inclosure surrounding the great temple of Ammon are the ruins of a temple dedicated to the Theban war god Mont (q.v.). Since 1895 much work in the way of reconstruction has been done on the great temple under the direction of the French Egyptologist Lefebvre (q.v.).

Bibliography. Sir J. G. Wilkinson, *Topography of Thebes* (London, 1835); Lepsius, *Denkmäler* (Berlin, 1849-58); A. E. See Colored Plate of ARCHITECTURE.

KÄRNTEN. See CARINTHIA.

KAROK (kă'rok) **STOCK.** A linguistic family of California Indians, sometimes known as the Quoratean stock, formerly living on the Klamath River in the northwestern part of the State. In culture they are quite like the Hupa

(q.v.) and Yurok (q.v.). Under the local name of Orleans, they now number 775.

KAROLSTADT. A German reformer. See CARLSTADT.

KÁROLY, NAGY. See NAGY-KÁROLY.

KÁROLYI, kă'rô-lyé, COUNTS. An Hungarian family whose ancestral seat, Nagy-Károly, is in the County of Szatmár. They sprang from the Kaplyon family, which flourished in the thirteenth century.—MICHAEL KÁROLYI was raised to the rank of Baron in 1609, and his grandson, ALEXANDER (1668-1743), became Count in 1712. The latter was a general under Rákóczy during his struggle against the Hapsburgs, but, being left in command of the insurgent forces by Rákóczy's retirement into Poland, made peace with the King and was later appointed a field marshal.—Count ALOYS (1825-89) became in 1866 and again in 1871 Austrian Ambassador at Berlin, was the second Austrian Plenipotentiary at the Berlin Congress (1878), and was Ambassador to England (1878-88).

KARPELES, kăr'pe-lës, GUSTAV (1848-1909). An Austrian literary critic and historian, born of Jewish stock in Eriwanowitz, Moravia. He studied at Breslau and, after journalistic activity there, in 1877 removed to Berlin, where he was associated with Spielhagen as editor of Westermann's *Monatshefte* until 1882. One of the foremost of Heine scholars, Karpeles was the author of an *Autobiographie*, collected from the poet's letters and works (1888), and of *Heine: Aus seinem Leben und aus seiner Zeit* (1899). His further writings include also *Ludwig Borne* (1870); *Nikolaus Lenau* (1873); *Friedrich Spielhagen* (1889); *Goethe in Polen* (1889); *Graf Moltke als Redner* (1890). But his more valuable work is such essays on Jewish literature as *Die Frauen in der jüdischen Litteratur* (1871), and the two great histories, *Geschichte der jüdischen Litteratur* (2 vols., 1886) and *Allgemeine Geschichte der Litteratur* (1891; 2d ed., 1901). In English he published *Jewish Literature* (1895) and *A Sketch of Jewish History* (1897).

KARPINSKI, kăr-pén'ské, FRANCISZEK (1741-1825). A Polish lyric poet. He was born at Holoskow, Galicia, received instruction from the Jesuits in Stanislawow, and studied theology and law in Lemberg. In 1783 he became secretary to Prince Adam Czartoryski and afterward attracted the attention of the King, Stanislas Augustus. Later he retired to the country. In 1794 some of his poems the King gave Karpinski two estates in 1794. The best of his works are his elegies, idyls, and songs, religious and erotic, of which many are still heard among all classes throughout Poland. His collected works were published by Dmochowski in four volumes (Warsaw, 1804; new ed., 3 vols., Cracow, 1862). His autobiography was published by Moraczewski in Lemberg (2d ed., 1849). A monument to his memory was erected in Kolomea in 1880 on the anniversary of his birth (October 4).

KARQUENAS, or KARQUINES See CARQUINEZ.

KARR, kăr, ALPHONSE (1808-90). A French novelist, journalist, and satirist. He was educated at the Collège Bourbon and subsequently became a teacher there. He became a contributor to the *Figaro* and won his first success in an autobiographical romance, *Sous les tilleuls* (1832). This vein was continued with *Une*

Teheran, about 120 miles south of the latter (Map: Persia, D 6). Surrounded on three sides by mountains, it contains a great number of mosques, baths, caravanserais, and a college, and is famous for its melons and figs. Its chief manufactured products are silk and woolen goods, jewelry, rose water, copper utensils, brasswork, and faience. Cobalt is mined in the vicinity. Pop. (est.), 35,000. It suffered greatly from an earthquake in 1895.

KASHER. See KOSHER.

KASHGAR, kash'gär'. The former capital of the Chinese Dependency of East Turkestan, situated on the river Kashgar, in lat. 39° 27' N. and long. 76° 2' E., about 100 miles northwest of Yarkand (Map. Asia, J 5). It consists of the old town, lying on an elevation overlooking the river, and the new town, lying about 2½ miles south of the former. They are both surrounded by mud walls and moats, and the new town is also defended by a citadel. With the exception of the Chinese quarter in the new town, dating from 1838, and more or less modern in appearance, Kashgar is poorly built and consists largely of mud huts. It contains a large number of native schools and manufactures gold, jasper, and silver articles, cotton and woolen goods, and carpets. The rivalry of Yarkand has had a detrimental effect on the commerce of Kashgar. The chief articles of commerce are textiles. The civil government of the region is in charge of a Chinese official, with the rank of Taotai, who resides in the old town. The general and his troops live in the new town. A Russian consulate is maintained here. The population, estimated at 60,000 to 70,000, is very heterogeneous. Kashgar is a city of great antiquity and is supposed to have been mentioned as early as 76 B.C. as a place of commercial importance. It is situated at the junction of roads to Peking, India, and the Russian Empire. It was ruled successively by its own princes, the Mongols, and the Chinese. During the Dungan revolt of the Chinese Mohammedans, Kashgar, following the example of the other cities of East Turkestan, rose against its Chinese rulers and became in 1865 the capital of the state organized by Yakub Beg. The town was regained by the Chinese in 1877. Consult: Lansdell, *Chinese Central Asia* (2 vols., New York, 1894); Sven Hedin, *Central Asia and Tibet* (2 vols., London, 1903); Sir F. E. Young, husband, *The Heart of a Continent* (New York, 1904).

KASHMIR, kash'mēr', or **CASHMERE**, officially **KASHMIR AND JAMMU** (jūm'oo). A native state under the direct control of the government of India, situated mostly in the Himalayan mountain system, in the extreme northern part of the Empire (Map: India, C 1). To the north is East Turkestan, while on the east the country is bounded by Tibet and on the south and southwest by the Punjab; on the west lies the North-West Frontier Province (the British District of Hazara and the native states of the Chitral and Swat). The state, having a total estimated area of 84,432 square miles, includes the provinces of Jammu (with the jagirs of Bhadarwah and Punch), Kashmir, Ladakh, Baltistan, and Gilgit. The state is traversed by the western Himalayas, running with numerous lateral ranges on either side of the valley of the upper Indus, which flows through the centre of the country. The greatest elevations are found in the north, in the Mustagh or

Karakoram Range; the Rakaposhi Mountain north of Gilgit is 25,561 feet high, and Mount Godwin-Austen, in the north of Baltistan, is 28,265 feet, being after Mount Everest the highest mountain in the world. Godwin-Austen is one of the great peaks round the Baltoro glacier; two of the others are higher than the Rakaposhi Mountain, viz., Gasherbrum (28,100 feet) and Masherbrum (25,660 feet). Near the south bank of the Indus, west of Baltistan, is the great peak Nanga Parbat (26,182 feet). The valleys of Kashmir are celebrated for their scenery, seldom falling throughout the greater part of the country to much less than 5000 feet. So mountainous is the country that by far the larger portion is uninhabited; it is probable that in not more than 14,000 square miles of the total area of 84,432 square miles is there permanent habitation; of this area, upward of 5000 square miles are in the Jammu Province and about 8000 square miles in the Kashmir Province. The climate is dry and in winter severe; at Srinagar (elevation 5204 feet) the average January temperature is 33° F. and at Leh (11,503 feet) 19.1° F., while the average July temperature is 74.3° F. at the former and 63.3° F. at the latter place, the average annual rainfall at Srinagar is about 27 inches and at Leh only slightly more than 3 inches. The most important part of the country is the celebrated valley of Kashmir (in Kashmir Province), surrounded by lofty mountains, which culminate some 50 miles north of the valley in Nanga Parbat. The valley is traversed by the Jhelum River (the Hydaspes of the ancient Greek historians), and its comparatively level floor, averaging 6000 feet above the sea, is about 84 miles long and 20 to 25 miles wide. Srinagar, the capital of the state, is situated about in the middle of the valley, on the Jhelum. There is little agriculture practiced outside of the Jammu Province and the valley of Kashmir, here the soil, when irrigated, yields good crops of cereals, especially rice, and fruit and vegetables. Some of the mountain slopes afford good pasturage for cattle and goats. Not much has been done towards discovering the mineral resources of the state; coal has been found in the Udhampur District of Jammu and at Sof in the south of the Kashmir Province. Manufacturing is confined largely to Srinagar, which formerly was famous for its Kashmir shawls. Silk weaving and carpet making are important, other industries are wood carving, the manufacture of woolen cloth, and work in iron, silver, and copper. By far the largest import is piece goods; others are sugar, iron, tea, and tobacco. The largest export is ghee, others of some magnitude are hides and skins, woolen cloth, fruits, and drugs.

The Kashmiris are by language of Aryan stock. Physically they are of the white race, although in some regions much mixed with Mongolian blood, especially in the outlying territories of Ladakh, Baltistan, etc. Kashmiri is the vernacular of about 34 per cent of the population, Punjabi 30 per cent, and Dogri 15 per cent; there is a great variety of languages used in different parts of the state by comparatively small numbers. The Baltis, Ladakhis, etc., seem to be a smaller and less strongly developed race than the Kashmiris proper, who have an admixture of Sikh blood. The population of the state in 1901 was returned at 2,905,578, showing an increase of 14.2 per cent over 1891, but a

part of this increase was due to a more thorough enumeration; in 1911, 3,158,126, the increase over 1901 being 8.7 per cent. In 1911, males numbered 1,674,367 and females 1,483,759. A great majority of the inhabitants are classified as Mohammedan, but the influence of Hinduism, as well as belief in witchcraft and sorcery, is still strong among them. The 1911 census returned the Mohammedans at 2,398,320; Hindus (who are chiefly in Jammu), 690,390; Buddhists, 36,512; Sikhs, 31,553, Christians, 975. Srinagar (q.v.) had 122,618 inhabitants in 1901 and 126,344 in 1911; the town of Jammu, in 1901, 36,130. The state has suffered much from earthquake, famine, cholera, and (especially in Srinagar) fire, but in recent years the people have enjoyed a marked and increasing prosperity.

Kashmir was an independent monarchy until 1586, when it was conquered by Akbar and annexed to the Mogul Empire. It was taken by the Afghans in 1752 and annexed by the Sikhs in 1819. In 1846 the Sikh Maharaja, Gulab Singh, placed himself under British protection, in return for which he was confirmed in the possession of the country. Gulab Singh made several extensions of territory, which practically surrounded the Kashmir of 1846. He died in 1857 and was succeeded by his son Ranbir Singh, who died in 1885. Under Partab Singh (born 1850) several important changes were inaugurated in 1889. The old land system was swept away and restrictive monopolies abolished. A period of prosperity and national regeneration was immediately entered upon, and since then progress has been continually made. There is a British political agent at Srinagar.

Kashmiri has exerted considerable cultural influence upon Tibet and not a little physical influence also. Kashmiri folk literature is rich in tales and proverbs, many of which have been published in Knowles, *Dictionary of Kashmiri Proverbs and Sayings* (London, 1885), and *Folk-Tales from Kashmir* (ib., 1888). For information of value will be found: *... works*. Bellew, *Kashmir and Kashgar* (London, 1875); Frederic Drew, *The Jummoo and Kashmir Districts: A Geographical Account* (ib., 1875); William Wakefield, *The Happy Valley Sketches of Kashmir and the Kashmiris* (ib., 1879); *Kings of Kashmir: being a translation of the Sanskrit work Rājataranginī of Kāhalaṇḍīka* by J. C. Dutt (Calcutta, 1879); Hellwald, *Centralasien* (2d ed., Leipzig, 1880); Oscar Eckenstein, *The Kāshkorams and Kashmir. An Account of a Journey* (ib., 1896); Duke, *Kashmir Handbook* (ib., 1903); P. Pirie, *Kashmir. The Land of Streams and Solitudes* (New York, 1909); F. M. J. Bruce, *Kashmir* (ib., 1911); Sir F. E. Younghusband, *Kashmir* (London, 1911); F. A. Grierson, *Manual of the Kāshmiri Language, comprising Grammar, Phrase-Book, and Vocabulary* (2 vols., Oxford, 1911); E. F. Neve, *Beyond the Pir Panjal, Life among the Mountains and Valleys of Kashmir* (London, 1912); Arthur Neve, *Thirty Years in Kashmir* (ib., 1913).

KASHMIRI, kash-mér'é. The language of the Aryan population of Kashmir, in northern India. It is descended from the Middle Indian vernaculars and is thus ultimately related to the Sanskrit, although many Arabic and Persian words have been imported into it. The language has no written literature of native

origin, but portions of the Bible have been translated into the vernacular. The script in which it is written is generally Persian; but the older Sharada alphabet, derived from the Devanagari, is sometimes used, especially by the Hindu Kashmiris. For further information, consult: Elmslie, *Kashmiri-English and English-Kashmiri Vocabulary* (London, 1872); Wade, *Grammar of the Kashmiri Language* (ib., 1888); Grierson, *Manual of the Kāshmiri Language* (Oxford, 1911).

KASHOWOO. See MARIPOSAN STOCK.

KASHU, ká-shōō'. A province of Japan. See KAGA.

KASIKUMUKS, ká'sé-kōō-mōōks'. One of the Lesghian peoples of central Daghestan in the eastern Caucasus. They are not to be confounded with the Kumuks, or Kумыks, to the north of them, who are, linguistically at least, of Turkish stock. The Kasikumuks call themselves Lak; the Avars term them Tumul. Their language has been studied by Von Uslar and Schiefner. An account of the Kasikumuks will be found in Erckert, *Der Kaukasus und seine Völker* (Leipzig, 1887).

KASKASKIA, kās-kās'ki-ā. An Algonquian tribe of the Illinois confederacy, formerly living upon the river of the same name in southern Illinois. Although of considerable importance at the first occupation of the country, they decreased so rapidly that before the organization of the Territory they had been reduced to a mere handful. In 1832 the survivors, with the Peoria, removed to Kansas, where in 1854 both tribes were confederated with the Wea and Piankishaw from Indiana. In 1867 all four tribes removed to the Quapaw Agency, Oklahoma. The name is said to signify 'a katydid.'

KASKASKIA. A river of Illinois, rising in the centre of Champaign County (Map Illinois, E 9). It flows in a generally southwesterly direction and empties into the Mississippi River, near Chester. Length, about 400 miles, drainage area, about 5840 square miles. It is navigable to Vandalia, about 90 miles.

KASKASKIA. A village in Randolph Co., Ill., on the Mississippi River. Pop., 1910, 142 (Map: Illinois, B 6). In 1673 Joliet visited the Kaskaskia Indians, then living near the site of what is now Utica, Ill., and in 1675 Marquette established a mission among them. In 1700 both mission and village were moved to the site of the present Kaskaskia. It is accordingly the oldest permanent settlement in the Mississippi valley. The English gained possession of it by treaty in 1763 and in 1772 made Kaskaskia the capital of their territory in this part of the country. On July 4, 1778, George Rogers Clark (q.v.), with 200 backwoodsmen, captured it for Virginia—an event which had much to do with the cession of the western territory to the United States in 1783. For many years Kaskaskia was the most important settlement in the "Illinois Country," and after the organization of Illinois in 1809 was the Territorial and State capital until 1820, since which time it has steadily declined. Originally it was 3 miles from the Mississippi; but the river gradually encroached and united with the Okaw in 1881. The continued widening of the channel at the north end of the island gradually ate away the land, until most of the original town site disappeared. The present village is all that remains of the original town. Consult Mason, "Kaskaskia and its Parish Records," in *Maga-*

zine of American History, vol. vi (New York, 1890), and an article, "Kaskaskia: A Vanished Capital," in the *Chautauquan*, vol. xxx (Chautauqua, N. Y., 1900).

KASNER, kas'nēr, EDWARD (1878-). An American mathematician, born in New York City. He was educated at the College of the City of New York (B.S., 1896), at Columbia University (Ph.D., 1899), and at the University of Göttingen (1900). At Columbia he was tutor in mathematics (1900-05), instructor (1905-06), adjunct professor (1906-10), and professor after 1910. He became one of the editors of the *Transactions of the American Mathematical Society*, and of the *Revue semestrielle des mathématiques*. His publications include: *The Invariant Theory of the Inversion Group* (1900); *Present Problems of Geometry* (1905); *Differential-Geometric Aspects of Dynamics* (1913).

KASR EL-KEBIR, kas'r ēl-kē-bēr' (Sp. *Alcazar Quivir*). A town of Morocco. See ALCAZAR.

KASSABA, kas-sā'bā. A town in Asia Minor. See CASSABA.

KASSALA, kās-sā'lā. A town of north Africa, situated 1700 feet above the sea, on the river Gash, at the southeast end of Anglo-Egyptian Sudan, near the Abyssinian frontier (Map: Africa, H 3). The soil is very fertile; white durra is the chief crop. Prior to the uprising of the Mahdi in 1883, the town belonged to Egypt. Pop. (est.), 20,000, mostly Arabs. It was almost completely ruined by the Mahdists and was taken by the Italians in 1894. In accordance with the Anglo-Italian convention it was restored to Egypt in 1897.

KASSAPA, kās'sā-pā, **KĀSYAPA**, kā'shyā-pā. See MAHĀ-KĀSYAPA.

KASSEL, kās'sel. A city of Prussia. See CASSEL.

KASSIMOV, kās-sē'mōv. Capital of a district of the same name in the Government of Riazan, Russia, situated on the left bank of the Oka (Map: Russia, F 4). It contains a number of manufacturing establishments, principally tanneries, an Orthodox cathedral, and a mosque dating from the time of Khan Kasim. There is considerable trade, especially at the July fair. In the fifteenth century it was the residence of the Tatar Khan Kasim. Pop., 1897, 13,500; 1912, 16,340.

KAS'SITES. A people whose kings for 576 years ruled over Babylonia (c 1761-1185 B.C.). In the cuneiform inscriptions they are called *Kashshu*. Delitzsch regards this name as referring to the Cossæans (*Kossaiotai*) mentioned by Polybius (v, 44, 7), Strabo (xi, 13, 6; xvi, 1, 18), Diodorus (xvii, 111), and Arrian (*Anab.*, vii, 15, 1)—a warlike people living in the Zagros Mountains near the borders of Media, against whom Alexander fought; and Eduard Meyer is strongly of the same opinion. Oppert and Lehman identify the *Kashshu* with the Cissians (*κισσιῶν*), mentioned by Æschylus (*Choeph.*, 424; *Persæ*, 17), Herodotus, and others. The fact that Sennacherib found the *Kashshu* in the same region where the Cossæans were in the days of Alexander (*Annals*, i, 63-ii, 7) distinctly favors the first view. Lehmann thinks that this is only an instance of the constantly occurring extension of a territorial name; but the probability is that the Kassites are identical with the Cossæans. Whether *Gandash* (1761-45) came from the home of the Kassites in the Zagros Mountains or from some district in Babylonia occupied by this people at

the time, is uncertain. He was the first King of the dynasty. His successors—Agum I (1745-23), Kashtiliash I (1723-01), Ushi (1701-1693), Abirattash (1693-70), Tazzigurmash (1670-55), and Agum II (1655-25)—came more and more under the influence of Babylonian culture. Agum II (Agumkakrimi) styles himself King of Kashshu, Padan, Alman, and Gutl. He recovered from Khana in Mesopotamia the images of Marduk and Zarpanit that had been carried away by the Hittites in 1832. In the Babylonian list of kings there is a break after Tazzigurmash. But from the summary at the bottom we know that there were 36 kings of this dynasty, reigning 576 years and 9 months. The names of at least six kings for the period from 1625-c.1500 have not yet been found. In the beginning of the fifteenth century Karaindash made a covenant (*biritu*) with Asurrimneshu of Assyria, according to an account of the relations between the two kingdoms drawn up in the reign of Adadnirari V (812-783). There may have been two reigns between Karaindash and Kadashmanharbe I, who corresponded with Amenhotep III (1411-1375). Kurigalzu I also was a contemporary of this Egyptian King. Burnaburiash (c 1381-56) married a daughter of Asurballit I of Assyria, made a treaty with Puzur Asur, and corresponded with Amenhotep IV (1375-50) of Egypt. His son Karahardash was murdered by the Kassites, but their leader Nazibugash (1356-55) was deposed by Asurballit II, who placed on the throne Kurigalzu II (1355-33), another son of Burnaburiash. Kurigalzu II invaded Elam and captured the city of Susa; he also defeated Adadnirari II of Assyria. This war with Assyria was continued by Nazimaruttash (1333-07), who was defeated by Adadnirari II. Kadashman Turgu (1307-1290) was followed by Kadashman Ellil (1290-84), who fought with Shalmaneser I of Assyria (c.1320-1290), probably in the last year of this King's reign. Kadashman Ellil also maintained friendly relations with the Hittite King Hattusil, the contemporary of Ramses II (1310-1244). In the reigns of Kudur Ellil (1284-76) and Shagarakti Shuriash (1276-63) Tiglath Ninib of Assyria made fierce attacks upon Babylonia which were repulsed. But Kashtiliash II (1263-55) succumbed, and seven of his regnal years are counted as belonging to Tiglath Ninib as the first Assyrian King ruling over Babylonia (c 1262-54). After his murder Ellilnadinshum (1255-54), Kadashmanharbe II (1254-53), Adadshumiddin (1253-47), and particularly Adadshumusur (1247-17) kept up the struggle which ended with victory for the Babylonians. Melishipak (1217-02) pursued Ninibpilesar to the city of Assur. Mardukapaliddin I (1189) maintained his power, which, however, was now waning. The last kings were Zamamaiddin (1189-88) and Ellilnadinahi (1188-85).

As to the ethnic relations of the Kassites, little is known. Attempts have been made to prove from their language that they were Aryans or belonged to the same Asianic stock as the Mitannians and Hittites. But if Suriash is the Indo-Iranian sun god, he may be a foreign importation; and if Turgu is identical with Tarko, Tarchu, or Terah, this god seems to have been worshiped by many peoples not closely related. The Kassites do not appear to have been Elamites; they are clearly not Semites; and they have to all appearances no relation

to the Sumerians. There may have been an Aryan element in the population; and it is not impossible, though it cannot yet be proved, that they belonged to a great family of related nations of which the Hittites were the westernmost branch. The Hebrews probably knew them as *Kash*; and the possible pronunciation *Kush* seems to have caused a double confusion in Gen. ii 13 and x. 8. See BABYLONIA.

KASSNER, kas'nēr, CARL JULIUS H (1864-). A German meteorologist, born in Berlin and educated there at the technical high school and the university. After being employed in the Royal Astronomical Observatory, in 1890 he became connected with the Royal Meteorological Institute in Berlin, of which he was appointed a director in 1909. He traveled widely and was well known as an authority on Bulgaria, which he visited 10 times between 1900 and 1912. Kassner did much for the teaching and popularization of meteorology, devised several meteorological instruments, and prepared two meteorological globes (1907). Among his published works are *Ueber die Entstehung der Zyklonen* (1893), *Das Wetter und sein Einfluss auf das praktische Leben* (1908), *Das Reich der Wolken und Niederschläge* (1909); *Die meteorologischen Grundlagen des Städtebaus* (1910).

KAS'SON, JOHN ADAM (1822-1910). An American legislator and diplomat, born at Charlotte, Vt. He graduated at the University of Vermont in 1842, was admitted to the bar in 1845, and practiced for several years. In 1857 he settled in Iowa, where he entered politics, and in 1860, as chairman of the Republican State Committee, managed the Lincoln campaign. Thereafter he held a large number of offices and appointments. Assistant Postmaster-General in 1861-62, he was sent as commissioner to the first International Postal Congress at Paris (1863) and in 1867 concluded postal treaties with six European nations. He served in Congress (1863-67, 1873-77, 1881-84), between these terms was a member of the Iowa Legislature and Minister to Austria, and in 1884-85 was Ambassador to Germany and American representative at the International Congo Conference at Berlin. In 1893 he was appointed special envoy to the Samoan International Conference and in 1897 commissioner plenipotentiary to negotiate reciprocity treaties

with foreign Powers under the provisions of the Dingley Act. In 1898 he was a member of the American-Canadian Joint High Commission. He published: "A History of the Monroe Doctrine," in the *North American Review* (1881); a *History of the Formation of the United States Constitution* (1889); *Evolution of the Constitution and History of the Monroe Doctrine* (1904).

KASTALSKY, kas-tal'ski, ALEXANDER DMITRIEVICH (1856-). A Russian composer. He was born at Moscow and studied music in its famous conservatory; from 1876 to 1882 with Tchaikowsky and Taneev among his teachers. In 1887 he became instructor of the piano in the Synod School of Sacred Music and two years later assistant master of the Synod Chapel, becoming full master in 1901. One of the leading representatives of the newer, nationalist tendencies in Russian Church music, to which his own work has given considerable impetus, he wrote the chorales *The Mercy of the World* and *The Almighty God*; *Hymns for Easter Eve*; and *Songs of the Cherubim*.

KASTAMUNI, kas'ta-mōō'nē. The capital of a vilayet of the same name in Asiatic Turkey, in the northern part of Asia Minor, 36 miles from the Black Sea, 250 miles east of Constantinople (Map: Turkey in Asia, B 2). On a rocky hill outside the town stands an old castle and in the town are a large number of mosques, two Christian churches, and some industrial establishments manufacturing cotton and leather goods. There is a considerable trade in timber, cereals, fruit, and mohair. The city is a centre of Moslem learning and contains several theological colleges and a convent of dervishes. Kastamuni was once famous for its copper ware, but the ancient mines in the vicinity are now abandoned. The population is estimated at about 16,000—Turks, Greeks, and Armenians. It was a town of some importance in Byzantine times and was taken by the Ottoman Turks in 1393.

KÄSTNER, kēst'nēr, ABRAHAM GOTTHELF (1719-1800). A German mathematician and poet, born at Leipzig. He devoted himself to the study of law and afterward to philosophy, physics, and mathematics. In 1739 he began teaching mathematics, philosophy, and logic in the University of Leipzig and in 1746 was made professor. In 1756 he was called to Göttingen as professor of natural philosophy and geometry. His chief mathematical works are *Anfangsgründe der Mathematik* (4 vols., 1758-69; 6th ed., 1800); *Vorlesungen über Mathematik und Physik* (1768); *Astronomische Abhandlungen* (2 vols., 1772-74); *Anfangsgründe der Arithmetik, Geometrie, ebenen und sphärischen Trigonometrie und Perspektive* (Göttingen, 1774); *Geschichte der Mathematik* (4 vols., 1796-1800). He is best known for his *Sinngedichte* (1781), a collection of witty and caustic epigrams.

KASTNER, käst'nēr, JOHANN GEORG (1810-67). A German composer and musical theorist. He was born at Strassburg and studied under Maurer and Romer. He composed four operas—*Gustav Wasa* (1832), *Der Tod Oscars* (1833), *Der Sarazene* (1834), *Die Königin der Sarmaten* (1835)—and then went to Paris to continue his studies under Berton and Reicha. There Kastner undertook recondite researches, published treatises on instrumentation, vocalization, etc., composed operas, and became famous as a teacher. He was founder and vice president of

the Association des Artistes-musiciens, the recipient of many honors, and Officer of the Legion of Honor. Many of his textbooks were approved by the Academy and used in the Conservatory, among them his treatise on instrumentation (1837), which remained the standard till the appearance of Berlioz' monumental work some 30 years later. Perhaps his most original work was the *Livres-partitions*, a series of vocal and instrumental symphony cantatas, whose various subjects are described and analyzed in accompanying essays. In addition to the operas already mentioned he composed *Beatrice* (1839); *La maschera* (1841); the biblical opera, *Le dernier roi de Juda* (concert performance, 1844), which is considered his masterpiece, and much instrumental music. Consult F. J. Fétis, *Biographie universelle des musiciens, et bibliographie générale de la musique* (Brussels, 1837-81), and Herman Ludwig, *Johann Georg Kastner, ein elsässischer Tondichter, Theoretiker und Musikforscher* (3 vols., Leipzig, 1886).

KASTRI. See CASTRI

KASTRO, ká'stró. Capital of the island of Mytilene (q.v.) in the Aegean Sea. It is the seat of a metropolitan of the Greek church, has 14 mosques, seven churches, and a castle built in 1373 on the site of the ancient acropolis. Since the Balkan War the city has been occupied by the Greeks and has a lively trade with the neighboring islands and the mainland. The city was formerly built on an island, but it is now connected with the mainland of Mytilene, or Lesbos, by a causeway and has harbors on both sides of the island. Pop., 1896, 53,000; 1912, 56,000, mainly Moslems.

KASVIN, kaz-vén'. A town of Persia. See KASBIN.

KÁSYAPA. See MAHĀ-KĀŚYAPA.

KATABAGAN, ká-tá-bá'gán. An almost extinct group of pagan Malays who inhabit the mountains between Tayabas and Ambos Camarines provinces. They are interesting only in that they are the last remnant of a pagan people in southern Luzon. See PHILIPPINE ISLANDS.

KATABOLISM (from Gk. καταβολή, *katabolē*, a throwing down, from καταβάλλειν, *kataballein*, to throw down, from *katá*, *kata*, down + βάλλειν, *ballein*, to throw). The chemical changes that occur within an organism and result in the formation of simpler products through the decomposition of more complex ones. It is otherwise known as destructive metabolism and is identical with digestion, respiration, and fermentation. See METABOLISM

KATAHDIN, ká-tá'din, or **KTAADN** (from an Indian word meaning "highest land" or "big mountain"). The highest mountain in Maine, 5200 feet above the sea (Map: Maine, C 3). It is in Piscataquis County, somewhat north by east of the centre of the State, in a dense wilderness and difficult of access. Mount Katahdin is of granite, which is exposed in large abrupt walls on the slopes. The summit is bare and covered with lichens, and from it a grand view may be obtained of the wild and rough country around it.

KATAK. See CUTTACK.

KATAKANA, ká'tá-ká'ná. See JAPANESE LANGUAGE.

KATAKIUCHI, ká'tá-ké-ō'chē (Jap., enemy killing). A form of vendetta practiced during many centuries in Japan. It was popularly thought proper to slay an enemy who had murdered one's father or lord. Though pro-

hibited by the government, it was imperatively prescribed by custom. To fail in the duty of taking vengeance involved social ostracism, while, on the other hand, its performance brought capital punishment of the avenger. This subject is the basis of hundreds of popular stories and famous novels, the greatest of many historic illustrations of the custom being that of the "Forty-seven Ronins," which is a standard representation in the Japanese theatres. In recent years the newer school of native moralists has attacked the code of ethics under which *katakiuchi* was possible. Under the modern laws it exists no longer. Consult the voluminous literature of the subject, both native and European; in Japanese, the *I-ro-ha Bunko* and its sequel, the *Yuki No Akébono*; Mitford, *Tales of Old Japan* (2d ed., London, 1874); Dickens, *Chushingura, or the Loyal League* (New York, 1876).

KATALA. An Alaskan seaport on Controller Bay. Its population in 1910 was 188 (Map: Alaska, K 5). It is the coast terminus of the Copper River and Northwestern Railroad, which connects with the Copper River Railroad of 195 miles, extending from Cordova to Kennicott, Nizina valley. At Kennicott is the Kennicott-Bonanza copper mine, one of the richest and most productive in Alaska. Under the Act of Congress of April, 1914, the United States contemplates extensions of the Copper River railway system as follows. from Chitna to Fairbanks, 313 miles, branch of 38 miles to the Bering coal fields, via Lake Charlotte

KATAMORPHISM. See METAMORPHISM

KATCH, RANN OF. See CUTCH, GULF OF, INDUS.

KATE, ká'te, JAN JACOB LODEWIJK TEN (1819-89). A Dutch poet, born at The Hague. He studied theology at Utrecht, where he made the acquaintance of Van den Bergh the Elder and of the lexicographer Winkler Prins, and where he wrote much poetry. With Prins in 1842 and 1843 he wrote the satiric periodical *Braga*, which was entirely composed in verse, of which he had a wonderful command, being a ready and fluent improvisator. Ten Kate entered the ministry of the Reformed church and from 1860 was pastor of a church in Amsterdam. Besides some sketches of travel and some purely theological works, he wrote translations from Hebrew, Psalms (1872), and several of the minor prophets. from Luther's hymns, Chamisso's poetry, and from Schiller and Goethe (*Faust*); from Tegner and Charles XV; from Andersen and Oehlenschläger, Hugo's lyrics; Tasso's *Gerusalemme* (1856) and Dante's *Inferno* (1876), and Byron's *Gaouar* and Milton's *Paradise Lost*. His original poems, popular at home and frequently translated into French and German, are mostly of theological tenor. The best known are: *De Schepping* (1866); *De Planeeten* (1869); *De Jaargetijden* (1871); *Palmbladen en dichtbloemen* (1884). His collected works appeared at Leyden (12 vols., 1890-91). Consult Jan ten Brink, in *Onze Hedendaagsche letterkundigen met bijchriften* (Amsterdam, 1884), and "Werken van Jan Jacob Lodewijk ten Kate," in *Geschiedenis der Noord-Nederlandsche letteren in de 19e eeuw*, vol. ii (ib., 1888).

KATER, HENRY (1777-1835). An English scientist who devoted himself to the study of mechanics and the exact sciences. He was born in Bristol and died in London. At his father's desire he began the study of the law, but in 1794

he relinquished his legal studies and obtained a commission in the Twelfth Regiment of foot, then stationed in India. During the following year he was engaged under Colonel Lambton in the survey of India and on his return, in 1808, became a student in the senior department of the Royal Military College at Sandhurst and was shortly afterward promoted to a company in the Sixty-second Regiment. His contributions to science are chiefly to be found in the *Philosophical Transactions*, the most important of these memoirs being those relating to his determination of the length of the seconds pendulum at the latitude of London and those which describe his "floating collimator," an instrument for aiding the determination of the horizontal or zenith points. For the invention of this instrument he received the gold medal of the Royal Astronomical Society. The reversible pendulum (qv) which he devised (1818) enables the physicist to determine the length of the simple pendulum at any point on the earth's surface and in a modified form is still in use. In 1821-23 he was associated with Arago, Mathieu, and Colby in making observations to determine the differences of longitude between the Greenwich and Paris observatories. His memoirs on the verification and comparison of the standards of weights and measures of Great Britain and Ireland induced the Emperor of Russia to employ him to construct standards for the weights and measures of that country, and for these labors he received the order of St Anne and a diamond snuffbox. His many scientific papers will be found in the *Philosophical Transactions*, *Astronomische Nachrichten*, *Astronomical Society Monthly*, and *Astronomical Society Memoirs*.

KATHERINE. In Shakespeare's *Taming of the Shrew*, the spirited daughter of Baptista, whose subduing by her husband, Petruchio, gives the comedy its title.

KATHIAWAR, kâ'tê-a-wâr'. A peninsula on the west coast of India, part of the Province of Gujarat, Presidency of Bombay. On the northwest is the Gulf of Cutch, the Gulf of Cambay on the southeast, and the Arabian Sea on the west and south (Map India, B 5). Cotton is the chief staple. There are a few industries, such as the making of gold and silver thread, powders, oils, and perfumes. Politically the region is divided among 187 native chiefs under the protection of the British government. Area (of political agency), 20,911 square miles. Pop., 1901, 2,329,196, 1911, 2,496,057. . . . The towns are Rajkot, Navanagar, . . . and Somnath. The Portuguese port of Diu is on a small island off the south coast.

KATHLEEN MAVOURNEEN, kâth'lên ma-vôor'nên. A ballad by Louise M. Crawford.

KATIPO, kâ'tê-pô. A small venomous spider (*Latrodectus scelo*, Thorel) of New Zealand and Australia. In New Zealand it is generally found on the beach under old driftwood, but in Australia it is found widely scattered over the continent and always frequents dark sheltered spots. It is dark-colored, with a bright red or yellowish stripe. The name is Maori and may be derived from *kakati*, to sting, and *po*, night, cf *kakapo*, night parrot.

KATIPUNAN (kâ'tê-pôo-nân') **SOCIETY.** A Filipino secret society, organized some time during the early part of the last decade of the nineteenth century to oppose Spanish supremacy

in the archipelago. It was formed under the leadership of Andres Bonafacio, a schoolmaster or warehouse keeper of Cavite, and its principal object was to expel all foreigners from the Philippines. The basis of its organization and discipline was military. Wherever 100 men can be assembled there is to be a "superior chief," with rank of colonel. Under him are principal chiefs, partial chiefs, captains (*cabezas*), and men. Each rank knows only those below it. The duties of the men are fivefold, viz., to obey orders, to contribute provisions and clothing, to act as spies against all suspected persons, to be ready to sacrifice property, family, or life for the society, and to take the field as guerrillas at a moment's notice. Each signs an oath in his own blood, swearing under most revolting penalties to serve the society. All other oaths are absolved by this, and the native leads a life of fear, not knowing when the knife may end his career. The reckless daring of the Filipino is largely due to the terror inspired by this organization. In 1895-96 a widespread conspiracy was discovered, and some 300 of the Katipunian leaders were arrested. From this time the society was in open opposition and rebellion against the Spanish government and later opposed the United States. During the Spanish-American War the Filipinos, controlled and led by Agumaldo, a member, declared their independence and drew up a constitution at Malolos. When the forces of the society, under Agumaldo, were broken and defeated, opposition to the United States assumed the character of guerrilla warfare. During this time native affairs were controlled by this society. Agumaldo proclaimed that every male Filipino in every hamlet and barrio should be subject to its regulations. While the society continued to exist after the capture of Agumaldo and the pacification of the Philippines, its numbers have been supposed to have decreased and its influence to have weakened. The truth of this statement has not, however, been demonstratively established.

KATKOV, kat-kôf', MIKHAIL NIKIFOROVITCH (1818-87). A Russian publicist of international reputation. He studied at Moscow, at Königsberg, and at Berlin, where he was particularly attracted by Schelling. In 1840 he published a valuable essay *On Russian Popular Songs*, expressing views of an ardent liberal and adherent of the party of Westerners. For his dissertation *On the Elements and Forms of the Slavo-Russian Tongue* (1845) he was appointed adjunct in philosophy at Moscow, which position he held until 1850, when lectures on philosophy were intrusted to professors of theology. In 1851 he was officially appointed editor of the Moscow *Intelligencer*, which he leased in 1863. By this time Katkov's ideas had undergone a radical change, and apparently he needed but a pretext for an open break with his former associates. The disorders among the peasants and university students in 1861-62, and especially the Polish revolution of 1863, gave Katkov the chance of his life. He accused the Nihilists Chernyshevsky, Herzen, and Bakunin (qq.v.) as the real originators of all the trouble, and from a liberal turned into a reactionary advocate of absolutism and unprincipled and aimless nationalism. His paper became an exponent rather than a leader of public opinion, harshly criticizing the government for half-hearted measures in suppressing treason,

which he saw everywhere. Until his death he wielded an enormous influence on Russian politics, being the personal adviser of Alexander III. His journalistic papers have been collected in 25 volumes (Moscow, 1863-87; 2d ed., 1897-98). Consult E. Maschte, "Michail Nikiforowitsch Katkof," in *Nord und Sud*, vol. xciv (Breslau, 1900).

KATMAI, kát'mí, MOUNT. An active volcanic peak of 7500 feet elevation, on Alaska Peninsula, 100 miles northwest of Kodiak Island (Map: Alaska, H 6). It was supposed to be a dead volcano until its outbreak of June 6, 1912, which was one of the most violent eruptions seen by man. At Kodiak darkness lasted for 60 hours, and the ash deposits averaged a foot deep. There were signs of its renewed activity during the year 1914.

KAT'MANDU'. See KHATMANDU.

KATO, kát'tó, or **KAI-POMO**, kí'pō'mó. An Athapascan tribe, formerly living in the Cahto valley, Mendocino Co., Cal. Though of a different linguistic family, their culture resembles that of the Pomo, hence the name. Consult P. E. Goddard, "Kato Texts," in *University of California Publications, American Archaeology and Ethnology*, vol. v (Berkeley, 1909).

KATO, kát'tó, TAKA-AKIRA, BARON (1859-). A Japanese diplomat and statesman, born at Nagoya. He was educated at the University of Tokyo, was employed for a time by the Mitsubishi (steamship) Kaisha, and in 1888-90 was private secretary to Count Okuma, then Minister of Foreign Affairs. He was in the Finance Department in 1891-94 as director of the banking and taxation bureaus, was Japanese Envoy to the Court of St. James's in 1894-99 and in 1908-13, and was thrice Minister of Foreign Affairs—in 1900-01, in January-March, 1906, and in January-February, 1913. In 1904 he became proprietor of the influential newspaper *Nichi-Nichi*. He was made Baron in 1911.

KATO, TOMOSABURO (1859-). A Japanese naval officer, born in Hiroshima. He became a midshipman in 1883 and had attained the grade of captain in 1899 before he was appointed professor at the Naval Academy. After serving as sectional chief and construction supervisor, in 1902 he became chief staff officer of the standing squadron. In the war with Russia he was chief of staff of the Kamimura squadron, and at the close of the war became a bureau chief. He was promoted vice admiral in 1908 and became commander of the Kure admiralty in 1909. In 1914 he commanded the Japanese fleet which attacked the Germans at Tsing-Tao (q.v.).

KATONA, kát'tó-nó, JÓZSEF (1792-1830). An Hungarian dramatic poet, born at Kecskemét. His earlier efforts suffered from a too close dependence upon German models, but in his masterpiece, *Bánk Bán*, he was distinctly national and original. He wrote the play in 1815, but it was not performed until six years afterward, in Budapest. It is still a popular play on the Hungarian stage. His poems, essays, and other works were collected in three volumes 50 years after his death.

KATRINE, kát'rín, LOCH. A lake in Perthshire, Scotland, famous for its beautiful scenery, which has been immortalized by Scott and Wordsworth (Map: Scotland, D 3). It is of serpentine form, 8 miles long and $\frac{3}{4}$ of a mile in average width. Ben Venue (2393 feet), Ben A'an, and the Trossachs are on its banks. There

are several islets, one of which, Ellen's Isle, is the central scene of action of Scott's *Lady of the Lake*. Steamers ply on its waters, and it is annually visited by large numbers of tourists. As the main source of Glasgow's water supply, the water being conducted by a tunnel and aqueducts for a distance of 25 miles, the level of the lake has been raised so as to flood, in part, Ellen's Isle.

KATSENA, kát'sè-nà. A town in the northern part of Kano, British Nigeria, Central Africa, 84 miles northwest of Kano (Map: Africa, E 3). It was formerly the largest town and capital of the Hausa territories. It is surrounded by a high wall, but its buildings are mostly in ruins. It began to decline as a result of the seven years' siege by the Fulahs in the beginning of the nineteenth century, from which it never recovered. It came under British control in 1903. Its population, once said to number 100,000, is now estimated at 7500.

KATSŪ AWA, kát'sū á'wá (c 1820-96). A Japanese statesman, born at Shidzuoka, in Suruga Province. A diligent student in youth, he made himself familiar with the literature of China, Japan, and Holland. He commanded a company of soldiers in the army set to guard the country at the time of Perry's landing in 1854. In May, 1855, he was sent with others to Nagasaki to learn from the Dutch how to manage steam vessels. He made such progress that in 1861 he navigated the first Japanese steamship across the Pacific Ocean and was active in having built the first native man-of-war on foreign models. He advised against the Yeddo government's attempting to chastise the Choshu clan, in which disastrous campaign the prestige of the Tokugawa family was irretrievably ruined. In the civil war of 1868 his friendship with Saigō (q.v.) probably saved Yeddo from being burned. His life was several times attempted by assassins. He retired to Shidzuoka with his master, the Shogun Kōiki (q.v.), but he was later called by the Mikado to Tokyo to become Minister of the Navy Department. In 1874 he opposed the project of war with Korea and, resigning his office, gave himself to study. He wrote a history of the modern Japanese navy.

KATSUO, kát'sō-ō. In Japan, any of various tunnies, varying from 1 to 4 feet in length, which are among the sea fish most extensively taken. The dried fish of Japan are mainly of this kind and are called katsuobushi, amounting in quantity to about 5,000,000 catics annually.

KATSURA, kát'sō-ō-ra, TAARO, PRINCE (1847-1913). A Japanese statesman and soldier, born in Choshu. He fought on the Imperialist side in the War of the Restoration, was sent abroad to study military science, was Vice Minister of War in 1886-91, and led a division in the war against China, for his services being made Viscount. After the war he became Governor-General of Formosa, held the portfolio of War in 1898-1900, and in June, 1901, formed a cabinet which by means of skillful tactics maintained its position till January, 1906, when the unpopularity of the Peace of Portsmouth forced it to resign. He was Prime Minister again in 1908-11, also holding the post of Minister of Finance, and a third time, from December, 1912, to February, 1913. For bringing about the Anglo-Japanese Alliance he was made Count; after the Russo-Japanese War, during which he had been head of the adminis-

tration, he was created Marquis, and after the annexation of Korea in 1911 his title was made Prince. In 1912 he founded a new political party called Rikkendoshikai.

KATTE, kât, EDWIN BRITTON (1871-). An American electrical engineer, a son of Walter Katte. Born at St. Louis, Mo., he graduated from Cornell University (M.E.) in 1893; studied and served as apprentice in the H. R. Worthington shops, Brooklyn, N. Y., in 1894-96, and for two years was assistant engineer to the Park Avenue Improvement Commission of New York City. Thereafter he was successively draftsman, assistant engineer, mechanical engineer, and electrical engineer of the New York Central and Hudson River Railroad, becoming chief engineer in 1906, with full charge of design, construction, and operation of the electrical traction systems. In 1914 he was vice president of the American Society of Mechanical Engineers.

KATTE, kât'te, HANS HERMANN VON (1704-30). A friend of Frederick the Great while he was Crown Prince. He disobeyed the King's order that he should have nothing more to do with the young Crown Prince, who was ardently attached to him, and in whose plans to escape he took a part. But the plot was discovered, and Katte was executed, Frederick being compelled to witness his death from a palace window.

KATTE, kât, WALTER (1830-). An American civil engineer, the father of Edwin Britton Katte. He was born and educated in England, coming to the United States in 1850. In 1857 he was resident engineer of the State canals of Pennsylvania and from that time until the outbreak of the Civil War held responsible positions as an engineer of various railroads. During 1861-62 he was in the service of the Federal government in military railway work. During 1865-75, while connected with the Baltimore and Annapolis Bridge Company of Pittsburgh, he superintended the building of the St. Louis steel arch bridge and afterward, until his retirement in 1899, was chief engineer of several railroads, including the Manhattan Elevated in New York City and the New York Central system.

KATTEGAT. See CATTEGAT.

KATTENBUSCH, kât'en-bush, FERDINAND (1851-). A German Protestant theologian, born in Kettwig in the Rhine Province. He was educated at Bonn, Berlin, and Halle, studied theology and became docent at Göttingen, and from 1878 to 1904 was professor at Giessen, in 1904-06 at Göttingen, and then at Halle, where he was rector of the university in 1913. He devoted himself particularly to the history of creeds and symbols, and his most important work is *Das apostolische Symbol* (1894-1900). Among his other books are: *Luthers Lehre vom unfreien Willen* (1875); *Der christliche Unsterblichkeitsglaube* (1881); *Ueber religiösen Glauben im Sinne des Christentums* (1887); *Vergleichende Konfessionskunde* (1892 et seq.); *Von Schleiermacher zu Ritschl* (1892; 3d ed., 1903); *Die Kirchen und Sekten des Christentums in der Gegenwart* (1909). He contributed to the Herzog-Hauck *Real-Encyklopädie*.

KAT'TIMUN'DOO, or **CATTIMUNDOO** (East Indian name). A substance which resembles gutta-percha, derived from the milky juice of *Euphorbia trigona*, an East Indian plant. It is obtained either as a natural gum, which has

oozed through the bark, or more commonly by making incisions and collecting the juice. It is used in India as a cement for knife handles and for similar purposes. While fresh, it is very elastic, but in course of time becomes resinous or brittle.

KATTOWITZ, ká'tô-vits. A town in the Province of Silesia, Prussia, on the Rawa, 105 miles southeast of Breslau. It has important iron and zinc works, manufactures of phosphor bronze, furniture, creosoted block, roofing paper, bricks, and machinery, and is the centre of the upper Silesian coal trade. It has a railway-repair shop. Pop., 1890, 16,513; 1900, 31,745; 1910, 43,973. Kattowitz was an unimportant village until 1867, when it was made a city. Its growth is due to the discovery of minerals near by.

KATUN, ka-tōōn'. A cycle of 20 years, peculiar to the calendar of the Maya tribes. It was subdivided into five parts of four years each. The years were counted around the circumference of the calendar wheel, and the conclusion of each katun cycle was noted by the placing of a commemorative stone in the wall of the principal temple. Thirteen of these cycles made up the *ahau katun*, or great cycle of 260 years. The etymology of the term is disputed. Consult Joyce, *Mexican Archaeology* (London, 1914).

KATUN'GA. An important native trading town in British Sudan, West Africa, situated about 80 miles south of Bussa. Pop. (est.), 15,000.

KĀTYĀYANA, kat-yū'ya-na. A name of great celebrity in the literary history of India. It belongs, in all probability, to several personages renowned for their contributions to the grammatical and ritual literature of the Brahmanical Hindus, but it is met with also among the names of the chief disciples of the Buddha, Sakyamuni. The most celebrated personage of this name, however, is Kātyāyana, the critic of the great grammarian Panini (q.v.), and he is most likely the same as the Kātyāyana to whose name is attached a ritual manual, the *Srauta Sutra* of the White Yajur-Veda, also the *Sarvānu-kramanī*, a sort of Vedic concordance of about 46 pages, and other treatises connected with the White Yajur-Veda. Kātyāyana is well known as a grammarian through his critical notes or supplementary additions to Panini. These are called *l'arttikās*, explanations or additional rules. They treat of about one-third of Panini's aphorisms, and they are of special value. Kātyāyana's additions and corrections were gathered up and commented on in turn by Patanjali (q.v.). The territory to which Kātyāyana belonged was Deccan, and his date appears to have been the third century B.C. On the Kātyāyana Srauta Sutra, consult Weber, *White Yajur-Veda* (London, 1859), and Macdonell, *History of Sanskrit Literature* (ib., 1913).

KĀ'TYDID. A popular name for several species of long-horned grasshoppers, usually of a pale-green color. Those to which this name specifically applies are natives of North America and are abundant in some parts of the United States. Their peculiar note is always to be heard during the summer and perhaps most abundantly in the evening twilight, although sometimes in the daytime. The note of one species is almost like a shrill articulation of the three syllables, "ka-ty-did," following each

other in quick succession, after which there is a pause of two or three minutes. Modified wing membranes, by the overlapping of the wing covers, can be made to rub against one another, and the sound is produced by the friction. It is a noticeable fact that with these insects the day note differs from the night note. The common species in northern New England is the narrow-winged katydid (*Scudderella curvicauda*). The broad-winged katydid is also a common northeastern species (*Cyrtophyllus perspicillatus*), and another species is the oblong-winged katydid (*Amblycorypha oblongifolia*). The species commonly known as the angular-winged katydid (*Macrocentrum retinervis*) is abundant throughout the more southern portions of the United States (extending as far north as New Jersey on the Atlantic coast). It hibernates in the egg stage. The eggs are flattened oval and of a slate-brown color and are laid in a double, overlapping row on the twigs

A KATYDID.

The common angular-winged katydid (*Macrocentrum retinervis*), and its eggs, attached to the edge of a leaf.

of trees, the edges of leaves, and in other places. Females lay their eggs in the early fall and continue to lay at intervals until killed by frost, each female laying from 100 to 150 eggs. In the spring the egg splits along its top edge, and the young katydid, very pale in color, emerges. In its northern range this species is single-brooded, but in the Southern States there are two generations annually. The eggs of this species are stung by the curious chalcidid parasite *Eupelmus mirabilis*, which has been called the "back-rolling wonder," from the fact that its abdomen is frequently turned backward and upward until it nearly reaches the head, the hind wings being turned in the same direction, so that the insect almost forms a ball. See LOCUST.

KATZBACH, kät's'bäch. A small river in the Prussian Province of Silesia, falling into the Oder at Parchwitz. It is celebrated for the battle fought on its banks on Aug. 26, 1813, between the French troops under Marshal Macdonald and the Prussians under Blücher, in which the latter were completely victorious. Macdonald was unaware of the presence of the Prussians on the other side of the Katzbach when he began to ford the stream. Blücher waited until half the French army had crossed, then swept down on them with his cavalry and two corps of bayonets, and hurled them into the waters of the Katzbach, killing and wounding 12,000, and taking 18,000 prisoners, together with 143 cannons and 2 eagles.

KATZENSTEG, kät'sen-shtāk', DEB (Ger., The Cat's Bridge). A novel by Hermann Suder-

mann (1889), considered one of his best works of fiction.

KAUAI, kā'u-ä'ä. The northernmost of the Hawaiian Islands, situated in lat. 22° N. and long. 159° 30' W. (Map: Hawaii, B 1). It is almost circular in shape, is of volcanic origin, and is composed chiefly of basaltic rocks. The surface is elevated, reaching in the highest peak of the island, Waialeale, an altitude of about 6000 feet, a large part of it is under forests. The coasts are partly low and sandy and partly precipitous. The island is well watered, chief among its streams being Hanalei. In spite of its volcanic origin, Kauai has a goodly proportion of agricultural land of unusual fertility, confined mainly to the north. Sugar is the chief product, but tropical fruits are grown in abundance. The chief harbors are Hanalei, Koloa, Waimea, and Nawiliwili. Pop., 1910, 11,859, including the adjacent islet of Niihau. Area, 590 square miles. See HAWAIIAN ISLANDS.

KAUFFMAN, kaf'man, REGINALD WRIGHT (1877-). An American author, born at Columbia, Pa. After special work at Harvard University (1896-97), he was a reporter and then an editorial and special writer for the *Philadelphia Press*, associate editor of the *Saturday Evening Post* (1904-07), associate editor of the *Delinquent* and dramatic critic of the *Philadelphia North American*, and managing editor of *Hampton's Magazine* (1909). He wrote *The Things that Are Caesar's* (1902); *The Chasm* (1903); *The Bachelor's Guide to Matrimony* (1907); *What is Socialism?* (1910); *The House of Bondage* (1910); *The Sentence of Silence* (1912; new ed., 1914); *The Spider's Web* (1913); *Jam* (1914).

KAUFFMANN, kouf'män, ANGELICA (1741-1807). A Swiss historical and portrait painter, born at Chur, Switzerland, Oct. 30, 1741. She was taught by her father, Johann Josef Kauffmann, a painter of some talent. At an early age Angelica displayed such talent that her father took her to Italy. At Como, in 1752, she executed a portrait in pastel of the Bishop of Como, which attracted much attention. She studied in the galleries of Milan in 1754, also painting portraits, among them several of the Duchess of Carrara. In 1757 she assisted her father in the decoration of the church at Schwarzenberg, painting 12 full-length figures of the Apostles, and also in decorating the seats of the counts of Montfort. She then studied in northern Italy, especially at Florence, where she remained seven months, developing a remarkable talent for music and song. In 1763, at Rome, she studied ancient art under Winckelmann, who became her fast friend, and whose portrait (now in the Städel Museum, Frankfurt) she painted. At this time she made a study of historical and allegorical compositions.

In 1765 her English friends persuaded her to go to England; after spending a year studying at Venice, she arrived in London in 1766. She was received with great favor, her charm of manner, as well as her art, winning for her many friends. She was fêted by the aristocracy and presented at court. Among her admirers were Goldsmith, Garrick, Fuseli, and Sir Joshua Reynolds. She was one of the original members of the Royal Academy in 1769 and for years afterward was a prominent exhibitor at the Academy. She was also successful as an interior decorator and as an engraver and etcher. There are 31 plates, with at least 200

of her original drawings, at the British Museum. Her life was embittered by a secret marriage, in 1767, with an impostor, a supposed Swedish Count Horn. The Pope annulled the marriage, and in 1781 she married Antonio Zucchi, a Venetian painter, with whom she returned to Italy the same year. After acting as teacher of design to the Princess of Naples, she settled at Rome, where her house became the centre of a coterie of scholars and artists, among whom was Goethe, who has given a trenchant characterization of her art. She remained in Rome until her death, Nov 5, 1807. She was honored by a splendid funeral under the direction of Canova, and her bust was placed in the Pantheon.

Angelica Kauffmann excelled in single figures and in portraits, especially those of women. Her historical paintings are poor in composition; the figures are without variety or passion and lack virility, but they are marked by grace and charm and are always pleasing. Among the historical paintings of her early period (before 1781) are: "Mother of the Gracchi", "Sacrifice of Messalina", "Edgar and Ethelfrida", "Anna and Abra", "Samma at Benoni's Grave". Especially good is "Psyche Drying Cupid's Tears". Her other works include "Death of Leonardo da Vinci" (1781), "Servius Tullius as a Child" (1784), "Adieux of Abélard and Héloïse", "Hermitage, St Petersburg", "Ariadne"; "Abandoned", the "Sybil," and the well-known "Vestal Virgin," in the Dresden Gallery; "Christ and the Woman of Samaria" (1799); "Virtue Directed by Prudence to Withstand the Solicitations of Folly" (now in Philadelphia), painted with her husband. Among her best portraits are those of herself in the National Gallery (London), the Berlin Museum, the Munich and Uffizi galleries (Florence); Raphael Mengs and Lady Hamilton, in the South Kensington Museum.

Consult: De Rossi, *Vita di Angelica Kauffmann* (Florence, 1810). Wessely, in Dohme, *Kunst und Künstler* (Leipzig, 1817). Schram, *Die Malerin Angelika Kauffmann* (Brünn, 1890); Gerard, *Angelica Kauffmann* (London, 1893); Engels, *Angelika Kauffmann* (Bielefeld, 1892); "Angelica Kauffmann," in *Illustrirte Zeitung* (Leipzig, June, 1903).

KAUFFMANN, FRIEDRICH (1863–). A German scholar. He was born at Stuttgart, attended the universities at Tübingen and Freiburg, and was professor successively at Halle, Jena, and after 1895 at Kiel. Besides serving as an editor of the *Zeitschrift für deutsche Philologie* and as a contributor to Paul's *Grundriss der germanischen Philologie*, he published: *Deutsche Grammatik* (3d ed., 1902); *Geschichte der schwabischen Mundart* (1890), *Deutsche Mythologie* (last ed., 1892), *Deutsche Metrik* (1897); *Philipp Melanckthon* (1897); *Goethe* (1899); *Texte und Untersuchungen zur altgermanischen Religionsgeschichte* (vol. i, Wulfila, 1899; vol. ii, Balder, 1902).

KAUFMANN. The correct name of the German mathematician Nicolaus Mercator (q.v.).

KAUFMANN, ALEXANDER (1817–93). A German poet, born in Bonn. He studied law in the university of his native city and Berlin, but his preference was always for the literature and history of the Middle Ages. From 1850 he was archivist to the Prince of Löwenstein in Wertheim. He published several volumes of verse, whose freshness and vigor soon made him

one of the favorite poets of the Rhineland. In 1857 he married the Nuremberg poet Mathilde Binder, who, under the pen name of Amara George, wrote *Blüten der Nacht* (1856) and *Indianermythen* (1856). Kaufmann's works include: *Casarius von Heisterbach* (1862); *Gedichte* (1852), *Münchener* (1853); *Unter den Reben* (1872); and, in collaboration with his wife, *Mythoterpe* (1858).

KAUFMANN, GEORG HEINRICH (1842–). A German historian, born at Münden and educated at Halle and at Göttingen, where he studied under Waitz. From 1865 to 1888 he taught in the Gymnasium of Göttingen and the lyceum of Strassburg. He became professor of history at Münster (1889) and then (1891) at Breslau, where he was rector in 1905–06. His chief works are: *Deutsche Geschichte bis auf Karl den Grossen* (1880–81); *Geschichte der deutschen Universitäten* (1888–96); *Politische Geschichte Deutschlands im neunzehnten Jahrhundert* (1900); *Die Legende vom heiligen ungenährten Rock in Trier* (2d ed., 1904). With Bauch and Reh he edited *Akten und Urkunden der Universität Frankfurt-an-der-Oder* (1897–1903).

KAUFMANN, KONSTANTIN PETROVITCH (1818–82). A Russian general, born near Ivanogorod. He won distinction first as an engineer and afterward served as chief of staff in Caucasia. Later he served for a time in the War Department and aided in reorganizing the army. Rising gradually in rank and governmental favor, he was made Governor-General of the Northwestern Region and commander of the troops of the Military Division of Vilna in 1865 and of the newly formed Division of Turkestan two years later. In the latter position, especially, he won great distinction by his success in strengthening and extending Russian influence in Central Asia. He waged a successful war against Bokhara, took Samarkand in 1868, subjugated the Khan of Khiva in 1873, and annexed what was left of the old Khanate of Khokand.

KAUFMANN, MORITZ (1839–). An English clergyman and writer on social reform. He was born in Gross-Sachsen, near Weinheim, Baden, and was educated at Trinity College, Dublin. From 1877 to 1883 he was tutor at St Aidan's, Birkenhead, in 1884–92 curate of Erpingham, after 1892 rector of Ingworth, and after 1893 vicar of Calthorpe. In 1899–1900 he was Donnellan lecturer to the University of Dublin. He wrote: *Socialism* (1874; based on Schäffle's *Kapitalismus und Socialismus*); *Utopias, or Social Schemes of Improvement from Sir Thomas More to Karl Marx* (1879); *Christian Socialism* (1888); *Charles Kingsley* (1892); *Socialism and Modern Thought* (1895); *The Housing of the Working Classes and of the Poor*.

KAUFMANN, RICHARD VON (1850–1908). A German economist, born in Cologne. He studied at the universities of Bonn, Heidelberg, and Berlin, became a teacher and a professor, and for a short time held a position in the Finance Ministry. His numerous publications include: *Die Vertretung der Interessen der Arbeiter in den Staaten Europas* (1877); *L'Association douanière de l'Europe centrale* (1879); *Die Finanzen Frankreichs* (1882), translated into French by Dulaurier, *Die öffentlichen Ausgaben der grösseren europäischen Länder nach ihrer Zweckbestimmung* (3d ed., 1893); *Die Kom-*

municipal finances: Grossbritannien, Frankreich, Preussen (2 vols., 1906). He became known also through his archaeological work and through the excavations in Syria, Asia Minor, and Egypt suggested by him.

KAUKAUNA, ka-ka'na. A city in Outagamie Co., Wis., 7 miles by rail east by north of Appleton, on the Fox River, and on the Chicago and Northwestern Railroad (Map: Wisconsin, E 4). It has good water power, used by a number of the industrial establishments, which include, besides the shops of the Chicago and Northwestern Railroad, pulp and paper mills, brick and tile works, a planing mill, a foundry and machine shop, sulphate and sulphite mills, etc. The water works and electric light works are owned by the municipality. Pop. 1910, 4717.

KAULBACH, koul'bach. A family of distinguished German painters. (Its founder and most celebrated member, **WILHELM VON KAULBACH**, is treated in a separate article.)—**FRIEDRICH KAULBACH** (1822–1903), an historical and portrait painter, born at Arolsen, Waldeck, was a nephew and pupil of Wilhelm. Although his "Coronation of Charlemagne" (1869, Maximilianeum, Munich) proves his ability for compositions on a large scale, he excelled chiefly in portraiture and was much employed by royalty. Among his best portraits are those of the Empress Elizabeth of Austria and of the sculptor Elisabeth Ney (1860, Hanover Museum). He was appointed court painter and professor at the Polytechnic Institute in Hanover and in 1874 was elected a member of the Berlin Academy.

HERMANN KAULBACH (1846–1909), a genre painter, was born in Munich, the son of Wilhelm. He studied under Piloty and treats interesting subjects, for the greater part historical genre scenes, with rare coloristic charm and minuteness of detail. Especially noteworthy are: "Hansel and Gretel with the Witch" (1872, Municipal Gallery, Riga), "Last Days of Mozart" (1873, Municipal Gallery, Vienna); "Sebastian Bach Playing the Organ before Frederick the Great" (1875); "Coronation of St. Elizabeth" (1886, Wiesbaden Gallery), "At a Friend's Grave" (1888, New Pinakothek, Munich). He was made professor in 1888.

FRIEDRICH AUGUST KAULBACH (1850–), a genre and portrait painter, was born in Munich, the son of Friedrich, from whom he derived his first instruction. He then studied under Kreling and Raupp at Nuremberg and under Diez in Munich. The elegant treatment and brilliant coloring of his genre scenes in the spirit of the German renaissance and other historic periods, the style of which he adopted with an amazing facility and eclecticism, won for him speedy recognition, as might be expected from such works as "Cavalier and Lady's Maid" (1873), "A Day in May" (1879, Dresden Gallery), "Schützenlied" (1881; a well-known tavern picture), the "Luteplayer" (1882, Vienna Museum), and many others. After his stay in Paris in 1881 he devoted himself chiefly to portraiture. Uniting the elegance of Van Dyck with the chic of a modern Frenchman, he became the most popular portrait painter of Munich. Among familiar examples of this later work are the portraits of his wife, Frida Scotta the violinist (Frankfurt and Munich); his father and mother, Princess Gisela; the Prince Regent of Bavaria (Munich); Emperor Wil-

liam II (Cologne); Empress Auguste Victoria, with daughter; and the American dancer Ruth St. Denis. Of religious subjects, he painted an "Entombment" (1892, Munich). His exquisite paintings on fans and his caricatures also deserve special comment. From 1886 to 1891 he was director of the Munich Academy, succeeding Piloty. He was made a member of the Berlin Academy and was awarded the great gold medal at the Berlin exhibition in 1886. For his biography, consult Graul (Vienna, 1890) and Rosenberg (Bielefeld, 1900).

KAULBACH, WILHELM VON (1805–74). A German historical painter. He was born at Arolsen, Westphalia, Oct. 15, 1805. His first lessons in design were from his father, a goldsmith and line engraver, and in 1821–25 he studied at Düsseldorf under Cornelius and Mosler. He followed Cornelius to Munich in 1826 and decorated the Odeon there with frescoes of Apollo and the Muses, in the style of his master. In the same style are his frescoes in the arcades of the court garden, with figures of Bavaria and her four chief rivers. Of quite different character was his "Madhouse" ("Irrenhaus," 1834), based on reminiscences of an insane asylum at Düsseldorf, which he decorated with frescoes—an intensely naturalistic production. His 16 frescoes of the story of Cupid and Psyche, in Prince Maximilian's palace, on the other hand, were antique in style. Besides the foregoing, Kaulbach designed for King Louis the decorations of the Königsbau from Klopstock, Wieland, and Goethe. In 1834 he finished the cartoon of the "Battle of the Huns." His "Destruction of Jerusalem by Titus," designed in 1837–38, is a strange conglomeration of history and symbolism. There is a fine replica in oil in the Munich Pinakothek.

In 1847 Kaulbach succeeded Cornelius as director of the Munich Academy. In his designs for frescoes for the exterior of the New Pinakothek, glorifying the development of the arts under Louis I, he introduced an element of satire which aroused great opposition. His decorations for the staircase of the Berlin Museum (1847–66) are an apotheosis of the evolution of human culture, in six colossal mural paintings, representing the chief epochs, "The Fall of Babel," "Greek Culture," "Destruction of Jerusalem," "Battle of the Huns," "The Crusaders before Jerusalem," "Age of the Reformation." In 1859 he painted "Otho III in the Vault of Charlemagne," for the Germanic Museum at Nuremberg. His satire had already excited the wrath of the Ultramontane party, and Kaulbach retorted in 1871 with a grisaille cartoon in oil of Peter Arbus. His last works, like the "Battle of Salamis," in the Maximilianeum, Munich, and "Nero," show decline. During this period he painted a number of portraits, severe and distinguished in style, among the best of which are one of himself, in the Germanic Museum, Nuremberg, and Louis I and Maximilian II, in the New Pinakothek. He was loaded with honors, German and foreign, being made an Officer of the Legion of Honor and corresponding member of the Institut de France, Grand Commander of the Order of St Michael, etc. He died of the cholera at Munich, April 7, 1874.

Kaulbach is well known as a designer for engravings. In this work his satire and skillful portrayal of character had full play. He made a thorough study of Hogarth, as is evident in

his illustrations of Schiller's *Verbrecher aus verlorenen Ehre* and Goethe's *Faust*. He also designed a "Shakespeare Gallerie" and a "Goethe Gallerie." Best of all are his illustrations of Goethe's *Reineke Fuchs*, in imitation of Grandville's *Scènes de la vie des animaux*.

Kaulbach's works express the historical knowledge and philosophic thought of his age. He was endowed by nature with a fine sense of form and a strong power of characterization, but under the influence of the Cornelian school his figures became sensuous, and his characterization degenerated into satire. Among his sitters were the Emperor of Austria, Frederick William as Crown Prince and his three sons, and Prince Albrecht of Prussia. Consult H. Müller, *Wilhelm von Kaulbach* (Berlin, 1893); Bertha Riehl, "Wilhelm von Kaulbach," in *Die Kunst unserer Zeit*, vol. xvi (Munich, 1905); and especially Fritz von Ostini, "Wilhelm von Kaulbach," in *Künstler Monographien*, No. 84 (Bielefeld, 1906).

KAULBARS, koul'bärs, ALEXANDER, BARON (1844-). A Russian general and explorer, brother of Nikolai Kaulbars. He was born in St. Petersburg and there received his military education. In 1869, having been sent to Central Asia on military service, he climbed the Tian-Shan Mountains and was the first to reach the headwaters of the Naryn and to explore the region lying beyond Lake Issyk-Kul. The results of these explorations are set forth in his monograph "Materials for the Geography of Tian-Shan" which brought him the Russian Geographical Society's gold medal. In 1870 he explored part of the Russian-Japanese boundary, visiting China the following year and the District of Kulja in 1872. In 1873 he participated in the Khivanian expedition, exploring the delta and old channels of the Amu-Darya and finding a navigable course from the Sea of Aral to that river. The results of these studies Kaulbars embodied in his valuable "Materials for the Lower Amu-Darya" and "The History of Amu-Darya," for which he received another gold medal, from the Imperial Geographical Society. In 1877-78 he participated in the Russo-Turkish War and at its close was the Russian delegate on the Balkan Boundary Commission. Appointed Bulgarian Minister of War in 1882, he was recalled the following year. In 1892, having been ordered to organize a new cavalry division, he was given its command; in 1900 he was commander general in China and early in 1904 was Governor-General of the District of Odessa and then (November) received command of the third, and later of the second, Manchurian army. In the battle of Mukden he commanded the Russian right, and the turning of his position by Generals Oku and Nogi gave the Japanese the victory. (See RUSSO-JAPANESE WAR.) After he had resumed command in Odessa, Kaulbars's negligence was considered partly responsible for the massacre of the Jews in 1905. Some years later he won considerable notoriety by his undiminished anti-Semitism and protection of the "Black Hundred" organization (composed of members of the League of the Russian People). This partiality grew to such a scandal that in 1913 he was removed from his responsible post at Odessa.

KAULBARS, NIKOLAI, BARON (1842-1906). A Russian soldier, brother of Alexander Kaulbars. He was born in St. Petersburg and after studying military science there and in Berlin

became a member of the Russian general staff in 1868. He took part in the Russo-Turkish War (1877-78), represented his government when Bosnia and Herzegovina were occupied by the Austrians in 1878, and was a member of the Montenegrin Boundary Commission in 1879. From 1881 to 1886 he was military agent at Vienna and in the latter year was sent on a special diplomatic mission to Bulgaria. At the international geographical congresses in Vienna (1881) and Paris (1889) he represented Russia. He was appointed chief of the general staff of the Sixth Army Corps in 1889, with headquarters at Warsaw, and in 1899 was attached to the general staff at St. Petersburg. Besides attracting attention by a series of articles on military, historical, and scientific subjects—such, especially, as "Aperçu des travaux géographiques de la Russie, 1889"—Kaulbars was noted as a cartographer, having been the first to draw several important maps.

KAULEN, kou'len, FRANZ (1827-1907). A German Roman Catholic theologian. He was born at Düsseldorf, was educated at Bonn, and became a priest of the Roman Catholic church in 1850. In 1863 he was appointed a lecturer at Bonn, in 1880 professor, in 1892 papal domestic chaplain, and in 1903 a member of the Papal Bible Commission. He published *Die Sprachverwirrung zu Babel* (1861), *Geschichte der Vulgata* (1869), *Handbuch zur Vulgata* (1870), *Assyrien und Babylonien nach den neuesten Entdeckungen* (4th ed., 1891), and other works. He also finished the preparation, begun by Hergenröther, of the second edition of Wetzer and Welte's *Kirchenlexikon, oder Encyclopädie der katholischen Theologie und ihrer Hilfswissenschaften* (12 vols., Freiburg-im-Breisgau, 1882-1901), the chief German encyclopædia of the Roman Catholic church.

KAUN, koun, HUGO (1863-). A German composer, born in Berlin. He studied at the Hochschule under Grabau and Schulz and later at the music school of the Royal Academy under Kiel. From 1887 to 1900 he lived in Milwaukee, where he conducted various societies. In 1900 he settled permanently in Berlin. His works include two one-act operas, *Der Pietist* and *Oliver Brown*; three symphonies; the symphonic prologue *Maria Magdalena*; a symphonic poem, *Falstaff*; a concerto for piano and orchestra, considerable chamber music; several choral works with orchestra; numerous pieces for piano solo.

KAUNITZ, kou'nits, WENZEL ANTON DOMINIK, PRINCE (1711-94). An Austrian statesman. He was born at Vienna, Feb. 2, 1711; studied at Vienna, Leipzig, and Leyden; traveled in England, France, and Italy, and in 1735 was made an Imperial Councillor. He was employed on diplomatic missions to Rome, Florence, and Turin in 1741-42, was Austrian Minister at the court of Charles of Lorraine, Governor of the Austrian Netherlands in 1744-45, and in 1746 arranged with the French the stipulations for the withdrawal of the Austrian troops from Brussels and Antwerp. He took an important part as Imperial Ambassador in 1748 in the negotiations at Aix-la-Chapelle which closed the War of the Austrian Succession, and after the conclusion of peace became a member of the Privy Council, in which capacity he first conceived the plan of an alliance between Austria and France which established his great diplomatic reputation. He was Ambassador at Paris

from 1750 to 1753. In 1753 he became Chancellor and Minister of Foreign Affairs and in 1756 effected the Austro-French coalition against Frederick the Great. (See SEVEN YEARS' WAR.) Throughout the lifetime of Maria Theresa and with a steady decrease of influence under her sons, Joseph II and Leopold II, he continued at the head of foreign affairs. Though unsuccessful in his attempts to check the power of Prussia, he well represented Austria's interests in the first partition of Poland (1772) and in 1775 acquired Bukowina from the Turks. He took an active part in the reform measures of Joseph II, having already advocated in 1758 a reform of the complicated machinery of Austrian administration. As a statesman, he combined in an interesting way the older ideas of the eighteenth century statecraft with more modern conceptions, as, e.g., in his ideas on taxation and in his attitude on the revolt in the Netherlands when he advised Joseph II to consider their ancient privileges. Although somewhat eccentric in his personal habits and much ridiculed by the Viennese for his predilection for French fashions and manners, he was a liberal patron of the arts and sciences and a great admirer of French philosophy and literature, especially of Voltaire and the Encyclopædists. He retired from public life when Francis II ascended the throne (1792), and died June 27, 1794. Consult: Hormayer, *Oesterreichischer Plutarch* (Vienna, 1823); Béer, *Denkschriften des Fürsten Kaunitz* (ib., 1872); Schlitter, *Correspondance secrète entre le comte Kaunitz et le baron Ignatz de Koch* (Paris, 1899); id., *Kaunitz, Philipp Cobenzl und Spielmann* (Vienna, 1899); A. von Arneth, *Biographie des Fürsten Kaunitz* (ib., 1899), and the authorities cited under JOSEPH II, MARIA THERESA, and LEOPOLD II. See AUSTRIA-HUNGARY.

KAUPERT, kou'pért, GUSTAV (1819-97). A German sculptor, born at Cassel. He studied at the School of Arts and continued at the Munich Academy as the pupil of Schwanthaler. During his stay in Rome, whither he had gone with a government stipend, he received important orders from America and executed after Crawford's design all the accessory figures for the Washington Monument, also the colossal statue of America and the figures on the frontispiece of the Capitol in Washington. Besides a number of mythological and allegorical groups and statues, his original creations include the "Sleeping Lion" (1874), a monument to the Hessians fallen in battle, in the Karlsauë at Cassel; a marble group, in heroic size, of "Christ and the Four Evangelists" (1887), in the Basilica at Treves; and the statue of Emperor William I (1891), in the Römersaal at Frankfort, where he was professor at the Städel Institute (1867-92).

KAURI GUM. See KAURI PINE; DAMMAR.

KAURI (kou'rè) **PINE** (*Agathis australis*). A beautiful New Zealand coniferous tree, which sometimes attains a height of 150 feet, and which is noted for its dark, dense foliage. Although kauri is often called pine, it is not a pine at all. The genus *Agathis* is associated with *Araucaria* in constituting the coniferous tribe Araucariaceæ, which differs in many important particulars from the tribe Abietineæ, which includes the more common conifers of the north temperate regions, as pines, spruces, hemlocks, etc. A conspicuous superficial difference is that the

leaves of *Agathis* have broad blades, not needle-like, as in the pines. The timber of kauri is buff, close-grained, durable, flexible, very valuable for masts, yards, and planks, and for nearly all kinds of building and implements on account of its superiority to other timbers. It is much used for masts for the British navy. The Fiji Islands, New Hebrides, and Australia produce other species, the timber of which is sold under the name of kauri pine, although there are differences in quality. They all produce a resin called kauri resin, or kauri gum, and sometimes Australian copal and Australian dammar, of which large quantities are exported, chiefly from New Zealand. It is used for making varnishes. It is of a dull amber color and is sometimes found in pieces weighing 100 pounds by digging where kauri forests have formerly grown. When collected fresh from the trees, it is whitish. The industry of digging for kauri gum is a large one, employing many men, who go about thrusting a wire spear into the ground till they strike gum. See DAMMAR.

KAUTSKY, kout'ski, KARL JOHANN (1854-). An Austrian Socialist, born at Prague and educated at the Gymnasium and University of Vienna. After 1875 he was a contributor to the Socialist press, residing at various times in Zurich, Stuttgart, London, and, after 1897, in Berlin. One of the foremost exponents of the doctrines of Marx and Engels, in 1883 he founded in Stuttgart *Die neue Zeit*, a Socialist organ, which he thereafter edited. He wrote: *Einfluss der Volksvermehrung auf den Fortschritt der Gesellschaft* (1880); *Karl Marx' ökonomische Lehren* (14th ed., 1912); *Das Erfurter Programm* (11th ed., 1912, in Russian, 1903); *Der Parlamentarismus* (1893); *Geschichte des Sozialismus*, part i (1894); *Die Agrarfrage* (1890); *Handelspolitik und Sozialdemokratie* (1901; 2d ed., 1911); *Die soziale Revolution* (vol. i, *Sozialreform und soziale Revolution*, 1902, vol. ii, *Am Tage nach der sozialen Revolution*, 1903; 3d ed., 1911); *Thomas More und seine Utopie* (2d ed., 1907); *Der Ursprung des Christentums* (1908); *Vorläufer des neueren Sozialismus* (2d ed., 2 vols., 1909); *Vermehrung und Entwicklung in Natur und Gesellschaft* (1910). Many of his writings have been translated into English and some into French.

KAUTZ, kouts, ALBERT (1839-1907). An American naval officer, born at Georgetown, Ohio. He graduated at the Naval Academy in 1861. In June, 1861, as commander of a prize brig, he was captured near Cape Hatteras, but was released on parole and proceeded to Washington, where he succeeded in procuring the first exchange of prisoners authorized by President Lincoln. His services in the engagements on the lower Mississippi received commendatory notice, and at the close of the Civil War he was made lieutenant commander. In 1898 he was promoted to the rank of rear admiral and in 1901 was retired.

KAUTZ, AUGUST VALENTINE (1828-95). An American soldier, born at I-pringen, Baden. He came to the United States with his parents and, after serving as a volunteer in the Mexican War, was appointed to a vacancy in the Military Academy, where he graduated in 1852. For several years he served against the Indians and at the outbreak of the Civil War was made a captain in the Sixth United States Cavalry, with which he served through the Peninsular campaign of 1862. He continued as a cavalry offi-

cer, participating with distinction in many engagements, and in 1864 was placed in command of the cavalry division of the Army of the James. He was brevetted major general of volunteers in October, 1864, and in 1865 marched into Richmond in command of a division of colored troops. After the war he conducted successful operations against the Indians on the New Mexican frontier until 1874, when he was promoted colonel of the Eighth Infantry. In 1875 he was placed in command of the Department of Arizona. He was retired in 1892. General Kautz published *The Company Clerk* (1863); *Customs of Service for Non-Commissioned Officers and Soldiers* (1864); *Customs of Service for Officers* (1866).

KAUTZ, JULIUS (GYULA) (1829-1909). An Hungarian economist and statesman, born at Raab. He was educated there, at Pest, and at Leipzig, and was made instructor (1859), and then (1863) professor, of political economy in the University of Pest. In 1883 he became vice governor, and in 1892-1900 was governor, of the Austro-Hungarian Bank. He was made a Privy Councillor, served as member of the Hungarian Parliament (1865-83), and after 1886 was a life member of the Upper Chamber. In 1860 he was chosen a member of the Hungarian Academy of Science. His more important works in Hungarian are a system of economics and finance (last ed., 1890), and, in German, *Theorie und Geschichte der Nationalökonomik* (2 vols., 1858-60).

KAUTZSCH, KOUCH, EMIL FRIEDRICH (1841-1910). A German Hebrew scholar and biblical critic, born at Plauen (Saxony). He was educated at Leipzig, in whose theological faculty he was appointed privatdocent (1869) and professor (1871). Subsequently he held chairs at Basel (1872-80) and Tübingen (1880-88). In 1888 he received a professorship at Halle. He was one of the founders of the Palestine Exploration Society of Germany (1877) and from 1888 one of the editors of the *Theologische Studien und Kritiken*. He published *De Veteris Testamenti Locis a Paulo Apostolo Allegatis* (1869), *Grammatik des Biblisch-Aramäischen* (1884), *Heilige Schrift des alten Testaments* (3d ed., 1908-10), with other scholars; *Apokryphen und Pseudepigraphen des alten Testaments* (1900), with others. He edited Hagenbach's *Encyclopädie und Methodologie* (the 10th and 11th eds.); Gesenius' *Hebraische Grammatik* (from the 22d to the 28th ed., 1909); Scholz's *Abriß der hebraischen Laut- und Formenlehre* (thoroughly revised, 8th ed., 1899).

KAVA, ká'va. A South Sea Island shrub, *Piper methysticum*, with narcotic properties, and an opiate or intoxicating drink made from the root of the plant. See **AVA**.

KAVANAGH, ká'v'-ná. A prose romance by Henry W. Longfellow (1849).

KAVANAGH, HUBBARD HIND (1802-1884). An American bishop of the Methodist Episcopal Church South. He was born in Clark Co., Ky., and entered the ministry in 1823. In 1837 and 1838 he was Superintendent of Public Instruction in Kentucky. When the Methodist division occurred in 1844, he remained with the Church South, of which, in 1854, he was elected Bishop. The only Bishop of his church within the Federal lines during the Civil War, he gave evidence of great wisdom in a trying position. Consult A. N. Redford, *Life and Times of H. H. Kavanagh* (1884).

KAVANAGH, JULIA (1824-77). An Irish novelist. She was born at Thurles, Tipperary, and was the daughter of Morgan Peter Kavanagh, a minor poet and philologist. Her childhood was spent in France, where she was educated. In 1844 she took up her residence in London and entered literary life. Among her novels may be mentioned, *Madeleine, a Tale of Auvergne* (1848); *Nathalie* (1850); *Grace Lee* (1855); *Adèle* (1857); *Sybil's Second Love* (1867); *Bessie* (1872); *Two Lives* (1877). Her first work was entitled *The Three Paths, a Story for Youth* (1848), a posthumous work, *Forget-Me-Nots*, two volumes of short tales, appeared in 1878. Her novels, some of which have appeared in translations and in American editions, are notable for charm of style and poetic feeling. Consult C. W. Wood's preface to the 1878 edition of *Forget-Me-Nots*. Her plots are usually centred in France and, while of no great depth, are full of expositions of home life and domestic duties. She was a prolific contributor to periodical literature and also wrote many biographical sketches. Chief among her miscellaneous writings are *Woman in France during the Eighteenth Century* (1850), *Women of Christianity Exemplary for Acts of Piety and Charity* (1852), *A Summer and Winter in the Two Sicilies* (1858), *French Women of Letters* (1862), *English Women of Letters* (1862).

KAVELIN, ká've-lén', KONSTANTIN DMITRIEVITCH (1818-85). A Russian jurist and writer, born in St. Petersburg. He was educated at the Moscow University, where he became adjunct professor of civil law (1844-48), afterward taking the same position at the university of his native city, which he left in 1861 to teach in the Military Law Academy. As law tutor to the Grand Duke Nicholas and afterward legal adviser to the Finance Minister, Kavelin exerted considerable influence in obtaining freedom for the serfs. He made official sojourns in France and Germany to study the educational institutions of those countries, and he wrote much upon legal subjects. His scientific and literary activity was varied, including, besides history and law, political economy, the philosophy of history, ethics, psychology, and other subjects. His literary discussion of the agrarian question influenced the development of the radical reforms of Alexander II. His complete works were published in four volumes in 1859, but he wrote afterward *Problèmes de psychologie* (1872), *La philosophie de l'a priori* (1875), and *La question des paysans* (1882). These, with a biography, are included in the latest edition of his works (1897-1900).

KAVERY, ká'vēr-i, or CAUVERY. A river of south India, rising in Coorg in the Ghats, within 30 miles of the west coast, at an altitude of 4000 feet. It flows southeast through Mysore and below the famous stronghold of Seringapatam forms the beautiful falls and rapids of Sivasamudram. Near Collegal it enters Madras and, proceeding past Bhavani, Erode, and Karur, at Trichinopoly and Srirangam divides into several deltaic channels, one of which near the centre continues as the Kavery eastward past Combaconum and into the Bay of Bengal at Karikal, another, on which are situated Tanjore and Tiruvalur, entering at Negapatam, and the principal and northernmost channel, the Coleroon, 92 miles long, debouching at Porto Novo. The Kavery is navigable only downward by small native craft. Its length is 415 miles.

The irrigation system of its delta, dating from the second century, is the most ancient in India.

KAVI, ká'vé (Skt., wise, poet). The ancient sacred language of Java (c.800-1400 A.D.). In structure this language belongs to the Malayo-Polynesian group, and its inflection is essentially Javanese. (See JAVANESE LANGUAGE.) There are three dialects of the Javanese—the vulgar tongue, the polite dialect, and the ancient—and they are written in alphabets which are adaptations of the Indian Devanagari script. The largest infusion of loan words is from Sanskrit. In the common language of Java the proportion of Sanskrit is only 11 per cent, but in the recondite it is nearly 40 per cent. The introduction of Indian elements is traced to the immigration of the Brahmans from India about 2000 years ago, who brought with them Hindu civilization and religion. Kavi holds the same relation to Javanese that Sanskrit does to the modern languages of India. Much of the literature is based on the Indian epic of the *Mahābhārata*, as, e.g., the *Bārata-yuddha* (partly translated in Raffles, *History of Java*, London, 1817), and the *Arjuna-Vivaha* (ed. by Friederich, Batavia, 1850; and by Kern, The Hague, 1871). In the fifteenth century the Kavi, with Hinduism, was driven from Java to the small island of Bah.

Bibliography. Humboldt, *Ueber die Kavi-Sprache* (Berlin, 1836-39); Friederich, *Voorloopig Verslag van het Eiland Bah* (Batavia, 1849-50); Stuart, *Kavi-Oorkonden* (Leyden, 1875); Jonker, *En Oud-javaansch Wetboek* (ib., 1885); Juynboll, *Drie Boeken Van het Oud-javaansche Mahābhārata* (ib., 1893). An exhaustive dictionary of the language has been prepared by H. N. van der Tuunk under the title *Kaivalineesch-nederlandsch woordenboek* (4 vols., Batavia, 1907-12).

KAW, ká, properly **KANSA**. A Siouan tribe speaking a dialect of the Osage language, formerly occupying several villages on the lower Kansas River in Kansas and estimated about a century ago at 1300. In 1846 they were removed to a reservation west of the Osage in the present Oklahoma. In 1875 they still numbered 516, but in 1910 there were but 238 remaining, less than half of whom were full-bloods. In former customs they resembled the other buffalo-hunting tribes of the plains.

KAWAITSU, ká-wá't-sōō. A Shoshonean tribe, living in Tehachapi mountains in southern California. See SHOSHONEAN STOCK.

KAWAMURA, ká'wá-mōō'rā, KAGEAKI, VISCOUNT (1850-). A Japanese soldier, born in Satsuma. He had considerable military experience in youth and had an important place in the expeditionary force sent to Formosa at the close of the Chino-Japanese War; for his services he was made Baron. Through the various military grades he was promoted to general in 1905, when he had been of great service in the Russo-Japanese War. At the head of the Army of the Yalu he held the extreme right of the Japanese line in the battle of Mukden. (See RUSSO-JAPANESE WAR.) He was afterward created Viscount. In July, 1906, he was appointed extraordinary inspector general of the army, and he became high military counselor and commander of the Tokyo garrison.

KAWERAU, ká'vēr-ou, GUSTAV (1847-) A German Protestant theologian, born at Bunzlau. After study at Berlin he held pastorates at Langheinersdorf and Klemzig, from

1886 to 1892 was professor of practical theology at Kiel, and in the latter year was appointed to a similar chair at Breslau. In 1883 he assisted in founding the Society for the Promotion of the Study of the History of the Reformation. He was made a member of the Consistory of Prussia at Berlin in 1907. He published: *Johann Agricola von Eisleben* (1881); *De Digamia Episcoporum* (1889); *Reformation und Gegenreformation* (1894; 3d ed., 1907), constituting vol. iii of Möller's *Lehrbuch der Kirchengeschichte*; *Predigten auf die Sonn- und Festtage des Kirchenjahres* (1899); *Paul Gerhardt* (1907); *Luther in katholischer Beleuchtung* (1911). He edited a number of works, especially treating of Luther, and became joint editor with Enders of *Briefwechsel Luthers* (vol. xi, 1907; vol. xv, 1913).

KAWIA, ká-we'á, or **CAHUILLA**, ká-we'yá, sometimes improperly spelt **COAHUILLA**. A Shoshonean tribe centring about Cahuilla creek and valley in southwestern California. They are a roving people of considerable strength and apparently primitive character, but, as they have never been under treaty restrictions, very little is known concerning them. They number 755. Consult A. L. Kroeber, *Shoshonean Dialects of California* (Berkeley, 1907).

KAY, JOHN (1742-1826). A Scottish miniature painter, etcher, and caricaturist, born near Dalkeith. He worked as a barber in Edinburgh until he was 43 years old. Then, encouraged by the favor with which his attempts at etching were received, he opened a print shop, where he painted miniatures and sold his etchings, sketches, and caricatures of Edinburgh celebrities and quaint characters. These were collected by Hugh Paton for illustration in his *A Series of Original Portraits and Caricature Etchings by the Late John Kay* (2 vols., 1838, with additional plates, 1877). Kay's portraits appeared at different Edinburgh exhibitions (1811-22), and some of his drawings can still be seen at the Royal Scottish Academy.

KAY, JOSEPH (1821-78). An English economist, born at Salford, Lancashire, brother of Sir James Phillips Kay-Shuttleworth. He graduated from Trinity College, Cambridge (B.A., 1845, M.A., 1849). As a result of his investigations of social conditions in Europe, made as a traveling bachelor of the university in 1845-49, he published *The Education of the Poor in England and Europe* (1846), *The Social Condition of the People in England and Europe* (2 vols., 1850), and *The Condition and Education of Poor Children in English and German Towns* (1853). He also wrote on *The Law Relating to Shipmasters and Seamen* (2 vols., 1875) and on *Free Trade in Land* (1879; 9th ed., 1885). Called to the bar at the Inner Temple in 1848, he was made queen's counsel and was elected a bencher in 1869, and from 1862 until his death he served as judge of the Salford Hundred Court of Record.

KAYAK, ká'ák (Eskimo name). An Eskimo canoe. It consists of a wooden framework, covered over with hide, but having a hole in the centre of the top covering for the man using it; this hole is surmounted with a flap which lashes around the body of the oarsman and prevents the entrance of water. See **ESKIMO**.

KAYE, ká, SIR JOHN WILLIAM (1814-76). An English military historian. He was born in Acton, near London, and was the son of a lawyer. After education at Eton and Addis-

combe, he went to India, and from 1832 to 1841 served in the Bengal Artillery, becoming lieutenant. He engaged in journalistic and literary work in India, and afterward in England from 1845 to 1856, when he received an appointment in the home department of the East India Company. The next year India came under the crown government, and he was nominated to the secretaryship of the Indian Political and Secret Service Department, made vacant by the retirement of John Stuart Mill. The leisure of his official life was employed in the writing and publication of numerous historical, biographical, and other works. His writings include: *History of the War in Afghanistan* (2 vols., 1851; later ed., 3 vols., 1874), *The Administration of the East India Company* (1853), *Christianity in India* (1859), *History of the Sepoy War* (3 vols., 1857-58, 5th ed., 1881), revised and republished as Kaye and Malletson's *History of the Indian Mutiny* (6 vols., 1890); *Lives of Indian Officers, Illustrative of the History of the Civil and Military Services in India* (2 vols., 1867; new ed., 1880); *Essays of an Optimist* (1870). He also edited Buckle's *Memoirs of the Services of the Bengal Artillery* (1852); Tucker's *Memoirs of India Government* (1853); *Autobiography of Miss Cornelia Knight, Lady Companion to the Princess Charlotte of Wales* (2 vols., 1861), and, with J. F. Watson, Taylor's *People of India* (1868). In 1871 he was created a Knight Commander of the Star of India. Three years later he resigned his appointment because of ill health.

KAY-SHUTTLEWORTH, SIR JAMES PHILLIPS (1804-77). An English educational reformer, founder of the English national system of elementary education. A brother of Joseph Kay, he was born at Rochdale, Lancashire, was a bank clerk for several years, and from 1824 to 1827 studied medicine at Edinburgh. He practiced at Manchester, devoting himself to sanitary reforms and to the advance of the Free Trade movement, and becoming assistant poor-law commissioner in 1835. In this way his attention was attracted to educational reforms; in 1841 he wrote a report on the training of the poor, having established a normal school at Battersea, largely from his own resources, in 1839. His plan was successful, and on it is based the English system of popular education. He was a member of the Central Relief Committee during the Lancashire famine at the time of the American Civil War and was prominent in the organization of the Liberals in his country. He wrote, among several pamphlets on education, *Four Periods of Public Education* (1862), and two novels, *Scarsdale* (1860) and *Ribblesdale* (1874).

KAZAN, or KASAN, ká-zán'. A government of European Russia, bounded by the Government of Vyatka on the north, Ufa and Samara on the east, Samara and Simbirsk on the south, and Nizhni Novgorod on the west (Map: Russia, G 3). Area, 24,587 square miles. The district is divided into three parts by the Volga and its tributary the Kama. In the north there are swamps and heavy forests; in the southeast, steppes; in the southwest, somewhat broken districts. During the springtime large areas are submerged by the rivers. Kazan is also traversed by the Vetluga and the Vyatka. The soil is generally good. The minerals are not important; but iron, petroleum, and sulphur are worked. The forests occupy over 30 per cent

of the area, and the arable land about 50 per cent. The chief industry is agriculture, including gardening and fruit raising, although certain lines of house industries, especially in wooden articles, are well developed. The chief manufacturing establishments are flour mills, distilleries, soap factories, tanneries, etc. Kazan contains a large number of river ports on the Volga and the Kama and carries on an extensive trade with Asiatic Russia. Pop., 1912, 2,792,400, composed of Russians, Tatars, and Tchuvashes. Most of the population belong to the Russian church. The Mohammedans number over 600,000, and there are a few thousand heathen. Capital, Kazan (q.v.). Up to the thirteenth century the present Government of Kazan formed a part of the dominions of the northern Bulgarians. Conquered by the Tatars in the thirteenth century, it was formed in 1438 into a separate khanate, which was, however, overthrown by the Russians in 1552.

KAZAN, or KASAN. Capital of the Russian government of the same name (q.v.), situated on the Kazanka, 195 miles east of Nizhni Novgorod (Map: Russia, G 3). At the north end of the city is situated the kremlin. It contains the sixteenth-century cathedral, a monastery, an orphan asylum as well as an arsenal, and the palace of the Governor. The town proper is divided into several quarters, of which two are inhabited by Tatars. The Kazanski convent, built in 1579, is a pilgrimage centre on account of a copy of the ikon of the Virgin Mother of Kazan, a miraculous picture, the original of which is now preserved in St. Petersburg and venerated throughout Russia. The city contains a handsome monument of Alexander II (1895) and the curious Sujumbeka Tower, a pyramidal brick structure of four tiers, 244 feet high, an object of veneration to the Moslems as the reputed burial place of one of their saints. Kazan possesses a large number of churches, monasteries, mosques, synagogues, and monuments. Among them is a truncated pyramid built in 1812-23 to commemorate the capture of the city in 1552. The University of Kazan, founded in 1804 by Alexander I, has four faculties and an attendance of 1200. There are attached to it an observatory, a botanical garden, an ethnographical museum, and a library of 235,000 volumes, including many Mongol and Tatar manuscripts. There are in Kazan, besides two theological seminaries, a teachers' seminary, a military school, and a theatre.

The manufacturing industries are of considerable importance. Leather (especially Russian leather), soap, textiles, iron and steel, and wooden articles are manufactured on an extensive scale. There is also some shipbuilding. Kazan is an important centre in the commerce between European and Asiatic Russia. The city possesses a stock exchange and electric railways, is the seat of an archbishop, and of many Mohammedan dignitaries, being the intellectual centre of the Russian Moslems. Pop., 1911, 188,100, including over 30,000 Tatars. The original town of Kazan was founded in the thirteenth century, about 30 miles northeast of the present town. It was destroyed by the Russians in 1399 and rebuilt on the present site by the Khan of the Golden Horde in 1437. It soon became the capital of the Tatar Khanate of Kazan. In 1552 the Russians under Ivan the Terrible took the town after a bloody siege, and its fall put an end to the khanate.

KAZANLIK, kâ-zân'lêk, or **KASANLIK**. A town of Eastern Rumelia, Bulgaria, situated on a tributary of the Tunja, at the base of the Balkan Mountains, and 5 miles south of the Shipka Pass (Map: Balkan Peninsula, E 3). It lies amid flower gardens; its chief industry is the manufacture of oil of roses, for which it is famous. During the Russo-Turkish War Kazanlik was an important centre of military operations and was occupied by the Russian forces on Jan. 7, 1878. Pop., 1900, 10,826, 1910, 10,568.

KAZEM'BE. See CAZEMBE.

KAZINCZY, kôz'int-sé, FERENCZ (1759-1831). An Hungarian author and editor, whose writings include plays, poems, travel sketches, and translations from various languages. He studied law, but followed literature as a profession, the first in Hungary to do so, and by earnest and persistent effort, producing original works and translating no slight amount from French, English, German, and the classical languages, he did much to restore the Magyar language and tooust Latin, being the leader of the Neologists, or innovators of the Hungarian vocabulary. In 1794, having been implicated in the political conspiracy of Abbot Martinovics, he was brought to trial and sentenced to death, but he obtained a commutation and was imprisoned for six years. After his liberation in 1801 he was the leader of the contemporary Hungarian literary activity. His original works appeared in 1836-45 in five volumes. Kazinczy's *Correspondence*, published by the Hungarian Academy, is very important for the literary history of his time.

KAZVIN, or **KASVIN**. See **KASBIN**.

KEA. An island of the Cyclades. See **ZEÄ**.

KEA, kâ'a or kâ'a. The kea, or mountain parrot, is large, about the size of a raven, and olive green, with the feathers edged with black, and a reddish tinge beneath the wings and on the tail which ends in a broad blackish band. It belongs to the South Island of New Zealand alone, where it is not found in the forests, but on the rocky mountain summits. It seeks its food in brushy places and nests among the crevices of the cliffs. Originally largely insectivorous, these parrots have acquired, since the settlement of New Zealand, a carnivorous taste which has made them a pest on all the more elevated sheep pastures. They used to come familiarly about the pens and slaughterhouses and became fond of picking the heads and offal thrown out. This liberal diet led to a great increase of parrots. It was next found that they attacked any sores the sheep might have, and from this learned to alight upon the sheep and with their pickaxe-like beaks tear down through the flesh of the loins until the kidneys were reached and devoured, apparently for the sake of their fat. In some districts the loss of sheep has been considerable, and in consequence these parrots have been actively destroyed. For a full account of the birds and the important economic problem which they present, consult Marriner, *The Kea, a New Zealand Problem* (Christchurch, N. Z., 1908).

KEACH, kêch, BENJAMIN (1640-1704). An English Baptist author. He was born at Stoke Hammond, joined the Baptists in 1655, became a preacher in 1659, suffered imprisonment for his opinions in 1664, removed to London in 1668, and there died as pastor of a large Baptist church. He was noted as a controversialist, but

is now of interest chiefly from the fact that he wrote several allegories, two of which, *The Travels of True Godliness* (1683; latest edition, with memorial by H. Malcolm, London, 1849) and its companion *The Progress of Sin, or the Travels of Ungodliness* (1684; latest edition, London, 1849), were very popular.

KEAN, kên, CHARLES JOHN (1811-68). A noted English actor, the second son of Edmund Kean (q.v.). He was born at Waterford, Ireland, Jan. 18, 1811, and educated at Eton. He adopted the stage against his father's desire, making his début at Drury Lane in 1827 as Young Norval in Home's *Douglas*, but failed to capture the London public. In the provinces and in America, which he first visited in 1830, he was popular before he achieved a reputation in London. The only time when he played with his father in London, it is said, was at the latter's last appearance in 1833, when Charles was Iago to his father's Othello. Five years before they had appeared together at Glasgow in Arnold Payne's *Brutus*. He married in 1842 Miss Ellen Tree, and till his death in 1868 they acted together. His management of the Princess's Theatre (1850-59) was distinguished for the splendor of some of his productions, the most studious care being expended on scenery and dress. Byron's *Sardanapalus*, produced in 1853, was perhaps the most striking of these "restorations," as they were called. Kean was also director of the royal theatricals. His Hamlet was his greatest Shakespearian part. He was at his best in such pieces as *The Wife's Secret*, *The Corsican Brothers*, and especially in *Louis XI*. One of his latest undertakings was a tour around the world with his wife, upon which he started in 1863. He died at Chelsea, Jan. 22, 1868. Consult. Cole, *The Life and Theatrical Times of Charles Kean* (London, 1859); Cook, *Hours with the Players*, vol. II (ib., 1881); Hutton, "Mr. and Mrs. Charles Kean," in *Actors and Actresses of Great Britain and the United States*, edited by Matthews and Hutton, vol. IV (New York, 1886); Marston, *Our Recent Actors* (London, 1890); Scott, *The Drama of Yesterday and To-Day* (ib., 1899).

KEAN, EDMUND (1787-1833). A celebrated English tragedian. The facts of his parentage are not known with certainty. His mother was a strolling actress named Ann Carey, and his father is supposed to have been Edmund Kean, an architect's clerk, though some accounts say it was his brother Aaron, a stage carpenter. His childhood in London, where he was born March 17, 1787, was for the most part one of poor surroundings and many vicissitudes. Almost from babyhood he was brought upon the stage, the first time, it is said, as Cupid in a ballet. On one occasion he gave a recitation before George III at Windsor Castle. In 1803 he joined a strolling company and for 11 years continued his acting chiefly in provincial towns. In 1808 he married. His appearance as Shylock at Drury Lane was made in January, 1814, and in that season his name and fortune were assured. All London flocked to hear him; Hazlitt, Hunt, and Lamb, who were constantly in the pit, were extravagant in their praise, and Coleridge said: "Seeing him act was like reading Shakespeare by flashes of lightning." Yet it is curious to learn that he modified his Hamlet at the request of Mrs. Garrick, in order to do the part more "as David did." Kean made his first appearance in the United States in 1820 and

was received at first with great enthusiasm, but later, having with characteristic arrogance broken an engagement in Boston, he was severely censured and soon returned to England, where worse troubles awaited him. An action was brought against him in 1825 for criminal conversation with an alderman's wife, and he was condemned to pay damages. In consequence of this scandal he was hissed from the stage in London and Edinburgh. In the same year he came again to the United States, where the popular hostility was partly mitigated only by an apology for his conduct. At Quebec, however, he was much touched by an election from the Huron Indians as one of their chiefs. He reappeared at Drury Lane in 1827, but only occasionally rose to something of his old splendor. His health and spirits were completely broken by his habits of intoxication; he died at Richmond, May 15, 1833. Kean's disposition was generous, but ungovernable. His dramatic gifts were of a high order. He had an expressive face, with black hair and eyes, and, though small of stature, was of a most effective presence, and possessed a richly powerful voice. His greatest characters were Shylock, Othello, Richard III, Hamlet, and Sir Giles Overreach.

Bibliography. Phippen, *Authentic Memoirs of Edmund Kean* (London, 1814); Proctor (Barry Cornwall), *The Life of Edmund Kean* (Boston, 1835); Hawkins, *The Life of Edmund Kean* (London, 1869); Lewes, *On Actors and the Art of Acting* (ib., 1875); Baker, *Our Old Actors* (ib., 1881); Edwin Booth, "Edmund Kean," in *Actors and Actresses of Great Britain and the United States*, edited by Matthews and Hutton, vol. III (New York, 1886); Stirling, *Old Drury Lane* (London, 1887); Molloy, *The Life and Adventures of Edmund Kean, Tragedian, 1787-1833* (ib., 1897).

KEAN, ELLEN TREE (1805-80). An English actress, wife of Charles John Kean (qv.). She made her first appearance upon the stage at Covent Garden Theatre, London, in 1823 and soon established a high reputation in leading comedy parts. In 1836 she came to America, where she met with great success. After her marriage in 1842 she continued to act with her husband, and upon his death in 1868 she retired from the stage. She died Aug. 20, 1880. Consult Winter, in *Eminent Women of the Age* (Hartford, Conn., 1869).

KEANE, KEN, DORIS (1885-) An American actress, born in Michigan. She was educated at the American Academy of Dramatic Art, New York, and studied also in Chicago, Paris, and Rome. Her début was made at the Garrick Theatre, New York, in 1903 as Rose in *Whitewashing Julia*. She starred with John Drew in *Delancy* (1904); played Rachel Neve in *The Hypocrites* in New York and London in 1907; and subsequently had important rôles in *The Happy Marriage* (1909), *Arène Lupin* (1909), *Decorating Clementine* (1910), *Anatol* (1912), and *Romance* (1913).

KEANE, JAMES JOHN (1857-). An American Roman Catholic archbishop. He was born at Joliet, Ill., and was educated at St. John's University, Minn., and at the Grand Seminary, Montreal, Canada. Ordained to the Roman Catholic priesthood in 1882, he was then assistant at St. Mary's Church and pastor of St. Joseph's Church at St. Paul, Minn., until 1885; served as professor and bursar (1886-88) and president (1888-92) of St. Thomas's Semi-

nary, St. Paul; and was pastor of the Church of the Immaculate Conception from 1892 to 1902. In the latter year he was consecrated Bishop of the diocese of Cheyenne, Wyo., and in 1911 he took charge of the archbishopric of Dubuque, Iowa.

KEANE, JOHN, first BARON (1781-1844). An Irish soldier. He was born at Belmont, County Waterford, Ireland, and was the son of Sir John Keane. He entered the army on a captain's commission in 1794, when but 13 years of age, and in 1799 served as aid-de-camp to Lord Cavan in the Egyptian campaign. After service in Gibraltar, Ireland, Bermuda, and at the taking of Martinique in 1809, he commanded a brigade through the Spanish Peninsular War and attained the rank of major general. In 1814 he was made a major general and placed in command of the expedition which landed at New Orleans and successfully resisted an American attack on his position. On the arrival of his superior officer, Sir Edward Pakenham, he continued to serve as brigade commander and was twice wounded. He was created K.C.B. in 1815. From 1823 to 1830 he was civil governor and commander in chief of the British forces in the West Indies and was made lieutenant general in 1830. In 1833 he succeeded Sir Colin Halkett as commander in chief at Bombay, and in 1839 commanded the advance into Afghanistan, the most brilliant exploit in which was the capture of the supposedly impregnable fortress of Ghuzni. For this service he was made G.C.B. and created Baron Keane of Ghuzni and Cappoquin, with a pension of £2000.

KEANE, JOHN JOSEPH (1839-). An American Roman Catholic archbishop. He was born at Ballyshannon, County Donegal, Ireland; came to America in 1846, and graduated at St. Charles's College and St. Mary's Seminary, Baltimore. As assistant pastor of St. Patrick's, Washington, D. C. (1866-78), he was prominent in the Catholic Young Men's National Union and in the Total Abstinence Union of North America. During his occupancy of the see of Richmond (1878-86) he established the Confraternity of the Holy Ghost. He was rector of the Catholic University of America from 1886 to 1897, was elevated to archiepiscopal dignity with the title of Archbishop of Damascus (1897), and after three years in Rome was transferred to the see of Dubuque, Iowa. He resigned in 1911 and was appointed titular Archbishop of Ciana. James John Keane succeeded him in 1911. He wrote on education, especially on the question of denominational schools; a selection from his writings, edited by M. F. Egan, appeared in 1902 as *Onward and Upward*. He was Dudgeon lecturer at Harvard in 1890.

KEARNEY, kâr'ni. A city and the county seat of Buffalo Co., Neb., 196 miles west by south of Omaha, on the Union Pacific and the Chicago, Burlington, and Quincy railroads (Map: Nebraska, E 4). A canal, 18 miles long and used incidentally for irrigation, furnishes 4500 horse power for the manufactures of the city. The industrial establishments include large flour mills, grain elevators, brickworks, alfalfa mills, a canning factory, cigar factories, a foundry and machine shops, and other works. The city has also extensive grain, stock, ice, alfalfa, and stock-feeding interests. Celery is raised extensively. Kearney has the State Industrial School for Boys, the Western State Normal School (with an enrollment of 1000), a

military academy, normal institute, public library, State hospital for tuberculosis, and a fine high school, city hall, courthouse, government building, and opera house. There are also three public parks, a bridge a mile long across the Platte River, and Lake Kearney, a beautiful sheet of water covering 40 acres. Across the river are the remains of old Fort Kearney, maintained by the government during and after the California gold rush to protect the overland traffic from Indian attacks. Settled in 1871, Kearney was incorporated as a village in the following year. The government is administered, under a charter of 1901, by a mayor elected every two years, and a council, which is elected by wards. The water works are owned by the city. Pop., 1900, 5634; 1910, 6202.

KEARNEY, DENIS (1847-1907). An American labor agitator, the leader of the movement known as Kearneyism in California. He was born in Oakmont, Ireland, went to sea as a cabin boy at the age of 11, and in 1872 settled in San Francisco, Cal., where he obtained employment as foreman of a gang of stevedores and soon afterward went into the draying business on his own account. In 1877 he began to incite the laboring men of San Francisco against the wealthier classes and soon gained almost complete ascendancy over the mass of them. Great meetings were held on the Sand Lots near the city, where Kearney ruled supreme, soon attracting general attention by his savage attacks upon capital, Chinese labor, and various alleged grievances. His influence rapidly increased, until his adherents were strong enough to pack a constitutional convention and force the adoption of a new State constitution in 1879, which was largely in their own interest and was most detrimental to capital and vested interests generally. In the summer of 1878 Kearney visited the Eastern States and delivered incendiary and intemperate speeches in the larger cities. He did not succeed in winning many new adherents, however, and returned to California, where his old following gradually drew away from him, and he himself soon relapsed into insignificance. Consult "Kearneyism in California," in James Bryce, *American Commonwealth*, vol. ii (New York, 1910).

KEARNY. A town in Hudson Co., N. J., on the Passaic River and on the Erie Railroad (Map: New Jersey, D 2). It is a residential suburb of Newark and New York and has a State soldiers' home, a Roman Catholic protectory, a Carnegie library, and an Italian orphan asylum. There are important manufactures of linoleum, cotton and linen thread, roofing material, white metal, brass novelties, celluloid, dyestuffs, fertilizers, lamps, and buttons. The government, under a charter of 1895, is vested in a town council, which includes one member elected at large for a term of two years, who is the mayor. Kearny was originally a part of some land ceded by Gov. Philip Carteret in 1668 to Capt. W. Sanford, who called it New Barbadoe. The township of Kearny was created in 1867 and named after Gen. Philip Kearny. Pop., 1900, 10,896; 1910, 18,678. 1914 (U. S. est.), 21,967.

KEARNY, LAWRENCE (1789-1868). An American naval officer, born at Perth Amboy, N. J. He entered the navy as a midshipman in 1807 and during the War of 1812 took part in several daring exploits. He was one of the officers sent to the Gulf of Mexico and the Caribbean Sea in 1821 to stamp out piracy in those

waters and in 1823 was one of the commanders in Capt. David Porter's mosquito fleet, which completed this work. Three years later, as commander of the *Warren*, he performed a similar service for the Levant. He was commissioned captain in 1832 and in 1841 was appointed to the command of the East India squadron. During his stay on this station he began negotiations with the Chinese government which resulted in the signing of a commercial treaty between China and the United States in 1845. In 1843, while on his return to America, he stopped at the Hawaiian Islands and protested against the provisional cession to Great Britain which the King had been coerced into signing by Lord George Paulet. He was made a commodore, and was retired in 1867.

KEARNY, PHILIP (1815-62). An American soldier, prominent in the Mexican and Civil wars, the nephew of Gen. Stephen W. Kearny. He was born in New York City, graduated at Columbia in 1833, and subsequently studied law under Peter A. Jay. In 1837 he entered the United States army as lieutenant in the First Dragoons, and two years later was one of three officers sent by the United States government to study the French cavalry service. He spent several months in the cavalry school at Saumur, and then, having secured a leave of absence, volunteered with the First Chasseurs d'Afrique and served with conspicuous gallantry in the Algerian War. Late in 1840 he returned to the United States. He was then successively aid-de-camp to General Macomb, general in chief of the United States army, from 1840 to 1841, and to General Scott, the successor of General Macomb, from 1841 to 1844, and subsequently served under his uncle in the West. In April, 1846, he resigned from the army, but almost immediately reenlisted for service in the Mexican War and became captain of the company which was chosen as the bodyguard of General Scott. In December of this year he was promoted captain. He earned a brevet of major at Contreras and Churubusco and towards the close of the latter engagement made a gallant charge into Mexico City, but received a wound which necessitated the amputation of an arm. In 1851 he participated in a campaign against the Rogue River Indians, but again resigned in October of this year and spent several years in Europe. In 1859 he entered the French army as a volunteer aid to General Maurier; served in the Italian War, participating in the battles of Magenta and Solferino; and for his conspicuous bravery throughout the campaign he received the cross of the Legion of Honor. At the outbreak of the Civil War he returned to the United States and in May, 1861, was appointed brigadier general. He commanded for some time the First New Jersey Brigade and in May, 1862, was placed in command of the cavalry of the Army of the Potomac. He served with great efficiency and gallantry throughout the Peninsular campaign, attracting particular attention at the battles of Williamsburg and Seven Pines, and in July, 1862, was commissioned major general of volunteers. He subsequently participated in the second battle of Bull Run and on Sept. 1, 1862, was killed while reconnoitring at Chantilly. Consult: De Peyster, *Personal and Military History of Philip Kearny* (New York, 1869); an account by Kearny himself of his service in Algiers, published under the title *Service with the French*

Troops in Africa (ib., 1844?); and his "Letters from the Field," in the *Historical Magazine* (2d series, Morrisania, N. Y., 1870).

KEARNY, STEPHEN WATTS (1794-1848). An American soldier, born at Newark, N. J. He was appointed a lieutenant in the Thirteenth Infantry in 1812 and was captured by the British, who held him a prisoner for several months. In 1840 he was made a brigadier general and given command of the Army of the West, with which he conquered New Mexico. He then entered California, where he found Stockton (q.v.) and Frémont (q.v.) already in possession, but, disregarding their claims, assumed the office of Governor in 1847, in pursuance of instructions given him by the Secretary of War to establish a civil government in the conquered country. He held the office, however, only from the 1st of March until June, when he was ordered to Mexico, and in 1848 was made Governor of Vera Cruz and later of Mexico City, where he contracted the fever of which he died. He returned to the United States in 1848, with the rank of major general. He wrote a *Manual for the Exercise and Manœuvring of United States Dragoons* (1837) and *Organic Law and Laws of the Government of the Territory of New Mexico* (1846).

KEARSARGE, kēr'sārj, MOUNT. A mountain in Carroll Co., N. H., 2943 feet high, belonging to the White Mountain group (Map New Hampshire, H 4). It was in honor of this mountain that the vessel was named which sank the Confederate cruiser *Alabama* in 1864. Another mountain, situated in Merrimac Co., N. H., is known by the same name. The latter was formerly known as Kēat Sargr which was easily changed to Kearsarge. Its Indian name was Cowissewaschook.

KEARY, kē'ri, ANNIE (1825-79). An English novelist, born in Yorkshire. She first wrote tales for children, the best of which are *Little Wanderlin* and *Sidney Grey*. Her more mature novel writing, chiefly concerned with domestic life, was varied by the production of two works, *Early Egyptian History* (1861) and *The Nations Around* (1870), an account of the peoples bordering upon Israel, which showed considerable ability in a different line. Among her other books are: *The Heroes of Asgard* (1857); *Janet's Home* (1863); *Clemency Franklyn* (1866); *Oldbury* (1869); *Castle Daly* (1875); *A Doubting Heart* (1879). *Castle Daly*, an Irish story, the best and most popular of her novels, is a discriminating study of the strong and weak points of the Saxon and Celtic natures.

KEASBEY, kēz'bē, LINDLEY MILLER (1867-). An American economist, born at Newark, N. J. He graduated at Harvard in 1888, took his Ph.D. at Columbia in 1890, and studied also at Strassburg. In 1892 he was appointed professor of political science at the University of Colorado, in 1894 professor of economics and politics at Bryn Mawr, in 1905 professor of political science at the University of Texas, where he was transferred to the chair of institutional history in 1911. He wrote *The Nicaragua Canal and the Monroe Doctrine* (1896), various contributions to reviews, and a translation from Loria, *The Economic Foundations of Society* (1899).

KEATING, JOHN M. (1852-93). An American physician, born in Philadelphia. He was educated at Seton Hall College and at the University of Pennsylvania, traveled extensively in

the East, was lecturer on the diseases of children at the University of Pennsylvania for a time, and afterward became professor of the principles and practice of medicine in the Woman's Medical College, Philadelphia. He edited the *Cyclopædia of the Diseases of Children* and *The Climatologist*, and published: *With General Grant in the East* (1880), *The Mother's Guide in the Management and Feeding of Infants* (1881); *Maternity, Infancy, and Childhood*; *Mother and Child*; and several other works.

KEATS, GWENDOLINE (pen name, ZACK) (?-1910). An English novelist, born in Devonshire. After publishing several short dialect stories in *Blackwood's Magazine*, she came before a wider public with *Life is Life* (1898), a series of 12 tales, displaying great power in depicting the hard side of life. They were succeeded in a similar vein by *On Trial* (1899), which won the prize of the London Academy; *The White Cottage* (1901); *Tales of Dunstable Weir* (1901); *The Roman Road* (1903).

KEATS, JOHN (1795-1821). An English poet, born in London, Oct. 29 or 31, 1795. When about eight years old, he was sent to the school kept by John Clarke at Enfield. Here he formed a friendship with the master's son, Charles Cowden Clarke, learned Latin, possibly French, and read eagerly, especially in Greek mythology. The Greek language, however, he never learned; most of his early notions of Greece he got from the *Classical Dictionary* of Lemprière. His father, a livery-stable keeper, died in 1804; and his mother, who had married William Rawlings, another stable keeper, soon left him and went to live with her well-to-do mother in Edmonton, where she died in 1810. At school Keats was not a very studious youth, but he was admired for his nobility of character and his courage; he was quick-tempered, but quick to forgive, pugnacious, and fond of sports. His personal beauty was striking. On his mother's death Keats was taken from school by his guardians and apprenticed for five years to a surgeon at Edmonton. Of this period we know little save that one day a comrade read him Spenser's *Epithalamium* and lent him the *Faerie Queene*. This was a revelation. Keats had found his way. He was entranced by Spenser's world of romance and forthwith set himself to writing verse in imitation of his master. At this time he also fell under the influence of Gray and Moore. In 1814 he quarreled with the surgeon to whom he had been apprenticed and went to London, where he continued his studies, for which, however, he had no real liking, at Guy's and St. Thomas's hospitals.

Keats soon made the acquaintance of Leigh Hunt, Shelley, and others, and in 1817 of the painter Haydon, all of whom exerted a powerful influence upon him. With Hunt he lived for a time. His first published poem, the sonnet beginning "O Solitude, if I with thee must dwell," appeared in Leigh Hunt's *Examiner* (May 5, 1816). It was followed on December 1 by the great sonnet "On First Looking into Chapman's Homer," which Hunt accompanied with observations on its author and the new school of poetry. Four other sonnets speedily followed. In March, 1817, appeared *Poems by John Keats*, dedicated to Hunt. The volume fell flat, for every one was at that time under the sway of Moore, Scott, and Byron. Keats at once began *Endymion*, which was published in

1818. This year he made a tour through the English Lake district and Scotland, where he contracted the throat trouble which ultimately developed into consumption. Just after his return to England appeared the famous attacks on *Endymion* (*Blackwood's Magazine*, August, 1818; and the *Quarterly Review*, dated April, 1818, but published in September). Whether or not Keats's critical foe was Lockhart, he had fervent defenders in Shelley, who in his *Adonais* calls his friend's assailants assassins, and in Byron, who devoted to Keats a strophe in *Don Juan*. Keats continued to write, though failing health and his passion for Fanny Brawne, a girl with whom he had fallen in love several years earlier, were not conducive to sustained work. In 1820 appeared his third volume, *Lamia and Other Poems*. He died in Rome, Feb. 23, 1821, and was buried there near Shelley, by the pyramid of Caius Cestius. Keats did not live to produce much, as compared with the work of the famous poets who were his contemporaries. The affectations which marred his first two volumes naturally led to severe criticism. The third volume contained poetry of the most exquisite quality. There may be greater lyric poetry than that of his odes, but none is lovelier. "On a Grecian Urn," "To a Nightingale," and "To Autumn" are above all critical deduction or detraction. In "Isabel," "The Eve of St Agnes," and "La belle dame sans Merci" he captured the very spirit of mediæval romance. His longer poems, of an excellence uneven and far from sustained, are still noble creations of the poetic imagination and rich in passages of the rarest beauty. Thanks to the perfection of a group of his shorter poems, to the deathless phrases sown through his work, and to the magic of his exquisite natural imagery, he became the poet's poet. His influence upon the three generations of poets that have followed him has been greater than that of Shelley. The marks of it are plain in the poetry of Tennyson, Rossetti, Swinburne, and Morris, and at moments even in that of Browning. Since his death his fame has increased more and more, and a high place by the side of Shelley is assured him.

KEB. See SER.

KEBLAH. See KIBLAH.

KEBLE, JOHN (1792-1866). An English divine and poet. He was born at Fairford in Gloucestershire and at the age of 15 won a scholarship at Corpus Christi College, Oxford. After winning the distinction of a double first, he was elected fellow of Oriel, which brought him into the most distinguished intellectual society in the university. In 1812 he also won both the English and Latin prize essays. He was ordained deacon in 1815 and priest in 1816. Neither the prospect of emolument at Oxford nor the attractions of the Oriel common room, of which Whately and Copleston were then members and to which Arnold, Newman, and Pusey were soon to be added, could tempt him from the career he had chosen, that of a parish priest. He took duty in Fairford, Gloucestershire, occasionally receiving pupils, among whom were Robert Wilberforce, Isaac Williams, and Hurrell Froude. From 1836, when he accepted the living of Hursley, near Winchester, his life was spent mostly in this small country parish, devoted faithfully to its simple duties, though he exerted great influence throughout England by a vast correspondence. Quiet and retiring as he was, he is yet considered, on Newman's testimony, as the real author of the Oxford movement, to which he is held to have given the impulse by his sermon on "National Apostasy," preached at Oxford in 1833. His important contributions to the literature of the movement were his share in the translations of the *Library of the Fathers* and in the *Tracts for the Times*, of which he wrote seven, besides being ultimately associated in counsel with the other authors. His churchmanship was, however, always marked by a sober attachment to Anglican traditions, and he was deeply grieved by Newman's secession, in which he never dreamed of following him. His Christian churchmanship was expressed in *The Christian Year*, a volume of verse which he published anonymously in 1827 and which had a remarkable success and influence, not equaled by that of his later volume, *Lyra Innocentium* (1846). A *Concordance to the Christian Year* was published in 1871 in New York. He was professor of poetry at Oxford from 1831 to 1841, and his lectures were edited by Francis (Oxford, 1910). He died at Bourne-mouth, March 29, 1866. Keble College (q.v.) was founded in Oxford University as a memorial to him.

Bibliography. J. T. Coleridge, *Life of John Keble* (2d ed., 2 vols., New York, 1869); C. M. Yonge, *Musings on the Christian Year and Lyra Innocentium* (Oxford, 1872); A. H. Japp, *Golden Lives: Biographies for the Day* (London, 1873); J. C. Shairp, *Studies in Poetry and Philosophy* (3d ed., Edinburgh, 1876); Walter Lock, *Life of Keble* (London, 1894); A. B. Donaldson, *Five Great Oxford Leaders* (ib., 1900); Henri Brémond, *Ames religieuses* (Paris, 1902); J. H. Newman, *Apologia pro Vita Sua* (New York, 1905); E. F. Wood, *John Keble* (Milwaukee, 1910).

KEBLE COLLEGE. A college of Oxford University. It was founded in 1870 by subscription in memory of the Rev. John Keble, vicar of Hursley, sometime fellow and tutor of Oriel College, professor of poetry in the univer-

sity, and the author of *The Christian Year*. It was authorized by a statute of the university, passed in 1871, regarding new foundations, and was intended to provide economical living for students and Christian training based on Church of England principles. The college is governed by a warden and a council of from 9 to 12 members, the whole charge of education and discipline being lodged in the hands of the warden. The establishment is large, consisting of a warden, a subwarden, a bursar, 10 tutors, a precentor, 25 scholars and exhibitioners, with, in all, about 250 undergraduates. The buildings, built of brick, a unique feature in Oxford architecture, are extensive. The chapel is especially noteworthy, among its treasures being Holman Hunt's picture, the "Light of the World." The college presents to 33 livings, most of them of considerable importance.

KEBLER, LYMAN FREDERIC (1863-). An American chemist, born at Lodi, Mich. He was educated at the University of Michigan (Ph.C., 1890; M.S., 1892), Jefferson Medical College (1898), Temple University, Philadelphia (1899-1903), and George Washington University (M.D., 1906). He was an instructor in chemistry at Iowa State College (1888-89), at Michigan (1891-92), and later assistant professor of pharmacology and materia medica at Georgetown College. He served as chief chemist for manufacturing chemists in Philadelphia from 1892 to 1903 and was then engaged by the Bureau of Chemistry of the United States Department of Agriculture, first as chief of the drug laboratory and after 1907 as chief of the chemistry division. His scientific contributions and bulletins are chiefly on the subject of habit forming and other harmful drugs.

KECHUA, kěch'wa. A South American Indian stock. See QUICHUA.

KECSKEMÉT, kěch'kě-măt. A city in the County of Pest, Hungary, situated in an agricultural district 65 miles by rail south-southeast of Budapest (Map: Hungary, F 3). It is a scattered town, with a number of churches, two cloisters, a city hall, and cavalry barracks. Grain, tobacco, and fruit (principally apricots and apples) are cultivated, and cattle and poultry are raised. Wine is produced, and manufactures of flour and bricks are carried on. The city is well known for its annual cattle fair. Educational institutions include a law school, a vintner's school, and an agricultural school. Pop., 1900, 57,812; 1910, 66,834, mostly Roman Catholic Magyars. The city was badly damaged by an earthquake in 1911.

KE'DAH, or KĪ'DAH. A native state on the western side of the Malay Peninsula, having an area of some 3800 square miles (Map: Burma, D 5). It is ruled by a native sultan, but is under British protection. The state is well administered, roads are being built, and a branch of the Federated Malay States railroad system connects the capital, Alor Star, with the outside world. Large quantities of rice, rubber, and tapioca are produced. There is an active trade with the Straits Settlements. Pop., 1911, 245,986.

KEDAR'S (kě'darz) **TENTS**. An expression denoting uncongenial surroundings, derived from Psalm cxx. 5.

KEDGE (perhaps connected with dialectic Swed. *keka*, to tug). A small anchor. It is used for various purposes, such as hauling the stern of a ship to one side or the other or haul-

ing a ship from one part of the harbor to another. See ANCHOR.

KED'ZIE, ROBERT CLARK (1823-1902). An American chemist. He was born at Delhi, N. Y., graduated from Oberlin College in 1847, and studied medicine at the University of Michigan. He served as a surgeon in the army at the outbreak of the Civil War and was for a time engaged in private practice of medicine. In 1863 he was elected to the chair of chemistry in the Michigan Agricultural College. As president of the State Board of Health, he paid special attention to arsenical wall papers and invented an oil tester for the detection of inferior and dangerous grades of oil. But his most valuable service was to agricultural chemistry.

KEE'BLE, SAMUEL EDWARD (1853-). An English Wesleyan clergyman, born in London, where he was educated. After receiving his ministerial training at Didsbury College, he entered the ministry of the Wesleyan Methodist church in 1876. In 1908 he became a member of the Legal Hundred, and he founded and served as president of the Wesleyan Union for Social Service. He is the author of *Industrial Day Dreams* (1896); *Christianity and our Wages System* (1905); *A. B. C. Annotated Bibliography on Social Questions* (1907); *The Ideal of the Material Life* (1908); *A Legal Minimum Wage* (1912). He also edited *The Citizen of Tomorrow* (1906), *Social Science and Service* (1909); *Social Teaching of the Bible* (1909), *Wounds of the World* (1913).

KEEFE, DANIEL J. (1855-). An American labor leader. He was born at South Chicago, Ill. When he was eight years old, he began work in a shingle mill, and later he became a lumber handler and longshoreman. In 1882 he was president of the Lumber Unloaders' Association and after 1893, except for two years, was president of the International Longshoremen, Marine, and Transport Workers' Association. He served also as one of the members of the first executive committee of the National Civic Federation, as a vice president for a time of the American Federation of Labor, and in 1906 as member of the Industrial Peace Commission, Washington. From 1908 to 1913 he was Commissioner General of Immigration of the United States.

KEE'FER, GEORGE ALEXANDER (1836-1912). A Canadian civil engineer. He was born at Cornwall, Ontario, and was educated at Upper Canada College, Toronto. He was first employed on surveys connected with the Grand Trunk Railway, and later made the first exploration for a direct line of railway between Ottawa and Toronto, which is now the Canadian Pacific Railway route. In 1872 he entered government service, doing important survey and civil engineering work in British Columbia until 1886. He constructed one of the heaviest sections of the Canadian Pacific Railway in the Fraser River cañons and afterward built the water works of the city of Vancouver. In 1900 he became resident engineer of Dominion Public Works in British Columbia. When Russian engineers examined the Canadian Pacific previous to beginning the Trans-Siberian Railway, they offered the construction of the latter's terminal section at Vladivostok to a Canadian syndicate, and Keefer was employed to examine and report upon the proposed route between Vladivostok and the Amur River.

KEEFER, SAMUEL (1811-96). A Canadian

civil engineer. He was born at Thorold, Ontario, and after an education for the profession of civil engineer obtained government employment in the Province of Quebec and in 1841-53 was chief engineer of the Board of Public Works. Besides the regular work of responsible positions in connection with the Grand Trunk Railway, he was Deputy Commissioner of Public Works and an official inspector of Canadian railways. He was among the first to urge the construction of the Sault Ste. Marie Canal, made a survey for that purpose in 1852, and took part in building the first suspension bridge at Niagara Falls, which was completed in 1869. For this he was awarded a diploma and gold medal at the Paris Exposition of 1878. In 1872 he made a survey for the Baie Verte Canal. In 1857 he became resident engineer of the Grand Trunk Railway and had charge of the division between Montreal and Kingston. In 1880 the Conservative government of Sir John A. Macdonald made him a member of the commission to inquire into the condition and progress of the Canadian Pacific Railway, the construction of which was then being pushed. The commission's report in 1882 was so satisfactory that further parliamentary inquiry was prevented.

KEEFER, THOMAS COLTRIN (1821-1914). A Canadian civil engineer. He was born at Thorold, Ontario, and was educated at Upper Canada College, Toronto. He was first employed on the Erie Canal and afterward on the Welland Canal (1841), where he remained until 1845, when he was placed in charge of the Ottawa River works. In 1850 he was employed by the government to make a survey of the rapids of the St. Lawrence and to explore the region between the St. Lawrence and the headwaters of the St. John for the purpose of establishing intercolonial communication by canal or railway. Subsequently he made surveys for the Grand Trunk Railway, and he prepared the report and plans which resulted in the building of the Victoria Bridge across the St. Lawrence at Montreal. He served as a commissioner from Canada at the international exhibitions in London in 1851 and in 1862 and in Paris in 1878. In the latter year he was created C.M.G. In 1869-70 he published a series of letters advocating the construction of the Canadian Pacific Railway. He was appointed to determine upon the practicability of a ship canal between the Great Lakes and the Atlantic and on this question published a monograph in 1894. Keefer brought about the change on Canadian railways from the narrow gauge to the standard gauge. In 1887 he was president of the Canadian, and in 1888 president of the American Society of Civil Engineers and in 1898-99 president of the Royal Society of Canada. His publications include: *Philosophy of Railways* (1849); *The Influence of the Canals of Canada on her Agriculture* (1850); *Report on the Victoria Bridge* (1853); *Canadian Waterways from the Great Lakes to the Atlantic* (1893).

KEEL (Icel. *kjöl*, Dan. *kjøl*, Swed. *köl*, keel). In wooden ships the keel is a construction of rectangular section made up of timbers scarfed and bolted together; it is the first part of the ship to be laid upon the building blocks, hence the term "laying of the keel" is synonymous with beginning the actual construction of a ship. It extends from the sternpost (or rudderpost in wood-built single-screw steamers) to the

gripe and apron. In iron and steel steamers the keel consists of the vertical keel plates and the flat keel plates, the latter being usually referred to as the keel. The vertical keel is internal and in vessels having double bottoms extends from the bottom plating or flat keel to the inner bottom. Iron and steel sailing ships and some steamers have external bar or hollow keels. In all kinds of vessels the keel is one of the principal longitudinal ties holding the ship together and stiffening her in the direction of her length. To reduce the angle of roll in modern men-of-war, *bilge keels* are fitted. These consist of plating extending longitudinally like an external keel, but at the turn of the bilge, for about three-fifths the length amidships. The section of this keel is usually that of a very acute isosceles triangle with its base against the ship's bottom, the sides consist of plating, and the space inside is ordinarily filled with wood. (See *BILGE*) Instead of using bilge keels, merchant vessels are usually steadied by keeping their *righting moment* (see *SHIPBUILDING*) fairly weak by means of arrangements of cargo and water ballast. A *false keel* is a facing of timber spiked to the main keel to protect it. *Docking keels* are side keels occasionally placed on ships (especially heavily armored ones) for convenience in docking. They receive the upward thrust of bilge shores and distribute it along the bottom so that there is no danger of warping in the bottom plating or warping or "hogging" frames. *Keel blocks* are the short built-up piles of timber on which the keel of a ship rests in building or when in a dry-dock.

KEELER, JAMES EDWARD (1857-1900). An American astronomer, born at La Salle, Ill., and educated at Johns Hopkins University, from which he graduated in 1881. He took part in the solar eclipse expedition to Colorado (1878) and four years afterward in the Mount Whitney expedition. After a year at the Allegheny (Pa.) Observatory he went to Germany and studied under Quincke in Heidelberg and von Helmholtz in Berlin. He was appointed assistant in the Lick Observatory in 1886 and two years later became its astronomer. In 1898 he succeeded Holden as director of the Lick Observatory after nine years at the head of the Allegheny Observatory. Keeler's greatest work was in spectroscopy, his most notable achievements in this field being the accurate determination of the wave length of the fundamental green ray of the nebular spectrum and the demonstration, by means of the spectroscope, of the truth of Maxwell's theory regarding the meteoric constitution of the rings of Saturn. He wrote *Spectroscopic Observations of Nebulae* (1894) and many contributions to the *Astrophysical Journal*, of which he was coeditor, and to the *Memoirs of the Royal Astronomical Society*.

KEELEY, LESLIE (1836-1900). An American physician, originator of the Keeley Cure. He was born in St. Lawrence Co., N. Y., graduated at the Rush Medical College, Chicago, in 1863, and later entered the Federal army as a surgeon. At the close of the war he removed to Dwight, Ill., where he began the practice of his profession. Here in 1880 he opened a sanatorium for persons addicted to the immoderate use of alcohol and opium. His cure consisted of a secret preparation, which he said contained bichloride of gold; and such was his success that

similar sanatoriums in other parts of the country Dr. Keeley claimed that, when his medicine was administered according to his directions, it had no injurious effects and that 95 per cent of the patients treated were permanently cured. Besides his *The Morphine Eater*, or *From Bondage to Freedom* (1881), he published numerous articles in the periodical press.

KEELEY, MRS. MARY ANNE (1805 or 1806-99). An English comic actress, the wife of Robert Keeley (q.v.). Born in Ipswich, she made her appearance as Miss Goward (her maiden name) in Dublin in 1823. In 1825 she went to London, soon becoming a member of the company at Covent Garden, with Mr Keeley, to whom she was married in 1829. Among the parts in which she won her great popularity were *Nerissa* in *The Merchant of Venice* (1830), *Smikey* in *Nicholas Nickleby* (1837), Jack Sheppard (1838), *Saurey Gamp* (1844), and *Betty Martin* (1855). In 1836-37 the Keeleys visited America with great success. From 1844 to 1847 they managed the Lyceum, where their production of *The Cricket on the Hearth* ran for over a year. The last 40 years of her life were passed chiefly in retirement. On her ninetieth birthday a public reception was given her at the Lyceum. She died in London, March 12, 1899. Consult: *Lewes, On Actors and the Art of Acting* (New York, 1878), *Scott, The Drama of Yesterday and To-day* (London, 1890); *Goodman, The Keeleys on the Stage and off* (ib., 1895).

KEELEY, ROBERT (1793-1869). An English comedian. He was born in London, where he appeared, after playing in the provinces, in 1818. During the following years he became a great favorite as *Jemmy Green* in *Tom and Jerry*, Mr. Bounceable in *What Have I Done?* Peter Pall Mall in *The Prisoner of War*, and in many other popular pieces. He was most effective in the character of comic suffering or stupidity. His *Touchstone* was excellent, and he made an admirable *Sir Andrew Aguecheek* when, with Charles Kean, at the Princess's Theatre in 1850, he revived *Twelfth Night*. He died in London. Consult *Marston, Our Recent Actors* (London, 1890), and authorities referred to under **KEELEY, MRS. MARY ANNE**.

KEEL-HAULING. A punishment formerly inflicted in the British and Netherlands navies for certain very serious offenses. By means of whips or tackles, usually on the foreyard arms, the offender was hauled from one side of the ship to the other (or from one yard to the other) underneath the keel, being made to sink by weights attached to his feet.

KEELING ISLANDS, or Cocos. A group of 23 small coral islands belonging to Great Britain and situated in the Indian Ocean, in lat. 12° 4' to 12° 13' S and long 96° 50' E, 500 miles southwest of Java (Map: World, L 30). Products are coconuts and coconut oil. The islands were discovered by Captain Keeling in 1609, studied by Darwin in 1836 and Dr. H. O. Forbes in 1878. The British acquired them in 1856. Pop., 1911, 749, mostly Malays. It was off these islands that the German cruiser *Emden* was destroyed by the Australian cruiser *Sydney* in the European War which started in 1914. See **WAR IN EUROPE**.

KEELSON, *kēl'son* (Swed. *kölsvin*, Dan. *kjölsvin*, Norw. *kjölsvill*, *keelson*, from Swed. *köl*, Dan., Norw. *kjö*, *keel* + *svill*, Icel. *svill*, AS. *syll*, Eng. *sill*; influenced in Swed., Dan. by popular confusion with *svin*, Goth.

svēin, OHG., AS. *swin*, Ger. *Schwein*, Eng. *swine*). In wooden vessels, a construction of timber similar to the keel, but resting on the floor timbers directly above the keel and bolted to it, thus gripping the floor timbers firmly in place. *Side keelsons* or *bilge keelsons* are smaller than the main keelson and placed out towards the turn of the bilge. *Sister keelsons* are side keelsons close up to the main keelson and bolted to it as well as to the floor-timbers and garboard strakes.

KEELY MOTOR. A machine purporting to furnish motive power at a minimum expenditure of energy. It began to attract attention in 1874 and for several years excited wide interest. Its inventor, John W. Keely, a carpenter who was born in Philadelphia in 1837 and died there Nov. 18, 1898, made many startling claims and predictions for the success of his motors, asserting that they were destined to revolutionize mechanics. Several hundred thousand dollars were subscribed for the stock of the company formed to control the invention, and, while the nature of the machine was kept a carefully guarded secret, it was widely exploited and attracted considerable attention. Various exhibitions were given, with some remarkable features; but the promised developments never appeared, and after the inventor's death the fraud was thoroughly exposed, it being shown that the force was supplied by a hidden compressed-air apparatus.

KEEN, DORA (1871-). An American traveler and Alpinist, also a social and educational worker. She was born in Philadelphia, a daughter of the surgeon W. W. Keen. After graduating from Bryn Mawr College in 1896, she held various responsible civic positions in Philadelphia, helping to bring about important reforms. In her travels she covered the North American continent from Alaska to Panama, both coasts of South America and the interior of the southern portion, eastern, western, and southern Asia and northern Africa; and she made numerous visits to Europe. Her activity as an Alpinist began with eight ascents of first-class peaks in the Alps in 1909-10. In the mid-summer of 1911 her inadequately outfitted expedition, hastily organized for the ascent of Mount Blackburn (16,140 feet) in Alaska, was unsuccessful, but, returning early in 1912, with only local prospectors for companions, she accomplished the first ascent of this sub-Arctic peak. Out of 33 days which the party spent entirely on glaciers, for 20 they were without tents, sleeping in snow caves at low temperatures; and for 10 days they had only candles for fuel. This expedition was immediately followed by a journey of 300 miles on foot and by open, camp-built boat across the Alaskan wilderness to the Yukon River, for 125 miles the route lay over Skolai Pass, which Miss Keen was the first woman ever to cross. In 1914, with three men, she made scientific observations of the glaciers of Harriman and College fiords, Prince William Sound, Alaska, and made the first exploration of the Harvard Glacier, reaching its sources (6100 feet). Miss Keen contributed numerous articles to popular and geographical magazines and lectured on her experiences. She became a fellow of the Royal Geographical Society, London, in 1914.

KEEN, WILLIAM WILLIAMS (1837-). An eminent American surgeon. He was born in Philadelphia and studied at Brown Univer-

sity, where he graduated in 1859. After a three years' course in Jefferson Medical College, Philadelphia, he served as an assistant surgeon in the Federal army during part of the Civil War. For two years he studied abroad, returning in 1866 to Philadelphia to practice and to lecture on anatomical subjects in Jefferson Medical College. He was in charge of the Philadelphia School of Anatomy during 1866-75, was professor of artistic anatomy in the Pennsylvania Academy of Fine Arts in 1876-90, professor of surgery in the Woman's Medical College in 1884-89, and thereafter, until his retirement in 1907, professor of surgery in Jefferson Medical College. A specialist in the surgery of the brain and nervous system, Dr. Keen was among the first in the United States to perform successfully new and difficult operations in this field. He received honorary degrees from Jefferson Medical College and Brown, Northwestern, Toronto, Edinburgh, Yale, St. Andrews, Greifswald, and Upsala universities, and served as president of the American Surgical Association (1898), the American Medical Association (1900), the Congress of American Physicians and Surgeons (1903), and the American Philosophical Society (after 1907). In 1914, at a meeting of the International Surgical Association, he was elected president for the meeting of 1917. After 1894 he was foreign corresponding member of the Société de Chirurgie de Paris, the Société Belge de Chirurgie, and the Clinical Society of London; honorary fellow of the Royal College of Surgeons of England, the Royal College of Surgeons of Edinburgh, the Deutsche Gesellschaft für Chirurgie, the Italian Surgical Society, the Palermo Surgical Society, and the Berliner Medicinische Gesellschaft; and associate fellow of the American Academy of Arts and Sciences. He published: *Clinical Charts of the Human Body* (1870), *Early History of Practical Anatomy* (1875); *Surgical Complications and Sequels of Typhoid Fever* (1898); *Addresses and Other Papers* (1905); *Animal Experimentation and Medical Progress* (1914); also an edition of *Heath's Practical Anatomy* (1870), the American edition of *Gray's Anatomy* (1887), the *American Text-Book of Surgery* (1899, 1903), and *Keen's System of Surgery* (1905-13).

KEENE. A city and the county seat of Cheshire Co., N. H., 43 miles (direct) southwest of Concord, on the Ashuelot River, and on the Boston and Maine Railroad (Map: New Hampshire, E 8). It is within 12 miles of Monadnock Mountain, is situated on a plain surrounded by lofty hills, and has broad and well-shaded streets, a State normal school, Elliot City Hospital, and a public library. The city has also a number of parks, covering altogether about 220 acres. Keene is noted for its manufactures of woodenware; it has several chair, furniture, pail, and tub factories, shops of the Boston and Maine Railroad, a pottery, shoe factory, woolen mill, glue works, toy, celluloid-comb, and wood-heel factories, a granite-cutting plant, and door, sash, and blind factories. The water works are owned by the municipality. Pop., 1900, 9165; 1910, 10,068; 1914 (U. S. est.), 10,451. Settled under the authority of Massachusetts in 1734, Keene was known as Upper Ashuelot until it was incorporated in 1753 by New Hampshire under its present name. It was chartered as a city in 1874. Consult Hale, *Annals of the Town of Keene from 1790 to 1815* (Keene, N. H., 1851),

and Griffin, *History of the Town of Keene* (ib., 1904).

KEENE, CHARLES SAMUEL (1823-91). An English pen-and-ink humorous artist, born at Hornsey. While working in an architect's office, for which he had given up his father's profession of law, he spent all his spare time in doing water colors of historical and nautical subjects, which his mother sold. The architect's office he soon forsook for wood engraving, in which he served a five years' apprenticeship. His first independent work was for the *Illustrated London News*, but it was *Punch* that made his reputation and with which he was closely connected from 1851. After 1872 Keene was much helped by the notes and sketches of humorous incidents made by his friend Joseph Crawhall. For the magazine *Once a Week*, started in 1859, he did illustrations to Charles Reade's *Closter and the Hearth* and George Meredith's *Evan Harrington*. He stands first among English pen-and-ink artists, obtaining his effects without forcing. His etchings, only 50 in number and mostly for private circulation, also rank high. Consult: C. J. Keene, *Four Hundred Pictures of our People*, sketches from *Punch* (London, 1888); G. S. Layard, *Life and Letters of Charles Keene* (ib., 1892); *The Work of Charles Keene*, with introduction by Joseph Pennell (New York, 1897).

KEENE, LAURA (?1820-73). The stage name of Mary Moss, an actress, who was born in England, but who completed her career in America. Her greatest success before coming to this country was as Pauline in *The Lady of Lyons* (in London, 1851). She left England in 1852 and went, by way of the United States, where she made her first appearance in New York, on Sept. 20, 1852, to Australia. In 1855 she returned to New York and about a year later she opened there a playhouse bearing her own name. Her most celebrated production was *Our American Cousin*, which she brought out in 1858, with Joseph Jefferson as Asa Trenchard and E. A. Sothern as Lord Dundreary. She afterward toured with it, and it was during one of her presentations of this play in 1865 that President Lincoln was assassinated. Most of the last 10 years of her career she continued to direct her traveling company. As a star, she was very successful, especially in melodramatic pieces. Miss Keene was twice married—to H. W. Taylor in 1847 and to John Lutz 10 years later. She died at Montclair, N. J., Nov. 4, 1873. Consult Creahan, *The Life of Laura Keene* (Philadelphia, 1897).

KEENER, JOHN CHRISTIAN (1819-1906). An American bishop of the Methodist Episcopal Church South, born in Baltimore, Md. He graduated with the first class from Wesleyan University in 1835, entered the Methodist ministry in 1843, and when the church was divided in 1844 remained with the Church South. For nearly 20 years he was pastor of churches in New Orleans, and from 1866 to 1870 edited the *New Orleans Christian Advocate*. In 1870 he was elected Bishop. He was the author of *Post Oak Circuit* (1857; 13th thousand, 1875), published anonymously. He was highly esteemed by Jefferson Davis.

KEENER, WILLIAM ALBERT (1856-1913). An American jurist and legal scholar, born at Augusta, Ga. He graduated from Emory College in 1874 and from Harvard Law School in 1877. Admitted to the New York bar, he later

served as justice of the Supreme Court of that State. At Harvard he was assistant professor of law in 1883-88 and Story professor in 1888-90, and at Columbia University professor of law in 1890-92, Kent professor from then until 1902, and dean of the Law School from 1891 to 1901. He wrote a *Treatise on the Law of Quasi-Contracts* (1893), and edited a selection of cases on the law of contracts, private corporations, and quasi contracts, and on equity jurisprudence.

KEEP. In mediæval fortification, the central and principal tower or building of a castle, and that to which the garrison retired, as a last resort, when the outer ramparts had fallen. See CASTLE.

KEEP, ROBERT PORTER (1844-1904). An American educator and author. He was born at Farmington, Conn., and graduated from Yale University in 1865. After two years as an instructor at Yale, he was, during 1869-71, United States Consul at the Piræus, the harbor town of Athens, Greece. After his return he engaged in teaching at Williston Seminary, Easthampton, Mass., and in 1885 he was appointed principal of the free academy at Norwich, Conn. In 1903 he became principal of Miss Porter's School for Girls at Farmington, Conn. He was the author of a translation of Autenrieth's *Homeric Dictionary* (1876, later eds.), *Stories from Herodotus* (1879); *Essential Uses of the Moods in Greek and Latin* (1882), *Homér's Iliad*, books i-vi (1883), *Greek Lessons* (1885).

KEEP, WILLIAM JOHN (1842-). An American manufacturer of stoves and of testing machines, born at Oberlin, Ohio, where he studied in the college between 1858 and 1864. In 1865 he graduated in civil engineering from Union College. He then engaged in the manufacture of stoves and in 1884 became superintendent of the Michigan Stove Company. In 1885 he discovered the relation between shrinkage and the chemical composition of cast iron, and to determine this he devised the system of Keep's Test, or Mechanical Analysis. He was a vice president of the American Society of Mechanical Engineers in 1904-06. He is author of *Cast Iron* (1902).

KEEPER OF THE GREAT SEAL. See GREAT SEAL.

KEEWATIN, kē-wā'tin. A former district of Canada lying immediately west of Hudson Bay and extending north to the Arctic Ocean. By recent legislation the area was distributed to the provinces of Manitoba (q.v.) and Ontario (q.v.) at the south and to Northwest Territories (q.v.) at the north. The name was of Indian origin, signifying 'northwest wind.'

KEEWATIN, kē-wā'tin. A town in Kenora District, Ontario, Canada, on the Lake of the Woods and on the Canadian Pacific Railway, 130 miles east of Winnipeg (Map: Ontario, F 8). There is a park at Keewatin Beach. There are lumber and boat-building industries. Fine hunting and fishing are to be had in the vicinity. The town is a well-known summer resort. Pop., 1901, 1156, 1911, 1242.

KEFF, or EL-KEFF, ʔl-kəfʔ. A strongly fortified town in the northwestern part of Tunis, about 125 miles south-southwest of the city of Tunis. It is an important strategic point and a commercial centre, with a considerable trade in grain and olives. Its citadel on a rocky height above the town is occupied by a French garrison. The town dates from a Phœnician-

Numidian colony which became the Roman *Sicca Veneris*. It contains a ruined temple of Venus and several ancient Roman remains and is the seat of a geographical and archaeological society. Pop., 6500.

KEFIR, or KEPHIR, kəf'ər (Caucasian, from Turk. *kaif*, delight). A fermented beverage made from milk and similar to kumiss (q.v.). It is made in the Caucasus and has been introduced into Europe and America, where it is prescribed for invalids. In the United States cow's milk alone is commonly used, although a mixture of milk and buttermilk is sometimes employed. The true kefir fermentation is induced by *kefir grains*, which are hard, yellowish aggregations about the size of a pea and contain several yeast cells and a number of lactic acid bacilli. At the proper temperature the fermentation is completed in two or three days. Frequent shaking prevents the rising of the cream and later the formation of lumps of curd. A part of the milk sugar is broken up into alcohol, carbonic-acid gas, and lactic acid; but the casein is apparently not changed, as it is in the case of kumiss. Good kefir should be effervescent. It contains about 0.75 per cent of alcohol and 1 per cent of lactic acid, together with the constituents of normal milk in slightly diminished proportions. Kefir is richer in albuminoids than kumiss, contains less alcohol, and is less acid. As a remedy for lung diseases, stomach disorders, anæmia, and glandular tuberculosis, kefir is held in high repute by the Caucasians, and its therapeutical value has lately been recognized by the medical profession also, especially in intestinal putrefaction, in auto-intoxication, and in stimulating nutrition in debility.

KEGON'SA, LAKE. One of the so-called Four Lakes (q.v.) of Wisconsin.

KEHAMA, kē-hā'mā. See CURSE OF KEHAMA, THE.

KEI, kī, or KEY ISLANDS. A group of islands in the eastern part of the Banda Sea, East Indian Archipelago, situated in lat. 5°-6° S. and about long 133° E. (Map: East Indies, H 7). It is composed of the islands of Great Kei and Little Kei and a number of islets, with a total area estimated at 572 square miles. With the exception of Great Kei, which is mountainous and volcanic, the islands of the group are low and of coral formation. They are all well wooded and fertile. Teakwood is found in abundance. The group belongs to the Dutch, forming a part of the Residency of Amboina. Pop. (est.), 23,000, chiefly natives of New Guinea and Malays.

KEIFER, kī'fər, JOSEPH WARREN (1836-). An American soldier and politician, born in Clark Co., Ohio. He was educated at Antioch College and in 1856 settled in Springfield, Ohio, where he began to study law. Two years later he was admitted to the bar, but at the outbreak of the Civil War gave up his practice to accept a commission as major of the Third Ohio Infantry, and rose to the brevet rank of major general of volunteers in 1865. During Lee's last campaign General Keifer's troops were among those which compelled the surrender of Ewell's corps at Sailor's Creek, and General Keifer received the surrender of Commodore Tucker and the Marine Brigade, which numbered about 2000 men. At the close of the war he declined a commission as lieutenant colonel of the Twenty-sixth United States Infantry. He served

in the Ohio State Senate in 1868-69, held a number of offices in the Grand Army of the Republic, was chosen a delegate to the Republican National Convention in 1876, and the same year was sent to Congress, of which body he continued to be a member until 1883. During the last two years he was Speaker of the House. In 1873 he was elected president of the Lagonda (Ohio) National Bank. At the outbreak of the Spanish-American War he was commissioned a major general of volunteers and for a time commanded the Seventh Corps, encamped near Havana. He wrote *Slavery and Four Years of War* (2 vols., 1900).

KEIGHLEY, kē'li. A municipal borough in the West Riding of Yorkshire, England, on the Aire, 17 miles west-northwest of Bradford (Map. England, E 3). It has important manufactures of worsted, machines, tools, and paper. A mechanics' institute, opened in 1870, contains a flourishing art school and museum. The Leeds and Liverpool Canal connects it with Hull. Its growth is due to its manufacturing enterprise and dates largely from its incorporation in 1882. It has three parks, a free Carnegie library, and owns its water, gas, tramways, artisans' dwellings and other house property, baths and wash-houses, and a cemetery. It was incorporated in 1882 with a mayor, 6 aldermen, and 18 councillors. Pop., 1901, 41,564; 1911, 43,487.

KEIGHTLEY, kēt'li, THOMAS (1789-1872). An Irish author, born in County Kildare. He was educated at Trinity College, Dublin, settled in London in 1824, and devoted himself to literary work. Among his numerous publications are: *Fairy Mythology* (1828; Bohn's Library, 1850), *Tales and Popular Fictions* (1834); *Mythology of Ancient Greece and Italy* (1831); creditable histories of Greece (1835), of Rome (1836), of England (1837-39), of the Roman Empire (1840), and of India (1846-47). *Life, Opinions, and Writings of John Milton* (1855); *Shakespeare Expositor* (1867); *The Crusaders* (1834); *Secret Societies of the Middle Ages* (1837), which was published anonymously and against the author's wishes.

KÉIKI, kē'kē, or HITOTSUBASHI, shtōts'-bsh-i (1837-1902). A Japanese statesman, Shogun of Japan, and "the last of the Tycoons." He was the seventh son of the famous Nariaki, Daimyo of Mito and chief of the party opposed to foreign intercourse when the Townsend Harris Treaty of 1858 forced this issue upon the Yeddo government and the daimyos. In his eleventh year Kéiki was adopted into the feudal house of Hitotsubashi in Yeddo, and at 15 took the name of Yoshinobu, or, as the Chinese characters representing the name are pronounced, Kéiki. When the childless Shogun Iyesada was looking about for an heir, the candidacy of Kéiki was urged by his father and a large following of the daimyos, because of his abilities, popularity, and nearness of relationship to the Tokugawa (q.v.) or shogunal family, and because through him they hoped to keep Japan isolated from foreign contact, and thus uphold the dignity and sacredness of the land; but the Premier Ii (q.v.) appointed Iyémochi, of the house of Kii; but after the assassination of Ii, Kéiki was appointed the young Shogun's guardian. He arrived in Kyoto March 1, 1863, being expected to lead an army to expel the foreigners from the country, the Emperor also making him chief guardian of his own person, at a time when the Choshu clansmen

were about to attack the city and carry off the Mikado. Kéiki avoided factions and endeavored to steer his way clear amid multiplying complications. He summoned the daimyos to a deliberative assembly in Kyoto to consider the situation. When the Shogun Iyémochi died of kak'ke, Aug. 8, 1866, the court conferred upon Kéiki the headship of the Tokugawa family. One of the most notable events of the new régime was the repeal of the old ordinance forbidding Japanese to leave the country. On Nov. 11, November, 1867, he resigned the office of Shogun, a post he had been very unwilling to accept, but, leaving Kyoto Jan. 3, 1868, after the coup d'état (Jan. 3, 1868), which changed the whole system of administration and placed a new government in power, subject to the Mikado only, he was later recalled from Osaka by the Mikado and the new government, who assured him of their friendship. With his army he set out on January 27, but his troops were defeated at Fushimi. Kéiki fled to Yeddo, first notifying the foreign ministers then in Osaka that he was no longer able to give them any protection. Arrived at Yeddo, he decided to submit to the Mikado and requested his supporters to do the same. His submission was accepted, pardon was granted, and he retired to Shidzuoka. His private name was Ichido. Consult E. W. Clement, "Last of the Shoguns," in *Open Court*, vol. xxviii (Chicago, 1914).

KEIL, kil, HEINRICH GOTTFRIED THEODOR (1822-94). A German classical scholar, born at Gressow, near Wismar. After studying at the universities of Göttingen and Bonn, he spent two years (1844-46) in investigating the manuscripts preserved in the libraries of Italy. In 1859 he was made professor of classical philology at Erlangen and from 1869 until his death filled a similar chair at the University of Halle. He is celebrated chiefly for his remarkable critical edition of the *Grammatici Latini* (1855-80); of the seven volumes, five were done by Keil, while the two on Priscian were by Hertz. His other well-known works are editions of the *Epistulae of Pliny the Younger* (1853; 2d ed., 1870, with index by Mommsen); Varro's *Rerum Rusticarum Libri Tres*, with commentary (1882-84), and Cato's *De Agri Cultura* (1892 et seq.). Consult Sandys, *A History of Classical Scholarship*, vol. iii (Cambridge, 1908).

KEIL, JOHANN KARL FRIEDRICH (1807-88). A Lutheran theologian, born in Lauterbach, near Oelsnitz, Saxony. He was educated at Dorpat and Berlin and returned in 1833 to teach Old and New Testament exegesis and Oriental languages at the former university, where he remained until his retirement to Leipzig, with a pension, in 1858. He was joint editor of commentaries upon various books of the Old Testament (1861-67), which exhausted several German editions and were also translated into English. He had published previously: *Der Tempel Salomos* (1839); *Lehrbuch der historisch-kritischen Einleitung in die Schriften des alten Testaments* (1855); *Handbuch der biblischen Archäologie* (1858-59).

KEIM, kim, KARL THEODOR (1825-78). A German Protestant theologian. He was born at Stuttgart and studied under J. C. Baur at the University of Tübingen (1843-47), devoting himself to philosophy, ecclesiastical history, and biblical criticism. Having successively been tutor at Ulm and at Tübingen, vicar at Stuttgart, deacon and archdeacon at Esslingen (1856-59),

he became professor of historical theology at the University of Zurich in 1860 and at Giessen in 1873. He was prominent among the liberal theologians of Germany and published several volumes on the history of the Reformation in Swabia, but is chiefly remembered as the author of the *Geschichte Jesu von Nazara* (3 vols., 1867-72), one of the best works on the life of Christ from a rationalistic point of view. An English translation of it was published under the title *Jesus of Nazareth, and the National Life of Israel* (6 vols., 1873-82).

KEIR-HARDIE, kēr-hār'dī, JAMES. English labor leader. See **HARDIE**

KEISER, kī'zər, REINHARD (1674-1739). A German composer, born at Teuchern, near Weissenfels. He received his early musical education from his father and later perfected at the Thomasschule and the University of Leipzig. His first success, *Ismene*, produced when he was but 18 years of age, was followed one year later by the opera *Basilius*, which established his reputation and led to his removal to Hamburg, then the leading operatic centre of Germany. He wrote about 120 operas during the 45 years of his residence there and is most remarkable for his richness in melodic invention. While for the vast majority of his operas he used the stereotyped subjects dealing with Greek mythology, he was the first German to use also popular contemporary subjects (often obscene). In 1728, after his return from Copenhagen, where for six years he had acted as musical director to the King, he was appointed canon and cantor of St Catharine's Church, Hamburg. His compositions include oratorios, cantatas, passion music, and considerable secular and chamber music.

KEITH, kēth. A Scottish historical house which first appears on record during the latter half of the twelfth century. It took its name from the lands of Keith in East Lothian, to which the office of the King's marischal was attached. About 1458 Sir William Keith was created Earl Marischal and Lord Keith. His house reached its highest power in the person of his great-great-grandson, the fourth Earl, who was a member of the Privy Council in the reign of Mary Queen of Scots, and by marriage with his kinswoman, the coheress of Inverurie, nearly doubled the family domains, which now included lands in seven shires. These vast possessions passed to his grandson GEORGE, the fifth Earl, who in 1593 founded the Marischal College in the University of Aberdeen. After adding the lands of the ancient abbey of Deer to his estates, misfortunes fell upon the house and within less than a century Dunnottar was in ruins and its lord a landless exile. At the age of 22, GEORGE, the tenth and last Earl Marischal, took part, with his younger brother JAMES, in the rising of 1715. He was attainted, and his estates were forfeited; but he himself escaped abroad, where he rose to distinction in the Prussian service. His communication to the British government of a political secret which he learned when Prussian Ambassador at Madrid procured his pardon in 1759. A year or two afterward he revisited Scotland and bought back part of the family estates, but refused the proffered restoration of the family titles. He speedily returned to Prussia and died there in 1778 at the age of 86. His brother, who had risen in the Prussian service to the rank of field marshal, fell at Hochkirch in 1758.

(See **KEITH**, JAMES.) Neither having any issue, the direct male line of the house came to an end. Consult Buchan, *The Ancient and Noble Family of Keith* (Peterhead, 1820); Taylor, *The Great Historic Families of Scotland* (London, 1887); Sir Robert Douglas, *Peerage of Scotland* (2d ed., 2 vols., Edinburgh, 1913).

KEITH, ALEXANDER (1791-1880). A Free Church of Scotland divine. He was born at Keith Hall, Aberdeenshire, Nov. 30, 1791; educated in Aberdeen; was a minister of the Established church until the disruption in 1843, when he joined the Free church. His principal work, *Evidence of the Truth of the Christian Religion Derived from the Literal Fulfillments of Prophecy* (1828), has passed through 40 editions and been translated into several languages. It was followed by *The Signs of the Times* (1832); *Demonstration of the Truth of the Christian Religion* (1838); *The Land of Israel* (1843); *The Harmony of Prophecy* (1851). These books represent a literal interpretation of prophecy now largely laid aside. With a deputation from the Church of Scotland, he visited Palestine to make researches respecting the condition of the Jews and published a *Narrative of the Mission to the Jews* (1841). This has been illustrated by his son, Dr. G. H. Keith, of Edinburgh, who accompanied him in his tour and was the first person to take daguerreotype views of the Holy Land. He died at Buxton, England, Feb. 8, 1880.

KEITH, ARTHUR (1864-). An American geologist. He was born at St Louis, Mo., and was educated at Harvard University (A.B., 1885; A.M., 1886). In 1886-87 he was an assistant on the Massachusetts State Geological Survey. He served as assistant geologist, 1887 to 1894, and thereafter as geologist, on the United States Geological Survey, and the results of his investigations, dealing particularly with the structural and stratigraphic geology of the United States, are published in various bulletins and reports of the Geological Survey.

KEITH, ARTHUR (?-). A British anatomist and physiologist. He was educated at Aberdeen University College, London, and at Leipzig. At the Royal College of Surgeons he became museum conservator and Hunterian professor. In 1899-1902 he was secretary of the Anatomical Society of Great Britain, in 1912-13 was president of the Royal Anthropological Institute, and in 1913 was made a fellow of the Royal Society. His most valuable anatomical work was on the structure and functions of the heart. He was assistant editor of Treves's *Surgical and Applied Anatomy*, edited Hughes's *Practical Anatomy* (1902), and published *Introduction to the Study of Anthropoid Apes* (1896), *Human Embryology and Morphology* (1901), *Ancient Types of Man* (1911), and *Man: A History of the Human Body* (1912).

KEITH, BENJAMIN FRANKLIN (?-1914). An American theatrical manager, born at Hillsboro Bridge, N. H. Until 1885 he was proprietor of a circus. He then became part owner of the Gaiety Theatre in Boston, where he initiated the continuous-performance theatre. In 1906, with F. F. Proctor, he formed the Keith and Proctor Amusement Company, which soon controlled many vaudeville theatres throughout the United States. He also became president of the United Booking Office of America.

KEITH, GEORGE (c.1639-1716). A Church

of England divine and early missionary in America. He was born near Aberdeen, at whose university he was educated for the Presbyterian ministry. About 1662, however, he adopted Quaker principles and was associated with George Fox and Robert Barclay in public defense of them. He came to America soon after 1684 and for some years preached and practiced the same doctrines. Gradually separating from the Friends, he was denounced by William Penn as an apostate and, after endeavoring to organize a body of Christian (or Baptist) Quakers, entered the Church of England in 1700. His reasons for this step were considered so cogent that they were chosen for the first publication of the newly organized Society for Promoting Christian Knowledge. He was a zealous missionary for his new creed, traveling through the Northern Colonies (1702-04) and baptizing hundreds of Quakers. He returned to England in 1704 and was appointed rector of Edburton in Sussex in the next year. He was a man of wide learning. In 1706 he published *A Journal of Travels from New Hampshire to Caratuck, on the Continent of North America*. He was also the author of a new method for calculating longitude, in *Geography and Navigation Completed* (1709). Consult R. Jones, *The Quakers in the American Colonies* (New York, 1911).

KEITH, GEORGE KEITH-ELPHINSTONE, VISCOUNT (1746-1823). A British admiral. The fifth son of the tenth Lord Elphinstone, he was born at Elphinstone, Scotland, Jan. 7, 1746. He entered the navy in his boyhood and served in the East Indies, China, and other parts of the world. He commanded the frigate *Perseus* at the battle of Bunker Hill in 1775, in the action at Fort Mifflin on the Delaware in 1777, and served on shore in 1780 at the reduction of Charleston, being actively employed in the intervals in intercepting American blockade runners and privateers. Within the decade of peace from 1783 to 1793 he sat in Parliament, first for Dumbarton and later for Stirlingshire. He served in the Mediterranean squadron under Lord Hood at Toulon in 1793, was made a rear admiral in 1794, and in the following year was sent to operate against the Dutch colonies. In this expedition he was successful, taking possession of Cape Colony, Ceylon, Cochin, Malacca, and the Molucca Islands and finally, in August, 1796, capturing the Dutch squadron of West Africa. For these exploits he was elevated to the Irish peerage as Baron Keith of Stonehaven Marischal. In 1800 he cooperated with the Austrians in the capture of Genoa. From 1803 to 1807 he was commander in chief in the North Sea and in 1815 commanded the Channel fleet which prevented the escape of Napoleon I and led to his subsequent surrender to Captain Maitland of the *Bellerophon*. In 1814 he was created Viscount Keith of the peerage of the United Kingdom. He died March 10, 1823, at Tullyallan, Perthshire, Scotland. Consult Allardyce, *Memoir of the Honble G. K. Elphinstone, K.B., Viscount Keith* (London, 1882).

KEITH, JAMES (1696-1758). A Scottish general, best known as MARSHAL KEITH. The second son of William, ninth Earl Marischal of Scotland, and Lady Mary Drummond, daughter of the Earl of Perth, he was born at the castle of Inverugie in Aberdeenshire on June 14, 1696, and educated for the legal profession at Edinburgh University. Having subsequently decided to pursue a military career, he and his elder

brother George, Earl Marischal, took part, on the side of the house of Stuart, in the insurrection of 1715 and after its suppression were attainted (See KEITH, the house of.) Having effected his escape, Keith remained in France for some years, improving his knowledge of the military profession and waiting for an opportunity of obtaining service. In 1719, with his brother and other Scottish noblemen, he sailed on board the fleet which was fitted out by Cardinal Alberoni and the Spanish court for the invasion of Scotland. The Jacobites were defeated at Glenshiel by the royal army, under General Wightman, and obliged to retreat. Keith escaped to the Continent. He continued in the Spanish service, but as his expectations of promotion were repeatedly disappointed, in consequence of his firm attachment to his religion, he applied for a recommendation to the Russian government, which was immediately given, and he received from the Czar Peter II a commission as major general. He distinguished himself in the wars with the Turks and Swedes, particularly at the siege of Oczakov and the reduction of the Aland Islands, but, finding the Russian service in various respects disagreeable, he entered that of Prussia in 1747. King Frederick knew his merits and gave him the rank of field marshal. From this time his name is associated with that of the King of Prussia, who relied as much on the military genius of Keith as he did on the diplomatic ability of his brother the Earl Marischal. Keith's talents became still more conspicuous upon the breaking out of the Seven Years' War. He shared the doubtful fortunes of the King before Prague and was present at the great victory of Rossbach and at the retreat from Olmütz. When the Austrians under Daun, and the Prussians under their King, met at Hochkirch on Oct. 14, 1758, Keith commanded the right wing. The Prussian army was beaten, and Keith, surrounded and overwhelmed by numbers while endeavoring to force his way at the bayonet point, was shot through the heart. His body was recognized by Count Lacy, formerly his scholar in the art of war, and was buried at Hochkirch. Keith wrote a brief but interesting memoir of his own life, published in the year 1714 and ending in 1734, which was printed in 1843 by the Spalding Club. For his military career after entering the Prussian service, consult Carlyle, *The Life of Frederick the Great* (New York, 1858).

KEITH, SIR WILLIAM (1680-1749). A Lieutenant Governor of Pennsylvania and Delaware. The son of Sir William Keith of Ludquhairn, Aberdeenshire, Scotland, he was born near Peterhead. His youth was spent in the exiled Stuarts at the court of Louis XIV. He was appointed Surveyor-General of Customs in the Southern Colonies of North America and was Governor of Pennsylvania (1717-26). Although he established some order in the government, his administration was in the main that of a self-seeking demagogue. In 1720 he succeeded to the baronetcy of his father, who had died insolvent, and later (1728), becoming pecuniarily involved, left America to avoid his creditors. His subsequent reputation is that of a man intriguing, treacherous, and vain. He wrote a *History of Virginia* (1738) and was the author of a volume of miscellaneous papers that appeared just before his death, which took place on Nov. 18, 1749, while imprisoned for debt in the Old Bailey, London.

KEKEWICH, kĕk'wĭch, ROBERT GEORGE (1854-1914). An English soldier. He entered the army in 1874 and served in the Malay Peninsula (1875-76), in the Nile expedition (1884-85), in Suakin (1888), and in South Africa (1899-1902). He gained fame through his 126-day defense of Kimberley, from Oct. 15, 1899, to Feb. 15, 1900, when he was relieved by General French. Subsequently he was wounded during De la Rey's fierce attack on his column at Moedwill (September, 1901), and in April of the next year he defeated Commandant Kemp at Roooval. During the war he was promoted to major general, and later he was retired.

KEKULÉ VON STRADONITZ, kā'kōō-lā fōn shtrā'dō-nĭts, FRIEDRICH AUGUST (1829-96). A celebrated German chemist, born at Darmstadt. He studied at Giessen and Paris and in 1856 became privatdozent at Heidelberg. In 1858 he was made professor of chemistry at Ghent and seven years later professor at Bonn, where he remained till his death. His work was in organic chemistry, the development of which during the second half of the nineteenth century was determined largely by the valency doctrine introduced by Kekulé (See CHEMISTRY; CARBON COMPOUNDS. VALENCY). His brilliant application of the valency idea to benzene and its derivatives led him to the establishment of the constitutional formula of benzene, which has been the guide light of all subsequent investigations of this great series of compounds, including all the modern synthetic dyestuffs. His writings include *Lehrbuch der organischen Chemie* (1861-87) and *Chemie der Benzolderivate und der aromatischen Substanzen* (1867-80). His original contributions were published mostly in the *Annalen der Chemie*.

KEKULÉ VON STRADONITZ, REINHARD (1839-1911). A German archaeologist. He was born at Darmstadt and was educated at Erlangen, Göttingen, and Berlin. In 1873 he was appointed professor at Bonn and later professor at Berlin. His works include: *Hebe, eine archäologische Abhandlung* (1867), *Die Balustrade des Tempels der Athena Nike* (1869, 1881), *Die antiken Bildwerke in Theseion* (1869), *Die Gruppe des Künstlers Menelaos in Villa Ludovisi* (1870), *Ueber die Entstehung der Gotterideale der griechischen Kunst* (1877), *Griechische Thonfiguren aus Tanagra* (1878), *Ueber den Kopf des Prazetischen Hermes* (1881), *Zur Deutung und Zeitbestimmung des Laokoon* (1883), *Die antiken Terrakotten* (1880-84); and the biography *Das Leben Friedrich Gottlieb Welckers* (1880). He contributed also, to various editions of Baedeker's *Greece*, "A History of Greek Art."

KE'LANTAN, or KI'LANTAN. A native state lying on the eastern side of the Malay Peninsula, having an area of about 5500 square miles. The state is ruled by a native Sultan under British protection. The chief industry is agriculture, rice, rubber, copra, resin, and tapioea being the principal products. There is, however, no little mineral wealth, and extensive concessions are held by British mining companies. Silk weaving, boat building, and brick-making are the more prominent of the industries. The port of Kelantan is in regular steamship communication with Singapore and Siam and, by a railway now (1915) under construction, will be joined to the railroad system of the Federated Malay States. The capital,

Kota Bharu, has a population of about 12,000; while that of the state is (1912) 286,750, mainly Moslems.

KELAT, kĕ-lăt'. A city of Baluchistan. See **KHELAT**.

KELCEY, kĕl'ei, HERBERT (LAMB) (1856-). An American actor, born in London, England. His first appearance on the stage was at Brighton in *Flirtation* (1877), and he first appeared in London in *Bow Bells* (1880). Later he played important rôles at Drury Lane and the Royalty, but in 1882 he came to the United States in *Taken from Life* at Wallack's Theatre, New York. Subsequently he played in *Money* (1883-84), *A Sheep in Wolf's Clothing* (1884), and *Harvest* (1886). From 1887 to 1896 he was a member of Daniel Frohman's company at the Lyceum, starred with Effie Shannon in *The Moth and the Flame* (1898), and later played in *The Daughters of Men* (1906), *Widowers' Houses* (1907), *The Lady from Oklahoma* (1911), and *Years of Discretion* (1912).

KÉLER-BÉLA, kā'ĕr-bā'la (ALBERT VON KÉLER) (1820-82). An Austrian violinist and composer. He was born at Bartfeld in Hungary and was a pupil of Sechter at Vienna, where he was at the same time a member of the orchestra of the Theater an der Wien. In 1854 he was appointed leader of Gungl's celebrated band at Berlin and the next year succeeded Lanner at Vienna. From 1856 to 1863 he was kapellmeister of an infantry regiment in the Vienna garrison. He moved to Wiesbaden in 1867, where he was the conductor of the Kur Orchestra, which post he resigned because of ill health in 1873. He composed much popular dance music, violin solos, and orchestral music generally. His overtures and compositions for small orchestra are still popular.

KELETI, kĕl'ē-tē, GUSTAV FRIEDRICH (1834-1902). An Hungarian landscape painter and writer on art, born at Pressburg. He first studied law at Pest and Vienna and became a tutor in the family of Baron Eötvös, before taking up painting at the Munich Academy under Fischbach, Voltz, and Schleich. He developed an independent style in the spirit of romanticism. Several of his landscapes are in the National Museum at Budapest. By his writings he contributed much towards the elevation of art criticism in Hungary, and under his direction were established in 1871 the Royal Hungarian School of Drawing and in 1880 the School of Industrial Art, of which he became the superintendent. He was elected a member of the Hungarian Academy in 1874.

KEL/LAR, HARRY (1849-). An American prestidigitator, born at Erie, Pa. He assisted the "Fakir of Ava," magician; later was business manager of Davenport Brothers, spirit mediums, and with other entertainers traveled in Mexico, South America, Africa, and Oriental countries. After 1884 he appeared in the leading American cities. Perhaps the best-known illusionist of his time, he published *A Magician's Tour up and down and round about the Earth* (1886) and *Kellar's Variety Entertainments* (1901).

KELLE, kĕl'le, JOHANN (1829-1909). A German philologist, born at Regensburg and educated at Munich. From 1857 to 1899 he was professor of the German language and literature in the University of Prague. His work on Otfrid includes: *Otfrids von Weissenburg Evan-*

geliensbuch (1856); *Die Formen und Lautlehre der Sprache Otfride* (1869); *Christi Leben und Lehre, besungen von Otfrid: Aus dem Althochdeutschen übersetzt* (1870); *Glossar zu Otfride Evangelienbuch* (1879-81). His work on Notker is no less important; in general it aims to prove that the writings bearing his name are not by a school or group of translators, but by Notker alone, and includes: *Verbum und Nomen in Notkers Boethius* (1885); *Die Sankt Galler deutschen Schriften und Notker Labeo* (1888); *Untersuchungen zur Ueberlieferung, Uebersetzung, Grammatik der Psalmen Notkers* (1889). Among his other works the following should be mentioned: *Die Jesuitengymnasien in Oesterreich* (1873); *Vergleichende Grammatik der germanischen Sprachen*, vol. i (1863), *Geschichte der deutschen Literatur von der ältesten Zeit bis zum 13. Jahrhundert* (1892); *Ueber die Quelle von Ezzos Gesang von den Wundern Christi* (1893); and his *Speculum Ecclesiae* (1858).

KELLER, kē'lēr, ADELBERT VON (1812-83). A German philologist, born at Pleidelsheim and educated under Uhland at Tübingen, where, after study at Paris, he became privatdozent and assistant librarian (1835). After travels in Italy and research in Italian libraries, he was professor and librarian at Tübingen until 1850, when he became president of the Literarische Verein in Stuttgart. In this office much of his work as editor of German works was done, while his work in Romance belongs to the earlier period. He wrote: *Li romans des sept sages* (1836); *Altfranzösische Sagen* (last ed., 1876), a complete edition of Cervantes (1838-42); *Romancero del Cid* (1840); *Zwei Fabliaux* (1840); *Diokletians Leben* (1841); *Li romans dou chevalier au leon* (1841); *Gesta Romanorum* (1842); with Rapp, a translation of Shakespeare (1843-46); *Römvart* (1844); *Altdeutsche Gedächte* (1846); *Alte gute Schwänke* (last ed., 1846); *Lieder Heinrichs von Württemberg* (1849); *Lieder Guillems von Burgunden* (1849); *Meister Altsuerts Werke* (1850); *Italienscher Novellenschatz* (1851-52); *Fastnachtsspiele aus dem funfzehnten Jahrhundert* (1853-58); *Ayrs Dramen* (1864-65); *Das deutsche Heldenbuch* (1867); *Hans Sachs* (1870-81); *Tüngers Facetiae* (1875); *Uhland als Dramatiker, mit Benutzung seines handschriftlichen Nachlasses dargestellt* (1877); *Das Nibelungenlied nach der Paristenhandschrift* (1880); *Verzeichnis altdeutscher Handschriften* (ed. by Sievers, 1890). Consult Fischer, *Nekrolog für A. von Keller* (Leipzig, 1884), and article in the *Allgemeine deutsche Biographie*, vol. xvii (ib., 1883).

KELLER, ALBERT VON (1845-). A Swiss-German historical, genre, and portrait painter, born at Gais (Appenzell). He studied philosophy and law at the University of Munich before taking up painting as a pupil of Lenbach and afterward of Ramberg at the academy there. After traveling in Italy, France, England, and the Netherlands, he exhibited in Vienna (1873) "An Audience with Louis XV," then painted for a time groups and female figures in modern costume, and scenes from antique life, with rich architectural surroundings. "A Roman Bath" (Königsberg Museum) was followed by the masterly "Raising of Jairus's Daughter" (1886, Munich), "Empress Faustina in the Temple of Juno at Praeneste," "The Witch's Sleep" (1888), "St.

Julia on the Cross" (1892). Among the best known of his other works are "Chopin" (New Pinakothek, Munich), "The Portrait Painter" (National Gallery, Berlin), "The Happy Sister," "Judgment of Paris," and "The Crucifixion." He is an artist of great originality in his delicate and subtle color as well as in his very modern conceptions of classic and religious themes and of portraiture. One of the chief leaders of the new Realistic school, he became president of the Munich Secession Society, which possesses some of his best sketches. He was awarded gold medals in Munich and Berlin; was named professor at and honorary member of the Munich Academy; was decorated in 1898 with the order of the Bavarian Crown, which conferred upon him nobility, and received many other distinctions. A selection of his works, in photogravure, was published in Munich in 1899. Consult Rosenhagen, *Albert von Keller* (Bielefeld, 1912).

KELLER, ARTHUR IGNATIUS (1867-). A leading American illustrator and painter. He was born in New York and studied at the National Academy of Design under Wilmarth and Ward and later in Munich under Loeffts. Though preëminently an illustrator, he also deserves an honorable place among contemporary American painters for his remarkable sketches in oil and for his water colors. In illustrative work he possesses a free spontaneous style and furnishes a conscientious yet individual interpretation of the author. He is perhaps at his best in his renderings of the Colonial era and the Civil War. Among the books illustrated by him are Herbert's *The First American*, Wister's *The Virginian*, Stockton's *Kate Bonnet*, Gilbert Parker's *The Right of Way*, Bret Harte's *Stories*, Longfellow's *Hanging of the Crane*, Irving's *Sleepy Hollow*, and Dickens's *A Christmas Carol*. His painting "At Mass" was bought by the Munich Academy. "Lead, Kindly Light" received a gold medal at Philadelphia in 1899, and "Washington's Wedding Reception" a silver medal at Paris in 1900. He won the Evans water-color prize of the American Watercolor Society in 1902 and a gold medal at St. Louis in 1904.

KELLER, kē'lār, EMILE (1828-1909). A French politician, born at Belfort. In 1857 he was elected deputy for the Haut-Rhin District and soon made himself prominent as a leader of the Roman Catholic party. He lost his seat in 1863, but was reëlected in 1869. He commanded a volunteer corps in the Franco-Prussian War, and as a member for Haut-Rhin again in 1871 he made a stirring speech against the cession of Alsace and Lorraine to Germany. When the treaty was signed, he left the Assembly, with other Alsatians, but was back as member for Belfort in 1876 and again in 1885. His publications include: *Histoire de France* (9th ed., 1894); *L'Encyclopie et les libertés de l'église gallicane* (1860); *L'Encyclopie et les principes de 1789* (1865); *Le général de Lamoricière* (1873). *Les congrégations religieuses en France* (1880).

KELLER, kē'lār, FERDINAND (1800-81). A Swiss archaeologist, born at Zurich. He studied theology and natural sciences at Zurich, Lausanne, and Paris. In 1831 he was made an instructor at Zurich and secretary of the Society for Natural Research, and in this capacity he published various works on naked rock soil and vent holes in the Alps. The discovery of

the sepulchral mound at Burghölzli led to the founding of an antiquarian society of which Keller was president for 40 years, and of a museum, the growth of which was largely due to him. His most important discovery was the pile dwelling at Obermeilen, on Lake Zurich, in the winter of 1853-54. Besides his articles on this subject in the *Proceedings of the Antiquarian Society*, he published *Bauriss des Klosters Sankt Gallen vom Jahr 820* (1844) and an archaeological map of eastern Switzerland (1874). Consult Meyer von Knonau, *Lebensabriss von Ferdinand Keller* (Zurich, 1882), and Lee, *The Lake Dwellings of Switzerland, and Other Parts of Europe*, by Dr. F. Keller (2d ed., London, 1878).

KELLER, FERDINAND (1842-). A German historical, genre, and portrait painter. He was born and educated at Karlsruhe. In 1857 he accompanied his father and brother to Brazil, where he sketched diligently from nature in the tropical forests. He returned to Karlsruhe in 1862, studied landscape painting under Schirmer and then figure painting under Canon, whereupon he spent four years in Italy, mostly in Rome. His "Death of Philip II" was awarded the first prize at the International Art Exhibition in Rio de Janeiro. Besides large compositions of Brazilian scenery, and numerous portraits, he next produced "Burning of Rome under Nero" (1873, medal Vienna Exposition) and became widely known through his successful design for the curtain of the New Theatre at Dresden (1876). Then followed "Victory of Margrave Ludwig Wilhelm of Baden over the Turks at Salankamen, 1691" (1879, Karlsruhe Gallery), "Hero Finding the Body of Leander" (1880, Vienna Academy), and later "Apotheosis of William the Victorious" (1888, National Gallery, Berlin). He scored a great triumph with a large allegorical composition, representing the founding of Heidelberg University, in a "Triumphal Progress of Pallas Athens before Elector Ruprecht" (1886, in the Aula of the university). In later years he devoted himself chiefly to portraiture, numbering among his sitters the Grand Duke and Duchess of Baden and Emperors William I and II. He was appointed professor and in 1881 director of the School of Art in Karlsruhe and ranks among the chief modern colorists in Germany.

KELLER, FRIEDRICH LUDWIG VON (1799-1860). A Swiss-German jurist, pupil of Savigny. He was born at Zurich, studied jurisprudence at Berlin and Göttingen (1819-22), and on his return home (1825) became professor of civil law, took an active part in Swiss politics, and soon became head of the Liberal radicals of Zurich. In 1831 he was made head of the Swiss judiciary. From 1843 to 1847 he was professor in the University of Halle and then went to Berlin as successor of Puchta. He became a Conservative member of the Lower House and because of his services to the monarchical party was ennobled and called to the Upper House. His principal works are *Ueber Litiskontestation und Urteil* (1827) and *Der römische Zivilprozess und die Aktionen* (6th ed., 1883). His *Vorlesungen über die Pandekten* was edited by Friedberg (1861) and by Lewis (1867).

KELLER, GOTTFRIED (1819-90). A celebrated Swiss-German novelist and poet, one of the best modern short-story writers, remarkable for his blending of the humorous and the tragic,

the realistic and the romantic. He was born in Zurich of poor but excellent parents. His mother, widowed early, gave him the best education she could in the local schools. The boy studied landscape painting unsystematically with rather poor teachers in Zurich, wasted much time, and read quite widely but carelessly. Supported by his mother's meagre savings, he continued his art studies in Munich from 1840 to 1842, partly under the direction of Julius Lange, but more often independently. Illness, poverty, and small success in his chosen art caused his return to his native town. Here he led an aimless life from 1842 to 1848, making the acquaintance of Freiligrath (q.v.), falling in love with Luise Rieter, writing lyrics, and finally deciding that literature rather than painting was his proper field. He appeared as a lyric poet first in 1846. Assisted by a stipend from the Zurich department of education, he studied literature, history, and philosophy at Heidelberg during the years 1848 to 1850, coming under the influence of H. Hettner (q.v.) and Ludwig Feuerbach (q.v.). The years 1850-55 he spent in Berlin in straitened circumstances. At this time he came under the influence of Varnhagen (q.v.) and Duncker, studied the drama, wrote the biographical novel *Der grüne Heinrich* (4 vols, first form, 1854-55; revised form, very different, 1879-80, 70th ed., 1912), some lyrics, and the first volume of his collection of short stories, *Die Leute von Seldwyla* (vol. i, 1856; vol. ii, 1874; 73d ed., 1912). Berlin marks a turning point in his career. Returning to Zurich, he was the efficient Secretary of the canton from 1861 to 1876, but produced only a few *Novellen*. His second successful literary period extends from 1876, when he retired from office, to his death in 1890. *Der grüne Heinrich*, really a series of short stories, has many faults as a novel and was not well received. When Keller did not attempt the novel, but confined himself to the short story proper, he excelled. He was at his best in certain of the *Novellen*, which depict with wonderful insight and charming humor contemporaneous Swiss village life. Besides the works above mentioned, the most important are: *Sieben Legenden* (1872; 60th ed., 1912), *Zürcher Novellen* (1878; 72d ed., 1912); *Das Sängergedicht* (1882; 60th ed., 1912)—all collections of *Novellen*, the best known of which are *Pankraz der Schmoller*, *Die drei gerechten Kamacher*, *Romeo und Julie auf dem Dorfe*, *Das Fährleim der sieben Aufrechten*, *Kleider machen Leute* and *Dietegen*; *Gesammelte Gedichte* (1883); *Martin Salander* (1886), a novel.

Gottfried Keller," in *Literaturhistorische Gesellschaft zu Bonn*, vol. ii (N. S., Berlin, 1911).

KELLER, HELEN ADAMS (1880-). An American writer and lecturer, blind and deaf from infancy. She was born in Tuscumbia, Ala., descended on her father's side from Alexander Spotswood, a Colonial Governor of Virginia, and connected with the Lees and other old Southern families, and through her mother related to the New England families of Adams, Hale, and Everett. When she was 19 months old, she was attacked by scarlet fever, which left her without the senses of sight and hearing. Until her eighth year no serious attempt was made to educate her. She then was placed under the care of Miss Anne M. Sullivan (Mrs. John A. Macy), who had received her training at the Perkins Institution in Boston, and who remained with Miss Keller indefinitely as companion and teacher. Miss Keller's progress was remarkable. When she had learned to read and write and to use the finger alphabet, she determined that she would learn to speak. Under the instruction of Miss Sarah Fuller, of the Horace Mann School, New York, in less than a month she was able to talk intelligibly. After studying for some years at the William Brewster School and at the Cambridge School, she entered Radcliffe College in 1900 and graduated in 1904. After her graduation she served on the Massachusetts Commission for the Blind and on the committees of various societies for the blind. She became widely known as a lecturer and writer on her own experiences and on the possibilities of a rich intellectual life for the deaf and blind. Her writings include, besides an autobiography: *Optimism* (1903), *The World I Live in* (1908), *The Song of the Stone Wall* (1910), *Out of the Dark* (1913). Most of these have appeared in German translations. Consult. H. A. Keller, *Story of my Life*, with her letters, 1887-1901, and a supplementary account of her education (New York, 1903); John Hitz, "Helen Keller," in the *American Anthropologist*, vol. viii (N. S., Lancaster, Pa., 1906); Gérard Harry, *Man's Miracle: The Story of Helen Keller and her European Sisters*, translated from the French (New York, 1913). *The Girl who Found the Bluebird* (ib., 1914), by Georgette Leblanc (Madame Maeterlinck), was written after a visit to Miss Keller.

KELLER, OTTO (1838-). A German classical scholar, born at Tübingen and educated at the universities of Tübingen and Bonn. He was professor at Freiburg (1872-76), at Graz (1876-81), and afterward at Prague until 1909, when he retired. His most important work was in collaboration with A. T. Holder, an edition of the text of Horace, *Horati Opera Rec. Keller et Holder* (1864-70; vol. i, 2d ed., 1899), which is the chief critical edition of Horace. On this subject he also published *Epilegomena zu Horaz* (3 vols., Leipzig, 1879-80). Important, too, for the study of Horace is his *Pseudocronis Scholia in Horatium Vetusiora, etc.* (2 vols., ib., 1902-04). Besides these, he made many contributions to learning, among which the most important are: *Tiere des klassischen Altertums in kulturgeschichtlicher Beziehung* (Innsbruck, 1887); *Tier- und Pflanzenbilder auf Münzen und Gemmen* (1889); *Lateinische Volksetymologie* (1891); *Lateinische Etymologien* (1893); *Grammatische Aufsätze* (1895); *Kulturgeschichtliches aus der*

Tierwelt (1904); *Die antike Tierwelt*, vols. i, ii (1909, 1914).

KELLERMAN, WILLIAM ASHBROOK (1850-1908). An American botanist, born at Ashville, Ohio. He graduated at Cornell (1874) and received his Ph.D. at Zurich (1881). For five years he was natural-science master in the State Normal School of Wisconsin, then professor of botany and zoölogy in the Agricultural College of Kansas, as well as State botanist there; and he wrote a pamphlet upon the flora of Kansas. From 1891 until his death he was professor of botany in Ohio State University, which published his *Catalogue of Ohio Plants* (1899), the fourth it had issued, with a supplement the following year, and also *The Non-Indigenous Flora of Ohio* (1900), which he prepared with the assistance of his wife. He founded the *Journal of Mycology* in 1885.

KELLERMANN, kél'ér'mán', FRANÇOIS CHRISTOPHE, DUKE OF VALMY (1735-1820). A French general, born near Rothenburg, Bavaria. In 1752 he entered the French army, served through the Seven Years' War and in the Polish expedition of 1771, and had risen to the rank of a *maréchal de camp* before the Revolution broke out. He warmly espoused its cause in 1788, and in 1792 he received the command of the Army of the Centre. Acting with Dumouriez, Kellermann repelled the Duke of Brunswick and delivered France, in the famous cannonade of Valmy (Sept. 20, 1792). He then commanded the Army of the Alps, but on allegation of treason against the Republic he was imprisoned for a year and only liberated by the fall of Robespierre. He afterward rendered important services in Italy, and was created marshal of France in 1804 and Duke of Valmy in 1809. After 1812 he commanded the reserves in Germany. In 1814 he voted for the deposition of Napoleon and at the Restoration attached himself to the Bourbons. He was created a peer in 1814 and in his subsequent political activity voted with the Liberals. He died Sept. 12, 1820. Consult J. G. P. de Salos, *Fragments historiques sur M. le maréchal de Kellermann* (Paris, 1807), and De Bolidoux, *Esquisse de la carrière militaire de F. C. Kellermann* (ib., 1817).

KELLERMANN, FRANÇOIS ETIENNE, DUKE OF VALMY (1770-1835). A French general. He was the son of Gen. François Christophe Kellermann (q.v.) and was born at Metz, Aug. 4, 1770. He entered the army at an early age, being attached to the army of the First Consul. In 1796 he was Napoleon's adjutant general in Italy, and in 1797 was made brigadier general. At Marengo (q.v.) in 1800 he decided the day by a charge of heavy cavalry and was made a general of division shortly afterward. He again distinguished himself at Austerlitz (1805) and after 1807 took part in the Peninsular campaigns. On Napoleon's return from Elba in 1815, he was in command of the royal troops sent to oppose him, but ended by offering his services to the Emperor. At the battle of Waterloo he distinguished himself by a brilliant and successful cavalry charge against the English, which would probably have changed the result of the battle but for the lack of forces to support the move. He was one of the most distinguished cavalry leaders of the First Empire, although his merits were not always recognized during his lifetime. He sat in the Chamber of Peers after the death of his father,

whose liberal opinions he shared. At his death, which took place June 2, 1835, he left a collection of memoirs which, though never published, have been used by his son, François Christophe Edouard (1802-68), in his *Histoire de la campagne de 1800* (Paris, 1854).

KELLEY, BENJAMIN FRANKLIN (1807-91). An American soldier, born in New Hampton, N. J. At the age of 19 he went to Wheeling, Va. Upon the outbreak of the Civil War he enlisted the First West Virginia Regiment for the Federals and was made its colonel. His first service was at Philippi, where he captured the Confederate camp equipage and was himself badly wounded. He was made brigadier general of volunteers in 1861, was victorious at Romney and Blue's Gap, and afterward commanded a division of 10,000 men in the Department of Harper's Ferry. In 1862 he was serving under General Frémont, and the following year he was in command of the West Virginia Department and pursued General Lee, while in 1864 he checked the enemy at Cumberland, Md., New Creek and Morefield, Va. He was brevetted major general of volunteers in 1864 and after the peace was appointed internal-revenue collector and in 1873 examiner of pensions.

KELLEY, EDGAR STILLMAN (1857-). An American composer, born at Sparta, Wis. He studied with Merriam, Clarence Eddy, and Ledochowski in Chicago (1874-76) and afterward at Stuttgart with Seifriz, Krüger, Speidel, and Finck, the celebrated composer, graduating from the conservatory in 1880. Upon his return he held several Church appointments and for a short period conducted a comic opera. Later he taught in San Francisco, where he became musical critic of the *San Francisco Examiner*. In 1896 he settled in New York, teaching in the New York College of Music and lecturing for the extension department of New York University in 1901-02. He contributed to leading musical journals and magazines. From 1906 to 1912 he lived in Berlin. When he returned to the United States, he became professor of music at the Western College for Women in Columbus, Ohio, and professor of composition at the Cincinnati Conservatory of Music. He became a member of the National Institute of Arts and Letters. His works include a comic opera, *Puritania*; two symphonies, an orchestral suite, *Aladdin* (on Chinese themes); a piano quartet, a string quartet, incidental music to *Ben Hur*, *Prometheus Bound*, *Macbeth*; songs, piano pieces. As an author, he attracted attention through his book *Chopin the Composer* (1913), a scholarly analysis of the master's works.

KELLEY, FLORENCE (1859-). An American social worker. She was born in Philadelphia, a daughter of William Darrah Kelley, and graduated from Cornell University in 1882 and from the law department of Northwestern University in 1894. She married, but divorced her husband, and was afterward known as Mrs. Kelley. She served as State inspector of factories in Illinois in 1893-97, was American editor of the *Archiv für Sozialgesetzgebung* in 1897-98, and after 1899 held the general secretaryship of the National Consumers' League. She translated Frederick Engel's *Condition of the Working Class in England*, edited Edmond Kelly's *Twentieth Century Socialism* (1910), and is author of *Some Ethical Gains through Legislation* (1905), *The Fate*

of Felix Brand (1913), *Modern Industry in Relation to the Family* (1914).

KELLEY, WILLIAM DARRAH (1814-90). An American politician, born in Philadelphia. Orphaned young, he was apprenticed first to a printer, and then to a jeweler in Boston, where from 1835 to 1840 he was engaged in business for himself. He returned to Philadelphia in 1840, studied law, was admitted to the bar in 1841, was elected prosecutor for the city of Philadelphia in 1845, and from 1846 to 1856 was judge of the Philadelphia Court of Common Pleas. Though he had been for years a Democrat and free trader, he joined the Republican party in 1856 and in 1860 was sent as a delegate to the Chicago Convention which nominated Lincoln. In the same year he was elected to Congress, where he soon became conspicuous as an advocate of protection and the abolition of slavery and as an opponent of the demonetization of silver. He served in Congress until his death. For many years, as the oldest member in consecutive service, he was called the Father of the House, and by his enthusiastic and persistent championship of the Pennsylvania pig-iron interests he earned the sobriquet of Pig-Iron Kelley. He was a voluminous writer and, in addition to numerous political addresses, published *Reasons for Abandoning the Theory of Free Trade and Adopting the Principle of Protection to American Industry* (1872), *Letters on Industrial and Financial Questions* (1872), *Letters from Europe* (1880), *The Old and the New South* (1887).

KELLEY, WILLIAM VALENTINE (1843-). An American Methodist Episcopal clergyman and editor, born at Plainfield, N. J. He graduated from Wesleyan University in 1865 and entered the ministry in 1867. After serving several important pastorates he was elected editor of the *Methodist Review* of New York in 1893. He was a member of the general conferences of 1896, 1900, 1904, 1908, and 1912; became vice president of the board of missions of his church, and wrote *The Ripening Experience of Life and Other Essays* (1907); *Down the Road and Other Essays* (1911); *The Illumined Face* (1911), *Glances of the Soul of Gilder* (1911).

KELLGREN, KJELLGRÄN, JOHAN HENRIK (1751-95). A Swedish lyric poet, born at Floby Prestgård, West Gothland. He was educated at Skara and at the Abo University, where he became a privatdocent in 1774. He afterward taught privately in a noble family at Stockholm, where he met Gustavus III, and by 1778 he had begun to write for the *Stockholmsposten*, of which he afterward became joint editor. His keen critiques and his poems, inspired by the prevailing French æstheticism, attracted the attention of this King, who made Kellgren his librarian and private secretary and in 1786 nominated him to the Swedish Academy. Kellgren's satirical humor is displayed in his original poems, *Mina lojen* (My Jests) and *Ljusets fiender* (The Enemies of Light), while he excelled all his Swedish predecessors in such lyrics as *Nya skapelsen* (The New Creation) (1790), *Sigvart och Hulma*, and *Till Kristina* (1792). His *Samlade skrifter* (collected works) were published in three volumes (1796). The influence of the French Revolution, drawing him away from his earlier models, is apparent in his patriotic song *Kantaten 1 januari 1789*.

KELLOGG, WILLIAM ERSKINE (1878-). An American biologist. Born at Buffalo, N. Y., he graduated from Ohio State University in 1898 and studied at Columbia University (Ph.D., 1904), where he taught zoology (Barnard College) from 1901 to 1906. In the latter year he became professor of biology at Goucher College, Baltimore, and in 1908 a member of the teaching staff at the Marine Biological Laboratory, Woods Hole, Mass. His investigations deal largely with vertebrate morphology and embryology, and his publications include: *Social Direction of Human Evolution* (1911); *Text-Book of General Embryology* (1913); *Outlines of Chordate Development* (1913).

KELLNER, MAX (1861-). An American Semitic scholar, born at Detroit, Mich. He graduated from Hobart College in 1881 and from Harvard University (A.B.) and the Cambridge Theological School in 1885. At the latter institution he was instructor in Hebrew (1887-91), assistant professor (1891-98) and professor (1898-1907) of Old Testament language, and professor of the literature and interpretation of the Old Testament after 1907. His writings include: *The Prophecies of Isaiah* (1895); *The Standard Inscription of Ashurnasirpal* (1895); *The Assyrian Monuments Illustrating the Sermons of Isaiah* (1900); *An Outline Study on the History of the Hebrews* (1901); *An Outline Study on the Old Testament Literature and Religion* (1902).

KELLOGG, CLARA LOUISE (1842-1916). An American dramatic soprano, a daughter of George Kellogg, born at Sumterville, S. C. She was educated in New York, where she made her debut in 1861. Her principal American tours took place between 1868 and 1872, after which she filled an engagement in London, sang in Italian opera in the United States, and in 1874 organized her own opera company in English, for which she practically made her own translations and adaptations of libretti, was her own stage manager and chorus master, and on occasion the vocal and dramatic instructor of her principals. She had a wide repertoire and was a thorough mistress of her art. She married Carl Strakosch in 1887 and soon afterward retired from the stage. In 1913 she published her memoirs under the title *Memoirs of an American Prima Donna* (New York).

KELLOGG, FRANK BILLINGS (1856-). An American lawyer. He was born at Potsdam, N. Y., but removed to Minnesota in 1865 and there received a common-school education. Admitted to the bar in 1877, he served as city attorney of Rochester, Minn., for three years, and as county attorney of Olmstead County for five years. Moving to St. Paul in 1887, he formed a partnership with Senator C. K. Davis and C. A. Severance and became general counsel for various railroad and mining companies. He was special counsel for the United States in cases against the paper and Standard Oil trusts and in the suit of the government to prevent the Union Pacific and Southern Pacific merger, and for the Interstate Commerce Commission in the investigation of the Harriman railroads. In 1912 he was elected president of the American Bar Association.

KELLOGG, GEORGE (1812-80). An American inventor. He was born at New Hartford, Conn., graduated at Wesleyan in 1837, and from 1838 to 1841 was principal of an academy at

Sumterville, S. C. He was for some time a manufacturer in Birmingham, Conn., and was in the United States revenue service from 1863 to 1866. He established factories in England, was a patent expert, and patented a machine for making jack chains (1844), a dovetailing machine (1849), a type-distributing machine (1852), and improved surgical instruments (1853). He was the father of Clara Louise Kellogg.

KELLOGG, JOHN HARVEY (1852-). An American physician, born at Tyrone, Mich. He studied at the State Normal School, graduated from Bellevue Hospital Medical College in 1875, and thereafter practiced at Battle Creek, Mich., where he became superintendent of the Battle Creek Sanitarium in 1876. He invented several medical and surgical instruments and experimented with processes to improve cereal foods. He founded and became president of the American Medical Missionary College. Besides papers and articles, he wrote: *The Art of Massage* (1895), *Rational Hydrotherapy* (1901, 4th rev. ed., 1910); *The Home Book of Modern Medicine* (1906); *The Battle Creek Sanitarium, History, Organization, Methods* (1908, 1913); *Life, its Mysteries and Miracles* (1910), *Neurasthenia, or Nervous Exhaustion* (1914).

KELLOGG, MARTIN (1828-1903). An American classical scholar and educator, born at Vernon, Conn. He graduated at Yale in 1850. After 10 years of service in the College of California, in 1860 he became professor of Latin and Greek in the university of that State. In 1876 he was transferred to the chair of Latin language and literature, and from 1890 to 1899 he was president of the university. His administrative policy resulted in an important growth in the institution. He edited *His Oratoria, Selections from Cicero and Quintilian* (1872) and *The Brutus of Cicero* (1889).

KELLOGG, PAUL UNDERWOOD (1879-). An American social worker and editor, born at Kalamazoo, Mich. He was a reporter on, and city editor of, the *Kalamazoo Daily Telegraph* between 1898 and 1901, took special courses at Columbia University in 1901-06 and at the New York School of Philanthropy in 1902, and after 1902 was editor of the *Survey* magazine (formerly *Charities and the Commons*). This periodical became widely known under his editorship for its accurate and judicial reports upon social and labor conditions in various parts of the United States. In 1907-08 he directed the Pittsburgh Survey, whose findings he edited in six volumes for the Russell Sage Foundation. He was a member of the board of directors of the New York City Commission on Congestion of Population and in 1910 chairman of the Commission on Occupational Standards of the National Conference of Charities and Correction. Amherst gave him an honorary A.M. in 1911.

KELLOGG, SAMUEL HENRY (1839-99). An American scholar and missionary, born at Westhampton on Long Island. Graduating from Princeton University in 1861, and three years later from Princeton Theological Seminary, he went to India as a Presbyterian missionary in 1865 and remained there 11 years. During this time he studied Hindu dialects and taught theology at Allahabad. Upon his return to the United States he became the pastor of a Pittsburgh church, then professor in the Western

Theological Seminary, and in 1886 pastor of St. James's Square Presbyterian Church in Toronto. After six years he returned to India, where he was occupied mainly with the work of translating the Bible into Hindi. His works include: *A Grammar of the Hindi Language and Dialects* (1876, 1892); *The Jews, or Prediction and Fulfillment* (1883); *The Light of Asia and the Light of the World* (1885); *From Death to Resurrection* (1885); *The Genesis and Growth of Religion* (1892).

KELLOGG, VERNON LYMAN (1867-). An American entomologist, born at Emporia, Kans. After graduating in 1889 from the University of Kansas, he studied at Cornell and abroad at Leipzig and Paris. He was assistant and associate professor of entomology at the University of Kansas from 1890 to 1894 and thereafter professor of entomology and lecturer in bionomics at Leland Stanford Junior University. His publications include *Elements of Insect Anatomy* (1889), with J. H. Comstock; *Common Injurious Insects of Kansas* (1892); *Elementary Zoology* (1901, 2d ed., 1902); *First Lessons in Zoology* (1903); *American Insects* (1905; 2d ed., 1908); *Darwinism Today* (1907); *Insect Stories* (1908); *The Animals and Man* (1911); *Beyond War* (1912), and, with David Starr Jordan, *Animal Life* (1900), *Evolution and Animal Life* (1907), and *Scientific Aspects of Luther Burbank's Work* (1909).

KELLOGG, WILLIAM PITT (1831-). An American soldier and politician, born at Orwell, Vt. He studied at the Norwich Military Institute and in 1848 removed to Illinois, where four years later he was admitted to the bar. In 1861 President Lincoln appointed him Chief Justice of Nebraska, but soon afterward, being granted a leave of absence, he raised the Seventh Illinois Cavalry and fought in the Civil War as its colonel. He was promoted to the rank of brigadier general for his services in the army under Pope in Missouri and for the ability with which he commanded General Granger's cavalry during the Corinth campaign, but in 1863 he was compelled by ill health to resign from the service. Consistently Republican in politics, he was collector of the port of New Orleans in 1865-68, United States Senator in 1868-72, Governor of Louisiana in 1873-77, and a member of Congress in 1883-85. To every Republican National Convention from 1860 to 1896 he was a delegate.

KEL/LOR, FRANCES ALICE (1873-). An American sociologist, born at Columbus, Ohio. She graduated from the Cornell Law School in 1897 and studied at the University of Chicago and at the New York Summer School of Philanthropy; was secretary and treasurer of the New York State Immigration Commission in 1909 and chief investigator for the Bureau of Industries and Immigration of New York State in 1910-13; and became managing director of the North American Civic League for Immigrants and a member of the Progressive National Committee. She is author of *Experimental Sociology* (1902); *Out of Work* (1904); *Education of Women by Athletics* (1909); *Out of Work* (1915).

KELLOW SAFETY POWDER. See EXPLOSIVES.

KELLS. A market town of County Meath, Leinster, Ireland, on the Blackwater, 9½ miles northwest of Navan, famous for its historical associations (Map: Ireland, E 4). The town

originated in a monastery founded in the middle of the sixth century by St. Columba, in which the Columban community of Iona found a refuge when that island was devastated by the Norsemen between 802 and 815. The renowned sixth or seventh century *Book of Kells*, a beautifully executed manuscript copy of the Gospels, is preserved in Trinity College, Dublin, and a fine tenth-century crossier is in the British Museum. The chief existing antiquities are St. Columba's oratory, several ancient sculptured crosses, and a round tower of the twelfth century. Pop., 1901, 2428; 1911, 2395.

KELLY, EDMOND (1841-1909). An American lawyer and Socialist. He graduated from Columbia College in 1870, was admitted to the bar, and later studied at Cambridge University. He opened a law office in Paris, where he became known as an authority on international marriages and where he served also as counsel to the American Legation. Returning to New York in 1890, he was active in municipal reform, founded the City Club, and had much to do with the election of Mayor Strong. His effort to organize workmen into good-government clubs did not succeed, and he returned to his law practice in France. There he was counsel of Princess de Sagan (Anna Gould) in the divorce suit against her husband, Count Boni de Castellane. Again in the United States in 1905, he participated actively in Socialistic propaganda and made special investigation of the tramp problem. His writings include *Evolution and Effort and their Relation to Religion and Politics* (1895; 2d ed., 1898); *Government, or Human Evolution* (2 vols., 1900-01); *The Unemployables* (1907); *Twentieth Century Socialism* (1910).

KELLY, HOWARD ATWOOD (1858-). A distinguished American gynecologist, born at Chambersburg, Pa., and educated at the University of Pennsylvania, where he graduated B.A. in 1877 and M.D. in 1882, and where he was associate professor of obstetrics in 1888-89. While in Philadelphia, he founded Kensington Hospital. He was professor of gynecology and obstetrics at Johns Hopkins University from 1889 to 1899 and after the latter year—when he became also gynecological surgeon in Johns Hopkins Hospital—of gynecology alone. High attainments in his special field brought Dr. Kelly many honors—he received the degree of LL.D. from Aberdeen and Washington and Lee universities and from the University of Pennsylvania; served as president of the Southern Surgical and Gynecological Society in 1907 and of the American Gynecological Society in 1912; and was elected fellow or honorary member of English, Scottish, French, German, Austrian, and Italian obstetrical and gynecological societies. Besides contributing some 300 valuable articles to medical journals and editing, with C. P. Noble, *Gynecology and Abdominal Surgery* (vol. i, 1907; vol. ii, 1908), he published: *Operative Gynecology* (2 vols., 1899); *The Vermiform Appendix and its Diseases* (1905, 1909); *Walter Reed and Yellow Fever* (1906, 1907); *Medical Gynecology* (1908); *Myomata of the Uterus*, with I. S. Cullen (1909); *Cyclopaedia of American Medical Biography* (1912); *American Medical Botanists* (1913); *Diseases of the Kidneys, Ureters, and Bladder*, with C. F. Burnam (2 vols., 1914).

KELLY, HUGH (1739-77). A British author and playwright, born at Killarney, Ireland.

He learned his trade as a stay maker, but at the age of 21 went to London to seek his fortune in literature. He found it in the writing of an insipidly sentimental play, *False Delicacy*, which Garrick presented at the Drury Lane in 1768. Its success was far beyond its merits. Dr. Johnson had a poor opinion of the author's gifts, and Goldsmith held him in contempt. It was in avowed rivalry with the latter's *The Good Natured Man*, which was about to appear, that Garrick brought out *False Delicacy*, which somehow so commended itself abroad as to be translated into French, German, and Portuguese. This comedy was followed by four others—*A Word to the Wise* (Drury Lane, 1770), *A School for Wives* (ib., 1773), *The Romance of an Hour* (Covent Garden, 1774), *The Man of Reason* (ib., 1776). His tragedy *Clementina* (Covent Garden, 1771), though moderately successful, had little merit. Kelly was called to the bar in 1774, but did not succeed as a lawyer and took to drink. *A Life* was prefixed to his *Works* (1778).

KELLY, JAMES EDWARD (1855–) An American sculptor, born in New York. He studied at the National Academy of Design and at first devoted himself to wood engraving, being known principally as a magazine illustrator until 1881, and his statues, while full of spirit and often excellent in portraiture, are essentially illustrations in bronze. He won the designation "the sculptor of American history" by his works, which include "Sheridan's Ride" (1878), "Paul Revere" (1882), statuette, "Monmouth Battle Monument" (1883–85), with five historical panels, groups for the Saratoga Monument (1887), "Grant at Fort Donelson" (1886), "General Devens" and the Sixth New York Cavalry Monument at Gettysburg (1890), "Call to Arms" (1891), a colossal figure for the Troy Soldiers' Monument, Buford Monument at Gettysburg (1895), "Battle of Harlem Heights" (1897), a bronze relief, for Sons of the Revolution, at Columbia University, New York; and a colossal monument to commemorate the defense of New Haven (1909). He executed a series of bronze heads from sittings given by 40 generals of the Civil War, including Grant, Sherman, Sheridan, and Hancock, and a similar series for the Spanish-American War, including heads of Wheeler, Wood, Dewey, Sampson, and others. He was one of the founders of the Art Students' League.

KELLY, JOHN (1821–86). An American politician. He was born in New York City, had a common-school education, was apprenticed to a mason, and at the age of 24 started in business for himself. He soon became interested in politics, for which he had a decided aptitude, entered Tammany Hall, became a member of the Tammany General Committee in 1849, and in 1854 was elected alderman from the Fourteenth Ward. He then served in Congress from 1855 to 1858, attracting attention by his vigorous opposition to the Native American or Know-Nothing movement, and from 1858 to 1861 and again from 1865 to 1868 served as sheriff of New York County, in which capacity he accumulated a considerable fortune by taking full though legitimate advantage of the financial opportunities which this office then offered. He spent the years 1869–71 in Europe and on his return took an active part with Tilden and O'Connor in the fight against William M. Tweed (q.v.). He was called upon at

the same time to effect the general reorganization of Tammany Hall, and this he did to the satisfaction of most of the better element of the New York Democracy. Thenceforth until 1884 he was regarded as the autocrat and dictator of the Tammany organization, though there was considerable discord on several occasions, notably in 1876. He was appointed comptroller by Mayor Wickham, but was subsequently removed by Mayor Cooper. In 1879 he quarreled with Governor Robinson, the regular Democratic nominee for the governorship of the State, and, by running for that office himself on an independent ticket, successfully divided the Democratic vote and brought about the election of Alonzo B. Cornell, the Republican candidate. Kelly took an active interest in national as well as in State and city politics and in 1884 made a stubborn but unsuccessful effort to prevent the nomination of Grover Cleveland for the presidency. Though he was often accused of resorting to questionable methods to secure his ends, he was seldom charged with personal dishonesty. Consult Breen, *Thirty Years of New York Politics* (New York, 1899).

KELLY, MYRA (MRS. ALLAN MACNAUGHTON) (?–1910). An American author and educator. She was born at Dublin, Ireland, came to the United States at an early age, was educated at the Horace Mann School, and graduated from Teachers College, Columbia University, in 1899. As a teacher in East Side New York schools, she gathered material for very human and sympathetic sketches of life among poor children. Originally published for the most part in magazines, these sketches were collected under the titles: *Little Citizens* (1904); *The Isle of Dreams* (1907); *Wards of Liberty* (1907); *Rosnah* (1908); *Golden Season* (1909); *Little Aliens* (1910); *New Faces* (1910); *Her Little Young Ladyship* (1911). Miss Kelly married Allan MacNaughton in 1905.

KELLY, THOMAS (1769–1853). An Irish hymn writer, born in Dublin. He graduated at Trinity College, Dublin; began the study of law, but gave it up for theology and became a clergyman of the Established church. Later he became a Congregationalist and devoted his large wealth to the work of the churches. His reputation rests upon his *Hymns*, to the number of 765, which appeared in Dublin in successive editions between 1804 and 1853, which in their day were very popular, and some of which are still used, especially "On the mountain tops appearing."

KELLY, WILLIAM (1811–88). An American inventor. He was born in Pittsburgh, Pa., was educated at the public schools, and before he was 22 years old had decisively proved his mechanical ingenuity by several inventions, chief of which was a revolving steam engine. In 1845 he went to Lyon Co., Ky., and, having engaged in the manufacture of iron, bent his energies to the problem of inventing improved processes of manufacture. His factory on the Cumberland River soon turned out a product that acquired more than a local reputation. In 1847 he began to study the problem of reducing fuel cost in the manufacture of iron and soon afterward to decarbonize molten iron by the application of an air blast, a process for which he built a converter. It is claimed in Kelly's behalf that this process, by which molten cast iron is changed into steel, was employed for some time in certain lines of steel manufacture before Sir

Henry Bessemer's process was introduced into the United States by Alexander L. Holley in 1867. Kelly's knowledge that Bessemer was patenting his process in England compelled him to apply at Washington for the protection of his own rights, and he obtained official recognition that he was the first inventor, although the application for a Bessemer patent was pending at the time. In 1863 a factory was built at Wyandotte, Mich., for the manufacture of steel by Kelly's process; but disputes which threatened protracted litigation compelled the claimants in behalf of the rival processes to consolidate their interests three years afterward. It is said that Kelly was the first to employ Chinese workmen in the United States.

KELLY-KENNY, SIR THOMAS (1840-1914) A British soldier, born at Kilrush, County Clare, Ireland. He entered the army as an ensign in 1858; served in China in 1860, taking part in the action of Sinho and the capture of the Taku forts, and participated in the Abyssinian expedition in 1867. Subsequently he held various appointments and was regularly promoted until at the outbreak of the South African War he held the rank of major general. He then proceeded to the Cape with Lord Roberts, as commander of the Sixth Division, took part in the relief of Kimberley and won the promotion to lieutenant general. At Kimberley his more conservative methods had brought him to some extent into conflict with Lord Kitchener, who, though Kelly-Kenny's junior, acquired prestige as Lord Roberts's representative. In 1901-04 Kelly-Kenny was at the War Office as adjutant general to the forces. He was knighted in 1902, was promoted to general in 1905, and was retired in 1907. A year earlier King Edward had specially singled him out for the G.C.V.O., and he received other decorations at home and abroad.

KELOID, less often, but more correctly, **CHELOID**, *kē'loid* (Gk. *χηλῶν*, *chēlō*, a claw) A benign neoplasm which appears in the skin in the form of a scarlike fibrous tumor. It is probably always due to an injury, at whose site it appears, though formerly it was believed that true keloid arose spontaneously, while false keloid followed injury. Keloid has been known to follow pressure of clothing, a scratch, a vaccination wound, a boil, a leech bite, an acne pustule, a smallpox pustule, and an incision in the lobule of the ear made for an earring. Certain persons are predisposed to scarring and to keloid, small injuries being followed by the disease. This statement is true of the negro race. It is not uncommon to see negroes with large numbers of keloids of varying sizes. The keloid is usually an elevated, rounded, firm, flat tumor with sharply defined edges projecting about one-eighth of an inch above the level of the skin and generally appearing on the face, ears, back, shoulders, or breasts. Occasionally it has the form of a ridge. It is of a glistening white or red color, smooth on its surface, devoid of lanugo hairs, and often slightly sensitive to pressure. Rarely keloids weighing over 15 pounds are encountered.

Upon section the tumor appears to be fibrous, with a few nuclei and spindle cells chiefly about the blood vessels. It is thought that keloid develops from abnormal growth of the adventitia of the arterioles. Clawlike processes project from the tumor into the neighboring skin, and there are changes in the walls of blood vessels

for some distance beyond the edge of the keloid. The tumor usually progresses up to a certain point and then remains stationary. A few cases recover spontaneously, the tumor undergoing slow atrophy. The growth is almost sure to return after cauterization or excision. If the latter is practiced, thorough removal of surrounding tissue must be made. As palliatives of the pain or itching, mercurial applications, lead, salicylated plaster, resorcin, and pressure have been used. Linear scarifications and electricity have also been employed.

KELOWNA. A city in the Yale and Cariboo District, British Columbia, Canada, on Okanagan Lake, 80 miles south-southwest (direct) of Sicamous, on the Canadian Pacific Railway (Map British Columbia, E 5). There is a daily Canadian Pacific Railway steamer service to the railway terminus at Okanagan Landing, 28 miles distant. There are a general hospital, exhibition building, and race track. The city owns a park, its electric light and power plants and its water works. Among the industrial establishments are saw and planing mills, box factories, fruit packing houses, a jam and fruit-canning plant, a bottled water works, and cigar factory. Tobacco is grown and manufactured locally. The city is surrounded by a very rich fruit-growing district. Pop., 1911, 1663.

KELP. A name applied to certain large seaweeds, mainly Fucaceæ and Laminariaceæ, also to the crude ash obtained by drying and burning seaweed. On the coasts of Ireland, Scotland, France, and New England the term is applied mainly to species of *Fucus* and *Laminaria* and is sometimes confined to the latter genus. The extensive groves of giant kelps of the Pacific coast of America consist principally of *Nereocystis luetkeana*, *Macrocystis pyrifera*, and *Pelagophycus poria*. The commercial product known as kelp (seaweed ashes) consists of hard dark-gray or bluish masses composed mainly of common salt, sodium carbonate, sodium and potassium sulphates, potassium chloride, and potassium or sodium iodide, with a certain amount of insoluble and coloring matter. This material was formerly used to a considerable extent in the manufacture of soap and glass and as a source of crude sodium carbonate and iodine. The latter substances, however, are now obtained at a lower price and of better quality from other sources; the former from the natural salt deposits, and the latter from the by-products of the recrystallization of Chilean sodium nitrate. As a result, kelp is now prepared in far less quantity than formerly. The principal use of kelp plants, as of other seaweeds, is as a fertilizer, for which purpose they are applied mainly without further treatment than partial drying on the beach. The giant kelps of the Pacific coast have recently, however, been exploited as a source of commercial potash, especially for fertilizing purposes, on account of the high percentage of potash which they contain. These kelps contain about five times as much potash as the Atlantic seaweeds, analyses showing the wet kelps with 85 per cent of water to contain about 3 per cent of potash as potassium chloride. The iodine content is about 0.2 per cent. Consult: D. M. Balch, "On the Chemistry of Certain Algae of the Pacific Coast," in *Journal of Industrial and Engineering Chemistry* (Easton, Pa., 1909); F. K. Cameron, "Fertilizer Resources of the United States," in *United States Congress* (62d Congress, 2d Session),

Senate Document, No. 190 (Washington, 1912); "Kelp and Other Sources of Potash," in *Journal of the Franklin Institute* (Philadelphia, 1913). See IODINE; SEAWEED.

KELP CRAB. A name given on the Pacific coast to a rather large crab (*Epialtus productus*). It is used as food by the natives along the coast, but has not yet found its way into the San Francisco markets. It ranges from Puget Sound to Monterey and is said to be easily recognized by its smooth squarish shell or carapace, which bears two distinct teeth on each side. It is the most common maoid crab of California and Oregon, inhabiting rocky shores just below low-water mark.

KELP/FISH. Any of many small fishes in various parts of the world which frequent beds of kelp near shore and whose colors as a rule protectively accord with the colors of the seaweeds. In California the name is given distinctively to several blennioid fishes of the genus *Gibbonsia*, and especially to the large related blenny, *Heterostichus rostratus*, which is caught for market. It is 16 inches long and is translucent reddish brown, marked with many patches and streaks of light and shade.

KELP GOOSE. A goose (*Chloephaga hybrida*) of the Falkland Islands and Patagonia, resembling the brant and closely allied to the Magellanic and several other species of the Southern Hemisphere.

KEL/PIE. A Scottish word denoting a water sprite, usually in the form of a horse, which was believed by the superstitious to forewarn by preternatural lights and sounds those who are destined to be drowned, or even to assist in the drowning.

KELP PIGEON. A sailor's name for the sheathbill (q.v.).

KELPS. The large brown algæ (also called devil's aprons) in the order Laminariales. See ALGÆ; PHÆOPHYCÆ; KELP.

KEL/SEY, FRANCIS WILLEY (1858-). An American Latin scholar, born at Ogden, N. Y. He graduated at the University of Rochester (1880) and studied in Europe (1883-85). From 1880 to 1889 he taught Latin at Lake Forest University, first as instructor, later as professor. Thereafter he was professor of Latin at the University of Michigan. He edited textbooks for schools, portions of many Greek and Latin authors (Xenophon, Cæsar, Cicero, Lucretius, Ovid); became joint editor with Professor Percy Gardner, of the University of Oxford, of a series of *Handbooks of Archaeology and Antiquities*; and published *Pompeii: Its Life and Art*, translated from Augustus Mau (1899; rev. ed., with new matter by Professor Kelsey, 1902). A contributor to various educational journals, in 1911 he edited *Latin and Greek in American Education*, an important collection of papers dealing with the value of the classics. In the year 1906-07 he was president of the American Philological Association and from 1907 to 1912 president of the Archaeological Institute of America.

KEL/SO. A market town and police burgh in Roxburghshire, Scotland, on the Tweed, 43 miles southeast of Edinburgh (Map: Scotland, F 4). Its trade is chiefly agricultural; it manufactures fishing tackle, manures, vehicles, cab-network, and agricultural machinery. It contains remains of the abbey of the Virgin and St. John the Evangelist, founded in 1128 by King David I, which was destroyed by the Eng-

lish in 1545. On the opposite bank of the Tweed are the ruins of Roxburgh Castle. Pop. (police burgh), 1901, 400; 1911 3982.

KELT (Scottish). Young salmon in a certain stage of growth. See SALMON.

KEL/TIC CHURCH, LITERATURE, ETC. See CELTIC CHURCH, ETC.

KEL/TIE, JOHN SCOTT (1840-). A Scottish geographer. He was born in Dundee and was educated at St. Andrews and Edinburgh. He was for several years a publisher's editor, was inspector of geographical education for the Royal Geographical Society in 1884, its librarian in 1885, and its secretary in 1892. In 1880 he became editor of the valuable annual *the Statesman's Year Book*. He wrote: *History of the Scottish Highlands and Clans* (1874); *Report on Geographical Education* (1886); *Applied Geography* (new ed., 1908); *The Partition of Africa* (1894); *The History of Geography* (1914), with O. J. R. Howarth.

KEL/TON, JOHN CUNNINGHAM (1828-93). An American soldier, born in Delaware Co., Pa. He graduated at West Point in 1851, undertook frontier service as a lieutenant of infantry in Minnesota, Kansas, and Dakota for six years, and then returned to West Point as instructor in the use of small arms. His career in the Civil War began at St. Louis (1861), where he was a purchasing agent for the Western Department, but the same year he was made colonel of the Ninth Missouri Volunteers. In 1862 he became assistant adjutant general on the staff of Major General Halleck. For his valuable services, active and executive, he was brevetted brigadier general in the regular army (1865), and after the war was a staff colonel and assistant adjutant general at Washington, where he invented some improved rifles and revolvers that were accepted by the Ordnance Department. He published a *Manual of the Bayonet* (1861) and other works on military topics.

KELTS. See CELTIC PEOPLES.

KELUNG, kē'lung', or KILUNG. The chief seaport of Formosa (q.v.), in lat. 25° 9' N., long 121° 47' E. (Map: Japan, D 8). It lies at the head of a deep bay, which is guarded by Kelung Island, which lies about 2 miles off shore. The scenery behind the town is very striking. The harbor has been dredged and equipped to permit the accommodation of large vessels. The principal export is coal. There are a large number of coal mines in the immediate neighborhood. Gold and sulphur are also mined near by. Kelung is connected by rail with Dai-hoku (in Chinese, Tai-pek) and Kagi, the capital, and with Shin-chiku, 63 miles farther south, and is connected with Tamsui via Dai-hoku. Pop., 1908, 17,100.

KELVIN, WILLIAM THOMSON, first BARON (1824-1907). A Scottish British physicist. He was born at Belfast, June 26, 1824, the son of James Thomson, who was later professor of mathematics at Glasgow. He graduated in 1845 from St. Peter's College, Cambridge, and shortly afterward was elected fellow. He became professor of natural philosophy in the University of Glasgow in 1846, in which position he continued until 1899. While an undergraduate he published a paper *On the Uniform Motion of Heat in Homogeneous Solid Bodies and its Connection with the Mathematical Theory of Electricity*, which was favorably received by scientists. He was for some time editor of the *Cambridge Mathematical Journal* and was the

first editor of the *Cambridge and Dublin Mathematical Journal* which succeeded it, some of his most brilliant discoveries having appeared in these journals during a period of 65 years. He also contributed to the *Comptes Rendus*, the *Transactions* and *Proceedings* of the Royal Societies of London and Edinburgh, and various other journals. In the mathematical theories of elasticity, vortex motion, heat, electricity, and magnetism, his discoveries were notable. Lord Kelvin, who was the electrical engineer for the Atlantic cables of 1857-58 and 1865-66, made many very valuable improvements in signaling apparatus—he invented the mirror galvanometer used for cable signaling, devised the siphon recorder still in use for receiving the signals, and from his study of the properties of the cable made an observation (borne out in more than a half century of practice) that a limit to the speed of operation would early be reached owing to the effect of the static capacity.

Lord Kelvin acted as engineer for several other cable companies; invented many pieces of electrical apparatus and methods for measurement, and developed an improved form of mariners' compass free from the magnetic action of the iron of the ship, and a deep-sea sounding apparatus, both of which are in widespread use. Lord Kelvin's work in thermodynamics was also of the greatest value, for it was he who first appreciated the importance of the doctrine of the conservation of energy as enunciated by Joule and who developed Carnot's work on heat so that it would harmonize with the new theory then being generally accepted; a paper *On an Absolute Thermometric Scale* contains much that is now considered fundamental in thermodynamics. Even as early as 1842 Lord Kelvin had published a paper containing the germ of his theories on the age of the earth, and this subject he constantly discussed and elaborated. He was also greatly interested in the problems resulting from the discovery of radium and the theory of electrons. His many papers, contributed to scientific journals, were collected in book form as follows: *Reprint of Papers on Electricity and Magnetism* (1872); *Mathematical and Physical Papers* (6 vols., 1882-1911); *Popular Lectures and Addresses* (3 vols., 1891-94). With Prof. P. G. Tait he collaborated on *Elements of Natural Philosophy* (1873), later called *A Treatise on Natural Philosophy*.

Lord Kelvin attended the meeting of the British Association held in Montreal in 1884, and afterward he visited Baltimore and delivered at Johns Hopkins University a course of lectures, published in 1904 as *Baltimore Lectures on Molecular Dynamics and the Wave Theory of Light*. In 1897, while in America for the Toronto meeting of the British Association, he visited several leading universities of the United States, and in 1902 he came again. For his work in connection with the Atlantic cable he was knighted in 1866, and in 1892 he was raised to the peerage. Honors from governments, scientific societies, and universities came to him from all over the world. He was the first to be awarded the Order of Merit (1902); he held the Grand Cross of the Victorian Order and the Prussian Order "Pour le Mérite," and was a Grand Officer of the Legion of Honor; and served as president of the British Association (1871), of the Royal Society, London (1890-95), and of the Royal Society, Edin-

burgh (four times). In 1896 there was a notable celebration at Glasgow of his jubilee as professor. Retiring three years later, he maintained his connection with the university as a research student and in 1904 was made chancellor. Lord Kelvin represented the highest type of physicist, since he combined powers of mathematical reasoning with the inventive faculty and manipulative skill of a great experimentalist. His interest and unflagging activity continued to the time of his death, which occurred Dec. 17, 1907, at his residence, Netherhall, near Largs, Scotland. Consult Andrew Gray, *Lord Kelvin* (New York, 1908), Elizabeth King (Lord Kelvin's sister), *Lord Kelvin's Early Home* (ib., 1909), S. P. Thompson, *Life of William Thomson, Baron Kelvin of Largs* (ib., 1910).

KEMBLE, kēm'b'l, ADELAIDE (1814-79). An English opera singer and author. Of a famous dramatic family, being a daughter of Charles Kemble (q.v.), niece of Mrs. Siddons, and the sister of Fanny Kemble, she devoted herself to musical studies and began public life with great promise as an operatic singer. Her English debut was at Covent Garden in *Norma* (1841), after she had already appeared in several Italian cities with ever-increasing celebrity. In 1843, after a short though brilliant professional career, she married Mr. Edward Sartoris, an Italian gentleman of fortune, and retired to his estates in Italy. She published *A Week in a French Country House* (1867) and other literary work. In May, 1874, her son, Algernon Charles Sartoris, married the daughter of President Grant. Consult Fanny Kemble (Mrs. Butler), *Record of a Girlhood* (London, 1878) and *Records of Later Life* (ib., 1882).

KEMBLE, CHARLES (1775-1854). An English actor, the youngest son of Roger Kemble (q.v.). Born at Brecon, in South Wales, Nov. 25, 1775, he received his education, like his brother, John Philip (q.v.), at Douai, and like him also, on his return to England, devoted himself to the stage. In April, 1794, he made his first appearance at Drury Lane as Malcolm, his brother playing Macbeth. In the course of his career he played a great variety of characters with steadily growing success, being in his earlier parts overshadowed by his elder brother's reputation. Among his best rôles were Charles Surface, Dorincourt in *The Belle's Stratagem*, Mercutio, Laertes, Macduff, and Mirabel. Macready's epigrammatic characterization of him is well known—"A first-rate actor in second-rate parts." He married in 1806 the actress Marie Thérèse De Camp. In 1832-34 he visited America with his daughter Fanny and made a great sensation. He retired from the stage in April, 1840, and died Nov. 12, 1854.

Bibliography. Oxberry, *Dramatic Biography* (London, 1826); Fitzgerald, *The Kembles* (ib., 1871); Fanny Kemble, *Record of a Girlhood* (ib., 1878); Lane (ed.), *Charles Kemble's Shakespeare Readings* (2d ed., ib., 1879); Matthews, *Actors and Actresses of Great Britain and the United States*, vol. 11 (New York, 1886); Doran, *Annals of the Stage*, edited by Lowe (London, 1888).

KEMBLE, EDWARD WINDSOR (1861-). An American illustrator. He was born in Sacramento, Cal., and studied a short time at the Art Students' League, New York, but was mainly self taught. He began early to draw for the *Daily Graphic*, then for the *Century*,

Life, and other magazines, and rapidly made a name with his caricatures, sketches of old New England life and negro subjects. The latter were his specialty for many years. Volumes treating the various activities of "Kemble's Coons" appeared in 1898, 1899, and 1900, and among other books of drawings he published *Raccoon, Virginia Creeper, Bully-Goat and Other Comicalities*. He also illustrated the books *Uncle Tom's Cabin, Huckleberry Finn, Pudd'nhead Wilson, The Knickerbocker History of New York*. A clever delineator of character types, Kemble shows special aptitude of the negro, whom he portrays with generation or caricature.

KEMBLE, ELIZABETH (1761-1836). An English actress, daughter of Roger Kemble (q.v.). She made her first appearance upon the stage in 1783 at Drury Lane Theatre, taking the part of Portia in *The Merchant of Venice*. She was married in 1785 to Mr Whitlock, an actor, with whom in 1792 she came to the United States on a professional tour. Mrs. Whitlock attained a high degree of public favor and had the honor of appearing before President Washington at Philadelphia, but her reputation was overshadowed by her more famous sister, Mrs. Siddons. In 1807, after her return to England, she retired from the stage.

KEMBLE, FRANCES ANNE (MRS. FANNY KEMBLE) (1809-93). An English actress and author, born in London, Nov. 27, 1809, daughter of Charles Kemble. Her daughter Sarah (Butler) Wister (Mrs. Owen Wister), was the mother of Owen Wister (q.v.). She was educated largely in France and made her first appearance on the stage Oct. 5, 1829, in the character of Juliet, reviving the fortunes of the Covent Garden Theatre under her father's management. This was followed by a series of brilliant successes in Portia, Beatrice, Lady Teazle, and other parts, till she was compared with Mrs. Siddons, her famous aunt. Her crowning triumph was as Julia in Sheridan Knowles's masterpiece, *The Hunchback*, written expressly for her. In 1832 she came to New York with her father, making her American debut as Bianca in *Fazio* and exciting great enthusiasm. Two years later she married Pierce Butler, of Philadelphia, and retired, living in that city and on the Butler estate in Georgia. In 1847 she had left her husband and reappeared on the English stage. She returned in 1849 to the United States and, having been divorced from Mr. Butler, resumed her maiden name and went to reside in Lenox, Mass. Later she gave public readings from Shakespeare and other dramatic authors in the principal cities of the United States and Great Britain, an occupation she much preferred to regular acting. She had a magnificent presence, her voice was flexible, ample, and harmonious, and her self-possession remarkable. During the War of the Rebellion she resided in England and contributed valuable articles to the *London Times* on the evils of slavery. Among her other works are: *Francis the First: An Historical Drama* (1832); *Journal of Frances Anne Butler* (1835); *Poems* (1844). *A Year of Consolation* (1847), descriptive of a tour to Italy; *Journal of a Residence on a Georgian Plantation in 1838-39* (1863); *Record of a Girlhood* (1878-79); *Records of Later Life* (1882); *Notes upon Some of Shakespeare's Plays* (1882); *Poems* (1883); *Far Away and Long Ago* (1889), a story; *Further Records* (1891). Her death oc-

curred in London, Jan. 15, 1893. Consult, besides the autobiographical works mentioned above, Parton, in *Eminent Women of the Age* (Hartford, Conn., 1869), and *The Letters of Edward Fitzgerald to Fanny Kemble* (London, 1895).

KEMBLE, GEORGE STEPHEN (1758-1822). An English actor, the second son of Roger Kemble (q.v.), born at Kington, Herefordshire. He was intended, it is said, for the medical profession, but showed the family preference for the stage, and, after practicing in the country, was able by means of the reputation of his sister, Mrs. Siddons, to secure an engagement at Covent Garden (1784), where he appeared as Othello, his wife, Elizabeth Satchell, playing Desdemona. He was engaged also at the Haymarket and afterward managed theatres in Edinburgh, Glasgow, and several smaller cities. His extreme stoutness, in the latter part of his life, enabled him to play his favorite rôle of Falstaff without artificial padding. Consult Oxberry, *Dramatic Biography* (London, 1826).

KEMBLE, GOUVERNEUR (1786-1875). An American manufacturer, born in New York City. He graduated at Columbia in 1803, traveled extensively in Europe during the Napoleonic wars, was United States Consul at Cadiz under President Monroe, and was engaged in procuring supplies for the American squadron at the time of the war with Algiers in 1815. In 1817 he established the West Point foundry at Cold Spring, N. Y., for the manufacture of cannon. He was a Democratic member of Congress from 1837 to 1841 and was a member of the State Constitutional Convention of 1846. He was an intimate friend of Washington Irving, and his house at Newark, N. J., was the Cockloft Hall of *Salmagundi*.

KEMBLE, JOHN MITCHELL (1807-57). An English historian and philologist, the son of Charles Kemble the actor, and the brother of Fanny Kemble. He was born in London, England, received his preliminary education at Clapham and at the Bury St. Edmunds Grammar School, and in 1826 entered Trinity College, Cambridge, where he became an intimate friend of Tennyson, Archbishop Trench, and William B. Donne. He was brilliant but erratic in his studies, and before he had completed his course entered the Inner Temple for the study of Anglo-Saxon law, in which he had become interested. He failed in 1829 to satisfy the examiners of his proficiency in philosophy, and his degree was "deferred"; but after a period of study in Germany, where he began his researches in Germanic philology, he was granted his B.A. in 1830 and proceeded to his M.A. in 1833. About this time he became associated with Trench and others in a plan to aid Torrijos in his revolt against Ferdinand VII of Spain and sailed to Gibraltar; but the scheme was abandoned, and he returned to Germany to continue his philological studies with Jacob Grimm at Göttingen and at other universities. An edition of *Beowulf*, published in 1833, gave him high rank as an Anglo-Saxon scholar. A course of independent lectures on Anglo-Saxon language and literature given at Cambridge in 1834 increased his reputation. From 1835 to 1844 he was editor of the *British and Foreign Review*. In February, 1840, he was appointed licenser of stage plays in succession to his father, Charles Kemble, and retained the office until his death. In 1839-40 he published his valuable collection of charters of the Anglo-

Saxon period under the title of *Codex Diplomaticus*, and in 1849 appeared his *The Saxons in England*—a work which was never completed, but which remained, up to the time of the publication of Bishop Stubbs's *Constitutional History*, the chief authority for the study of the history of England before the Norman Conquest.

KEMBLE, JOHN PHILIP (1757-1823). An eminent English actor, the eldest son and second child of Roger Kemble (q.v.). Born at Prescott in Lancashire, Feb. 1, 1757, he was educated chiefly at a Roman Catholic seminary in Staffordshire and at the English College of Douai in France. Though intended for the Church, on his return to England he adopted the stage as his profession, making his first appearance at Wolverhampton in 1776. On Sept. 30, 1783, he first appeared at Drury Lane in *Hamlet*—always a favorite character of his—and in 1788 he succeeded to the management of that theatre, where his elder sister, Mrs Siddons (q.v.), was for some years the leading actress. After the destruction of the building by fire Kemble raised a new one, which was opened in 1809. In June, 1817, he retired from the stage, and a few days thereafter a public dinner was given him, for which Thomas Campbell composed his *Valedictory Stanzas to J. P. Kemble, Esq.* He finally took up his residence in Switzerland, where he died on Feb. 26, 1823. His wife, Priscilla Kemble, an actress of ability, whom he had married in 1787, survived him. Kemble was a great tragedian and a man of character. He loved to personate, with his commanding figure and sonorous voice, the loftier heroes of the drama—kings, prelates, heroes. He was especially successful in Brutus, Wolsey, Macbeth, and Coriolanus. Consult Boaden, *Memoirs of the Life of John Philip Kemble, Esq.* (London, 1825); FitzGerald, *The Kembles* (ib., 1871); Lewes, *On Actors and the Art of Acting* (ib., 1875); Baker, *English Actors from Shakespeare to Macready* (New York, 1879); Doran, *Annals of the Stage*, edited by Lowe (London, 1888).

KEMBLE, MARIE THÉRÈSE DE CAMP (1774-1838). An actress, born at Vienna, Austria, of a theatrical family, brought to England when a child, and in 1806 married to Charles Kemble (q.v.). She continued on the stage with her husband, but retired in 1819, except for an appearance with her daughter Fanny in 1829. She was the author of several dramatic pieces, among them *The Day after the Wedding*, an interlude.

KEMBLE, ROGER (1721-1802). The founder of the English family of actors bearing his name, of which his daughter Sarah (see SIDDONS, SARAH) and his son John Philip (see KEMBLE, JOHN PHILIP) are the most celebrated. He was the head of an itinerant company of players and an actor of some ability. He married in 1753 Sarah Wood, an actress, by whom he had 12 children. Consult FitzGerald, *The Kembles: An Account of the Kemble Family* (London, 1871).

KEMBLE PLAYS. The name given to a valuable collection of English dramas made by the tragedian John Philip Kemble (q.v.) and now in the library of Devonshire House, London. It includes the first editions of Shakespeare's plays.

KEMÉNY, kē'mā-ny', ZSIGMOND, BARON (1816-75). An Hungarian novelist and political writer, born in Nagyán-kapud, Transylvania,

and educated at the Nagy-Enyed College. His first and most important historical novel, *Gyulai Pal*, was published in five volumes in 1846. Two years afterward he was in Budapest, assistant editor of the *Pesti Hírlap*, and a deputy to the National Assembly on the side of Kossuth. In 1851 he became editor of the influential political journal, the *Pesti Napló*. His historical novels, *Férj és no* (1852), *Szív orvényci* (1854), *Az özvegy és leánya* (1856), and *Zord ido* (1857), are masterpieces of psychological interpretation. Kemény's essays were collected in two volumes under the title *Studies* (1870).

KEMEYS, kēm'ēs, EDWARD (1843-1907). An American wild-animal sculptor, born at Savannah, Ga., and educated in the New York public schools. During the Civil War he served in the Union army, becoming captain of artillery. Afterward he studied civil engineering. He had always been especially interested in wild animals, and a long stay in the backwoods of Illinois had made him acquainted with many of them. While a member of an engineering party engaged in laying out Central Park, New York, the sight of an artist modeling a wolf's head determined him to become a sculptor. He worked with great enthusiasm, spending much of his time in the West studying wild animals and Indians. In 1877 he went abroad, familiarized himself especially with the work of Barye, in Paris, and became a friend of Josef Wolf, the German animal painter, whose influence upon him is evident. His "Bison and Wolves" was favorably received at the Salon of 1878. Returning to New York, he produced in the intervals between his hunting trips his "Still Hunt," Central Park, New York; "Wolves," Fairmount Park, Philadelphia; "Panthers and Deer," "Raven and Coyote." In 1892 he modeled a number of large groups for the Columbian Exposition at Chicago, which led to his commission for the large bronze lions at the entrance of the Chicago Art Institute and for the fountain, "The Prayer for Rain," in Champaign, Ill. After eight years' residence in Chicago he moved to Arizona, where he did some of his best work in the form of small bronzes (now in the Chicago Art Institute and the National Gallery at Washington). The last five years of his life Kemeys passed in Washington, D. C., where he modeled the hoyden bears that flanked the entrance of the Missouri State Building at the St. Louis Exposition. His creations are insistent with personality and with the mystery of animal life, and while his technique is powerful and harmonious, the method is always lost in the result. Consult Leila Mechlin, in the *International Studio* (New York, July, 1905).

KEMMERER, EDWIN WALTER (1875-). An American economist, born at Scranton, Pa. He graduated from Wesleyan University (Conn.) in 1899 and from Cornell University (Ph.D.) in 1903. He was instructor in economics at Purdue University in 1901-03 and served as financial adviser to the United States Philippine Commission in 1903, as chief of the division of currency of the Philippine Islands in 1904-06, and as special commissioner of the Philippine government to Egypt in 1906. He then returned to Cornell to be assistant professor of political economy in 1906-09 and professor of economics and finance from 1909 to 1912, when he accepted a corresponding chair at Princeton. He was managing editor of the *Economic Bulletin* in 1907-10 and associate editor of the *American*

Economic Review after 1911. Besides his official reports, he is author of *Money and Credit Instruments in their Relation to General Prices* (1907; rev. ed., 1909).

KEMNITZ, kēm'nīts. See CHEMNITZ.

KEMP, JAMES FURMAN (1859-). An American geologist, born in New York City. He graduated from Amherst College in 1881 and from the Columbia School of Mines (E.M.) in 1884, and at Columbia became adjunct professor of geology in 1891 and professor in 1892. In addition he served as geologist of the United States and New York State geological surveys (making special investigations of the geology of the Adirondack Mountains), and as manager and scientific director of the New York Botanical Gardens (after 1898), and he lectured on geology at Johns Hopkins, Massachusetts Institute of Technology, and McGill. Amherst gave him an honorary Sc.D. in 1906 and McGill an LL.D. in 1913. He was twice president of the New York Academy of Sciences and in the year 1912-13 president of the American Institute of Mining Engineers. His publications include *Ore Deposits of the United States and Canada* (1893; 3d ed., rewritten, 1900) and *Handbook of Rocks* (1896; 5th ed., 1911), besides numerous articles, reports, and monographs.

KEMPE, kēmp, ANN ELIZA. See BRAY, ANN ELIZA KEMPE

KEMPE, HARRY ROBERT (1852-). An English electrical engineer. He was educated at Westminster School and at King's College, London, and then for three years was assistant to Sir Samuel Canning. He worked under other pioneers of the British telegraph service, especially Sir Charles Wheatstone and Sir W. H. Preece. He was electrician to the Postal Telegraph Department and, upon the Post Office taking over the telephone service in 1913, became electrician to that office. He wrote on telegraphy, telephony, and pneumatic dispatch and published a *Handbook of Electrical Testing* (1876; 7th ed., 1908), *The Electrical Engineer's Pocket Book* (1890), and *The Engineer's Year Book* (1894 et seq.).

KEMPELEN, kēm'pē-lēn, WOLFGANG VON (1734-1804). An Austrian mechanic and inventor. He was born at Pressburg in Hungary and obtained celebrity as the deviser of an automaton chess player with which he traveled over a good part of the world. The chess player was destroyed in 1854 by fire in Philadelphia. It was alleged that a human being was concealed in the figure, and a lively controversy arose over the question. Kempelen also produced a complicated figure which articulated certain words distinctly, resembling the voice of a child of three to four years. To explain its construction he published the *Mechanismus der menschlichen Sprache* (1791).

KEMPENEER, kēm'pe-nār, PETER DE (1503-80), called in Spain, PEDRO CAMPAÑA, in his paintings, PETRUS CAMPANIENSIS, or PETRUS KAMPANIA. A Flemish religious painter and tapestry designer. He was born in Brussels, but at the age of 27 went to Italy, where he visited Venice under the patronage of Cardinal Grimani, for whom he painted several pictures. At Bologna he helped paint the decorations of the triumphal arch erected for the reception of the Emperor Charles V. After 10 years' study and work in Italy he went to Spain and labored for 25 years in Seville. His masterpiece is the "Descent from the Cross" (c.1548), now in the

cathedral, where are also his "Purification" and "Resurrection," all good both in design and color. Returning to Brussels, he became the Duke of Alba's chief engineer and on May 27, 1563, was appointed by the city successor to Michel Coxie as art director and maker of cartoons for the Brussels tapestry works at a salary of 50 gulden. Although not without merit as a painter, Kempeneer is a strong mannerist, imitating now Michelangelo, now Raphael, now the Spanish primitives, and he possesses little originality. His "Christ Preaching in the Temple" is in the National Gallery, London.

KEMPER, JAMES LAWSON (1823-95). An American soldier in the Confederate service, born in Madison Co., Va. He graduated at Washington College in 1842 and served through the Mexican War. After his return he entered politics and was a member of the State Legislature for 10 years, during two of which he was Speaker. After the secession of his State he entered the Confederate service as colonel of the Seventh Virginia, which he commanded at the first battle of Bull Run. The next spring he was commissioned brigadier general and was engaged in the battles of Fair Oaks (May 31-June 1, 1862), Gaines's Mill (June 27-28, 1862), South Mountain (Sept. 14, 1862), Antietam (Sept. 16-17, 1862), Fredericksburg (Dec. 13, 1862), and Gettysburg (July 1-3, 1863), where his brigade formed part of Pickett's division. During the charge he was seriously wounded and thereafter was not in active service. On March 1, 1864, he was commissioned major general. After the war he became a planter in Madison County, and in 1874-78 he was Governor of Virginia.

KEMPER, REUBEN (1770-1826). An American soldier and adventurer, born in Fauquier Co., Va. He received a fair education from his father, a Baptist clergyman, and in 1800, with the rest of the family, removed to Ohio. Subsequently, with one of his brothers, he removed to Mississippi Territory, where he became a surveyor. There for several years he was one of the most active of the conspirators who made successive attempts to overthrow the Spanish government in west Florida. In 1808 he led an unsuccessful expedition against Baton Rouge and in 1810 against Mobile. Two years later he raised a force of 600 Americans to assist Gutierrez and Toledo in the revolt in Mexico, but after a short service in Texas, where they met with some success, the force disbanded and returned to the United States. In 1815 Kemper distinguished himself at the battle of New Orleans, where he commanded a company of volunteers. The remainder of his life he spent quietly as a planter in Mississippi.

KEMPERHAUSEN, kēm'pēr-hou'zen. The nom de plume of Robert Pearce Gillies in contributions to *Blackwood's*

KEMPF, LOUIS (1841-). An American naval officer, born in Belleville, Ill. He entered the Naval Academy in 1857 and in the Civil War served in the blockade of Charleston, in the battle of Port Royal (1861), in the expedition against Port Royal Ferry, in the bombardment of Sewell's Point (1862), and along the coast throughout the war. Promoted to be captain in 1891, he commanded the receiving ship *Independence* from 1896 until 1899, when he received the grade of rear admiral and became commandant of the Mare Island Navy Yard. While squadron commander of the Asiatic fleet

(1900-02), he declined to join foreign admirals in the bombardment of the Taku forts (during the Boxer troubles, 1900), but helped to protect Americans. In 1902-03 he was commandant of the Pacific Naval District and in the latter year was retired, but in 1904-05 he served on special duty.

KEMPIS, THOMAS À (c.1380-1471). A mediæval ecclesiastic, now almost universally recognized as the author of the *Imitation of Christ* (q.v.). His family name was Hemerken, sometimes Latinized into Malleolus (little hammer), though he is usually known by the title given above, from his birthplace, Kempen, in the Lower Rhine District. He was educated at Deventer, partly by the Brothers of the Common Life (q.v.). In 1399 he entered the Augustinian convent at Mount St. Agnes, near Zwolle, and took the vows in 1406, being ordained priest in 1413. In 1425 he became subprior, and there is a notice of his reelection in 1448. He wrote sermons, books for the young, biographies, and a history of his monastery, besides the *Imitation of Christ*. Nearly all his uneventful life was passed in this secluded convent, where he died in 1471. His remains, after two or three removals, were in 1897 placed in St Michael's Church at Zwolle, beneath a splendid monument.

Bibliography. The first edition of his works appeared in Utrecht in 1473, the first English translation in London in 1502. One of the best of the early editions was that by H. Sommalus, published in Antwerp in 1607; the latest edition is by M. J. Pohl (8 vols., New York, 1904-10). A good recent English translation is by Wilfred Raynall, from the Latin edition of 1556 by Richard Whytford (New York, 1909). Consult also: Kettlewell, *Thomas à Kempis and the Brothers of the Common Life* (2 vols., London, 1882); Cruise, *Thomas à Kempis* (ib., 1887); Scully, *The Life of the Venerable Thomas à Kempis* (New York, 1901); Montmorency, *Thomas à Kempis, his Age and his Book* (London, 1906); J. Williams, *Thomas of Kempen* (ib., 1909); R. Storr, *Concordance to the Latin Original of De Imitatione Christi* (Oxford, 1910).

KEMP LAND. See ENDERBY LAND.

KEMPT, SIR JAMES (1764-1854). A British soldier. He joined the army in 1783. In 1799 he took part in the Duke of York's expedition to Holland and in 1800, when Sir Ralph Abercromby sailed on his expedition to the Mediterranean and to Egypt, he was the latter's aide-camp and military secretary. After Sir Ralph Abercromby's death Kempt served during the remainder of the campaign, which ended with the siege of Alexandria. After a few years of home service he was attached to the expedition to Naples, which sailed in 1805 under Sir James Craig, and he commanded a brigade in Calabria. His most important services were in the Peninsular War, under the Duke of Wellington, to whom he was highly recommended. He was given command of a brigade in 1811 and fought at Badajoz, Vitoria, Orthez, Toulouse, and later at Quatre-Bras and Waterloo. For his services at Waterloo he was made G.C.B. in July, 1815. During 1820-28 he was Governor of Nova Scotia and in 1828-30 Governor-General of Canada. Kempt, after his return home, was made Privy Councillor.

KEMPTEN, kēmp'ten. A city of Bavaria in the District of Swabia, situated on the river Iller, 81 miles by rail southwest of Munich

(Map: Bavaria, D 5). The city consists of the old town by the river and the new or upper town, formerly the residence of the abbots of Kempen. The two were united in 1803. It contains a seventh-century abbey church, with a cupola and a fine altar, an old town hall, a museum, and a palace now used as barracks. Kempen is a place of considerable trade and carries on manufactures of cotton, machinery, woodenware, hosiery, thread, powder, mathematical instruments, paper, matches, and cheese. Pop., 1900, 18,864; 1910, 21,001. The town was made a free city in the fourteenth century. The new town was the residence of the abbots of Kempen, who ruled over a large domain. In 1803 the abbey and its territory were annexed to Bavaria, which at the same time absorbed the free city of Kempen.

KEMPTVILLE. A railway junction of Grenville Co., Ontario, Canada, 31 miles south of Ottawa on a tributary of the Rideau River and on the Canadian Pacific Railroad (Map: Ontario, J 3). It possesses a public library. Its industrial establishments include planing mills, a foundry, electric-power plant, and concrete-pipe works. Pop., 1901, 1523, 1911, 1192.

KEN, kân. A river of India. See CANE.

KEN, kên, or KENN, THOMAS (1637-1711). A prelate of the Church of England. He was born at Berkhamstead, Hertfordshire, July, 1637, educated at Winchester and New College, Oxford, became domestic chaplain to Bishop Morley in 1665, rector of Brightstone, Isle of Wight, in 1667, and prebend at Winchester in 1669. In 1675 he visited Rome with his nephew, Isaac Walton, and in 1679, on his return, after five years' absence, accompanied Mary, Princess of Orange, as her chaplain, to Holland. In 1680 he became chaplain to Charles II, whom he attended in his last illness. Shortly before his death the King nominated Ken to the bishopric of Bath and Wells (1684). He was not fully invested with the episcopal functions till after the accession of James II. For refusing to obey the order of the King to read the declaration of indulgence, he was sent to the Tower, with six other bishops (1688). Nevertheless, when the Prince of Orange ascended the throne as William III, he refused to transfer his allegiance to the new King, and James still his lawful sovereign. For this he was deprived of his bishopric (April, 1691). He died at Longleat, March 19, 1711. Bishop Ken was a man of solid and extensive learning, pure ideals, refined tastes, and wide sympathies, and in office displayed great zeal and self-devotion. He was the author of several volumes of sermons, theological treatises, and of many devotional writings. His "Morning Hymn" ("Awake, my soul, and with the sun") and "Evening Hymn" ("Glory to Thee, my God, this night") are surpassed by none in the language. The familiar doxology, "Praise God, from Whom all blessings flow," is his composition. His poetry was published in 1721, his prose in 1858. Consult: J. L. Anderson, *Life of Thomas Ken* (London, 1854); G. L. Duyckinck, *Life of Thomas Ken* (New York, 1859); E. H. Plumptre, *Life and Letters of Bishop Ken* (2 vols., London, 1890); F. A. Clarke, *Thomas Ken* (New York, 1896).

KENA. See KENEH.

KENAI, kē-ni'. A peninsula projecting from the south coast of Alaska, between Cook Inlet and Prince William Sound (Map: Alaska, J 6). It is 160 miles long, with a maximum width of

110 miles, and is connected with the mainland by an isthmus 20 miles wide. Its coasts are much indented, and there are several good harbors. The interior is mountainous and mostly barren. Gold and copper have been found, but neither metal has been as yet productively exploited. There is much coal, but attempts to develop the low-grade fields of Kachemack Bay were commercially unsuccessful. The development of the peninsula in late years has been associated with the efforts to connect Seward, a town on Resurrection Bay, an open winter seaport, by rail with Fairbanks (qv). This railroad, the Alaska Northern, was constructed and operated (72 miles) to the head of Turnagain Arm, Cook Inlet. The United States Alaskan Railway Commission has under consideration the building of a government railway with which the Alaska Northern may possibly connect. Settlements of importance on the peninsula, with population and schools in 1910, are as follows. Seward, 534, school; Kenai, 250, school; and Seldovia, 173, school.

KENDAL, or **KIRKBY KENDAL**. A municipal borough and market town in Westmoreland, England, on the Kent, 22 miles south-southwest of Appleby (Map: England, D 2). It is a straggling town, with an ancient Gothic church and a ruined castle. The name "kendals" is applied to the woolen cloths produced here, which, with carpets, worsted stockings, cottons, linsey-woolseys, doeskins, tweeds, and coat linings, are the staple manufactures of the town. Its other products include combs, cards, shoes, machinery, leather, and paper. Limestone is quarried near by, and gunpowder is made. The weekly market is the chief one for corn and provisions in the county. The town owns its water, gas, free library, natural-history museum, recreation grounds, markets, baths, and slaughterhouses. John Kempe, of Flanders, cloth weaver, with other compatriots, settled in Kendal under the protection of Edward III and inaugurated its industries. The town was incorporated in 1576. Pop., 1901, 14,183, 1911, 14,033.

KENDAL, Mrs. (1849-). The stage name of Mrs. Margaret ("Madge") Robertson Grimston, a well-known English actress. She was born at Great Grimsby, March 15, 1849, of a theatrical family, being the sister of the dramatist T. W. Robertson, and appeared as a child in several rôles, but made her début in 1865 as Ophelia at the Haymarket, London. She was married in 1869 to W. H. Grimston (Mr. Kendal), and the two thereafter acted together. In 1875, at the Opéra Comique, she made a great success as Miss Hardcastle. After a few years at the Court and Prince of Wales's theatres, in the course of which she played Dora in the English version of Sardou's *Diplomacy*, one of her greatest rôles, she went with her husband to St. James's Theatre, where among her noted parts were those of Kate Verity in *The Squire* (1881), Claire de Beaupré in *The Ironmaster* (1884), Rosalind in *As You Like It* (1885), Antoinette Rigaud (1886), and Lady Clancarty (1887). Mr. and Mrs. Kendal made their American début in *A Scrap of Paper* in 1889, and the success of their first tour in the United States was repeated in several successive seasons. In 1893 they produced *The Second Mrs. Tanqueray* in America. They continued to appear in popular plays without interruption till 1908, when they both retired, though Mrs. Kendal reappeared at the gala performance at

His Majesty's Theatre in 1911, playing Mistress Ford. Consult: Archer, "Mr. and Mrs. Kendal," in Matthews and Hutton, *Actors and Actresses of Great Britain and the United States* (New York, 1886); Scott, *The Drama of Yesterday and To-Day* (London, 1899); T. E. Pemberton, *The Kendals: A Biography* (New York, 1900).

KENDAL, WILLIAM HUNTER (real name WILLIAM HUNTER GRIMSTON) (1843-). An English actor manager. He was born in London and made his début in Glasgow when about 18 years old. Some four years later he appeared in London, at the Haymarket, and in 1869 he married Madge Robertson (see KENDAL, Mrs.), with whose career his own was thereafter closely associated. He and John Hare as partners managed the St. James's Theatre from 1879 to 1888. In 1889-95 he toured successfully, with Mrs. Kendal, in the United States and Canada, and in 1908 both retired.

KENDALL, Amos (1789-1869). An American politician, born at Dunstable, Mass. He graduated at Dartmouth College in 1811; taught school and studied law at Groton, Mass.; and in 1814 removed to Kentucky, where he became a tutor in the family of Henry Clay at Ashland. In October of 1814 he was admitted to the Kentucky bar, in the following year became editor of a paper at Georgetown, Ky, and in September, 1816, editor of the Frankfort *Argus*, which was later one of the principal Jackson organs in the State. He was one of Jackson's chief advisers, and when the latter became President, in 1829, he took Kendall with him to Washington, appointing him Fourth Auditor of the Treasury. At Washington Kendall came to occupy a unique position. The foremost figure in Jackson's famous "Kitchen Cabinet" (qv.), "he proved more and more," says W. G. Sumner, in his *Life of Jackson*, "the masterful spirit of the administration." Jackson made him Postmaster-General in 1835, and he continued in that office during a greater part of Van Buren's term, administering the office with skill and integrity and introducing many improvements in the service, of which the money-order system (1838) was the most important. After his retirement from office he edited newspapers in Washington for several years and in 1845 became interested with Samuel F. B. Morse in the development of telegraph patents, a connection which continued until 1860 and made Kendall's fortune. Towards the end of his life he gave freely to various educational and charitable institutions, and founded at Washington, in 1857, the Columbia Institution for the Deaf and Dumb. Kendall violently opposed secession and supported Lincoln throughout the war, although still calling himself a "Jacksonian Democrat." He published a *Life of Jackson* (1843), and his *Autobiography* (ed. by William Stickney) was published at Boston in 1872.

KENDALL, GEORGE WILKINS (1809-67). An American journalist, born in Amherst (now Mount Vernon), Hillsboro Co., N. H. In 1837 he was one of the founders of the New Orleans *Picayune*. Seeking health and adventure, he joined the unfortunate Texan Santa Fe expedition in 1841, but was taken prisoner by the Mexicans and held for seven months. He was an eyewitness of much of the Mexican War, accompanying the American armies as correspondent for his paper. He published *Narrative of the Texan Santa Fé Expedition* (1844) and *War between United States and Mexico* (1851).

KENDALL, HENRY CLARENCE. See AUSTRALIAN LITERATURE.

KENDALL, WILLIAM MITCHELL. (1856-). An American architect, born at Jamaica Plain, Mass. He graduated from Harvard University in 1876, studied architecture at Massachusetts Institute of Technology for two years, and concluded his studies in France and Italy. He became a member of the firm of McKim, Mead, and White, New York City, and in this connection collaborated on the designs of various important buildings, among those in New York being the new Post Office, the Municipal Building, and, for Columbia University, the Avery Library, the School of Journalism Building, and the president's house. He also helped plan various private dwellings in New York and Chicago. In 1914 he was elected a member of the National Institute of Arts and Letters.

KENDALL, SERGEANT (WILLIAM SERGEANT) (1869-). An American figure painter, born at Spuyten Duyvil, N. Y. He studied at the Art Students' League in New York, with Eakins in Philadelphia, and at the Ecole des Beaux-Arts and with Merson in Paris. He became an academician in 1905 and won important medals at many exhibitions. In 1913 he was appointed director of the Yale Art School at New Haven. Among his best-known works are: "Beatrice," in the Pennsylvania Academy, Philadelphia, "An Interlude," in the National Gallery, Washington; "Narcissa," in the Corcoran Gallery, Washington; "The Seer" and "Psyche," in the Metropolitan Museum, New York. His portraits of children are especially admirable; and his color and technique are excellent, with much individuality.

KENDALLVILLE. A city in Noble Co., Ind., 27 miles north of Fort Wayne, on the Lake Shore and Michigan Southern and the Grand Rapids and Indiana railroads (Map: Indiana, G 2). It has a public library. There are extensive industrial establishments, including refrigerator works, flour and lumber mills, iron-works, and manufactories of stock tank heaters, pumps, clothes racks, mittens and gloves, caskets, novelty cases, cement tile and brick molds, etc. The city carries on a large grain trade and is situated in the centre of the Indiana onion belt. The water works, and the plant are owned by the . . . 1900, 3354, 1910, 4981.

KENDRICK, ASAHEL CLARK (1809-95). An American Greek and New Testament scholar. He was born at Poultney, Vt., graduated from Hamilton College in 1831, and became professor of classics at Madison (now Colgate) University. In 1850, with other professors, he left Madison and became first professor of Greek in a new college, the University of Rochester. There he served, with the exception of two years of travel in Italy and Greece, until his retirement in 1888. For several years he also occupied a chair in Rochester Theological Seminary. He was a member of the American committee for the revision of the New Testament (1872-80) and revised the English translation of Olshausen's *Commentaries on the New Testament* (6 vols., 1853-58) and "St. John," in H. A. W. Meyer's *Commentaries*. He published: *Echoes*, a volume of translated French and German poems (1855); *Life and Letters of Emily C. Judson* (1860); an edition of Xenophon's *Anabasis* (1873), long popular; *Our Poetical Favorites* (3 series, collected 1885); *Martin B.*

Anderson (1895). In 1872-73 Dr. Kendrick was president of the American Philological Association.

KENDRICK, JOHN (1745-1800). An American navigator, born at Martha's Vineyard. He commanded a privateer during the latter part of the Revolution and in 1787-88, as commander of the *Columbia* and *Washington*, fitted out by Boston merchants, explored Nootka Sound and parts of the northwest coast of America. In 1791 he made another voyage, and this time visited Oceanica, discovered (and named) Massachusetts Sound, and opened the sandalwood trade between Hawaii and China. He was accidentally shot in Hawaii.

KENEALY, ke-né'li, EDWARD VAUGHAN HYDE (1819-80). An Irish barrister. He was born in Cork and in 1840 graduated B.A. at Trinity College, Dublin. He was called to the Irish bar in 1840 and to the English bar seven years later and in 1868 became queen's counsel and a bencher of Gray's Inn. In 1867 he was counsel for the defense of the Fenians Casey and Burke and in 1873 leading counsel for Orton, the claimant in the celebrated Tichborne case. This latter case he lost, partly because of the violence of his arguments and his unprofessional conduct; but he persisted, and for libelous attacks on the presiding justice and various barristers, made in the *Englishman*, which he had founded, he was expelled in 1874 from the Oxford circuit and disbenched by Gray's Inn. As a member of Parliament, elected for Stoke in 1875, he was unimportant. His publications include an edition of the proceedings of the Tichborne case and *Brallaghan, or the Deimosophists* (1845), *Goethe, a New Pantomime* (1850); *Poems* (1864); *Enoch, the Second Messenger of God* (1872). His scattered poems, collected in three volumes, appeared in 1875-79.

KENEH, kēn'e, or GENEH, or KENA. The capital of an Egyptian province of the same name, on the right bank of the Nile, 34 miles north of Thebes (Map: Egypt, C 2). It is a station for Nile steamers and opposite a station on the Nile Valley Railroad and has a well-developed pottery industry and some sugar manufacturing. It is visited by numerous pilgrims from the interior of Africa, on their way to Mecca. Pop., 1897, 27,478, 1907, 29,053.

KENELM CHILLINGLY, kēn'elm chil'ling-li. A novel by Lord Lytton (1873).

KENESAW MOUNTAIN, BATTLE OF. An engagement fought near Marietta, Ga., June 27, 1864, during the Civil War, between a Federal force of about 16,000 under General Sherman and a Confederate force of about 18,000 under Gen. Joseph E. Johnston. The Confederates were strongly intrenched on Kenesaw Mountain and repelled the Federal assault after two and a half hours of fighting, the Federals losing nearly 3000, and the Confederate brigade commanders Gen. C. G. Harker and Col. D. McCook. The Confederates lost about 800. It was the only serious reverse sustained by General Sherman in his Atlanta campaign. Soon afterward Sherman maneuvered Johnston out of his position, and on July 2 the latter abandoned Kenesaw Mountain, falling back behind the Chattahoochee River.

KENEZITES. See KENIZZITES.

KENIA, kā'né-ā, MOUNT. An isolated, extinct volcano in British East Africa, situated 12' south of the equator and 180 miles east of Victoria Nyanza (Map: Congo, G 2). Its

altitude is 17,191 feet; it is covered with perpetual snow above 15,000 feet and has a number of glaciers. Mount Kenia was first brought to the attention of the civilized world by Krapf in 1849. In 1887 it was ascended by Count Teleki to an altitude of 15,280 feet and partially ascended in 1893 by Dr. Gregory. The summit was reached by Kolb in 1896 and by Mackinder in 1899.

KENILWORTH. A market town in Warwickshire, England, 5 miles north of Warwick (Map: England, E 4). It has the remains of an abbey erected in 1122. Near by is Kenilworth Castle, united to the crown domains in the reign of Henry IV and conferred by Elizabeth upon Robert Dudley, Earl of Leicester, who here in 1575 entertained her for 19 days. Extensive remains of the castle exist. Kenilworth Castle is the scene of Walter Scott's famous romance (*Kenilworth*, 1821), through which runs the story of Amy Robsart, Leicester's unacknowledged wife, and of a novel by Ludwig Tieck. Pop., 1901, 4544; 1911, 5776. Consult Beck, *Kenilworth Castle* (Leamington, 1840, new ed., 1878).

KENITES (Heb. *Kayin*, *ha-Ken*; Ar. *Banu'l Kayin*). A people occupying in ancient times the eastern part of the Negeb (q.v.) in south Palestine, and in the period immediately before Mohammed apparently a territory farther south extending into the Sinaitic Peninsula. According to 1 Sam. xv. 6, Saul said to the Kenites, "Go, depart, get you down from the midst of the Amalekites, lest I destroy you with them." The Kenites then went out of the midst of the Amalekites. It may be inferred that there were Kenite enclaves among the Amalekites, but not necessarily that the Kenites were nothing but an Amalekitish clan. To this life with Amalek Judges (i 16) seems to allude in the statement that "the Kenites went with Judah from the city of palm trees [by which originally Tamar-Ain Weibeh may have been meant] into the wilderness of Arad which lies in the Negeb, and that they went and dwelt with Amalek" (so the Greek version). Precisely when this occurred is not known. About two centuries before Saul, Heber the Kenite left Kain, and more particularly the clan of the Bene Hobab, and pitched his tents near Kadesh (Naphtali).

That Hobab the Kenite was the father-in-law of Moses (Judg. iv. 11) may be a local tradition in this clan, less strongly supported than that which makes Jethro, the priest of Midian, Zipporah's father. Tiele and a number of other scholars have maintained that Yahwe was a Kenite deity adopted by Moses from his father-in-law, and H. P. Smith has recently (*The Religion of Israel*, pp. 50 f., New York, 1914) interpreted Ex. xviii. 5-12 as an account of the reception of the chief men in Israel into covenant with Jethro's God. It is difficult, however, to escape the impression that in this passage Jethro is represented as confessing for the first time his faith in the deity of Moses' God and showing its sincerity by the sacrifices he offers; nor can it be an accident that Elohim, and not Yahwe, is exclusively used in the conversation between him and Moses that follows. The theory of a Kenite origin of the worship of Yahwe in Israel and Judah can scarcely be said to rest on a solid foundation.

How far any fact in the earlier history of this people may be preserved in the story of Cain and Abel in Genesis iv is not easy to de-

termine. That Cain (Heb., *Kayin*) is the eponym of the tribe need not be questioned, nor that Abel was a tribe exterminated by the Kenites, nor that the nomadic life in the wild and sterile region of Nod (q.v.) appeared to the author to be the punishment for this crime of a people once cultivating the soil whence it was driven forth into the wilderness; but such a lapse into nomadic conditions is at least doubtful. It may indeed have been suggested by the fact that the tribe seems to have been only in part nomadic, there being Kenite cities in the Negeb, to account for which the story was told of Cain, the city builder. (See **CAIN**.) David told Achish that he made raids against the Negeb of the Kenites (1 Sam. xxvii 10) and later sent of the spoil of the Amalekites to the cities of the Kenites (1 Sam. xxx 29). In the prophecies of Balaam, which seem to reflect the historic situation of David's time, the Kenites are referred to as living in strong places and in a rocky region, but in danger of being devastated and carried away by Ashur (Num. xxiv 21, 22). It is less likely that the poet thought of the Assyrians than the Ashurim, neighbors of the Kenites in the south and southwest. Nöldeke is probably right in identifying the Kenites with the Arabic tribe Bal Kayin (*Banu'l Kayin*), flourishing in El Tih and El Tor in the sixth century A.D. Consult: Nöldeke, *Ueber die Amalekiter und einige andere Nachbarvölker der Israeliten* (Göttingen, 1864); Tiele, *Vergelykende geschiedenis der egyptische en mesopotamische godsdiensten* (Amsterdam, 1869-72); Stade, "Das Kainszeichen," in *Zeitschrift für alttestamentliche Wissenschaft* (Giessen, 1894); Ed. Moyer, *Die Israeliten und ihre Nachbarstämme* (Halle, 1906); N. Schmidt, *The Messages of the Poets* (New York, 1911).

KENIZZITES, or KEN'EZITES. One of the groups of pre-Israelitish inhabitants of Palestine named in Gen. xv 19-21. In Gen. xxxvi. 11, Kenaz (the eponymous ancestor of the Kenizzites) is enumerated among the Edomite clans, while according to Num. xxxii. 12, Josh. xiv. 6-14, Caleb (q.v.) appears as a Kenizzite. The relationship between the Caleb and Kenizzite clans is further illustrated by the designation of Othniel (Caleb's son-in-law) as a "son of Kenaz" (Josh. xv. 17, Judg. i 13, iii 9-11, 1 Chron. iv. 13), though the tradition on this point is somewhat hazy, since, according to 1 Chron. iv. 15, Kenaz is a grandson of Caleb. Confusing as these various notices are, we may at least conclude that Kenizzite was the name of an old "Canaanitish" clan settled in southern Palestine which entered into alliances with Edomite clans and also with the clan of Judah and became gradually absorbed in this way. The latter tribe, as has been pointed out (see **JUDAH**), is marked by the admixture of various non-Hebrew elements and appears to have been far more composite than any of the other Hebrew tribes, though probably none were entirely free from "Canaanitish" or other elements.

KEN'LY, JOHN REESE (1822-91). An American soldier, born in Baltimore, Md. He studied law and was admitted to the bar in 1845, but went to the Mexican War as lieutenant with a company of volunteers which he had raised, and was afterward promoted to the rank of major. He entered the Civil War as colonel of the First Maryland Regiment, which, together with some Pennsylvania companies, was captured by Stonewall Jackson, after hard fighting, at Front Royal

on the Shenandoah (May 23, 1862). Kenly himself was severely wounded when made prisoner, but his stand had saved General Banks's division at Winchester, and he was raised to the command of a brigade (1862). This he led at Hagerstown, Harper's Ferry, and elsewhere, and at the close of the war he was brevetted major general of volunteers. He published his Mexican experiences under the title *Memoirs of a Maryland Volunteer* (1873).

KENMARE, kën-mâr', NUN OF See CUSACK, M. F.

KENN, THOMAS. See KEN, THOMAS

KEN'NAN, GEORGE (1845-). An American author, journalist, and traveler, born at Norwalk, Ohio. He was educated in the public schools of his native town and of Columbus, Ohio, studied telegraphy; and in December of 1864 began his travels by a journey to Kamchatka, where he served the Russo-American Telegraph Company as telegraphic engineer, assisting in exploring parties in northeastern Siberia (1865-66) and superintending telegraph construction in middle Siberia (1866-68). On the abandonment of this enterprise he returned to the United States, but in 1870 explored the eastern Caucasus, Daghestan, Chechnia, and the course of the Volga to the Caspian, again in 1885-86 he made a journey of 15,000 miles through northern Russia and Siberia, investigating the convict, prison, and exile system and exploring the Russian Altai. In 1898 he went to Cuba and was special correspondent during the Spanish-American War for the *Outlook*, and for the same periodical went to Japan when the Russo-Japanese War opened. His accounts of his Russian travels attracted wide attention. They are collected as *Tent Life in Siberia* (1870, 1910) and *Siberia and the Exile System* (2 vols., 1892). A result of his Cuban sojourn was *Campaigning, in Cuba* (1899). He was expelled from Russia while carrying on further social and political studies. In 1902 he went to the island of Martinique, after the eruption of Mont Pelée, and climbed the still active volcano. His experiences are described in *The Tragedy of Pelée* (1902). The latter year saw also the publication of his *Folk Tales of Napoleon*. In 1905 he wrote of the situation in China, particularly as affecting American commerce and interests, and did much to clarify American ideas on that subject. He also published *A Russian Comedy of Errors* (1915). He became a member of the National Institute of Arts and Letters.

KEN'NEBEC' RIVER. The second largest river in Maine. It rises in Moosehead Lake in the west-central part of the State and flows south into the Atlantic Ocean, about 25 miles northeast of Portland, receiving its principal tributary, the Androscoggin, 18 miles from its mouth (Map: Maine, C 3). The drainage basin extends to the Canada line, about 150 miles, varies in width from 50 to 80 miles in the main division, and includes a total area of 5970 square miles, about one-fifth of the total area of the State. The length of the main stream is about 140 miles, and its descent is 1026 feet. It has falls at Augusta (where a dam has been built), at Waterville, and at three other points above, supplying abundant water power. It flows through a fertile and beautiful region, where considerable lumbering and cattle raising are carried on. It is navigable for large ships to Bath, 12 miles from the sea, and for steamboats

to Hallowell, 40 miles, except in winter, when it is closed by ice above Bath.

KENNEBUNK, kën'é-bûnk'. A town in York Co., Me., 25 miles by rail southwest of Portland, on the Mousam and Kennebunk rivers, and on the Boston and Maine Railroad (Map: Maine, B 5). It has valuable water power and manufactures shoe counters, twine, lumber, leatheroid, trunks, traveling bags, etc. There is a free circulating library. Settled about 1650, Kennebunk was part of Wells until 1820, when it was incorporated as a separate township. The electric-light plant is owned by the municipality. Pop., 1910, 3099. Consult E. E. Bourne, *History of Wells and Kennebunk to 1820* (Portland, 1875), and Daniel Remick, *History of Kennebunk, from its Earliest Settlement to 1890, Including Biographical Sketches* (Kennebunk, 1911).

KENNEBUNKPORT, kën'é-bûnk-pôrt'. A town in York Co., Me., 27 miles by rail southwest of Portland, on the Atlantic Ocean, at the mouth of the Kennebunk River, and on the Boston and Maine Railroad (Map: Maine, B 5). It has an excellent harbor and is one of the most popular summer resorts in the State, having a fine beach and numerous hotels. There are Talbot's Library, circulating and public libraries, and some manufactures, particularly of boats. Pop., 1900, 2123, 1910, 2130. Settled in 1629, Kennebunkport was incorporated in 1653 as Cape Porpoise, was almost completely destroyed by the Indians in 1703, was reincorporated as Arundel in 1717, and received its present name in 1821. Consult Charles Bradbury, *History of Kennebunkport* (Kennebunk, 1837).

KEN'NEDY, SIR ALEXANDER (BLACKIE WILLIAM) (1847-). An English mechanical and electrical engineer. He was born in Stepney, the son of a clergyman and a nephew of Prof. J. S. Blackie, studied at the City of London School and the Royal College of Mines; and worked for a time at marine engineering. In 1874-89 he was professor of engineering at University College, London, where he established the first engineering laboratory. Kennedy invented an autographic recorder for testing the strength of materials and in the *Proceedings* of the Institution of Civil Engineers for 1886 summarized the work of engineering laboratories and of testing machines. He designed large lighting and power plants in Edinburgh, Manchester, Calcutta, and in Japan; was chief engineer to the Westminster Electric Supply Corporation and consulting electrical engineer to the London and Northwestern Railway, served on various committees (naval boiler, 1900; naval machinery design, 1904; wireless telegraphy, 1913); became civil member of the Board of Ordnance in 1909; and was knighted in 1905. An enthusiastic Alpinist, he published *A. W. Moore's Alps in 1864* (1902). He translated Reuleux's *Kinematik* (1879) and wrote *The Mechanics of Machinery* (1886).

KENNEDY, ARCHIBALD R. S. (1859-). A Scottish Semitic scholar, born at Whitehills, Banff. He studied at Aberdeen, Glasgow, Göttingen, and Berlin; was a fellow of Glasgow in 1885-87 and professor of Hebrew at Aberdeen in 1887-94; and in 1894 became professor of Semitic languages at Edinburgh. In the "Porta Series" he prepared grammars of Hebrew (1885), Syriac (1889), Assyrian (1890), and Arabic (1895). Besides contributions to dictionaries of

the Bible, he published editions of Exodus (1901) and Joshua and Judges (1902), and commentaries on Samuel (1905) and Leviticus and Numbers (1910).

KENNEDY, BENJAMIN HALL (1804-89). An English classical scholar and educator, born near Birmingham. He was graduated at Cambridge in 1827 and the following year was elected a fellow and classical lecturer of St. John's College, Cambridge. He was then for six years assistant master at Harrow and from 1830 to 1866 was head master of Shrewsbury School. His headmastership at Shrewsbury was most successful: many of his pupils, among them H. A. J. Munro and J. E. B. Mayor, won marked distinction in classics. In 1866 he accepted the regius professorship of Greek at Cambridge, became canon of Ely in 1867 and a member of the university council in 1870. From 1870 to 1880 he was a member of the committee on the revision of the New Testament. Dr. Kennedy published a number of classical textbooks, two of which, *Public School Latin Primer* and *Public School Latin Grammar*, were long popular textbooks. He edited also parts of Sophocles, Aeschylus, and Aristophanes, and the whole of Vergil (31st ed., 1881). He translated *The Birds* of Aristophanes, and the Psalter, into English verse, besides publishing a collection of his own Greek, Latin, and English poetry. In this work, entitled *Between Whales* (2d ed., 1882), he incorporated autobiographical matter. Consult Sandys, *A History of Classical Scholarship*, vol. iii (Cambridge, 1908).

KENNEDY, CHARLES RANN (1871-). A dramatist of English birth but American residence, born at Derby, and largely self-educated. Beginning as office boy and clerk, he became successively a writer and lecturer, a press agent and theatrical business manager, and finally a playwright. In 1908 he was unusually successful with his play *The Servant in the House*, a drama framed to carry a social and religious message. This was followed by *The Winterfeast* (1908), *The Terrible Meek* (1911), *The Necessary Evil* (1913), *The Idol-Breaker* (1914). All these pieces are serious and of a strong "reforming" tendency. In 1898 Kennedy married the actress Edith Wynne Mathison.

KENNEDY, GRACE (1782-1825). A Scottish writer. She was born at Pinmore, Ayrshire, but at an early age removed to Edinburgh. She wrote novels of a religious tendency which had no small vogue in their day. She is best known as the author of *Father Clement* (1823), an anti-Roman-Catholic novel, which ran through some dozen editions and was translated into several languages. Other books of hers are: *Anna Ross* (1823), *Dunallan* (2d ed., 1825), *Jessy Allan* (12th ed., 1853), and *Decision* (1821). A collected edition of her works in six volumes appeared at Edinburgh in 1827, and a German translation of them, *Sammtliche Werke*, in Bielefeld in 1844.

KENNEDY, SIR JAMES SHAW (originally SHAW, JAMES) (1788-1865). A British general, born in the Parish of Straiton, Ayrshire, Scotland, and educated in Maybole and the Ayr Academy. He was made an ensign at the age of 17 and was advanced steadily to the rank of general in 1863. He went abroad with his regiment, the Forty-third Light Infantry, in 1807, distinguished himself in the Peninsular campaign, fought under Wellington in Belgium, and left behind him *Notes on Waterloo* that were

published (1865), also a *Plan for the Defence of Canada*, and an autobiographical sketch. His essay, *Notes on the Defence of Great Britain and Ireland* (1859), was frequently reprinted.

KENNEDY, JOHN (1813-1900). A Scottish Congregational minister and author, born at Aberfeldy, Perthshire, and educated at Aberdeen, Edinburgh, and Glasgow universities. He was pastor of a Congregational church in Aberdeen from 1836 to 1846, when he was called to the Stepney Congregational Meeting House in London, a charge which he held till his retirement in 1882. From 1872 to 1876 he was professor of apologetics at New College, London, and from 1884 to 1895 chairman of the New College council. He edited *The Christian Witness* (1866-73) and *The Evangelical Magazine* (1887-90). The most widely known of his books are, probably, *The Divine Life* (1858) and *A Handbook of Christian Evidences* (1880). Among his other publications are *The Gospels Their Age and Authorship* (1880), *The Pentateuch: Its Age and Authorship* (1884), *Old Testament Criticism and the Rights of Non-Experts* (1897).

KENNEDY, JOHN (1838-) A Canadian civil engineer. He was born at Spencerville, Ontario, and was educated at McGill University. In 1863 he was appointed assistant city engineer of Montreal. In 1871 he became division engineer, and later chief engineer, of the Great Western System of Canada. In 1875-1907 he was chief engineer of the Montreal harbor commission. He deepened the ship canal between Montreal and Quebec from 20 to 27½ feet and designed and carried out all the improvements in Montreal harbor during 32 years. He was a member of several royal commissions for engineering purposes connected with the Lachine Canal, the causes of floods at Montreal, and the completion of the Trent Valley Canal system.

KENNEDY, JOHN PENDLETON (1795-1870). An American novelist. He graduated at Baltimore College (University of Maryland) in 1812 and in 1814 fought in the battles of Bladensburg and North Point. He was admitted to the bar in 1816, was for several years a member of the Maryland House of Delegates, from 1839 to 1845 was a member of Congress, where he advocated Whig principles, and during Fillmore's administration was Secretary of the Navy (1852). He then retired from politics, but he upheld the Union during the war. Kennedy is now chiefly remembered as a writer of romances, among which are *Swallow Barn* (1832), *Horse-Shoe Robinson* (1835), and *Rob of the Bowl* (1838). Among his other books are: *Annals of Quodlibet* (1840), a political satire; *Mr Ambrose's Letters on the Rebellion* (1865); *Memoirs of the Life of William Wart* (2 vols., 1849), an excellent biography of the leisurely kind. It is worth noting that Kennedy constantly befriended Edgar Allan Poe, and that while abroad he became a friend of Thackeray and wrote or outlined the fourth chapter of the second volume of *The Virginians*, a fact which accounts for the great accuracy of its scenic descriptions. Of his works *Horse-Shoe Robinson* is the best and ranks high in antebellum fiction. For his life, consult the biography, by Tuckerman, which forms the tenth volume of his collected works (New York, 1870-72).

KENNEDY, JOHN PITT (1796-1879). A British military engineer, born at Donagh, Donegal County, Ireland. He was educated at Foyle College, Londonderry, and the Royal Military

Academy, Woolwich, becoming lieutenant in an engineer corps in 1815. Four years afterward he was sent to Malta, thence to Corfu, and he superintended the formation of a harbor and canal at Santa Maura (1820). He served next under Sir Charles Napier at Cephalonia, building lighthouses, roads, and quays; was subinspector of militia in the Ionian Islands (1828-31); and then returned to Ireland, where he set himself to the discovery of ways and means for improving the lamentable condition of the agricultural classes. His methods are indicated by the title of his work, *Instruct; Employ; Don't Hang Them*; or *Ireland Tranquilized without Soldiers and Enriched without English Capital* (1835). He wrote several others of similar nature, and as inspector general for Irish education (1837), as secretary to the Devon commission (1843) and to the famine relief committee (1845), his labors were unceasing in behalf of his native land; but he went back to the army in 1849 as military secretary to Sir Charles Napier and accompanied him to India. There he built the military road named after him and extending from Kalka via Simla to Kunawur and Tibet. He published *British Home and Colonial Empire* (1865-69), as well as a number of technical works relative to his Indian career.

KENNEDY, JOHN STEWART (1830-1909). An American capitalist and philanthropist. He was born near Glasgow in Scotland, received a scant education in school, studied in his spare moments as a clerk, and at 20 was sent to America by a London iron firm, in whose branch house in Glasgow he worked for four years. Then he came again to New York and entered business with Morris K. Jesup. From this partnership he retired in 1867 and from active business in 1883, although he was still called upon after that date to aid in the reorganization of various financial concerns, notably in 1888, when he acted with J. S. Harris as receiver of the New Jersey Central Railroad. He was prominently connected during his life with New York charities, and his will gave away \$30,000,000—bequests of \$2,500,000 each to Columbia University, the New York Public Library, Metropolitan Museum of Art, Presbyterian Board of Home Missions, Presbyterian Board of Foreign Missions, Presbyterian Church Election Fund, and Presbyterian Hospital, four gifts of \$1,500,000 each, three of \$750,000 each, nine (to colleges) of \$100,000 each, and 10 of \$50,000 each, besides numerous .

KENNEDY, JOSEPH CAMP GRIFFITH (1813-87). An American statistician. He was born at Meadville, Pa., was educated at Allegheny College, studied law, and for a time edited country newspapers. In 1849 he was put in charge of the . . . of the United States Census Bureau, . . . he was made superintendent of the census. He had previously consulted with European statisticians in regard to census matters and in 1850 had suggested to them an international arrangement by which the facts could be more expeditiously gathered, a discussion which led to the holding of the congress of statisticians at Brussels in 1853. During the administration of President Johnson he was appointed examiner of national banks.

KENNEDY, ROBERT (1865-). A Scottish surgeon and anatomist. He was born in Glasgow and was educated there, at Edinburgh, and at Berlin. After being surgeon to infirmaries and hospitals in Glasgow, he was examiner

in surgery at St. Andrews from 1901 to 1904. At the University of Glasgow he was lecturer in applied anatomy from 1906 to 1911, when he became St. Mungo professor of surgery. A specialist in nerve surgery, Kennedy contributed papers on this subject to medical journals, and in Chipault's *Etat actuel de la chirurgie nerveuse* (1903) he wrote "Suture et anastomoses des nerfs."

KENNEDY, THOMAS FRANCIS (1788-1879). A Scottish political reformer, born at Greenan, near Ayr. He was educated at Harrow and at Edinburgh University, was admitted to the Scottish bar in 1811, and became a member of Parliament in 1818. Thereafter he devoted his attention to Liberal reforms. He obtained in 1825 the right of prisoners to a peremptory challenge under a ballot method of selecting juries and took a leading part in bringing about numerous other . . . them, the abolition of religious . . . extension of the franchise, the lowering of the corn duties, and the gradual extinction of the Scottish Court of the Exchequer. Under the Whig government he became clerk of ordinance in 1832, later Junior Lord of the Treasury, in 1837 paymaster of civil services in Ireland, and in 1850 Commissioner of Woods and Forests, retiring in 1854.

KENNEDY, WILLIAM (1799-1871). A British poet and prose writer, born near Dublin of Scottish parentage. After . . . a time at Belfast College, he went . . . was on the staff of the *Parish Magazine*, next a literary worker in London, from 1830, and eight years afterward went as secretary with Lord Durham to Canada. Thence he drifted south to Texas and in 1841 was British Consul at Galveston, but retired invalided with a pension (1849), first to London, then to Paris, where he died. He published two volumes of verse, chiefly lyrical, called *Futful Fancies* (1827). *The Arrow and the Rose, and Other Poems* (1830); a drama, *The Siege of Antwerp* (1838); and *The Rise, Progress and Prospects of the Republic of Texas* (2 vols., 1841).

KENNEDY, SIR WILLIAM RANN (1846-1915). An English jurist. He was educated at Eton and at King's College, Cambridge, where he won high honors in scholarship, and was called to the bar by Lincoln's Inn in 1871. Active in Liberal politics, he stood for Birkenhead in 1885 and 1886 and for St. Helen's in 1892. He became queen's counsel in 1885 and served as judge of the Queen's Bench Division of the High Court of Justice from 1892 to 1907, when he became a Lord of Appeal. In 1891 (2d ed., 1907) he published *Law of Civil Salvage*, a subject on which he was an authority. He served as president of the International Law Association, was a fellow and afterward honorary fellow of Pembroke College, Cambridge, and received the degree of LL.D. from Victoria University.

KENNEDY, WILLIAM SLOANE (1850-). An American author, born at Brecksville, Ohio. He graduated from Yale University in 1875, studied two years at Harvard, and became a staff writer for the *Boston Transcript*. Besides translating from the French and Italian and contributing to magazines, especially on Italian language and literature, he edited Walt Whitman's *Diary in Canada* (1904), and wrote: *Henry Wadsworth Longfellow* (1882); *John Greenleaf Whittier* (1882); *Oliver Wendell Holmes* (1883); *Wonders and Curiosities of the*

Railway (1884; new ed., rev., 1906); *John G. Whittier, the Poet of Freedom* (1892); *Reminiscences of Walt Whitman* (1896); *In Portia's Gardens* (1897).

KENNELLY, ARTHUR EDWIN (1861-). An American electrical engineer, born in Bombay, India, and educated at University College School, London. After holding several positions up to 1886, he then became senior ship's electrician for the Eastern Telegraph Company, and a year later came to the United States to be principal electrical assistant to Thomas A. Edison. From 1894 to 1901 he was established as a consulting electrical engineer at Philadelphia, in 1902 he became professor of electrical engineering at Harvard University, and in 1903 he had charge of laying cables for the Mexican government. He served as president of the American Institute of Electrical Engineers (1898-1900) and of the Illuminating Engineering Society (1911). Regarded as an authority, especially on the use of magnetism in engineering and on alternating electric currents, he is author of *Theoretical Elements of Electro-Dynamic Machinery* (1893), *Elementary Electro-Technical Series* (1897); *Electro-Dynamic Machinery* (1898); *Recent Types of Dynamo-Electric Machinery* (1899), *Electricity Made Easy* (1899); *The Interpretation of Mathematical Formulae* (1899); *Wireless Telegraphy* (1907); *The Application of Hyperbolic Functions to Electrical Engineering Problems* (1912); *Tables of Complete Hyperbolic and Circular Functions* and a supplementary *Chart Atlas* (1914).

KENNERLEY, MITCHELL (1878-). An American publisher, born at Burslem, England. He was manager of the New York branch of John Lane, the London publisher, from 1896 to 1900, business manager of the *Smart Set* in 1900-01, founded in 1901 and was editor and proprietor until 1905 of the *Reader* magazine, and then engaged in the publishing business. In 1910 he undertook the publication of the *Forum* and of the *Papyrus*.

KENNET. A river of England and tributary of the Thames. It rises on the Marlborough Downs in Wiltshire and flows east through Berkshire, emptying into the Thames at Reading, after a course of 45 miles (Map: England, E 5). It has been made navigable for ships drawing 3½ feet to Newbury, from which town the Kennet and Avon Canal crosses the country to Bath, thus making the river a part of the waterway connecting the North Sea with St. George's Channel.

KENNETH I (called MACALPINE) (?-860). A Scottish king who came to the throne in Galloway, in 832 or 834, on the death of his father. His power spread rapidly; he drove out the Danes (841), united the Scottish and Pictish kingdoms, and invaded Lothian six times. He transferred relics of St. Columba to Dunkeld, which became the ecclesiastical centre of his kingdom. Consult Andrew Lang, *History of Scotland*, vol. i (New York, 1900).

KENNETT, ROBERT HATCH (1864-). An English Hebrew scholar. He was born in St. Lawrence, Ramsgate, and was educated at Queens' College, Cambridge, where he was chaplain in 1887-93 and in 1903 and lecturer in Hebrew and Syriac in 1887-1903. He was lecturer in Hebrew and Syriac at Caius College in 1891-93 and university lecturer in Aramaic in 1893-1903, and then became regius professor of Hebrew and canon of Ely. In 1909 he was

Schweich lecturer. Kennett contributed to the *Cambridge Biblical Essays* (1909), to theological journals and biblical dictionaries, and wrote *A Short Account of the Hebrew Tenses* (1901), *In our Tongues* (1907), and *The Servant of the Lord* (1911).

KENNETT, WHITE (1660-1728). A Church of England prelate. He was born at Dover, Aug. 10, 1660, was educated at Westminster School and Oxford, and became rector of Ambrosden in 1685. In 1691 he returned to Oxford as tutor and vice principal of Edmund Hall, where he had for a pupil the famous antiquary Hearne. He became Archdeacon of Huntingdon in 1701, dean of Peterborough in 1707-08, and Bishop of Peterborough in 1718. He was an eloquent preacher, a learned antiquary, historian, and theologian. He was a strong opponent of the High Church party. He published numerous works, the most important of which are: *Parochial Antiquities* (1695; new ed., 2 vols., 1818); the third volume of a *Compendious History of England* (published anonymously in 1706), extending from the accession of Charles I to the end of Queen Anne's reign; *A Register and Chronicle, Ecclesiastical and Civil, from the Restoration of King Charles II*, vol. 1 (1728). He left numerous historical manuscripts, now a part of the Lansdowne collection in the British Museum. He died at Westminster, Dec. 19, 1728. Consult his *Life*, by Newton (London, 1730).

KENNEY, ANNIE (?-). An English woman-suffrage leader, born at Lees, Lancashire. She became intimate with the Pankhursts and in 1905 was arrested with Miss Christabel Pankhurst and imprisoned for three days, charged with disorder at Sir Edward Grey's meeting in the Free Trade Hall, Manchester. She then became the first organizer of the Women's Social and Political Union. For attempting in 1906 to interview Mr Asquith, then Chancellor of the Exchequer, she was sentenced to six weeks' imprisonment, and again in October of that year, for her protest (outside the House of Commons) against the government, she was sent to prison for two months. In 1908, having gone with Mrs. Pankhurst on a deputation to the House of Commons, she was again imprisoned. When the leaders of the Women's Social and Political Union were arrested in 1912, she took charge of the work in London. She was arrested, released, and rearrested several times in 1913 under the "Cat and Mouse" Act; and in 1914, for forcing an entrance to Lambeth Palace to address the Archbishop of Canterbury, she was taken to Holloway Gaol.

KENNEY, CHARLES LAMB (1821-81). An English journalist and author, son of James Kenney. Born at Bellevue, near Paris, by 1837 he was a clerk in the General Post Office at London and a few years later was writing dramatic criticism for the *London Times*. In 1856 he was called to the bar. His publications include a book in support of the building of the Suez Canal—Kenney was at one time Ferdinand de Lesseps' secretary—entitled *The Gates of the East* (1857); *Memoir of M. W. Balfe* (1875); a translation (1878) of Balzac's *Correspondence*; the words to several musical sketches and light operas, popular songs, and some excellent *vers de société*. Like his father, he kept good literary company, and among his friends were Thackeray and Dickens. There is considerable information about him in John Genest's *English Stage*, vols.

vii and viii (London, 1832), and in P. W. Clayden's *Rogers' and his Contemporaries* (2 vols., ib., 1889).

KENNEY, JAMES (1780-1849). A popular dramatist of Irish birth and English breeding. After 1803, when his farce *Raising the Wind* appeared, he wrote many successful plays, ranging in kind from farce to tragedy. His father was a quondam manager of Boodle's Club, London, a part owner of that institution, and a familiar figure in the London sporting world. The son was placed in a London bank, but out of banking hours developed a strong taste for amateur acting and passed from that to play writing. Some of his plays have been many times revived, and one or two still hold the stage. *Sweethearts and Wives* (1823) was his great hit, and other successes include the musical afterpiece *Turn him Out* (1812); *Love, Law, and Physic* (1812); *Spring and Autumn* (1827); *The Illustrious Stranger* (1827); *Musaniello* (1829); *The Sicilian Vespers* (1840), a tragedy. Kenney frequented Samuel Rogers's feasts of reason and was a friend of Charles Lamb.

KENNGOTT, kën'göt, GUSTAV ADOLF (1818-97). A German mineralogist, born in Breslau. He was educated at the University of Breslau, in which he was appointed a lecturer (1844). Subsequent appointments were those of professor of natural history in the Pressburg Realschule (1850-52), assistant custodian of the Imperial mineral cabinet at Vienna (1852-56), professor of mineralogy in the Polytechnic School of Zurich (1856-57), and professor of mineralogy in the University of Zurich (1857-97). His services in the development of crystallography, petrology, and mineralogy are recognized as important. His publications include *Lehrbuch der reinen Kristallographie* (1846); *Lehrbuch der Mineralogie* (1851; 5th ed., 1880); *Elemente der Petrographie* (1868); *Handwörterbuch der Mineralogie, Geologie und Paläontologie* (2 vols., 1882-86), with Lasaulx and other scientists.

KENNICOTT. See KATALLA.

KENNICOTT, BENJAMIN (1718-83). An eminent biblical scholar. He was born at Totnes, Devonshire, April 4, 1718, and educated at Oxford, where he highly distinguished himself. He took his degree of M.A. in 1750, having been previously elected a fellow of Exeter College; in 1767 he was appointed Radcliffe librarian; and in 1770 canon of Christ Church, Oxford, where he died, Sept. 18, 1783. The whole interest and importance of Kennicott's life are comprised in his great undertaking for the improvement of the Hebrew text of the Old Testament. In 1753 he published a work entitled *The State of the Printed Hebrew Text of the Old Testament Considered* (2d ed., 1759). This contained observations on 70 Hebrew manuscripts, with an extract of mistakes and various readings, and showed the necessity for a much more extensive collation, in order to ascertain or approximate towards a correct Hebrew text. He undertook to execute the work in the course of 10 years and labored, until his health broke down, from 10 to 14 hours a day. In spite of considerable opposition from bishops Warburton, Horne, and other divines, Kennicott succeeded in enlisting the sympathies and obtaining the support of the clergy generally. Upward of 600 Hebrew manuscripts and 16 manuscripts of the Samaritan Pentateuch were collated, with the assistance of other English and continental scholars. The

first volume of his edition of the Hebrew Bible appeared in 1766, and the second in 1780, accompanied by a very useful and instructive dissertation. The text chosen was that of Van der Hooght, without the vowel points, and the various readings were printed at the bottom of the page. The *Varia Lectiones Veteris Testamenti* (Parma, 1784-87), published by De Rossi, is a very valuable addition to Kennicott's Hebrew Bible. Jahn published at Vienna (1806) a very correct abridgment, embracing the most important of Kennicott's readings.

KENNY, SIR THOS. KELLY. See KELLY-KENNY, SIR THOS.

KENO, or KINO, kē'nō (origin of the term unknown). A variation, for gamblers' purposes, of the juvenile game of lotto. In the common form of the game, balls numbered from 1 to 99 are placed in a hollow globe called a goose, which can be revolved so that the balls may be well shaken up. The number of each ball is called as it emerges from the goose. Cards bearing four rows of five numbers each are sold to the players, each of whom covers any ball's number which appears on his card. The player who thus first covers a row of five numbers calls out "Keno!" and receives the stakes of all of the other players, minus a certain percentage paid to the bank.

KENORA (formerly RAT PORTAGE). A town, port of entry, and the capital of the Rainy River District, Ontario, Canada, on the Lake of the Woods at its outlet and on the Canadian Pacific Railway, 133 miles east of Winnipeg (Map: Ontario, F 8). Among its public buildings are the Anglican and Roman Catholic cathedrals, a hospital, courthouse, and jail. Its manufactured products include flour, lumber, railway ties, and boats. It is situated in a lumbering district, and gold is found in the vicinity. It is a summer resort. Kenora owns its telephone and electric-light plants and its water works. Pop., 1901, 5202, 1911, 6158.

KENOSHA. A city and the county seat of Kenosha Co., Wis., on Lake Michigan 34 miles south of Milwaukee, on the Chicago and Northwestern Railroad and on the Pere Marquette and Hill boat lines (Map: Wisconsin, F 6). It has Kemper Hall School and library and the Simmons Memorial Library. The city manufactures extensively tanned leather, machine-shop products, carriage and automobile lamps, beds, plumbers' supplies, brass goods, automobiles, springs, hosiery, underwear, wagons, furniture, etc. There is a fine harbor. Kenosha was first incorporated in 1841 and in 1850, when its present name was adopted, it received a city charter. The water works are owned by the city. Pop., 1900, 11,606; 1910, 21,371; 1914 (U. S. est.), 26,062.

KENO'SIS (Gk. *kénōsis*, emptying). A term derived from the word *ἐκένωσε*, in Phil. ii. 7, used in recent theology to designate a supposed self-limitation of Himself by the Logos (q.v.) to the capacities of humanity for the purpose of incarnation. The suggestion of a kenosis was made by Liebniz about the year 1840 and has been taken up most thoroughly by the theologians in particular Gess, Deussen, and Frank. In spite of many verbal differences, these theologians manifest a remarkable agreement in the substance of their teachings upon this subject. The problem they are attempting to solve by the theory of kenosis is the old problem of the union of two natures, human and

divine, in the one consciousness of the God-man. The personality of Christ is conceived by them all to reside in the divine element, the Logos. But the one and undivided person of Jesus is ignorant of certain things, as of the day and hour of the destruction of Jerusalem, is limited in a variety of ways, feels His dependence upon God and prays to the Father, and is not only temptible, but truly tempted, yet without sin. It follows at once that the Logos, i.e., God, is thus ignorant, dependent, tempted, etc. How is this possible? The answer given by these theologians is that the Logos, by a voluntary divine act, limited Himself to the capacity of humanity when He assumed it, so that His experiences are truly human experiences. They do not transcend the possibilities of humanity, however they may differ from ordinary human experiences. By the self-limitation there was no loss of the essential attributes of deity, such as knowledge, but there was a surrender of the exercise of these attributes in particular ways, as in the form of omniscience, which is the knowledge of all actual things in their concrete totality. Thus, the Logos did not actually know all the future while in the earthly state. The evidences presented that there was an actual kenosis are the facts of Christ's life, as indicated above, and the express statements of the Scriptures of a change in entering upon the human condition, and especially the positive statement of an "emptying" in the Philippian passage. The great objection to the kenosis lies in the unchangeability of God. Can deity change itself? Would it not thereby abandon the essential characteristic of divinity, that it exists by necessity in itself? Can we conceive of deity passing into unconsciousness? The reply of the kenotics to this objection is that we must not determine what facts are by our a priori conception of unchangeability, but must determine our idea of unchangeability by the facts. The whole question then turns on the two points, Was the personality of the God-man resident in the Logos? and, Was this one person, the Logos, ignorant? Consult. Thomasius, *Christi Person und Werk* (Erlangen, 1802-61); Gess, *Die Lehre von der Person Christi* (Basel, 1856); Frank, *System der christlichen Gewissheit* (Erlangen, 1870-73); Simon, *Reconciliation by Incarnation* (Edinburgh, 1898); Mackintosh, *The Doctrine of the Person of Jesus Christ* (New York, 1912). See CHRISTOLOGY. INCARNATION

KEN'RICK, FRANCIS PATRICK (1797-1863) An American Roman Catholic prelate. He was born in Dublin and studied in Rome from 1815 to 1821. Ordained priest at the end of this course, he was sent out to take charge of a new seminary at Bardstown, Ky., which he conducted for nine years. In 1830 he was made coadjutor to Dr. Conwell, whom he succeeded as Bishop of Philadelphia in 1842. Here he founded the Seminary of St. Charles Borromeo. In 1851 he was transferred to the see of Baltimore, in time to preside over the first plenary council of the American bishops in the following year. His most celebrated works are his Latin treatises, *Theologia Dogmatica* (4 vols., 1839-40) and *Theologia Moralis* (3 vols., 1841-43); but he attracted much attention by a controversy with the Episcopalian Bishop Hopkins of Vermont, of which his side was published in 1837, under the title of *The Primacy of the Holy See and the Authority of General Councils*. At the time

of his death he was preparing a revised English translation of the Bible, with copious notes, and had brought out a part of it. Consult O'Shea, *The Two Kenricks* (Philadelphia, 1904).

KENRICK, PETER RICHARD (1806-96). An American Roman Catholic archbishop, brother of Francis Patrick Kenrick (q.v.) He was born at Dublin, was educated at Maynooth College, came to America in 1833, became assistant pastor and in 1835 pastor of the Philadelphia Cathedral Parish, was professor of dogmatics in the seminary of the diocese and then vicar-general, and in 1843, after two years as coadjutor, became Bishop of St. Louis. After the division of his large diocese in 1847 he was appointed Archbishop. He was prominent in charitable work, especially during the Civil War, and built many churches and founded many schools in his see. He strongly objected to the dogma of papal infallibility, framed an elaborate protest, which he was not allowed to deliver in council, in which he declared the definition false; but acquiesced in the final decree. Kenrick wrote *The Holy House of Loreto: An Examination of the Historical Evidence of its Miraculous Translation*, and *Anglican Ordinations*.

KENRICK, WILLIAM (1795-1872). An American nurseryman. When 28 years of age, he was taken into partnership by his father, a pioneer nurseryman, whose gardens were planted in 1790 upon the ground where John Eliot commenced preaching the gospel to the Indians. Perhaps Kenrick will be best remembered on account of his introduction of the mulberry, and the active part he took in the attempt to establish the silk industry in America. His book, *The American Silk-Growers' Guide*, appeared in 1835.

KEN'SAL GREEN. A London cemetery, occupying about 60 acres and containing about 70,000 graves; Sydney Smith, the actor Kemble, Sir Charles Eastlake, Leigh Hunt, Thackeray, and other celebrities are buried here.

KEN'SETT, JOHN FREDERICK (1818-72) An American landscape painter, born at Cheshire, Conn. He was apprenticed to his uncle, a bank-note engraver, but devoted his leisure to the study of painting. In 1840 he went to England, where he studied for five years, supporting himself by engraving. The sale of his first picture, a view of Windsor Castle, exhibited at the Royal Academy, encouraged him to persevere, and he spent the next two years painting landscapes in Italy. His "View on the Arno" and "Shrine," exhibited at the National Academy, New York, in 1848, established his reputation in America, and he was elected an Academician in 1849. Representative of his work as a member of the so-called Hudson River school is a painting (on exhibition at the Metropolitan Museum, New York) which shows the town of Cornwall, with Dunderberg and Storm King in the distance. In the same museum, but not on exhibition, are 38 of his paintings, some unfinished, the last summer's work of the artist, presented by his brother, Thomas Kensett, in 1874. His "Sunset on the Coast" and "October Afternoon" are in the Corcoran Gallery, Washington. His work is delicate and refined, but weak in drawing and composition.

KEN'SINGTON GARDENS. One of the public ornamental parks of London, extending on the west side of Hyde Park, from which it is partly separated by the Serpentine. It is trav-

ersed by walks and ornamented with rows and clumps of noble trees. Near the western border of the park stands Kensington Palace. The gardens at first consisted of the grounds attached to the palace and were only 26 acres in extent, but they have been frequently enlarged and now are 2½ miles in circuit. There are many notable buildings in the vicinity.

KENSINGTON MUSEUM. See **SOUTH KENSINGTON MUSEUM.**

KENSINGTON PALACE. A royal residence in the Parish of Kensington, London. In it William III and Mary, Queen Anne and her husband, Prince George of Denmark, and George II died. It was the birthplace of Queen Victoria, who there was informed of William IV's death and her own accession to the throne. It was later the residence of Princess Louise and the Marquis of Lorne and of the Prince and Princess of Teck.

KENT. A maritime county in the southeast of England, bounded north by the Thames estuary, east by the North Sea, south by the Strait of Dover and Sussex, and west by Surrey and London (Map: England, G 5). Area, 1,525 square miles. Kent is a highly productive agricultural county, with numerous market gardens and orchards, it has always been the leading hop-growing county of England. It contains the cities of Canterbury, Rochester, Dover, Folkestone, Gillingham, and Maidstone, the county town, the important dockyards and arsenals of Woolwich, Chatham, and Sheerness, and the famous watering places of Margate, Ramsgate, and Tunbridge Wells. Pop, 1901, 961,139, 1911, 1,045,661. Kent was at one time an Anglo-Saxon kingdom. It was settled by the Jutes and became prominent when its King, Ethelbert (q.v.), was converted to Christianity by St. Augustine in 597. When Ethelbert died, in 616, the kingdom became pagan again for a short time. It rapidly declined in power and remained important chiefly as the seat of the Archbishop of Canterbury. In the course of the eighth century it lost all independence, and it was ruled over by the state that happened to be supreme, whether it was Wessex (q.v.) or Mercia (q.v.). During the reign of William I Kent seems to have been a county palatine. Several codes of law of the old kingdom have come down to us. Consult Hasted, *The History and Topographical Survey of Kent* (Canterbury, 1801), and *Victoria History of the County of Kent* (London, 1908).

KENT. A town in Portage Co, Ohio, 10 miles northeast of Akron, on the Baltimore and Ohio, the Erie, the Northern Ohio Traction and Light, and the Wheeling and Lake Erie railroads (Map: Ohio, H 3). It is the seat of a State normal school and contains a Carnegie library. The industrial establishments include flour mills, railroad machine shops, and manufactories of concrete mixers, nuts and bolts, and locks. Ample water power is available. Pop, 1900, 4541; 1910, 4488.

KENT, CHARLES (WILLIAM CHARLES MARK) (1823-1902). An English poet, biographer, and journalist, born in London. After completing his education at Prior Park and Oscott, he became editor of the *Sun* (1845-70), studied law at the same time and was called to the bar in 1859, but devoted himself thereafter to literature. He edited the *Weekly Register*, a Roman Catholic paper (1874-81). A personal friend of Charles Dickens, he contributed to *Household*

Words and *All the Year Round* under Dickens's editorship and to other periodicals. Several volumes of poems, published previously in the forties, fifties, and sixties, provided the material for his collected *Poems* (1870). In later years he gave himself largely to editorial work—chiefly complete editions of the greater English writers, memoirs, and critiques, and notably Burns (1874), Lamb (1875 and 1893), Moore (1879), Father Prout (1881), and Lord Lytton (1875, 1883, and 1898). He also wrote *Leigh Hunt as an Essayist* (1888), *The Wit and Wisdom of Lord Lytton* (1883), and *The Humour and Pathos of Charles Dickens* (1884). Consult J. C. Francis, *Notes by the Way* (1909).

KENT, CHARLES FOSTER (1867-). An American Old Testament scholar, born at Palmyra, N. Y. Educated at Yale (A.B., 1889; Ph.D., 1891) and at the University of Berlin (1891-92), he was an instructor at the University of Chicago (1893-95), associate professor (1895-98) and professor (1898-1901) of biblical literature and history at Brown University, and professor of biblical literature at Yale after 1901. His publications include: *Outlines of Hebrew History* (1895); *A History of the Hebrew People* (2 vols., 1896-97; 2d ed., 1912); *A History of the Jewish People during the Babylonian, Persian, and Greek Periods* (1899); *The Messages of Israel's Lawgivers* (1902, 1911); *Israel's Historical and Biographical Narratives* (1905), *Origin and Permanent Value of the Old Testament* (1906, 1912), *Israel's Laws and Traditional Precedents* (1907); *The Heroes and Crises of Early Hebrew History* (1908, 1912); *The Kings and Prophets of Israel and Judah* (1909, 1912), *The Makers and Teachers of Judaism* (1911), *Biblical Geography and History* (1911), *Life and Teachings of Jesus According to the Earliest Records* (1913); *The Songs, Hymns, and Prayers of the Old Testament* (1914). Kent was a contributor to the **NEW INTERNATIONAL ENCYCLOPEDIA**.

KENT, EDWARD AUGUSTUS, DUKE OF (1767-1820). An English prince, the fourth son of George III and father of Queen Victoria. He entered the army and in 1794 served under Sir Charles Grey in the attack on the French West India Islands, in recognition of his valor, Fort Royal in Martinique was changed to Fort Edward. In 1799 he was made Duke of Kent and Strathearn and appointed commander in chief of the British forces in North America, and in 1805 he was made a field marshal. The name of the island of St John was changed in his honor to Prince Edward Island. In 1818 he married Victoria Mary Louisa, Dowager Princess of Leiningen.

KENT, FAIR MAID OF See **FAIR MAID OF KENT**

KENT, JACOB FORD (1835-). An American soldier. He was born in Philadelphia and graduated at West Point in 1861. He served through the Civil War, especially distinguishing himself at Spottsylvania and in the campaign before Richmond, and in October, 1864, was brevetted colonel of volunteers. At the close of the war he became assistant instructor in tactics at West Point and from 1869 to the time of the Spanish War was on frontier duty or in garrison. He took part in the Cuban campaign, commanding the forces which captured El Caney, and in July, 1898, became major general of volunteers. In the regular army he was promoted through the various grades to that of brigadier

general in October, 1898. Later in the same month he was retired.

KENT, JAMES (1763-1847). An eminent American jurist, born in Fredericksburgh, Putnam Co., N. Y., July 31, 1763, the son of Morse and Hannah Rogers Kent. His father was a lawyer of some distinction; and the son, after graduating from Yale College in 1781, entered upon the study of law, was admitted to the bar in 1785, and began the practice of his profession at Poughkeepsie. He was elected to the New York Assembly in 1790, 1792, and 1796. He removed to New York City in 1793 and during the same year was chosen to fill the new professorship of law in Columbia College. The early recognition of his abilities by Hamilton, Jay, and other leaders of the Federalist party, to which he had attached himself, led to his appointment and rapid advancement as a judicial officer. In 1797 he became recorder of New York City; a year later he was appointed a justice of the State Supreme Court by Governor Jay. In 1804 he was promoted to the chief-justiceship, and in 1814 to the position of Chancellor, then the highest judicial office in the State. This office he held until 1823, when his age reached the constitutional limit of 60 years and compelled his retirement from the bench. He had won a high reputation both as a common-law and equity judge; and his judicial opinions, printed mainly in Caines's and Johnson's reports, are still regarded as valuable and authoritative expositions of legal and equitable principles. He did more than any other judge of his time to create an American system of equity jurisdiction based on the generous principles of the English Chancery. Upon his retirement from the bench he was reappointed to the professorship of law at Columbia, which had remained unoccupied since his resignation in 1798. He entered upon his academic duties with great enthusiasm, remodeled and expanded the lectures which he had delivered under his previous appointment, and attracted a considerable number of students. Tiring of these duties, as he wrote at a later period, he abandoned them in 1826 and published a portion of his lectures in the form of volumes first and second of his famous *Commentaries upon American Law*. A third volume was added in 1828, and the fourth appeared in 1830. It has been said of these commentaries that they have had a deeper and more lasting influence in the formation of the national character than any other secular book of the last century excepting Blackstone's *Commentaries on the Laws of England*. They have passed through 14 editions and continue to rank as a legal classic. Kent died in New York City Dec. 12, 1847. Kent Hall, the building of the Law School of Columbia University, is named for him. Consult William Kent, *Memoirs and Letters of Chancellor Kent* (Boston, 1898).

KENT, WILLIAM (1684-1748). An English architect, especially of gardens, born in Yorkshire. He was apprenticed to a coach painter, but afterward studied painting in London and finally found patrons, who in 1710 sent him to Italy. While in Rome, he met the Earl of Burlington, under whose roof he lived, and in consequence of whose patronage he flourished after he returned to England. He had little success as a painter. Hogarth considered him a "contemptible dauber," and Walpole disliked his pictures and decorations, but styled him the "father of modern gardening." He was the first

landscape architect to vindicate the natural as against the artificial that had previously dominated, being, as Walpole said, "painter enough to taste the charms of landscape, bold and opinionative enough to dare to dictate, and born with a genius to strike out a great system from the twilight of imperfect essays." He was very popular in society, and his taste in art influenced the clothes, decorations, and furniture of the day. As a sculptor, he made the mediocre statue of Shakespeare in the Poets' Corner at Westminster Abbey. Among buildings designed by him are the seat of the Earl of Leicester at Holkham, the country houses of Stowe and Houghton, Devonshire House in Piccadilly, the Horse Guards at Whitehall, and an improvement in Kensington Palace. With the Earl of Burlington, he published *The Designs of Inigo Jones* (1727).

KENT, WILLIAM (1851-). An American mechanical engineer. He was born in Philadelphia and graduated (M.E.) from Stevens Institute of Technology in 1876. Between 1879 and 1890, when he established himself as a consulting engineer in New York City, he was mechanical engineer and superintendent for various industrial concerns. In 1903-08 he was dean of the College of Applied Science at Syracuse University. The circumstances connected with his leaving Syracuse attracted considerable attention in educational circles at the time. (Consult *Science*, vol. xxviii, New York, 1908.) He lectured on steam engineering at various other universities and technical schools. In addition, he patented some 20 inventions on smokeless furnaces, water-tube boilers, and weighing machines, served as editor of the *American Manufacturer and Iron World* (1877-79), associate editor of the *Engineering News* (1895-1903), and editor of *Industrial Engineering* after 1910, and is author of *The Strength of Materials* (1879, 2d ed., 1890); *Strength of Wrought Iron and Chain Cables* (1879), a standard *Mechanical Engineer's Pocket Book* (1895; 8th ed., 1910), *Steam-Boiler Economy* (1901); *Investigating an Industry* (1914).

KENT, WILLIAM (1864-). An American born in Chicago. He moved to California with his parents in 1871, graduated from Yale University in 1887; and then looked after his father's business interests in Chicago. In 1890 he entered into a partnership with his father (who died in 1901) under the name of A. E. Kent & Son, the firm dealing extensively in real estate and cattle. Later he became president of the Golconda Cattle Company of Nevada and the Kent-Jordan Company of North Carolina. He served as a member of the Chicago City Council (1895-97) and as president of the Municipal Voters' League (1899-1900). Moving to California in 1907 he was elected as an insurgent Republican to the 62d Congress (1911-13) and was reelected as an Independent in 1912 and 1914. He was actively interested in social and civic improvement.

KENTIGERN, kén'ti-gěrn, SAINT. See MUNGO, SAINT

KENTISH PLOVER. A plover (*Charadrius cantianus*, or *alexandrinus*) resembling the ringed plover and widely distributed in Europe and Asia. It is well known on the south coast of England, where it sometimes breeds. See PLOVER.

KENT ISLAND. The largest island in

Chesapeake Bay, situated east of Annapolis (Map: Maryland, G 3). It belongs to Queen Anne Co., Md., is 15 miles long by 5 miles wide, and is the centre of important oyster fisheries. Pop. 1900, 2525; 1910, 2262. Kent Island was colonized in 1631 by adventurers from Virginia and is the site of the earliest settlement in Maryland. See CLAIBORNE, WILLIAM.

KENTON. A city and the county seat of Hardin Co., Ohio, on the Scioto River, 59 miles northwest of Columbus, on the Toledo and Ohio Central, the Cleveland, Cincinnati, Chicago, and St. Louis, and the Erie railroads (Map: Ohio, C 4). It has farming and lumbering interests and manufactures of iron, iron fence, hardware, cakes and candies, toys, tools, etc. Among the more prominent structures may be mentioned the courthouse, city buildings, county jail, public library, and armory. In Kenton is found the highest point of the dividing ridge from which the waters on the north side flow into Lake Erie, and on the south into the Gulf of Mexico. Settled in 1833, Kenton was incorporated in 1885, the charter of that year now operating and providing for a government vested in a mayor, elected every two years, and a unicameral council. The city owns and operates its water works. Pop. 1900, 6852; 1910, 7185.

KENTON, SIMON (1755-1836). An American pioneer and Indian fighter, born in Fauquier Co., Va., of Scotch-Irish parentage. He received a scanty education and in 1771, after having, as he supposed, killed a companion in a fight, crossed the Alleghenies to the headwaters of the Ohio, where he assumed for a time the name of Simon Butler and became an Indian trader. Here he was associated with Simon Girty (q.v.), the renegade. During Lord Dunmore's War (q.v.) he served as a scout. Later in the frontier warfare that raged throughout the States of Ohio and Kentucky during the Revolution, Kenton served with great distinction under Boone and Clark, his fame as a frontier hero being second only to that of Boone himself. In 1778 he joined Clark at the Falls of the Ohio (Louisville) and went with him on his expedition to Kaskaskia. Later he was taken prisoner by the Indians, suffered indescribable tortures, and was twice saved from the stake by the intercessions of his old companion, Girty, and of Logan, the Mingo chief. Handed over finally to the British at Detroit, he escaped from there and made his way southward, where he continued active in the border warfare until the end of the war. After the battle of Blue Licks he settled at Maysville, Ky., served again in Wayne's campaign in 1793-94, and, after living in retirement for some years, he emerged for a short interval in 1813 to take part with the Kentucky volunteers in the Canadian campaign and was present at the British defeat on the Thames. His last years were spent in poverty in Kentucky. Consult McDonald, *Biographical Sketches of General Nathaniel Masse . . . and General Simon Kenton* (Dayton, Ohio, 1852), and C. H. L. Johnston, *Famous Scouts* (Boston, 1910), in popular narrative style.

KENT'S HOLE. A famous archaeological station near Torquay, Devonshire coast, England, yielding rude chipped and bone implements of Paleolithic type. As early as 1825 the cave was explored by MacEnery, again in 1840 by Godwin Austen, and in 1864 by Pengelly and Vivian, acting under a committee of the British Association. The deposits, in descending order,

were: (1) large blocks of limestone cemented here and there with stalagmite; (2) a layer of black mold 3 to 12 inches thick; (3) stalagmite 1 to 3 feet thick, almost continuous; (4) red cave earth varying in thickness and containing about 50 per cent of broken limestone, with bones of the horse and of animals at the present day extinct in the vicinity—mammoth, rhinoceros, wolf, and lion—and rude stone implements, (5) above the red clay and below the stalagmite in one part of the cave a thin sheet of black earth containing charcoal, flint scrapers, barbed harpoon heads, and other implements in bone and antler, besides the bones and teeth of animals. From the upper layer were taken relics of polished stone, copper, bronze, pottery of Roman times, and human bones supposed to prove cannibalism. Consult Evans, *Ancient Stone Implements of Great Britain* (New York, 1872).

KENTUCKY. One of the south-central States of the American Union, lying between the Appalachian Mountain system and the Mississippi River. It is bounded on the north by Illinois, Indiana, and Ohio, the boundary being the north shore of the Ohio River; on the northeast by West Virginia, the boundary being the middle of Big Sandy River and Tug Fork; on the southeast by Virginia, on the south by Tennessee; and on the west and northwest by Missouri and Illinois, the middle of the Mississippi River being the west boundary. It extends from lat. 36° 29' 51" N. to 39° 9' N. and from long. 81° 57' 50" W. to 89° 32' 29" W. Its greatest length from east to west is nearly 425 miles, its extreme breadth is 175 miles, and its area is 40,598 square miles, of which 417 miles are water.

Topography. The surface slopes gently to the west and northwest to the Ohio and the Mississippi rivers and may be divided into three parts. The first is a mountainous region that occupies the southeastern third of the State and forms the northward continuation of the Cumberland plateau of Tennessee. Here, however, its surface has been carved by streams into an intricate maze of narrow, steep-sided ridges separated by equally narrow, deep valleys. The ridges have an average elevation of about 2000 feet, though southeastward some rise to 4000 feet or slightly more along the Virginia line, while to the northwest they decline to 1500 feet or less and are more rounded and subdued. The main valleys in the mountains vary from 600 to 1500 feet above sea level.

The second topographic division extends from the mountain region westward, across the southern half of the State, to the Mississippi River and is a continuation of the highland rim of Tennessee. Its east border is irregular in outline and has an elevation of about 1000 to 1200 feet, while its western end along the Mississippi is only about 500 feet above the sea. Parts like the "barrens" between Green and Cumberland rivers are level; other parts are rolling to hilly. In certain parts of it sink-hole basins are a prominent feature. Some of the Mississippian limestone is very soluble, and many caverns have been formed in it, one of which, Mammoth Cave (q.v.), is the largest known cave in the world. The part west of the Tennessee River is a portion of the Gulf coastal plain.

The third division is the Lexington plain, or the blue-grass region, a circular area 90 to 110 miles in diameter in the north-central part of the State, having a gently rolling surface and

an elevation of 600 to 1000 feet. It is surrounded on the east, south, and west by the highland rim division, which rises often sharply 100 to 200 feet above its level.

The drainage system of the State is well developed and includes a number of navigable rivers and innumerable smaller tributary streams. The Mississippi flows for 80 miles along the western border and receives the entire drainage of the State, over 95 per cent of which enters it by way of the Ohio. This latter stream flows along the entire northern border of the State in a winding course of nearly 600 miles and with its larger tributaries, the Tennessee, Cumberland, Green, Salt, Kentucky, Licking, and Big Sandy, forms a highly important system of inland navigation. Millions of tons of coal pass down the Ohio annually. In their lower courses the Tennessee and the Cumberland flow northward across western Kentucky only a few miles apart. The middle course of the Cumberland is in Tennessee, but its upper portion is in southeastern Kentucky. In the limestone cavern region, which is best developed in the Green River valley, much of the drainage is through underground channels. The only lakes are the miniature ones in sink-hole basins.

Geology. Except for a few very small igneous dikes in Elliott and Crittenden counties, the rocks of the State are entirely sedimentary. The oldest rocks are Ordovician limestones that have been uparched into a very low broad dome which has been unroofed by erosion and now forms the Lexington plain or blue grass region. This is encircled on the east, south, and west by a narrow belt of Silurian limestones and Devonian shales and limestone, and about these there are Mississippian shales and limestones forming a narrow belt east of the Lexington plain but flooring a large area south and west of it. Pennsylvanian rocks, consisting of sandstones, shales, and numerous thick coal seams, form the southeastern mountain region and a part of the highland rim in western Kentucky. The Gulf coastal plain region west of the Tennessee River consists of unconsolidated sands and clays. Of these a narrow belt just west of the Tennessee River is of Cretaceous age; the rest are of Eocene age. Over this region there is a thin surface deposit of Lafayette gravel and along the Mississippi and the lower course of the Ohio loess deposits form a belt some miles in width. Pleistocene silts and recent alluvium form the flood plains of the streams. The rocks of the highland rim are flat-lying, as are those of the southeastern mountain region except along Cumberland and Pine mountains, where they have been faulted and thrust up on edge.

Soils. The most fertile soils are the well-drained flood plains of the larger streams. The blue-grass region also possesses a soil of wonderful fertility and yields abundant crops of grass, grain, fruit, tobacco, and hemp. It is underlain by phosphatic limestones whose gradual disintegration supplies the elements necessary to maintain a high degree of fertility. The soils of the highland rim are diversified. Some parts have sandy to clay loam soils that when calcareous are quite fertile, but when leached of lime may be poor. The hilly region adjacent to Indiana and Illinois has fertile loess-loam soils. The soils west of the Tennessee River consist mostly of a common clay, containing carbonate of lime and a sandy loam. In

much of the mountain region the soils are thin; but in coves, on mountain-side benches, and in occasional flood-plain areas rich soils are found. The eastern or mountainous section is largely forested with hardwoods.

Climate. The rolling to hilly surface gives protection from severe winds and makes the climate more agreeable than it is in the more open prairie States in the same latitude. The mean annual temperature varies from 55° F or slightly less in the mountains in the east to nearly 60° F. in the west.

In the summer the temperature usually rises to 100° F. or above and in winter often falls for a few days to zero and sometimes goes 5° or 10° below, but periods of extreme heat or cold are of short duration. Sudden changes are somewhat frequent. Thunderstorms accompanied by hail and high winds sometimes occur in the spring and summer, but the area affected is nearly always quite small. Tornadoes are rare. The rainfall varies from about 40 inches in the northern counties to about 53 inches in the southeast. It is well distributed through the year, but is slightly above the average in spring and slightly below it in autumn. Snow occurs every winter, but is more frequent in the mountains and is rarely deep anywhere.

Forests. Kentucky was originally completely covered with forests, except for a few "barrens" in the central portion, but now about 60 per cent of the area is cleared, and the remaining forests have been pretty well culled. About nine-tenths of the trees were (and are) deciduous hardwoods—a fact correlated with the fertility of the soil. Pines and other evergreens are chiefly confined to the rocky and mountainous portions.

The relative abundance of the more important trees is indicated roughly by the statistics of lumber production collected for the thirteenth census.

These are as follows: oak of various species (nearly half the total), yellow poplar (or tulip tree), red (sweet) gum, hickory (several species), yellow pine (meaning mostly short-leaf pine), beech, chestnut, hemlock, ash (several species), elm, basswood, maple, sycamore, cypress (in extreme western portion), walnut (central portion mostly), white pine (in mountains), spruce (in mountains), cottonwood, birch, cedar, cherry, tupelo gum (western portion).

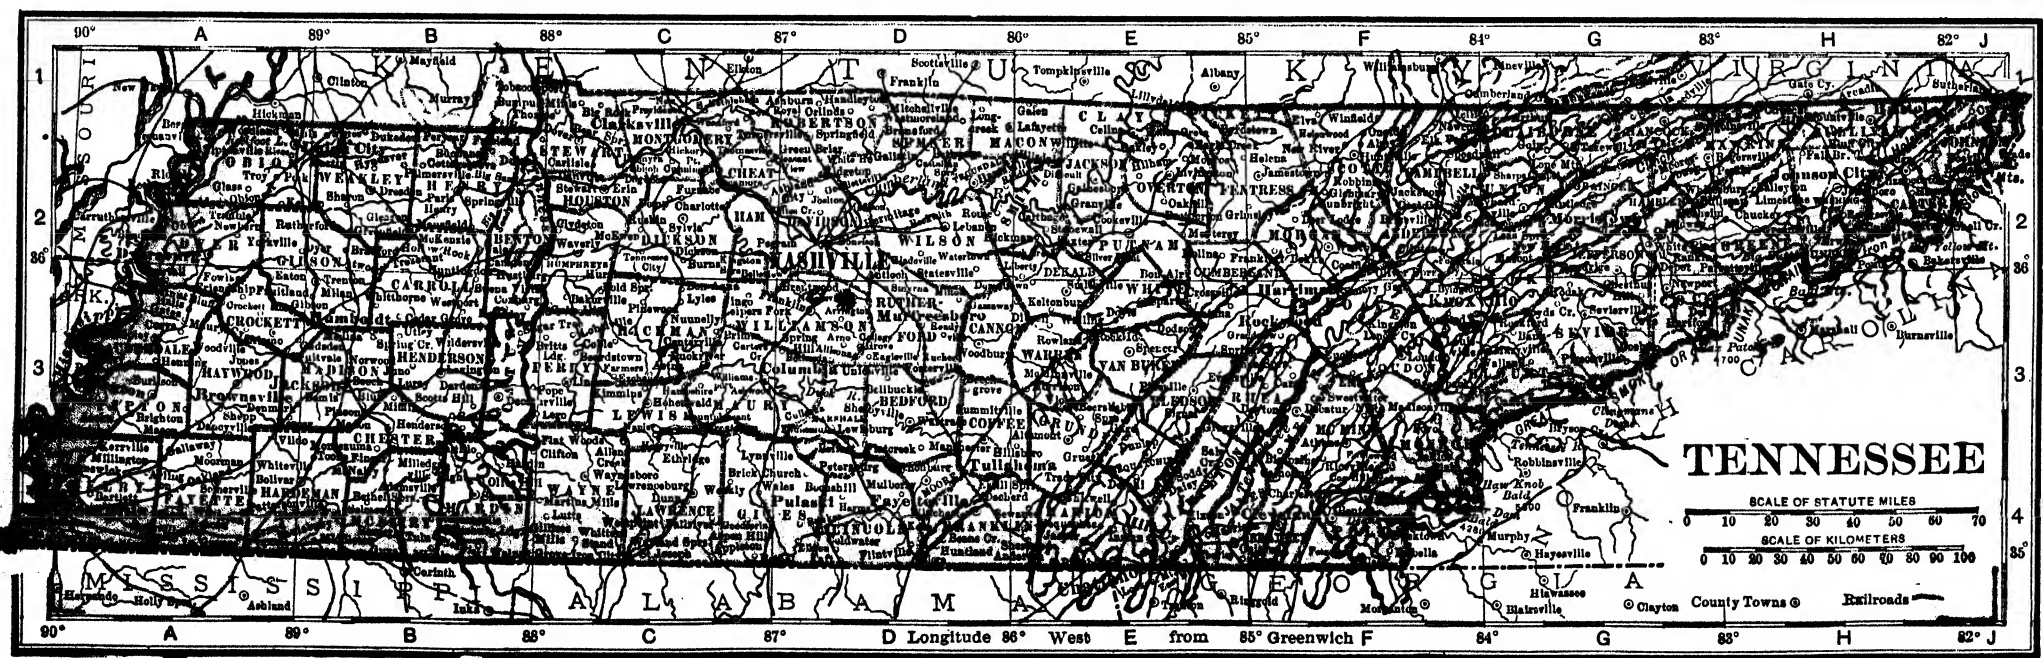

Mining. Coal is the principal mineral product.

Its value, \$20,516,749, constituted in 1913 about three-fourths of the total mineral output.

Kentucky is distinctive in containing areas belonging to two great coal fields.

The one, in the extreme east, belongs to the Appalachian system, the other, in the northwest, to the eastern interior field. In 1913 there were 26,332 men employed in the coal mines, and out of a total production of 19,616,600 tons 14,353,583 tons were machine-mined. The State was the third to enter the field of regular producers of coal; the first coal produced was mined in 1827.

The clay-working industry is second in importance, with manufactured products valued at \$2,914,276 in 1913. The principal products were fire brick and other forms of refractory material made from fire clay. Quarrying is next. The total product in 1913 was valued at \$1,150,205. Petroleum is also produced, and in 1913 the value of the output of 524,568 bar-

rels was \$675,748. The value of the natural gas produced in 1913 was \$509,846. Kentucky ranks second among the States in the production of fluor spar. Other mineral products are asphalt, cement, iron ore, lead, lime, mineral paints, oil stones, sand and gravel, sand-lime brick, and zinc. The total value of the mineral products in 1913 was \$26,845,579.

Agriculture. The State is admirably adapted for agriculture. The approximate land area is 25,715,840 acres, and of this, in 1910, 22,189,127 acres were in farms and 14,354,471 acres in improved land. The total number of farms in 1910 was 259,185, and the average acreage was 85.6. In 1910 the total value of farm property, including land, buildings, implements, and machinery, domestic animals, poultry, and bees, was \$773,797,880. In that year the value of all property per farm was \$3,000. The average value of land per acre was \$21.83. The average size of farms decreased continuously from 226.7 acres in 1850 to 85.6 acres in 1910. In the first half of the century the "plantation" was the common farm unit and had not disappeared entirely in 1870. During the last 40 years most plantations have gradually been divided into small parcels of land, largely operated by tenants. While the total number of farm operators increased 55.7 per cent from 1880 to 1910, the number of tenant farms increased 99.6 per cent. The total acreage owned, operated, or leased by white farmers in 1910 was 21,748,350, by colored farmers, 440,777. The average size of farms operated by white farmers in 1910 was 87.9 acres, which was twice as large as that of farms operated by colored farmers, 37.6 acres. In 1910 the total number of farms owned in whole or in part by the operators was 170,332. The native white farmers in 1910 numbered 245,499; foreign-born white farmers, 1956, and negro and other non-white farmers, 11,730.

The more important details in regard to the principal crops in 1913 are shown in the following table, as estimated by the United States Department of Agriculture:

CROPS	Acreage	Prod bu	Value
Corn	3,650,000	91,250,000	\$58,400,000
Oats	135,000	3,675,000	1,948,000
Wheat	780,000	12,540,000	12,916,000
Barley	5,000	142,000	109,000
Rye	22,000	301,000	286,000
Hay	750,000	*712,000	11,392,000
Potatoes	50,000	2,250,000	1,890,000
Sweet potatoes and yams	10,000	1,050,000	808,000
Tobacco	400,000	†364,000,000	30,576,000

* Tons

† Pounds

The total value of crops in 1909 was \$138,973,000, and the combined acreage was 6,046,819, representing 42.1 per cent of the total improved land in farms. The general character of the agriculture in Kentucky is indicated by the fact that somewhat more than two-fifths of the total value of crops in 1909 was contributed by the cereals and somewhat more than one-fourth by tobacco. The remainder, representing 27.6 per cent of the total, consisted mostly of potatoes and other vegetables, hay and forage, forest products, and fruits and nuts. Corn is grown most largely in the northern and north-

eastern sections along the Ohio River and in the central portion from the north to the south boundaries.

The acreage of tobacco had gained appreciably from 1879. In that year it was 226,120. This increased steadily, and the acreage in 1909 was 469,795. Tobacco is grown mostly in the counties lying in a stretch across the State from the northeast to the southwest boundaries. The annual tobacco crop has ranged from one-third to one-half of the total for the United States. The average yield per acre in 1914 was 910 pounds, and the average value per acre was \$76.44. The growing of tobacco in the State in the early part of the present century was accompanied by industrial disturbances. (See paragraphs on *History* below.)

In 1909 the total acreage of potatoes and other vegetables was 182,639, and their value \$11,800,000. Including potatoes and sweet potatoes and yams, the acreage of vegetables was 115,007, and the value \$8,287,000. The raising of flowers and plants and of nursery products is of some importance. In 1909 the value of these was \$508,372. The orchard fruit trees of bearing age in 1910 numbered 8,722,441, and from these there were produced 9,447,858 bushels of fruit, valued at \$4,506,950. The most important fruit is the apple, and second in point of value are peaches. In 1909 there were grown 3,680,182 pounds of grapes, valued at \$137,326. Of small fruits there were produced, in 1909, 4,972,702 quarts, valued at \$357,597.

Kentucky produces about nine-tenths of the hemp of the United States. The acreage devoted to this crop in 1909 was 6855, and the production was 6,420,232 pounds, valued at \$348,386, being greatest in the vicinity of Lexington and in the adjacent counties to the south. (For a graphic account of hemp culture in Kentucky, see chapter I of James Lane Allen's novel, *The Reign of Law*.) Cotton is grown on a small scale in the extreme southwest corner. There were produced, in 1909, 3469 bales, valued at \$223,024. The acreage devoted to cotton was 7811. Sorghum cane forms an important crop. In 1909, 62,327 acres were devoted to this. The product was 226,303 tons, valued at \$1,416,565. From this 2,733,683 gallons of sirup, valued at \$1,216,426, were made.

Live Stock and Dairy Products. The excellence of the forage in certain portions, the large production of corn, and the favorable climate have made stock raising an important industry. Kentucky is famous for its horses, and there has been developed a breed of road horse which is probably the best known and most highly valued of any American breed. Many of the fastest American horses were bred in the famous blue-grass region. No other part of the United States has so many farms devoted to the raising and breeding of horses. The total value of live stock in 1910 was \$112,605,412. According to the estimates of the United States Department of Agriculture, cattle other than milch cows on Jan. 1, 1915, numbered 543,000, valued at \$16,507,000, milch cows, 390,000, valued at \$17,745,000, horses, 443,000, valued at \$42,085,000; mules, 231,000, valued at \$24,486,000; swine, 1,582,000, valued at \$11,390,000; sheep, 1,229,000, valued at \$5,162,000. The fowls of all kinds in 1910 numbered 8,764,204, with a value of \$4,461,871.

Dairy products, including milk, cream, butter fat, butter, and cheese, in 1909 were valued at

\$9,065,813. The milk produced was 125,566,917 gallons, and the butter made was 38,130,687 pounds, valued at \$7,117,905. The milk sold was valued at \$1,793,142.

Forest Products. In 1910, 91,051 farms reported forest products, which include firewood, fencing material, logs, railroad ties, telegraph and telephone poles, etc. The total value of these products was \$7,843,142. Of the value, \$3,581,244 was that of products used or to be used on the farms themselves, \$3,237,101 of products sold or for sale, and \$1,024,797 the amount received for standing timber. These figures do not include those of forest products not produced on farms. The total quantity of rough lumber cut in 1909 was 860,712 thousand feet. This was chiefly hardwood—oak and yellow poplar. There were also sawed, in 1909, 19,776 thousands of lath and 55,010 thousands of shingles.

Manufactures. Kentucky is notably an agricultural State, but its manufacturing indus-

tries are important and have increased steadily from the middle of the nineteenth century. Growth is shown by the fact that in 1849 the total value of the industries, including the products of the neighborhood and hand industries, amounted to only \$21,710,000, while in 1909, exclusive of the products of the neighborhood and hand industries, it was more than 10 times as great, amounting to \$223,754,000. From 1849 to 1909, however, the proportion which the manufactures of the State represented for the total value of the products of manufacturing industries in the United States decreased somewhat. This proportion was 2.1 per cent in 1849 and but 1.1 per cent in 1909. In 1909 Kentucky ranked twentieth among the States in gross value of manufactured products. The following table gives the most important details in regard to industries in 1909, compared with 1904. Only those industries whose product in 1909 was valued at more than \$1,000,000 are included in this table.

COMPARATIVE SUMMARY FOR 1909 AND 1904
THE STATE — ALL INDUSTRIES COMBINED AND SELECTED INDUSTRIES

INDUSTRY	Cen- sus	Num- ber of estab- lish- ments	PERSONS EN- GAGED IN INDUSTRY		Capital	Wages	Cost of mate- rials	Value of prod- ucts	Value added by manu- fac- ture
			Total	Wage earners (aver- age num- ber)					
All industries	1909 1904	4,776 3,734	79,060 69,755	65,400 59,794	\$172,779 147,282	\$27,888 24,439	\$111,779 86,545	\$223,754 159,754	\$111,975 73,209
Boots and shoes, including out stock and findings	1909 1904	13 9	570 720	426 659	1,700 756	171 200	2,444 1,360	3,248 1,930	804 570
Bread and other bakery products	1909 1904	286 237	1,433 1,056	985 744	2,198 1,114	485 350	1,946 1,400	3,338 2,225	1,392 825
Brick and tile	1909 1904	82 88	1,267 1,277	1,125 1,114	2,160 1,563	400 362	234 176	1,015 887	781 711
Canning and preserving	1909 1904	36 16	876 607	653 520	1,562 724	177 101	1,093 706	1,857 1,096	764 390
Carriages and wagons and materials	1909 1904	161 131	3,263 3,119	2,777 2,734	7,759 5,309	1,164 1,104	2,713 2,814	5,141 5,505	2,428 2,691
Cars and general shop construction, repairs by steam-railroad companies	1909 1904	24 24	5,887 4,773	5,605 4,588	5,600 2,413	3,240 2,525	2,900 2,956	6,535 5,739	3,635 2,783
Clothing, men's, including shirts	1909 1904	123 141	4,399 4,198	3,849 3,759	3,746 4,870	1,184 1,055	3,276 3,381	6,052 6,433	2,711 3,052

Although a few industries predominate greatly in importance in the State, there is considerable diversity in manufacturing activities. The most important single industry is the manufacture of distilled liquors, in the production of which Kentucky held second place in 1909. In that year the value of the product was \$44,360,000, or 21.7 per cent of the total reported for the country. The distilling of liquors began practically in the earliest period. In 1794 a large number of distillers removed to Kentucky from Pennsylvania as a result of the whisky rebellion. The product took the name of the county in which most of them settled, Bourbon. The group of industries second in importance and value of products is that related to flour-mill and gristmill products. These show an increase of 71.8 per cent for the decade 1899-1909. With the exception of the lumber industry there were more establishments engaged in the manufacture of flour-mill and gristmill products in 1909 than in any other industry. The lumber and timber industry ranks third. This includes the logging plants, the chief products of which are logs and bolts, sawmills, shingle mills, and planing mills, producing rough lumber, shingles, logs, cooperage stock, sash, doors, blinds, interior finish, and other millwork, and the wooden packing-box factories. The importance of the industry is indicated by the fact that it gave employment in 1909 to more than twice as many wage earners as any other industry. The manu-

factures of tobacco occupy fourth rank in the value of products. These include establishments engaged in the manufacture of cigars, cigarettes, chewing and smoking tobacco, and snuff. The factories of Kentucky are engaged chiefly in the manufacture of chewing and smoking tobacco and snuff. Kentucky is the leading tobacco-growing State in the Union (see *Agriculture*, above) and was one of the first States to engage in tobacco manufactures on a factory basis. The industries related to iron and steel are of great importance. Because of the extensive iron-ore deposits which exist in about one-fourth of the counties of the State, the manufacture of iron and steel was one of the first industries to be developed. There were seven steelworks and rolling mills in the State in 1909.

The wage earners included 55,636 males and 9764 females. For the great majority of wage earners employed in the manufacturing industries the prevailing hours of labor in 1909 ranged from 54 to 60 a week, inclusive. Although cities of 10,000 inhabitants or over contained only 17.6 per cent of the total population and 32.7 per cent of all manufacturing establishments in 1909, the establishments located in such cities gave employment to 61.1 per cent of all wage earners and reported 59.8 per cent of the total value of products. Louisville (q.v.), the largest city, and Covington (q.v.) are important manufacturing centres. Other cities of industrial importance are Newport, Paducah,

Owensboro, Frankfort, Henderson, and Lexington. Details of these cities are given under the individual articles.

Transportation. The State has excellent transportation facilities both by land and water. Transportation on the latter is furnished by the Mississippi, Ohio, Cumberland, and Tennessee rivers and by a number of smaller navigable streams. The Federal government has made some improvements. Transportation on the Ohio has been much improved by the construction of a canal around the falls at Louisville. A considerable portion of the eastern half of the State is broken and mountainous, and large districts are untouched by railroads. The principal period of railroad construction was between 1880 and 1890, when the mileage increased from 1530 to 2942. On June 30, 1913, the mileage of steam railroads was 3789, and the mileage of electric railways was 493 in 1912. The longest lines are the Louisville and Nashville, the Illinois Central, the Cincinnati, New Orleans, and Texas Pacific Railway, the Chesapeake and Ohio, the Louisville, Henderson, and St. Louis, and the Southern Railway. The State has a railroad commission which has power to hear and determine complaints and to regulate railroad rates. There were, in 1913, 183 miles of interurban railroad.

Banking. The first bank chartered in the State was the Bank of Kentucky, chartered at Frankfort, in 1806, with a capital of \$1,000,000. Branches were organized in other towns. The State owned a part of the shares and was therefore interested in it. The first general banking act was passed in 1818. This authorized the establishment of 40 banks, to which six were added in 1819. As a result of extensive credit given with real estate as security, the Bank of Kentucky and several others fell into financial difficulties in 1819. In the following year the Bank of the Commonwealth in Kentucky was established. This was a State institution. Its profits were to go to the State, and its notes were made legal tender. In order to assist the bank, the Legislature repealed the charter of the Bank of Kentucky in 1822. The Bank of the Commonwealth was unsound, and its notes became of little value. The institution went into liquidation in 1829. For a time the only banks in the State were the branches of the Bank of the United States. In 1834, however, three large banks were chartered. These had an aggregate capital of \$13,000,000, and for a period they flourished. In the crisis of 1837 all suspended specie payment and until 1844 were in a very precarious condition. The banking system underwent another critical period in 1854, when 27 banks failed. From 1890 to 1893 many smaller banks failed, when larger institutions were undisturbed. There were, in 1913, 135 national banks, with a capital of \$12,195,900 and deposits subject to check amounting to \$43,223,190. There were 416 State banks, with deposits subject to check amounting to \$33,840,404 and savings deposits amounting to \$10,666,512. There were also 15 State stock savings banks, with 12,665 depositors, deposits subject to check amounting to \$1,791,670, and savings deposits amounting to \$3,750,446. In addition there were 45 loan and trust companies, with deposits subject to check aggregating \$8,176,990 and savings deposits amounting to \$4,219,665.

Government. The present constitution was

adopted in 1891. The State has been governed under three previous constitutions—those of 1792, 1799, and 1850. Amendments to the constitution may be proposed in either House, and if they receive a three-fifths vote of all the members elected to each House they are submitted to the popular vote. If a majority is cast in favor of them, they then become a part of the constitution. A majority of each House concurring at two consecutive sessions to a proposal to call a constitutional convention, it is submitted to a vote of the people, and if approved by a majority of those voting, provided the number is equal to one-fourth of the qualified voters who voted at the last preceding election, a convention will be called.

Legislative.—Legislative power is vested in the House of Representatives and the Senate, jointly known as the General Assembly. There are 100 Representatives, elected for two years, and 38 Senators, elected for four years. Regular sessions are limited to 60 legislative days. The Legislature meets on the first Tuesday after the first Monday in January of even years.

Executive.—The chief executive power of the State is vested in a Governor, elected for four years. He is not eligible for a succeeding term. The Lieutenant Governor is elected for four years and acts as President pro tempore of the Senate. The other executive officers, also elected for four years, are Auditor, Register of the Land Office, Commissioner of Agriculture, Labor, and Statistics, Superintendent of Public Instruction, Secretary of State, Treasurer, and Attorney-General. If a vacancy occurs in the office of Governor in the first two years of his term, a new election is held. If, however, it occurs during the last two years, the Lieutenant Governor serves out the term.

Judiciary.—The judicial power is vested in a supreme court known as the Court of Appeals, consisting of not less than five nor more than seven judges, elected for eight years. The judge longest in service acts as Chief Justice. Each judicial district has a circuit court, with a judge serving for six years. In each there are also so-called quarterly courts, the judges of which are also justices of the county courts.

Suffrage and Elections.—Every male citizen of the United States is entitled to vote who has resided in the State one year, in the county for six months, and in the precinct 60 days. Women can vote for school and library officers. All general elections are held on the first Tuesday after the first Monday in November. Only district and State officers and members of the municipal legislative boards may be elected in the same year in which members of the House of Representatives in the United States are elected. The Legislature of 1912 passed a primary-election law, revised in 1914, providing for the nomination of candidates at primary elections. This does not apply to candidates for school officers, nor to trustees in towns of the fifth and sixth classes, nor to candidates for presidential electives. Party candidates for the United States Senate are nominated by a preference vote. In 1914 the Legislature passed a measure making provision for the election of Senators in conformity with the national constitutional amendment providing for the direct election of Senators. A political party is defined by this act as an affiliation or organization of electors representing a political policy and having a constituted authority for its government and

regulation, and which, at the last preceding election at which presidential electors were voted for, cast at least 20 per cent of the total vote cast at such an election.

Local and Municipal Government.—Towns and cities of the State are divided into six classes. Those with a population of 100,000 and over constitute the first class, those of 20,000 and less than 100,000, the second; those of 8000 and less than 20,000, the third; those of 3000 and less than 8000, the fourth, those of 1000 and less than 3000, the fifth; those of less than 1000, the sixth. Cities of the first, second, third, and fourth classes are permitted to adopt a commission form of government. At the end of 1913 the cities of Covington, Lexington, Newport, Paducah, Mount Sterling, and Danville had voted for this form of government. Each county has a judge of the county court, a clerk, attorney, sheriff, jailer, coroner, surveyor, and assessor, and in each justice's district one justice of the peace and one constable are elected for terms of four years. Each county has a financial board composed of the county judge and a justice of the peace or of the county judge and three commissioners elected on a general ticket.

Miscellaneous Constitutional and Statutory Provisions.—The marriage of whites and negroes is prohibited. A child-labor law passed in 1908 prohibits children under 14 years of age from working during school terms and restricts the character of employment for all those under 16 years of age. There is an eight-hour day for all laborers and mechanics employed on the public works either of the State or by a public contractor. The sale of liquor is regulated by local-option laws. Previous to 1912 the county unit law exempted cities of 3000 population, but the Legislature in that year extended the law to include all cities in the county vote. The same Legislature passed a measure forbidding the sale of liquors in dry territory. The cities of 5000 or more under no-license on May 1, 1913, were Danville, Mayfield, Richmond, and Bowling Green. On that date there were 91 counties under no-license.

Finance. The report of the State Treasurer for the fiscal year ending June 30, 1913, shows that there was a balance in the Treasury on July 1, 1912, of \$300,549. The receipts for the fiscal year amounted to \$7,666,781. The disbursements for the same period were \$7,605,427, leaving a balance on June 30, 1913, of \$361,903. The bonded indebtedness includes a bill dated July 1, 1897, for \$165,000, to the Agricultural and Mechanical College of Kentucky and the State Normal School for Colored Persons. This bond is a perpetual obligation of the Commonwealth, and the interest is a perpetual charge upon the Treasury. In addition to these, bonds valued at about \$2,300,000 are held by the Board of Education. The total debt in 1913 was \$4,452,000. The debt per capita was \$190, compared with per capita debt of \$162 for the entire United States.

Militia. The organized militia includes a brigade of infantry, composed of the first, second, and third infantry, a detachment of sanitary troops, and a field hospital. There were, in 1913, 1843 enlisted men and 170 officers. The males of militia age, from 18 to 44 years in 1910, numbered 457,493.

Population. The following is the population of Kentucky by decades: 1790, 73,677; 1800, 220,955; 1810, 406,511; 1820, 564,317; 1830,

637,917; 1840, 779,828; 1850, 982,405; 1860, 1,155,684; 1870, 1,321,011; 1880, 1,648,690; 1890, 1,858,635; 1900, 2,147,174; 1910, 2,289,905. The estimated population on July 1, 1914, was 2,350,131. The population per square mile in 1910 was 57. For the three decades ending with 1840 Kentucky held sixth rank among the States in population, but this position has been gradually lowered, until in 1910 it was fourteenth. The urban population (places of 2500 or more) in 1910 was 555,442, while the rural population was 1,734,463. The white population in 1910 was 2,027,941, while the negro population was 261,656. Kentucky, like most of the Southern States, has a small foreign-born population. There were, in 1900, 1,161,709 males and 1,128,196 females. The males of voting age numbered 603,654. There are only two cities with a population of over 50,000, Louisville and Covington. The former had in 1910 a population of 223,928, and Covington had in the same year, 53,270. Other important cities, with their populations in 1910, are Lexington, 35,099; Newport, 30,309; Paducah, 22,760; Owensboro, 16,011; Henderson, 11,452; Frankfort, 10,465. Of the entire population in 1910, 24.3 per cent resided in cities and in incorporated towns having a population of 2500 or over. The capital is Frankfort.

Education. In the development of its educational system Kentucky has encountered problems similar to those of the other Southern States which have a large negro and rural population. Educational development is steadily improving, and in 1910 there were 208,084 illiterates, about 12.1 per cent. Of these, 145,156 were of native parentage, 3300 foreign-born whites, and 57,900 negroes. The percentage of illiteracy among negroes decreased from 40.1 per cent in 1900 to 27.6 per cent in 1910, a much greater gain than was made by the white population. According to the thirteenth census the total school population in 1910 was 755,709. In 1912-13 the rural school population was 596,351, and the city school population was 141,604. The legislatures from 1906 to 1913 passed a number of excellent measures which resulted in an improvement in conditions. The Legislature of 1912 passed a school-inspection law, an act providing for the supervision of rural schools, a measure providing for the raising of standard of qualification and increasing the salary of county superintendents, an act providing for a teachers' salary schedule, a compulsory-attendance law for rural schools, and a measure giving to women the right of school suffrage.

Although the rural schools have made great progress it has not been commensurate with that made by the city schools. This is due to a lack of supervision. The legislation of 1912 tended to offset this and other faults. Prior to the enactment of the compulsory-attendance law in 1912 there was little effort made to enforce such measures for compulsory attendance as were then in the statutes. The State Board of Education has organized school-improvement leagues, and these have produced excellent results. At the end of 1913 nearly 1000 leagues had been formed. The total number of schools for white children in 1912-13 was 7174, and colored schools numbered 794. There were, in 1913, 168 county high schools, in which were enrolled 3909 pupils. Disbursements for educational purposes for rural schools in 1912-13

amounted to \$4,390,507, and \$2,248,964 for city schools. Schools for the education of special classes such as the Institution for the Blind at Louisville, the Kentucky School for the Deaf at Danville, and the Kentucky Institution for Feeble-Minded Children at Frankfort, are maintained. The normal schools are the Eastern Kentucky State Normal School at Richmond, the Western Kentucky State Normal School at Bowling Green, and the Kentucky Normal and Industrial Institute for colored persons at Frankfort. The institutions for higher education are the State University of Kentucky at Lexington, Berea College at Berea, Ogden College at Bowling Green, Central University of Kentucky at Danville, Georgetown College at Georgetown, McLean College at Hopkinsville, Transylvania University at Lexington, University of Louisville at Louisville, Bethel College at Russellville, St. Mary's College at St. Mary, Kentucky Wesleyan University at Winchester. Colleges for women are Liberty College for Women at Glasgow, Beaumont College at Harrodsburg, Bethel Female College at Hopkinsville, Hamilton College for Women at Lexington, Logan Female College at Russellville, and Margaret College at Versailles. Schools for negroes are Bowling Green Academy at Bowling Green, Free Memorial Institute at Camp Nelson, Eckstein Norton Institute at Cave Spring, Danville Polytechnic Seminary at Danville, Wayne Institute at Harrodsburg, Louisville Christian Bible School at Louisville, and the Atkinson Literary and Industrial College at Madisonville.

Charities and Corrections. Charitable and penal institutions include the Eastern State Hospital at Lexington, the Central State Hospital at Lakeland, the Western State Hospital at Hopkinsville, and the Institute for Feeble-Minded Children at Frankfort. As noted in the paragraph on *Education* above, institutions for the education of blind and deaf are also maintained. There are State prisons at Frankfort and Eddyville. There is also a Confederate Soldiers' Home at Pewee Valley. In 1912 a tuberculosis hospital was opened at the Eddyville penitentiary. A tuberculosis hospital was also built in 1912 in the Central Hospital at Lakeland, and a tuberculosis colony was established in 1910 at the Western Hospital at Hopkinsville. The charitable and correctional institutions are under the supervision of the State Board of Control.

Religion. The two religious denominations which are strongest in the other Southern States predominate also in Kentucky, viz., the Baptists and the Methodists, the former having the larger number of members. The Disciples of Christ are also very strongly represented in the State. The most important of the other denominations are Roman Catholics and Presbyterians.

History. Kentucky was originally a portion of Fincastle Co., Va., and was first visited by Dr. Thomas Walker in 1750. Frequent visits followed after 1765, a notable one of these being an exploring expedition made by John Finley and a few companions from North Carolina in 1767. Two years later Daniel Boone and five companions from the Yadkin settlements came to eastern Kentucky, but it was not until 1774 that the first effort to plant a colony was undertaken. In June of that year James Harrod and 40 associates from the Monongahela country made the first permanent settlement in Kentucky. It was located in what is now Mercer

County and was given the name of Harrodsburg. In 1775 Daniel Boone planted a settlement to which he gave the name of Boonesborough. The favorable land policy of Virginia encouraged immigration to the new country, but the settlers soon found themselves in a life-and-death struggle with the Indians, who claimed the land. In 1774 a Virginian force administered a crushing defeat to the Northwestern Indians at Point Pleasant (q.v.), and forced them to cede their claims to their Kentucky lands and to retire beyond the Ohio. In the same year Daniel Boone concluded a treaty with the Cherokees at Wataga by which they sold for 10,000 pounds sterling their flimsy claim to the lands between the Ohio and Cumberland rivers and west and south of the Kentucky River (amounting to 17,000,000 acres, or about one-half the present area of the State) to Richard Henderson and his associates, who styled themselves the Transylvania Company. Virginia claimed the territory in question and refused to recognize the validity of the sale, but the Legislature consented in 1778 to give the company a title to 200,000 acres and to confirm the sales already made to innocent purchasers.

In May, 1775, the first effort at State building was begun. At the call of Colonel Henderson a convention met at Boonesborough and adopted a code of nine laws for the government of the self-constituted Commonwealth, but its work was disallowed by the Legislature of Virginia. The following year, by act of the Legislature, the new country was separated from Fincastle County and organized under the name of Kentucky County, with Harrodsburg as the county seat and with separate representatives in the Virginia Legislature. Meantime struggles with the Indians were almost constantly occurring. In 1782 a desperate battle was fought at the Blue Lick Springs, resulting in the defeat of the whites and the death of over 60 of their men (about one-tenth of the fighting population), among the number being some of the most prominent leaders in Kentucky. By this time agitation for separation from Virginia and independent State government was well under way. There were now three counties in Kentucky and an estimated population of 30,000 inhabitants. In 1784 an informal convention was held at Danville to discuss the question of separation. It was followed by a more regular convention in May, 1785, and a third in August of the same year, both being held at Danville. A petition for separation was sent to the Virginia Legislature, and it was promptly and favorably acted upon, the only condition being ratification by a fourth convention, and the consent of the Congress of the Confederation. In 1787 the fourth convention met to accept the conditions, when the information came that the Legislature had repealed its act to allow separation. This action caused great chagrin among the settlers and led to threats of secession. The discontent was increased by a rumor that the United States had agreed to surrender to Spain the right of navigating the Mississippi River in return for other advantages in which Kentucky would have no share. The intrigues of Spain through the promise of special commercial advantages to induce Kentucky to set up an independent government caused but a trifling flurry. The inhabitants in general stood firmly by the American Union. In November, 1787, a fifth convention met at Danville to discuss the situa-

tion. Meantime a third act of separation was passed. The conditions of this act were such that they were rejected by a sixth convention. Finally a fourth act was passed and a seventh convention met at Danville in July, 1790, and accepted the conditions. By an Act of Feb. 1, 1791, Congress agreed to admit Kentucky to the Union June 1, 1792.

In April, 1792, a ninth convention met at Danville and adopted a constitution of government; Isaac Shelby was chosen as the first Governor, and, after a spirited struggle, Frankfort was chosen as the capital. In July, 1799, a new constitution was adopted which made the Governor and other State officers elective by the people instead of by electors. In the War of 1812 Kentucky took a distinguished part. Seven thousand volunteers, far more than Kentucky's quota, offered their services, and her troops fought gallantly in most of the battles in the northern part of the United States and in Canada, and about one-fourth of Jackson's army at New Orleans consisted of Kentucky riflemen. From the War of 1812 to the Mexican War the chief questions of interest in the history of Kentucky relate to financial and economic measures. Like the other Western States, Kentucky was swept into the financial craze. In 1818 the Legislature chartered 46 banks with a total capital of \$8,720,000. In less than two years most of them had collapsed, and ruin confronted large numbers of the people. The Legislature was appealed to for relief, and a measure for that purpose was passed, but the Supreme Court held it null and void. Not to be outdone, the relief party carried the Legislature, the judges were legislated out of office, and a new court created and filled with judges favorable to the relief measure. The old court refused to give way, and for a time there were two Supreme Courts, their supporters throughout the State being known as the Old Court and New Court parties. The Old Court party finally triumphed. In the Mexican War, as in the War of 1812, Kentucky took an honorable part. Although her quota was but 2400, more than 10,000 volunteered, and Kentucky troops participated in most of the battles fought on Mexican soil. In 1850 a new constitution was adopted which made all judges and county officers elective.

Upon the outbreak of the Civil War Kentucky attempted to maintain a position of neutrality, but the geographical position of the State rendered the scheme impossible. The Governor rejected President Lincoln's call for troops, and when the Confederate and Union armies began to pour into the State from opposite directions formal demands were made for their withdrawal. The Union armies soon took possession, and by 1862 the Confederate forces had evacuated the State. The more important military operations in Kentucky were the battles of Mill Spring, Richmond, and Perryville, the invasion of General Bragg, the five successive cavalry raids of the Confederate General Morgan, and Forrest's attack on Paducah. Including the so-called Home Guards and those who enlisted but were never mustered in, Kentucky furnished more than 90,000 troops to the Union army and 40,000 to the Confederacy. A considerable portion of the population adhered to the Confederacy, and in November, 1862, a convention irregularly chosen and claiming to represent 65 counties of the State passed an ordinance of secession, and the Confederate Congress went through the form

of admitting the State to the Confederacy. Kentucky escaped from the carpetbag and military régimes, the civil authority having been reestablished in October, 1865.

Political conditions have given rise to a number of bitter feuds. One of these resulted in 1900 in the assassination of William Goebel, Democratic contestant for Governor. Mr. Goebel was nominated in June, 1899; but a faction of the Democratic party, angered by his alleged unscrupulous political methods, nominated an independent candidate, who received so many votes that W. S. Taylor, the Republican candidate, was declared elected. Previous to this, however, a clause in the election law had been inserted, through the efforts of Mr. Goebel, providing that the Legislature could, for cause, set aside the decision of the election commissioners. A committee of the Legislature was prepared to submit to that body a report unseating Governor Taylor in Mr. Goebel's favor, when on January 30 the latter was shot from a window in the State House. He took the oath as Governor on his deathbed, and upon his death J. C. W. Beckham, then Lieutenant Governor on the Democratic ticket, was sworn in as Governor. Warrants were issued for the arrest of Caleb Powers, Republican Secretary of State, and others identified with the Republican party. Mr. Taylor, who was also accused of complicity in the murder, left the State and remained in exile until the election of Governor Willson, noted below. On August 18 Mr. Powers was convicted as being an accessory to the murder and was sentenced to life imprisonment. An appeal was taken to the Court of Appeals, which granted him a new trial. On Sept. 1, 1901, he was reindicted and was tried again in October and was again found guilty. This verdict was for the second time set aside on appeal, as was a third. On Nov. 12, 1907, Powers having spent the intervening time in prison, a fourth trial resulted in a disagreement. On May 3, 1908, Powers was pardoned by Governor Willson. He was afterward a candidate for the national House of Representatives, was elected to Congress in 1911, and reelected in 1913.

Serious conditions in the tobacco fields of the State, beginning about 1906, resulted in what came to be almost a state of civil war. A number of tobacco producers, dissatisfied with the prices of tobacco obtained from the American Tobacco Company, organized what was known as the American Society of Equity, with the ostensible purpose of controlling the price of tobacco. A number of growers, however, refused to join this association, and there were organized against them a series of attacks by so-called "night riders." On Dec. 5, 1907, 500 of these night riders, masked and heavily armed, destroyed property in the city of Hopkinsville valued at \$200,000. Raids on other towns followed. State troops were called out by Governor Willson, and he also endeavored to bring about a peaceful solution of the troubles by conferences between the tobacco growers, societies, and tobacco buyers. The situation was complicated as a result of protests from the Italian government to the Secretary of State on account of the destruction of the property of Italian citizens, valued at about \$15,000, during the raid on Hopkinsville. Governor Willson's efforts did not succeed, and conditions grew worse in 1908. On January 3 the Governor issued a proclamation in which he offered a

reward of \$500 for the conviction of any person implicated in the raid of the night riders in the dark-tobacco belt. Nevertheless raids of the night riders continued. Tobacco warehouses were burned; many tobacco buyers and others were assaulted, and the property of many persons not involved in the feud was destroyed. Martial law was declared in several counties, and State troops were sent to preserve order. The reign of lawlessness continued during the summer and early months of autumn, 1908. On October 12, as a result of the murder of a tobacco farmer in Hickman County, together with his wife and two children, Governor Willson made a final appeal to the people to put an end to the outrages. In November of that year an arrangement was made between the American Society of Equity and the American Tobacco Company, whereby the latter was to buy tobacco at the rates insisted on by the associated growers. Night riding, however, continued in 1909, although to a less serious extent. Several suits for damages were won by independent tobacco manufacturers against the Burley Tobacco Society, an organization formed to control the price of tobacco in the Burley District. The Legislature of 1910 passed a measure making it lawful for farmers to abstain from growing any kind of crop for any given period or season, and to combine or pool crops of certain commodities in order to obtain a higher price therefor. This legislation, together with an agreement by the American Tobacco Company to purchase tobacco at a fixed price, resulted in the cessation of night riding and the restoration of normal conditions.

The election of State officers held on Nov. 5, 1907, resulted in the success of Augustus E. Willson, the Republican candidate, who received 214,481 votes, compared with 196,428 votes for his Democratic opponent Mr. Willson was the first Republican Governor elected and seated since 1895. The most notable event in the political history of the State in 1908 was the election of a Republican Senator to succeed James B. McCreary for the term beginning March 4, 1909. After a deadlock that lasted two months William O. Bradley, former Governor, was elected. In the election of Nov. 3, 1908, Bryan received 244,092 votes, Taft 234,711, Debs 4060. The election held on Nov. 7, 1911, resulted in an overwhelming victory for the Democratic nominees. The State, which for four years had had a Republican Governor, gave Mr. McCreary, the Democratic nominee, a plurality of 31,335 votes. The Democrats also obtained a strong majority in the Legislature. The Legislature elected Ollie M. James United States Senator on Jan. 10, 1912. In the national election held on November 5 Wilson received 219,584 votes, Taft 115,512, Roosevelt 102,766, Debs 11,647. On March 13, 1914, the House of Representatives defeated a resolution to submit to the people an amendment to the constitution allowing women to vote. The Senate on March 17, 1914, rejected a State-wide prohibition bill passed several days previous by the House. Senator Bradley died on May 23, 1914, and Johnson N. Camden was appointed to fill the vacancy caused by his death. The following November ex-Governor Beckham was elected to succeed Senator Camden. The State has 11 representatives in Congress and 13 electoral votes.

In national elections Kentucky was a Democratic State from the date of its admission till

the formation of parties about 1828. It voted for Clay in 1824 and for Jackson in 1828, but from this time till 1852 it was one of the strongest Whig States. It cast its vote for Buchanan in 1856 and for Bell in 1860. Since that time it has been Democratic, with the exception of the year 1896, when it cast 12 of its electoral votes for Mr. McKinley and one for Mr. Bryan. The Governors of the State with their party affiliations have been as follows:

Isaac Shelby	Democrat-Republican	1792-96
James Garrard	"	1796-1804
Christopher Greenup	"	1804-08
Charles Scott	"	1808-12
Isaac Shelby	"	1812-16

son Club (Louisville) and the annual reports of the State departments.

KENTUCKY. A river in the State of Kentucky. It is formed by several forks in the Cumberland Mountains on the southeastern boundary of the State and flows in a winding northwest course for 260 miles, emptying into the Ohio River midway between Cincinnati and Louisville (Map Kentucky, F 2). It flows through a region of romantic beauty, passing for a long distance between perpendicular rocks of limestone, through which it has worn its way. The region abounds in coal, iron, salt, and an excellent variety of marble. The navigation of the river has been improved by a system of locks and dams constructed at great cost, so that steamboats can ascend it 60 miles to Frankfort and flatboats 100 miles farther.

KENTUCKY, THE STATE UNIVERSITY OF. A coeducational institution for higher education at Lexington, Ky. It was established in 1865 as a part of the University of Kentucky now known as Transylvania University, under denominational control. It remained a part of that institution until 1880, when it was reorganized under the control of the State, with the name of the State University of Kentucky. The university has a campus of 52 acres, which was given by the city of Lexington. It has college buildings and equipment valued at \$750,000. Its departments include the College of Arts and Sciences, College of Agriculture, College of Civil Engineering, College of Mechanical and Electrical Engineering, College of Mines and Metallurgy, College of Law, and Graduate School. There is also connected with the university an agricultural experiment station with a farm of 250 acres and farm equipment valued at \$175,000. The total income of the university in 1913-14 was about \$200,000. Of this \$140,000 were from State appropriations and the remainder from national appropriations. The attendance in all departments of the university in 1913-14 was 1245, and the faculty included 75 professors and instructors. The library contained about 30,000 volumes. The president in 1914 was Henry Stiles Barker, LL.D.

KENTUCKY COFFEE TREE. A North American tree. See GYMNOCLADUS.

KENTUCKY RESOLUTIONS. See VIRGINIA AND KENTUCKY RESOLUTIONS.

KENTUCKY STATE AGRICULTURAL AND MECHANICAL COLLEGE. See KENTUCKY, THE STATE UNIVERSITY OF.

KENTUCKY UNIVERSITY. See TRANSYLVANIA UNIVERSITY.

KENTUCKY WARBLER. One of the most beautiful of the American wood warblers (*Geothlypis formosa* or *Oporornis formosus*); migratory and numerous in summer in the southeastern parts of the United States. It is clear olive green, bright yellow below, head and neck of male black, with a yellow stripe above and behind the eye. In the female the black is replaced by dusky olive. Its terrestrial habits lead it to haunt thickets near streams for the most part. Consult F. M. Chapman, *The Warblers of North America* (New York, 1907). See WARBLER, and Colored Plate of AMERICAN WOOD WARBLERS.

KENTVILLE. The capital of King's Co., Nova Scotia, Canada, on the Cornwallis River, 71 miles by rail northwest of Halifax (Map:

Nova Scotia, E 3). It contains an academy and a provincial sanitarium, and near it are a militia camp and a Dominion experimental farm. Its manufactures include woodwork, milling machinery, gasoline engines, carriages, and automobiles. The town owns its lighting plant and water works. Pop, 1901, 1731; 1911, 2304.

KENYON, kén'yón, FREDERICK GEORGE (1863-). A distinguished English classical scholar and paleographer, born in London. He graduated at New College, Oxford, and was made fellow of Magdalen College (1888) and assistant keeper of manuscripts in the British Museum (1889). He did valuable service in the cause of classical studies by his publications of texts discovered in papyri belonging to the British Museum. The most important of these are: Aristotle's *Constitution of Athens* (1891); Herondas (1891), Hyperides (1891-92); Bacchylides (1897); *Catalogue of Greek Papyri in the British Museum* (3 vols, 1893, 1898, 1907). He has also published: *Paleography of Greek Papyri* (1899), *Facsimiles of Biblical Manuscripts in the British Museum* (London, 1900); *Handbook to the Textual Criticism of the New Testament* (1901, 2d ed., 1912); *Evidence of Greek Papyri with regard to Textual Criticism* (1905); *Robert Browning and Alfred Domett* (1906); a reproduction of part of the *Codex Alexandrinus* of the Greek Bible (1909), and other works on biblical manuscripts. He also edited the poems and letters of the Brownings.

KENYON, JOHN (1784-1856). A British poet and philanthropist. He was born on the island of Jamaica, West Indies, was left an orphan while a schoolboy in Bristol, England; and was educated at the Charterhouse, London, and at Peterhouse College, Cambridge. He became the associate and friend of Coleridge, Wordsworth, Southey, Charles Lamb, the Brownings, and numerous other celebrities, including Bayard Taylor and James T. Fields, and, possessed of great wealth, was the helpful and unostentatious benefactor of many of the more needy of his literary friends. His poetical works include: *A Rhymed Plea for Tolerance* (1833), *Poems for the Most Part Occasional* (1838); *A Day at Twol, with Other Verses* (1849). He was twice married, and his second wife is the Nea of some of his most graceful verses. He was widely known for his hospitality, his generosity, and his charities. Eighty legatees were mentioned in his will, which included various benevolent institutions and many of his friends.

KENYON, WILLIAM SQUIRE (1869-). An American legislator. He was born at Elyria, Ohio, and was educated at Iowa (now Grinnell) College and at the law school of the State University of Iowa. He took up the practice of law at Fort Dodge, Iowa; was prosecuting attorney of Webster Co., Iowa, for five years and district judge of the eleventh judicial district of Iowa for two years; and served as district attorney (1904-07) and general attorney (1907-10) of the Illinois Central Railroad and as assistant to the Attorney-General of the United States (1910-11). In 1911 he was elected United States Senator for an unexpired term and was reelected for the term 1913-19. Senator Kenyon attracted national attention by his advocacy in the United States Senate of progressive legislation regarding child labor, lobbying, and government ownership of railroads. His support of the miners during the labor troubles in West Virginia, Michigan, and

Colorado (1913-14) and his bill in 1914 to repeal the act incorporating Rockefeller's General Education Board gave him popularity among some classes.

KENYON COLLEGE. A college in Gambier, Ohio, established by, and historically connected with, the Protestant Episcopal church. Three schools—a Theological Seminary, a College, and a Preparatory School—were originally established, but in 1906 the Preparatory School was discontinued. The corporate name was changed in 1891 to Kenyon College, and in 1912 constitutional changes made the board of trustees an autonomous and independent body. In 1913-14 Kenyon College had a faculty of 24 and a student enrollment of 117 in the College and 19 in the Theological Seminary. The library contains over 40,000 volumes. Of its original domain of 4000 acres, the college still retains over 400. The college buildings are constructed of stone in collegiate Gothic style and with the grounds are valued at \$544,000. The endowment is \$520,000, and the gross income is \$65,500. The college is not coeducational, only men being admitted. Courses leading to the three degrees of A.B., Ph.B., and B.S. are offered by the college, while in the seminary a three years' course leads to the degree of B.D. Kenyon has had many distinguished graduates, among them Rutherford B. Hayes, Edwin M. Stanton, David Davis, Henry Winter Davis, Stanley Matthews, and John J. McCook. The president in 1914 was Rev. W. F. Peirce, D.D., L.H.D.

KEOKUK. A city and one of the two county seats of Lee Co., Iowa, 166 miles by rail southeast of Des Moines, the State capital, at the confluence of the Des Moines and Mississippi rivers and on the Chicago, Rock Island, and Pacific, the Chicago, Burlington, and Quincy, the Toledo, Peoria, and Western, and the Wabash railroads (Map: Iowa, F 4). Until about 1910 there had been around the Des Moines rapids of the Mississippi a canal 8 miles long, costing almost \$8,000,000, which had, since 1877, made possible continuous navigation between New Orleans and St. Paul. This has been obliterated by the construction of one of the largest hydroelectric power plants in the world, largely completed and put into operation in June, 1913. See DAMS AND RESERVOIRS.

With its transportation facilities, both by rail and by water, Keokuk has developed into an important wholesale and jobbing place and, as the centre of a fertile agricultural region, controls an extensive trade in farm products. The industrial establishments include lumber mills, powder works, canning and pickling establishments, a poultry-packing plant, garment, boot and shoe, and starch factories, cereal mills, box factory, drug manufacturing laboratory, and cement-machinery factory. Keokuk, locally known as the Gate City and the Power City, extends along the river on the summit of high bluffs. It has many wide, well-paved streets and boulevards.

Among its noteworthy features are Rand Park, the burial place of the Indian chief after whom the city was named, the national cemetery, United States Weather Bureau Station, and a public library of 30,000 volumes. It was formerly the seat of a large college of physicians, established in 1849, and a dental college and school of pharmacy, established a few years later. Prominent structures are the United States government building, the Mississippi

River Power Company's dam and power house, high school, Union Railway Station, Elks Club, Masonic Temple, courthouse, a fine hotel, and an opera house. The railroad and wagon bridge across the Mississippi River here is more than 2000 feet long. In December, 1913, a complete plan for the city was adopted.

Keokuk was first incorporated in 1848 and adopted the commission form of government in 1910. There are two commissioners besides the mayor. Pop., 1890, 14,101; 1900, 14,641; 1910, 14,008. Consult: "Early Days in Keokuk," in *Annals of Iowa*, vol. iii (Iowa City, 1871); V. Ivins, *Pen Pictures of Early Western Days* (Keokuk, 1905), *Commission Plan of Municipal Government as Used by the City of Keokuk* (ib., 1907); *Annual Reports under the Commission Plan of Government* (ib., 1910-). See DAMS AND RESERVOIRS.

KEOKUK (WATCHFUL FOX) (c.1780-1848). An Indian chief of the Sac-Fox Confederation, from whom the city of Keokuk, Iowa, was named. He was born near Rock River, Ill., in a tribe of Sacs, whose spokesman he was during the War of 1812. In 1832 his efforts kept the tribe from uniting with Black Hawk (q.v.) in taking up arms against the United States. He was one of the party who in 1837 went to Washington and arranged a peace between his people and the Sioux. Visits were made to other eastern cities, where Keokuk's eloquence was much remarked. In 1845 he removed from Iowa to Kansas, where he died, poisoned by a member of the Black Hawk band.

KEPHALLENIA. See CEPHALONIA.

KEPHIR. See KEFIR.

KEPI, kâ'pé; often as *Eng. kēp'i* (Fr.). The ordinary forage cap of the French infantry soldier. It was originally made of red cloth, with a patent-leather visor, and was first used by the French troops serving in Algeria.

KEPLER, JOHANN (1571-1630). One of the world's greatest astronomers. He was born on Dec. 27, 1571, at Weil der Stadt in Württemberg, Germany. He was sickly in his early childhood, and his constitution remained weak throughout life. In 1584 he was sent to the cloister school in Adelberg and in 1586 to the academy in Maulbronn. On passing a brilliant maturity examination, he was admitted in 1589 to the University of Tübingen. Here he studied chiefly theology and the classics. At the same time he became acquainted with the teachings of Copernicus, which greatly influenced his later career. In 1594 he accepted the chair of astronomy and mathematics at Graz, which he held until 1600, when he was compelled to leave on account of religious difficulties. Tycho Brahe had been appointed mathematician and astronomer to Emperor Rudolph II in 1599, and in the following year Kepler became his assistant in the observatory near Prague. On Oct. 13, 1601, Tycho Brahe died, and Kepler succeeded him in both of his important posts. His compensation was to be 500 florins a year, but, owing to the desperate condition of the Imperial finances, it was never paid in full. While retaining this position, Kepler in 1612 accepted the office of mathematician to the states of Upper Austria. In 1626 he moved to Ulm, where he undertook the publication of the Rudolphine Tables. In July, 1628, he left the service of the Emperor Ferdinand II and entered that of Wallenstein, who promised to pay the amount of his former salary that still remained unpaid.

Wallenstein, however, did not keep his promise. With the intention of presenting his case to the Imperial Diet, Kepler undertook a journey to Ratisbon. But on his way he was attacked by fever and shortly after reaching Ratisbon died, on Nov. 15, 1630. While in Graz, in 1597 he married Barbara von Mühleck, who died in 1611. Two years later he married Susanna Reutlinger, who survived him.

Kepler early conceived that there must be some intelligible reason for the actual disposition of the solar system, and it was mainly the development of this idea that gained him a wide reputation and the friendship of Tycho Brahe and Galileo. In the capacity of Imperial mathematician he completed the Rudolphine Tables, which had been left unfinished by the death of his former patron, Tycho Brahe. But he was also compelled to discharge the duties of an astrologer, although he limited his astrological work to the vague estimation of tendencies and probabilities. His chief title to fame is his discovery of the three laws of planetary motion, viz., the laws of elliptical orbits, of equal areas, and of the relations between periods and distances. (See ASTRONOMY; GRAVITATION.) The first two of these laws appeared in his greatest work, *Astronomia Nova de Motibus Stellæ Martis ex Observationibus Tychoonis Brahe* (1609). Other important features of this work were discoveries in regard to gravitation and the explanation of the tides by lunar attraction. In 1616, in Linz, Kepler calculated the first ephemerides based on his laws. In 1619, in his treatise *Harmonices Mundi, Libri V*, he published his third law. In September, 1627, he finished the Rudolphine Tables, the appendix of which contained a catalogue of 1005 stars. In 1629 he called the attention of astronomers to the approaching transits of Mercury and Venus. That of Mercury, which occurred on Nov. 7, 1631, was the first transit of a planet across the sun ever observed.

Kepler was also the founder of a theory of vortices and did pioneer work in several important scientific subjects. In 1604 he announced an approximation to the law of refraction, and on the invention of the telescope he gave the theory of refraction by lenses and the principle of the inverting telescope. His theory of infinitesimals prepared the way for Cavalieri's theory of indivisibles and the invention of the calculus by Newton and Leibnitz. He was also very active in introducing logarithms into Germany. His principal writings, besides those already mentioned, include: *Prodromus Dissertationum Cosmographicarum seu Mysteriorum Cosmographicum* (1596); *Ad Vitellionem Paralipomena quibus Astronomiæ Pars Optica Traditur* (1604); *De Stella Nova in Pede Serpentarii* (1606); *Nova Stereometria Solidorum* (1613); *Ephemerides Nova Motuum Cælestium* (1616); *Eptomes Astronomiæ Copernicana* (1618-21); *De Cometis* (1619); *Chilias Logarithmorum* (1624); *Nomnum seu Opus Posthumum de Astronomia Sublunari* (1634). His extant manuscripts were purchased by Empress Catharine II of Russia, donated by her to the Academy of St. Petersburg and deposited in the observatory of Pulkowa, where they remained inaccessible for a long time. A complete edition of Kepler's works, in eight volumes, was prepared by Frisch under the title *Joannis Kepleri Opera Omnia* (1858-71).

KEPLER'S LAWS. See CENTRAL FORCES.

KEPPEL, AUGUSTUS, VISCOUNT (1725-86). An English admiral, the son of William, second Earl of Albemarle, and grandson of Arnold Joost van Keppel, first Earl of Albemarle, a Dutch general in the suite of William of Orange when he came to England in 1688. He was educated at Westminster School and in 1735 joined the navy. After serving on the Guinea coast and in the Mediterranean, in 1740-44 he accompanied Anson on the latter's voyage around the world. In 1744 he was promoted to post captain and for several years made successful expeditions, notably in 1748, when he concluded a treaty with the Dey of Algiers, and in 1762, when Havana was taken after a siege of two months. He sat in Parliament for Windsor from 1761 to 1780 and later for Surrey. In 1762 he became rear admiral, in 1765-66 was a member of the Admiralty Board, and in 1778 was made an admiral. In the latter year he came into special prominence in connection with the indecisive engagement off Ushant, when, owing to the failure of Sir Hugh Palliser, who commanded the rear, to obey Keppel's signals, the French fleet under D'Orvilliers escaped into Brest. The facts becoming known, Palliser, who was in favor with Keppel's political opponents, demanded a court-martial, accusing Keppel of incompetency and cowardice. The trial resulted in a complete vindication and approval of Keppel's course of action, and he became the hero at numerous popular demonstrations. His services, however, were suspended by his opponents, but as an active member of Parliament he was a capable critic of their naval administration and in 1782, under a change of ministry, was appointed First Lord of the Admiralty and the same year was created Viscount Keppel and Baron Eldon. Consult Keppel, *Life of Admiral Keppel* (2 vols., London, 1842).

KEPPEL, SIR COLIN RICHARD (1862-). An English naval officer, son of Sir Henry Keppel. Entering the navy before he was 13, he served in the Egyptian War of 1882, in the Sudan in 1884-85, and with Egyptian forces on the Nile in 1885-86, commanding the gunboat flotilla in 1887 on Omdurman. He was promoted captain in 1899 and was in command of the Atlantic fleet as rear admiral in 1909-10. He was made Knight Commander of the Victorian Order in 1908 and of the Indian Empire in 1911.

KEPPEL, FREDERICK (1846-1912). An

American art dealer and connoisseur. He was born at Tullow, Ireland, and was educated at Wesley College, Dublin. Removing to New York, he established himself in 1868 as an art dealer and soon acquired a reputation as an authority on etchings and engravings. In 1886 he established branches of his firm in Paris and London. He was also known as a lecturer on his chosen subjects and as a writer and translator of works. His contributions appeared in the *Century*, *Harper's*, the *Studio*, and other magazines, and he published these books, among others: *The Etched Work of Jean François Millet*, a translation from the French; *Modern Disciples of Rembrandt* (1890); *Christmas in Art* (1909); *The Golden Age of Engraving* (1910).

KEPPEL, SIR HENRY (1809-1904). An English admiral and author, the fourth son of the fourth Earl of Albemarle. Born in Kensington, he joined the navy in 1822 and became lieutenant in 1829, commander in 1833, and post captain in 1837. After serving in India, in the Mediterranean, and at the Cape of Good Hope, from 1841 to 1845 and from 1847 to 1851 he was in command of the China and Pacific stations, doing valuable service in suppressing piracy. He commanded the naval brigade at Sebastopol during the Crimean War (1854-55) and from 1857 to 1858 was again on the China coast, when he destroyed the Chinese war fleet in Fatshan Creek. For this service he was created K.C.B. In 1860 he was naval commander in chief at the Cape of Good Hope, afterward on the Brazilian station, and from 1867 to 1869 vice admiral and commander in chief of the China-Japan squadron. In 1869 he became full admiral and returned to England. He was made G.C.B. in 1871 and admiral of the fleet in 1877. He was the author of *Expedition of H.M.S. Dodo to Borneo* (2 vols., 3d ed., 1847); *A Visit to the Indian Archipelago in H.M.S. Meander, with Journal of Sir James Brooke* (2 vols., 1853), *Reminiscences* (1898); *A Sailor's Life under Four Sovereigns* (3 vols., 1899). Consult Sir Algernon West, *Memoir of Sir Henry Keppel* (London, 1906).

KEPPLER, JOSEPH (1838-94). An American cartoonist, the founder of the New York comic weekly, *Puck*. He was born in Vienna, where he studied at the Academy of Fine Arts and contributed cartoons to leading periodicals. He was the first to introduce into the United States color lithography as a medium for caricature. In 1868 he established in St. Louis a German *Puck*, the failure of which caused him to move to New York. There he was employed as caricaturist for *Frank Leslie's Illustrated Newspaper* from 1872 to 1877. In 1875 he started another German *Puck*, in partnership with Adolph Schwartzman. The colored political cartoons of this paper became famous, and in 1877 the English edition appeared. Much of Keppler's success was due to his clever adaptation to modern life of mythological and historical subjects.

KER, kër, JOHN, third DUKE OF ROXBURGH. See ROXBURGH.

KER, JOHN (1819-86). A Scottish Presbyterian divine. He was born at Tweedsmuir in Peeblesshire and was educated at Edinburgh University and in Germany. Ordained to the ministry in 1845, he accepted the pastorate of the East Campbell Street Church in Glasgow in 1851. In 1876 he was appointed professor of

practical training in the United Presbyterian Theological Hall and occupied the position during the remainder of his life. His publications include a volume of *Sermons*, which went through several editions (1868-88); *The Psalms in History and Biography* (1886); *Scottish Nationality and Other Papers* (1887); *Lectures on the History of Preaching* (1888), *Letters, 1866-85* (1890). A volume of *Memorial Discourses* indicated his popularity.

KER/ATIN (from Gk. *képas*, *keras*, horn). A nitrogenous organic substance allied to the proteids and rich in sulphur. It is not acted on by either pepsin or trypsin. Keratin is the principal chemical constituent of the substance of hair, epidermis, nails, feathers, and horn. It may be readily prepared from the shell membrane of eggs, which is for this purpose extracted with water, alcohol, ether, and dilute acids, then digested with pepsin and trypsin, and again washed in the solvents. Keratin is soluble in hot concentrated alkalies. Strong nitric acid imparts to it a yellow color, which explains the staining of the skin by nitric acid. By consecutive treatment with moderately dilute hydrochloric acid, sodium hydroxide, and potassium permanganate, and the application of pressure, keratin (and therefore also horn scraps, hair, and similar substances) is converted into a material usable in the arts. On the other hand, dilute mineral acids, under certain conditions, transform keratin into digestible albumoses and peptones. When hydrolyzed by prolonged boiling with aqueous acids, keratin yields a variety of amino acids. See POLYPEPTIDES.

KER/ATITIS. See CORNEA.

KÉRATRY, kà'rà'tré', AUGUSTE HILARION DE (1769-1859). A French author and politician. He was born at Rennes and, though republican in principles, was imprisoned twice during the Terror on account of his aristocratic descent. He then lived in retirement and devoted himself to philosophical and religious studies until the restoration of the Bourbons. By his liberal attitude as a member of the Chamber of Deputies he did much to promote the Revolution of 1830, resulting in the downfall of Charles X and the accession of Louis Philippe. He was made a peer of France in 1837 by Louis Philippe. In 1848 he was again a member of the Chamber of Deputies. After the coup d'état of Napoleon, to whom he was strongly opposed, he withdrew from public life. Among his works may be mentioned: *Inductions morales et physiologiques* (1817); *Du beau dans les arts d'imitation* (1822); and some novels, widely read in their time, including *Le dernier des Beaumanoirs* (1824), *Frédéric Styndall* (1827), and *Saphira* (1835). He also contributed numerous articles to the *Courrier Français*, of which he was one of the founders.

KÉRATRY, EMILE DE, COUNT (1832-1904). A French politician, born in Paris. Abandoning the legitimist traditions of his family, young Kératry entered the army (1854) and fought in Africa, the Crimea, and Mexico. Returning to Paris in 1865, he became a contributor to the *Revue Contemporaine* and subsequently editor of the *Revue Moderne*, in which appeared his articles on the French occupation and campaigns in Mexico, which threw light on the course pursued by the Imperial government in Mexico and produced a lively sensation in France. In 1869

he was elected a deputy to the Corps Législatif and became an active member of the opposition. During the session of 1870 Kératry was active in pressing measures for the reform of the national militia and the suffrage. On the fall of the Empire (Sept. 4, 1870) he was made Prefect of Paris, but he soon resigned this position to go on a diplomatic mission to Spain. On his return Gambetta made him commander in chief of the forces organized in the five departments of Brittany, but he quarreled with Gambetta and resigned Nov. 27, 1870. In March, 1871, Thiers appointed him Prefect of the Department of Haute-Garonne, and in November he was made Prefect of the Department of Bouches-du-Rhône, but he exhibited such lack of tact and hostility to the Republican party that his resignation was willingly accepted in August, 1872. He then became one of the editors of *Le Soir*. He wrote several comedies, dramas, and pamphlets. Among his comedies and dramas may be mentioned *La vie de club* and *La guerre des blasons*. His historical works and political pamphlets are strongly partisan and must be read with caution. The chief among them are *La Contre-Guerrilla française au Mexique* (1867), *L'Élévation et la chute de l'empereur Maximilien* (1867); *La créance Jecker* (1868), *Le quatre Septembre* (1872), *Murad V, prince, sultan, prisonnier d'état* (1878), *A travers le passé, souvenirs militaires* (1887).

KERAULI, kē-rōu'lē, or **KARAULI**, kārōu'lē. A native Rajput state, India, northwest of Gwalior, from which it is separated by the Chumbul River (Map: India, C 3). Area, 1242 square miles. Pop., 1901, 156,786. 1911, 146,587. The surface generally is hilly and well timbered; iron is found, building stone is quarried, and there are some unimportant domestic industries. About one-fourth of the soil is cultivated with rice, barley, grain, and wheat for home consumption. Gunny cloth is made and exported. The ruler is a rajah, advised by a British Resident. Capital, Keraul.

KARBELA, kār'bē-lā, or **MESHHEH HOSEIN**, mēsh'hēd hō-sān'. A city of Asiatic Turkey in the Vilayet of Bagdad, about 55 miles southwest of the city of Bagdad, not far from the Euphrates, with which it is connected by the ancient Hamadiyyah Grand Canal, which drains a marshy region (Map: Turkey in Asia, E 4). Hosein, son of the Caliph Ali, while attempting to defend his claim to the caliphate, was defeated and killed there by the Ommyads (Oct 10, 680); he was buried in the city, which then became for the Shi'ahs second in holiness only to Mecca. Most of this sect being Persians, Kerbela is almost entirely Persian in character. The fanaticism of the inhabitants shows itself especially in the violence with which a sort of passion play is acted on the anniversary of Hosein's death (See **HASAN AND HUSAIN**.) The city has been the scene of many revolts, after the last of which, in 1843, suppressed with much bloodshed, the right of sanctuary which had been extended to criminals at Kerbela was annulled. There are five mosques. The principal one, that containing the tomb of Hosein, is venerated both by Shi'ahs and Sunnis; its domes and minarets are plated with gold. The second mosque is that of the Imam Abbas. Non-Mohammedans are not allowed to enter either of them. The number of pilgrims visiting the city annually is enormous—according to some estimates 200,000. They often bring the corpses

of relatives for burial in sacred ground. It is claimed that the plague which has often devastated the land was in many cases due to this fact. Kerbela is also a starting point for the Meccan pilgrimage (see **HADJ**), and the market place for the whole of northeast Arabia. Trade is brisk, and the Turkish government derives a large revenue from the place. The treasures of the mosques have during the centuries been enriched by countless precious gifts; the treasurers, who receive no salary, are also made wealthy by donations from pilgrims. The chief industries are the manufacture of bricks of holy earth, such as are used by the Shi'ahs in daily prayers, and the making of shrouds, on which are stamped verses from the Koran. Dates and cereals are the chief food exports. A ruined wall, 24 feet high, surrounds the old city, the streets of which, with one exception, are narrow and dirty. But new quarters have recently developed around the old, with broad, regular, and lamp-lighted streets, and sidewalks. The population is about 65,000, of which 54,000 are Shi'ahs.

KERENS, kēr'enz, **RICHARD C.** (1842–1916). An American contractor and politician. He was born in Killberry, County Meath, Ireland, but, brought to the United States in infancy, was educated in the public schools of Jackson Co., Iowa. Throughout the Civil War he served in the Union army. After the war he lived in Arkansas and at San Diego, Cal., and was contractor for the Overland Mail. In 1878 he moved to St. Louis and thereafter was interested in the construction of railroads and was active in the Republican politics of Missouri. In 1892 he became a member of the Republican National Committee. From 1909 to 1913 he was Ambassador to Austria-Hungary.

KERESAN STOCK. A Pueblo group of New Mexico, constituting the ancient tribe of the Queres or Keres, and now represented by the pueblos of Acoma, Cochiti, Laguna, San Felipe, Santa Ana, Santo Domingo, and Sia, all in the general neighborhood of Albuquerque, with an aggregate population of about 4000. The dialectic variation between the villages is slight, and the culture is similar. The Indians are skillful potters and weavers. Consult P. E. Goddard, *Indians of the Southwest* (New York, 1913). See **PUEBLO**, and **Colored Plate of INDIANS, AMERICAN**.

KERGUELEN (kēr'gē-lēn or kār'gē-lān') **LAND**, or **DESOLATION ISLAND**. An island in the south of the Indian Ocean, in lat. 48° 39' to 49° 44' S. and long. 68° 42' to 70° 35' E. It is over 100 miles long and about 50 miles wide at the widest part, with a total area of over 1300 square miles (Map: World, O 28). It is surrounded by numerous inlets and reefs and has an elevated surface, the glacier-covered peaks of Mount Ross and Mount Richards reaching 6060 and nearly 4000 feet respectively. The coasts are indented by a number of inlets, the largest being Christmas Harbor and Royal Sound. The island is of volcanic origin and composed chiefly of basaltic rocks with an admixture of carboniferous strata. Streams and lakes abound, but trees are absent. The flora is arctic, the most interesting species being the indigenous *Pringlea antiscorbutica*, or Kerguelen cabbage, a cruciferous edible plant of large dimensions. The fauna is made up largely of aquatic animals and sea fowl. The climate is very raw, the mean temperature being about

45° F. in summer and 29° F. in winter. The warmest period is in January. The group was discovered by Kerguelen-Trémarec in 1772 and visited by Cook in 1776. In 1874 the island was used by the German, English, and American expeditions as a station for observing the transit of Venus. Since 1893 the group has been in the possession of France. Under a concession from France the island has lately been occupied by a company engaged in whale fishery and in sheep farming. Consult J. H. Kidder, "Contributions to the Natural History of Kerguelen Island," in Smithsonian Institution, *Miscellaneous Collections*, vol. xiii (Washington, 1878); Hulot, "Les Kerguelen" in *Revue des Deux Mondes* (Paris, 1911); E. Rallier du Baty, "Quinze mois aux Iles Kerguelen," in Société de Géographie de Lille, *Bulletin*, vol. lvii (Lille, 1912). See POLAR RESEARCH.

KERGUELEN - TRÉMAREC, kâr'ge-lân'-trâ'mâ'rêk', YVES JOSEPH DE (1745-97). A French navigator and explorer, born at Quimper, Brittany. He sailed in 1771 on a voyage of discovery to the southern seas as naval lieutenant. At Mauritius he embarked in two smaller craft. In 1772 he discovered an island (see KERGUELEN LAND), which he supposed was the country full of natural riches he had hoped to find, and he claimed it for France. Kerguelen's discovery was discredited in his own country, as it was certainly not the long-sought southern continent. A second voyage (1773-74) with two vessels convinced the explorer of the island's barrenness, and in his bitter disappointment he named it Desolation Island. On his return he was tried by court-martial for professional errors, condemned and imprisoned; but Louis XVI released him and commanded him to write an account of his explorations. This he did in *Relation de deux voyages dans les mers australes et les Indes* (1782); and he published, besides, *Relation d'un voyage dans la mer du Nord* (1771) and *Relation des combats et des événements de la guerre maritime de 1778 entre la France et l'Angleterre* (1796).

KERKI, kër-kê'. A strongly fortified town, capital of a province of the same name, Bokhara, Central Asia, situated 113 miles southeast of the city of Bokhara, on the left bank of the Amu Darya (Map: Asia, Central, I 4). The town has several mosques, a small bazar, and a caravanserai. It is defended by a good wall and deep ditch and has some importance, owing to its position on the frontier and as a centre of caravan routes. Its fortifications were strengthened by the Russians in 1885, and the town contains a Russian garrison. The inhabitants, numbering about 5000, are mostly Uzbeks and Turkomans.

KERKUK, kër-köök'. A town of Asiatic Turkey in the Vilayet of Mosul, situated on a tributary of the Tigris, about 140 miles north of Bagdad (Map: Turkey in Asia, E 3). It has an old citadel, a number of mosques, three Roman Catholic churches, and several monasteries. One of the mosques contains the alleged tomb of Daniel. There are some cotton factories, tanneries, and potteries; but its real importance is due to the petroleum and naphtha springs in the vicinity. It has a brisk trade in the produce of the neighborhood, silk, hides, fruit, and timber being exported. Near the city are mineral springs which enjoy a more than local repute. The population is estimated at 23,000, mostly Kurds, about one-third being Christian Chaldeans.

KERL, kër'l, GEORG HEINRICH BRUNO (1824-1905). A German metallurgist. He was born at Andreasberg in the Harz, received his scientific training at the mining academy of Clausthal and at Göttingen, and was appointed a lecturer in chemistry at Clausthal in 1846. In 1862 he obtained a professorship. In 1867 he was a lecturer in the Royal Mining Academy of Berlin, from 1868 to 1892 was a member of the expert industrial commission, and from 1877 to 1885 was connected with the patent office. He retired in 1897. In 1859 he became an assistant editor on the staff of the *Berg- und hüttenmännische Zeitung* of Leipzig. The list of his publications is extensive and includes a *Handbuch der metallurgischen Hüttenkunde* (2d ed., 4 vols., 1861-65), *Grundriss der allgemeinen Hüttenkunde* (2d ed., 1879), and *Metallhüttenkunde* (2d ed., 1881).

KERLÉREC, kâr'lâ'rêk', LOUIS BILLOUART. CHEVALIER DE (1704-70). A French sailor and Colonial Governor of Louisiana. He was born at Quimper, France, and early entered the French navy. He fought against the Austrian Succession he fought against the English. In 1751 on the *Neptun*, after his superior officers had been disabled, he fought three English ships, giving up only when the ship was full of water, the crew much reduced, and he himself wounded. He was promoted captain in 1751 and the next year was appointed Governor of Louisiana. He was involved in frequent quarrels with independently appointed subordinates and was much annoyed by English privateers and, in the upper Mississippi valley, by the intriguing of English agents with the Indians. Louis XV, finding the colony unprofitable, paid no attention to his appeals for aid and secretly ceded it to Spain. On his return to France in 1764, nevertheless, he left the colony in much better condition than that in which he found it. However, he was accused by some of his subordinates of peculation and illegal use of power. In 1769 he was convicted and sentenced to banishment. He appealed, but died before further action could be taken.

KERMAN, kër'mân. A province of Persia. See KIRMAN.

KERMANS SHAH, kër'mân-shâ'. A town of Persia. See KIRMAN SHAH.

KERMES, kër'mêz (Ar., Pers. *qirmiz*, *qirmiz*, crimson, from Skt *kṛmīya*, produced by a worm, from *kṛmī*, worm + *jñā*, to be born), or SCARLET GRAIN. One of the most ancient dye-stuffs on record, known in the time of Moses as *tola* and to the Greeks as *coccus*. It was obtained from the dried bodies of female kermes insects (*Lecanum ilicis*, L.) Kermes has been largely supplanted by cochineal (q.v.), which has 10 to 12 times its coloring power, but is still used in some parts of the south of Europe and more extensively in India and Persia. The kermes insect is abundant in these regions, attaching itself to the leaves of the kermes oak (*Quercus coccifera*), a low, bushy shrub with evergreen, spinous leaves. In some parts of Spain the kermes oak grows in great profusion, as on the slopes of the Sierra Morena. The kermes insect attacks the young shoots of the shrub, the female affixing itself and remaining immovable till, after attaining its full size, about that of a pea, it deposits its eggs. Kermes is gathered towards the end of May, before the eggs are hatched. The insects are killed by exposure to the fumes of boiling vinegar and afterward dried

in the sun or in an oven. The coloring matter is kermesic acid, $C_{12}H_{12}O_8$. It has been employed from time immemorial to dye cloth a brownish dark red. It may still be seen in the red draperies of the figures in old Flemish tapestries. Tradition states that the curtains of the Hebrew tabernacle were dyed with kermes.

KERMES MINERAL (so called from the orange-red color), or SULPHURETED ANTIMONY. An amorphous, impure, reddish-white antimonious sulphide (Sb_2S_3), used in medicine. It is made by boiling 4 parts of potassium hydrate and 12 parts of water with 1 part of native antimony trisulphide out of contact with air for some time, then adding 50 parts of boiling water, filtering quickly, and decomposing the solution with dilute sulphuric acid. The kermes mineral thus obtained contains small quantities of antimonious oxide and is insoluble in water and in alcohol. On exposure to light, its color becomes somewhat lighter. It forms one of the ingredients of compound pills of antimony, its action being similar to that of tartar emetic (q.v.) It was once a famous remedy, especially in France and Italy, and was known as Carthusian powder, or *poudre des Chartres*.

KERMIS, kër'mis, or **KERMESSE**. A carnival which has long been popular in the Low Countries and in northern France. It was originally a celebration upon the dedication of a church or upon the feast day of the patron saint of a town. It varied widely in different localities, but almost always consisted of a costume procession, sports, dances, and feasts. In many respects it was similar to the May-day festivities in England. There are more or less elaborate celebrations of this kind annually at Brussels, on Trinity Sunday at Mons, where it is the "Lumeçon" procession in which Gilles de Chin slays a monster who has captured a princess (this being a form of the St. George and the Dragon story), and every seven years at Hasselt, where it is chiefly a Christian, though in part a pagan, festival. In the United States a kermis is an entertainment, generally for some charitable purpose, in which the Flemish festival is imitated. Consult D. C. de K. Boulver, *Belgian Life in Town and Country* (New York, 1904).

KERN, kër'n. A name applied formerly to Irish and Gaelic infantry soldiers.

KERN, kër'n, HENDRIK (1833-). A Dutch Orientalist. He was born on the island of Java and was educated in Leyden and Berlin. He taught Greek in the Athenæum at Maestricht (1858-62) and in 1865 became professor at Leyden. His writings include *Handleiding bij het onderwijs der Nederlandsche taal* (1879-83); *Çakuntala* (1862); *Die Glossen in der Lea Saichā und die Sprache der saichischen Franken* (1869); *Kavastuden* (1871); *Aryabhatīya. A Manual of Astronomy* (1874); *Over de jaartelling der zuidelijke Buddhisten* (1875); *Geschiedenis van het Buddisme in Indie* (1881-83; Fr. trans. by Huet, 1903); an edition of the text of the *Brihat-Samhita* (1865) and an English translation (1869); *De Fidji-taal vergeleken mit hare verwanten in Indonesie en Polynesie* (1886); *The Jātaka Māla*, in "Harvard Oriental Series" (1892); *Manual of Indian Buddhism*, in "Grundriss der indo-arischen Philologie" (1896); *Saddharma Pundrika* (1912); and numerous contributions to *Bydragen tot de Taal, Land, en Volkenkunde van Nederlandsch Indie*, and other periodicals. A complete bibli-

ography of his writings to 1903 is given in the *Album Kern* (Leyden, 1903), prepared in honor of his seventieth birthday.

KERN, HERMANN (1823-91). A German educator of the Herbartian school. He was born at Jüterbog and was educated at Leipzig. Through the teaching of Drobisch and Hartenstein he became a follower of the philosopher Herbart. He taught successively at Halle, Coburg, Mülheim, and Berlin. He retired from school work only a short time before his death. From 1853 to 1856 he was editor of the *Padagogische Blätter*. Besides his contributions to the *Zeitschrift für das Gymnasialwesen*, and articles in Palmer and Wildermuth, *Encyclopadie des Erziehungs- und Unterrichtswesens* (1876-87), his works include: *De Leibnitz Scientia Generali* (1847); *Ein Beitrag zur Rechtfertigung der herbartischen Metaphysik* (1849); *Die philosophische Propädeutik in Verbindung mit dem mathematischen und physikalischen Gymnasialunterricht* (1861), and the very important *Grundriss der Pädagogik* (5th ed., 1893).

KERN, JOHANN KONRAD (1808-88). A Swiss statesman. He was born at Berlingen in the Canton of Thurgau, studied theology at Basel, and, turning to law, attended the universities of Berlin, Heidelberg, and Paris. On his return to his native canton he became a member of the cantonal Legislature (1832), and later President of the Council of Public Instruction (1835) and of the Supreme Court (1837), displaying in these offices fine oratorical talent and great legal and administrative sagacity. In 1838, when the French government demanded the expulsion from the country of Prince Louis Napoleon, Kern stirred up the Swiss to defiance. In 1847 he was instrumental in overthrowing the Sonderbund (q.v.) and in 1848 took an active part in the drawing up of the federal constitution and was later elected president of the federal court. As President of the Council of Public Instruction, he afterward established the Polytechnic School of Zurich, one of the most admirable institutions of its kind in Europe. In 1857 he took part, as delegate of Switzerland, in the conference at Paris which settled the dispute with Prussia concerning Neuchâtel. From 1857 to 1883 he was Swiss Minister to France and negotiated many important treaties with that country. His recollections were published in 1887 in Bern, *Souvenirs politiques*. Consult H. Kesselring, *J. K. Kern, eine Lebensskizze* (Frauenfeld, 1888).

KERN, JOHN WORTH (1849-). An American statesman and lawyer, born at Alto, Howard Co., Ind. He received his education in the high school of Kokomo (Ind.), and at the law school of the University of Michigan, from which he graduated in 1869. He began his practice at Kokomo and served as city attorney from 1871 to 1884. Removing in 1885 to Indianapolis, he became reporter of the Indiana Supreme Court; in this capacity he edited 17 volumes of the court's reports. An ardent Democrat in politics, he served as a member of the State Senate from 1893 to 1897. During the early part of his career he had become known as an able lawyer, and his tact and courtesy and power as a public speaker made him popular. He was special assistant United States district attorney in 1893-94 and city solicitor of Indianapolis from 1897 to 1901. In national politics he was the friend and supporter of Bryan. Although unsuccessful in 1900 and

1904 as candidate for Governor of Indiana, his campaign speeches brought him a reputation as an exponent of Democratic principles. In 1905 he received the complimentary votes of his party for United States Senator, and in 1908 he was Democratic nominee for Vice President. In 1911, his party having gained control of the State Legislature, Kern was elected to the Senate over Beveridge, the Republican nominee. He took rank as one of the leading Democratic Senators. In the Democratic National Convention of 1912 he was a delegate from Indiana and represented the interests of Governor Marshall, although he supported Wilson during the final ballots. Kern was himself mentioned as a possible presidential candidate by Bryan. When the Democratic party obtained control of the Senate, in 1913, he was made floor leader, a position which he filled with marked ability.

KERNAHAN, kĕr'nā-hān, COULSON (1858-). An English novelist, born at Ilfracombe, Devonshire. He was associated with Locker-Lampson on a new edition of *Lyra Elegantiarum*, contributed to many periodicals, wrote humorous verse, and gained wide popularity for his fiction, some of which has been translated into French, German, Dutch, Hungarian, and Chinese. Among his books are: *A Dead Man's Diary* (1890); *A Book of Strange Sins* (1893); *The Child, the Wise Man, and the Devil* (1896); *Scoundrels and Co.* (1899); *A World without a Child* (1905); and, between 1906 and 1914, *An Author in the Territories* (with foreword by Lord Roberts), *The Red Peril*, *Bedtime Stories*, and *The Bow-Wow Book*.

KERNER, kĕr'nĕr, ANTON (1831-98). An Austrian botanist. He was born at Mautern in Lower Austria. In 1858 he became professor of botany at the Polytechnic Institute at Buda and in 1860 was elected to the same chair in the University of Innsbruck, a post which he resigned in 1878 to accept the directorship of the botanical garden of Vienna and the professorship of botany in the university there, where his labors continued until his death, in 1898. He established his reputation by publishing a report of his botanical exploration of Hungary, *Pflanzenleben der Donauländer* (Innsbruck, 1863), and *Vegetationsverhältnisse des mittlern und östlichen Ungarn und Siebenbürgen* (ib., 1875). In 1864 he published a book upon the culture of Alpine plants (*Die Kultur der Alpenpflanzen*); in 1867 finished the publication of the results of his studies with respect to the limits of vegetation of more than 1000 species of plants, and in 1874 sketched a model botanical garden, *Die botanischen Garten*. One of his most important works is *Das Pflanzenleben*, which first appeared in 1887. The first volume of a new edition of this work by A. Hansen appeared in 1913.

KERNER, JUSTINUS (1786-1862). A German poet of the so-called Swabian school. He is best known for his *Reiseshatten* (1811), poems and dramatic scenes characterized by a dreamy fancy and a peculiar fantastic humor, and for a morbid book on animal magnetism, *Die Seherin von Prevorat* (1829), which passed through several editions and aroused much fleeting interest in America. Of his poems the *Wanderlied* is a universal favorite. He began life as an apprentice in a cloth factory at his native Ludwigsburg and went in 1804 to study medicine at Tübingen, where he became a friend of Uhland and Schwab. After two years of travel

(1809-11) he practiced medicine at Wildbad (1811), Welzheim (1812), Gaildorf (1815), and Weinsberg (1819). Partial blindness compelled him to give up his profession in 1851. A monument was erected to him at Stuttgart in 1895. His complete poetical works were edited by Heichen (8 vols, 1903).

Bibliography. Kerner's autobiographical *Bilderbuch aus meiner Knabenzeit* (Brunswick, 1849; new ed., Frankfurt, 1897), Strauss, "Justinus Kerner," in *Kleine Schriften* (Berlin, 1866); Watts, *Life and Work of Kerner* (London, 1884); Reinhard, *Justinus Kerner und das Kernerhaus zu Weinsberg* (Tübingen, 1886); Niethammer, *Justinus Kerners Jugendliebe* (Stuttgart, 1887); Heinemann, *Justinus Kerner als Romantiker* (Tübingen, 1908).

KERN (kĕrn) **LAKE**. A lake in Kern Co., Cal., flowing at high water into Kern River (Map: California, F 7).

KERN RIVER INDIANS. A small band of Shoshonean stock, on the Kern River in California.

KER'OSENE (from Gk. κῆρος, kĕros, wax). The name of a mixture of certain fluid hydrocarbons used for illumination. It has been prepared from bituminous coal and shales, asphaltums, and wood, and from rosin, fish oil, and candle tar, but is now more economically obtained from petroleum. The density of the mixture called kerosene should be about 0.810 or 43° Baumé and should not yield inflammable vapors below a temperature of 110° or 120° F. It is, therefore, not explosive under ordinary circumstances, and a lighted match may be plunged into it without igniting it. If, however, it be burned in a metal lamp, and this be heated to 115° or 120° F, gases might be formed in the upper part of the lamp which, on taking off the cap or burner, might cause an explosion. The temperature at which these gases are given off is known as the flashing point. But there are many lighter hydrocarbons in petroleum, and much of the kerosene in the market contains them in greater or less proportion. The kerosene now used for illuminating purposes is obtained largely in the refining of petroleum (q.v.).

KERR, kĕr, MICHAEL CRAWFORD (1827-76). An American legislator. He was born at Titusville, Pa., was educated at Erie Academy and graduated at the law school of Louisville University in 1851. He removed to New Albany, Ind., in 1852, was a member of the State Legislature in 1856-57, and in 1862-65, as reporter to the Supreme Court of Indiana, compiled five volumes of valuable *Reports*. In 1864 he was elected to Congress as a "war" Democrat, having vigorously opposed the "Copperhead" element in his district. In Congress he was looked upon as one of the leaders of the Democratic party. He was reelected in 1866, 1868, and 1870, and he strongly opposed the Republican policy of reconstruction in the Southern States. His views on financial questions, however, did not meet with favor in his constituency, where he openly antagonized the inflationists and the "greenback" element and favored the resumption of specie payments. In 1874, however, after a sharp contest he was reelected, and on his reentry into Congress was elected to the speakership. He presided as Speaker at only the first session of the Forty-fourth Congress and died of consumption shortly after its adjournment.

KERR, ORPHEUS C. The pseudonym of Robert Henry Newell (q.v.).

KERR, WASHINGTON CARUTHERS (1827-85). An American geologist, born in Guilford Co., N. C. He graduated at the University of North Carolina in 1850 and was appointed a computer in the office of the *Nautical Almanac* at Cambridge, Mass. In 1855 he was appointed professor of geology, mineralogy, and chemistry in Davidson College (North Carolina), and at the beginning of the Civil War enlisted in the Confederate army as a private. He became State geologist of North Carolina in 1866 and from 1882 to 1883 was a member of the United States Geological Survey. His publications include a *Report of the Geological Survey of North Carolina* (2 vols., 1875-81), a *Report on the Cotton Production of Virginia* (1884), and *Ores of North Carolina* (1888).

KER/RIL. The black-banded sea snake (*Distira cyanocincta*), one of the most numerous and venomous of the sea snakes (q.v.), prevalent from the Persian Gulf to Japan. It is about 6 feet long, greenish olive in color, marked by a series of saddle-shaped bars or patches across the back at intervals about equal to their own width. A similar species is illustrated on the Plate of FOREIGN VENOMOUS SERPENTS with SNAKE.

KERR/VILLE. A city and the county seat of Kerr Co., Tex., 71 miles by rail northwest of San Antonio, on the Guadalupe River, and at the terminus of a branch of the San Antonio and Aransas Pass Railroad (Map: Texas, C 4). It carries on a large trade in wool and mohair, being one of the leading wool markets of the State, also in cotton, various lumber products, live stock, hides, etc., and has flouring mills, cotton gins, and quarries. The town is situated at an elevation of 1750 feet and enjoys considerable popularity as a health resort. It contains the Scofield School for Girls and the Kerrville Sanitarium. Pop, 1900, 1423; 1910, 1843.

KER'RY, kër'í. A maritime county in the southwest of Ireland, in the Province of Munster, bounded north by the estuary of the Shannon and west by the Atlantic Ocean (Map: Ireland, B 7). Area, 1811 square miles. The surface is rugged, wild, and mountainous, the highest peak of Ireland, Carran Tual, being in this county. Kerry contains the Lakes of Killarney. The manufactures are inconsiderable; oats and butter are the chief exports, and fisheries on the coast are extensive and profitable. Chief towns, Tralee (the county town), Killarney, Listowel, Cahersiveen, Kenmare, and Dingle. Pop., 1841, 294,100; 1901, 165,726; 1911, 159,191.

KERSAINT, kër'sân', ARMAND GUY SIMON DE COETNEMPREN, COUNT DE (1742-93). A French naval officer and politician, born at Paris, July 29, 1742. His father, Guy François de Coetnempren, Count de Kersaint, was a distinguished naval officer. The son entered the navy in 1755 and in 1757 was promoted to the rank of ensign for bravery in action. In 1782, at this time a captain, he took part in an expedition to Guiana. Before the Revolution the officers of the French navy were divided into two parties—the reds (nobles) and the blues (commons or *roturiers*)—and at its outbreak Kersaint aligned himself with the latter as the party of progress. He attacked feudal privileges, and as a member of the Assembly he voted for the deposition of the King. On Jan. 1, 1793, he was appointed a vice admiral and began to devote himself

earnestly to the improvement of the navy and of the national defense. The bloodthirsty measures of the Revolutionary leaders soon caused him to rebel at their acts. He voted against the execution of the King, and after the latter's death he strongly opposed the actions of the Revolutionary Tribunal, denounced the September massacres, and attacked Marat. Accused of conspiring against the state and for the restoration of the monarchy, he was arrested Sept. 23, 1793, and executed December 4.

KERSAINT, C. L. DE. See DURAS, CLAIRE LECHAT DE KERSAINT, DUCHESS OF

KER/SEY, kër'zi (from *Kersey*, a village near Hadleigh in Suffolk, England, formerly noted for its woolen trade). A light-weight woolen cloth, having a soft nap and smooth face, the result of careful finishing processes. It is usually woven with a twill which throws the warp on the face. See CASSIMERE.

KER/SHAW, JOSEPH BREVARD (1822-94). An American soldier in the Confederate service, born at Camden, S. C. He was admitted to the bar in 1843 and was a member of the South Carolina Senate from 1852 until 1856. At the beginning of the Civil War he commanded the Second South Carolina Volunteers and took part in the first battle of Bull Run. He was commissioned brigadier general on Feb. 13, 1862, and commanded a brigade in the Peninsular campaign, at the close of which he joined the Confederate forces in northern Virginia and took part in the Maryland campaign. Towards the end of the battle of Fredericksburg he succeeded Gen T. R. R. Cobb, upon the latter's death, and repulsed the last two attacks made by the Federals on Marye's Hill. The next year he was engaged in the battle of Gettysburg and then was transferred with Longstreet's corps to the West, where he took part in the charge which destroyed the Federal right wing at Chickamauga. After the relief of Knoxville and Longstreet's retreat to Virginia, he commanded a division in the battles of the Wilderness, Spottsylvania, and Cold Harbor, and was engaged in the Shenandoah campaign of 1864 against Sheridan. After the evacuation of Richmond his troops formed part of Ewell's corps, which was captured at the battle of Sailor's Creek, April 6, 1865. At the close of the war he returned to South Carolina and in 1865 was chosen President of the State Senate. He was judge of the Circuit Court from 1877 till 1893. In 1894 he was appointed postmaster of Camden, an office which he held until his death in the same year.

KERTBÉNY, kért'bä-ny', KARL MARIA (real name, BENKEET) (1824-82). An Hungarian author. He was born at Pest, and after the age of 20 traveled considerably abroad, visiting numerous cities of central and western Europe, where many of his literary works were written. Besides German translations of Hungarian poets, such as Arany, Petöfi, Jókai, and Vörösmarty, which are widely known, and essays on literary and other subjects, he wrote *Ungarns deutsche Bibliographie, 1801-60*, continued by Petrik and published in 1886.

KERTCH, kërch. A fortified seaport in the Government of Taurida, Russia, situated at the foot of a hill on the east extremity of the Crimea, known as Kertch Peninsula (Map: Russia, E 5). It is regularly built, with wide streets and houses mostly of stone. Its oldest building is the church of St. John the Baptist,

built in Byzantine style and dating, according to an inscription on one of its pillars, from 717 A.D. In the vicinity of the town are a number of ancient mounds, which have yielded, and still yield, numerous relics, most of which are now in the Hermitage at St. Petersburg. The catacombs in the vicinity of Kertch contain many ancient inscriptions on their walls. The chief manufacturing establishments of Kertch are flour mills, saw mills, limekilns, breweries, and tobacco, leather, cement, candle, and soap factories. Owing to its position on the strait between the Sea of Azov and the Black Sea, Kertch enjoys a thriving export trade; in addition to its own manufactures there is a considerable trade in iron ore from the neighboring mines, grain, linseed, fish, cement, wool, and hides. The herring fisheries are of some importance, and fish is one of the chief articles of trade. Kertch is a popular bathing resort, and the mud baths of Tchrokrak, in the vicinity, are famous for the cure of rheumatism, while those of Kertch itself are only slightly inferior. Pop., in 1910, 56,770. Kertch occupies the site of the ancient Panticapæum, a colony of Miletus and later the capital of the Kingdom of Bosphorus. It fell in the thirteenth century into the hands of the Tatars, who ceded it to the Genoese in 1318, when it became known as Cerchio. The Turks took it at the end of the fifteenth century, and the Russians in 1773. In 1855 it was completely destroyed by the allied armies, but was soon rebuilt.

KERVYN DE LETTENHOVE, kër-vin' de lèt'ten-hò've, *Fr. pron.* kâr'vân', JOSEPH MARIE BRUNO CONSTANTIN (1817-91). A Belgian historian, born in Saint-Michel, Flanders. He was a Catholic member of the Belgian Chamber of Deputies and Minister of Public Instruction (1870-71), correspondent of foreign scientific societies, and preëminent in his own country as an investigator of the national antiquities. He made translations of some of Milton's shorter poems (1839), published two volumes of Froissart (1855) crowned by the French Academy, and edited the *Lettres et négociations de Philippe de Commines* (1867), but is more specially remembered for his *Histoire de la Flandre* (1847-50), *Jacques d'Artevelde* (1863), *Histoire et croniques de Flandre* (1879-80), *Relations politiques des Pays-Bas et de l'Angleterre* (1882-87), *Les Huguenots et les gueux* (1883-86), and *Marie Stuart* (1889).

KESSEL, VAN. A Flemish family of painters, all born in Antwerp, the earliest of whom was JEROME (1578-c.1636), portrait, animal, and still-life painter, pupil of Cornelis Floris. He worked from about 1606 in various cities of Germany (Frankfort, Augsburg, Strassburg, and Cologne), chiefly painting portraits, and before 1622 appears settled again at Antwerp as the son-in-law of Jan Breughel (Velvet Breughel), in whose landscapes he supplied the animals.—His son JAN THE ELDER (1626-79) painted landscapes, flowers, fruit, and animals, was a pupil of Simon de Vos and of Jan Breughel, and accompanied his son JAN THE YOUNGER to Madrid. The museum there has a "Garland around Infant Jesus and St. John" (figures by Van Thulden; and 40 small pictures with animals by him). A "Concert of Birds" is in the Antwerp Museum; "Boar-Hunt," "Combat between Bear and Snake," "Landscape with Birds," and "Landscape with Fable of Stork and Fox," are in the Vienna Museum; others are in the

Louvre, Paris, the Uffizi Gallery, Florence, and in the museums at The Hague, Brunswick, Stuttgart, Nuremberg, Stockholm, and elsewhere.—His son and pupil FERDINAND (1648-96) painted similar subjects in a kindred manner, but also attempted large historical subjects by order of King John Sobieski of Poland, for whom he executed, moreover, "The Four Elements" and "The Four Continents" and, after both perished in the flames, repeated them on a larger scale. About 1688 he settled at Breda, where he did some decorative work in the palace of King William III.—JAN THE YOUNGER (1654-1708), also son and pupil of Jan the Elder, went to Madrid in 1680 and acquired reputation as a portrait painter, but also treated historical and all those subjects which his father cultivated, and was made court painter by Charles II in 1686. His portrait of Philip IV is in the museum, and two mythological scenes, "Psyche Found by Cupid" and "Psyche Surrounded by Wild Animals," are in the Alcazar at Madrid.—JAN THOMAS (Nicolae) (1677-1741), nephew and pupil of Ferdinand, was a genre painter in the manner of David Teniers and, through his village festivals, became well known in Paris, whither he had gone early in life. In 1704 he returned to Antwerp to buy his mastership. Subsequently inheriting his uncle's property, he fell into dissipation and died in want.—Another JAN VAN KESSEL (c.1641-90), who was born and died at Amsterdam, painted landscapes in the manner of Jacob Ruysdael and Hobbema. His winter landscapes and his views of Amsterdam are particularly valued and may be seen in the museums at Amsterdam, Rotterdam, Antwerp, Darmstadt, and in the Old Pinakothek at Munich.—THEODORUS VAN KESSEL (c.1620-?), engraver and etcher, born in Holland, settled at Antwerp in 1652 and is known by etchings after Rubens, Van Dyck, Titian, Guido Reni, and others. These last two Van Kessels were probably not related to the Antwerp family.

KESTER, PAUL (1870-). An American dramatist, a brother of Vaughan Kester. He was born at Delaware, Ohio. He is author of *Tales of the Real Gypsy* (1897), of verse; and of the following plays: *The Countess Roudine*, with Minnie Maddern Fiske, *The Cousin of the King*, with Vaughan Kester; *What Dreams May Come*; *Eugene Abram*, Lamar (1893); *The Musketeers* (1898); *Guy Mannering* (1898); *Sweet Nell of Old Drury* (1900); *When Knighthood was in Flower* (1901), from the novel of Charles Major; *Queen Frametta* (1902); *The Cavalier* (1902), with George Middleton from G. W. Cable's novel, *Dorothy Vernon* (1903); *Mademoiselle Mars* (1903); *Friend Hannah* (1906); *Don Quixote* (1908); *Lily*, *The Bull Topper* (1910). Among the notable actors and actresses who have starred in his plays are Madame Modjeska, Alexander Salvini, Madame Janauschek, Julia Neilson and Fred Terry, Ada Rehan, Julia Marlowe, E. H. Sothern, Annie Russell, Marie Tempest.

KESTER, VAUGHAN (1869-1911). An American novelist, brother of Paul Kester, born at New Brunswick, N. J., and educated in the public schools of Mt. Vernon, Ohio, and under a tutor. He made story-writing and miscellaneous literary work his profession, and was on the staff of the *Cosmopolitan* magazine. His novel *The Prodigal Judge* (1911) is notable for its whimsical humor and for the faithfulness of its local (Southern) characterization. Other of

his writings include: *The Manager of the B. & A.* (1901); *The Fortunes of the Landrays* (1905); *John o' Jamestown* (1907); and, posthumously published, *The Just and the Unjust* (1912) and *The Hand of the Mighty, and Other Stories* (1913), which contains a sketch of the author by Paul Kester.

KESTNER, AUGUSTE SCHEURER. See SCHEURER-KESTNER, AUGUSTE

KES'TREL. One of the smallest of the true falcons or "noble" birds of prey (*Falco tinnunculus*), scarcely more than a foot in length and the commonest of all the British Accipitres. It is widely distributed in the Old World, occurring in Asia and north Africa as well as in nearly all Europe, where it occurs in a number of well-defined subspecies. It is nearly related to the common sparrow hawk of America, which it resembles in color and habits as well as in size. The general color is brick red above, buff, fawn, or rufous beneath, everywhere marked with black, and with the head and rump bluish gray. The sexes differ markedly in color, the female tending towards rusty brown, and the male towards ashy gray. Like all true falcons, the kestrel is a strong flier, but it is easily distinguished from other falcons and hawks by its habit of hovering in one spot for some time, sustaining itself by the rapid movement of the wings. When doing this, it always keeps its head to the wind, whence has arisen one of its popular names, windhover. Like the sparrow hawk, the kestrel is a very useful bird, its principal diet being mice and insects, in the destruction of which it renders real service to the farmers. It occasionally captures small birds and can be trained to do so, but its use in falconry was always confined to the lower classes, among whom the use of the larger falcons was forbidden. For this reason the name "kestrel" came to be applied as a term of contempt. The nest is made in hollow trees, in crevices of cliffs, or even in deserted crows' nests, and the eggs are usually about five in number, creamy white, more or less spotted with brown. See PLATE OF FALCONS AND FALCONRY.

KESWICK, kēz'ik. A market town in Cumberland, England, at the northern extremity of Derwentwater, and at the foot of Skiddaw Mountain, 22 miles south-southwest of Carlisle (Map: England, C 2). It is a favorite tourists' resort, a centre of picturesque scenery, and contains the residence of Southey (Greta Hall), also his burial place, and a museum of natural history. Silver, lead, and zinc ores are mined, and Keswick is well known for its manufactures of lead pencils. The town owns its water and electric-lighting supplies. Pop., 1901, 4451; 1911, 4403.

KETCH (from Turk. *qâiq*, *qaiq*, boat). A small sailing vessel of 50 to 300 tons, formerly quite common in the Mediterranean, but now not so much used. Ketches had two masts, both square-rigged; the mainmast, very much higher than the after mast, was placed very nearly in the centre of the vessel, and the great spread of after canvas was balanced by large and numerous fore and aft sails forward. The ketch was at one time a favorite yachting rig and was also much used for bomb vessels, the clear forward deck being most convenient for mounting a mortar.

KETCH, JACK. The popular name for a public hangman, derived from John Ketch, an English executioner notorious in the seventeenth

century. The name is also referred to Jaquet, a former holder of the manor of Tyburn.

KETCHIKAN, kēch'i-kān'. A port of entry at the south boundary of Alaska, 600 miles north of Seattle (Map: Alaska, O 8). It had a population of 1613 in 1910. Apart from its stirring business activity, it is an important place, as by law it is an obligatory port of call for all ships engaged in trade in southeast Alaska. It is a modern city, with electricity and other conveniences, churches, schools, banks, etc. Ketchikan is the commercial centre of transportation and of trade for the adjacent regions and mining districts. Among these is the rich and productive copper region of Prince of Wales Island. The adjacent native village (pop., 154) has a government school. The climate is unusually mild in winter, December, with an average temperature of 26°, being the only month below freezing. The rainfall is very heavy, exceeding 150 inches annually.

KETEL, kâ'tel, CORNELIS (1548-1616). A Dutch painter, born at Gouda. He was a pupil for a very short time of Anthonie van Montfort at Delft and then went to Paris and worked at Fontainebleau. Afterward he went to England (1573) and painted a number of portraits at the court. In 1581 he settled at Amsterdam, where his principal work, a "Banquet of Marksmen" (1588), is preserved in the Rijks-Museum.

KE'TONES (apocopated from *acetone*, from *acet-ic*, from Lat. *acetum*, vinegar), or ACETONES. A large and important class of carbon compounds that are in many respects similar to the aldehydes. While the aldehydes (q.v.) are characterized by the carbonyl group CO to which one hydrogen atom and some hydrocarbon radicle are attached, and while most organic acids are characterized by the carbonyl group CO to which one hydroxyl group (OH) and some hydrocarbon radicle are attached, the ketones contain a carbonyl group to which *two* hydrocarbon radicles are attached. If R and R' stand for any hydrocarbon radicles, like methyl (CH₃) or ethyl (C₂H₅), the following formulas represent respectively the structure of any aldehyde, any organic acid, and any ketone:

For example, ordinary aldehyde, acetic acid, and acetone (the simplest ketone) are represented respectively by the following structural formulas:

Just as aldehydes are obtained from primary alcohols by oxidation, so are ketones produced by the oxidation of secondary alcohols. (See ALCOHOLS.) In either case the oxidation consists in the removal of two hydrogen atoms from the alcohol molecule. Thus, normal propyl alcohol, CH₃.CH₂.CH₂OH, yields (H, C, H, C, H, O) (propionic aldehyde), while iso-propyl alcohol, (H, C, H, (OH) CH₃, yields CH₃.CO.CH₃, (acetone). One of the general methods employed for the

preparation of ketones consists in heating the calcium or barium salts of organic acids. Thus, acetone may be prepared by distilling calcium or barium acetate. (See ACETONE.) From the higher fatty acids ketones may be obtained directly by heating the acids with phosphoric anhydride. Thus, heptylic acid may be directly decomposed, according to the following equation:

Ketones may also be prepared by the Grignard reaction (q.v.).

Like the aldehydes, ketones are capable of combining with acid sodium sulphite, with hydrocyanic acid, with hydrazine derivatives (like phenyl hydrazine), etc., and precisely as in the case of aldehydes, two chlorine atoms may be readily substituted for the oxygen of the carbonyl group, by the action of phosphorus pentachloride. Thus, acetone may be transformed into di-chloro-propane, according to the following reaction.

The most important difference between the aldehydes and the ketones consists in the fact that, while the former are readily oxidized to acids whose molecules contain the same number of carbon atoms as the aldehydes, the molecule of a ketone is split up, on oxidation, so that compounds of simpler structure, i.e., containing a smaller number of carbon atoms, are obtained. Thus, acetone (3 carbon atoms) breaks up into acetic acid (2 carbon atoms) and carbon dioxide (1 carbon atom), according to the following equation:

If at least one of the hydrocarbon radicles composing the molecule of a ketone belongs to the benzene series, the ketone is called an *aromatic ketone*. Thus, benzophenone, $\text{C}_6\text{H}_5\cdot\text{CO}\cdot\text{C}_6\text{H}_5$, which may be obtained by heating the calcium salt of benzoic acid, is an aromatic ketone. The physical and many of the chemical properties peculiar to a given ketone depend, of course, not only on the characteristic carbonyl group (CO), but also on the nature of the radicles to which that group is attached. See ALDEHYDES

KETTELER, kët'te-lër, CLEMENS AUGUST, BARON VON (1853-1900). A German diplomat, born at Potsdam and educated for the army. Upon reaching the grade of second lieutenant he resigned his commission to enter the diplomatic corps. In the same year (1882) he went as a student interpreter to China and in 1883 as Councillor of State distinguished himself in the disturbances of that year in Canton. After being Consul at Tientsin, in 1892, he became Secretary of the German Legation at Washington (1893). Three years afterward, having married an American, he was named Minister to Mexico, whence he returned to China in 1899 as Plenipotentiary at Peking. During the Boxer rebellion of the following year, Ketteler, who was an excellent Chinese scholar, represented the diplomats of the other countries. On June 20 he started for an interview with the government and was shot in his sedan chair by a Chinese officer.

KETTELER, WILHELM EMANUEL, BARON

VON (1811-77). A German Roman Catholic ecclesiastic and Ultramontane leader. He was born at Münster, Prussia, and was educated by the Jesuits at Brieg in Switzerland, then studied law at Göttingen, Berlin, Munich, and Heidelberg, and entered the civil service at Münster, but suddenly changed his course and began the study of theology. He was ordained in 1844 and was a prominent member of the Frankfort Parliament (1848). In 1850 he was consecrated Bishop of Mainz. The object of his life was to gain for the Church absolute freedom from state control; he therefore opposed Bismarck and the Hohenzollerns with unremitting energy. At the Vatican Council he voted against the declaration of papal infallibility, but on its pronouncement submitted to it immediately and even defended the new dogma in several pastoral letters. Henceforth he assumed the leadership of the Ultramontane party in its contest with the German Empire, advocating a policy of unconditional resistance to the state's legislation in connection with ecclesiastical affairs. (See KULTURKAMPF.) He wrote: *Freiheit, Autorität und Kirche* (7th ed., 1862); *Die wahren Grundlagen des religiösen Friedens* (1868); *Das allgemeine Konzil und seine Bedeutung für unsere Zeit* (5th ed., 1869); *Die Katholiken im deutschen Reiche* (5th ed., 1873); *Der Kulturkampf gegen die katholische Kirche*, etc. (1874).

KETTERING. A market town in Northamptonshire, England, 14 miles northeast of Northampton (Map: England, F 4). It has iron-ore quarries, blast furnaces, and manufactures boots and shoes, brushes, clothing, and agricultural tools. The large and handsome parish church of St. Peter and St. Paul has a tower dating from 1450, and there is a fine town hall with corn exchange. Modern buildings include a free library, hospitals, and Victoria Hall. Kettering has a free grammar school and owns its water works. Pop., 1901, 28,653; 1911, 29,972.

KETTLEDROM. A metallic kettle or basin, made of copper or brass, with a head of vellum, which is lapped over an iron ring and fitted outside of the kettle. By means of screws the head may be tightened or loosened. The drums are played by means of a mallet covered with felt or leather. By means of the screws the instruments can be tuned. In modern orchestras there are generally three kettledrums, tuned in the tonic, dominant, and subdominant. Modern composers require the kettledrums to change their tones within the same movement and often without many bars of rest. To enable the performer to meet these requirements, Richard Ludwig, of Leipzig, invented a kettle-drum which in very short time can be tuned to any interval. Instead of turning each individual screw the performer turns only one large one, by means of which all the others are operated. The larger of the two drums is tuned in F, the smaller in Bb. By means of a pedal any interval within a perfect fifth can be obtained; so that the larger drum can produce all tones between F and c, and the smaller all tones between Bb and f, giving the performer the possibility of producing any chromatic interval between F and f. The chief use of the kettle-drum is to emphasize rhythmic figures. Consult P. de Lavernière, *La timbale* (Paris, 1913).

KETTLEDROM. A term which used to be employed—and still is, perhaps—to describe a

social gathering, a sort of afternoon tea, and generally a gathering of women. This latter use of the word is said to have originated in the British army in India. It sometimes happened in the emergencies of camp life that in an entertainment given by officers and their wives there was a lack of requisite furniture, so that the heads of kettledrums were made to serve in place of tables to hold the cups of tea. Hence, by metonymy, the article used gave name to the occasion on which it was used.

KETT'S REBELLION. A popular outbreak which took place in Norfolk, England, in 1549, under the leadership of Robert and William Kett, brothers. They are mentioned as a tanner and a mercer, living in Wymondham, Norfolk, but both were landholders of consequence, Robert holding the manor of Wymondham, besides other lands. He was the chief leader of the revolt, although assisted by William and two other brothers. The rising began at Attleborough on June 20, 1549, with the destruction of the fences and hedges. The common lands of Harpham and belonging to the manor of Wilby; but the Kett brothers were not drawn into it until the 9th of July. Having accepted the command, Robert Kett led the insurgents to Norfolk, establishing a camp on Mousehold Heath near by, where his forces increased to the number of 16,000 men. He maintained excellent order, establishing his tribunal under an oak tree, which long bore the name of Kett's Oak. There the delegates of 21 hundreds of Norfolk and one hundred of Suffolk met and drew up a petition of their grievances, which was sent to the Privy Council in London. From this petition it is evident that the revolt was chiefly directed against the inclosures of the common land and the consequent eviction of the tenantry, all of which was being done contrary to custom and to laws recently enacted by Parliament. The petition also contained moderate demands for the redressal of other feudal wrongs, one of which specified that all bondmen be made free. On August 1 Kett captured Norfolk, putting to rout a force of 2500 men sent to its rescue. The revolt was finally suppressed by a force under the Earl of Warwick, in a bloody battle at Dussindale, in which more than 3500 of the insurgents were killed. He gained this victory through a force of German lanzknechts, whose firearms the insurgents were unable to withstand. Both of the Ketts were captured and suffered death on the gallows. Consult Russel, *Kett's Rebellion* (London, 1850), and Clayton, *Robert Kett and the Norfolk Rising* (ib., 1912).

KETUPA, kě-tōō'pā. A fishing owl of the Oriental genus *Ketupa*, specifically the Javan one (*Ketupa javanensis*). Other species are commonly known from Asia Minor to southern China. All are large tufted owls, with the feet naked of feathers, and the talons large, strong, and roughened, in adaptation to the catching of living fish and crabs, upon which this genus mainly feeds, though birds and small mammals are also taken.

KEUH-FOW, kyōō'fou'. A city in China. See KIUH-FOW.

KEUI, kě'ē. See BOGHAY-KIEUI.

KEUKA (kě-ū'kā) **LAKE**, or CROOKED LAKE. A Y-shaped lake, lying partly in Steuben and partly in Yates County, west-central New York (Map: New York, C 6). The stem and the branches lie in narrow valleys formed by hills.

All of the branches are singularly uniform in their width, the two northern arms being about ½ mile wide, and the main stem about 1 mile wide. Much of the scenery from the lake and the shores is very beautiful. At the southern end of the lake, which is its head, is Hammondsport (pop., 1910, 1254), and at the foot Penn Yan (q.v.). The waters are carried eastward to Seneca Lake (q.v.).

KEUPER, koī'pēr (dialectic German term, near Coburg, for red, sandy clay). The upper division of the Triassic system in Europe. It is represented in Germany by a series of marls, sandstones, dolomite and gypsum beds, more than 1000 feet thick. In Great Britain it includes marls and sandstones with gypsum and rock salt and has a maximum thickness of about 3000 feet. Bones and footprints of the labyrinthodont and saurian reptiles are found in the Keuper.

KEW, kū. A township in Surrey, England, on the Thames, 6 miles west-southwest of Hyde Park Corner, London (Map: London, E 5). It owes its celebrity to the Royal Botanic Gardens, about 270 acres in extent, with their famous collection of plants, native and exotic. There are numerous conservatories and hot-houses, a palm house, an arboretum, three museums, a winter garden or temperate house, an American garden, a ten-story pagoda 163 feet high, a Pantheon and a Temple of Victory with dates and mementos of historic English battles, a laboratory, and the elegant North Gallery, containing a valuable collection of paintings of tropical flowers. The Botanic Gardens, commenced by the mother of George III, owe much of their celebrity to Sir W. J. Hooker (q.v.) and Sir Josiah D. Hooker. They were presented to the nation by Queen Victoria in 1840, since when they have been open to the public. There is also an observatory, used chiefly as a meteorological station. Kew Palace, once the favorite residence of George III, is close to the northern entrance. The church contains an organ which once belonged to Handel; in the churchyard are buried the artists Meyer and Gainsborough. Pop., 1901, 2699; 1911, 2806.

KEWANEE, kě-wā'ně. A city in Henry Co., Ill., 56 miles north by west of Peoria, on the Chicago, Burlington, and Quincy Railroad (Map Illinois, D 3). It has a public library and two parks. Coal is mined in the vicinity, and there are extensive tube and boiler works, employing about 4900 persons, and manufactures of agricultural implements, steam-heating apparatus, gasoline engines, water-supply systems, pumps, gloves and mittens, etc. Kewanee has adopted the commission form of government, the mayor and four commissioners being elected every four years. The water works are owned and operated by the municipality. Pop., 1900, 8382; 1910, 9307; 1914 (U. S. est.), 13,473.

KEWAUNEE. A city and the county seat of Kewaunee Co., Wis., on Lake Michigan at the mouth of the Kewaunee River, 37 miles east of Green Bay, on the Kewaunee, Green Bay, and Western Railroad (Map: Wisconsin, F 4). It is in a fertile agricultural and dairying country and has pea canneries, gas-engine works, agricultural implement works, planing mills, foundries, machine shops, etc. Kewaunee was settled in 1850 and was incorporated in 1882. The electric-light plant is owned by the city. Pop., 1900, 1773; 1910, 1839.

KEWEENAWAN (kə'wē-nā'wan) **SERIES.** A group of conglomerates, sandstones, and lime-stones, with interbedded sheets of volcanic rocks, which outcrop in the western Lake Superior region. They belong to the upper part of the Algonkian, although some geologists have classed them with the Cambrian. Their maximum thickness is about 40,000 feet. The strata, which appear in great force on Keweenaw Peninsula and farther westward, dip below Lake Superior and come to the surface again on the northern shores in Minnesota. The rich copper deposits of Michigan occur in this series. See **PRE-CAMBRIAN FORMATIONS. ALGONKIAN SYSTEM.**

KEY (AS. *cæg*, *cæge*, OFries. *kai*, *kei*; probably connected with OHG. *hail*, Ger. *Keil*, Icel. *keiler*, wedge, peg). A common heraldic bearing in the insignia of sees, seats of learning, and religious houses, particularly such as are supposed to be under the patronage of St. Peter. Two keys in saltire are frequent, and keys are sometimes *interlaced* or linked together at the *bows*, i.e., rings. Keys *indorsed* are placed side by side, the wards away from each other. In secular heraldry keys sometimes denote office in the state. See **HERALDRY.**

KEY. In mechanics and building any piece driven into a recess provided for it between two pieces, for the purpose of holding them immovably together, is called a key. Keys are usually tapering or wedge-shaped and are commonly used in machinery to secure a wheel to its pinion or axle, in anchors to prevent the slipping of the stock in the shank, and in carpentry to lock the members of a scarfed joint; while the crowning voussoir of an arch, which "locks" the arch, is called the key or keystone. In plastering, the hold of the plaster on the masonry, brickwork, or lathing, by its being forced into interstices, is called its key.

MAJOR KEYS

No of sharps	0	1	2	3	4	5	6	7	8	9	10	11	12
Names of keys {	C	G	D	A	E	B	F#	C#	G#	D#	A#	E# (F)	B# (C)
No. of flats	12	11	10	9	8	7	6	5	4	3	2	1	0

MINOR KEYS

No. of sharps	0	1	2	3	4	5	6	7	8	9	10	11	12
Names of keys {	A	E	B	F#	C#	G#	D#	A#	C#	G#	D#	A#	E# (F)
No. of flats	12	11	10	9	8	7	6	5	4	3	2	1	0

KEY. In music, all the tones of any given scale considered collectively and in their harmonic rather than their melodic relations. The term is not at all synonymous with "scale," but has a much broader meaning. A scale consists only of single tones in melodic succession, whereas a key comprises not only the tones of the scale itself, but all chords constructed upon those tones. Each key is named after the keynote or tonic, i.e., the lowest tone of the scale belonging to that key. There are as many keys as there are scales, i.e., 12 major and 12 minor. The major and minor scales differ in the position of the semitone—the former having this semitone between the third and fourth, the latter between the second and third degrees. The semitone leading into the octave, and known as the *leading tone*, is common to both major and minor scales and is found between the seventh and eighth degrees. For the major scales the one beginning on C is regarded as the fundamental scale. Because all the tones appear without any chromatic alteration, it is also called the *natural*

scale. This is really a misnomer, since all major scales are exactly alike as regards the succession of tones and semitones; there is only a difference in pitch. The only reason why this scale is called natural is that on instruments having a keyboard all the tones are played on the white keys, while all other scales require the use of a number of black keys. For instance, if the major scale is begun on D the F must be sharpened, so as to preserve the semitone between the third and fourth degrees, for the same reason the C must also be sharpened. Among the minor keys that of A bears the same relation to all the others as the key of C bears to the other major keys. Every composition is written in a definite key, which can be determined at once by glancing at the *key signature*. Instead of each sharp or flat required in the . . . it is customary to indicate at the beginning of a piece all the notes which require chromatic alteration. Whether the mode is major or minor can generally be determined by the opening chord, for, as a rule, compositions begin with the tonic chord. The keys of C major and A minor, requiring no chromatic alterations, have therefore no signature. The number of sharps or flats for the other keys is determined by the circle of fifths. (See **TEMPERAMENT.**) Taking the key of G, whose tonic lies a fifth above C, one sharp is required; the key of D, whose tonic lies a fifth above G, requires two sharps; etc. The number of flats is determined by proceeding from C in fifths downward. The signatures of minor keys are determined in the same manner. Since the key of A minor lies a minor third below the corresponding major key of C, it follows that all other minor keys are found a minor third below the corresponding major keys. The following is a complete table of all the key signatures:

The keys printed in capitals are the only ones in practical use. Owing to the equal temperament (q.v.) now in use for all instruments, enharmonic changes cause no difficulty. On keyed instruments, like the pianoforte or organ, the tones F# and Gb are identical, being both played on the same key. It is therefore immaterial for such instruments whether a piece is written in F# or Gb. It certainly is much simpler to write in Db with only five flats than in the enharmonic key of C# with seven sharps. In the above tables the keys printed in small letters are such as correspond to those in large letters above or below. They are given only to show that by going through the circle of fifths we again come to the starting point.

Just as the several tones of a scale bear a certain relationship to one another, so there exists also a similar relationship among the keys. A *relative* or *parallel* key is a minor key having the same signature as its corresponding major key or vice versa. Thus, C major and A minor, C minor and Eb major, A major and F# minor, are *relative* or *parallel* keys. *Related* keys are those whose tonic tones stand in some relation to one another. G and F are closely related to C because the tonic of the former key is the fifth above, that of the latter key the

fifth below C. *Remote or extreme keys* are those whose tonic tones stand in no or some very distant relation to one another. See MAJOR; MINOR; MODES; TONALITY.

In another sense the word "key" is used to denote a series of levers composing the keyboard of keyed instruments. In the pianoforte these keys are manipulated by the fingers. They cause the hammers to strike the strings. The organ has a similar set of keys, which open valves for the passage of the wind into the pipes. There is also a set of keys manipulated by the feet and called *pedal*. In the instruments of the woodwind class the levers lying on the outside of the tube and covering the air holes are also called keys. They differ from the valves of brass instruments, which latter are inside of the tube. See KEYBOARD, VALVE.

KEY, Kĕ, SIR ASTLEY COOPER (1821-88). A distinguished British naval officer, son of the surgeon Charles Aston Key. He was born in London and entered the navy in 1833. He served with distinction on the South American Station (1844-46), in the Baltic during the Crimean War (made C B in 1855), and in China in 1857. In 1858 he was appointed a member of the commission of national defense, and in 1863 captain of the gunnery ship *Excellent* and superintendent of the Royal Naval College. In 1866 (then a rear admiral) he became director of naval ordnance. In 1872 he organized and was made president of the new Royal Naval College at Greenwich and in 1873 was made a K.C.B. and a vice admiral. He was commander in chief on the North American and West Indian Station in 1876 and became admiral in 1878 and senior naval lord of the Admiralty and G.C.B. in 1882. For nearly a quarter of a century he took a leading part in shaping the policy of the British navy, in training its *personnel*, and in developing its *matériel*.

KEY, Kĕ, DAVID MCKENDREE (1824-1900). An American jurist and cabinet officer, born in Greene Co., Tenn. He graduated at Hiwassee College in 1850, was admitted to the bar, and in 1853 became a resident of Chattanooga. He opposed the secession movement in Tennessee and rendered valuable aid to Andrew Johnson, but, unlike him, after the secession of the State, he joined the Confederate army and served throughout the war in the Forty-third Tennessee Regiment, of which he became lieutenant colonel. After the war he joined the Republican party, was a prominent member of the State Constitutional Convention in 1870, and in 1875 was appointed to succeed Andrew Johnson in the United States Senate, where he served until 1877. He was then defeated for reelection, but in the same year was appointed Postmaster-General in President Hayes's cabinet. In 1880 President Hayes appointed him United States district judge for the eastern and middle district of Tennessee, from which position he retired in 1894.

KEY, Kĭ, ELLEN (KAROLINA SOFIA) (1849-). A Swedish social and ethical writer, of international importance. The daughter of Emil Key and his wife, née Countess Posse, she was born at "Sundsholm," Småland, of a family of landed gentry and statesmen in which strains of Scottish and English blood were blended. She was educated at home and became in her twentieth year the secretary of her father, a member of the Riksdag. From 1870 on she was a contributor to periodicals, on literary, historical, and sociological subjects. Her father's fortune

lost, she became a teacher in a private school, and in addition to teaching from 1880 to 1899 she was constantly writing and lecturing at the People's Institute at Stockholm and elsewhere. From 1899 to 1910 she lived much abroad, the success of her books afterward enabling her to make a permanent country home for herself in Sweden. An ardent feminist, with views of love and marriage that startle the conventional and with convictions on the sex relations that condemn at certain points old moral standards, she was exposed to unwarranted slander and abuse, which, however, was offset by the admiration of "advanced" thinkers everywhere—among them Maeterlinck, Bernard Shaw, Georg Brandes, and Havelock Ellis. Though known primarily as a writer on social ethics and sex questions, she gained distinction in several other fields. Her works have been translated into many languages, the following titles . . . of which have appeared in English . . . *of the Child* (1909); *Love and Ethics* (1911); *The Morality of Woman* (1911); *The Woman Movement* (1912); *The Torpedo under the Ark "Ibsen and Women"* (1912); *Rahel Varnhagen* (1913), a biography, *The Renaissance of Motherhood* (1914); *The Younger Generation* (1914). Important works of hers not Englished are: *The Misuse of Woman's Power* (1896); *Woman's Psychology and Woman's Logic* (1896); *Life-Lines* (1903-06). For some bibliographical and much general information, consult the brief biography, L. N. Hamilton, *Ellen Key: Her Life and her Work* (Stockholm, 1904; Eng. trans., New York, 1913), and *Nordisk Familjebok*, vol. xiii (Stockholm, n. d.).

KEY, ERNST AXEL HENRIK (1832-1901). A Swedish anatomist, born in Småland. He studied at Lund, became assistant surgeon at the Seraphim Hospital in Stockholm (1858), and studied pathology and histology in Germany under Schultze and Virchow. He was professor of pathological anatomy in the Caroline Institute of Stockholm (1862-97), of which he was for many years rector. In 1882 he became a member of the Swedish Lower House. Key edited *Nordiskt medicinskt Arkiv* (1869 et seq.), and the valuable collection, *Ur vår tids forskning* (1872-80), and wrote: *Studien in der Anatomie des Nervensystems und des Bindegewebes* (2 vols. 1875-76), which won him the Montyon prize from the French Academy. He also wrote on the history of Swedish medicine, especially ophthalmology (1892); and *Tull kirurgiens historia i Sverige* (1897).

KEY, Kĕ, FRANCIS SCOTT (1780-1843). A lawyer, born in Frederick Co., Md., Aug. 9, 1780, noted in American letters as the author of "The Star-Spangled Banner." Key was a graduate of St. John's College, Annapolis, Md. He practiced law at Frederick, Md., in 1801, and later removed to Washington, where he became district attorney of the District of Columbia. In 1814, during the attack of the British on Baltimore, he went on an errand, under a flag of truce, to the British fleet, but was detained while the bombardment of Fort McHenry, the defense of Baltimore, was taking place. He watched the progress of the fight from the British ship during the night and in the morning, seeing the Stars and Stripes still waving triumphantly, composed his famous song. This was at once printed and became almost instantly popular. It was sung to the tune "Anacreon in Heaven," and is to-day perhaps the favorite heroic song

of America. By general order it is the national air in the army and navy. "The Star-Spangled Banner" was printed, with other poems by Key, in 1857, the volume as a whole adding nothing to his reputation. Consult: J. T. Brooke, *Sketch of the Character of the Late Francis Scott Key* (Cincinnati, 1843); F. S. Key-Smith, *Francis Scott Key, with a Glimpse of his Ancestors* (Washington, 1909); id., *Francis Scott Key, Author of the Star-Spangled Banner, What Else he Was, and Who* (ib., 1911).

KEY, THOMAS HEWITT (1799-1875). An English classical scholar, born in London. He graduated at Trinity College, Cambridge, in 1821, and studied medicine at Cambridge and at Guy's Hospital, London. In 1824 he was called to the chair of mathematics in the University of Virginia, then in its infancy. Ill health compelled his return to England in 1827. In 1828, when the University of London was founded, he accepted the chair of Latin there and held it until 1841. From 1842 until his death he was professor of comparative grammar in the same institution and at the same time served as head master of the preparatory school connected with University College; he had been joint head master of the school from 1832. As a philologist, he produced numerous pamphlets containing essays and reviews, and a controversial argument on Donaldson's *Varronianus*. He contributed to the *Penny Cyclopædia* and the *Journal of Education*. In 1846 he published a *Latin Grammar on the System of Crude Forms* (by "crude forms" he meant uninflected forms, word stems; he borrowed this device from the teaching of Sanskrit grammar). His other works include *Philological Essays* (1868) and *Language: Its Origin and Development* (1874), in which he advocated the onomatopoeic theory of the origin of language. His best energies were given to the construction of a *Latin-English Dictionary* (1888), which was published, after his death, in an unfinished state, by the Cambridge University Press. Consult Hicks, *T. Hewitt Key* (Cambridge, 1893).

KEYBOARD. A frame containing a set of keys, placed in the front part of the pianoforte or organ. The word is also applied to the keys, or digitals, taken collectively. The natural keys are of wood covered with white ivory, and the raised keys, touched to produce sharps and flats, are blocks of ebony or other hard black wood. The influence of the keyboard upon the development of modern music is important. The earliest keyboard of which we have record was that of the hydraulic or water organ, a Greek invention of the second century. In this the keys, 18 in number, were all level. Strange to say, the principle of the balanced key, which had to be rediscovered in the seventeenth century, was then well known. Our modern chromatic keyboard was in use as early as 1361, though the keys were so large that they had to be struck with the fist. Their width was, however, gradually lessened, and in the spinet made by Pasi, of Modena, in 1490 (the earliest instrument of this class), and in the organ of St. Blaise at Brunswick (1499), the compass was approximately that of our present keyboard. In most of the early instruments the natural notes are black and the sharps and flats white. Several attempts have been made to re-form the keyboard. The principal objection to all rearrangements is the fact that there is a mass of beautiful music written for the modern pianoforte which could not be adapted to an instrument with a differ-

ently arranged keyboard. See CLAVICHORD; FINGER BOARD; HARPSICHORD; SPINET; TEMPERAMENT, VIRGINAL.

KEYES, KÉZ, CHARLES ROLLIN (1864-). An American geologist. Born at Des Moines, Iowa, he graduated from the State University of Iowa in 1887, and took his Ph.D. at Johns Hopkins in 1892. He assisted on the United States Geological Survey (1889-90), was paleontologist of Missouri (1890-92) and assistant geologist of Iowa (1892-94), directed the Missouri Geological Survey (1894-97), and served as president of the New Mexico State School of Mines (1902-06). After 1890 he was a consulting mining engineer and was interested in various mining operations. His publications include: *Geological Formations* (1892); *Coal Deposits of Iowa* (1893); *Organization of Geological Surveys* (1894); *Paleontology of Missouri* (1894); *Maryland Granites* (1895); *Origin and Classifications of Ore Deposits* (1900); *Genesis of Lake Valley Silver Deposits* (1907); *Ozark Lead and Zinc Deposits* (1909); *Deflation* (1910); *Mid-Continental Eolation* (1911), *Annotated Bibliography of Iowa Geology* (1913).

KEYES, EDWARD LAWRENCE (1843-). An American surgeon, son of Gen. E. D. Keyes. He was born at Charleston, S. C., graduated at Yale in 1863 and from the medical department of New York University in 1866, and studied in Paris for a time. He became surgeon to several New York hospitals and from 1869 to 1890 was a member of the faculty of the Bellevue Hospital Medical College. He published: *A Practical Treatise on the Surgical Diseases of the Genito-Urinary Organs*, with W. H. Van Buren (1874; 2d rev. ed., by E. L. Keyes and E. L. Keyes, Jr., 1905); *Tonic Treatment of Syphilis* (1877; rev. ed., 1896); *The Venereal Diseases* (1880); *Surgery of the Kidneys, the Bladder, and the Genitalia in the Male* (1905).

KEYES, EMERSON WILLARD (1828-97). An American lawyer and educator born at Jamestown, N. Y. In 1848 he graduated from the State Normal School at Albany. He was deputy superintendent of public instruction of New York in 1857-65 and acting superintendent in 1861-62. Admitted to the bar in 1862, in 1865 he became deputy superintendent of the banking department of New York State, from 1870 to 1873 he served as State bank examiner, and from 1882 to his death he was chief clerk of the Brooklyn (N. Y.) board of education. He assisted in framing the educational sections in the charter of Greater New York and published: *New York Court of Appeals Reports* (1867-69); *History of Savings Banks in the United States* (1876-78); *New York Code of Public Instruction* (1879); *Laws of New York Relating to Common Schools*.

KEYES, ERASMUS DARWIN (1810-95). An American soldier, born at Brimfield, Mass. He graduated at West Point in 1832 and was on duty in Charleston harbor, S. C., during the nullification excitement of that year. He was engaged in garrison duty or on frontier service against the Indians until the outbreak of the Civil War, when he was made colonel of the Eleventh Infantry and sent to New York to organize an expedition for the relief of Fort Pickens. On May 17, 1861, he was made brigadier general of volunteers, and on July 21 took part in the first battle of Bull Run. During the Peninsular campaign he commanded the Fourth Army Corps and was engaged in its chief ac-

tions. He resigned in 1864. He published *Fifty Years' Observation of Men and Events, Civil and Military* (1884).

KEYHOLE LIM'PET. A limpet of the genus *Fissurella*, a shell allied to the ordinary limpet (q.v.), but differing in that the apex is perforated, the hole being of the shape and appearance of an old-fashioned keyhole. In very young shells the apex is entire and spiral. These shells are found on nearly all coasts.

KEY ISLANDS. See KEI ISLANDS.

KEYNES, KÄNZ, JOHN NEVILLE (1852-). An English logician and economist. He was born at Salisbury and was educated at Amersham Hall School, at University College, London, and at Pembroke College, Cambridge. Of both these colleges he was fellow and of the latter honorary fellow. From 1884 to 1911 he served as university lecturer in moral science at Cambridge, being also secretary of the local examinations and lectures syndicate (1892-1910) and chairman of the special board for moral science (1906-12). After 1893 he was secretary of the council of the university senate and after 1910 registry. He wrote *Studies and Exercises in Formal Logic* (1884; 4th ed., 1906) and *Scope and Method of Political Economy* (1891; 3d ed., 1904).

KEYNOTE. In music the fundamental note from which the key takes its name. See TONIC.

KEYPORT. A borough in Monmouth Co., N. J., 22 miles (direct) south by west of New York City, with which it has steamboat connection, on Raritan Bay and on the Central Railroad of New Jersey (Map: New Jersey, D 3). It is a summer resort and contains a public library, a high school, and Beach Park. There are manufactories of rubber goods, sewing machines, and wagons, and oyster and clam interests. The water works and sewage system are owned by the borough. Pop., 1900, 3413; 1910, 3554.

KEYS, POWER OF THE (Lat. *clavium potestas*). A theological term which denotes the supreme authority of the Church. It is prominently represented by two golden keys in the insignia of the Pope, considered as the successor of St. Peter, to whom Christ said: "I will give unto thee the keys of the kingdom of heaven" (Matt. xvi. 19). In the early fathers it usually means the authority to forgive sins. Writers on canon law generally distinguish between the *potestas ordinis* and the *potestas jurisdictionis*. The former relates to the priestly powers inherent in the clergy by virtue of their ordination, e.g., the power to offer the sacrifice of the mass. The latter relates to Church government, whether it be the care and discipline of the parish priest or the universal sway of the sovereign pontiff. In its fullness (the *plenitudo potestatis*) the power of jurisdiction, including executive, legislative, and judicial functions, resides only in the Pope, but in a more or less limited way it may be exercised by patriarchs, primates, archbishops, bishops, and priests. Constant evidence of the authority of the hierarchy is shown in the administration of discipline through the sacrament of penance.

Protestants hold a different view of the passage in the Gospel of Matthew and understand that whatever power the keys there symbolize was conferred upon the Church as a whole and is to be exercised by the ministry and laity together. It is held to include both doctrine and discipline, but not any such thing as the sacra-

ment of penance. A few modern critics think some corruption has crept into the text in Matt. xvi. 19, so that the original meaning is lost. See PENANCE; DISCIPLINE, ECCLESIASTICAL.

The position of the papacy on this is stated in Pius IX's constitution *Pastor Æternus*, published at the Vatican Council of 1870. The text, with translation, is found in Schaff, *Creeds of Christendom*, vol. ii (New York, 1877). Consult: Macedo, *De Clavibus Petri* (Rome, 1860); Hinschius, *Kirchenrecht der Katholiken und Protestanten* (6 vols., Berlin, 1869-97); Baart, *The Roman Court* (New York, 1899).

KEYSER, Kĭ'zēr. A city and the county seat of Mineral Co., W. Va., 5 miles southeast of Piedmont, on the Potomac River, and on the Baltimore and Ohio, the Western Maryland, and the Twin Mountain and Potomac railroads (Map: West Virginia, F 2). It is in a fruit and stock-raising region and has railroad machine shops, silk and woolen mills, pottery works, furniture and canning factories, and stone quarries. Keyser is a popular summer resort and contains a State preparatory school and a courthouse building. The commission form of government has been adopted. The water works are owned by the city. Pop., 1900, 2536; 1910, 3705.

KEYSER, CASSIUS JACKSON (1862-). An American mathematician and philosophical writer, born at Rawson, Ohio. He graduated from Ohio Normal University in 1883 and from the University of Missouri in 1892 and studied at the University of Michigan (1894) and at Columbia (Ph.D., 1901), where he had been tutor and instructor in mathematics since 1897. He taught five years in the public schools of Ohio and Missouri (1885-90), at the State Summer School, Kirksville, Mo. (1892), at the State Normal School, New Paltz, N. Y. (1892-94), and at Washington University, St. Louis, Mo. (1894-95). At Columbia he became professor of mathematics in 1904 and head of the department in 1910, and he taught there in the summer sessions from 1900 to 1907 and at the University of California in 1911. He became a member of the American board of the *Hibbert Journal*, and made contributions to that and other philosophical journals. In 1914 he published *Science and Religion: The Rational and the Super-Rational*.

KEYSER, EPHRAIM (1850-). An American sculptor. He was born at Baltimore, Md., and studied first at the Maryland Institute, in which he later became instructor. Then he worked at the Royal Academy in Munich and, under Albert Wolff, at Berlin. There his life-size figure of "Psyche," now in the Cincinnati Museum, won for him the silver medal of the Academy and the Michael Beerche scholarship, giving him a year's study in Rome. Among his portrait busts are those of Cardinal Gibbons, Henry Harland, Daniel Coit Gilman, and Sidney Lanier. Distinguished for imagination and strength are the memorial to Chester A. Arthur in Albany—an angel with drooping wings and sorrowful visage laying a palm branch on the sarcophagus—and the Stein Memorial in Baltimore. His bust of a man in the Peabody Institute, Baltimore, deserves especial mention for characterization and atmosphere.

KEYSER, HENDRIK CORNELISZOOM DE (1567-1621). A Dutch architect and sculptor, born at Utrecht. He was a pupil of Cornelius Bloemaert in his native town and then studied in Paris,

On his return he settled in Amsterdam with Bloemaert (1591) and three years afterward was appointed city architect and sculptor. His works, executed mostly in the style of the Dutch Renaissance, include the court of the East India House and the Exchange at Amsterdam, the City Hall and the monument of William of Orange at Delft, the monument of Erasmus at Rotterdam, and the front of the Oosterkirk at Hoorn. In these works he was assisted by his son Pieter, and he himself erected the monument to Admiral Tromp at Delft.

KEYSER, JAKOB RUDOLF (1803-64). A Norwegian historian and philologist. He was born and educated at Christiania and in 1825 received a royal fellowship and traveled for two years in Iceland making linguistic researches. In 1828 he was made docent, and in 1837 professor of history and statistics, in the University of Christiania. His writings were on the early history of Norway and the North, especially the ecclesiastical, and he edited many of the old Norse authors. With P. A. Munch he edited, at government expense, *Norges gamle Love indtil 1380* (3 vols., 1846-49, completed by G. Storm, vol. iv, 1885, and E. Hertzberg, vol. v, 1895). His other more important works were: *Om Nordmandenes Herkomst og Folkeslegtsskab* (1839); *Nordmandenes Religionsforfatning i Hedendommen* (1847); *Den norske Kirkes Historie under Katholicismen* (1856-58); and the posthumous works, *Efterladte Skrifter* (1865-67) and *Norges Historie* (1865-70).

KEYSER, NICAISE DE (1813-87). A Belgian historical painter, born at Sandvliet, near Antwerp. He studied at the Academy of Antwerp, under Jacobs and Van Brée. He attracted attention with his first picture, "Crucifixion" (1834). The "Battle of the Spurs, 1502" (1836, Museum at Courtrai), and "Battle of Worringen, 1288" (1839, New Museum, Brussels), are distinguished for lofty conception, skill in depicting the turmoil of battle, correct drawing, and luminous coloring. They were followed by historical genre scenes, treated with subtle refinement, such as: "Emperor Maximilian Visiting Memling's Studio"; "The Giaour" and "Death of Maria de' Medici" (both 1845, and in the National Gallery, Berlin); "Columbus and his Son Leaving Barcelona" (1852); "Court of Lorenzo de' Medici" (1870); "Charles V Liberating Christian Slaves in Tunis" (1873, New Museum, Amsterdam); "Francis I in the Studio of Benvenuto Cellini" (Fodor Museum, Amsterdam). He at first modeled his style after the great masters of the Netherlands, but showed in his later period a tendency to follow the modern French school. An example of this kind is the "Massacre of the Innocents" (Museum at Ghent). He also painted good portraits and in 1864-66 adorned the staircase of the Old Museum in Antwerp with groups of Belgian artists. In 1855 he was appointed director of the Academy at Antwerp.

KEYSER, PETER DIRCK (1835-97). An American oculist. He was born in Philadelphia, of Dutch ancestry; attended Delaware College, and studied chemistry under Gentz; and served for a year as captain of volunteers in the Civil War, but was forced by poor health to resign. He spent two years at Munich, Berlin, and Jena, where he took his degree in medicine in 1864, and again entered the Federal army as assistant surgeon. At the close of the war he became connected with the Philadelphia Eye and Ear

Infirmary. He became professor of ophthalmology in the Medico-Chirurgical College of Philadelphia in 1889 and also dean of this institution. His earlier works were on chemistry, later he published *Report on Operations for Cataract* (1874) and other valuable papers in the same field.

KEYSER, THOMAS DE, wrongly called **THEODORE** or **DIRK** (c.1596-1667). A Dutch portrait painter. He was born at Amsterdam, the second son of the architect and sculptor Hendrik de Keyser. He was probably the pupil of Cornelis de Voort, but he seems to have formed his style mostly on that of Nicolas Elias. He was at the height of his reputation when Rembrandt came to Amsterdam in 1631, and exercised a decided influence upon the youthful master. Keyser's masterpiece, the Reception of Marie de' Medici, is in The Hague Museum. Other paintings by him are in the museums of Amsterdam, Berlin, Brussels, The Hague, Munich, St. Petersburg. In the National Gallery at London is a portrait of "A Merchant and his Clerk" by Keyser, which is full of human and historical as well as pictorial interest. Keyser's technique and characterization are masterful, and his lights and shadows are exquisitely suggestive of Rembrandt. His groups' genre style show portraiture at a height surpassed by Rembrandt only.

KEYSTONE. The central and crowning stone of an arch or vault, and the last to be set in place. Like the other voussours (qv), it is wider at the top than at the bottom and thus keys the entire structure. See **ARCH**.

KEYSTONE STATE. Pennsylvania. See **STATES, POPULAR NAMES OF**.

KEY WEST. A city, port of entry, and the county seat of Monroe Co., Fla., 90 miles north by east of Havana, Cuba (Map Florida, E 7). It is at the south extremity of the United States, on Key West Island, the most westerly of the group of Florida Keys. The fine deep harbor is defended by Fort Taylor, situated on an artificial island at the main entrance. There are two cities. The city is on the Florida East Coast R. R. and on the line of a number of steamship routes to American and West Indian ports. It is a beautiful place, with broad streets, attractive houses, and tropical gardens, and its pure air and mild climate have made it a popular winter and health resort. Key West is an important United States naval station, with machine shops, dock, marine railway, marine hospital, barracks, etc. Among other features of interest are the Hargrove Institute, United States Biological Station, the high school, county courthouse and park, United States customhouse and post office, city hall, a convent, a Methodist seminary, a public library, United States Weather Bureau Station, a monument to the Maine dead, and the Eastern and Western Martello towers. The leading industry is the manufacture of cigars, which is very extensive and is carried on mostly by Cubans. Sponge fishing is also of importance, and the frequent shipwrecks on the islands offer opportunity for a profitable wrecking business. There is a considerable trade in cigars, sponges, turtles, fish, salt, fruit, vegetables, etc. The value of the exports in 1914 was \$5,000,000, while that of the imports was \$1,000,000. The island on which the city stands lies about 50 miles off the coast, but has been connected with the mainland by a railway built in part on the chain of

islets of which Key West is the terminal, and in part on a stone and concrete roadway connecting the islands. The purpose of this enterprise, on which about \$15,000,000 was expended, was to make possible the transfer of passengers and freight between Cuba and the United States by through cars to be transferred from Key West to Havana by an ocean ferry, and the through car line from New York to Havana was opened in the early part of 1915. The car ferry, which is capable of carrying 30 refrigerator cars, is pronounced the largest car ferry in existence. This enterprise of a through car line between the United States and Cuba was originated by Henry Flagler, who expended large sums of money in constructing the rail line over the ocean from the mainland to the island of Key West. Under a charter of 1893 the government is vested in a mayor, biennially elected, and a council. The water works are owned and operated by the municipality. Key West was settled in 1822, and, though unimportant for many years, it was in 1890 the largest city in the State and now ranks fourth. It was chartered as a city in 1832. Key West became of great importance to the Federal government during the Civil War and in the War with Spain in 1898 was the rendezvous of the North Atlantic squadron of the United States navy. Pop., 1900, 17,114. 1910, 19,945, 1914 (U. S. est.), 21,150.

KHABAROVSK, *kā'ba-rōfsk'*, formerly **KHABAROVKA**, *kā'bā-rōf'kā*. The capital of the Maritime Province (Primorsk), Siberia, situated at the confluence of the Ussuri with the Amur. It is the seat of the Governor-General of Amur, and has a railway school, an ethnographical museum, a Chinese temple, and a public garden with a monument to Count Muravev. As a terminal of the Ussuri branch of the Trans-Siberian Railway, Khabarovsk is a place of some commercial importance and carries on a large trade in fables. The town was founded in 1858 as a military station and named after the Cossack Khabarov, one of the conquerors of eastern Siberia. It was raised to the rank of a town in 1880. Pop., 1911, 54,879, including a number of Chinese.

KHABUR, *kā-boor'*. A river of Asiatic Turkey. It rises among the Karajah Mountains in the Vilayet of Diarbekir, south of the sources of the Tigris, and flows for about 200 miles in a general southerly direction until it joins the Euphrates at Kerkisiah. It is identified by some authorities with the Hebrew Chabor and the Araxes of Xenophon.

KHAIBAR (*kī'ber*) **PASS**. Another spelling for the name of a mountain defile between India and Afghanistan. See **KHYBER PASS**.

KHAIR-ED-DIN, *kīr'ed-den'* (better **KHAIR AL-DIN**). A Greek pirate, better known, with his brother Horuk, as Barbarossa (q.v.).

KHAKI, *ka'kē* (Hind. *khaki*, dusty, from *khāk*, dust). A drab, clay, or dust-colored cloth of East Indian origin, first used by the British government for their native troops and afterward for all British troops serving abroad or on campaign. For a number of years after the Spanish-American War of 1898 it was employed by the United States government for field and colonial service and similarly by both France and Germany. In the United States army the khaki uniform is now officially known as the cotton service uniform and is of a neutral olive drab rather than khaki color.

KHALID, *kā'lid* (582-642). A Mohammedan general. He was the son of Walid, of the Mahzumiyyah branch of the Kuraish. At first he was an enemy of Mohammed, being among the leaders who defeated him at Uhud in 625. But after Mohammed had married his kinswoman, Maimunah, he accepted the new faith (629) and became Mohammed's greatest general, receiving the surname Sword of Allah after his victory over the Byzantines at Muthah. He was then sent by Mohammed against Mecca and commanded the right wing of the attack. He defeated the impostor Musailima and the Banu Hanifah after the Prophet's death and in 633 was made commander of the army sent by Abu Bekr into Mesopotamia. He defeated the Persians in the Battle of the Chains, but was then ordered to join forces with Amr and Abu Ubaidah in Syria. After a forced march of five days through the waterless desert, he reached Tadmor (Palmyra). The first city in Syria that he captured was Bosra, the capital of Hauran (634). He then defeated the armies of Heraclius at Ajnadin Fihl, or Pella (635), and Emesa (635). Damascus was then besieged, and fell in August, 635. His next great battle was that of the Yarmuk (August, 636). Damascus had then to be besieged a second time, and shortly before or after it fell word came that Omar, for reasons that are not certain, had given the chief command to Abu Ubaidah. Khalid then showed his loftiness of spirit by continuing to serve as a subordinate without protest until his death, at Emesa, 642. Consult: Wellhausen, *Skizzen und Vorarbeiten*, vol. vi (Berlin, 1899), De Goeje, *Mémoire sur la conquête de la Syrie* (Leyden, 1900), A. Müller, *Der Islam*, vol. i (Berlin, 1885), Huart, *Histoire des Arabes* (Paris, 1912).

KHALIFA, *kāl-y'fā*, **THE**, also known as **ABDULLAH IEN SEYID MOHAMMED**, *āb'dul-la'hē 'b'n sā-yēd' mō-hām'mēd* (c.1846-99). He was the first to assert that Mohammed Ahmed was the mahdi sent to regenerate and to deliver the Moslem world. He became the latter's chief adviser or khalifa, and on his deathbed (1885) the Mahdi proclaimed him his successor. In the 13 years of his rule he extended greatly his dominions in the Sudan. He was defeated by the British under Kitchener at Omdurman, Sept. 2, 1898, and fled to the south with the remainder of his army, which was dispersed in the battle of Om Debrikat, Nov. 24, 1899, Abdullahi himself being slain.

KHALKHAS. See **KALKAS**.

KHAMA, *ka'mā* (1835-). A Christianized African chief, head of the Bamangwato, a northern tribe of Bechuanaland. In 1872 he joined with Montsioa in an appeal to England against Boer encroachments. He got no immediate help, but in 1884 Bechuanaland was taken formally under British protection. In 1893 he assisted the British South Africa Company in overthrowing the power of the Matabele, and two years later he and two other chiefs visited England to protest against his country being put under that company. As a result of their protest, all the territory north of the Molopo was made a native reservation, and at Khama's request stringent laws were passed against importation of alcohol. In 1903 he founded as a new capital Selechoe, Bamangwato. Consult Mrs. Wyndham Knight-Bruce, *The Story of an African Chief* (London, 1894).

KHAMI. See **HAMI**.

KHAM SIN, kām-sēn'. See SĪMOOM.

KHAM TI, kām'tē. One of the peoples of Shan stock, dwelling on the Assam-Burmese frontier. See SHANS.

KHAN, kân (Pers. *khân*, prince, of Tatar origin). 1. A title of uncertain origin, often borne by Oriental rulers, especially in Central Asia. Its earliest mention is by Gregory of Tours (560), who designates the chief of the Huns (Avars) as Chagnus. Among Mohammedans it seems to have been first used in the thirteenth century at the time of the Mongol Genghis Khan, and it persisted down to the time of the last Oriental ruler of the Crimea, Shahin Giray (1783). Since the time of Bayazid I (1389) and Mohammed I (1402), the title has been added to the other titles of the Osmanli sultans. It was not used by the Seljuks (1037-1300). Khan is also joined to a personal name so as to form a composite word. In Shiite lands it means simply a man of rank, equivalent to Turkish Beg or Bey. Some of the titles compounded with Khan are: (1) Kha-Khan, used long before the twelfth century to designate the leader of the Tou-Kiou Turks, the Ouigurs, Mongols, Chinese (Yuen dynasty), and Mandshus. (2) Il-Khan (provincial khan), to indicate their inferiority to the Kha-Khans, used by the Mongol ruler Hulagu and his successors in Persia (1256-1336). (3) Tar-Khan, a subaltern prince. (4) Gur-Khan (universal lord), used by the Turks of Kara-Khitay, by Tamerlane (1335-1405), and Ulug Beg (1447). (5) Ir-Khan, used by certain Turkish tribes. The word "khanate," for the territorial divisions of Genghis Khan's empire, is a European formation. Consult De Lacouperie, *Khan, Kha-Khan, and Other Tribes* (1885).

2 The homonym "khan" (Persian *khānah*, house) is frequently applied in translations of Oriental texts and works on the East to unfurnished inns, erected either by the government or private individuals for travelers, and for whose accommodations either no charge or a small fee is required. See CARAVANERAI.

KHANDESH, kân'desh, or **CANDEISH**. Formerly a district in the Central Division, Bombay, British India, now divided into Khandesh East and West. Area, 9989 (Khandesh East, 4550; Khandesh West, 5439) square miles. Pop., 1901, 1,427,382; 1911, 1,615,609. It is watered by the Tapti, and its extensive central plain fringed on the north by the Satpura Hills comprises a considerable area of fertile alluvial soil. It raises cereals, linseed, cotton, and cattle. Cotton cloth goods are manufactured. Almost surrounded by the powerful native states of Hyderabad, Sind, and Baroda, it suffered greatly during the long contest between the Mohammedans and the Mahrattas and also from the struggles among the rival chiefs. In 1818 it was taken by the East India Company. The Bhils, a . . . race, aggravated considerably the . . . of the new government. Capitals: East Khandesh, Jalgaon; West Khandesh, Dhulia.

KHANG-HI, käng'hē' Emperor of China (1662-1722). See K'ANG-HI.

KHANIA, kâ-né'a. See CANEA.

KHARBIN, kâr-bēn'. See HARBIN.

KHARGEH, kâr'gē, EL (full name, *Wah al-Hargah*, outer oasis). An important oasis of Egypt, situated about four days' travel west of Thebes, in lat. 25° 30' N. and long. 30° 40' E., about 220 feet above the sea and 435 miles

by rail south of Cairo (Map: Egypt, C 2). It is about 90 miles long from north to south and 3 miles wide on an average. The oasis contains the town of Khargeh (q.v.) and several villages in which antiquities may be found. The oasis does not contain a single stream, but is underlaid by sandstone rock from which water is obtained. Of late years there has been extensive boring, and portions of the surrounding desert have been reclaimed. Pop., 1907, 8348. Wheat, barley, rice, and indigo are grown. Dates are exported, the oasis containing over 60,000 palms. El Khargeh has been known since the time of Psammeticus.

KHARGEH, kâr'gā, EL, or **KHARGA**. The chief town of the oasis of the same name in Upper Egypt, situated about 100 miles west of Thebes (Map: Egypt, C 2). It contains the ruins of a temple of Ammon and several other ruins from the time of the Ptolemies and the Romans. Pop., 1907, 5362.

KHARIJITES, kâ'ri-jits. See MOHAMMEDAN SECTS.

KHARKOV, kâr-kôf'. A government of Little Russia, bounded by the governments of Kursk and Voronezh on the north, the Province of the Don Cossacks on the east, Yekaterinoslav on the south, and Poltava on the west (Map: Russia, E 5). Area, 21,041 square miles. It has a flat surface, with a general incline towards the south. It is watered mostly by tributaries of the Dnieper and the Don. The climate is variable, but warmer than in the central part of Russia. The soil is mostly a black loam of great fertility. Cereals, including corn and buckwheat, are raised in large quantities; tobacco and the vine are also cultivated. Stock raising is an important industry, and horse breeding for the army is actively prosecuted. The chief manufactures are beet sugar, tobacco, liquors, bricks, pottery, flour, woolen goods, and iron products. The government is well provided with railway lines. Pop., 1912, 3,329,700, consisting chiefly of Little Russians. Capital, Kharkov. The territory now occupied by the Government of Kharkov was in the early Middle Ages inhabited by Khazars, Petchenegs, and later by Tatars. The Cossacks began to settle there in the seventeenth century.

KHARKOV. The capital of the Russian government of the same name, situated in a marshy district on three streams, at the junction of two railway lines, 250 miles east-southeast of Kiev (Map: Russia, E 4). It has an attractive appearance and is well built. There are a cathedral, Protestant and Roman Catholic churches, numerous Russian churches, two theatres, an exchange, and a museum. The University of Kharkov, founded in 1803, has four faculties (including jurisprudence and medicine) and nearly 1800 students, a botanical garden, and a library with 173,000 volumes. There are also a technological institute with about 1200 students, one of the four theological academies of Russia, a medical school, a veterinary institute, and a number of secondary and special schools. The city has many extensive cigar and tobacco factories, distilleries, a sugar refinery, candle works, soap works, and iron foundries. Kharkov is one of the principal commercial cities of Russia, owing to its central position with respect to the north and south trade. There are four annual fairs, at which a very large volume of business is done, especially in horses and wool. The principal imports come via the Baltic

and include mainly machinery, tea, wine, and tobacco. Pop., 1897, 173,989; 1912, 248,281. Kharkov was founded in the middle of the sixteenth century. It was the scene of revolutionary disturbances in 1905-06.

KHARPUT, kâr-pôô', or **HARPUT**. The capital of the Vilayet of Mamuret-ül-Aziz, Asiatic Turkey. It is situated on an elevated plateau near the banks of the upper Euphrates and near the source of the Tigris (Map: Turkey in Asia, D 2). It has fine bazars, an ancient church, a Jacobite convent with a collection of valuable biblical manuscripts, a college attached to the American mission station, and a native school. The trade is chiefly in wine, cotton, and oil. The population is estimated at over 25,000 and is composed of Turks, Kurds, Armenians, and Jacobite Syrians. In 1895 it was the scene of one of the worst massacres of Armenians by the fanatical Kurds of the neighboring hills.

KHARTUM, kar-tôôm'. The capital of Anglo-Egyptian Sudan, situated on the left bank of the Blue Nile, near its confluence with the White Nile, in a treeless, sterile region (Map: Africa, H 3). It is strongly fortified and covers a large area. The present town was laid out by General Kitchener in 1908. The government buildings are European in style, and there are several mosques, a Coptic church, a hospital and barracks, a zoölogical garden, and a street railway. Gordon Memorial College and the palace of the Governor-General are new and fine buildings. As the focus of trade in Sudan, Khartum imports arms, powder, grain, and textiles, and exports ivory, ostrich feathers, and fruit. The shops of the water-transport department are situated here. Its population was estimated in 1882, before its destruction by the Mahdists, at 70,000; with suburbs (1907), 69,349. Khartum was founded by Mehemet Ali in 1822; in 1830 was made the seat of the Governor-General of Sudan and became a commercial centre. In 1885 it was taken by the Mahdi after the valiant defense by General Gordon (q.v.), who was killed in the massacre following the capture. The Mahdi's successor razed the city and made Omdurman, across the river, his capital. With the overthrowing of the power of the Mahdi by General Kitchener in 1898, Khartum was reinstated as the capital of Anglo-Egyptian Sudan and has since recovered a large part of its former trade and prosperity, especially since the railroad connecting it with Egypt has been completed. Consult: G. W. Steevens, *With Kitchener to Khartum* (7th ed., Edinburgh, 1898; new ed., New York, 1914), Bridgman, "The New British Empire in the Sudan," in *The National Geographic Magazine* (Washington, May, 1906).

KHAS, káz. One of the Gurka tribes of Nepal. Like most of their kindred, they are of mixed Hindu-Aryan and Tibeto-Mongolian blood. The Nepalese Khas are to be distinguished from the Khas of Siam and Laos, who belong to the Moïs, as one of the large groups of uncivilized or "savage" tribes of western Farther India is called. Consult Vansittart, in *Journal of the Asiatic Society of Bengal*, vol. lxiii (Calcutta, 1894).

KHASI, kâ'sé, **KHASIA**, kâ'sé-â, or, as they call themselves, **KYI**. Inhabitants of the region of the Khasi Hills in northern Assam, eastward from the Garo tribes. The Khasi are classed by Dalton (1872) as Indo-Chinese, but independent in their linguistic affinities, pos-

sessing both monosyllabism and a species of agglutination. Ratyel (1898) considers that the Khasi are largely of Aryan blood, and Deniker (1900) thinks they approach the Indonesian type. The Khasi are among the few Indian peoples who recognize the female line. They also eschew the use of milk. Consult: Dalton, *Descriptive Ethnology of Bengal* (Calcutta, 1872); Friedrich Mueller, "Die Sprache der Khasia," in his *Grundriss der Sprachwissenschaft*, vol. ii (Vienna, 1822); H. Roberts, *Grammar of the Khasi Language* (London, 1891); Wilhelm Schmidt, "Grundzüge einer Lautlehre der Khasi-Sprache," in *Königlich Bayerische Akademie der Wissenschaften, Abhandlungen der philosophisch-philologischen Klasse*, vol. xxii (Munich, 1905).

KHASI (kâ'sé) **HILS**. See JAINTIA HILLS.

KHATMANDU, kât'mân-dôo'. The capital of Nepal (q.v.). It is situated at the confluence of the Baghmati and Vishnumati rivers, 145 miles north of Patna (Map: India, E 3). The brick or stone paved streets are narrow and dirty. The houses are from two to four stories high and have elaborately carved wood balconies and windows. There are several pagoda-shaped temples with gilt copper domes. The chief building is the Maharajan palace containing a modern durbar or reception room, and the Kot military council chamber in which Jung Bahadur disposed of his political enemies by a general massacre on Sept. 15, 1846. A British Resident is stationed at Khatmandu. The town has public schools, hospitals, and a public library. Pop (est.), 1913, 80,000.

KHAYYAM, OMAR. See OMAR KHAYYAM.

KHAZARS, kâ'zârz, **CHOZARS**, or **CHAZARS**. A people long extinct, who in the early part of the Middle Ages inhabited the region of the Caucasus and the Caspian and the steppes of southeastern Russia. When at the height of their power, in the ninth century, they held sway as far west as the Dnieper and northward to the middle Volga. They had many important cities which carried on an extensive commerce, their capital Itil (now Astrakhan) being "the Venice of the East." On the Volga they came in contact with the Bulgars, and along the Dnieper and Oka with the Slavs. By some writers they are supposed to have been an indigenous people of the Caucasus, but the warlike movements and conquests which they carried on brought in admixtures, so that the question of their ethnological position becomes a difficult one. They are usually classed with the Turk peoples, although Finno-Ugrian or Caucasian affinity is not excluded. Contemporary accounts relate that they were fair, with black hair and fine physical development, and that the women were beautiful and much sought after by the courts of Byzantium and Bagdad. As a commercial people, they possessed the good qualities of honesty and business ability, which made them successful. Their sovereigns were called Khakans (Khans). In the seventh century the Khazars were defeated by the Mohammedan caliphs, as they had been previously by the Huns (450) and the Turks; they soon recovered, however, and continued their alliance with the Byzantine Empire, helping the Greeks to stem the invasions of the Petchenegs and other barbarians. The apostle of the Slavs, Cyril, is said to have attempted their conversion without enduring results. In the eighth century their Khakan, with a part of his people, embraced Judaism.

The correspondence of the Jewish Khakan Joseph and the Spanish Rabbi Chasdai ben Shaprut (960 A.D.) has been preserved. The power of the Khazars endured only until about the beginning of the eleventh century. In 965 they suffered a defeat at the hands of the Russian ruler Sviatoslav, and about 50 years later their dominion in the Crimea came to an end. They left no literary remains.

Bibliography. Accounts of Oriental writers were published by Fraehn (St. Petersburg, 1821, 1827) and Harkavy (ib., 1874 et seq.). Consult further: Carmoly, *Itinéraires de la Terre Sainte* (Brussels, 1847); Vivien St Martin, *Sur les Khazars* (Paris, 1851); *Ibn Dasta*, translated by Chwolson (St. Petersburg, 1869); Cassel, *Der khazarische Königsbrief* (Berlin, 1877); Vambery, *Der Ursprung der Magyaren* (Leipzig, 1882); Hirschfeld, *Das Buch se-Chazari* (Breslau, 1885); Abercromby, *Pre- and Proto-historic Finns* (London, 1898); Marquart, *Osteuropäische und Ostasiatische Streifzüge* (Leipzig, 1903); Schechter, "An Unknown Khazar Document," in *Jewish Quarterly Review*, vol. iii, pp 181-219 (N. s., Philadelphia, 1913).

KHEDIVE, *ke-dév'* (Turk. *khidiv*, from Pers. *khudiv*, *khudiv*, king, lord; connected with Pers. *khudāi*, God, Lord, Av. *avādāta*, self-determined, Skt *avadhā*, self-determination, from *ava*, Lat. *suus*, one's own + *dāh*, Gk. *τῆναι*, *tūhēnai*, Lat. *con-dere*, to place). The title granted in 1867 by the Sultan to Ismail Pasha, the Viceroy of Egypt, and his successors, instead of the title of Vali, which all Turkish governors used. See ISMAIL PASHA; EGYPT.

KHEFREN, *kēf'rēn*. See CHEPHREN.

KHELAT, *ke-lāt'*, or **KELAT**. The capital of Baluchistan, 6780 feet above sea level and 88 miles south of Quetta (Map: Asia, Central, M 8). It is the residence of the Khan, who exercises a suzerainty, more or less nominal, over the other khans of Baluchistan. The town, situated on the slope of a hill, consists of mud houses and is surrounded by a mud wall, 30 feet high, with three gates. It is dominated by a citadel containing the Khan's palace. Its chief importance is as a centre for caravan routes to Quetta, Nushki, Gondava, and Khozdar. The town was occupied by England during the Afghan War in 1839, when Merab Khan, the ruler, was killed during the assault on the fort. In 1854 the British obtained the right of maintaining a garrison here. In 1877 a treaty was concluded with the Khan, by which a British agent, with military escort, became a resident at the court. The town has a good water supply. Its industries are small, but its bazar is the centre of a considerable domestic trade in Hindu wares and the products of the surrounding region. Pop., 14,000.

KHEMNITZER, *kēm'nits-ēr*, IVAN IVANOVITCH. A Russian writer of fables. See CHEMNITZER.

KHEPERI, *kā'pā-rē*. An Egyptian deity. See SCARABÆUS.

KHERASKOV, *kēr'ā-skōf'*, MIKHAIL MATVEVITCH (1733-1807). A Russian poet. He was born in Pereyaslav, Government of Poltava, and was descended from a family of Wallachian boyars. After serving in the army he was appointed assessor of the University of Moscow upon the foundation of that institution in 1755. Here he passed the greater part of his life, becoming successively inspector of printing, director (1763), and curator (1778-1801). He edited

several journals and devoted considerable attention to pedagogy. As a poet, he has been termed the "dean of Russian literature." He displayed great versatility, his works comprising tragedies, fables, novels, and miscellaneous poems. His most celebrated production is the *Rossyada*, in 12 books, the first great Russian epic to be published. It is conceived in the style of the *Aeneid* and describes the invasion of Kazan by Ivan the Terrible. The collected works of Kheraskov were published, in 12 volumes, at Moscow, in 1796.

KHERSON, *kēr-sōn'*. A government of South Russia, bounded on the north by the governments of Kiev and Poltava, on the east by Yekaterinoslav, on the south by the Black Sea, and on the west by Bessarabia and Podolia (Map: Russia, D 5). Area, over 27,337 square miles. It lies mostly in the steppe region of Russia and is practically without elevations. It is watered by the Dnieper, the Bug, and the Dniester, with their tributaries. In the north and northwest fertile stretches of black soil occur. In some parts of the government, however, the rainfall is very inadequate. Marble and granite are found in certain localities, and iron near the eastern frontier. The climate is moderate but variable. Cereals are raised mostly in the northern part, while in the south more attention is paid to the raising of domestic animals and to the cultivation of fruit. Tobacco and wine are produced to some extent. The chief industrial establishments are iron foundries, flour mills, machine works, chemical works, carriage factories, and there are considerable manufactures in wool, hemp, and leather, and agricultural machinery is produced in large quantities. Pop., 1912, 3,547,500, consisting principally of Little Russians, Moldavians, Bulgarians, Greeks, Germans, and Jews. Kherson has more German colonists than any other government in South Russia. Capital, Kherson.

KHERSON. Capital of the government of the same name in Russia, situated on the right bank of the Dnieper, about 20 miles above its mouth (Map: Russia, D 5). The river is here about 10 miles wide and contains numerous islets. The town is well built, attractive, and progressive. In the suburbs are situated the old fortifications, and the cathedral of St. Catharine, containing the remains of Prince Potemkin. The town contains a bronze statue of Potemkin and an obelisk in memory of John Howard, the English philanthropist, who died here in 1790. Kherson is an important station on the Dnieper, and its trade with Odessa is extensive, although the foreign trade is now almost entirely concentrated at Odessa and Nikolayev. The chief industries are milling, wool washing, and the manufacturing of tobacco products. The chief exports are hides, tallow, beer, flour, soap, and wool, all produced in or near the city. Kherson, founded by Prince Potemkin in 1778, was intended for a naval port and was strongly fortified. In 1787, however, the naval port was removed to Nikolayev, and the fortifications have since been abandoned. Pop., 1912, 91,858, of whom one-third are Jews.

KHEVENHÜLLER, *kā'ven-hul'lēr*, FRANZ CHRISTOPH VON (1588-1650). An Austrian statesman and diplomat, born at Klagenfurt. After a university education and extensive travel he became a prominent figure at the Imperial court, where he was a protégé of Chancellor Khlesl. (See KHLESL, MELCHIOR.) In 1616 he

obtained the important appointment of Ambassador to Madrid and there was successful in enlisting Spanish influence on behalf of Ferdinand II. He was Lord Steward to the Empress and for four years in command of a district in Croatia. He wrote, in German, an important work on contemporaneous history, the *Annales Ferdinandi* (printed entire at Leipzig, in 12 vols., in 1716-26). Consult Wolf, *Geschichtliche Bilder aus Oesterreich*, vol. i (Vienna, 1878).

KHEVSURS, kĕv'sŭŕz, or **CHEVSURS** (Georg., valley dwellers). One of the smaller mountain tribes of the Georgian group of peoples inhabiting the Caucasus. They are celebrated for their beer feasts. Their folk customs in general are of interest. Their religion is a mixture of paganism with Christianity and Mohammedanism. Besides the general works on the Georgians and the peoples of the Caucasus, reference may be made to Radde's monograph, *Die Chevsuren und ihr Land* (Cassel, 1878), and to the detailed account of the Chevsurs that is given in the fourth volume of Chantre's *Recherches archéologiques dans le Caucase* (Lyons, 1885-87).

KHINGAN, kĭn-gĭn'. A range of mountains between Mongolia and Manchuria, in the northeastern part of China. It begins at the southeastern corner of the Desert of Gobi, being an extension of the long chain which crosses that desert from East Turkestan (Map China, L 2 and 3). It skirts the desert on the east and extends northward through eastern Mongolia and western Manchuria to the Amur River. It reaches a height of about 7500 feet and contains a number of volcanic peaks. This chain is generally called the Great Khingan, and it is connected by forest-covered plateaus intersected by river valleys with the Little Khingan, a group of mountains south of the Amur in northeastern Manchuria, which region is now tapped by the Trans-Siberian Railway. The two mountain ranges were carefully explored and surveyed in 1887-88 and 1897.

KHIVA, kĕ'vā. A vassal state of Russia, in Central Asia, situated approximately between lat 40° and 44° N and long. 58° and 62° E. (Map: Asia, Central, J 2). It is bounded by the Aral Sea on the north, Russian Turkestan and Bokhara on the east, and the Russian Transcaspian Province on the south and west. Its area is estimated at about 26,000 square miles. With the exception of the portion adjoining the Amu, which flows along the eastern border, the country is occupied by sandy desert interspersed with a number of small oases. The territory depends for its water entirely on the Amu, from which a number of canals extend into the interior and are used for irrigation. The climate, although unpleasant, is healthful. The heat in the summer is very great, and the winters are short but severe. The rainfall is scanty, and during the autumn great quantities of sand are blown by the wind from the surrounding desert. In the portions of the country accessible to irrigation rice, wheat, and other cereals, cotton, melons, and fruit are cultivated. Domestic animals include horses, camels, and sheep; wild animals, the jackal, the wolf, and the fox. Agriculture and the raising of live stock are the chief occupations of the natives, who are partly nomadic.

Khiva is governed by a khan whose rule is hereditary and restrained in its absolutism by Russia. The foreign relations of the khanate

have been under the practical control of Russia since 1873. The population of Khiva is estimated at 800,000, including 400,000 nomads. The inhabitants belong to the Aryan races and are composed mainly of Karakalpaks, Turkomans, and Kirghizes. The Uzbeks are the ruling race and are engaged chiefly in agriculture. The Sarts and Tajiks, supposed by some to be the original settlers of the country, inhabit the cities, where they engage in trade and handicraft. The chief towns are Khiva (q.v.), the capital; New Urgenj; Kiptchak; and Kungrad.

History. Khiva in ancient times and in the early Middle Ages formed part successively of the kingdoms of Bactria, Parthia, and Persia, and of the caliphate. The modern Khanate of Khiva is a fragment of the independent kingdom known in history under the three different names of Chorasmia, Khwarezm, and Urgenj, which rose into power at the close of the eleventh century under a Seljuk dynasty and conquered and held in subjection Persia and Afghanistan. This kingdom controlled the Oxus or Amu, the most important river of Central Asia. It was swept into his great dragnet of conquest by Genghis Khan in 1221, and in 1372 it came into the hands of Timur. Timur's descendants were subdued in 1511 by Shahy Beg (called Sheibani Khan by Western writers), chief of the Uzbeks, a Turkish tribe, and his successors have ruled over Khiva to the present time. Ever since the seventeenth century, when its wealth excited the cupidity of the first Cossack raiders into Central Asia, the Russian government recognized the importance of Khiva and as a pretext for attempts at conquest complained that the Khivans fostered rebellion among the Kirghiz subjects of the Czar and plundered their caravans. In 1717 Peter the Great endeavored to conquer Khiva, but was defeated, and in 1839 the attempt was renewed by the Czar Nicholas I, but with no better success. With the advance of Russia in Central Asia, and the establishment of Russian power in the Transcaspian country, a cordon was slowly drawn about Khiva, and in 1873 a great effort was made to crush it. Three Russian columns advanced on Khiva from the Caspian, from Orenburg, and from Tashkent. The second and third, under Generals Verekin and Kaufmann, entered the city in May and June. The Khan agreed to pay a war indemnity of about \$11,000,000 (which is gradually being liquidated by the payment of yearly installments), and to cede to Bokhara the Khivan possessions on the right bank of the Amu. Shortly afterward, however, these possessions controlling the mouth of the Amu were incorporated with Russian territory, and now form the Russian District of Amu. Khiva, on the left bank, retains its autonomy nominally; but with Russia as a heavy creditor and established in full control of the surrounding country, it is practically a vassal state. In 1910 Seyid Asfendiar Khan (?1871-) succeeded his father, Seyid Mohamed Rahim Khan, as reigning sovereign.

Khanikov, "Les documents sur le khanat de Khiva," in *Bulletin de la Société Géographique* (Paris, 1873), with bibliography; MacGahan, *Campaigning on the Oxus, and the Fall of Khiva* (London, 1874); Lansdell, *Russian Central Asia* (ib., 1885); Moser, *A travers l'Asie Central* (Paris, 1886); Colquhoun, *Russia against India* (New York, 1900);

S. Goulitchambaroff, *Khwa* (Ashkhabad, 1913), in Russian.

KHIVA. The capital of the khanate of the same name, situated on a canal near the Amu, 240 miles west-northwest of Bokhara (Map: Asia, Central, J 2). It is surrounded by a wall and is made up mostly of flat-roofed huts. On an eminence in the centre of the town is situated the citadel, containing the palace of the Khan. There are 17 mosques and four Mohammedan colleges. The industries are the making of carpets, silks, and cottons. Pop. (est.), 6000.

KHLESL, klá's'l (spelled also KLESEL), MELCHIOR (1552-1630) An Austrian prelate, born in Vienna. Although Protestant by education, he entered the Roman church and rose through successive dignities to be Bishop of Vienna (1602) and Cardinal (1615). He also became Chancellor to the Archduke Matthias, upon whose accession to the throne of the Empire his power, already formidable, was greatly increased. He induced him to turn against the Emperor Rudolph. When in 1618, however, he counseled Ferdinand II and the latter's ally, Maximilian, Duke of Bavaria, to desist from war with the Bohemians, he was imprisoned at Castle Ambras in the Tirol. Summoned to Rome (1622) for trial before the Curia, he was there acquitted. Ferdinand later acquiesced in the decision of the church, and in 1627 Khlesl returned to Austria. His extensive and valuable correspondence, edited by Hammer-Purgstall in the form of an autobiographic study, appeared at Vienna in 1847-51 (4 vols.). Consult Kerschbaumer, *Kardinal Klesel* (Vienna, 1865).

KHLYSTI, or **KHLISTI**, klis-tí' (Russ., lasher). A Russian fanatical sect which originated about the middle of the seventeenth century. One Daniel Philipovitch, a renegade soldier, was the founder, and from him the sect is sometimes called Danielites. Philipovitch wandered about the country, declaring that he was God and preaching certain commandments. He adopted a son, who thenceforth was considered Jesus Christ, the Son of God, and a young girl was chosen as the virgin mother of God. The sect spread and still secretly exists, notwithstanding attempts to suppress it. The commandments of Philipovitch inculcated moral duties, including celibacy and abstinence from strong drink. Nevertheless the Khlysti are charged with indulging in immoral practices and revolting orgies. They meet at night in secret and become wrought up to a high pitch of fanatical excitement. It is a part of their discipline to weaken the flesh and strengthen the spirit, accordingly they fast often and flog one another at their meetings. They call one another Saviour, Redeemer, Christ, and Mother of God, and pray to each other as to gods. Many have been sent to Siberia and the Caucasus. Consult Heard, *The Russian Church and Russian Dissent* (London, 1887).

KHMELNITSKI, BOGDAN. See CHMIELNICKI, BOGDAN.

KHMELNITSKY, kmél-nít'skí, or **CHMELNITSKI**, NIKOLAI IVANOVITCH (1789-1845). A Russian writer of comedies in verse, born at St. Petersburg. He was first in the military service, taking part in the campaign of 1812-13, and afterward was Governor of Smolensk in 1829 and of Archangel in 1837, but retired the following year. His earliest literary attempts were metrical translations of Molière's *Tartuffe* and *L'Ecole des femmes*. Simple plots, natural

characters, and easy-flowing verses characterize his plays entitled *Vozdushnye zamki* (Castles in Spain), *Russkii Faust* (The Russian Faust), *Govorun* (The Prattler), and others. His comedy *Tsarkoe Slovo* (The Word of the Czar) was successful, and he wrote another historical drama called *Bogdan Chmielnicki*. His complete works were published at St. Petersburg (1849).

KHMERS, k'mérz. The primitive inhabitants of Cambodia. They are now to be found chiefly in the marshy regions of the south and the neighboring parts of Siam and Cochinchina, but were probably at an early period spread over a great portion of southeastern Farther India. Their physical affinities have been the subject of much discussion, likewise their linguistic relationship. Brinton (1890) calls them "a mixed people, descended partly from Mongolian ancestry, partly from Dravidian and Aryan conquerors"; Keane (1896) speaks of their language as having "Oceanic (Malayo-Polynesian) affinities"; Deniker (1900) thinks that the Khmers "have sprung from the intermixing of the Malays and Kuis, with an infusion of Hindu blood at least in the higher classes of society." The Khmers seem to be somewhat taller, less broad-headed, and darker skinned than the Annamese, Siamese, etc. Their eyes are seldom typically Mongolian, and their hair is often wavy rather than straight. Though a people in some respects of quite a primitive type, they are undoubtedly the originators of the generally majestic and simple basic principles of the architecture seen in the remarkable ruins of pyramids, temples, palaces, etc., of Angkor-Vat and elsewhere in the Khmer area. The original Khmer ideal has, however, been lightened by Indian influences, and perhaps other stimuli have also contributed to make the change from the first conception. Some of these ruins date from about the beginning of the Christian era, but the most beautiful probably belong to the period 700-1400 A.D. Some authorities seem inclined to attribute too little influence to the Khmers in the construction of these wonderful monuments, considering them almost entirely of foreign origin. It would be better, perhaps, to regard some of their peculiarities as due to different flowerings of Khmer art at diverse periods of the national history rather than as borrowings from outside. The modern Khmers who have behind them these evidences of former civilizations are too readily stigmatized by certain writers as mere "degenerate descendants" of their cultured ancestors, preserving only in metal smithing some recollections of their old-time glories. Probably both the genius of the creators of the Khmer ruins and the "degeneracy" of their successors have been exaggerated.

Bibliography. Besides the general works on Cambodia, Cochinchina, Siam, etc., by Aymonier, Moura, Garnier, Lemire, etc., the following more special treatises may be referred to: Aymonier, *Textes Khmers*, etc. (Paris, 1878-91); Fournereau and Porcher, *Les ruines d'Angkor* (ib., 1890); Fournereau, *Le Siam ancien* (ib., 1895); Léon Barré, "De l'influence française au royaume des Khmers, étude historique, économique, et politique du Cambodge, ancien et moderne," in *Annales de la Société d'Emulation du Département des Vosges*, vol. lxxviii (ib., 1902); A. Combanaire, "Etude sur les peuples préhistoriques du Cambodge et de la région d'Angkor," in *Bulletin de la Société des Etudes indo-chinoises de Saigon*, No. lvii (Saigon,

1909). A *Khmer-French Dictionary* was published by Aymonier (ib., 1878). See CAMBODIA; INDO-CHINESE.

KHNOFFF, knöpf, FERNAND (1858-). A Belgian painter, sculptor, and etcher. He was born at Grembergen, near Termonde (West Flanders), and passed his youth at Bruges. After studying law for a time, he devoted himself to painting under Xavier Mellery at the Brussels Academy and under Lefebvre in Paris. He was strongly influenced by Gustave Moreau, Alfred Stevens, and the English Pre-Raphaelites. His art is essentially modern, and his favorite subjects are mysterious and dreamy interpretations of the past or subtly conceived allegorical female figures, full of harmonious beauty, but lacking in vigor and freshness. His portraits also deserve special mention. Among his best-known works, many of which are in private possession, are "The Crisis" (1881); "The Temptation of St. Anthony" (1883); "Memories" (1889), Brussels Museum; "I Lock my Door upon Myself" (1891), Munich Pinakothek, "White, Black, and Gold" (1901), Brussels Museum, "The Idea of Justice" (1905), "Isolde" (1906). Consult Dumont-Wilden, *Fernand Knopff* (Brussels, 1907).

KHNUM, k'nōom, or **CHNUM**. An Egyptian deity, worshiped especially in the vicinity of the first cataract of the Nile, where he is usually associated with the goddesses Satet and Anuket, worshiped in the same district. His worship, however, was supreme from Thebes to Philæ. His name was connected by the priests with a stem (*khn*) signifying 'to form, fashion,' and in many Egyptian texts he is styled the creator of gods and men. He is one of the oldest Egyptian gods and is often depicted officiating at the birth of kings, and forming the newborn child upon a potter's wheel. In fact, "the oldest endowment [says Steindorff] of the kind about which we know anything is one dedicated by the primitive King Zoser to the patron of the Cataract district of Assuan, the god Khnum." His sacred animal was the ram, and he is generally represented in human form, with the head and horns of a ram. In later times Chnum was regarded as a cosmical divinity. Consult: Franz Wiedemann, *Religion of the Ancient Egyptians* (New York, 1897), E. A. T. W. Budge, *The Gods of the Egyptians* (London, 1904), Georg Steindorff, *The Religion of the Ancient Egyptians* (New York, 1905). See PLATE of EGYPTIAN DEITIES.

KHODAVENDIKYAR, kō'dā-vēn-dē-kyār', or BRUSA (Map. Turkey in Asia, A 2). A vilayet of Asiatic Turkey, occupying the northwest portion of Asia Minor, with an area of about 26,000 square miles, comprising portions of ancient Phrygia and Bithynia. It has a fertile soil and some manufactures, and its population is estimated at over 1,700,000, of whom a little more than 300,000 are Armenians. The capital is Brusa (q.v.).

KHOJEND, kō-jēnt', or **KHOJEND**. The capital of a district of the same name in the Territory of Samarkand, Asiatic Russia, on the Central Asiatic Railway, about 93 miles south of Tashkent (Map: Asia, Central, N 2). Gardening, vine growing, and the manufacture of coarse porcelain, silk and cotton goods are carried on. There is a brisk trade in leather, cotton, and raisins. Pop., 1897, 30,109; 1912, 39,977. Khodjend, the ancient Kyropolis, is one of the most ancient cities of Central Asia;

Alexander the Great sojourned here for a time. It became Russian in 1866.

KHOL, koi. A town in the Province of Azerbaijan, Persia, situated about 75 miles northwest of Tabriz, on the caravan route between that city and Erzerum (Map: Persia, A 3). It lies in a fertile and well-cultivated region, 3300 feet above the sea. The old wall incloses a city of wide and regular streets shaded by trees and intersected by several canals. It has several good buildings, including the Governor's residence and mosques. The bazars are built of brick and well stocked, and the town has a large caravanserai. Pop. (est.), 25,000, including a number of Armenians.

KHOIKHOIN, k'hoi'k'hoim'. See HOTTENTOTS.

KHOJEND, kō-jēnt'. A city of Asiatic Russia. See KHODJEND.

KHOKAND, kō-kānt'. A territory of Turkestan. See FERGHANA.

KHOKAND. The capital of a district in the Territory of Ferghana, Asiatic Russia, and former capital of the Khanate of Khokand (Map: Asia, J 4). It is situated on a small stream about 8 miles south of the Syr Darya, on the Central Asiatic Railway. It is surrounded by thick walls and is for the most part built in the Oriental fashion. The European portion is more regularly laid out. Khokand is the seat of a considerable transit trade in Russian manufactures, especially in cotton goods, and representatives of the great Russian dry-goods houses come each year to attend the fair in the middle of August. Pop., 1897, 81,354, 1912, 113,764.

KHOLM, kōlm (Pol. *Chelm*). The capital of a district of the same name in the Government of Lublin, Russian Poland, about 45 miles east of Lublin. It has a fine cathedral, an old castle, a theological and a teachers' seminary, and a railway school, and is a grain and cattle market. Pop., 1897, 19,236, 1912, 27,251.

KHOLMOGORY, kōl'mō-gō'rē. The capital of a district of the same name in the Government of Archangel, European Russia, situated 47 miles southeast of Archangel, on an island of the northern Dvina (Map: Russia, F 2). It was of some commercial importance in the palmy days of the White Sea trade, but is now in a state of decline. Peter the Great, on his return from his travels, brought to Kholmogory several specimens of the Dutch breed of cattle, by means of which the natives so improved their own that the Kholmogory breed is now considered one of the best in Russia and is well known abroad. From 1743 to 1746 it was the home of the former Regent, Princess Anna Leopoldowna, who was held here as a prisoner. The "father of Russian literature," Lomonosoff, was born in the little village Denisovka, in the vicinity of the town. Pop., 1912, 1053.

KHOMYAKOV, kō'myā-kōf', ALEKSEY STEPANOVITCH (1804-60). A Russian poet and publicist, born in Moscow. After serving in the Turkish campaign of 1828-29 he retired to devote himself to literature. In 1832 appeared his tragedy in verse, *Yermak*, followed by another, *Pseudo-Demetrius* (1833); they are inferior to his lyric *Poems*, which were published in 1844. Strongly imaginative, felicitous in diction, he is "drunk with patriotism." To him Russia is the ideal country of the world. In his historical, philosophical, and theological works he endeavored to prove that "the rotten West" (Romano-Germanic world) had come to

yield its place in history to the Panslavic world, with Russia in the lead. These Panslavic ("Slavophile") ideas were embodied in *A Message from Moscow to the Serbians* (Leipzig, 1860). He wrote in Russian, French, German, and English. His collected works appeared in Moscow (1861) in four volumes.

KHONDS, k'hōndz, or Kus. A Dravidian people who inhabit part of Orissa and the adjacent regions of Bengal and number more than half a million, but have never reached civilization like the Tamils, Telugus, Kanarese, Malayalam, etc. Physically the Khonds are below the average in stature, somewhat darker than their neighbors, comparatively well built and well muscled, and have always been in more or less demand as soldiers. They are credited with great hospitality, sense of honor, morality above the average, etc. They were formerly noted for their sacrifices of human beings to the earth deity, and their capture marriage, of which now only the shadow remains. Among them all the great religions of India, besides missionary Christianity, have obtained a hold, while the older heathenism is still a force to be reckoned with. They are a very interesting type of the primitive, as contrasted with the civilized, Dravidian. Captain Campbell, who learned to know them well during a long residence in their country, has, in his *A Personal Narrative of Thirteen Years' Service among the Wild Tribes of Khondistan* (London, 1864), given a good account of this people. For information of an anthropological and ethnological sort, consult also: Lewin, *Wild Races of Southeastern India* (London, 1870); Dalton, *Descriptive Ethnology of Bengal* (Calcutta, 1872); Rowney, *The Wild Tribes of India* (London, 1882); Reclus, *Primitive Folk* (New York, 1891).

KHONS, kōnz, or **KHONSU**. See CHONS.

KHOPA, kōpa. A seaport in Asiatic Turkey, in the Vilayet of Trebizond, and about 90 miles northeast of the city of Trebizond. In the European War, which began in 1914, Russian warships bombarded the port and destroyed the port barracks and the ammunition depot and set the town on fire. The Turks were preparing for an offensive movement from Khopa. See **WAR IN EUROPE**.

KHORASAN, kō'rā-sān' (the land of the sun). A northeastern province of Persia, bordering on the Russian Transcasian Territory on the northeast and Afghanistan on the east (Map: Asia, Central, F, G, H, 5). Area, estimated at 150,000 square miles. A large portion of it consists of the deserts of Lut in the south and Kavir in the west, interspersed with numerous oases. The agricultural land is situated chiefly in the northern part. The climate is, on the whole, temperate and healthful, but the scarcity of water makes agriculture impossible without artificial irrigation. Grain, cereals, cotton, tobacco, opium, and southern fruits are cultivated to some extent, and cattle are raised. In the cities the manufacturing of silk and woolen materials, cotton goods and Persian-lamb garments, carpets, shawls, and arms is pursued. Pop. (est.), 1,000,000, consisting of numerous nomadic tribes of Turkish, Kurdish, and Afghan descent, whose chief occupation is grazing. The trade has hitherto been carried chiefly by the road which leads from Meshed, the capital of the province, to the Caspian Sea, by way of Astrabad. In ancient times Khorasan consisted of the districts of Parthia, Margiana,

and Aria, forming parts of the Persian (later of the Parthian) Empire. Up to the sixteenth century the name covered also the Territory of Herat, now belonging to Afghanistan. Khorasan has been several times separated from the Persian Empire, but was finally reunited to it at the commencement of the sixteenth century by Ismail Sofi, the first Suffavean Shah of Persia. Consult: Macgregor, *Journey through Khorassan* (London, 1879); Radde, "Wissenschaftliche Ergebnisse," in *Petermanns Mitteilungen*, vol. cxxvi (Gotha, 1898); Tate, *Khurasan and Sistan* (London, 1900).

KHORSABAD, kōr'sā-bād'. A mound and village in the territory of ancient Assyria, about five hours northeast of the modern Mosul. The town whose ruins constituted the mound was in reality a suburb of Nineveh. Excavations at Khorsabad were begun in 1843 by Paul Botta (q.v.), after three months' work at Kuyunjik (see **NINEVEH**), with results which he considered unsatisfactory. At the new location he immediately brought to light important remains, his success marking the beginning of discoveries in Assyria. Supported by the French government, Botta continued his work through 1844 and uncovered portions of a large palace. In 1851-55 Victor Place, also at the expense of the French government, completed the examination of this palace, discovered that it had formed part of a fortified town, and determined the position and extent of the town walls. Records which were found showed that the palace had been built by Sargon II (722-705 B.C.), after whom the town was named Dūr-Sharrukin (Sargon's fortress). The town was nearly square, about a mile on each side, the angles of the walls being directed towards the four points of the compass. Eight gates were discovered, three of them very elaborate, flanked by winged bulls and other sculptures, while the arches were decorated with blue and white enameled tiles representing various figures of excellent design and execution. The palace stood on a terrace 45 feet high, at the northwest side of the town, a considerable portion of it extending without the wall (For full description of the palace and for a plate, see **ASSYRIAN ART**). Most of the sculptures and other works of art from Khorsabad are now in the Louvre, although unfortunately many of the antiquities discovered by Place were lost while being transported down the Tigris. Consult: Botta and Flandin, *Monument de Ninive* (5 vols., Paris, 1849-50); Joachim Ménant, *Inscriptions des revers de plaques du palais de Khorsabad traduites sur le texte assyrien* (ib., 1865); Place and Thomas, *Ninive et l'Assyrie* (3 vols., ib., 1866-69), and the works mentioned under **NINEVEH** (q.v.).

KHOSRU, kōs-rō' (Av. *Husravah*, having good renown). 1. The name of a legendary King of Persia, known as Kai Khosru. (See **KAIANIAN**.) 2. The name of the Sassanian King of Persia commonly called Khosru I, or, more accurately, Khusrāu. Surnamed Anushirvan (the noble soul), and known to Byzantine history as Chosroes I, he was the third son of Kobad, or Kavadh, King of Persia, and was the greatest monarch of the Sassanian dynasty. In 531 A.D. Khosru mounted the throne, according to the terms of his father's will. The young King is said to have put to death his elder brother, who had been excluded from the succession and had therefore conspired against him. In 540 Khosru reopened the standing

feud between the Persians and the Byzantines, and hostilities continued for 20 years. Although the Persians reaped an abundant harvest of glory, the other results were unimportant. On the accession of Justin II the Persian ambassadors were ignominiously treated, and the Greeks took possession of Armenia. Khosru, justly indignant again declared war in 570 and took Dara, the eastern bulwark of the Greek Empire, but was terribly defeated at Melitene (577) by Justinian, grandnephew of the Emperor of that name. The victorious Greek was in his turn totally routed in Armenia. Khosru did not live to see the end of the contest, as he died in 579. His government, though despotic and occasionally oppressive, was marked by a firmness and energy rarely seen among Orientals. Early in his reign he divided the country into the four provinces of Assyria, Media, Persia, and Bactriana, administering the government of each by a viceroy. Agriculture, commerce, and science were encouraged, ravaged provinces were repopled from his conquests, and wasted cities rebuilt. His memory was long cherished by the Persians, and many a story of the stern justice of Khosru is still current among them. During his reign Persia stretched from the Red Sea to the Indus and from the Arabian Sea far into Central Asia. Consult, in addition to the histories of the period, such as Rawlinson, Eduard Meyer, and others, Justi, in *Grundriss der iranischen Philologie*, vol. ii (Strassburg, 1896-1904).

KHOSRU II. King of Persia from 590 to 628. Surnamed **PARVEZ** (the Victorious). He was the grandson of Khosru I. He overthrew in 590, with the help of the Byzantine Emperor Maurice, the Armenian rebel Bahram Chubin, who had usurped the throne of the young prince's father, Ormazd IV. In gratitude he surrendered Dara, Nisibis, and a great part of Armenia to the Greeks, and preserved peace with them till the murder of his benefactor by Phocas in 602. Khosru invaded Mesopotamia in 604, took Dara, and for 17 years inflicted upon the Byzantines a series of disasters the like of which they had never before experienced. Syria was conquered in 611, Palestine in 614, Egypt and Asia Minor in 616, and the last bulwark of the capital, Chalcedon, fell soon after. At this crisis the fortune of war changed sides (See **HERACLIUS**). Khosru was driven to the very gates of Ctesiphon. He was deposed, and murdered by his eldest son, Sheroe, or Siroes, Feb. 28, 628. Consult Justi, in *Grundriss der iranischen Philologie*, vol. ii (Strassburg, 1896-1904).

KHOTAN, kô-tân', or **ILCHI**. A city in the southern part of East Turkestan, China, situated on the Khotan-Darya, in a fertile oasis on the edge of the great desert of the Tarim Basin, at an elevation of 4600 feet, and on one of the most important trade routes of Central Asia (Map: Asia, J 5). It is an ill-built but extensive place, fortified with Oriental ramparts; it has an important silk industry and exports gold and musk. Khotan is famous for its silk carpets. The silk is mixed with wool and gold thread, and patterns are handed down from father to son. It was formerly the capital of a khanate of the same name. The population is estimated at 30,000 to 40,000, mostly Uzbek Tatars. The country around Khotan was once full of flourishing cities, now buried in the desert sands. Explorations have been made in

the Khotan District by Sven Hedin in 1895 and 1900 and M. A. Stein in 1900-01. Consult: M. A. Stein, *Sand-Buried Ruins of Khotan* (London, 1903); id., *Ruins of Desert Cathay* (2 vols., ib., 1912).

KHOTIN, kô'tyén, or **CHOTIN**. The capital of the district of the same name in the Government of Bessarabia, Russia, situated on the right bank of the Dniester, a few miles from the Austro-Hungarian frontier (Map: Russia, C 5). It is of little commercial importance. The inhabitants are engaged chiefly in agriculture. Pop., 1912, 19,561. Here John Sobieski defeated the Turks in 1673.

KHUBILAI KHAN. See **KUBLAI KHAN**.

KHUEN-BELASI-HEDÉRVÁRY, KAROLY (CHARLES), COUNT (1849-1914). A Hungarian statesman, born at Freiwalldau in Upper Silesia. He entered the Hungarian House of Deputies in 1875 as a Liberal. In 1882 he became Obergespan, or Count, of Raab (Győr) and in the next year was made Governor of Croatia, where his 20-year rule was marked by some minor reforms and by a steadily growing hostility to him. In 1903, upon the resignation of Szell, the crown, in spite of Hedervary's unpopularity, made him Premier of Hungary (June 26). The powerful Opposition did not keep its pledges made to him when he formed his cabinet, and the army question forced his resignation (November 3). From March, 1904, to June, 1905, he was a Minister in Tisza's cabinet. Becoming Hungarian Minister President again on Jan. 17, 1910, he prorogued the House for eight weeks when it voted no confidence (January 24) and dissolved it on March 22. The newly elected Parliament had an administration majority, but the Independent minority blocked all business, and when the throne objected to his compromise over the army question Hedervary offered his resignation, on March 6, 1912, but kept the post of First Minister when Francis Joseph threatened to abdicate. On April 17, 1912, he finally had to resign.

KHUFU, kô'fô. The Egyptian form of the name Cheops (q.v.), the second King of the fourth Egyptian dynasty.

KHURJA, kô'r'já. A town in the District of Bulandshahr, United Provinces, India, near the East Indian Railway (Map: India, C 3). It lies 50 miles south-southeast of Delhi. It is one of the centres of India's cotton trade and exports grain, indigo, sugar, and ghi. Pop., 1901, 29,277; 1911, 27,387.

KHUZISTAN, kô'zê-stân', or **ARABI-STAN**. A western province of Persia, bounded by the provinces of Luristan and Ispahan on the north, Faristan on the east, the Persian Gulf on the south, and Asiatic Turkey on the west (Map: Persia, F, G, 6). Area, estimated at 39,000 square miles. The western part is low and swampy in the winter. The eastern is hilly and has a more healthful climate. The chief rivers are the Karun and the Kerkhah. The province is very sparsely settled and has declined greatly in trade since the famine of 1873. Pop. (est.), 200,000, largely Arabs. In the elevated portions of the east are raised rice, wheat, barley, maize, cotton, fruit, and indigo. Carpets, cotton, woolen, and silk goods are manufactured. The climate is hot and unhealthy. The chief cities are Dizful, Shuster, and Mohammerah.

KHVALYNSK, kvá-l'nsk'. The capital of a district of the same name in the Government

of Saratov, Russia, situated on the right bank of the Volga, 140 miles northeast of the city of Saratov (Map: Russia, G 4). Gardening, distilling, and trading in grain are the principal occupations. Pop., 1897, 15,465; 1912, 20,100, including 5000 Rascolniki and other Dissenters, in whose hands the trade of the town is concentrated.

KHVOSHCHINSKAYA, kvôsh'chîn-skâ-yâ, NADEZHDA DMITRIEVNA (1825-89). A prominent Russian author, born at Ryazan in the Province of Ryazan. A very precocious child, she was sent to Moscow to study art and literature. In 1847 six of her poems appeared in the *Literary Gazette*, and with these she made her debut as a writer. Her first serious piece of work, the novel *Anna Mikhailovna*, appeared three years later. In 1852 her *Country Teacher*, another novel, proved equally successful. She wrote under the pseudonym of V. Krestovsky and sometimes under that of Poriechnikov, most of her work first appearing in *Annals of the Fatherland*, a monthly magazine. Her keen observation and realistic manner found great favor with the Russian public, in particular in her studies of provincial life, of which the most important is *The Great Bear* (1871). Among her other publications are *In Trust of Better Things* (1861) and *From the Immediate Past* (1868). Several volumes of her work have been translated into German and Italian. Her collected works appeared at St. Petersburg (1883; in 5 vols., 1892). A most recent study of this important novelist in Russian will be found in Koltonovskaya, *Femmine Silhouettes* (St. Petersburg, 1912).

KHYBER, ky'bêr, or **KHAIBAR**, PASS. A narrow defile in the Khyber Mountains, northwest India, connecting Punjab with Afghanistan (Map: Afghanistan, O 5), between Peshawar and Kabul. It is 33 miles long and in some parts is merely a ravine from 50 to 450 feet wide, between overlooming mountains and almost perpendicular cliffs of shale and limestone rising from 1400 to over 3000 feet high. It forms the bed of a mountain stream which is subject to occasional and sudden floods and to periods during which the water disappears altogether. Impressive in its desolation, wildness, and grandeur, it is the only pass in the region through which artillery can be transported. Its strategic importance dates from the days of Alexander the Great. The ruins of native forts crown commanding points, and during the Afghan wars of 1839-42 and 1878-80 the passage of the British troops was obstinately opposed. Since the latter period the pass has been under the control of the Anglo-Indian government, which maintains several fortified posts garrisoned by the Khaibar Rifles, a corps of native Afridis. The pass is open to traffic on Tuesdays and Fridays only.

KHYENS, kyênz. See CHINS.

KIABOUCCA, **KIABOOCA**, **KYABUCA**, ki'â-bôôk'kâ, or AMBOYNA WOOD. A beautifully mottled wood which reaches the market in small pieces, curled knots or excrescences formed on the stem of the producing tree. The mottling is yellowish red, of different tints mixed with darker shades. It was much used for snuff-boxes and other kinds of ornamental cabinet-work. The exact botanical origin of this handsome wood is in question. It is probably produced by a number of allied species and is chiefly exported from New Guinea and Moluc-

cas. A number of species supposed to furnish this wood, as *Pterospermum acerifolium*, *Pterospermum rubiginosum*, and *Pterospermum suberifolium*, occur abundantly in India, where their timber is considered very valuable.

KIAKHTA, kâ-âk'tâ. A trading station in the Territory of Transbaikalia, Siberia, situated close to the Chinese commercial settlement of Maimatchin, and nearly 3 miles north of the fortress of Troitskozavsk, of which it forms a part (Map: Asia, M 3). It is surrounded by a wooden wall and has a fine cathedral and an extensive bazar. The commercial importance of Kiakhta is still considerable, although it has greatly declined since the Treaty of Peking in 1860, prior to which it was the chief centre of the trade between Russia and China. The trade consists almost entirely in the export of tea, and there is a brisk trade in other Chinese produce. Money was first used in the trade of Kiakhta in 1855. Pop., 23,400, including the adjacent towns of Troitskozavsk and Ust-Kiakhta.

KIA-K'ING, kyâ'k'êng', or **CHIA-CH'ING**, chyâ'ch'êng' (high felicity). The fifth Emperor of the *Ta Tsung* (great pure), the Manchu dynasty of China. He was the fifteenth son of K'ien-lung (q.v.) and succeeded him in 1796. National decay set in with his accession to the throne. He proved dissolute and worthless, and family feuds, plots, insurrections, and piracy taxed the resources of the country. He persecuted the Romish missionaries and expelled many of them. Secret societies became very active in his reign, especially the White Lily; also the Triad Society, whose sole aim was the overthrow of the Manchus. In 1816 a British embassy under Lord Amherst arrived, but failed to accomplish anything. Kia-k'ing died in 1820, after a reign of 25 years, and was succeeded by his son Tao-kuang, then already 40 years of age. Consult: Giles, *China and the Manchus* (Cambridge, 1912).

KIAMIL (kyâ'mêl') **PASHA** (1826-1913). A Turkish statesman, born in the island of Cyprus. He studied in the military academy at Cairo, accompanied an Egyptian prince on a European tour, and served as interpreter at the Viceroy's palace. After the death of Khedive Mehemet Ali (1849), Kiamil Pasha went to Constantinople, where he entered government service and rose rapidly. After becoming Grand Vizier in 1885, he endeavored to treat non-Moslem subjects with fairness and to pacify the Great Powers; but in 1891 Sultan Abdul Hamid, startled by Kiamil Pasha's programme of reforms, dismissed him in disgrace. A second time Grand Vizier in 1898, his recommendation of repression and punishment of the outrages inflicted upon Armenians resulted in a short time in his being sent away, as Governor, to Aleppo. Thence he was transferred to a like post at Smyrna. After the revolution of 1908 he again held his former high office until he failed to gain the support of the reform committee, and in 1912, just before the Balkan War, he became Grand Vizier for the fourth time. On Jan. 23, 1913, he was again, and this time effectually, overthrown by the coup d'état of Talaat Bey and Enver Bey. He was allowed to retire to Cyprus, where he died.

KIANG, ki-âng'. The Asiatic wild ass, better designated tarpan. Its local varieties have also received separate names, as gorkhar, etc. See ASS, and Plate of EQUIDÆ.

KIANGANES, kē-áng'an, or **QUIANGANES**. See IFUGAO

KIANGSI, kyáng'sé'. An inland province of China, bounded on the east by Chekiang and Fukien, on the south by Kwangtung, on the west by Hunan, on the north by Hupeh, and on the northeast by Anhui (Map: China, L 6). It is made up entirely of ranges of moderately high mountains and hills of no great length, veined by numerous watercourses and small stretches of open country. On its outer border, east, south, and west, the ridges are longer and higher and form a sort of horseshoe-shaped environment, the Poyang Lake filling the opening on the north. In this frame of mountains most of the numerous rivers of the province have their origin, and from this they drain either directly into the lake or join the Kan-kiang, the principal stream of which rises in the Meiling Mountains in the south and after a course of over 300 miles flows into the Yang-tse through the lake. This forms the great water highway from north to south, a single day's portage over the Meiling bringing the traveler to the North River of Canton, which leads to that city and the China Sea. The province is rich in minerals. Coal is found not far from the lake, and about 30 miles south of the city of Kwangsin, in what are called the Interdicted Hills, are valuable copper and iron mines. Under Imperial China these mines were closed as far back as the fifteenth century. Kaolin and other materials needed for pottery and porcelain making are abundant and support the famous chinaware industry of this province (See KINGTEHCHEN). The chief products of the province are tea, tobacco, grass cloth, hemp, chinaware, and paper. There is one treaty port, Kiukiang (q.v.). Principal imports are cotton yarn, kerosene, and sugar, principal exports, tea, porcelain, cotton, hemp, paper, and tobacco. Kiangsi has played an important part in literature. The capital is Nanchang. Area, 69,498 square miles; pop. (Chinese Michengpu census), 1910, 16,255,000.

KIANGSU, kyáng'sōw'. A maritime province of China, lying along the Yellow Sea, with Shantung on the north, Chekiang on the south, and Anhui on the west (Map: China, L 5). It is a great alluvial plain, broken only by isolated hills, and is well watered, being intersected by numerous waterways and the largest chain of lakes in China. The Yang-tse traverses its southern part, cutting it in two, and until 1853, when it suddenly changed its course to the northeast, the Yellow River intersected its northern part. The Grand Canal, which is a series of canalized rivers and lakes, runs through its entire length from Shantung to Chekiang, and is important for irrigation purposes and for local transportation. The southern section is watered by the Hwang-pu, which teems with Shanghai's commerce. The soil is very fertile, and produces grain of all kinds, cotton, tea, and silk. Rice is grown extensively. The silk produced in Kiangsu is the finest in the world, and the rice of the best quality in China. The salt industry is also important. The old bed of the Yellow River has been resurveyed and taxed, and is now under cultivation and produces immense crops.

There are four treaty ports: Nanking, Shanghai, Chinkiang, Soochow. Nanking is the capital of the province. Under the Manchu rule, a Governor-General (or "Viceroy") administered

the provinces of Kiangsu, Kiangsi, and Anhui. Nanking (q.v.), officially called Kiangning ("River Rest"), was the capital of China at different periods and as late as 1402. Chinkiang was opened in 1861 and has a considerable trade, a total in 1912 of Hk. Tls. 21,556,504. Shanghai (q.v.), on the Hwang-pu, is the most important of the treaty ports of China. Soochow (or Suchow, q.v.) was opened in 1896, and is famed for its wealth. Yangchow, situated on the Grand Canal, 15 miles from the Yang-tse, has an immense salt trade. The entire province was devastated by the Taiping rebellion, marks of which can still be seen. Area, 38,600 square miles. population estimated by census of 1910 at 15,380,000.

KIAOCHOW, kyá'ô-chow', or **KIAOCHAU**. A walled city on the south coast of the peninsula of Shantung, China, near the head of a large bay of the same name, and since 1898 the centre of a German protectorate of about 193 square miles (Map: China, M 4). Pop., including Kiaochow, which lies outside the German zone, about 168,000. In the city of Tsingtau is a population of 34,000, and in the whole German zone about 60,000, with 5000 foreigners, mainly German military. The Chinese city of Kiaochow was formerly a very important centre of trade, but, owing to the silting up of the bay and the opening of Chefoo on the north coast of the province, business has fallen off. The city is not large, but the suburbs are extensive. The port of Kiaochow was Taputu, 13 miles from the sea and about 6 miles from the city, on a small creek which at ebb tide became dry. The surrounding country (with the exception of Laoshan) is flat. The Bay of Kiaochow measures about 15 miles each way, and receives five small streams which carry into the bay much sediment during the rainy season, in July and August. The entrance to the bay is only 1¾ miles wide. On the east side is the low promontory called Laoshan, with rocky shores, and 2 miles from the point of this peninsula lies the town of Tsingtau, "green island," so named from a small grassy island close by. On the western side of the bay is another promontory, with commanding hills about 600 feet high. The east shore has a fine sandy beach, but the western side is rocky and dangerous to some extent.

The city of Tsingtau has one of the finest harbors on the Chinese coast. It was the seat of the German commercial activities in the Far East and the capital of the German zone. In 1897 it was a poor fishing village, but when taken over by the Germans was soon changed into a beautiful, thriving city. They bought the village outright, and installed fine wide streets with German names, electric lighting, telephone service, and other conveniences, including two German banks, the Hongkong and Shanghai Banking Corporation, the Russo-Asiatic Bank, and several good hotels. Industrial concerns include a brewery, a tannery, a soap factory, two eggs-products companies, and three brickkilns. In 1911 there were 18,000,000 bricks used in construction, and, in 1912, 393 building permits were issued. A new and expensive water supply was completed. Tsingtau has a splendid bathing beach and is the favorite summer resort for the Shanghai foreign colony. The maximum temperature is about 90° F. and the minimum 12°. Active efforts have been made at afforestation.

By an expenditure of over \$7,000,000 the Germans constructed an outer and an inner harbor. Considerable dredging was necessary to make the port a naval base. There are two anchorages and three moles, connecting with the railway, also an outer breakwater and extensive granite piers. A steel floating drydock, capable of accommodating the largest battleship, employs 36 Europeans and an average of 1300 Chinese workmen. In 1912 the gross value of the trade amounted to \$40,557,759, an increase of \$6,846,893 over 1911. Direct trade with foreign countries amounted to \$18,700,000, as against \$15,120,000 in 1911. Exports of native produce equaled \$17,999,539. Main foreign commerce, 1912:

	Imports from	Exports to
United States	\$1,332,114	\$34,375
Germany	2,047,497	1,880,221
Japan	4,862,069	656,774
Great Britain	268,915	351,553

Imports are chiefly cotton manufactures, oil from the United States, Russia, and Sumatra, timber, railway material, matches, and tobacco. Exports consist mainly of bean cake, coal, eggs (a large quantity to the United States), nuts, silk, straw braid (of which the Germans have the monopoly for north China), and cotton. In 1912 there were 785 ships entering Tsingtau, with a net tonnage of 1,209,151; German ships numbered 256, with 516,066 net tonnage, British 209, with 448,093, and Japanese 176, with 144,478 net tonnage. Because of the commercial importance of Tsingtau and its efficient government, many wealthy merchants and officials have taken up their residence in the city.

The administration prior to the War in Europe was under a naval officer with the title of Governor, assisted by a council composed of heads of departments, and three elected members. Tsingtau was declared a free port in 1898. In 1906 the Chinese Maritime Customs was established there, under an agreement that 20 per cent of the customs revenues were to be turned over to the German administration. There were no barrier dues (*likin*), and passengers and goods were allowed to pass freely between the German zone and the interior, without any customs regulations or restrictions.

The railway runs from Tsingtau, where it has fine terminal stations, through Shantung Province to Tsinan. By tapping the lower valley of the Hoang-ho River the road greatly increased the possibilities of German trade with interior China. Ten to 20 miles south of Weihien are the Shantung coal mines, in which Germany received preferential rights by treaty. In 1912 the two leading mining companies produced 573,676 tons of coal. In the same year the railroad showed a 17 per cent increase in returns and a 35 per cent increase in passengers.

For defense, Tsingtau was considered superior to Port Arthur. The hills which dominate the city in the rear are from 200 to 1000 feet high, while those commanding the harbor are 600 feet in height. At strategic points were a dozen modern reinforced concrete and sandstone forts, mounted with the heaviest type of Krupp guns, of 14 and 16 inches' calibre, with a range of 10 to 12 miles. These forts are of an interlocking character, each one commanded by at least two others. They completely dominated every approach to the city by land or sea. Be-

cause of its excellent defensive advantages, Tsingtau ranked as one of the strongest fortified places in the world. It was also the naval base for the German Far Eastern squadron.

On Nov. 14, 1897, Kiaochow was seized by a German squadron as retaliation for the murder of two German priests. In the negotiations which followed, Germany received an indemnity, a lease of the city of Tsingtau and Kiaochow Bay for 99 years (the lease running 100 li inland, comprising about 117 square miles), and in addition, valuable railway rights and preferential treatment in the mines of Shantung. German influence became paramount in the entire province. The main purpose of Germany in securing Tsingtau was to establish a strong naval base in Chinese waters, also to have a centre for the spread of German commerce and influence in the Far East. Because of the thoroughness of the German commercial methods, together with the fact that millions of marks were spent in rebuilding Tsingtau and establishing an efficient government, the expectations of Germany were amply realized. In the European War, which began in 1914, Japan compelled Germany to evacuate the protectorate after an investment by land and sea. The Germans made an heroic resistance. The bombardment of the port of Tsingtau lasted almost four months, and it was not until all the fortifications were entirely destroyed that the garrison surrendered. See TSINGTAU, WAR IN EUROPE.

KIBDELOPHANE. See ILMENTE

KIBLAH, kē'blā (Ar *Kiblah*, the direction to which one turns). The direction of the Kaaba (q.v.), in Mecca, towards which Mohammedans face when in prayer. It is indicated in a mosque by a niche in the wall called the *mīhrāb*. At the outset of his career Mohammed is said to have turned towards the Kaaba when praying, though this is contrary to Sura ii, 110: "The east and the west is God's; therefore whichever way ye turn is the face of God." After his flight to Medina the Prophet changed the direction of prayer towards Jerusalem in the hope of attracting the Jews. On Jan. 16, 624, he was told the futility of this hope, he changed back again to the Kaaba, justifying this momentous change by a special revelation (Sura ii, 136-145). Consult: Sprenger, *Das Leben und die Lehre des Mohammed*, vol. iii (Berlin, 1869); Grimme, *Mohammed* (München, 1904); Becker, "Islam," in *Die Religion in Geschichte und Gegenwart* (Tübingen, 1912).

KIBO. See KILIMANJARO.

KICHAI, kē'cht. A small tribe of Caddoan stock (q.v.), formerly residing on Sabine and Trinity rivers, eastern Texas, in alliance with the Caddo, but since 1850 more closely united with the Wichita (q.v.), with whom they are now living on their reservation in Oklahoma. In house-building and general custom they resemble the Wichita. They now number 10 souls.

KICHÉ, kē-chā'. See QUICHÉ.

KICKAPOO. A former important Algonquian tribe, residing, when first known to the French, in central Wisconsin. On the destruction of the Illinois Confederacy by the northern tribes subsequent to 1765 the Kickapoo moved down and established themselves in the middle Wabash region of Illinois and Indiana. Like the other tribes of the Ohio valley, they sided with the English against the Americans, both in the Revolution and the War of 1812.

Soon after the close of the latter war they made treaties which resulted in their removal first to Missouri and afterward to Kansas. About the year 1852 a large band, with some Potawatami, left the main body and went south to Texas and thence into Mexico, where they became known as Mexican Kickapoo, being joined later by others of their tribe. The Mexican band proved so constant a source of annoyance to the border settlements that efforts were made by the government to secure their return, and were so far successful that in 1873 about half were brought back and settled in the present Oklahoma. Most of the others still remain in northern Chihuahua and Tamaulipas, particularly in the Santa Rosa Mountains. From an estimated population of about 3000 in 1759 and 2200 in 1825 they have gone down to perhaps 900, of which 348 are in Kansas (Brown County) and Oklahoma and the remainder in Mexico. Those in Mexico are said to be increasing, while those who were returned to Oklahoma have decreased. Consult F. W. Hodge, *Handbook of American Indians North of Mexico* (Washington, 1907).

KICKHAM, kik'am, CHARLES JOSEPH (1826-82). An Irish novelist of Irish life, and, after Carleton, Griffin, and the Banims, perhaps the best of his kind. He was born at Mullinahone, County Tipperary. A gunpowder accident which damaged his sight and hearing made his intended medical career impossible. He played an active part in the Young Ireland movement in 1848 and was sentenced to 14 years' imprisonment as a treasonable Fenian in 1865, four years of which sentence he served before being pardoned out. With John O'Leary and T. C. Luby he edited (1865) the Fenian newspaper, *The Irish People*. From 1870 he devoted himself to literary work and is best known by the novels, of some tragic power, *Sally Cavanagh, or the Untenanted Graves* (1869), which he wrote in prison; *Knocknagow, or the Homes of Tipperary* (1879); and *For the Old Land: A Tale of Twenty Years Ago* (1886). Gifts of observation, of humor, and of romantic feeling were his, and, under circumstances more favorable to the development of his talents, he might have rivaled William Carleton as a faithful and sympathetic delineator of peasant life.

KIDD, BENJAMIN (1858-). An English sociologist. He entered the British civil service and did not become generally known until the publication of a brilliant essay, *Social Evolution*, in 1894. This work passed through several editions and was translated into German (1895), Swedish (1895), French (1896), Russian (1897), Italian (1898), Chinese (1899), Czech (1900), Danish (1900), and Arabic (1913). The main theme of *Social Evolution* is the conflict between private interest and social welfare, the struggle which eliminates the unfit being the condition of progress. Kidd held that society should be interpreted in terms of biology. He weakened his thesis, however, by finding that men were ultimately controlled by the extrarational motives supplied by religion, which furnished the basis for individual self-sacrifice for the benefit of the public welfare. His later books include: *Control of the Tropics* (1898); *Principles of Western Civilization* (1902); Spanish trans., 1903; *Herbert Spencer and After* (1908); *Two Principal Laws of Sociology* (1909).

KIDD, JOHN (1775-1851). An English physician and geologist, born in London. He was

educated at Bury St. Edmunds and Westminster, and at Christ Church, Oxford (B.A., 1797; M.D., 1804), and at Guy's Hospital. At Oxford he was a reader in chemistry in 1801-03, first Aldrichian professor of chemistry in 1803-22, and thereafter regius professor of medicine. In 1834 Kidd was appointed keeper of the Radcliffe Library. In addition to his regular courses he lectured also on mineralogy and geology and actively promoted the development of those sciences. He is author of *Outlines of Mineralogy* (2 vols., 1809); *A Geological Essay on the Imperfect Evidence in Support of a Theory of the Earth* (1815); *On the Adaptation of External Nature to the Physical Condition of Man* (1833, new ed., 1836); *Observations on Medical Reform* (1841); *Further Observations* (1842).

KIDD, WILLIAM (c.1650-1701). A British navigator, the notorious Captain Kidd of piratical fame. The son of a Scottish Nonconformist minister, he was born probably at Greenock, Scotland, about 1650. He went to sea at an early age, became a trader out of New York, and in the war between England and France, in the early part of the reign of William III, commanded a commissioned vessel in the West Indies and was noted for his bravery. In 1691 the Council of New York awarded him £150 for services rendered the Colony. In 1695, upon the recommendation of Col. Robert Livingston, he was appointed by the Earl of Bellomont, Governor of the Province of New York, to assist in suppressing piracy, and received two commissions from the King, one as a privateer against the French, and the other a roving commission to pursue and capture pirates wherever he might find them. He sailed from Plymouth, England, April, 1696, in a galley called the *Adventure*, carrying 30 guns and a crew of 80 men. After proceeding to New York he increased his crew to 155 men and sailed for Madeira, thence to St. Jago, Madagascar, Malabar, and the Red Sea. He had not been very successful in capturing vessels, and rumors arrived that he had turned pirate. According to evidence amassed he first took some small Moorish vessels, then fought a Portuguese man-of-war, which defeated him, and finally captured a Portuguese ship from Bengal, and an Armenian vessel, the *Quedagh Merchant*, with a rich cargo. At Madagascar he burned his vessel and went on board the Armenian, afterward purchasing the sloop *Antonie* and sailing in company. Proceeding to New York, he coasted from Delaware Bay to Block Island, corresponding with the Earl of Bellomont in the meantime. He had learned that he had been proclaimed a pirate and boldly went to Boston to know the truth, delivering up to the Governor 1111 ounces of gold, 2353 ounces of silver, 57 bags of sugar, 41 bales of goods, and 17 pieces of canvas acquired by his captures. On July 6, 1699, however, in accordance with the British proclamation, Kidd was arrested, the immediate charge against him being that of murder, he having killed a gunner on board the *Adventure* who had become mutinous. He was sent to England, and in April, 1700, was tried, and, although the evidence was inconclusive and the proceedings marked by injustice, was found guilty of murder and, on five separate indictments, of piracy. Kidd was allowed no counsel, and his explanations were ignored. He was condemned and hanged with several of his companions at Execution Dock, London, on May 23,

1701, protesting his innocence to the last. After Kidd's death it became rumored about that he and his crew had buried immense treasures prior to his capture, and the coast of the United States from Block Island south, and even islands in the Hudson River, have many times been searched fruitlessly for this rumored wealth. He had buried part of the *Quedagh Merchant's* treasure on Gardiner's Island off Montauk Point, L. I., but this was recovered by the Colonial authorities in 1699. Consult Campbell, *An Historical Sketch of Robin Hood and Captain Kidd* (New York, 1853), and Dalton, *The Real Captain Kidd: A Vindication* (ib., 1911).

KIDDER, DANIEL PARRISH (1815-92). An American Methodist Episcopal theologian and writer, born at Darien, Genesee Co., N. Y. He graduated from Wesleyan University in 1836, entered the ministry, and in 1837 went as a missionary to Brazil, where he was probably the first to preach a Protestant sermon. After his return to the United States, in 1840, he served as secretary of the Methodist Sunday-school publications and tracts (1844-56), as professor of homiletics in Garrett Biblical Institute for 15 years and in Drew Theological Seminary for 10 years, and as secretary of the board of education of his church (1880-87). The rest of his life was spent in Evanston, Ill. His *Treatise on Homiletics* (1864, 1884) and *The Christian Pastorate* (1871) are the books by which he is now best known. Others include: *Mormonism and the Mormons* (1844), *Sketches of Residence and Travel in Brazil* (2 vols, 1845); *Brazil and the Brazilians Portrayed in Historical and Descriptive Sketches* (8th ed., 1868).

KIDDER, FREDERIC (1804-85). An American author and antiquarian. He was born in New Ipswich, N. H., was mainly self-educated, and engaged in various business ventures in Boston and New York. As the result of special researches into the history of early New England times and families, he wrote on such subjects as *The History of New Ipswich, a New Hampshire Town* (1852); *The Expeditions of Captain John Lovewell* (1865); *Military Operations in Eastern Maine and Nova Scotia during the Revolution* (1867); *History of the First New Hampshire Regiment in the War of the Revolution* (1868); and *History of the Boston Massacre* (1870).

KIDDER, KATHRYN (Mrs. L. K. ANSPACHER) (1868-). An American actress, born at Newark, N. J. She studied dramatic art in New York, London, and Paris, made her debut as an actress at Chicago in 1885, and later appeared in *Davy Crockett*, *Nordeck*, and *Little Lord Fauntleroy*. After 1894 she starred continuously in old English comedies, in Shakespearean tragedies, and in French dramas. Her earliest success was in Sardou's *Madame Sans-Gêne*, of which she obtained exclusive performing rights in the United States and Canada, in any language except French. She also played in *Molly Pitcher* (1902); *Salammbô* (1904); *The Embarrassment of Riches* (1906); *A Woman of Impulse* (1909); *The Glass House* (1911); *The Washerwoman Duchess* (1912), a version of *Madame Sans-Gêne*.

KIDDERMINSTER. A manufacturing town in Worcestershire, England, on the Stour, 14 miles north of Worcester (Map: England, D 4). The Stafford and Worcester Canal opens com-

munication with Liverpool, Bristol, and Hull. Kidderminster is noted for its carpet manufactures, established in 1735; there are also worsted-spinning mills, tin-plate and dye works, and breweries. Richard Baxter, the Nonconformist preacher, and Rowland Hill, the sponsor of penny postage, were born here. The town owns its water supply, markets, free library, baths and washhouses, cemetery, and sewage farm. The United States is represented by a consular agent. Kidderminster dates from the Conquest and was incorporated in 1636. Pop., 1901, 24,681, 1911, 24,333.

KIDDERMINSTER, or INGRAIN, CARPET. See CARPETS AND RUGS.

KIDERLEN-WÄCHTER, kē'dēr-lēn-vāk'tēr, ALFRED VON (1852-1912). A German statesman, born at Stuttgart. Between 1872 and 1876 he studied law at Tübingen, Leipzig, and Strassburg. He served as secretary or counselor of the German embassies in St. Petersburg, Paris, and Constantinople until 1886, and after 1888 accompanied the Emperor on many of his journeys. In 1895 he was appointed Minister at Copenhagen and in 1900 Minister at Bucharest, where he made himself thoroughly informed in Balkan affairs. On several occasions he had charge of the embassy at Constantinople. When Baron von Schoen was ill in 1908, Kiderlen-Wächter was summoned to the foreign office to deal with the Casablanca incident and to prepare the Franco-German Treaty of 1909. These negotiations were carried on with the French Ambassador, Jules Cambon, by whom, it was considered by many, he was outplayed; and Kiderlen-Wächter was largely blamed for the Agadir coup. Appointed Secretary of State in 1910, he largely succeeded in rebuilding his diplomatic reputation within the two years before his death.

KIDNAPING (from *kidnap*, originally slang, from *kid*, slang for child + *nap*, variant of *nab*). The offense of wrongfully taking and conveying away a person against his will, either by force, fraud, or intimidation, or of detaining him with intent to do so. As the origin of the word indicates, it was originally applied only to the abduction of children, but very early in the English law it was employed to designate the same offense in regard to adults. Blackstone, in his *Commentaries*, defines it as "the forcible abduction or stealing away of a man, woman, or child from their own country, and sending them into another." The term is used in a broader sense in the common law of to-day, and, if a person is taken out of his way for any distance in his own country or locality, the person so constraining him is guilty of the crime.

In nearly all of the United States the crime is defined and regulated by statute to-day. Merely enticing a competent adult person away is not sufficient to constitute the crime. There must be an abduction against his will, either actually or constructively. For example, inducing a laborer to go to a far-away island to work, by holding out extravagant promises which the employer does not intend to fulfill, does not come within the scope of this crime; but getting a sailor intoxicated and taking him aboard a strange ship, with design to detain him until the vessel was under way, and then to persuade or coerce him to serve as a seaman, has been held to constitute kidnaping. The crime is also committed if the consent to such

removal and concealment is induced by 'fraud, or if the victim is legally incompetent to give a valid consent, as in case of a child of tender years or a feeble-minded person. The essential elements of kidnaping and of false imprisonment are about the same, except that the former includes, in addition to a detention, the act or intention of carrying away the victim to another place, usually for the purpose of avoiding discovery. Many of the United States have materially increased their statutory penalties for the crime, and the penalty now varies from 10 to 25 years' imprisonment.

Of course, if one person has a legal right to the custody of the person of another, he may detain or take him away to any place in his discretion, within the proper limits, even though the person thus subject to his control objects. Where two persons have equal rights to the custody of the person of another, it is not culpable for one surreptitiously to take the dependent person from the other. Thus, where husband and wife have separated without a legal decree, one may take their children from the other by any peaceable means, even though it be by trick or deception.

The laws of the United States make it a felony to kidnap a person in another country and bring him or her here to hold in confinement or for involuntary service or for any immoral purpose. The term "abduction" as a legal offense is usually restricted to the kidnaping of a woman for the purpose of marriage or sexual intercourse. See ABDUCTION; FALSE IMPRISONMENT; SLAVERY. Consult the authorities referred to under CRIMINAL LAW.

KIDNAPPED. A novel by Robert Louis Stevenson (1886). The story, laid in 1751, gives the adventures of David Balfour, who was kidnaped by his uncle and shipped to America to be sold.

KIDNEY. One of a pair of glands found in the body of every vertebrate (and represented by a similar organ in many invertebrates), whose function is to elaborate and eliminate urine and thereby excrete waste organic products of destroyed tissue and nutritive changes. In the human being the kidneys are placed in the back part of the abdominal cavity, behind the peritoneum, embedded in fat which, together with their blood vessels, keeps them in position. One is situated on each side of the spinal column, extending from about the eleventh rib to the neighborhood of the crest of the ilium. Above each one is the pyramidal supra-renal capsule (q.v.). The kidney is of the shape of a plump Lima bean, with a concave notch at one side, the hilum. It is of a dark-red color, firm, dense, but somewhat brittle. It is a little over 4 inches long, about 2 inches wide, and 1 inch thick, and varies in weight from 4 to 6 ounces, the female kidney being slightly smaller than the male. The organ is covered by a thin but tough fibrous envelope (*tunica propria*). The hilum leads down into a cavity, the sinus, in which lie the renal vessels, nerves, and duct. The duct is continuous with the ureter (which is the canal which conveys the urine into the bladder) and enlarges to become the pelvis of the kidney. The pelvis is funnel-shaped, with the edges of the large end attached to the margin of the sinus, thence turning inward and investing the sheaths of the vessels. The pelvis divides and then subdivides, the primary segments of the duct being called calices.

On longitudinal section, the kidney is seen to be composed of two principal portions: the external portion, or cortex, and the more central portion, or medulla. The medulla consists of from 8 to 18 conical segments called the pyramids of Malpighi, the apices of which (the papillæ) project into the bottom of the sinus and are encircled by the calices, and the bases of which are directed outward towards the surface and are contiguous to the cortex. Each pyramid is about $\frac{3}{4}$ of an inch high and about $\frac{2}{3}$ of an inch across the base, smooth in section, and marked with striæ running from base to apex which mark the course of the uriniferous tubules. The cortex consists of a peripheral layer,

KIDNEY.

c., cortex; m., medulla; p.m., pyramid of Malpighi; p., a papilla; ca., the calyx; pel., pelvis; i., the infundibulum; r.a., renal artery; s.ra., small branch of the renal artery; u., ureter.

and several processes (columns of Bertini) which pass down between the pyramids of the medulla and reach the sinus. The cortex is somewhat granular, owing to the presence of a number of very small pyramidal groups of tubules, the pyramids of Ferrein. The tubules that carry the urine begin by a number of spherical capsules in the cortex. From each capsule a narrow tubule passes which becomes wide and convoluted, narrows again as it doubles upon itself and returns, after running down into the subjacent Malpighian pyramid. The narrow loop is called the tube of Henle. It thus runs into the cortex, where it becomes again wide and convoluted, and finally opens into a straight tube which forms the axis of a pyramid of Ferrein. The straight collecting tubes run into the Malpighian pyramids, uniting and forming large trunks which terminate in openings in the papillæ of the pyramids, thus emptying their contents into the calices.

The kidney is well supplied with blood vessels. The arteries pass from the point at which they enter the organ at the bottom of the sinus, running up between the Malpighian pyramids and subdividing at their bases in cortico-medullary arches. These arches, lying between cortex

large irregular cells, and is known as the second or distal convoluted tubule. After a more or less tortuous course in the cortical pyramid the tubule again enters a medullary ray and joins with other similar tubules to form what is known as a collecting tubule. This tubule is lined with cuboidal epithelium and passes down through medulla and papilla to open into the pelvis of the kidney. The larger of these tubules situated in the papilla are called the ducts of Bellini. The different portions of the uriniferous tubules are thus seen to make up the structure of the kidney, being held together and supported by a very small amount of connective tissue. The cortical pyramids are seen to be formed by the glomeruli and the first and second convoluted tubules, the medullary rays by the ascending arms of Henle's loops and the collecting tubules, the medulla by the ascending and descending arms of Henle's loop, by the loops themselves, and by the collecting tubules, the papilla by the ducts of Bellini. These uriniferous tubules constitute the so-called parenchyma, or functioning part of the kidney, while the connective tissue which supports them is known as the interstitial part of the kidney.

Blood Vessels of the Kidney. Blood reaches the kidney through the renal artery, which enters the hilum and breaks up into several large branches. These branches pass up between the ducts of Bellini to the junction of medulla and cortex. Here they form a series of arches known as the renal arches. From these are given off two sets of branches. One set, the interlobular cortical arteries, pass upward to the cortex, forming a capillary network among the convoluted tubules and in the glomeruli. The other, known as the arteriæ rectæ, pass downward into the medulla, where they form a capillary network among the tubules of the medulla. From the cortical capillary network blood enters the interlobular vein, whence it is carried to the veins of the renal arches. From the medullary capillaries blood enters the venæ rectæ and thence goes to the veins of the renal arches. The lymphatics of the kidney consist of two sets of vessels—a superficial set which ramify in the deeper layers of the capsule, and a deeper set which accompany the blood vessels into the interior of the organ and communicate with the lymph spaces of the intertubular connective tissue. The nerves of the kidney belong to the sympathetic system and are mainly of the non-medullated variety. They pass in between the tubules, where they form a fine network.

KIDNEY, DISEASES OF THE. See BRIGHT'S DISEASE, CALCULUS, PYELITIS. The surgery of the kidney includes nephrectomy, or removal for tumor; nephrotomy, or section for removal of a calculus, nephrorrhaphy, or suturing the kidney fast in cases of movable kidney, and decapsulation. See SURGERY. Consult Da Costa, *Modern Surgery* (7th ed., Philadelphia, 1914).

KIDNEY BEAN (so called from the shape). The common kidney bean (*Phaseolus vulgaris*) is the haricot of the French. In Great Britain it is sometimes called French bean. See BEAN; DOLICHOS, and Plate of LEGUMINOSÆ.

KIDNEY VETCH (*Anthyllis*). A genus of perennial, somewhat shrubby herbs of the family Leguminosæ, valuable for forage and attractive for their spikes or heads of yellow-white or purple flowers and delicate foliage. The plants are propagated by seeds and are of easiest culture and succeed in even poor soil. In

the United States they have not become popular in any capacity.

KIDO, kē'dō, TAKAYOSHI (1832-77). A Japanese statesman, "The Pen of the Revolution of 1868," born at Hagi, in the Province of Choshu, about 1832. His father was a physician. When Commodore Perry's expedition arrived in Japan in 1854, he disguised himself as a laborer and served as porter to carry the instruments and baggage of the surveying parties, in order to penetrate the secret of the strength of Western nations. In 1868 he joined the revolutionary party, and with Iwakura, Okubo, and Saigō (qq.v.) he planned and executed the coup d'état of January, 1868, which gave the coalition of southwestern clans possession of the Imperial palace of Kyoto and the person of the Mikado. (See KEIKI.) He was the author of a famous state document, the address to the throne, which secured the abolition of the feudal system and the relinquishment by 270 daimyos of their lands and income to the Mikado. Recognizing the newspaper press as a potent element in civilization, he founded in 1868, at his own expense, the first regular newspaper, called the *Shimbun Zasshi*. In 1873 he was Vice Ambassador with Iwakura in the embassy round the world. He caused the translation and publication in Japanese, in eight volumes, of Montesquieu's great work, *L'Esprit des lois*, the reading of which by the educated classes in Japan ripened public sentiment for the constitution of 1889. Returning to Japan, he secured the formation of an assembly of local rulers, was made a Privy Councilor of the Emperor, and was in attendance upon the Mikado until his death in Kyoto, May 27, 1877. He was a man of preëminent political genius, stainless life, and gentle manners. At the promulgation of the constitution his abilities were recognized in posthumous honors and in the elevation of his son to the nobility.

KID'RON (Heb. *Kidrôn*). A valley east of Jerusalem, the modern Wady Sitti Maryam (valley of the Lady Mary), also called Wady Silwan (the valley of Siloah) (Map. Palestine, B 1). It begins north of the city at the foot of Mount Scopus, continues south towards the city, then takes a bend eastward, extends between Jerusalem and the Mount of Olives, and may be said to terminate south of the city at En Rogel, though the depression proceeds under the name of Wady el-Nar southeast towards the Dead Sea. The valley is now dry, but in ancient times there was a brook in it, and the true bed of the stream was found 38½ feet below the present channel in 1868. The following year an aqueduct cut through the rock was discovered, and in 1880 an inscription giving an account of the construction of the channel. (See SILOAM.) The Kidron is first referred to in 2 Sam. xv. 23, where David in fleeing from Absalom is said to have crossed it. In 1 Kings ii. 37, Shimei is forbidden by Absalom to cross Kidron. Some scholars have drawn the inference, from the fact that Shimei fled in the direction of Gath, that Kidron was the name of some part of the western ravine. But the text is probably corrupt and should be read "by any road" instead of "the brook Kidron." According to 1 Kings xv. 13, 2 Chron. xv. 16, Asa burned at Kidron the idol which his mother had set up; according to 2 Kings xxiii. 4, 6, 12, Josiah burned at Kidron the *asherah* that had been in the temple (See ASHERA.) The account in 2 Chron. xxix. 16, xxx. 14, of Heze-

kiah's casting into the Kidron the altars that were found in Jerusalem and the abominations of the temple is hardly historical. The popular name Valley of Jehoshaphat dates back to the fourth century A.D. It appears in the *Onomasticon* of Eusebius (272, 89) and in the *Onomasticon* of Jerome (145, 13). It is based upon Joel iii. 1-12, but the identification is manifestly incorrect. (See JEHOSEPHAT, VALLEY OF.) The belief that this valley will be the scene of the last judgment (see JUDGMENT, FINAL) has led both Jews and Mohammedans to make of it a burial ground, and its slopes are covered with tombs. The Jews have used especially the eastern side towards the Mount of Olives, while the Mohammedans are buried on the west towards the Temple. According to John xviii. 1, just before the betrayal Jesus went forth with His disciples across the ravine Kidron, "where was a garden."

KIEF, kē'ef. A government of Russia. See KIEV.

KIEFT, kēft, WILLEM (?-1647). A Dutch Colonial administrator, Director General of New Netherland. Little is known of his life before he came to America except that for a time he acted as the Minister of the Dutch government to Turkey. From the day of his arrival in March, 1638, he showed a tyrannical spirit which soon set the people against him. He was pompous, hypocritical, cowardly, and vengeful, and lacked administrative ability. With the exception of the Indian wars, the most noteworthy events of his administration were the battles of words and law which he fought with Dominie Everardus Bogardus, the tailor Hendrick Jansen, and others of his subjects. The prospects for a rapid growth of the Colony were bright when Kieft arrived in New Netherland, for the Dutch West India Company, disgusted with the small results of the patroon system, offered inducements to poorer immigrants, and many of this class were coming to the country and taking up farms along the Hudson and on Staten and Long islands. The Director General, to make room for these settlers, in 1640 sent his soldiers to murder the Raritan Indians—an exploit which was only partially successful, and which was so soon and thoroughly avenged that even he seems to have lost some of his self-assurance. Consequently, when, in February, 1643, the River Indians, fleeing from the Mohawks, sought shelter in the neighborhood of New Amsterdam, Kieft thought best to secure the signatures of three citizens to a petition before he ordered out his soldiers to destroy them.

The massacre which followed is one of the most cold-blooded in the annals of America. The savages, relying on the protection of the Dutch, whom they had every reason to believe friendly, were taken totally unawares, and more than 100 were slaughtered. Then began a war

which resulted in the destruction of the Indians, but meantime the prosperity of the Colony was ruined, farms were desolated and settlers massacred. Popular rage against the Director General knew no bounds, and, after a vain attempt to shelter himself behind the petition, which resulted only in his being assaulted by one of the signers, he called a meeting of the heads of families, and these selected a Council of Twelve, or the Twelve Men, as it was called, which was to act as an advisory committee. This, the beginning of self-government in New York, was more in semblance than in substance, for Kieft paid but slight attention to the counsel of the Twelve. Meanwhile the English on the east and the Swedes on the Delaware had taken advantage of these internal troubles to found strong colonies on Dutch soil, and finally the company, influenced perhaps by a petition from some of the settlers, sent out Peter Stuyvesant to undo the mischief which had been done; and in 1647 Kieft, with Bogardus and Jansen, and two or three others of his most inveterate enemies, sailed for Holland on the *Princess*, an unhappy company and a disastrous voyage, for the little vessel was wrecked on the coast of England, and Kieft, Bogardus, and nearly all of their shipmates were drowned.

KIE-KIE, kī'kī' (Maori name), *Freycinetia banksii*. A trailing or climbing shrub of the family Pandanaceae, which yields an edible aggregated fruit, said to be the finest indigenous fruit of New Zealand. It is found in the northern part of New Zealand and also down the west coast of South Island. The plant climbs the loftiest trees, branching freely, produces leaves 2 or 3 feet long, and clustered spadices. Its fruit is a fleshy berry, and when made into jelly it tastes like preserved strawberries. Consult Thomas Kirk, *Forest Flora of New Zealand* (Wellington, 1889), and Laing and Blackwell, *Plants of New Zealand* (2d ed., ib., 1907).

KIEL, kēl (OS. *Kille*, also *Kyl*). A city of the Province of Schleswig-Holstein, Prussia, on a bay of the Baltic Sea, 70 miles by rail north of Hamburg (Map: German Empire, D 1). It is the chief naval station of Germany and consists of the old city, situated between the harbor and a pool called the Little Kiel, and the new city, together with annexed suburbs (Düsterbrook, Wik, Gaarden, etc.). The naval station is situated on the eastern side of the harbor, near Ellerbek, directly opposite the old city. In this district are the Imperial shipyards (with two large basins connected by a canal), three shipways for the launching of newly built ships, four dry docks, a floating dock, and a haven for torpedo boats. To the southwest of the station are various large private shipbuilding and iron works. The war harbor of Kiel is perhaps the best example of its kind. The fortifications, consisting of the Friedrichsort and Falkenstein forts on the Schleswig side of the harbor, and four powerful shore batteries on the Holstein shore, are situated at a point where the shores approach each other, 5 miles north of the old city. Kiel has several handsome churches, the Nicholas Church dating from 1240 (restored 1877-84). There are also a fine thirteenth-century castle (rebuilt in 1838, now a royal residence), several public gardens, and a zoölogical institute. The principal educational institution is the Christian-Albrecht University, founded in 1665 and attended by over 2000 students, with a museum of antiqui-

ties and a library containing, in 1913, 319,118 volumes. There are also a marine academy and the naval school for officers, the Gymnasium, founded in 1320; a school for engineers; and the Thaulow Museum, containing a collection of wood carvings of the sixteenth and seventeenth centuries. The most important naval hospital of Germany is at Kiel.

The chief industry is shipbuilding, but there are also numerous establishments for the production of heavy machinery of various kinds, safes, spirits, flour, soaps, etc. As a commercial centre, Kiel is very important, having one of the best harbors in Europe and being the eastern terminus of the great Kaiser Wilhelm Canal, which connects the Baltic with the North Sea. This canal was officially closed for the duration of the European War, which began in 1914. (See WAR IN EUROPE.) The principal articles of commerce are cereals, coal, lumber, railroad ties, shingles, cement, dairy products, iron and steel ware, oil, talcum, matches, sugar, etc. The famous Kieler Sprotte (smoked sprats) industry is located at Ellerbek. Kiel holds an annual 12-day fair which plays an important part in the trade of the province. The harbor and environs present a striking appearance. The city is governed by a council and an executive board of magistrates. There are a chief burgomaster and a burgomaster. The city owns the gas works and an abattoir. Pop., 1880, 43,594, 1890, 69,172; 1900, 121,824, including the town of Gaarden, incorporated with Kiel in 1901; 1910, 211,027. The inhabitants are mostly Protestant. Kiel was founded by Adolphus IV of Holstein and was made a city in 1242. In 1284 it became a member of the Hanseatic League. It was annexed to Denmark in 1773 and to Prussia in 1866. By the Peace of Kiel of 1814 Denmark ceded Norway to Sweden.

KIEL, C. VAN. See KILTAAN.

KIEL, FRIEDRICH (1821-85). A German composer, born in Puderbach, near Siegen. He had no teacher in early youth and taught himself composition and the piano. Afterward he entered the orchestra of Prince Karl von Wittgenstein, received some violin lessons from him, and also studied under Kummer at Coburg. He completed his studies under Dehn at Berlin in 1842-44. His first highly successful work was his *Requiem*, brought out by Stern's Gesangverein. His other works included a good deal of religious music, for voice and orchestra, and some instrumental compositions. He was professor of composition at the conservatory in Berlin from 1870 until his death and attained high rank as instructor.

KIEL CANAL. See CANALS.

KIELCE, kyél'tse. The smallest of the governments of Russian Poland, . . . southwestern end of the country . . . B 4). Area, 3897 square miles. It is traversed from east to west by offshoots of the Carpathians and is watered by the Vistula, which separates it from Galicia. The government has deposits of coal, iron, zinc, sulphur, and marble, all of them worked to some extent. The chief occupation of the inhabitants, however, is agriculture. Besides the common cereals, vegetables are grown on a large scale, and the mulberry tree and beetroot also receive some attention. The manufacturing industries include the production of cotton goods, spirits, paper, brick, sugar, glass, leather, machinery, etc. Pop., 1912, 992,500, of whom 11 per cent are Jews. Capital, Kielce.

KIELCE. The capital of the government of the same name in Russian Poland, situated amid high hills about 107 miles from Warsaw (Map: Russia, B 4). In the Bishop's palace, now used as the offices of the Provincial Governor, is a remarkable series of portraits of the bishops of Kielce from 1292 to the Reformation. In ancient times Kielce was noted for its copper deposits, which, however, are no longer worked. The chief products at present are cement, brick, paint, sugar, and hemp articles. Pop., 1912, 32,381. The city was the scene of a number of engagements during the European War of 1914, having been taken and retaken several times. See WAR IN EUROPE.

KIELHORN, kél'hörn, FRANZ (LORENZ FRANZ) (1840-1908). A German Sanskrit scholar, born at Osnabrück. He was educated at Göttingen, Breslau, Berlin, London, and Oxford. From 1866 to 1881 he was professor of Sanskrit in the Deccan C. I. Poona and in 1882 became professor at . . . His works are: *Cāntanava's Phitsūtra*, with translation (1866), *Nāgajibhāṭṭa's Paṛibhāṣenducekhara*, with a translation (1866 and 1874), in the "Bombay Sanskrit Series," which he and Bühler founded in 1866, a *Grammar of the Sanskrit Language* (3d ed., 1888), *Kāṭyāyana and Patañjali* (1876), *The Vyākaraṇa-mahābhāṣya of Patañjali* (1880-85, 2d ed., 1892-1905). His *Report on the Search of Sanskrit Manuscripts* (1881) and contributions to *Indian Antiquary*, *Epigraphia Indica*, etc., on Indian chronology and epigraphy, should also be mentioned. After the death of Bühler he was made editor of the *Grundriss der indo-arischen Philologie*.

KIELLAND, kyél'länd, ALEXANDER LANGE (1849-1906). A Norwegian novelist, born at Stavanger. Born to wealth and social position, he studied at Christiania for the law; but he preferred business and was the successful owner of a brick and tile kiln when he published *Novelettes* (1879) and *New Novelettes* (1880), both of which bore clear marks of the study of French models, more especially Daudet, in conception and style. To these qualities *Garman and Worse* (1880, trans., 1885) adds an autobiographical, and *Laboring People* (1881) a socialistic interest. Under the influence of Balzac and Zola he portrays in *Skipper Worse* (1882, trans., 1885), *Poison* (1883), *Fortune* (1884), more of corruption in the upper, and of vice in the lower, classes; he protests in *Snow* (1886) and in *Saint Hans Festival* (1887) against conventional religion; and in *Jacob* (1891) he revolts from the smug optimism of the conservative classes. *Professor Loodahl* was published in 1904. Kielland's novelistic genius may be fairly judged from the translated *Tales of Two Countries* (1891). His comedies, *Homeward Bound* (1878), *Three Pairs* (1886), *Betty's Guardian* (1887), *The Professor* (1888), are less important. He became Burgomaster of Stavanger (1891) and (1892) Governor of Romsdal, where he wrote *Around Napoleon* (2 vols., 1895). His *Complete Works* were published in 11 volumes (Christiania, 1897-98; Ger. ed., 1905-08). Consult: B. Björnson, "A. L. Kielland," in *Kringsjaa* (Christiania, 1896); Georg Brandes, *Samlede Skrifter* (Copenhagen, 1899-1904); M. D. Schjøtt, *A. L. Kiellands Liv og Verke* (Christiania, 1904); V. Vedel, in *Tilskueren* (ib., 1906); A. L. Kielland, *Letters*, edited by his sons (2 vols., ib., 1907).

KIELMANSEGG, kél'mán-ség, ERICH, COUNT

VON (1847-). An Austrian statesman, born in Hanover. He entered the government service of Austria in 1870, held various posts in the administrative offices in the provinces, and was employed in the Ministry of the Interior from 1886 to 1889. He was then appointed Governor of Lower Austria, and in this position he brought about the consolidation of the suburbs with Vienna, the passage of a sanitary law, and other beneficial measures. In 1895 he was appointed Minister of the Interior, the first incumbent of Protestant faith to hold that portfolio in Austria, and was called to preside over a temporary cabinet. After a few months he was again appointed Governor of Lower Austria, and in this position he remained until 1911. He wrote: *Familien-Chronik der Herren, Freiherren, und Grafen von Kienmansegg* (1872, 2d enlarged ed., 1910), jointly, *Die Bauordnung für das Land Niederösterreich und für Wien* (1883; 6th enlarged ed., 1911), *Briefe an J. F. Dietrich von Wendt* (1902); *Geschäftsvereinfachung und Kanzlereiform bei öffentlichen Aemtern und Behörden* (1906).

K'IENT-LUNG, k'ien'lung', or CH'IENT-LUNG (enduring glory). The reign title of Hung-li, the fourth Emperor of the Ta Tsing, or Manchu dynasty in China. He was the fourth son of Yung-ching, and at the age of 26 succeeded him in 1736. He proved a wise, able, and energetic ruler, reorganized his government and established internal peace, extended his empire to Kashgar and Kulja, established his supremacy in Tibet, exacted tribute from Burma and Nepal, and attempted somewhat unsuccessfully to subjugate the aborigines of Kweichow and Szechwan. It was in this reign that the Turgots, who had in the middle of the seventeenth century emigrated to Russia, returned in 1770 in a body across the desert to their old home in Sungaria, an incident which De Quincey has made memorable by his essay on *The Flight of the Kalmuck Tartars*. He opposed the Catholic missionaries and early in his reign forbade the teaching of Christianity. From 1746 to 1785 persecution was active. The Jesuit Amiot estimated the population of China in 1741 as over 150,000,000. The Emperor maintained friendly though narrow relations with European nations, receiving embassies from Portugal in 1750 and Great Britain and Holland in 1795, all of which were quite barren in results. K'ien-lung was a liberal patron of both literature and art and brought out new editions of the 13 Classics of Confucianism and the 24 Dynastic Histories of China. A great achievement was the descriptive Catalogue of the Imperial Library, in which 3460 works, arranged under the four divisions of Chinese literature, were explained, commented upon, and criticized. He himself wrote essays, discourses, and poetry, his poetical works alone comprising 33,950 compositions. Unwilling to equal or surpass his illustrious grandfather, K'ang-hsi, in the length of his reign, he abdicated when he had reigned for 60 years and died three years later (1799). His successor was the worthless Kia-k'ing. Consult Rémusat, *Nouvelles mélanges asiatiques* (Paris, 1829), and Giles, *China and the Manchus* (Cambridge, 1912).

KI-ENT-POOS. See JACK, CAPTAIN.

KIENZL, kien'z'l, WILHELM (1857-). An Austrian musician, born at Waizenkirchen in Upper Austria. He studied composition under W. Mayer (W. A. Remy) in Graz, under

Krejc in Prague, and under Rheinberger in Munich. His piano technique was acquired at the Graz Gymnasium, under the teaching of Mortier de Fontaine and Liszt. After having made an extensive European concert tour (1881-82), he became chief kapellmeister of the German opera in Amsterdam, occupied a similar position at Krefeld, and from 1886 to 1890 was director of the Styrian Musikverein at Graz. In the latter year he was chosen first kapellmeister of the Hamburg opera, and during the period 1892-93 was Hofkapellmeister at Munich. Kienzl wrote the operas *Urvasi* (1886), *Heilmars, der Narr* (1892), and *Der Evangelimann* (1895), each in succession being received with increased favor. *Don Quixote* (1898) was less successful, but *Der Kuhreigen* (1911) was received with marked favor, and also heard in the United States (1913). He wrote several books: *Die musikalische Deklamation* (1880), *Miscellen* (1885), and a biography of Wagner (1904). He edited a number of musical works and in addition to his operas composed many songs and much instrumental music.

KIEPERT, kē'pērt, HEINRICH (1818-99). A German geographer and cartographer, born in Berlin. From an early age he was an enthusiastic student of geography, history, and philology, and after studying under Ritter devoted two years to the exploration of Asia Minor (1841-42). He first became widely known through his *Atlas von Hellas* (1840-46), which was followed by his *Karten zu Robinsons und Smiths Palästina* (1841). He then turned his attention chiefly to archaeology and, after publishing his *Karte von Kleinasien* (1843-45), several times returned to Asia (1870, 1886, 1888) and carefully explored much of the western part of the continent. He described his researches in works which at once were successful and secured their author important posts. From 1845 to 1852 he was director of the Geographical Institute of Weimar, in 1853 was made a member of the Berlin Academy of Sciences, and in 1859 became a professor in the University of Berlin. Among his best-known works, which bear witness to his great linguistic as well as his learning, are his *Atlas der alten Welt*, *Atlas der Erde und des Himmels* (15th ed., 1874), *Atlas Antiquus*, printed in six languages, and the *Atlas von Hellas*, already mentioned. In addition he wrote: *Lehrbuch der alten Geographie* (1878); *Travels in Asia Minor* (Eng. trans., 1842, 1870, 1889, 1890); and *Historisch-geographische Erläuterung der Kriege zwischen dem ost-romischen Reiche und den persischen Königen der Sassaniden-Dynastie*. The last work was awarded a prize by the French Institute in 1844. Consult J. Partsch, "Heinrich Kiepert, ein Bild seines Lebens und seiner Arbeit," in *Geographische Zeitschrift*, vol. vii (Leipzig, 1901).

KIERKEGAARD, kēr'ke-gard, SÖREN AABYE (1813-55). An eminent Danish philosopher and theological writer, born at Copenhagen. He studied theology at the university of his native town, but was never ordained, and afterward spent two years in Germany. In 1842 he settled at Copenhagen and remained there until his death. His ill health and morbid temperament prevented his becoming known for many years, except as a busy student, but he was one of the most original of Danish writers and thinkers and eventually exerted a strong influence on the literature and religious trend of his country,

not only by the power of his reasoning but through the force and brilliancy of his style. Although far from being an orthodox theologian, he taught that Christianity is the rule and conduct of life and based his philosophy on faith and knowledge. He wrote much in the form of sermons and sketches, as well as longer volumes, and adopted various pseudonyms, such as Victor Eremita, Hilarius Bogbinder, Frater Taciturnus. His most important works are: *Enten—Eller* (Either—Or) (7th ed., 1878); *Stadier paa Livets Vei* (Stages of Life) (1845), and *Indovelse i Kristendom* (On Christian Training) (1850). Consult: Brandes, *Søren Kierkegaard* (Copenhagen, 1877); Barthold, *Die Bedeutung der ästhetischen Schriften Søren Kierkegaards* (Halle, 1879); Harald Hoffding, *Søren Kierkegaard als Philosoph* (Stuttgart, 1896); O. P. Monrad, *S. Kierkegaard, seine Leben und seine Werke* (Jena, 1909); Lukács, *Die Seele und die Formen* (Berlin, 1911).

KIERSY, kyâr'sê', EDICT OF. A capitulary of Charles the Bald (877). It was a temporary measure to protect the interests of Charles the Bald during his expedition into Italy. It recognized (1) that the fiefs of vassals who accompanied the King on his expedition should be hereditary and (2) asserted the royal right to dispose of vacant fiefs. It was formerly supposed that this measure established the hereditary principle for fiefs, but this was already in existence. Consult Bourgeois, *Le capitulaire de Kiersy-sur-Oise* (Paris, 1885).

KIESERITE, kê'zêr-î't. A hydrated magnesium sulphate, found in the mines of Stassfurt, Germany. See EPSOM SALT.

KIESERITZKY, kê'zêr-î't'ski, LIONEL (1806–53). A noted chess player, born at Dorpat. He lived in Paris, where he was well known among chess players. He invented the king's side attack, known as the "Kieseritzky gambit."

KIESEWETTER, kê'ze-vêt'êr, RAPHAEL GEORG (1773–1850). An Austrian writer on music, born at Hollerschau, Moravia. He was employed in the Bureau of the Ministry of War and after traveling in various countries settled (1801) in Vienna, where he studied under Albrecht and Hartmann. He made a splendid collection of old musical manuscripts, upon which subject he was an authority. His books were in the field of historical research and include: *Geschichte der europaisch-abendlandischen oder unsrer heutigen Musik* (Leipzig, 1834, 2d ed., 1846); *Guido von Arezzo, sein Leben und Wirken* (Leipzig, 1840); *Die Musik der Araber nach Originalquellen* (ib., 1842). He died at Baden, near Vienna.

KIEV, kê'yêf. A government of Little Russia, occupying the larger portion of the Ukraine (q.v.). Area, about 19,340 square miles. The northern part is low, thickly wooded, and in part swampy (Map. Russia, D 5). In the west the surface is traversed by offshoots of the Carpathians. The central and southern portions have essentially a steppe character. The territory is watered chiefly by the Dnieper and its tributaries, the Pripiet and the Teteriev. The southern part belongs to the basin of the Bug. Kiev is among the most fertile regions of European Russia. Agriculture is the chief occupation; rye, wheat, oats, potatoes, and barley are the chief products, and there are extensive beet-root farms. Its sugar manufacture is one of the most important of all Russia. Stock raising is confined principally to the southern part,

where the natural conditions are most favorable. The breeding of horned cattle is of particular importance on account of the extensive use of oxen as a means of transportation. The local breed of cattle is highly prized in Russia. The manufacturing industries are also highly developed and include agricultural implements, cloth, soap, candles, tanneries, and iron and steel manufacturing establishments. The sugar mills alone employ over 30,000 persons. The house industry is only slightly developed, and a considerable proportion of the artisan population migrate for a part of the year to the larger centres of the Empire. The industries were somewhat depressed by the rioting which occurred just after the Russo-Japanese War of 1905. The trade is important and is to a large extent in the hands of the Jews. Pop., 1912, 4,635,700, chiefly Little Russians, Jews, Poles, and Lithuanians.

KIEV. The capital of a government of the same name, a third-class fortress, and the oldest of the famous cities in Russia (Map: Russia, D 4). It is situated on the right bank of the Dnieper in lat. 50° 27' N. and long. 30° 30' E., 624 miles southwest of Moscow and 270 miles north of Odessa. It lies on and amid several hills. The lower parts of the town are annually flooded by the Dnieper. Kiev is divided into the three principal parts of Old Kiev, the upper town, Petchersk with the famous monastery and the old fortifications, and the low-lying business quarter of Podol. There are besides 12 suburbs, incorporated with the city at comparatively recent periods. Two magnificent iron bridges reach across the Dnieper. One of them is a cable bridge 3510 feet long.

The prominent part played by Kiev, "the mother of Russian cities," in the political and ecclesiastical history of the nation naturally has had an influence on the local architecture, the ancient churches, monasteries, and historical remains making it one of the most interesting of cities. The Petcher-kaya Lavra (monastery of caves, named in reference to the original buildings) is a celebrated monastery. It was founded by the Metropolitan Hilarion in the eleventh century and for a long time served as a model for other Russian monasteries. It was destroyed by the Tatars in 1240 at first invasion, but was rebuilt in the fifteenth century. It occupies a prominent site on the Dnieper, is surrounded by strong walls, and forms a separate town with its streets of cells, inns, and churches, printing presses, and schools. The great church of the monastery contains the tombs of many ecclesiastical dignitaries and its treasury is filled with ancient Bibles, sacred vessels, and ecclesiastical costumes. The original caves of the monastery now possess the remains of numerous saints and are visited annually by throngs of pilgrims from all parts of Russia. The monastery of St. Vladimir has a church of the twelfth century, with well-preserved ancient frescoes. The famous cathedral of St. Sophia, built by Yaroslav in 1037 and modeled after the church of St. Sophia in Constantinople, has many specimens of ancient paintings and sacred relics. Other interesting ecclesiastical edifices are the church of the Three Saints, founded by the Grand Duke Vladimir in 989 and rebuilt in 1696; the church of St. Cyril, a twelfth-century edifice with ancient frescoes; and the cathedral of St. Andrew, a Renaissance structure of the eighteenth century. The cathedral of St. Vladi-

mir, decorated with excellent frescoes, is considered one of the finest churches in Russia. The secular edifices are of far less interest. The Imperial Palace, a French Renaissance building, contains collections of objects of art. One of the most interesting historical remains is the Golden Gate, a restored portion of the ancient fortifications. The town hall and the buildings of the University of St. Vladimir are also noteworthy. The university was founded in 1588 at Vilna and was removed to Kiev in 1833. It has four faculties—history, mathematics, law, and medicine—and in 1902 the total attendance was 4131, of whom a large number were medical students. The university library has about 150,000 volumes. Among other educational institutions are a theological academy which was founded in 1588 and which was for a long time the best-known institution of its kind in Russia, a polytechnic institute, five Gymnasias, a military school, and several other special schools. There are also a museum containing a fine collection of ancient icons, crosses, and other sacred objects, a number of scientific associations, hospitals, philanthropic institutions, and three theatres. Kiev is the seat of a metropolitan and head of the educational district of Kiev. It is also the seat of an appeal court.

The chief industries of Kiev are sugar refining, milling, and distilling, and the manufacture of tobacco, paper, chemicals, machinery, hardware, etc. It forms one of the chief centres of the Russian beet-sugar trade and deals heavily in grain, live stock, and timber. It is famous for its conserved fruits. Its commercial interests are promoted by a stock exchange and a good harbor. An important fair is held annually in February. The population was 186,041 in 1889, 320,000 in 1904, and 506,000 in 1911. During the summer it is increased by some 200,000 pilgrims.

The origin of Kiev is obscure and legendary. It is known to have existed as early as the fifth century. In the ninth century it became the capital of an independent principality and attained wide fame during the reign of Vladimir, when, after the introduction of Christianity, it became the religious centre of Russia. Its prosperity came to an end with the thirteenth century, its splendor and wealth having made it the object of attacks on the part of the neighboring tribes and later of the Mongols. It came under the rule of Lithuania in 1320 and began to revive, soon succeeding in attaining important municipal privileges. It was given Magdeburg rights in 1499. Under Lithuanian rule the city also resumed its former position as a religious centre of West Russia. It passed with Lithuania to Poland in 1569. It became Russian in 1668. The fortifications were restored by Peter the Great. In November, 1905, following the grant of a constitution by the Czar, there were violent disturbances in the city and a massacre of the Jews.

KIFTI, or **IBN AL-KIFTI**, *ib'n al-kēf'tē* (Ar. *Jamal al-Din abu' l-Hasan 'Ali ibn Yusuf al-Kifti*) (1172-1248). An Arabian vizier and historian. He was born of good family at Kift (Coptos), Upper Egypt, and received a good education there and in Cairo. After Saladin had conquered Jerusalem (1187), Al-Kifti went to that city, where his father held an official position under the Sultan. In 1202 he betook himself to Aleppo and there, much against his will, was made vizier by Saladin's son. When

the prince died in 1216, Al-Kifti gave up his office, but was again forced to assume public cares from 1219 to 1231 and again from 1236 till his death, in 1248. He was an able administrator, and the state prospered under his care; literature and learning flourished. But his best title to fame rests upon his favorite studies, although of his numerous histories all were destroyed in the Mongol invasion (1260) except one. This was his *Kitāb Ikhhār al-'Ulamā bi-akhbār al-Hukamā* (Information of the Wise Men Regarding the History of the Scientists), a historico-bibliographical work on Greek, Syriac, and Mohammedan philosophers and scientists. Unfortunately this most important work has come down to us only in the extract made by Ali ibn Mohammed al-Zanzani in 1249. Consult August Müller, "Ueber das sogenannte ta'rikh al-hukamā des Ibn el-Qifti," in the *Proceedings of the Eighth International Congress of Orientalists*, vol. i (Leyden, 1891).

KI-JA, *kē'-jā'*. See **KI-TSĚ**

KIKINDA, **NAGY**, or **GROSS**. See **NAGY-KIKINDA**.

KIKUYU, *kē-kōō'yōō*. A region in the southern part of the British East African Protectorate, lying on the equator. Missionary societies of various Christian bodies work in the region, and in June, 1913, the Protestant missionaries held a conference to promote efficiency in their common work. The Bishop of Uganda, Dr. Willis, presided, and the Bishop of Mombasa officiated at a communion service. They were speedily accused of heresy by the Bishop of Zanzibar, Dr. Weston, who demanded that they be impeached because they had admitted to the communion those not members of the Church of England. The incident precipitated a controversy which showed the radical differences between the High Church on one side and the evangelical and liberal Anglican parties on the other. The Archbishop of Canterbury called a council to meet in July, 1914, to advise in the matter.

Bibliography. Frank Weston, *Ecclesia Anglicana* (London, 1913); id., *Proposals for a Central Missionary Council in East Africa* (ib., 1914); H. H. Henson, *The Issue of Kikuyu. A Sermon Preached before the University of Oxford* (ib., 1914); A. H. Nankivell, "Kikuyu and the 'I. I. P.' Party," in the *Catholic World*, vol. xcix (New York, 1914); W. G. Peel, *Fresh Light on the Kikuyu Conference* (London, 1914); J. J. Willis, *The Kikuyu Conference: A Study in Christian Unity* (ib., 1914).

KILAUEA, *kē'lā-ōō-ā'ā*. A noted crater in the eastern part of the island of Hawaii, 10 miles from the sea and 30 miles southwest of the port of Hilo, on the east slope of the great volcano of Mauna Loa, 4000 feet above the sea, and 9800 feet below the summit of Mauna Loa (Map: Hawaii, F 4). It forms a great cavity on the side of the mountain, 3 miles long, 2 miles wide, and in the parts where the lava is not boiling from 500 to 800 feet deep. The floor of the crater, formed by the lava streams that constantly flow and cool in one or another part of it, accumulates slowly in periods of moderate activity, but is subject to sudden changes of level during great volcanic activity, when the lava may escape from vents on the lower slope towards the sea. This somewhat permanent crater floor is accessible by a steep trail on the northern cliff. At the southwest end of this great sink is a small lake called Halemaumau

(house of everlasting fire), frequently filled with boiling lava which is fed through subterranean channels and in periods of moderate activity either melts or flows over its rim to the lower level of the main crater basin, forming small or large streams upon its black surface, which cool quickly. The great eruptions from this crater were those of 1789, 1823, 1832, 1840, and 1868. There seems to be no subterranean connection between the sources of the eruptions from Mauna Loa and Kilauea, each having its periods of terrible activity without seeming to affect the other. Kilauea-iki (little Kilauea) is a companion crater of the same depressed type, a mile north of the main crater; it is now extinct and offers particular opportunity for the study of the Kilauea volcanic type. Consult J. D. Dana, *Characteristics of Volcanoes* (New York, 1891).

KILBOURNE, kil'börn, JAMES (1770-1850). An American pioneer, born in New Britain, Conn. In 1800 he became a Protestant Episcopal clergyman. Two years later he was sent to Ohio by the Scioto Land Company to select lands on which to found a settlement and the next year, after the adoption of the State constitution, which prohibited slavery, he purchased the territory now forming Sharon Township in Franklin County. He was soon joined by about 100 settlers from New England, and in 1804 laid out the village of Worthington (now a suburb of Columbus), where he organized the first Episcopal church in Ohio. Soon afterward he resigned from the ministry, and in 1805 Congress appointed him surveyor of public lands. From 1813 until 1817 he represented the Fifth District in the United States House of Representatives, and in 1823-24 and 1838-39 served in the Lower House of the State Legislature. During his services in Congress he proposed granting lands in the Northwest to actual settlers and was chairman of the committee which drew up the bill embodying this legislation. Among the local offices which he held were those of colonel of a frontier regiment, commissioner for Miami University, and trustee of Worthington College.

KILCH. A small whitefish (*Coregonus hiemalis*) of the Lake of Constance, in Switzerland, which is a favorite article of food. It dwells at the bottom, where it is caught with nets. When brought to the surface of the water, the belly is greatly distended by the expansion of the air in the swimming bladder; but the fishermen prick the bladder with a fine needle, the air escapes, and the fish continues to live comfortably at the surface.

KILDARE, kil-dâr' (Ir. *Kill-dara*, church of the oaks). An inland county of the Province of Leinster, Ireland. Its area is 654 square miles (Map: Ireland, E 5). The proportion of pasture land exceeds that devoted to tillage, stock raising being the chief industry. The principal towns are Naas, Athy, Newbridge, and Kildare. Pop., 1841, 115,190; 1901, 63,566; 1911, 66,627. Consult Murphy, "Kildare: Its History and Antiquities," in *Journal of the County of Kildare Archaeological Society* (Dublin, 1898).

KILDARE. A parish and market town in County Kildare, Ireland, 30 miles southwest of Dublin. It owed its origin to a nunnery founded in the fifth century by St. Bridget, the daughter of an Irish chieftain, who received the veil from St. Patrick. Notwithstanding its present decayed condition it is interesting for its antiqui-

ties, which comprise the restored thirteenth-century cathedral; an old cross; Franciscan and Carmelite abbeys; a portion of the chapel of St. Bridget, popularly called The Fire House, from a perpetual fire anciently maintained there; and the round tower, 103 feet in height, which crowns the elevation on which the town is built. Pop., 1901, 1576, 1911, 2639.

KILDARE, EARL OF. See FITZGERALD, THOMAS, LORD OFFALY.

KILGO, JOHN CARLISLE (1861-). An American Methodist Episcopal bishop and college president, born at Laurens, S. C. He was educated in various schools, receiving the degree of M.A. from Wofford College in 1892. He entered the ministry of the Methodist Episcopal Church South in 1882. From 1889 to 1894 he was agent of Wofford College and from 1890 to 1894 professor of philosophy there; thereafter until 1910, when he was elected Bishop, he was president of Trinity College, Durham, N. C. He was a member of the General Conferences of 1894, 1898, 1902, 1906, 1910, and of the Ecumenical Conference of 1901.

KILHAM, ALEXANDER (1762-98). The founder of the New Connection of Wesleyan Methodists, often called Kilhamites. He was born at Epworth, Lincolnshire, July 10, 1762; was converted at the age of 18, began to preach among the Wesleyans in 1783 and was the first to advocate the representation of the lay element in the government of the church; in 1785 he was received by Wesley into the regular itinerant ministry. After the death of Wesley there was much controversy among his followers as to the duty of continuing their submission to the Established church. Kilham was of the class urging a total separation from the Church of England. He was severely criticized for his assertion of popular rights in the church and for the publication of a pamphlet on the *Progress of Liberty* (1795), in which he urged a distribution of the powers of government between the clerical and lay elements. For severe remarks regarded as defamation of the society, he was formally arraigned at the conference held in 1796 and expelled from the connection by a unanimous vote. This resulted in the formation of the independent body called New Connection Methodists, which united with the Methodists in 1906. He died at Nottingham, Dec. 20, 1798. Consult Townsend, *Life of Alexander Kilham* (London, 1890).

KILIA, kil'ya. A fortified town in the Government of Bessarabia, South Russia, situated on the left bank of the Kilia branch of the Danube, 100 miles southwest of Odessa (Map: Russia, C 5). It is a thriving little town, with a customhouse. Pop., 1912, 10,874.

KILIAAN, kil'le-an, CORNELIS (1528-1607). A Dutch scholar, also called VAN KIEL and KILIANUS. He was born at Duffel and was educated at Louvain. He worked as a proof reader for the celebrated press of Plantin. His *Etymologicum Teutonicæ Linguae* (1574; revised under the title *Kilianus Auctus*, 1642; edited by Van Hasselt, 1777) is his great work.

KILIAN, kil'yan, ST. (c.644-689 or 697). A missionary and martyr of the seventh century. He was born in County Cavan, in the Province of Ulster, Ireland, about 644, entered the monastic life in his native country, and became a bishop. Having undertaken, in company with several of his fellow monks, a pilgrimage to Rome, he was seized in his journey through the

still pagan region of Franconia with a desire to devote himself to its conversion, and, being joined by his fellow pilgrims, Coloman and Donatus, he obtained for the project at Rome, in 686, the sanction of the Pope Conon. On his return to Würzburg he succeeded in converting the Duke Gosbert, with many of his subjects, and in opening the way for the complete conversion of Franconia; but, having provoked the enmity of Geilana, who, although the widow of Gosbert's brother, had been married to Gosbert, by declaring the marriage invalid and inducing Gosbert to separate from her, he was murdered at her instigation, during the absence of Gosbert, together with both his fellow missionaries. His day, May 8, is celebrated with great solemnity at Würzburg. The work which Kilian commenced was completed some years later by Boniface and his fellow missionaries. Consult: Bollandus and Heuschenius (eds.), *Acta Sanctorum*, *Julii* 2 (Paris, 1867); O'Hanlan, *Lives of the Irish Saints*, vii (Dublin, 1875-1904); Emerich, *Der heilige Kilian* (Würzburg, 1896).

KILIMANJARO, kil'i-mán-já'ró. A volcanic mountain in the northern part of German East Africa, the highest elevation of the continent, situated in lat. 3° 6' S., long. 37° 23' E., about midway between the Indian Ocean and the Victoria Nyanza (Map: Africa, H 5). It rises abruptly from the surrounding plain and culminates in the two peaks of Kibo and Kimawenzi, separated by a saddle 14,000 feet high. The south slope has a gentle incline, with many streams and 13 glaciers. The north slope rises abruptly. The inhabited portion lies below 6000 feet and produces an abundance of tropical fruits. Vegetation ceases entirely at 14,000 feet above sea level. The peak of Kibo, with an altitude of 19,728 feet, has a crater over 6000 feet in circumference and 600 feet deep, with its walls covered with ice in the northern part. Kimawenzi is 17,500 feet high. The Kibo peak has been ascended by Hans Meyer (1889 and 1898), C. Uhlig (1901 and 1904), and Captain Johanniss (1902).

Bibliography. Johnston, *The Kilimanjaro Expedition* (London, 1886); Hans Meyer, *Ostafrikanische Gletscherfahrten* (Leipzig, 1893); trans. by E. H. S. Calder under title of *Across East Africa Glaciers* (London, 1891); id., *Der Kilimanjaro, Reisen und Studien* (Berlin, 1900); Carl Uhlig, "Von Kilimandscharo zum Meru," in *Gesellschaft für Erdkunde, Zeitschrift* (ib., 1904); Johannes Schanz, "Besiedelung der Landschaften des Kilimandscharo durch die Dschagga," in *Baessler-Archiv* (Leipzig, 1913).

K'I-LIN, kē'lin', or **CH'I-LIN**, sometimes **KI-LIN**, in Japanese **KIRIN**. The Chinese unicorn. One of the four supernaturally endowed creatures of Chinese and Japanese tradition. K'i is the male and lin the female. The appearance of this fabulous animal on the earth is regarded as a happy portent, presaging the advent of good government. It lives to the age of 1000 years, is the noblest form of the animal creation, the emblem of perfect good, and is supposed to be the incarnated essence of the five primordial elements—water, fire, wood, metal, and earth. The k'i-lin occupies a prominent place in Chinese and Japanese art. It is usually pictured with the body and slender legs of a deer, the tail of an ox, and with a single soft horn projecting from its forehead. It is said to tread so lightly as to leave no footprints and so carefully as to crush no living thing. Confucius closes

his brief history of his own State of Loo with a record of the advent of the K'i-lin and Phenix. In the form *Kylin* the name is often erroneously applied by writers on ceramics to lions, or to the lion-like, grotesque creatures with which the Chinese fill in rocky landscapes, etc.

KILKENNY. An inland county of the Province of Leinster, Ireland, bounded south by Waterford (Map: Ireland, D 6 and 7). Area, 800 square miles. The principal industries are connected with coal mining and agriculture, but iron, manganese, and marl are also produced. Capital, Kilkenny (q.v.) Castlecomer is the centre of the coal district. Pop., 1841, 202,750; 1900, 79,159, 1911, 74,962.

KILKENNY (Gael., church of St. Kenny, or Canice). The capital of the County of Kilkenny, Ireland, and itself a civic county, situated on the Nore, 81 miles south-southwest of Dublin by rail (Map: Ireland, D 6). The city owes its origin to the cathedral church of the diocese of Ossory, which dates from the twelfth century. The Anglican cathedral of St. Canice dates from 1211, the partially restored abbey church of St. John's, called the Black Abbey, is one of the few ancient Irish churches now in actual occupation for the religious use of Roman Catholics. The cathedral is the second largest church in Ireland and has an excellent library of rare old books. There are noteworthy remains of a twelfth-century castle (now owned by the Ormonde family), a Dominican and a Franciscan abbey. The College or Grammar School of Kilkenny was founded in the sixteenth century. Here Swift, Farquhar, Congreve, and Berkeley were educated. St. Kieran's College is an educational establishment for the Roman Catholics and is interesting as one of the first opened by them after the repeal of the law which made Catholic education penal in the country. From the time of the invasion Kilkenny was a strong seat of the English power.

Kilkenny has small manufacturing establishments of blankets and coarse woolen and linen cloths, but the greatest activity is in the near-by collieries. There are large marble works and a large provision trade, the chief outlet of which is Waterford. The town returns one member to the British Parliament. During the Civil War Kilkenny sided with the King and after a year's siege honorably capitulated to Cromwell in 1650. Swift's satire of the "Kilkenny Cats," which shows their tails alone were left, illustrates the confusion on boundaries and rights between Kilkenny and Irishtown in the seventeenth century, which were maintained until both towns became bankrupt. Pop., 1901, 10,609; 1911, 10,514. Consult: John Hogan, *Kilkenny, the Ancient City of Ossory, the Seat of its Kings, the See of its Bishops and the Site of its Cathedral* (Kilkenny, 1884); Healy, *History of Kilkenny* (ib., 1893); James Donelan, "The Confederation of Kilkenny," in *Studies in Irish History* (2d series, Dublin, 1906).

KILLANIN, BARON. See MORRIS, MICHAEL.

KILLARNEY, kil-lär'ní. A parish and market town of County Kerry, Munster, Ireland, situated 1½ miles from the lower Killarney Lake, and 46 miles west-northwest of Cork (Map: Ireland, B 7). It has an imposing Roman Catholic cathedral and a school of arts and crafts. The beauty of the surrounding country attracts large numbers of tourists every spring and summer. Pop., 1901, 5656; 1911, 5796.

KILLARNEY, kil-lär'ní. A town, the capi-

tal of Souris District, Manitoba, Canada, on the Canadian Pacific Railway, 164 miles west-south-west (direct) of Winnipeg (Map: Manitoba, D 4). Industrial establishments include a flour mill, cement-block plant, sash and door factory, and five grain elevators. It is a popular summer resort. Pop., 1901, 585, 1911, 1010.

KILLARNEY, LAKES OF. Three connected lakes near the centre of County Kerry, Ireland (Map Ireland, B 7). The upper lake, studded with islands and close shut in by mountains, is $2\frac{1}{2}$ miles long and $\frac{3}{4}$ of a mile broad. It is connected by Long Range River, 3 miles long, with the middle lake (Tore Lake) which is 2 miles long by 1 mile broad. The lower lake (Lough Leane), with about 30 wooded islands, is 5 miles long by 3 broad. They are fed by the river Flesk and many smaller streams, the main outlet is the Laune. They are favorite summer resorts, annually visited by thousands of tourists for their varied and beautiful scenery, which is heightened by the rich colorings of the shores, the graceful outlines of the surrounding mountains (the loftiest in Ireland), and the interesting ruins of the fifteenth-century Ross Castle, Muckross Abbey, and other antiquarian remains. Consult Ballantyne, *The Lakes of Killarney* (London, 1859).

KILL/DEER, or KILL/DEE. The most widely known of American plovers (*Ægialitis*, or *Oxyechus vociferus*). It is 9 or 10 inches long and about 20 inches in extent of wing. It is grayish brown above, with an olive shade, and occasionally a bronzy lustrous orange brown or chestnut on the rump, and white beneath; there are black markings on head and breast, and the tail is variegated with black, white, and rufous. The nest is made on the ground, in grass or shingle, usually near water. The eggs, usually four, vary in color from creamy white to drab marked with blackish brown, and are 1.5 inches long (See Colored Plate of EGGS OF WATER AND GAME BIRDS). The killdeer is found throughout North America, from Newfoundland and Manitoba southward, and even into northern South America in winter. In the northern part of its range it is migratory, but from Virginia southward it is resident. It is not numerous in New England, but becomes more common in the Central States and is very abundant in the West. The name is based upon the very characteristic notes, which are generally uttered either while the bird is on the wing or when it is running about in its nervous, restless way. It is incessantly in motion, and, though often seen about farmyards, it seems to distrust man, and his presence generally causes much vociferous objection. They are seldom found singly except during incubation and are generally seen in small flocks of six or seven individuals. In the fall these usually are family groups. Although the killdeer when fat is edible, it is not usually ranked as "game" and is not much hunted. See PLOVER, and Plate of PLOVERS.

KILL'LEN, WILLIAM DOOL (1806-1902). An Irish educator and ecclesiastical historian. He was born in Antrim, was educated at Belfast, and in 1829 was ordained a minister of the Irish Presbyterian church. During his career as an educator he was chiefly identified with the Presbyterian College at Belfast. In 1841 he was appointed professor of Church history and pastoral theology in that institution, and in 1869 he was appointed its president. He wrote: *Plea of Presbytery* (1840), a continuation of

Reid's *History of the Irish Presbyterian Church* (1853); *The Ancient Church* (1859); the *Old Catholic Church . . . Traced to 755* (1871); the *Ecclesiastical History of Ireland from the Earliest Period to the Present Times* (1875); *Reminiscences of a Long Life* (1901); and other works.

KILLER. A small carnivorous whale of the genus *Orca*. These dolphins are notable for the fact that they are the only cetaceans which habitually attack and devour mammals. On account of their propensity to destroy more animals than they can eat, they are widely known as killers. The genus is distinguished from other dolphins by the following characteristics: beak about as long as head, broad, flat, and rounded, teeth about 12 on each side of each jaw, very large and stout, with conical recurved crowns; pectoral fin very large and ovate, about as broad as long, dorsal fin near middle of back, excessively high, and pointed; vertebrae, 51 or 52. A full-grown male is 20 feet long, with a dorsal fin 6 feet high, while the female is somewhat smaller. The surface of the body is smooth and glossy and is remarkably free from parasites.

Killers are found in all parts of the world and sometimes swim up rivers in pursuit of their prey, which consists of large fish, seals, dolphins, and even whales. Killers generally go in small schools of a dozen or less, but sometimes larger numbers are seen together. The whales, especially the beluga, are hunted down and killed by these schools. They seem to be fearless and are said to have stolen captured whales from whaling vessels, in spite of opposition by the sailors. Killers are seldom captured by whalers, as they yield very little oil, but in some regions they are taken for food, and they are of importance to the Arctic coast trade.

The number of species of killers is still greatly in doubt, for, in spite of their very wide distribution, specific characters are not clearly defined. Not less than eight species have been described, but there is a reasonable possibility that there are fewer valid species. The North Atlantic species (*Orca gladiator*) has been longest known, but the habits of the North Pacific killers have been more generally observed. In color the killers show great variety, though they are usually dark above, some being jet black, and light beneath. Behind the eye is a clear white spot, and there is a crescent-shaped band back of the dorsal fin, sometimes white and sometimes maroon. Smaller individuals, possibly different species, are more or less striped. Consult: Scammon, *Marine Mammals of the Northwest Coast of North America* (San Francisco, 1874); F. E. Beddard, *Book of Whales* (New York, 1900); Wilson, *National Antarctic Expedition*, vol. ii (London, 1907); R. F. Scott, *Scott's Last Expedition*, arranged by Leonard Huxley (2 vols., New York, 1913); and the zoologists cited under ALASKA. See DOLPHIN; WHALE.

KILLIECRANKIE, kil'krāp'ki, BATTLE OF. A battle which took place on July 17 (N. S., July 27), 1689, in and about the pass of Killiecrankie, in the Grampian Hills, and about 15 miles northwest of Dunkeld, Scotland, between 3000 or less Jacobitish Highlanders under Graham of Claverhouse, Viscount Dundee, and a royal force of about 4000 Dutch, Lowland Scots, and English under Hugh Mackay. Just as Mackay and his army had emerged from the pass Dundee and his Highlanders rushed down

from the hills above and drove the enemy back into the pass with heavy loss, but Dundee lost his own life while leading the charge.

KIL/LIFISH. Any of the minnow-like North American fresh-water fishes of the family Pœciliidæ (formerly called Cyprinodontidæ and erroneously associated with the Cyprinidæ). Consult Regan, *Proceedings of the Zoological Society, London* (London, 1913). The body is elongate, compressed behind and usually depressed at the head; and both are covered with rather large cycloid scales. The mouth is small, extremely protractile, and provided with small teeth; the lower jaw usually projects, and the pharyngeal bones are not armed, as in the Cyprinidæ. The sexes are usually unlike, and some of the species are viviparous. In these the anal fin of the male is modified into an intromittent organ. The species are numerous; but none attains a large size, and some are extremely small. They inhabit the fresh-water streams, brackish water and bays of America, southern Europe, Africa, and Asia. The family includes the top minnows and mummichog, and the interesting anableps, or four-eyed fish. Many of the species are extremely resistant and have become adapted to very diverse habitats. There are 30 genera and about 180 species. The name "killifish" is especially applied to the genus *Fundulus*, chiefly American, whose species are the largest of the cyprinodonts, and some very brightly colored. Jordan says that they are oviparous and feed chiefly on animals. Some of them live on the bottom and bury themselves in the mud of estuaries; others frequent river channels and bays and swim freely; and still others, called top minnows, remain on or near the surface and feed on floating insects in streams and swamps. The largest species of the eastern coastal region is *Fundulus majalis*, also called Mayfish; a lesser or even more familiar form is the mummichog, cobbler, or mudfish (*Fundulus heteroclitus*), which is to be met with in every pool and stream of brackish water from Maine to Texas. A Florida species is called sac-a-lait. They are useful for bait and make interesting pets in an aquarium. See Plate of KILLIFISHES AND TOP MINNOWS.

KILLIGREW, HENRY (?-1712). An English admiral, son of Henry Killigrew, the divine mentioned by Pepys, and a brother of the poet and painter Anne Killigrew. Of his life nothing is known apart from his connection with the navy, which he had entered before 1666. In 1673 he had risen to the rank of captain. Through the five years following he was employed on the southern coast of the Mediterranean and in 1686 as commodore commanded a squadron against the Barbary pirates, but accomplished little. With Richard Haddock and John Ashby he was joint commander in 1690 and in 1693 held a like post with Cloudesley Shovel and with Ralph Delavall, who with Killigrew was dismissed from command in June on the charge of treason in behalf of James. After 1697 Killigrew figured in the naval lists as an officer on half pay.

KILLIGREW, THOMAS (1612-83). An English dramatist, son of Sir Robert Killigrew, born in London. He was appointed in 1633 page to Charles I, traveled on the Continent, was made groom to the bedchamber of Charles II and chamberlain to the Queen. Killigrew is closely connected with the revival of the drama after the Restoration. In 1660 Charles II granted

him a patent to build a new theatre and raise a company of players. Killigrew accordingly formed the company of the King's servants and built the Theatre Royal, subsequently known as Drury Lane. His own plays, some of which were written before the Civil War, were printed in 1664. Notable among them is *The Parson's Wedding* (first performed perhaps as early as 1637). It is reprinted in Dodsley's *Old Plays*.

KILLING, KIL'ing, WILHELM (1847-). A German mathematician, born in Burbach, Westphalia, and educated at Münster and Berlin. He was a private tutor, then taught in Gymnasias, and in 1892 became professor of mathematics in the University of Münster. His distinctive work in non-Euclidean geometry brought him the Lobachevsky prize of the Kazan Academy in 1910. Killing wrote: *Die nicht-euklidischen Raumformen* (1883); *Erweiterung des Raumbegriffs* (1884); *Die Lieschen Transformationsgruppen* (1886); *Einführung in der Grundlagen der Geometrie* (1893-98); *Lehrbuch der analytischen Geometrie in homogenischen Koordinaten* (1900-02); and, with Hovestadt, *Handbuch des mathematischen Unterrichts* (1910-13).

KILLINGLY. A town, including several villages, in Windham Co., Conn., 25 miles north by east of Norwich, on the Quinebaug and Five Mile rivers, and on the New York, New Haven, and Hartford Railroad (Map: Connecticut, H 2). It has the Killingly High School and Bugbee Memorial Public Library, and manufactures cotton and woolen goods, mill supplies, shoes, harness, etc. Pop., 1910, 6564. Killingly, formerly Aspinock, was incorporated under its present name in 1708. In 1836 it was said to be the greatest cotton-manufacturing town in the State. Consult Larned, *History of Windham County, Conn.* (2 vols., Worcester, 1874), and Bayles, *History of Windham County, Conn.* (New York, 1889).

KILLINGTON PEAK. The second highest elevation of the Green Mountains in Vermont. It is 9 miles east of Rutland; its height is 4241 feet and it is a conspicuous landmark.

KILLOWEN, BARON RUSSELL OF. See RUSSELL, SIR CHARLES ARTHUR.

KILMAINHAM, kíl-mán'am. A western suburb of Dublin, Ireland, and a township of Dublin County. Pop., 6500. Here is situated Kilmainham Hospital, an establishment for the reception of wounded and pensioned soldiers, originally founded by King Charles II, and conducted on similar principles to the sister institution, Chelsea Hospital (q.v.). Kilmainham Hospital is maintained by an annual parliamentary grant and provides for upward of 250 veterans and officers. Near the hospital is Kilmainham jail, where Parnell was confined in 1882. "The Treaty of Kilmainham" was an alleged agreement between Gladstone and Parnell, according to which Parnell promised to exert his influence against the commission of agrarian crime in Ireland, upon condition that Gladstone secured the introduction into Parliament of a legislative measure affecting the Land Act of 1881.

KILMARNOCK. A municipal and police burgh in Ayrshire, Scotland, on Kilmarnock Water, 12 miles north-northeast of Ayr (Map: Scotland, D 4). It has a fine town hall, library, art museum, atheneum, and theatre. Its educational institutions include an observatory, school of science and art, and an institute of philoa-

7. PURSY MINNOW (*Cyprinodon variegatus*).

ophy. The Robert Burns Memorial (the poet's first work was published in Kilmarnock) contains originals of the Burns manuscript and a splendid library of the poet's works. It has large engineering establishments, woolen mills, carpet and lace-curtain manufactories, machine shops, blast furnaces, tanneries, shoe factories, etc. The neighborhood is rich in coal and iron, and its dairy produce is extensive. The largest cheese show in Scotland is held here, the value of the exhibits generally amounting to about £35,000. Pop., 1901, 34,165, 1911, 34,728. Consult McKay, *History of Kilmarnock* (Kilmarnock, 1848).

KILN, kil (AS. *cylm*, *cylene*, from Lat. *culina*, kitchen). A furnace or oven, for burning brick, earthenware, or pottery, for making charcoal, for roasting carbonate-iron ores, and for burning lime or cement. The kilns are made of stone, brick, or iron; and, according to the method of conducting the operation, they are divided into two classes. *intermittent kilns*, in which the fire is permitted to go out after the charge is burned, and *continuous kilns*, in which the charge may be removed and a fresh one put in while the fire is kept burning. The continuous kilns are of different types according to the class of product to be burned, and the fuel may be oil, gas, powdered coal (which gasifies on entering the kiln chamber), or solid coal. Kilns are also classified in accordance with the course of the draft, into *up-draft* and *down-draft*; and by shapes, into *round*, *rectangular*, *conical*, and *annular*, the latter having a series of cells around a central compartment. Moreover, a kiln is said to be *regenerative* if the gas and air before combustion is preheated by passage through a checker work of brick which has been previously heated by the waste gases of combustion escaping from the kiln.

Portland Cement Kilns may be divided somewhat arbitrarily into (1) intermittent dome or bottle kilns, (2) ring or Hoffmann kilns, (3) continuous-shaft kilns, and (4) rotary kilns. *Dome kilns* consist of a calcining chamber, surmounted by a chimney, which together form a structure resembling a large bottle in shape. At the bottom of the kiln are a set of removable grate bars, and a door for admitting air to the fire and for withdrawing the burned clinker. Near the top of the chamber are one or more openings called charging eyes, through which the new mixture and fuel are fed into the kiln. The chimney-like structure provides the necessary draft for the fire, carries away the gases of combustion, and serves to keep the temperature of the kiln uniform. Dome kilns are built of rough stone, brick, or concrete masonry, lined with fire brick, the lining being so constructed that it can be removed and rebuilt without disturbing the kiln structure proper. The kilns are charged by replacing kindling wood on the grate bars and filling above to the level of the charging eyes with alternate layers of fuel and raw mixture. When calcination is complete, the kiln is allowed to cool down and the clinker is withdrawn. The operation of the kiln is thus intermittent. A modification of this type is equipped with a drying tunnel, through which the charge passes, and is dried by the waste heat of the kiln, resulting in a saving of fuel. This modified type of the dome kiln has been used in England, but at only one or two localities in the United

States. Dome kilns are going out of use in the Portland-cement industry.

Ring or Hoffmann kilns have been much used in Germany, but not in England or the United States. They consist of a series of chambers arranged around a central stack, each chamber being connected by flues with its neighbors and the stack. After the chambers are filled through side doors, one is started by feeding coal fuel through roof openings. The heat from this passes through several chambers ahead before being drawn off to the stack, thus heating these up, so that less fuel is required to burn them. As soon as one chamber is burned and cooled, it can be emptied. There will thus always be one chamber at high fire, others cooling down, others heating up, and loading and unloading going on from still other chambers.

Continuous-shaft kilns consist essentially of a high vertical chamber, whose several sections, known as the preheating, burning, and cooling chambers, may or may not be in line. The cement mixture is charged at the top, and the fuel may be added there or part way down. The charge then is continually moving downward, and the burnt cement or clinker is drawn off at the bottom.

Rotary kilns for burning cement are distinctly an American development, although the device was invented in England. A rotary kiln consists of a steel or iron cylinder, 60 to 150 feet long, lined with fire brick or some other refractory substance to resist the heat, and mounted on roller bearings, generally placed at two points near the ends. A circumferential rack on the shell enables the cylinder to be rotated by worm

FIG. 1. ROTARY CEMENT KILN

by a sprocket chain. The head of the cylinder is inclosed by the chimney in such a manner as to be free to rotate and is somewhat higher than the front, which is covered by a movable cap, through which the crude oil or powdered coal is forced by air pressure. The raw material, either dry or wet, is fed into the upper end of the kiln and gradually works towards the bottom, in consequence of the inclination and the rotary movement of the cylinder. Calcination takes place during the passage.

Natural Cement and Lime. Both these products are usually burned in kilns of the vertical continuous-feed type. In cement burning the fuel is generally mixed with the rock; but while this may be done in lime burning, it is desirable to feed the fuel separately, as then it does not come in contact with the lime and discolor it. See CEMENT.

Brickkilns may be *temporary* or *permanent*. The former are built up of the bricks themselves, generally in a number of rows of parallel arches, which may contain from 25,000 to 40,000 brick and be from 25 to 50 courses in height, called a *scove kiln*. (See BRICK.) Burnt brick are placed around the outer sides and on top of the kiln, the walls being daubed with mud. Openings are left at the top to permit the escape of steam arising from the liberated moisture in the brick. Fires are started in the windward end of each arch, then at the other

end, and allowed to approach each other slowly, several days sometimes being required. The doors are closed and sealed to prevent the entrance of air. Wood, coal, or oil may be used for fuel, the oil requiring special burners and being used but comparatively little. *Permanent brickkilns* have fixed side walls, but may be open or closed at the top. If open, the fires extend beneath the whole length of the charge, the gases passing upward, much as in temporary kilns. If closed, the fire boxes are on both sides in rectangular kilns, or at regular intervals around a circular kiln. Permanent, closed-top kilns may be up-draft or down-draft. In the former the fire enters the bottom of the kiln chamber and passes out at the top. In the latter it follows the reverse course. *Continuous brickkilns* have a series of connecting chambers fired in succession, the gases passing from the first to the second, and so on. Filling, burning, and emptying go on in different chambers at the same time. The type was described under Portland-cement kilns. *Fire brick* and *refractory ware* are frequently burned in down-draft kilns, which must be lined with fire brick. Burning requires five or six days, and cooling several days more. *Paving brick*, in the Middle

If the ware is decorated, it receives a low heat firing to fix the colors after their application. Each firing is performed in a separate kiln. In the biscuit oven the temperature is believed to

FIG. 3. BRICK AND BRICK-LINED IRON OR STEEL LIMEKILNS.

reach 2500° F., in the gloss or glaze ovens 1900°, and in the enamel oven not more than 1400°. Pottery kilns are usually in the form of a tall cylinder of various dimensions, from 15 to 30 feet in diameter, 15 to 20 feet high, and terminated by a truncated cone of about two-thirds the height of the cylindrical part.

Architectural Terra-Cotta Kilns are usually cylindrical, down-draft, and of the muffle type; i.e., they have double walls between which the fire passes so that it does not come in contact with the ware. Heat is applied for 5 to 6 days, reaching a temperature of about 2300° F. Porous terra-cotta tiles (see TILE) are burned for a much shorter period, the sawdust mixed with clay being consumed during the process. *Sewer pipe* is generally burned in round, down-draft

FIG. 2. DOWN-DRAFT BRICKKILN.

West of the United States, are generally burned in the down-draft kilns. The temperature while burning ranges from 1600° to 2300° F. The burning takes from four to six and the cooling from three to six.

Charcoal Kilns, when of a permanent character (see CHARCOAL), are dome-shaped structures, with doors, a grate, ash pit, and an outlet near the top for the volatile products.

Pottery Kilns are of many kinds, depending upon the ware that is to be burned and the consequent amount of heat required. Earthenware, stoneware, and porcelain each require different degrees of heat, the intensity varying in the order named. (See POTTERY.) The kilns are usually circular. Earthenware and stoneware are stacked up in the open kiln chamber, while earthenware and porcelain are first carefully packed in fire-clay boxes called *saggers*, and these are piled up in stacks called *bungs* in the kiln, an average kiln holding 40 or 50 bungs. The kilns are usually built on the down-draft principle. Forty or 50 hours are usually necessary for the first firing of the pottery, and as many more are allowed for it to cool off. The kilns are generally very large, and the whole process of burning requires from 7 to 14 days. The white earthenware and porcelain are first fired to the biscuit stage; the glaze is then applied, and the wares are fired in the gloss kiln, the temperature of this second burning being lower than the first in the case of white earthenware and higher in the case of true hard porcelain.

FIG. 4. ELEVATION AND SECTION OF TERRA-COTTA KILN.

kilns, the process requiring from five to seven days.

Roasting Kilns are used for expelling moisture, bituminous matter, carbonic acid, and sulphur from iron ore, by burning fuel either solid or gaseous in contact with the ore. This kiln, of a capacity up to 600 tons each, consists of a cylindrical brick-lined sheet-iron casing converging at the bottom. When gas-fired, there is a central down-draft flue for the escape of the waste gases, the roasting being accomplished in the narrow annular space. The operation is continuous. The Gjer kiln is an example of this

type using solid fuel, and the Davis-Colby ore roaster of those using gaseous fuel. Consult annual issues of *The Mineral Industry of the United States* (New York), *Transactions of the American Institute of Mining Engineers* (ib.), and *Transactions of the American Ceramic Society* (Columbus, Ohio), for the prevailing practice in various industries in which kilns are used. For lime and cement kilns, consult Eckel, *Cements, Limes, and Plasters* (New York, 1907), and Ellis Soper, "Rotary Kiln in the Manufacture of Portland Cement," in *American Society of Mechanical Engineers, Journal*, vol. xxxii (Baltimore, 1910).

KILO- (from Gk. *χίλιοι*, *chilioi*, thousand) A prefix meaning 'one thousand' and employed in the metric system to denote that the given magnitude is 1000 times larger than the fundamental unit. Thus, a kilometer is 1000 meters, a kilogram 1000 grams, etc. Kilo is also employed in an abbreviated form of kilogram. See METRIC SYSTEM.

KILOWATT, kil'ô-wôt (from Gk. *χίλιοι*, *chilioi*, thousand + Eng *watt*, from the Scottish engineer James Watt) A unit of power equivalent to 1000 watts or 1000 joules per second. It is equal to 1341 horse power. See WATT; ELECTRICAL UNITS.

KILPATRICK, HUGH JUDSON (1836-81). An American soldier, one of the most brilliant cavalry leaders on the Federal side in the Civil War. He was born near Deckertown, N. J., graduated at West Point in 1861, and on May 9 entered the Federal service as captain in the Fifth New York Volunteers, generally known as Duryea's Zouaves. He was wounded at Big Bethel on June 10, was engaged in a regiment of cavalry in August, and on September 25 became lieutenant colonel of the Second New York Cavalry. From 1862 to 1864 he took a prominent part in nearly all the cavalry operations connected with the campaigns of the Army of Virginia and the Army of the Potomac, making innumerable raids and gathering information of Confederate movements. In one of his raids in 1863 he covered more than 200 miles in less than five days, fought skirmishes daily, and during this time captured and paroled more than 800 prisoners, with a loss to himself of only one officer and 37 men. In the second battle of Bull Run and afterward in the battle of Gettysburg he served with conspicuous gallantry. In December, 1862, he was promoted to be colonel, and in June, 1863, to be brigadier general, United States volunteers, while he received the brevet of major and lieutenant colonel in the regular army for gallantry at Aldie, Va., and Gettysburg respectively. In March, 1864, he participated in a celebrated raid towards Richmond and down the Virginia peninsula, and in April was placed in command of a division of cavalry in the Army of the Cumberland, then engaged, under Sherman, in the invasion of Georgia. Wounded at Resaca, he recovered in time to guard Sherman's communications effectively. At the close of the war he was brevetted brigadier general in the regular army for services in the capture of Fayetteville, N. C., and major general for his services during the campaign in the Carolinas, and in June, 1865, attained the regular rank of major general of volunteers. He resigned his commission in the regular army in December, 1865, and his commission in the volunteer service in January, 1866, and from December, 1865, to August, 1868, was United States

Minister to Chile—a position which he again held from June, 1881, until his death at Santiago, in December. Consult Moore, *Kilpatrick and our Cavalry* (New York, 1865), and William Small, *Camp-Fire Talk on the Life and Military Services of Major-General Judson Kilpatrick* (Washington, 1887).

KILUNG, kē'lung' A seaport in Formosa. See KELUNG.

KILVEY, BARON GRENFELL OF. See GREENFELL, FRANCIS WALLACE.

KILWA KIVINJE, kēl'wā kē-vēn'yā, or QUILOA, kē'lô-ā. A seaport town of German East Africa, situated 180 miles south of Zanzibar (Map Congo, G 4). It has a customhouse and a spacious roadstead much frequented by merchant vessels; its trade is chiefly in rubber and timber. Pop., 1910 (est.), 100,800. Kilwa Kivinje has supplanted the town of Kilwa Kisiwani, situated on an island 17 miles to the south. The latter, founded about 1000 by Prince Shiraz of Persia, is now almost abandoned, but during the Arab domination it was a flourishing port for the East African slave trade.

KILWINNING. A municipal and police burgh in Ayrshire, Scotland, 3½ miles north of Irvine (Map Scotland, D 4). It is the seat of a large engineering and fire-clay works, woolen and muslin manufactures, numerous coal pits, and the Eglinton Ironworks. The parish church, built in 1775, occupies part of the site of the famous abbey of Kilwinning, founded in 1140. The town is noted as the birthplace of freemasonry in Scotland, and until the institution of the Grand Lodge in 1736 all other lodges in Scotland received their charters from "Mother Kilwinning." Pop., 1901, 4440, 1911, 4945. About a mile to the southeast stands Eglinton Castle, the scene of the famous Eglinton Tournament in 1839.

KIM. A story by Rudyard Kipling (1901), generally considered one of his best, telling the adventures of an Irish waif in India, who acquired marvelous knowledge of the Orient.

KIMAWENSI. See KILIMANJARO.

KIMBALL, ARTHUR LALANNE (1856-). An American physicist, born at Succasunna Plains, N. J. He graduated in 1881 at Princeton and in 1884 took his Ph.D. at Johns Hopkins, where he remained as associate in physics (1884-88) and associate professor (1888-91). In 1891 he was appointed professor of physics at Amherst. In 1883-84, under the general direction of Professor Rowland (q.v.) of Johns Hopkins, and by appropriation made by the United States government, he made a valuable series of experiments for the determination of the unit of electric resistance. His writings include *The Physical Properties of Gases* (1890); *College Physics* (1911).

KIMBALL, HEBER CHASE (1801-68). An American Mormon leader and priest. He was born at Sheldon, Vt., and was the son of a blacksmith. He was baptized into the Church of the Latter-Day Saints in 1832, was shortly afterward ordained an elder by Joseph Smith, the founder of the church, and in 1835 became one of the "Twelve Apostles." In 1837, and again in 1840, he went as a missionary to England, where he made many converts. In 1843 he was made head priest of the Order of Melchizedek, in 1847 was chosen as one of Brigham Young's counselors, and in 1849 became Chief Justice and Lieutenant Governor of the State of Deseret. In 1848 he was indicted for treason

by a United States grand jury, but was never brought to trial.

KIMBALL, JAMES PUTNAM (1836-). An American geologist, born at Salem, Mass. His training was obtained at the Lawrence Scientific School (Harvard), at the universities of Berlin and Göttingen, and at the Freiberg (Saxony) School of Mines. Subsequently he was a member of the geological surveys of Wisconsin and Illinois. In 1861-62 he was professor of chemistry and economic geology in the New York State Agricultural College (Ovid), and in the latter year was appointed assistant adjutant general of United States volunteers, with rank of captain. He took part in the various campaigns of the Army of the Potomac as chief of staff to Gen. M. R. Patrick and was afterward on the general staffs of McClellan, Burnside, Hooker, and Meade. Until 1874 he practiced as a mining engineer in New York; from 1874 to 1885 he was honorary professor of geology in Lehigh University, and in 1885-88 he was director of the United States Mint. His writings, in addition to official reports, include contributions on geology and metallurgy to American and foreign periodicals.

KIMBALL, KATHERINE (?-). An American etcher. She was born in New Hampshire and studied at the National Academy of Design, New York. She is represented in the permanent collections of the New York Public Library, the Boston Museum, the South Kensington Museum, London, and the Bibliothèque d'Art et d'Archéologie, Paris. Her illustrations for Okey's *Paris* (1904), Gilliat Smith's *Brussels* (1906), Sterling Taylor's *Canterbury* (1912), and, for the "Artist's Sketch Book Series," on *Rochester* (1912), are much esteemed, as are also her contributions to the *Century Magazine*, the *Queen*, the *Studio*, and the *Gazette des Beaux-Arts*. She became an associate member of the Royal Society of Painters, Etchers, and Engravers, London, and member of the Section de Gravure of the Salon d'Automne, Paris, and of the Chicago Society of Etchers.

KIMBALL, MARTHA GETTRUDE (1840-94). An American philanthropist, born in Portland, Me. She accompanied her husband, who was appraiser of captured cotton, to the front in the Civil War, acted as nurse during Sherman's campaign in Georgia, and was appointed inspector of hospitals. Acting on her suggestion, General Logan, as head of the Grand Army of the Republic, introduced the observation of Decoration Day.

KIMBALL, RICHARD BURLEIGH (1816-92). An American essayist and novelist. He was born in Plainfield, N. H., graduated at Dartmouth College in 1834, went to Paris in 1836 after two years' study of law, and upon his return practiced successfully in Waterford, N. Y., and in New York City. From 1854 until 1860 he was president of the Galveston and Houston Railroad, which he had projected—the first railroad built in the State of Texas. The most important of his varied writings, which include novels, essays, and books of travel, are: *Letters from England* (1842); *Saint Leger* (1850); *Cuba and the Cubans* (1850); *Romance of Student Life Abroad* (1853); *Undercurrents of Wall Street* (1861); *Was he Successful?* (1863); *The Prince of Kashna* (1864); *Henry Powers, Banker* (1868); *To-Day in New York* (1870); *Stories of Exceptional Life* (1887).

KIMBALL, SUMNER INCREASE (1834-).

The organizer of the United States life-saving service. He was born at Lebanon, Me., graduated from Bowdoin in 1855, and was admitted to the bar in 1858. In 1859 he was elected to the Maine Legislature and in 1862 became a clerk in the Treasury Department at Washington. He was placed in charge of the revenue marine service and the life-saving service in 1871 and by thorough reorganization greatly increased the efficiency of the latter. In 1878 this service was organized into a separate bureau, with Mr. Kimball at its head, and under his direction was extended to the Pacific coast and the Great Lakes. He served also as acting Register, acting Comptroller, and acting Solicitor of the Treasury. He is the author of *Organization and Methods of the United States Life-Saving Service* (1889) and *Joshua James—Life Saver* (1909).

KIMBALL, WILLIAM WIRT (1848-). An American naval officer, born at Paris, Me. He graduated from the United States Naval Academy in 1869, and rose through the various grades to that of captain in 1905 and of rear admiral in 1908. One of the first officers to serve on the earliest American torpedo boats, he did much for the development of machine and magazine guns, and later for the improvement of submarines. During the war with Spain he commanded the Atlantic torpedo boat flotilla; later he served on the boards of construction, examination, and retirement; and commanded the Nicaraguan expeditionary squadron in 1909-10. He was retired by operation of law in 1909, but remained in active service for another year.

KIMBERLEY, kím'ber-li. A town of Cape of Good Hope Province, South Africa, the capital of Griqualand West, near the frontier of the Orange River Colony, 647 miles by rail north-east of Cape Town. It is 4012 feet above the sea (Map: Cape of Good Hope, G 7). It has a fine courthouse, city hall, a free library, a museum, theatre, botanical gardens, a good system of water works supplied from the Vaal River, and is lighted by electricity. Kimberley, founded in 1871, owes its existence to the extensive diamond mines situated in its vicinity, owned entirely by the De Beers Corporation. It is one of the chief seats of this valuable industry and is also an important intermediate trading station between Cape of Good Hope Province and the interior of Africa. It is noted for its fine breed of horses. During the South African War Kimberley was defended by the British troops under Colonel Kekewich, and from Oct. 15, 1899, withstood a siege of 126 days by the Boers until relieved by General French. Memorial Hall was built during the siege. The Honoured Dead Memorial commemorates those who fell in the defense of the town. Pop., 1891, 28,718 (including 12,658 whites); 1904, 34,331 (13,556 whites); 1911, 49,823 (17,059 whites).

KIMBERLEY. The northern division of Western Australia (area, 144,000 square miles), fertile and pastoral where watered by the Ord and Fitzroy rivers; and in the region of the gold fields, discovered in 1882 (Map: Western Australia, H 3). Chief town, Derby.

KIMBERLEY, JOHN WODEHOUSE, first EARL OF (1826-1902). An English statesman, born in London, Jan. 7, 1826. He studied at Eton and graduated at Christ Church, Oxford, in 1847 with a first-class in classics. He succeeded his grandfather as third Baron Wodehouse be-

fore he had attained his majority and 20 years afterward was made Earl of Kimberley. He entered public life in 1852, as Undersecretary of State for Foreign Affairs—a position he held until 1861, with an intermission of a Russian embassy (1856–58). In 1863 he was an envoy to Copenhagen in connection with the Schleswig-Holstein affair and in 1864 was appointed Undersecretary at the India Office. He was Lord Lieutenant of Ireland (1864–66) under Lord John Russell, and Gladstone made him Lord Privy Seal (1868–70) and Secretary of State for the Colonies (1870–74 and 1880–82). He was Secretary of State for India in 1882–86, and again in 1892–94, until appointed Foreign Secretary in Lord Rosebery's cabinet (1894–95). In 1892 he was appointed Lord President of the Council, in 1897 led the Liberal opposition in the House of Lords, and in 1899 was made chancellor of London University. For several years Kimberley was the Liberal leader in the House of Lords, and while he was Colonial Secretary the town of Kimberley in the diamond region of South Africa was named for him. He died in London, April 8, 1902.

KIMCHI, kim'ká. A family of Hebrew scholars of the Middle Ages—The most famous member of the family is DAVID KIMCHI (generally quoted by the initials of his name, RaDaK—i.e., Rabbi David Kimchi), who was born at Narbonne about 1160 and lived until about 1235. His achievements were chiefly in the field of biblical exegesis and Hebrew grammar. His merit lies not in originality, but in the excellence of his compilations, in consequence of which his works exercised a great influence upon his successors. In his grammatical exposition he follows largely Ibn Janach (q.v.), but he wrote exclusively in Hebrew. His grammar and lexicon have appeared in many editions. His commentaries are still widely used among the Jews. They were among the first to be printed in the so-called Rabbinical Bibles, containing the Hebrew text with selected commentaries. The most important of them is a commentary on the prophetic books. A new edition of his commentary on the Psalms was begun by Schiller-Szinessy, but only the first part appeared (Cambridge, 1882). An edition of his commentary on Genesis appeared at Pressburg in 1842. In the great Maimonides controversy (see MAIMONIDES) Kimchi was on the side of Maimonides. Consult Tauber, *Standpunkt und Leistung des R. David Kimchi als Grammatiker* (Breslau, 1867).—Kimchi's father, JOSEPH (flourished 1150–70), gave the impetus to Jewish culture in southern France, whither he emigrated from Spain. He wrote biblical commentaries and grammatical treatises. Of his commentaries there have been preserved only those on Proverbs and Job, which have been published, and a commentary on the Song of Songs, which is unpublished. His grammatical works have been edited by Bacher and Matthews (Berlin, 1888).—David's older brother, MOSES (flourished 1170–90), also engaged in studies similar to those of his father and brother. A compendium of Hebrew grammar compiled by him enjoyed great popularity by reason of its simplicity and brevity and was published in a number of editions. It first appeared in 1608. The edition of 1546 (Venice) was published by Elias Levita, who added a commentary that has since then generally appeared in the editions of the grammar. Of his biblical commentaries only

those to Job, Proverbs, and Ezra and Nehemiah are known.

KIMPOLUNG, kêm'pô-lung. A town of Rumania. See CAMPULUNG.

KIN (AS. *cynn*, Goth. *kuni*, OHG. *chunni*, kindred; connected with OIr. *cine*, Lat. *genus*, Gk. *γένος*, Lith. *gamas*, Skt. *jana*, race, kind, from *jan*, to beget), NEXT OF. In English and American law, those who are so related by ties of consanguinity to a decedent as to be entitled to share in the distribution of his personal estate. The phrase does not therefore comprehend all who may be entitled to participate under statutes of distribution, as a wife, who is not of her husband's kin; nor all those who are related by ties of blood, but only those whose blood relationship is in the next order of consanguinity to the decedent. Next of kin are also to be distinguished from heirs, or those in the order of consanguinity to whom the real property of an intestate will pass by descent. These are, indeed, always next of kin, but they do not necessarily include all who answer that description. By the common-law canons of descent, under which the male descendant is preferred to the female, and, among males of equal degree, the eldest to those who are younger, a single member of the class constituting the next of kin may become the sole heir. In the United States, however, where those rules have been abolished, the next of kin are generally the same as the heirs at law. See ADMINISTRATION; CONSANGUINITY; DESCENT; DISTRIBUTION; HEIR.

KINÆSTHESIS, KINÆSTHETIC (kin'ēs-thēt'ik or kī'nēs-) SENSATIONS. Sensations whose organs are in the motor apparatus of the body and in the inner ear, and which are set in function by bodily movements. They thus form a subclass of the organic sensations (q.v.). Kinæsthetic sensations are usually divided into two groups—those of the muscle sense, including muscular pressure, articular pressure, and tendinous strain, and those of the static sense, including the ampullar and vestibular sensations. See MUSCLE SENSE; STATIC SENSE; MOVEMENT, PERCEPTION OF; ORGANIC SENSATIONS.

KINÆSTHETIC SENSATIONS IN ANIMALS. In the simpler animal forms it is not possible to make a distinction between kinæsthetic sensations (q.v.) and the sensations of touch. (See MECHANICAL SENSE IN ANIMALS.) The mental lives of some vertebrates, however, appear to involve distinctly kinæsthetic experiences, which may play a prominent rôle in the animal's consciousness.

It has been found that white rats are able either to find their way through a labyrinth which they have previously learned, or to learn the route through a new labyrinth, after they have been rendered blind (by extirpation of the eyes), anosmic (by removal of the olfactory lobes), partially deaf (by destruction of the middle ear), and partially anæsthetic (by anæsthetization of the feet and removal of the vibrissæ). In these mutilated animals the sensations of movement must constitute the principal means of guidance, although it may be the case that other sensory "cues" are utilized by normal individuals. The normal rat which has learned the path through a labyrinth shows, furthermore, that it remembers the lengths of the paths largely in kinæsthetic terms. For instance, if the distance over which the rat should pass before turning be shortened, the rat will usually run past the right turn into a blind

alley; and if, on the other hand, the distance be increased, the rat will often turn at the accustomed place and bump into the wall. If an individual is placed in the midst of a labyrinth with which it is familiar, it runs about until it appears to "get the feel" of a particular passage; then it starts off, traversing the remainder of the route rapidly. Its behavior is similar to the highly, kinæsthetic, coördinated performance of the human subject in a complex act, such as the playing of a difficult piece on the piano; after an interruption the player may not be able to continue, but will fumble the keys until he chances upon a correct movement, which immediately sets off the subsequent action. This similarity to human performance, together with the fact that the human subject who has learned a maze finds that consciousness is principally kinæsthetic, argues for the prominence of kinæsthesia in the rat's mind. It may be that the static sense (q.v.) is also involved in the maze consciousness of the rat. The animal's disturbance when a labyrinth with which it is familiar is rotated through 90° has been attributed by some writers to a static disorientation.

There are no experimental results which indicate that the consciousness of any animal other than the rat may become limited solely to kinæsthetic sensations. Kinæsthetic or organic sensations have, however, been ascribed with some positiveness to crawfish, perch, frogs, English sparrows, vesper sparrows, cowbirds, pigeons, guinea pigs, and dancing mice.

The great development of the semicircular canals in fishes hints at a corresponding development of the static sense, but there is no direct evidence that these organs mediate sensation. Similarly, the otocysts or statocysts of the lower animals (see HEARING IN ANIMALS; EAR, COMPARATIVE ANATOMY OF) suggest a kinæsthetic accompaniment, which has not however been established.

Consult Watson, "Kinæsthetic and Organic Sensations: Their Role in the Reactions of the White Rat to the Maze," in *Psychological Review Monograph*, sup., vol. viii (Lancaster, Pa., 1907); also general bibliography under ANIMAL PSYCHOLOGY.

KINAK, kē-nák'. See KUSKOKWIM RIVER.

KINCARDINE, kin-kär'din. A port of entry in Bruce Co., Ontario, Canada, on Lake Huron, and on the Grand Trunk Railway, 74 miles west-southwest (direct) of Collingwood (Map: Ontario, C 5). It has steamship connections with Cleveland and Sault Ste. Marie. The town possesses a public library, two parks, and owns its electric-lighting plant and water works. Its industrial establishments include bridge and boiler works, salt works, a pork-packing plant, and manufactories of sashes, doors, and furniture. Sand, clay, salt, marl, and limestone are found in the vicinity. Kincardine has become a popular summer resort. Pop., 1901, 2077; 1911, 1956.

KINCARDINESHIRE, or THE MEARNS. A maritime county in the northeast division of Scotland, with Aberdeenshire and the Dee on the north, Forfarshire and the North Esk on the south and west, and the North Sea on the east (Map: Scotland, F 3). Area, 381 square miles, or 244,000 acres, of which 121,000 are in cultivation. It is traversed by the Grampians. Chief towns, Stonehaven, the capital, Banchory, Inverbervie, and Laurencekirk. Pop., 1801, 26,350; 1851, 34,800; 1900, 40,923; 1911, 41,008.

KINCHAS'SA. A station of Congo Free State. See LEOPOLDVILLE.

KIN'CHINJIN'GA. A mountain peak of the Himalayas. See KUNCHINJINGA.

KINCHOW, or NANSHAN, BATTLE OF. See RUSSO-JAPANESE WAR.

KIND, kint, JOHANN FRIEDRICH (1768-1843). A German poet, dramatist, and romancer, born in Leipzig. He began in 1793 the practice of law in Dresden, but abandoned it in 1814 to devote himself exclusively to literary work. With Winkler he edited the *Abendzeitung* from 1817 to 1826. His poems (5 vols., 1808) are weakly sentimental, but his tales and novels, though not strong, appealed to many readers. He is, however, best remembered for his *Das Nachtlager von Granada* (music by Kreutzer), *Der Holzdieb* (music by Marschner), and especially for the libretto of *Der Freischütz*, imperishable through Weber's famous composition. But he is said to have borrowed the ideas of this from Apel's tale of the same name. Consult H. A. Kruger, *F. Kind und der Dresdener Liederkreis* (Leipzig, 1904).

KINDERGARTEN, kin'dër-gar'ten (Ger, children's garden). A school for children from the third or fourth to the seventh year, suggested and introduced by Friedrich Fröbel (q.v.), through the "natural activity of the child in play is so organized as to assist in the physical, mental, and moral development. Fröbel first grasped the essence of the idea of evolution in its application to education and saw the importance of the earlier stages. To him education was a setting free of the powers inherent in the individual. By an analysis of the child's instinctive tendency towards the physical, through gradual, continuous exercises, his best tendencies can be strengthened, and at the same time he can acquire a certain preliminary knowledge of the world of nature and man around him. Thus, the child gains control over his own being, develops power of thought, self-control, accuracy of sense perception, and a tendency towards an active intellectual life.

Fröbel was a close student of child life. Hence his suggestions of means and methods for the kindergarten work were based on accurate knowledge of child nature and have been of permanent value. The mere play instinct alone would not suffice, but the plays and games must be selected and organized. Fröbel classified the material to be so used as gifts and occupations. The kindergarten is a new social institution for the child, in which he has free scope to be himself while being also one of a community of equals towards whom he must observe his duties and accept the responsibility of his part in the whole. The gifts and the occupations are there introduced gradually and in a logical order. As he becomes familiar with the properties of the one, he is led on to the next, which properly grows out of the first, each introducing new impressions and repeating the old.

The first gift is composed of six rubber or woolen balls, three of the primary and three of the secondary colors. The ball is chosen as the simplest type form, from which may be derived all other forms, as embodying the element of constancy and unity. Through the balls the idea of comparison is introduced, and sensation and perception become clearer and stronger through the similarity, contrast, and discrimination made possible by the almost innumerable exercises and games. The second gift, compris-

- 1 Interior of H S Christian Memorial Kindergarten, Brooklyn, N Y
- 2 Children of Pratt Institute Kindergarten, Brooklyn, N Y, gardening

ing a wooden ball, cylinder, and cube, carries impressions further, and offers not only in itself, but also with the first gift, a strong illustration of contrasts and their connections. In shape, in material, in hardness, in color, etc., it contrasts with its predecessor, but is like it in the common shape of the balls. With the *third gift*, consisting of a wooden cube cut once in each dimension to form eight smaller cubes, begins the first impression of a whole divisible into similar parts. Here, too, are the first steps in number, in analysis of construction, the first suggestion, in the gifts, of the relation of the individual to the whole, and of the need of every perfect part to form a perfect unit. With the use of this gift the child accustoms himself to regularity, care, precision, beauty. The *fourth gift*, a cube like that of the third, but cut once horizontally and twice vertically into eight rectangular parallelograms, introduces especially the new element of a whole composed of parts unlike itself. The *fifth* and *sixth gifts* are but extensions of the *third* and *fourth*, with more material and differing forms of solids. The *seventh gift* consists of cardboard and triangular tablets of cardboard or thin wood, giving a basis for studies in surfaces and colors. The *eighth* and *ninth gifts* are introductory to drawing, and consist of small strips of laths and of rings and circles in cardboard, which can be arranged into all sorts of patterns.

The development of Fröbelian principles has caused much more stress to be placed upon the occupations than upon the use of the gifts. These occupations are, modeling in clay and in cardboard, and, later, wood carving, or sloyd, paper folding, in two and three dimensions: paper cutting, paper mosaic, and work with the color brush, mat plaiting, sloyd weaving, paper weaving, sewing, wax or cork work with sticks, drawing in checks and free, bead threading, and perforating. These occupations are grouped above, not in the order of their use, but as they deal with solids, surfaces, and lines and points. The union of part with part in the exercises is maintained by a central, continuous thread from which spring all the exercises of day, week, and month, that thought always dealing with subjects within the general and local experience of the kindergarten children. The songs, games, and stories, which hold together the periods of gift and occupation exercises, are also an integral part of them, growing out of them and their necessities. While they are the means of developing the singing voice, facility in language, grace and strength of body, they are also compassing the powers of attention, observation, imagination—they are helping the child to think, to obey law, to govern himself, to stand in the proper attitude towards his environment. Another aspect is the industrial connection of the kindergarten with life. Manual training, not in special but in general dexterity, forms an important part of the kindergarten training. From the delicacy of touch, as needed in such gifts as paper folding and parquetry, to the strength and decision gained by the hands in clay modeling, all degrees of handling are introduced, accuracy becomes a second nature, and crisp, distinct action is attained. The kindergarten also develops an interest in nature and gives the child an impulse to study its forces and phenomena.

The more recent development of the kindergarten theory has led to the rise of two schools—the “conservative,” or traditional, which clings to much of the Fröbelian symbolism and mysticism but is not wholly uninfluenced by modern tendencies, and the “liberal,” which does not look to philosophy for guidance but to the recent contributions of child and genetic psychology. The liberal kindergarten is accordingly conceived of, not as an institution for the development of a philosophical and mystical theory, but for the provision of a suitable environment to develop the impulses of the child, its desire to communicate, to dramatize, to represent, and to construct. Not formalism or a fixed theory, but the child itself and its awakening impulses as a member of society, form the guiding principle. The kindergarten is thus no longer an isolated school type, but is brought into line with the more recent tendencies in elementary education without any sudden gap or breach in method.

The first kindergarten was opened by Fröbel in the year 1840 in the village of Blankenburg in the Thuringian Forest. Until his death, in 1852, Fröbel gave himself up to the work of establishing other of these institutions, and of enlisting the friends of education in the cause. After his death the Baroness Marenholtz-Bülow, Fröbel's ardent disciple, devoted herself to carrying on the work, and the movement has steadily grown until kindergartens form a component part of the public-school system in most continental countries, in most cities of the United States, and in some South American and Asiatic countries. In France and French Switzerland their establishment is compulsory, and they are supported and organized like any other part of the public-school system. In Germany and England their support is yet local or philanthropic, although in England the infant schools, which form a part of the public elementary-school system, are slowly but surely being transformed and improved in accordance with the most recent developments of kindergarten principles.

The pioneer movement for the establishment of kindergartens in the United States was led by Miss Elizabeth Peabody, of Boston, who on becoming interested in Fröbel's writings went to Germany in 1867 to study his system. She returned the next year and devoted the remainder of her life to the popularizing of the Fröbelian principle of education, ably seconded by Mrs. Horace Mann and Dr. Henry Barnard. During the decade of the sixties several kindergartens were established in Boston, Mass., Hoboken, N. J., and Louisville, Ky. A similar movement was led independently in New York by Miss Henrietta Haines and Miss Boelté (Madame Kraus, q.v.), the latter a pupil of Fröbel's widow. During the seventies philanthropic associations were established in numerous cities for the support of kindergartens as charitable institutions. These were begun in Florence, Mass., in 1874, and in Boston in 1878; this movement prospered especially in San Francisco, Brooklyn, New York, Chicago, Pittsburgh, Cincinnati, and Louisville, and was supported in various other places. The first public kindergarten was opened in Boston in 1870, but shortly abandoned. The first permanently successful attempt to make the kindergarten a part of the public-school system was begun in St. Louis in 1873, under the leadership of Miss Susan Blow and Dr. W. T. Harris. Boston, Philadelphia,

Chicago, Milwaukee, and in time most of the large cities and many of the smaller ones, have followed St. Louis in this respect, usually through the absorption of free kindergartens previously established by private benevolent associations. Statistics privately collected show the number of kindergartens to have increased as follows: in 1873, 43; in 1882, 348; in 1892, 1311; in 1898, 4363; in 1903, 4000; in 1913, 8800. At the last date the 8800 kindergartens were distributed among 1105 cities and towns; of these 7600 were public schools. In 1903 the number of pupils was about 200,000; in 1913 this rose to 306,000, of whom 276,000 were in public schools. The kindergarten movement was furthered by a magazine, *The Kindergarten Messenger*, first published in 1873 by Miss Peabody. At the present time there are very many similar publications. The American Fröbel Union, established in 1867, also by Miss Peabody, was the forerunner of many such associations. The Union became the kindergarten department of the National Educational Association in 1885. Many schools for the training of kindergarten teachers have been established, either as independent enterprises or in connection with other educational institutions, chiefly normal schools. The best known of these, now connected with normal schools, are the Chicago Kindergarten College, and those in connection with the Teachers College, Columbia University, and with Pratt Institute, Brooklyn.

Bibliography. There is now a very extensive literature relating to the subject. For works by Fröbel, consult: F. W. A. Fröbel, *Gesammelte pädagogische Schriften*, edited by W. Lange (2 vols., Berlin, 1862-74; trans. in "International Education Series," New York, 1888-99); id., *Die Menschenerziehung* (Keilhau, 1826), translated by W. N. Hailman, *Education of Man*, "International Education Series," vol. v (New York, 1911); id., *Pädagogik des Kindergartens* (Keilhau, 1837-40), translated by Josephine Jarvis, *Friedrich Froebel's Pedagogics of the Kindergarten*, "International Education Series," vol. xxx (New York, 1904); id., *Mutter und Koselieder* (Vienna, 1895), translated by S. E. Blow, *Songs and Music of Friedrich Froebel's Mother Play*, "International Education Series," vol. xxxii (New York, 1901); id., *Autobiographie*, translated by Michaelis and Moore (4th ed., London, 1892); Josephine Jarvis (trans.), *Friedrich Froebel's Education by Development*, second part of the *Pedagogics of the Kindergarten*, "International Education Series," vol. xlv (New York, 1905). For general works, consult: W. N. Hailmann, *Kindergarten Culture in the Family and Kindergarten* (Cincinnati, 1873); Marenholtz-Büllo, *The Child: Its Nature and Relations*, translated from the German by M. H. Kriege (3d ed., New York, 1877); id., *Reminiscences of Froebel*, translated by Mrs. Horace Mann (Boston, 1877); id., *Die Arbeit* (Berlin, 1886); E. L. KINDI, kēn'dē, AL, or **ALCHINDIUS**, al-kin'-dī-ūs, ABU YUSUF YA'KUB IBN ISHAK AL-KINDI. An Arabian philosopher, who flourished in the ninth century. He was born in Kufa, where his father was Governor under Mahdi (775-785) and Harun al-Rashid (786-809), and studied at Basra and Bagdad. His library was confiscated under Motawakkil (847-861). He wrote more than 200 treatises on almost everything within the range of the philosophy and science of his time. By the Arabs themselves he is viewed as the Peripatetic philosopher in Islam. Of his many works, but a few on medicine and astrology remain. Consult: Flügel, *Al Kindi genannt der Philosoph der Araber* (Leipzig, 1857); A. Nagy, *Die philosophischen Abhandlungen des al-Kindi* (Münster, 1897); De Boer, *Geschichte der Philosophie im Islam* (Stuttgart, 1901).

KINEALY, kī-nē'li, JOHN HENRY (1864-). An American mechanical engineer. He was born at Hannibal, Mo., and was educated in the public schools of St. Louis and at Washington University (M.E., 1884), where he was an instructor in 1886-87 and professor of mechanical engineering from 1892 to 1902. He taught also at the Agricultural and Mechanical College of Texas (1887-89) and at the North Carolina College of Agriculture and Mechanical Arts (1889-92). He was a consulting engineer at Boston in 1902-04 and thereafter a mechanical engineer and patent expert at St. Louis. His own patents include an air-purifying apparatus, a thermal valve, a damper regulator, and other devices using the Kinealy metal diaphragm. He published: *An Elementary Text-Book on Steam Engines and Boilers* (1895; 4th ed., 1903); *Charts for Low Pressure Steam Heating* (1896); *Formulas and Tables for Heating* (1899); *Slide Valve Simply Explained* (1899); *Centrifugal Fans* (1905); *Mechanical Draft* (1906).

KINEMACOLOR, kīn'-ē-mā-kūl'ēr. A method for the projection in color of moving pictures. See MOVING PICTURES.

KINEMATICS (from Gk. κίνημα, *kinēma*, movement, from κινεῖν, *kinēin*, to move). That branch of mechanics which treats of different kinds of motion entirely regardless of the idea of matter and its inertia. It is therefore, strictly speaking, a department of geometry. See MECHANICS.

pean constitutions the crown is described as hereditary. In England the law of succession is lineal primogenial, with preference for males over females. In the Netherlands and Spain essentially the same rule prevails. In Belgium, Norway and Sweden, and Prussia it is agnatic lineal primogenial, with absolute exclusion of females; in Austria-Hungary it is the same, except that in default of male heirs females may succeed. The age at which the king attains his majority is usually 18, although in Austria-Hungary it is 16. During the minority of the king, or when for any reason he is unable to exercise the royal prerogatives, a regent is appointed, who is vested with the royal power. The only qualifications required of European kings relate to the profession of religious faith. Thus, in England the sovereign must be a Protestant, in Norway and in Sweden a Lutheran, and in Austria-Hungary a Roman Catholic. By the ceremony of coronation a semisacred character is communicated to the royal person which symbolizes his inviolability and supremacy. Among the qualities which attach to the crown are inviolability, immaculateness, irresponsibility (for the conduct of political affairs), and immortality. It is a common maxim that the king can do no wrong; therefore his ministers who countersign his official acts assume the responsibility for his conduct. By the quality of immortality is meant the immediate transmission of the crown upon the death of the wearer to his successor without interruption or interregnum. In general, the powers of the king include the appointment to office; the disposition of the land and naval forces; the calling, opening, proroguing, adjourning, and dissolving of the parliamentary bodies, the approval or rejection of legislative measures; the appointment and dismissal of ambassadors and ministers; the negotiation of treaties; and the issue of administrative regulations and proclamations of various kinds. The crown is also the source of clemency and pardon. In several of the European countries, besides Germany, the royal crown was formerly for a long period elective: these were Hungary, Bohemia, and Poland. Consult Frazer, *Lectures on the Early History of the Kingship* (London, 1905), and F. A. Woods, *Influence of Monarchs* (New York, 1913).

KING. A Chinese musical instrument. See CHINESE MUSIC.

KING, ALBERT FREEMAN AFRICANUS (1841-1914). An American physician, born in England, the son of Dr. Edward King. He graduated at Columbian (now George Washington) University in 1861 and received his medical degree from the University of Pennsylvania in 1865. He was professor of obstetrics in the Medical School of George Washington University from 1871 to 1913 and was also professor of obstetrics at the University of Vermont (1871-1913), and was president of the Washington Obstetrical and Gynecological Society in 1885-87. He wrote a *Manual of Obstetrics* (1882; 11th ed., 1910); *Effect of Ultra-Violet Rays on Malarial Fever* (1902). He urged with enthusiasm the theory of the mosquito transmission of malaria, a claim which, republished in 1883, was accepted in 1899 by the medical world as correct; and he was the first to advocate measures for personal and municipal use in the way of prevention. See INSECTS, PROPAGATION OF DISEASE BY.

KING, (WILLIAM BENJAMIN) BASIL (1859-). An American novelist. He was born at Charlottetown, Prince Edward Island, Canada, and was educated there and at King's College, Windsor. Later he made his home in Cambridge, Mass. Devoting himself to authorship after 1900, he published *Griselda* (1900); *Let not Man Put Asunder* (1901, 1902); *In the Garden of Charity* (1903); *The Steps of Honor* (1904); *The Giant's Strength* (1907); *The Inner Shrine* (1909), long anonymous and very popular; *The Wild Olive* (1910); *The Street Called Straight* (1912); *The Way Home* (1913); *The Letter of the Contract* (1914). Most of his books appeared in a low-priced edition in 1914.

KING, CHARLES (1789-1867). An American editor and educator, born in New York City, the son of Rufus King (1755-1827). He was educated at Harrow, England, and in Paris, returned to New York in 1806, and was elected to the New York Legislature in 1813. He was associate editor, with Appleton, of the *New York American* (a conservative newspaper) from 1823 to 1827 and was sole editor from 1827 to 1845. From 1849 until 1863 he was president of Columbia College, during which period the School of Medicine was reestablished and the School of Mines organized.

KING, CHARLES (1844-). An American soldier and novelist, born at Albany, N. Y. He graduated from West Point in 1866, served in the 6th Cavalry, was retired as captain for wounds received in action (1879), was inspector and instructor of the Wisconsin National Guard (1882-89), colonel (1890), adjutant general (1895), and brigadier general, United States volunteers (1898). He afterward served in the Philippines. His histories, stories, and sketches are largely concerned with military matters. His 50-odd published books include: *Famous and Decisive Battles* (1884); *Campaigning with Crook* (1890); *Between the Lines* (1889); *The Colonel's Daughter* (1883); *Marion's Faith* (1885); *Captain Blake* (1892); *Under Fire* (1894); *Ray's Daughter* (1900); *A Tame Surrender* (1901); *The Medal of Honor* (1905).

KING, CLARENCE (1842-1901). An American geologist, born in Newport, R. I. He graduated at the Sheffield Scientific School of Yale in 1862, and the following year set out with a single companion on a trip across the continent. He arrived in California after accomplishing the last part of his journey on foot and became attached as assistant to the Geological Survey, then directed by J. D. Whitney. His investigations at this time included the determination of the age of the gold-bearing rocks, surveys of Mount Whitney and the Yosemite valley, and the collection of evidence in support of the glaciation of the Sierras. In 1867, upon his recommendation, Congress provided for the geological survey of a belt of country including the fortieth parallel and extending across the Rocky Mountains. This survey, which laid the foundation for future geological investigations by the government, was successfully carried out by King during the years 1867-72. The value of his services to science in this connection received merited recognition when, in 1879, he was appointed the first director of the United States Geological Survey. Owing to ill health, he resigned the office of director in 1881, but during his brief tenure the Survey rendered

valuable assistance both to science and to the development of the mining industry of the country. The investigations of the Comstock Lode and of the Eureka and Leadville districts have had an important influence upon the study of economic geology. From 1881 until his death he practiced as a mining engineer and engaged in various scientific investigations. The most important of his publications are: *Mountaineering in the Sierras* (1871, 1902); "On the Discovery of Actual Glaciers on the Mountains of the Pacific Slope," in *American Journal of Science* (1871), *Systematic Geology* (1878); and "The Age of the Earth," in *American Journal of Science* (1893). The last-mentioned paper is a very valuable contribution to the study of the earth.

KING, DAN (1791-1864). An American physician, born in Mansfield, Conn. He studied medicine there, practiced at Preston, Conn., and afterward removed to Charlestown, R. I. Dr. King was actively interested in political affairs of Rhode Island and served in the State Legislature from 1828 to 1834. He supported the suffrage movement, of which Thomas Wilson Dorr became the head; but he did not sanction Dorr's headlong conduct after the suffrage party had failed to get control of the Legislature. The Narragansett Indians, who were in a reduced condition, found an earnest helper in Dr. King. As a joint commissioner for the State, he investigated the condition of the Indians, and his report resulted in the establishment of an Indian school. His publications include a *Life and Times of Thomas Wilson Dorr* (1859).

KING, EDWARD (1612-37). An English poet, the subject of Milton's *Lycidas*, born in Ireland. He studied at Christ's College, Cambridge, in 1626-30, was elected a fellow there in the latter year, and while at the university became a close friend of Milton. When King lost his life in a shipwreck off the Welsh coast, 13 poems by his friends at Cambridge were published under the title *Obsequies to the Memory of Mr Edward King* (1638), and it was in this volume that *Lycidas* appeared. King himself wrote a number of Latin poems.

KING, EDWARD (1829-1910). An English theologian and bishop, born at Westminster. He graduated B.A. from Oriel College, Oxford, in 1851, having become a Tractarian; was ordained priest in 1855 and served as curate at Wheatley, Oxfordshire. In 1858 Bishop Wilberforce appointed him chaplain of Cuddesdon College and in 1863 principal, and 10 years later he became canon of Christ Church and professor of pastoral theology at Oxford. King held firmly to his High Church views, and within four years of the date (1885) when Gladstone appointed him Bishop of Lincoln, he was tried before the Archbishop of Canterbury for certain ritualistic practices which the Church Association claimed were not in accord with the laws of the Church. The Archbishop's decision on the whole favored King. Especially in his pastoral work and as an influence among young men, Dr. King was notably successful. In 1909 he was the only Bishop in the House of Lords who supported Lord Lansdowne's amendment to the budget. (See LLOYD-GEORGE; LANSDOWNE, fifth MARQUIS OF.) His writings include *Meditations on the Last Seven Words* (1874) and, published after his death, *The Love and Wisdom of God: A Collection of Sermons* (1910); *Spiritual Letters* (1910); *Counsels to Nurses*

(1911); *Duty and Conscience—Being Retreat Addresses* (1911); *Sermons and Addresses* (1911).

KING, EDWARD (1848-96). An American journalist, born at Middlefield, Mass. At 17 he began newspaper work in Springfield and soon after (1867) was sent to Europe as special correspondent of the *Springfield Republican*, whose literary editor he became on his return. In 1869 he returned to Europe as newspaper correspondent, reporting the Franco-German War and the Paris Commune. In 1872 he made a journey through the South in behalf of *Scribner's Monthly*, traveling 25,000 miles. The literary result of this journey was *The Great South* (1875). He returned to Europe in 1875 and afterward lived chiefly in Paris as a journalist, but died in Brooklyn, N. Y. The more important of his books are: *French Political Events 1871-72*; *Europe in Storm and Calm* (1885); *Kentucky's Love* (1872); *A Venetian Lover* (1887), poems, *The Gentle Savage*, a novel (1888). His lyrics are collected in *Echoes from the Orient* (1880).

KING, EDWARD, VISCOUNT KINGSBOROUGH (1795-1837). An Irish writer on the antiquities of Mexico. Eldest son of the third Earl of Kingston, his own title was one of courtesy. He studied at Oxford (1814-18), but did not graduate. He was a member of Parliament (1818-26), but resigned his seat to his brother Robert. His great work on the *Antiquities of Mexico* (1830-48), in nine splendid volumes, was undertaken to prove the settlement of Mexico by the 10 lost tribes of Israel. The story goes that a Mexican manuscript in the Bodleian Library first interested him in the subject, and that Sir Thomas Phillipps urged him to the work. It is certain that he sank his whole fortune in it. Bankrupt, he was sued by a paper manufacturer, and died of typhus in the debtors' prison at Dublin.

KING, GRACE ELIZABETH (1859-). An American author of stories and historical sketches. She was born and educated in New Orleans. Her sketches first attracted attention in the *New Princeton Review* and were the basis of her novel *Monsieur Motte* (1888). Her special knowledge of the French culture of New Orleans is apparent in her fiction. Her later works include *Tales of Time and Place* (1892); *Earthlings* (1888); *New Orleans: The Place and the People* (1895); *Jean Baptiste Lemoyne, Founder of New Orleans* (1892); *Balcony Stories and A History of Louisiana* (1893); *De Soto and his Men in the Land of Florida* (1898); *Stories from Louisiana History* (1905).

KING, HENRY CHURCHILL (1858-). An American theologian and college president, born at Hillsdale, Mich. He graduated from Oberlin College in 1879 and from Oberlin Theological Seminary in 1882. At Oberlin he was associate professor of mathematics (1884-90) and of philosophy (1890-91), professor of philosophy (1891-97) and of theology after 1897, dean (1901-02), and president of the college after 1902. He lectured at Yale (1907), Harvard (1909), and Columbia (1913) universities and in India, China, and Japan in 1909-10. He was president of the Religious Education Association in 1907-08 and of the Ohio College Association in 1907-09. He is author of *An Outline of Erdmann's History of Philosophy* (1892); *Outline of the Microcosmus of Hermann Lotze* (1895); *The Appeal to the Child* (1900; 3d ed.,

1905); *Reconstruction in Theology* (1901); *Theology and the Social Consciousness* (1902); *Personal and Ideal Elements in Education* (1904); *Rational Living* (1905); *Letters on the Greatness and Simplicity of our Christian Faith* (1906; rev. ed., 1909); *The Seeming Unreality of the Spiritual Life* (1908); *The Laws of Friendship, Human and Divine* (1909; new ed., 1914); *The Ethics of Jesus* (1910); *The Moral and Religious Challenge of our Times* (1911); *Religion as Life* (1913).

KING, HELEN DEAN (1869-). An American biologist. Born at Owego, N. Y., she graduated from Vassar College in 1892 and in 1899 received her doctorate in philosophy from Bryn Mawr College, where she was fellow and student assistant in biology from 1897 to 1904. She taught physiology at Miss Baldwin's School, Bryn Mawr, from 1899 to 1907, was research fellow at the University of Pennsylvania in 1906-08, and served as assistant in anatomy in 1908-09 and as associate after 1909 at the Wistar Institute. She was also an assistant at Woods Hole, Mass. Her investigations deal largely with problems of sex determination.

KING, JAMES MARCUS (1839-1907). An American Methodist Episcopal clergyman, born at Girard, Pa. He graduated from Wesleyan University in 1862 and for six years was a professor in the Fort Edward Collegiate Institute, of which his brother, the Rev. Joseph E. King, was president for 59 years. In 1866 he entered the ministry of the Methodist Episcopal church, joining the Troy conference, and later being transferred to the New York conference. In 1899 he was assistant corresponding secretary, and in 1900-07 secretary, of the Methodist board of church extension, and the first corresponding secretary of the board of home missions and church extension. He was a delegate to the ecumenical conferences of 1881, 1891, 1901, and chairman of the executive committee of the Evangelical Alliance in the United States. From 1889 to his death he was secretary of the League for the Protection of American Institutions. He was the author of *Facing the Twentieth Century—Our Country: Its Power and Peril* (1899).

KING, JOHN ALSOP (1788-1867). An American politician, Governor of New York in 1857-59. He was born in New York City, whither his father, Rufus King (q.v.), had removed from Massachusetts. He was educated at Harrow, England, and in Paris. Returning to New York, he was admitted to the bar and practiced up to the outbreak of the War of 1812, in which he served as an officer of the New York State militia. After the war he established himself on a farm at Jamaica, L. I. He was a member of the State Assembly in 1819-21 and of the State Senate in 1823-25. In 1825 he went as Secretary of Legation to England with his father, who had been appointed by President John Quincy Adams Minister to the court of St. James's for a second time, and, on his resignation on account of ill health in 1826, remained in London until the appointment of a successor, as chargé d'affaires. After serving three more terms in the New York Legislature (1832-33; 1839-39; 1840-41), he was in 1848 elected as a Whig to the Thirty-first Congress (1849-51), in which he vigorously opposed Clay's compromise measures. In 1855 he presided at the Syracuse (N. Y.) Convention of the Republican party, with which he was thence-

forth associated. In 1856 he was a delegate to the Republican Convention at Philadelphia, and in 1857-58 was Governor of New York State. He was a Lincoln elector in 1860 and a member of the Peace Convention (q.v.) in 1861.

KING, JOHN EDWARD (1858-). An English classical philologist and educator, born at Ash, Somerset. He was educated at Clifton College, Bristol, and at Lincoln College, Oxford, of which he was fellow in 1882. Subsequently he was assistant master of St. Paul's School (1884-87), tutor of Lincoln College (1887-91), high master of Manchester Grammar School (1891-1903), head master of Bedford Grammar School (1903-10), and then head master of Clifton College. He published *The Principles of Sound and Inflection, as Illustrated in the Greek and Latin Languages* (1888), with C. Cookson, and *Comparative Grammar of Greek and Latin* (1890).

KING, JONAS (1792-1869). An American missionary. He was born at Hawley, Mass., July 29, 1792; graduated from Williams College (1816) and Andover Seminary (1819), and engaged in home mission work. To prepare himself for the foreign field, he studied Arabic in Paris under De Sacy. From 1822 till 1828 he held the position of professor of Oriental languages in Amherst College, but during the years 1823-27 was a missionary in Egypt and Palestine. In 1828 he went to Greece, where his missionary labors at first met with much success. Later he aroused the hostility of the Greek church, was several times tried on charges of reviling religion and the church, and even brought in danger of his life. He died at Athens, May 22, 1869. His miscellaneous works in Greek were published at Athens (1859-60). In English he wrote *The Oriental Church and the Latin* (1865). Consult his life by F. E. H. H. (New York, 1879).

KING, LEONARD WILLIAM (1869-). An English Semitic scholar. He was born in London and was educated at Rugby and at King's College, Cambridge. In 1903-04 he made excavations at Nineveh for the British Museum and collected valuable Oriental rock inscriptions. He became lecturer in Assyrian at King's College, London, and assistant keeper of Egyptian and Assyrian antiquities in the British Museum, for which he prepared a *Guide* (1900, 2d ed., 1908, with Budge). Among his more important works are: *Babylonian Magic and Sorcery* (1896); *Cuneiform Texts in the British Museum* (1896-1914); *Assyrian Chrestomathy* (1898); *Letters and Inscriptions of Hammurabi* (1898-1900); *Babylonian Religion and Mythology* (1899); *Assyrian Language* (1901); *Annals of the Kings of Assyria* (1902); *Inscription of Darius on the Rock of Behistun* (1907), with R. C. Thompson; *Egypt and Western Asia in the Light of Recent Discoveries* (1906), with H. R. Hall; *Studies in Eastern History* (1904-07); *A History of Sumer and Akkad* (1910); *Boundary Stones and Memorial Tablets in the British Museum* (1912).

KING, LIDA SHAW (1868-). An American classical scholar and college dean. Born in Boston, she graduated from Vassar College in 1890 and from Brown University (A.M.) in 1894 and continued her graduate studies at Vassar (1894-95), Radcliffe (1897-98), Bryn Mawr (1899-1900), and at the American School of Archaeology, Athens, Greece (1900-01). She taught the classics at Vassar (1894-97) and at

the Packer Collegiate Institute (1898-99, 1901-02), and at Brown was assistant professor of classical philology (1905-09), dean of the Women's College after 1905, and professor of classical literature and archaeology after 1909. She made contributions to the *American Journal of Archaeology*.

KING, PHILIP PARKER (1793-1856). A British naval officer and hydrographer, born on Norfolk Island in the Pacific. He entered the service when 14 years old and was lieutenant aboard the *Trident* in 1814. Three years afterward he was intrusted with an important survey, which occupied him five years and resulted in the marking of an improved route between the Torres Strait and Sydney, and in the publication of *King's Narrative of the Survey of the Intertropical and Western Coasts of Australia* (2 vols., 1827), for which he was made an honorary fellow of the Royal Society. His charts, which have been widely used, were issued by the Admiralty Hydrographic Department in 1825. In command of the *Adventure*, accompanied by the *Beagle*, commanded by Capt. Robert Fitzroy, he spent four years (1826-30) in making charts of the southern coast of South America, and on his return published *Sailing Directions to the Coasts of Patagonia*. He also wrote the second volume of the *Voyages of the Adventure and the Beagle* (3 vols., 1839), the other volumes of which were written by Robert Fitzroy and Charles Darwin. King retired to Sydney, New South Wales, became a legislative councillor, manager of the Australian Agricultural Society, and rear admiral on the retired list (1855), he being the first Australian to attain this rank.

KING, PRESTON (1806-65). An American political leader and legislator, born in Ogdensburg, N. Y. He graduated at Union College in 1827, was admitted to the bar, and began practice in St. Lawrence County. In 1830 he founded and became editor of the *St. Lawrence Republican*, the principal organ of the Jackson party in northern New York State. As a reward for his services, President Jackson appointed him in 1833 postmaster at Ogdensburg. In 1834 he was elected to the New York Assembly, being reelected for three successive terms. In 1843-47 he served in the State Senate, but from 1849 to 1853 was again a member. From 1857 to 1863 he was a Republican member of the Senate. In 1864 he was a delegate to the Republican Convention at Baltimore, where he was one of those who brought about the nomination of Andrew Johnson for the vice presidency—a service which the latter, when he became President, rewarded by appointing King collector of the port of New York. King committed suicide by jumping from a Hudson River ferryboat on Nov. 12, 1865, while temporarily insane.

KING, RUFUS (1755-1827). An American political leader, born March 24, 1755, at Scarborough, Me. He graduated at Harvard in 1777, read law with Chief Justice Theophilus Parsons, and was admitted to the bar in 1780, his studies being interrupted for a brief period in 1778, when he served as an aid to General Glover in the Rhode Island expedition. In 1783 he took his seat in the General Court of Massachusetts, to which he was several times reelected, and he became a member of the Continental Congress in December, 1784, being reelected in 1785 and 1786. He there introduced in March, 1785, a

resolution prohibiting slavery in the Northwest Territories. The substance of this resolution was subsequently incorporated by his colleague, Nathan Dane, into the famous Ordinance of 1787 (q.v.). He took a prominent part in the proceedings of the Convention of 1787 which framed the Federal Constitution, and in the Massachusetts Convention called to decide upon the adoption or rejection of that instrument he was instrumental in securing ratification. In 1786 he married Mary Alsop, daughter of John Alsop, and in 1788 removed to New York City, where he was elected to the State Assembly in 1789, and in the same year was elected to the United States Senate, where he at once took a high place as a leader of the Federalists. King was reelected in 1795, and in 1796 he accepted from President Washington, who had previously offered him a place in his cabinet as Secretary of State, the responsible post of Minister to England. He distinguished himself highly in the diplomatic service, in which he continued until 1803. In the year following his return he was mentioned as candidate for the Senate, and for Governor of New York, and as the Federalist candidate for Vice President received 14 votes. Again in 1808 he was the Federalist candidate for the same office, receiving 47 votes. In 1813 and again in 1819 he received the honor of an election to the United States Senate by a Legislature a majority of which was Republican. During the war with England he did not side with the extreme Federalists, but supported the administration in such measures as seemed to him to be for the general good. Nevertheless, in 1816, the few Federalist electoral votes for President were cast for him. In 1825-26 he was again Minister to England. He died April 29, 1827. Consult C. R. King, *Life and Correspondence* (6 vols., New York, 1894-1900).

KING, RUFUS (1814-76). An American soldier and journalist, born in New York City, son of Charles King, president of Columbia College, and grandson of Rufus King. He graduated at West Point in 1833, but three years later resigned from the army and became an assistant engineer on the New York and Erie Railroad. In 1839 he went to Albany, where he became editor of the *Advertiser*, and Adjutant General of the State of New York, in virtue of which latter office he commanded the troops called out to suppress the anti-rent riots. For four years after 1841 he was associate editor of the *Albany Evening Journal*, and then for 16 years was editor and part proprietor of the *Milwaukee Sentinel and Gazette*, which during this time became the leading newspaper in Wisconsin. King was appointed by Lincoln Minister to the Pontifical States in 1861, but just as he was about to embark for Rome came the news of the firing on Fort Sumter, whereupon he resigned his post and applied for an appointment in the military service. He was at once commissioned brigadier general of Wisconsin volunteers and later was transferred with the same rank to the United States volunteers and was placed in command of the Iron Brigade. His division met two of Jackson's divisions at Groveton on Aug. 28, 1862, and repulsed them, and on the following two days took part in the second battle of Bull Run. He was compelled by ill health to resign on Oct. 20, 1863, and was immediately reappointed Minister to the Pontifical States. When this post was abolished by Congress in

1867 he returned to the United States and became deputy collector of customs for the city of New York.

KING, SAMUEL ARCHER (1828-1914). An American aeronaut, born near Philadelphia. In 1849 he began making balloons, and in 1851 he made his first ascension at Philadelphia. He made ascensions at the Centennial (1876) and at the World's Columbian (1893) expositions. Altogether during his life he made more than 400 ascensions for pleasure, for scientific purposes, and for obtaining bird's-eye photographs of cities in many parts of the United States. His last trip was made when he was nearly 80 years old.

KING, THOMAS STARR (1824-64). An eminent Unitarian clergyman. He was born in New York City, Dec. 17, 1824, studied theology while employed as a teacher, and in 1846 became pastor of a church in Charlestown, Mass., which his father had formerly served. In 1848 he removed to Boston, where he was pastor of the Hollis Street Church. He gained wide popularity as a lecturer, in which capacity he found constant employment from 1845 to 1860. In the latter year he received a call to the only Unitarian church in San Francisco and began his ministrations there in the summer. When the Rebellion broke out, King exercised a powerful influence in favor of the national government against the large Southern element among the people of California, who wished to form an independent republic in California. During the war he was active in soliciting aid for the United States Sanitary Commission, and to him was chiefly due the splendid gift of California to that cause. He died at San Francisco, March 4, 1864. He wrote *The White Hills: Their Legends, Landscapes, and Poetry* (1859), and contributed frequently to reviews and other periodicals. After his death three volumes of his lectures, etc., were published, one of them, *Christianity and Humanity*, with memoir by E. P. Whipple (Boston, 1877). One of the peaks of the White Mountains has been named Starr King in his honor. Consult E. P. Whipple, "Memoir of Thomas Starr King," in *Christianity and Humanity* (Boston, 1877), and *American Literature and Other Papers* (ib., 1887).

KING, WILLIAM (1663-1712). An English author, born in London. From Westminster School he went to Christ Church, Oxford, where he graduated in 1685. Five years afterward he made his literary debut with an entertaining *Dialogue Showing the Way to Modern Preferment*, which favored the High Church Tory party. Through his *Animadversions* (1694) in defense of the Danish government he was made secretary to the Princess Anne, while his *Journey to London in the Year 1698* and *Dialogues of the Dead* (1699) established his reputation as a caustic but humorous critic. He published other satirical *Dialogues* and had different appointments—judge of the Admiralty Court in Ireland (1701), Vicar General of Armagh (1703), and keeper of the records at Dublin Castle (1707)—but he was of an indolent temperament, and careless about the publication of his writings, which were collected and edited by John Nichols after his death (3 vols., 1776). The best of the contents is *The Art of Cookery* (1708), a poem imitating *The Art of Poetry* by Horace, though *The Art of Love* (1709), a parody called *Useful Transactions in Philosophy, and Other Sorts of Learning* (1709), and

a school book, *Historical Account of the Heathen Gods and Heroes* (1710), are also noteworthy. A memoir of King was prefixed to the Nichols edition of the *Original Works* (1776).

KING, WILLIAM FREDERICK (1854-1916). A Canadian surveyor and astronomer. He was born at Stowmarket, Suffolk, England. In early youth he came to Canada with his parents and was educated at Toronto University. After employment for some years on Dominion land surveys in the Northwest he entered government service as an inspector of surveys, becoming chief inspector in 1886. In 1890 he was appointed chief astronomer of the Department of the Interior, in 1905 director of the Dominion Astronomical Observatory, Ottawa, and in 1909 superintendent of the Geodetic Survey of Canada. He was appointed Royal Commissioner for the international boundary between the United States and Canada under the several treaties relating thereto and in 1904-07 was a member of the International Waterways Commission. In 1906 he was made honorary president of the Royal Astronomical Society of Canada and in 1911 was president of the Royal Society of Canada. In 1908 he was made a C.M.G. He published *Astronomy in Canada* and many other scientific papers.

KING, WILLIAM LYON MACKENZIE (1874-). A Canadian statesman and economist. He was born at Berlin, Ontario, and was educated at Toronto, Chicago, and Harvard universities. He was a member of the editorial staff of the *Toronto Globe* (1895-96), a special Dominion commissioner to inquire into the carrying out of government contracts in Europe and Canada (1898-1900), instructor in political economy in Harvard University (1900), and Deputy Minister of Labor (1900-08). In 1908 he was elected a Liberal member of the House of Commons and in 1909 was appointed Minister of Labor in the Laurier cabinet, resigning on the defeat of the latter in 1911. King, whose grandfather was William Lyon Mackenzie (q.v.), devised the Canadian Industrial Disputes Investigation Act. He served as government conciliator in a large number of industrial strikes, was chairman of the Royal Commission to inquire into conditions of employment of telephone operatives (1907), a Royal Commissioner to assess losses of Japanese residents in anti-Asiatic riots at Vancouver, British Columbia (1908), and concerning conditions of employment among cotton operatives (1908). He was a delegate to the International Opium Commission, Shanghai, China (1909), to the International Social and Industrial Congress at The Hague (1910), and to the International Peace Conference, Lake Mohonk, N. Y. (1911). In 1914 he was appointed to conduct, in behalf of the Rockefeller Foundation, extensive researches into the relations between labor and capital. He was made a member of the American Economic Association, and a fellow of the Royal Society of Canada (1910). The decoration of C.M.G. was conferred upon him in 1906.

KING, WILLIAM RUFUS (1786-1853). An American statesman. He was born in Sampson Co., N. C., graduated at the University of North Carolina in 1803, and studied law at Fayetteville, where he was admitted to the bar in 1806. In the same year he was elected to the State Legislature, serving until his election, as a Democrat, to the Federal House of Representatives in 1810. There he remained until

he resigned, on Nov. 4, 1816, supporting the administration's war policy and receiving in the latter year the position of Secretary of Legation at St. Petersburg. In 1818, he settled as a cotton plant on the Alabama Co., Ala., was a member of the convention which drew up the constitution for the proposed State in that year, and after its admission in 1819 took his seat (on December 14) in the United States Senate as one of the first Senators from Alabama. He remained in the Senate by reelection until 1844, serving after 1838 as President pro tempore. His resignation (April 15, 1844) enabled him to accept an appointment as Minister to France. While holding this post, he is said to have prevented a French protest against the annexation of Texas. Recalled at his own request in September, 1846, he was appointed to fill a vacancy in the Senate, took his seat on July 13, 1848, was elected for the ensuing term, and served until his resignation, in January, 1853. In 1850-52 he had again been President pro tempore. In 1852 King, who had been a candidate for the Democratic nomination for the vice presidency ever since 1840, was finally named for that office on the Pierce ticket and was elected. Before the inauguration, however, his health began to fail rapidly, and he went to Havana, Cuba, where by special act of Congress he was allowed to take the oath of office on March 4, 1853. He never entered upon the duties of his office, however, but died shortly after his return to Alabama in the following April.

KING-AT-ARMS, or **KING-OF-ARMS**. The title of the principal heraldic officer of any country. There are four in England, of whom three (Garter, Clarenceux, and Norroy) form the College of Heraldry. The fourth is Bath king-at-arms.

Garter principal king-at-arms was instituted by Henry V (1417 A.D.) for the service of the Order of the Garter. His duties include the regulations of the arms of peers and of the Knights of the Garter. In the capacity of king-at-arms of the Order of the Garter, he has apartments within the castle of Windsor, and a mantle of blue satin, with the arms of St. George on the left shoulder, besides a badge and sceptre. His official costume, as principal king-at-arms of England is a surcoat of velvet, richly embroidered with the arms of the sovereign, a crown, and a collar of SS. Clarenceux and Norroy have jurisdiction to the south and north of the Trent respectively. They arrange and register, alone or conjointly with Garter, the arms of all below the rank of the peerage. Kings-at-arms were formerly entitled to wear crowns on all occasions when the sovereign wore his; now they assume them only at the ceremony of a coronation. Their installation anciently took place with great state and always on a Sunday or a festival day, the ceremony being performed by the King, the Earl Marshal, or some other person duly appointed by royal warrant. Bath, though not a member of the college, takes precedence of Clarenceux and Norroy. His office was created in 1725, for the service of the Order of the Bath, when it was instituted by George I and he was constituted Gloucester king-at-arms.

The chief heraldic officer for Scotland is called Lyon king-at-arms (q.v.), who since the Union has ranked next to Garter. His title is derived from the lion rampant in the Scottish royal

insignia, and he holds his office immediately from the sovereign, and not, as the English king-at-arms, from the Earl Marshal. Before the revolution he was crowned by the sovereign or his commissioner on receiving his office.

There is one king-at-arms in Ireland, named Ulster. The royal ordinance relative to the Order of St. Patrick, issued May 17, 1833, declares that in all ceremonials and assemblies Ulster shall have place immediately after the Lyon. Consult Fox-Davies, *Complete Guide to Heraldry* (London, 1909).

KING AUK. In Scandinavia, the little auk. See DOVEKIE.

KINGBIRD. One of the most useful and interesting of the American tyrant flycatchers (*Tyrannus tyrannus*). The bird is less than 9 inches in length, and its plumage is grayish slate color above and white beneath; but concealed on the very top of its head it has an erectile patch of vermilion feathers surrounded by white and orange.

The notes of the kingbird are not musical, but are vigorous and attractive, though often petulant. Some observers claim that during the breeding season the male gives utterance to a soft and very pleasing song, but, as he lacks the vocal apparatus of a true song bird, this statement is doubtful. The food of this flycatcher is insects captured on the wing, including bees, whence the bird is often known as the bee martin. The kingbird occurs throughout North America during the summer and is abundant in the East as far north as New Brunswick and common in the Middle West up to Manitoba, but rare west of the Rocky Mountains. In September it migrates to Central and South America, where it remains all winter, returning in season to reach its breeding limits early in May. The nest is a well-built structure on the end of a branch, often of an apple tree; it is composed mainly of weed stalks, grasses, and rootlets, with moss, plant down and the like in the lining. The eggs, four or five in number, are very handsome, creamy white, sharply spotted with umber brown.

Several relatives of the western part of the United States and the countries southward are often called kingbirds, each designated by some differential name, as the Arkansas kingbird (*Tyrannus verticalis*) of the Southwestern States, Cassin's kingbird (*Tyrannus vociferans*) of the Rocky Mountain region, and the gray kingbird (*Tyrannus dominicensis*) of Florida and the West Indies.

The great-crowned flycatcher (*Myiarchus cinerascens*) is a related species, common and conspicuous through the eastern United States, where it is easily recognized by its brave aspect, large crest, and loud but not unmusical cry. Its plumage is olivaceous above, browner on the head, throat ash gray, abdomen yellow. It is remarkable for almost invariably weaving into its rough nest, which is usually placed in some niche or hollow in a decaying tree stem, the cast skins of one or more snakes, and also for the peculiar beauty of its eggs, which are buff brown, covered with irregular lengthwise lines as if scratched with a fine pen. See Plate of TYPICAL FLYCATCHERS, with the article FLYCATCHER, and Colored Plate of EGGS of SONG BIRDS.

The kingbird of India and the East is a drongo (q.v.).

KING CERO. See CERO.

KING CHARLES LAND, or KUNG KARL LAND. A name often but erroneously given to the little-known group of islands which are situated to the east of Spitzbergen. The more easterly of the two large islands of the group, properly called King Charles Island, is in lat. 79° N., long. 28° E. See WYCHE'S ISLAND.

KING CHARLES SPANIEL. See SPANIEL.

KING COBRA. See HAMADRYAD.

KING COLE. See COLE, KING.

KING CONCH. A local name in Florida of *Strombus gigas*. See CONCH, and cf. QUEEN CONCH.

KING CRAB. A large, singular crustacean-like animal of the genus *Limulus*, also called horseshoe and helmet crab. It is, with four other species living in the tropical regions of eastern Asia from Japan to the East Indian Archipelago, the sole surviving representative of a large group (Merostomata, q.v.) which dates from Cambrian times. The king crab of the northeastern American coast is a large animal, sometimes nearly 2 feet in length, including the caudal spine. Its body is formed of two regions, the head and abdomen or hind body, the caudal spine being a modification of the ninth or last abdominal segment. The large, broad, lunate head is in general shape like a horse's hoof; hence the local name given the animal. It is composed of six fused segments and bears six pairs of legs, ending in forceps, corresponding in position to the antennæ, jaws, and maxillæ of the lobster or crab. On each side of the head are two compound eyes, lunate in shape, the surface of which is smooth, while there is a pair of minute simple eyes situated, one on each side of a low conical spine in the middle near the front edge. The

a, a, appendages of head; b, head (buckler); c, operculum, behind which are seen the other abdominal appendages; d, abdomen; e, caudal spine or telson.

legs are armed on the basal joint with sharp spines pointing inward for retaining the food or prey. The males differ from the females chiefly in respect to the shape of the second pair of legs, which end in a swollen thumb (next to the last joint) and a slender finger (last joint). The abdomen consists of nine segments, which are distinct in the larva, but which on hatching become fused together. It bears six pairs of broad, leaflike feet, those of each pair fused together along the median line, all but the first pair bearing on each side a set of about 100 leaflike, flat, thin, oval gills. The abdominal limbs of the first pair are called the operculum, since they form a structure which overlaps the other abdominal legs, and on the underside bears two

papillæ out of which the eggs pass or, in the male, the seminal fluid.

The internal anatomy is remarkable for the shape of the nervous system, the brain being in front of the œsophagus, which passes through a nerve ring, which distributes nerves to the head appendages. The arteries are very numerous, dividing into numerous microscopic branches, while the nerve ring and principal nerves are coated by an arterial membrane, so that the blood bathes the whole nervous system except the brain.

Unlike the crustacea, the female king crab buries her eggs in the sand between tide marks and then leaves them at the mercy of the waves until the young hatch. They are laid in the Northern States, according to the locality, from the end of May till the end of June—sometimes in July. The young hatch from a month to six weeks after oviposition. The female lays at spring tide at high water, and the eggs are fertilized by the male after they are extruded, he being slightly attached by his claws to the abdomen of his mate. Before hatching the shell bursts open, while the serous membrane within distends, acting as a thin, transparent, vicarious eggshell. The young or larva just before hatching passes through a trilobite stage, the segments being distinctly marked and the body divided into three longitudinal lobes. The caudal spine is rudimentary, becoming longer after each molt. The first molt occurs between three and four weeks after hatching, the shell or skin splitting open around the front.

The king crab burrows in the sand and mud of quiet bays and shallow estuaries and is not to

A KING CRAB.

be found on the outer rocky shores of New England. It lives on shellfish and worms, seizing them in a haphazard way as it burrows through the soft sand or mud, for which the body is admirably adapted. When it burrows, the head is bent down at right angles to the hind body, and, if disturbed, the caudal spine is held vertically, as a means of defense. It is extremely large and abundant in Delaware Bay and on the coast of New Jersey, where, after being dried, it is used as a fertilizer; it is also fed to swine and poultry. It also serves as a bait for eels and other fish. In the Moluccas the animal may be seen for sale in the market, being eaten by the lower classes of people. In the southern United States it is called casserole fish, from its resemblance to a saucepan or casserole.

The distribution of the king crab (*Limulus polyphemus*) on the eastern coast of North America is very wide; it ranges from a point between the mouths of the Kennebec and Penobscot rivers of Maine to Mexico, the Spanish Main, and the West Indies, seeming to attain its greatest size at Cape Hatteras and on the Delaware and New Jersey shores. The five existing species of *Limulus* (one American and

four Asiatic) have been recently divided by Pocock and also by Packard into three genera. One species of *Tachypleus* (*Tachypleus tridentatus*) abounds in southern Japan and the Chinese seas; another (*Tachypleus moluccanus*) inhabits the Molucca Islands, Formosa, the Philippines, and southern China; and *Tachypleus gigas*, Malaysia, Gulf of Siam, Singapore, and Torres Strait. *Carcinoscorpius rotundicauda* (Latr.) occurs in the Molucca and Philippine islands, Siam, and Malaysia. This last-named genus is the most primitive form, all the head appendages ending in forceps much like those of the female; while the most specialized form is *Tachypleus*, in which the second and third feet end in forceps. *Limulus polyphemus* is intermediate between the two. None has survived in Europe and other parts of the world except as stated above.

The systematic position of the king crab is unsettled, but it is allied to the trilobites on the one hand and to the arachnids (scorpions) on the other. It represents, according to Packard, a class (Merostomata of Dana) which is intermediate between the trilobites and the Arachnida, with no near affinities to the Crustacea. *Limulus* is an ancient form, of great vitality, withstanding exposure for a day or two to the dry air or sun, and is an example of a persistent type.

Allied to the order Xiphosura, of which *Limulus* is the type, is the order Eurypterida, a group of fossil form, ranging from the Cambrian to the end of the Carboniferous. It is represented by *Eurypterus*, *Pterygotus*, *Slimonia*, etc. (See MEROSTOMATA.) The family to which *Limulus* belongs began to flourish in the Devonian, and the *Limulus* of the Jurassic and present times was represented in the Carboniferous period by small king crabs (*Prestwichia*, *Belmurus*) which were scarcely over 2 inches in length.

T. Calman, "An Early Figure of the King-Crab," in *Science*, vol. xxvii (New York, 1908).

KING CROW. A drongo (q.v.); specifically, the black drongo (*Dicurus ater*) of all India and eastward. It is black, with a steely-blue

gloss, and is one of the most familiar and conspicuous birds of India, where it is often seen searching for insects on the backs of cattle. It nests in trees. Consult the books of Oates, Jerdon, Blanford, and other East Indian zoölogists.

KING DUCK. The spectacled eider (q.v.).

KING EAGLE. The European imperial eagle (*Haliaeetus heliaca*). See EAGLE.

KINGFISH. Any of several fishes conspicuous for strength or some other quality. 1. The cero, or king cero. See CERO. 2. In California, the little roncador (*Genyonemus lineatus*). 3. The moonfish (*Lampris luna*). See OPAH, and colored Plate of GAME FISHES, under TROUT. 4. A fish of the genus *Menticirrhus*, of the family Sciaenidae (croakers), specifically the hake, sea mink, or Northern whiting (*Menticirrhus saxatilis*), one of the most highly esteemed

KINGFISH (*Menticirrhus americanus*).

food fishes in the Northern markets. It is especially numerous and well known in the neighborhood of New York, where it appears early in the spring, along with the squeteague, and is likely to keep in company with it, for both seem fond of running up rivers to a point where the water is decidedly freshened between tides. Thus, they ascend the Hudson as far at least as Ossining. They are apt to run in schools, and they seem to prefer a hard sandy bottom, the edge of channels, and the neighborhood of sand bars. They gather about oyster beds and may be seen fighting for the worms and crustaceans dislodged in taking up the oysters. The kingfish takes a bait of pieces of clam or soft fish readily and affords excellent sport. The numbers seen and taken vary greatly, however, from year to year. A closely related species, the whiting (*Menticirrhus americanus*), is the one more usually called kingfish in the Carolinas and southward. See WHITING.

KINGFISHER. A city and the county seat of Kingfisher Co., Okla., 34 miles west of Guthrie, on the Chicago, Rock Island, and Pacific Railroad (Map: Oklahoma, D 3). It has considerable trade as a distributing and export centre for a productive farming and stock-raising district. The city contains the Kingfisher College and a Federal building. It has adopted the commission form of government. Pop., 1900, 2301; 1910, 2538.

KINGFISHER. A widely used name for the nonpasserine birds of the family Alcedinidae, characterized by the curious syndactyl feet, the outer and middle toes being coherent for half their length. In addition to this peculiarity the kingfishers have large, straight bills, with deep gape; the tongue is very small or rudimentary; the nostrils are basal; the tarsi are very short, and the tibiae are naked below. The family is very well defined and is related to the hornbills (Bucerotidae). In their manners and breeding habits there is a remarkable uniformity among

the kingfishers. All are rather solitary birds. They sit motionless while watching for prey and seize it, when discovered, by a quick, vigorous rush and then return to their post to swallow it at leisure. All breed in holes and lay smooth, white, more or less spherical eggs. The family includes something like 150 species, the geographical distribution of which is unusually peculiar and interesting. Only six, or perhaps eight, species occur in all of America, and these all belong to a single genus (*Ceryle*), which also occurs in the warmer parts of the Old World. The Papuan region is the centre of abundance for the family, having 13 genera, of which eight are endemic. From that centre the family fades away in all directions—Australia having four genera, the Oriental region six, and the Ethiopian region six. The kingfishers fall very naturally into two subfamilies, though the differences between them are more in habits than in structure, the Daceloninae are insectivorous and reptile-eating birds with a depressed bill, and the Alcedininae are the true kingfishers, living very largely on fish and having a compressed bill. A recent classification, based upon somewhat involved characters, adds a third subfamily, Cerylinae.

Daceloninae. The Daceloninae are all Old-World birds, often found far from water, to which they seldom resort, they breed in holes in trees and pick their insect and reptile food from the ground by darting down on it from above. About 80 species are known, the most interesting of which belong to the genera *Dacelo*, *Halcyon*, *Tanyptera*, and *Ceyx*. The first of these includes the famous laughing jackass (q.v.) of Australia, renowned not only for its discordant, laughing cry, but for being a kingfisher which never fishes nor goes near the water. For this latter reason all the Daceloninae are sometimes called (at least in books) king-hunters or dry-land kingfishers, in distinction from true kingfishers. The genus *Halcyon*, or *Alycyon*, is specially characteristic of the Ethiopian region. They are called wood kingfishers, and feed chiefly on insects, but eat lizards, and when hard pressed will resort to streams and catch fish. The inner front toe is short and rudimentary. The kingfishers of the genus *Tanyptera* are peculiar to New Guinea and neighboring islands and are remarkable for having only 10 rectrices instead of 12, the middle pair of which are lengthened and deprived of barbs for a part of their length, so that they are racquet-shaped, like those of some motmots. The genus *Ceyx* is notable for the absence of the second toe, so that the feet are only three-toed; they are small kingfishers of the Indian region.

Alcedininae. In the "true" kingfishers, of the subfamily Alcedininae, we have to deal with birds of moderate or small size and great beauty of plumage. They feed primarily on fish and are therefore found about ponds, lakes, or rivers, or by the borders of the sea. They breed in holes in banks, which they themselves dig, sometimes to a depth of 6 or 8 feet; it is slow work and occupies a pair of birds a week or more. The common European kingfisher (*Alcedo ispida*) and the belted kingfisher (*Ceryle alcyon*) of America are familiar and typical examples of this group. The former is an exquisite little bird, not much larger than a big sparrow, with the upper parts of the head, the scapulars, and the wing coverts dark green, the last two with

light greenish-blue spots and markings; the middle of the back is bright beryl blue and the short tail is azure blue; the throat is white and the rest of the under parts are deep cinnamon. It is a widely distributed bird in Europe and prefers the smaller streams and little ponds in parks and, besides fish, eats insects, crustaceans, mollusks, and worms. It is probable that this bird is the halcyon of the ancients, about which many wonderful fables were current as to its power to quell storms, its floating nest, and the stillness of the winds during its breeding season, which was thought to be in winter.

The American "belted" kingfisher is a much larger bird than the European species. It is as much as 13 inches in length, but its colors are not nearly so brilliant, although they are handsome. The upper parts are bluish gray, more or less spotted, and marked with white, especially on the wings and tail; the under parts are white, with a band across the breast and the sides bluish gray; in young birds the pectoral band and sides are tinged with rufous, while in the female they are distinctly rufous. The belted kingfisher is found breeding throughout North America. Its cry is similar to a watchman's rattle, or to the fisherman's click reel, as John Burroughs happily observes. The only other kingfisher occurring in North America is the Texan green kingfisher (*Ceryle americana septentrionalis*), which is only about 8 inches long and is glossy green above and white beneath, the lower parts spotted with green. It is found in the valleys of the lower Rio Grande and Colorado, where it is said to be common.

Miller, "Revision of the Classification of the Kingfishers," in American Museum of Natural History, *Bulletin*, vol. xxi (ib., 1912), and standard authorities on European and American ornithology. See DACELO, Plate of KINGFISHERS, MOTMOTS, ETC.

KING GEORGE'S WAR. The name commonly given to that part of the struggle known in European history as the War of the Austrian Succession which was fought in America. In Europe hostilities began with the invasion in 1740 of the Austrian Province of Silesia by Frederick II of Prussia. France, Bavaria, Spain, and Saxony soon joined in a league against Austria, while hostility to France and the anxiety of George II for the safety of his Electorate of Hanover early drew England into the struggle on the side of Austria. (See SUCCESSION WARS.) In America the war was begun by the capture in May, 1744, of Canso in Nova Scotia, by a French expedition from Louisbourg. Fearing that the French would follow up this success by an attempt to conquer all of Nova Scotia, Governor Shirley of Massachusetts advised that an attack be made against Louisbourg. The Massachusetts General Court agreed to the plan and appealed to the other Colonies for assistance. In response Pennsylvania sent provisions, and New York some artillery, but the men were furnished by the New England Colonies alone. William Pepperell, a merchant of Maine, was placed in command; and on the last day of April, 1745, the expedition, consisting of about 100 Colonial vessels, 4000 Colonial troops, and a small English squadron under Commodore Warren, appeared before Louisbourg. The place was so strongly fortified that it had

3. KIRUMBO (*Leptosoma discolor*); male.
4. MOTMOT (*Momotus lessonae*).
5. BEE-EATER (*Merops apiaster*).
6. LONG-TAILED MOUSEBIRD (*Colius macurus*).

been regarded by the French as impregnable, and the Colonial troops were so poorly equipped and had so little knowledge of the art of war that an attack upon it seemed almost hopeless, yet after a siege of seven weeks the fortress surrendered. In the three following years there were some conflicts at sea, and there was considerable border fighting, but no very important operations took place, and a much discussed plan for reducing the whole of Canada was not carried out. The struggle was brought to a pause in 1748 by the Treaty of Aix-la-Chapelle, which provided, so far as England and France were concerned, for a return to the status existing before the war was begun. Louisburg was given back to France in return for Madras, much to the dissatisfaction of New England, and the boundaries between the French and English colonial possessions were left unsettled. Consult Francis Parkman, *A Half-Century of Conflict* (2 vols., Boston, 1903), and R. G. Thwaites, *France in America* (New York, 1905).

KING GEORGE V LAND. A part of the north coast of the continent of Antarctica, extending from long 144° E to 153° E, situated to the east of Adelie Land. It is an ice-capped region, discovered and explored between 1911 and 1913 by Sir Douglas Mawson (q.v.)

KING HAAKON VII LAND. The northeastern coast of Victoria Land, facing Melville Sound (q.v.), discovered and explored by Hansen (1903-04)

KING HUNTER. The great Australian kingfisher. See DACELO

KING LAKE. ALEXANDER WILLIAM (1809-91) An English historian. He was the eldest son of William Kinglake lawyer and banker, and was born at Launceston Somersetshire, Aug. 5, 1809. He studied at Eton and Trinity College, Cambridge, where he was a friend and contemporary of Thackeray and Tennyson, and graduated M.A. in 1836. He entered Lincoln's Inn in 1832, was called to the bar in 1837, and soon acquired a large practice. About 1835 he made a tour in the Orient of some length, the result of which was a book entitled *Eastern*, descriptive of his adventures and impressions. It was not published until 1844, but at once attained an astonishing popularity, passing through many editions in England and America and being extensively translated on the Continent. He joined Saint-Arnaud's flying column in Algiers in 1845 and in 1854 followed the British expedition to the Crimea, minutely studying the campaign. In 1863 vols. i and ii of his magnum opus, *The Invasion of the Crimea*, appeared and fully sustained his literary reputation. Volumes iii and iv were published in 1868, vols. v and vi in 1875-80. The last and eighth volume appeared in 1887. His antipathy to Napoleon III and the actors in the coup d'état was marked. From 1857 to 1868 he sat in Parliament as member for Bridgewater and in 1860 was a determined opponent of the annexation of Savoy and Nice. He died in London, Jan. 2, 1891. Consult Tuckwell, A. W. *Kinglake. A Biographical and Literary Study* (London, 1902)

KING LEAR. A famous tragedy by Shakespeare, written in 1604 or 1605, and produced before King James at Whitehall on Dec. 26, 1606. The story on which the play is founded is told by Geoffrey of Monmouth, Layamon, Robert of Gloucester, Holinshed, and others. A dramatization was made in 1593 or 1594, under

the title of the *Chronicle Historie of King Lear*, and was reprinted in 1605, probably because of the success of Shakespeare's play. Percy's *Reliques* preserves the ballad of *King Lear and his Three Daughters*. Lear, King of Britain, desiring to be freed from the cares of ruling, divides his kingdom between his daughters Goneril and Regan, who profess great love for him, and disowns his youngest daughter, Cordelia, who loves him most, but does not satisfy him in the expression of her affection. His elder daughters, having secured his possessions, appear in their true character and by their perfidy and heartlessness drive the aged King to madness. Cordelia, married to the King of France, comes to his rescue, but fails and is put to death, and the broken-hearted King dies by her body.

KINGLET. A very diminutive bird of the genus *Regulus*, formerly classed with the Old World warblers (Sylviidae), but now placed in a family by themselves, Regulidae. It is sometimes called a golden-crowned, or ruby-crowned, or fire-crested warbler or wren. The color above is light olive green, below, yellowish gray, while the crest is orange yellow, ruby red, or fire orange, bordered with black. The female has a paler crest or none. They have a soft and pleasing song, frequent evergreens, and build beautiful cuplike nests, which hang on the twigs of trees. The eggs are numerous (5 to 10), whitish, spotted and marked with pale brown. Ten species are known, inhabitants of northern Europe, Asia, and America. Two species are common in the United States, the golden-crested kinglet (*Regulus satrapa*), which is the smaller, only 4 inches long, and the ruby-crowned kinglet (*Regulus calendula*), which is 4½ inches in length. Both are either migrant or winter visitors in most parts of the United States, but the goldcrest breeds in various mountainous regions, as far south as the Carolinas. The rubycrown is a famous songster and one of the most notable of our spring migrants. See PLATE OF WRENS, WARBLERS, ETC

KING LOG. In a fable of Æsop, a log sent by Jupiter in response to the petition of the frogs for a king. Their contempt for their new ruler, when they discovered his character, led them to ask for another king, whereupon Jupiter sent a stork, who began to devour his subjects.

KING LORY. A bird dealer's name for an Australian parrot of the genus *Aprosmictus*—not a true lory (q.v.)

KING MAKER. THE. A title frequently given to the powerful Richard Neville, Earl of Warwick. See WARWICK.

KINGMAN. A city and the county seat of Kingman Co., Kans., 45 miles west of Wichita, on the Atchison, Topeka, and Santa Fe and the Missouri Pacific railroads (Map: Kansas, D 7). It is in an agricultural and stock-raising region, has abundant water power, and manufactures flour and creamery products. The city contains a Carnegie library and owns its water works and electric-light plant. Kingman adopted the commission form of government in 1912. It was formerly the site of one of the largest salt mines in the country, but the shaft was destroyed by fire in 1910. Pop., 1900, 1785; 1910, 2570.

KING MONKEY. A semnopithecine African monkey, or guereza, of the genus *Colobus*. This genus has excited much interest because of its approach in some characters to the American

division of monkeys. These characters are the practical absence of the thumb and the wideness of the nostrils. They are slender monkeys, with well-marked callosities, and have a large, complex, sacculated stomach and small cheek pouches. Elliot recognizes about 30 species, all of equatorial Africa, and all have beautiful skins, much in demand, whence some species are nearly exterminated. They live in small troops and keep to the tallest jungle trees. Their diet is chiefly leaves. In captivity, owing probably to lack of accustomed exercise, they do not live long.

KINGO, kjin'gô, THOMAS HANSEN (1634-1703). A Danish hymnologist, of Scottish descent, born at Slangstrup. His secular poetry was popular in his day, largely because written in Danish. In 1673-81 he published *Aandelige Sjungekor*, a collection of hymns superior to anything that had preceded. An authorized *Kirkesalmebog* (hymn book) for Denmark (1699) contained many selections of his writing; the new Danish *Kirkesalmebog*, now in use, has 100 of his hymns, and Landstad's (q.v.) new *Kirkesalmebog* for Norway and for Norwegians in America, 117. Kingo's collected hymns appeared in 1827 and his *Aandelige Sjungekor* in 1856.

KING-OF-ARMS. See KING-AT-ARMS.

KING OF BEGGARS. A title given to Bampfylde Moore Carew, a noted English vagabond of the early eighteenth century.

KING OF DUNCES. A nickname applied in Pope's *Dunciad* to Colley Cibber (q.v.).

KING OF OCKHAM, PETER, first BARON (1669-1734). An English lawyer and politician, cousin of John Locke. He was born in Exeter, was educated at a Nonconformist academy in Exeter and at the University of Leyden, began the study of law at the Middle Temple in 1694, and was called to the bar in 1698. He entered Parliament in 1701 as member for Beeralston in Devonshire and became prominently identified with the Whig party. In 1708 he was knighted, in 1710 was a leader in the impeachment proceeding against Sacheverell, in 1714 was made Chief Justice of Common Pleas, and in 1715 became a member of the Privy Council. He was appointed Speaker of the House of Lords early in 1725 and presided at the trial of his predecessor, the Earl of Macclesfield; was made Baron in May of the same year and in June became Lord Chancellor. As judge of Common Pleas, he had gained a reputation for impartiality and wide legal learning; but the transfer from a civil court to one of equity showed him deficient in the details of chancery law, and his inattention to the cases brought before him and delay in handing down decisions were in complete harmony with the traditions of English chancery proceedings. He resigned in 1733, owing to a stroke of paralysis. He delivered several decisions which established principles in equity, was a fellow of the Royal Society, and published: *An Enquiry into the Constitution, Discipline, Unity, and Worship of the Primitive Church* (1691; 2d ed., enlarged, 1712); and *A History of the Apostles' Creed* (1702). Consult Welsby, *Lives of Eminent English Judges* (London, 1846), and Campbell, *Lives of the Lord Chancellors* (ib., 1858).

KING OF OCKHAM, PETER, seventh BARON (1776-1833). An English economist, who succeeded to the family title in 1793. He was educated at Eton and Cambridge, entered the

House of Lords in 1797, voted with the Whig party, and spared no pains to get at the root of all matters relating to the currency. His *Thoughts on the Effects of the Bank Restrictions* (1804) was a plea for specie payments which he tried to enforce upon his own estates, and in behalf of Catholic emancipation he wrote *On the Conduct of the British Government towards the Catholics of Ireland* (1807), while his opposition to the Corn Laws is witnessed by *A Short History of the Job of Jobs* (1846), published posthumously. Lord King also produced a *Life of John Locke, with Extracts from his Correspondence, Journals, and Commonplace Books* (2 vols., 1830, Bohn's ed., 1858).

KING OF THE HERRINGS. The moonfish (*Lampris luna*). See KINGFISH; MOONFISH. The name is also applied to various other fishes, such as the chimæra and the oarfish.

KING OF THE MACKERELS. A pelagic fish (*Ranzania truncata*), of very brilliant colors, closely allied to and shaped like a sunfish (*Mola*), which is occasionally taken off the eastern coast of the United States. Jordan remarks that a similar species is regarded about the Sandwich Islands with veneration as the "king of the tunnies and mackerels."

KING OF THE MULLET. A small fish of the Mediterranean (*Apogon imberbis*), renowned for its beauty. It is bright scarlet with minute black specks, fins and tail red tipped with black. The genus is a large one, with species scattered throughout the tropical world, all are of brilliant cardinal, scarlet, or carmine hues.

KING PENGUIN. The largest of the penguins (*Aptenodytes pennanti*, or *patagonica*), a native of the Falkland and other Antarctic islands. See PLATE OF AUKS.

KING PHILIP'S WAR. See PHILIP, KING.

KING-POST. In architecture, the vertical post or strut in the simplest form of triangular truss; the upper end keyed into the meeting ends of two rafters and the lower mortised, pinned, or strapped to the middle point of the tiebeam. Under normal conditions it is not really a post or strut, but a vertical tie or suspension member. See TRUSS, and Illustration under ROOF.

KING RAIL. One of the large rails (*Rallus elegans*) of the eastern United States, often called "fresh-water marsh hen," in distinction from the larger, grayer clapper rail, or "salt-water marsh hen." It is 18 inches long, brownish black with bright chestnut below and on the wing coverts. It has the habits of the family. See RAIL.

KINGS, BOOKS OF (Heb. *mēlakim*, Gk. *βιβλοι βασιλειῶν*, *bibloi basileiōn*, Lat. *libri regnorum*). The name given to two of the canonical books of the Old Testament. Originally they were but one, but are separated in our manuscripts of the Greek version and the translations dependent on it, in which they are designated "the third and fourth of the kingdoms"—the books of Samuel forming the first and second. This division into two books was copied by the Vulgate and passed thence into the general usage of Christendom. The exact titles of these books in the English Authorized Version are *The First Book of the Kings*, *Commonly Called the Third Book of the Kings*, and the *Second Book of the Kings*, *Commonly Called the Fourth Book of the Kings*. They embrace (1) the reign of Solomon (1 Kings i-xi), (2) the history of the divided kingdoms of Judah and Israel to

the downfall of the latter (1 Kings xii-2 Kings xvii); (3) the history of the Kingdom of Judah after the destruction of the northern kingdom until the Babylonian captivity (2 Kings xviii-xxv).

The division of Kings into two books is not warranted by the contents any more than the separation of Kings from the two preceding books of Samuel. The four books constitute a continuous historical series, and the Greek version, in designating them all by a single name, obeys a correct instinct as to their nature. What we have in Samuel and Kings is a compilation, from various sources, made by a series of editors whose aim it was to carry the history of the Hebrews on from the point where it was left by the compiler of Judges. The first redaction of the sources included in Samuel and Kings appears indeed to have been made before the destruction of the Kingdom of Judah, though after the reformation of Josiah (620 B.C.); but the method of historical composition among the Hebrews left it open for later editors to make all manner of additions and insertions, which, without necessarily effacing the work of the earlier writers, would carry the history still further down. The considerable variations between the Greek and Hebrew texts of Samuel and Kings furnish the proof for the assumption of various redactions of this compilation.

Among the sources embodied in the books of Samuel and Kings the most notable are: In Samuel, (1) a history of Saul, compiled by a Benjamite or Judæan, probably in the ninth century B.C., embodied in 1 Sam ix-xiv; (2) a history of David, containing (a) a later compilation (ninth century) embodied in 1 Sam xvi-xxvi and 2 Sam. i-v, xxi-xxiii, and (b) an earlier one, probably made by a contemporary (2 Sam. ix-xx); (3) a considerably later compilation of the history of Samuel and Saul, scattered through 1 Sam. i-xxvi. In Kings, (1) continuation of the history of David, found in 1 and 2 Samuel; (2) a biography of Solomon embodied in 1 Kings iii-xi, (3) stories of prophets, compiled probably in the eighth century B.C., embodied in 1 Kings xvii-xxi and 2 Kings ii-xiii; (4) extracts from compilations known as "Book of the Kings of Israel" and "Book of the Kings of Judah," though it is quite possible that the compiler of Kings has in mind a single work covering the annals of both the kings of Israel and Judah.

These as the main sources have been pieced together, and the history of the period has been included in the compilation brought under a single aspect through the skill of editors who viewed the facts of the past as illustrations of their religious theory, which implied that Judaism arose in its perfected form in the days of Moses, and that all the disasters and misfortunes happening to Israel are punishments sent by Yahwe for disobedience to His Law as given to the people through Moses. It is therefore necessary before utilizing the valuable material embodied in Samuel and Kings to make due allowance for this theory and to distinguish carefully between facts and the interpretation put upon them. In the second place, as in Joshua and Judges, the careers of the favorite heroes—notably David (q.v.) and Solomon (q.v.)—have been embellished with legends and the characters themselves idealized by projecting into the past views and religious conceptions that belong to much later ages. The same ele-

ment of legend, and to a certain extent myth, enters into the stories of the prophets Elijah (q.v.) and Elisha (q.v.), while the kings of Israel and Judah are judged entirely from the point of view of the above-outlined pragmatic method adopted already by the first group of editors. On the other hand, it should be emphasized that the extracts from the annals of Israel and Judah give us much valuable authentic history, as is shown by the references in Egyptian, Assyrian, and Syrian inscriptions, such as the inscription of Sheshonk I describing the invasion in the time of Rehoboam (c.948 B.C.), the Zakir inscription alluding to Bar Hadad II of Damascus, the Mesha inscription referring to Omri and Ahab, the inscriptions of Tiglath-pileser IV, Shalmaneser and Esarhaddon referring to the house of Omri, to Ahab, Jehu, Pekah, Pekahiah, and Hosea of Israel, and to Ahaz, Hezekiah, and Manassch of Judah. The chronology of Kings has been in part confirmed and in part corrected by the more accurate Assyrian chronology.

Bibliography. Consult histories of Stade, Guthe, Kittel, Wellhausen, Renan, Kent, and Piepenbring, and commentaries by Kittel and Benzinger. Among older commentaries, those of Thenius (2d ed., Leipzig, 1873) and Keil (2d ed., ib., 1876) are still of value.

KING SALMON. A name for the quinnat (q.v.).

KING'S BEADSMEN. See BLUEGOWNS.

KING'S (or QUEEN'S) BENCH. An ancient English court of common law, which succeeded the *Curia Regis*, or King's Court, in its criminal jurisdiction and also in a few civil matters. This jurisdiction, however, it gradually extended, until it became the most important common-law court of the kingdom, having jurisdiction over all criminal cases on the "crown side" and all civil causes between subject and subject on the "plea side." It also had important supervisory powers over certain inferior tribunals, *magistratus*, and all civil corporations. It had authority to pass on the extent of the jurisdiction of inferior courts and to remove causes to itself where they were improperly commenced in such courts. It consisted of a Lord Chief Justice and four puisne or associate justices. The Chief Justice bore the distinguished title of Lord Chief Justice of England. By the judicature acts of 1873 it was merged in the High Court of Justice; but the name was preserved as the King's Bench Division of the High Court, which retains its former important jurisdiction as well as that formerly exercised by the two other superior courts of common law, viz, the Court of Common Pleas and the Court of Exchequer (qq.v.). See also CURIA REGIS; JUDICATURE ACTS; COURT.

KINGSBOROUGH, EDWARD KING, VISCOUNT. See KING, EDWARD.

KING'S COLLEGE. The name of the college in New York City which later was called Columbia College. See COLUMBIA UNIVERSITY.

KING'S COLLEGE, CAMBRIDGE. A college of Cambridge University, originally known as the College of St. Nicholas. It was founded by Henry VI in 1441, along with Eton College, Windsor, as its preparatory school. The college was the first in Cambridge to be designed on a splendid architectural scale, of which the chapel, begun by Henry VI, continued by Henry VII, and completed by Henry VIII, is

now the most striking feature and the only part of the original plan fully carried out. The foundation consisted of a provost, 70 fellows, and scholars, chaplains, clerks, choristers, and servants to the extraordinary number of 140. The college had, from the first, unusual privileges, like New College, Oxford, such as exemption from the jurisdiction of the Archbishop of Canterbury, the Bishop of Ely, and even of the university, in matters scholastic. Till 1857 the members of King's College could take a degree without passing the university examinations, which privilege tended to lower the scholarship of its members. The revenues of the college are said to have been reduced by Edward IV, but were increased by succeeding benefactions. The college had, in 1913-14, a provost, 47 fellows, and 48 scholars, with lecturers, tutors, and college officers, and some 166 undergraduates. It presents to some 40 livings. Except the chapel, the buildings are not of pronounced distinction. The chapel, however, is the finest college chapel in existence and probably the finest example of its style of architecture in the world in size, form, and decoration. It contains some of the best glass and wood carving in England. Among the worthies of King's have been Sir Robert Walpole, the first Sir William Temple, Lord Stratford de Redcliffe, Archbishop Sumner, Bishop Pearson, and Richard Croke, the Greek scholar. See **ETON COLLEGE**, **CAMBRIDGE**, **UNIVERSITY OF**. Consult T. J. P. Carter, *King's College Chapel: Its History and Present Conditions* (London, 1867), and A. A. Leigh, *King's College, Cambridge* (ib., 1899).

KING'S COLLEGE, LONDON, ENGLAND. It was founded in 1829 (opened 1831) as an outgrowth of a division in opinion between the founders of the University of London, which had been established in 1825-27. King's College, like University College, became a teaching body, while the University of London became an examining body. Since 1910 the college has been a part of the University of London. The college is in connection with the Church of England, and its courses embrace theology, literature, science, pure and applied, and medicine. There is a school connected with the college, which was removed recently to Wimbledon. It is now located in the east wing of Somerset House. In the museum are the Babbage calculating machine and the George III collection of mechanical models and philosophical instruments. The college is one of the few in England with a school of modern Oriental languages. Perhaps its best-known alumnus is Dean Farrar. Other students were Prof. Thorold Rogers, Sir James Fitzjames Stephen, Professor Cayley, and the brothers Rossetti, whose father, Gabriele Rossetti, was professor of Italian there. In 1912-13 the number of students was 2745—King's College for Women, which was founded in 1877 and combined with King's College in 1885, is now located in Kensington and in 1910 also became a part of the University of London. It is the only institution in England offering a degree course in home science. There are about 100 students.

KING'S (or QUEEN'S) COUNSEL. In Great Britain a title of honor conferred by royal patent on barristers of distinction. The patent, issued in the King's (or Queen's) name, on the recommendation of the Lord Chancellor, appoints the patentee "one of our counsel

learned in the law." It confers no office, but gives certain rights of precedence over barristers not so honored and is a highly valued distinction. King's counsel are privileged to sit within the bar and wear a distinctive costume, which consists of a silk robe and, in the House of Lords, a full-bottomed wig. The dignity is said to have been first conferred on Lord Bacon by Queen Elizabeth.

It represents in modern times the distinction formerly enjoyed by the sergeants at law (q.v.) or Order of the Coif, now obsolete. It exists in Scotland, Ireland, and the British colonies, as well as in England. No corresponding dignity exists in the legal profession in the United States. See **BARRISTER**.

KING'S COUNTY. An inland county of Ireland, bounded east by Kildare and west by the Shannon, which separates it from Roscommon and Galway (Map: Ireland, D 5). Area, 772 square miles. Stock raising is the chief industry, the soil being in general sterile. The most important towns are Lullamore, the capital, Birr, Edenderry, and Clara. Pop., 1841, 147,550, 1901, 60,187, 1911, 56,832.

KING'S COURT. See **CURIA REGIS**.

KING'S DAUGHTERS AND SONS, INTERNATIONAL ORDER OF. An organization formed in New York City, early in 1886, as a distinctly spiritual force. At first women only were admitted to membership, but the society was soon enlarged to take in men and boys. It is strictly undenominational, organized in circles, city and county unions, chapters, and State branches, and has a central council which is incorporated, with headquarters in New York City. The social and religious services are of the most varied description, each circle being given free choice in choosing its own special work. The idea is to work "first for the heart, next the home, then the Church, and after that the great outside." The badge of the society is a Maltese cross of silver, bearing the initials I. H. N. (In His Name). A monthly magazine, the *Silver Cross*, is published in New York. There are branches in 32 States and 8 Canadian provinces and circles in China, Japan, India, and Syria. Consult the *King's Daughters' Yearbook* (New York).

KING'S (or QUEEN'S) EVIDENCE. In England a person who, having been an accomplice in some crime, has confessed and offered to give evidence against his fellow criminals. The usual practice of the crown in such cases is to pardon the person so testifying, though he is not as a matter of legal right entitled to a pardon; and an application is generally made to the judge to admit the party as a witness on the trial of his accomplices. A similar practice exists in Scotland, the public prosecutor having the power and discretion to admit the confessing party. For the corresponding practice in the United States, see **STATES EVIDENCE**.

KING'S EVIL. See **SCROFULA**.

KINGSFORD, kingz'fôrd, CHARLES LETHBRIDGE (1862-). An English historical writer, born at Ludlow, Shropshire. He was educated at St. John's College, Oxford. In 1889 he joined the editorial staff of the *Dictionary of National Biography*; in the following year became examiner of the Education Department, of which he was assistant secretary in 1905-12; and was made a member of the council of the Royal Historical Society. His publications include: *Song of Lewes* (1890); *The Crusades*

(1894), with T. A. Archer; *Henry V* (1902); *Chronicles of London* (1905); *Stow's Survey of London, with Introduction and Notes* (1908); *Sir Otho de Grandison* (1909); *The First English Life of Henry V* (1911); *English Historical Literature in the Fifteenth Century* (1913).

KINGSFORD, WILLIAM (1819-98). A Canadian historian, born in the Parish of St. Lawrence Jewry, London, England. He was educated at Camberwell and studied architecture, but his tastes were otherwise, and he enlisted as a private in the dragoon guards when 16 years old. In 1837 he went with his regiment to Canada and rose to be sergeant, but left the army (1841) to go into the city surveyor's office in Montreal. He was employed in the survey for the Lachine Canal (1846-48) and the following year came to the United States to aid in the building of the Hudson River Railroad. Thence he went to Panama and was an engineer on the railway building there. Afterward he was surveyor for the Grand Trunk Railroad and then a district superintendent of the line. He was again in the Canadian public service in connection with the Rideau Canal and was Dominion engineer in charge of the harbors of the Great Lakes and the St. Lawrence from 1872 to 1879. He published *History, Structure, and Statistics of Plank Roads in the United States and Canada* (1852), *Impressions of the West and South* (1858), *The Canadian Canals* (1865), *A Canadian Political Coin* (1874), *Canadian Archaeology* (1886), and *The Early Bibliography of Ontario* (1892); but by far his most important work is his *History of Canada* (10 vols., 1887-97), the result of 17 years' faithful study of the Canadian archives. Consult T. G. Marquis, "English-Canadian Literature," in *Canada and its Provinces*, vol. vi (Toronto, 1914). See also CANADIAN LITERATURE.

KINGSLEY, KINGZ'LI, CALVIN (1812-70). An American Methodist Episcopal bishop, born in Annsville, Oneida Co., N. Y. He graduated from Allegheny College in 1841, entered the ministry, and from 1846 to 1856 was a professor in his alma mater. From 1856 to 1864 he was editor of the *Western Christian Advocate* of Cincinnati. The General Conference of 1864 elected him Bishop. In 1867 he visited the missions in Europe, and in 1869 he started on a tour of all the mission stations of the Orient, beginning with Japan. On his return journey he died at Beirut, Syria. Noted as a debater, he twice discussed with Luther Lee in public the attitude of the Methodist Episcopal church to slavery. He was the author of *The Resurrection of the Dead: a Vindication of the Literal Resurrection of the Human Body* (1847; later eds.) and *Round the World: A Series of Letters* (2 vols., 1871).

KINGSLEY, CHARLES (1819-75). An English author and clergyman, born at Holne vicarage, Devonshire, June 12, 1819. He entered Magdalen College, Cambridge, in 1838, where he distinguished himself in classics and mathematics. In 1842 he became curate and, two years later, rector of Eversley in Hampshire. In 1848 he published *St. Elizabeth of Hungary*, a drama of mediæval piety, which contains scattered passages of rare poetic power and beauty. The next two or three years of his life were devoted—in company with his friend F. D. Maurice and others—to the physical and moral improvement of the working classes. In 1850-51 he was a contributor, over the signature

Parson Lot, to the *Christian Socialist*. His opinions on the social anarchy of modern times are to be found in his *Alton Locke, Tailor and Poet* (1849), a novel of some power, the hero of which is taken from a London workshop. This was followed by *Yeast, a Problem* (1849), in which Kingsley handles, among other questions, the condition of the English agricultural laborer, and in 1853 by *Hypatia, or New Foes with an Old Face*, a brilliant delineation of Christianity in conflict with the expiring philosophy of Greece in the early part of the fifth century. Two years after he published *Westward Ho!*—probably the greatest of his works. As a novelist, he excels in stirring narrative and in description—witness the vivid word painting of South American scenery in *Westward Ho!* or of the Egyptian desert in *Hypatia*. Other works of his are the famous London sermon called *Message of the Church to Laboring Men and Two Years Ago* (1857), *Water Babies* (1863), *Hereward the Wake* (1866), *The Hermits* (1869), and *At Last*, a delightful account of a voyage to the West Indies (1871). He was appointed professor of modern history at Cambridge in 1860 and, after resigning that post, was made, in 1869, canon of Chester and afterward canon of Westminster. In 1867 he had a passionate controversy with John Henry Newman because Kingsley had said (1860) that "truth for its own sake had never been a virtue with the Roman Catholic clergy." One of the most impressive preachers of his day, the best of his published discourses are to be found in his *Twenty-five Village Sermons* (1849). Kingsley's versatility is striking. With almost equal fervor he studied social questions, religion, and zoology. He was a Christian as ardently as he was an admirer of Darwin and Huxley and their science. Darwin and theology seemed to him compatible. Kingsley's health began to fail about 1863. In 1874 he visited the United States in search of health. In 1875 appeared the *Lectures Delivered in America*. He died at Eversley, Jan. 23, 1875, and was buried there. Consult the Chester edition of the *Works*, edited by his son, Maurice Kingsley (14 vols., London, 1900); *Letters and Memories*, by his wife (ib., 1877; condensed, 1883); *The Life and Works of Charles Kingsley* (19 vols., New York, 1902); and, for an aspect of his work, Mauritz Kaufmann, *Charles Kingsley, Christian Socialist and Social Reformer* (ib., 1892); C. W. Stubbs, *Charles Kingsley and the Christian Social Movement* (New York, 1899); F. S. Goldberg, "Kingsley and the Social Problems of his Day," in *Western Review*, vol. clxvii (London, 1907); C. E. Vulliamy, *Charles Kingsley and Christian Socialism*, "Fabian Society, Biographical Series" (No. 5, ib., 1914).

KINGSLEY, HENRY (1830-76). An English novelist, the brother of Charles Kingsley, born at Barnack, Northamptonshire. From King's College, London, he went to Oxford, but at the age of 23 left without graduating to seek his fortune in the gold fields of Australia. He did not find it directly during his five years' quest, but indirectly through his novel, *Geoffrey Hamlyn* (1859), dealing with colonial life, which he published on his return. While editor of the *Edinburgh Daily Review* he was also its correspondent during the Franco-Prussian War, and was credited with being the first Englishman to get into Sedan after its fall (1870). He wrote some 16 novels and did miscellaneous

literary work in addition thereto. His books include, notably: *Geoffrey Hamlyn*, just mentioned; *Ravenstoe* (1862); *Austin Elliot* (1863); *The Hillyars and Burtons* (1865); *Leighton Court* (1866); *Silcote of Silcotes* (1867); *Mademoiselle Mathilde* (1868); *Stretton* (1869); *Old Margaret* (1871); *The Harveys* (1872); *Reginald Hetheridge* (1874); *Number Seventeen* (1875); *The Grange Garden* (1876); *Fireside Studies* (1876). His *Works* were edited by C. K. Shorter (12 vols., c.1905).

KINGSLEY, JAMES LUCE (1778-1852). An American scholar, born in Scotland, Conn. He graduated at Yale in 1799, two years afterward became a tutor, and in 1805 was appointed first professor of ancient languages at Yale. He remained in this position until 1831, after which he was professor of Latin (emeritus in 1851) until his death. He was master of an elegant style in Latin and in English and was well versed in American history. He delivered the address on the two hundredth anniversary of the settlement of New Haven (1838) and wrote a brief *History of Yale College* (1835) and (in Sparks's *American Biography*) a life of Ezra Stiles, president of Yale College. Consult the memorial addresses by T. D. Woolsey and T. A. Thacher and sketches of his life by D. C. Gilman.—His son, **HENRY C. KINGSLEY** (Yale, 1843), was treasurer of Yale College in 1862-86; and a younger son, **WILLIAM L. KINGSLEY** (Yale, 1843), was long the editor of the *New Englander*, until his death in 1896.

KINGSLEY, JOHN STERLING (1854-). An American zoologist and teacher, born at Cincinnati, N. Y. He graduated at Williams College in 1875 and received the degree of Sc.D. from Princeton in 1885. Subsequently he was professor of zoology at the University of Indiana (1887-89), professor of biology at the University of Nebraska (1889-91) and at Tufts College (1892-1913), and professor of zoology at the University of Illinois after 1913. In 1884-96 he was one of the editors of the *American Naturalist* and after 1910 of the *Journal of Morphology*. He edited the *Standard Natural History* (6 vols., 1886), wrote *The Naturalist's Assistant* (1892), *The Embryology of Limulus* (1893), *Elements of Comparative Zoology* (1896; 2d ed., 1904), *Text-Book of Vertebrate Zoology* (1899), *Guides for Vertebrate Dissection* (1907), and translated and edited Hertwig's *Manual of Zoology* (1902; rev., 1912) and *Comparative Anatomy of Vertebrates* (1912).

KINGSLEY, MISS MARY H. (1862-1900). An English traveler and author, the daughter of George Henry Kingsley (1827-92) and niece of Charles Kingsley. Born at Islington, London, she was early interested in science and read the writings of Darwin, Huxley, and Lubbock. In 1893 she went to St. Paul de Loanda, in Portuguese West Africa, to study primitive religion and to gratify her zest for scientific research and for collecting specimens of various kinds. She returned the next year, after encountering many difficulties and traveling through parts of the country known only to the natives. In the latter part of 1894 she returned to Africa for the purpose of exploring the lower Niger region and studying its flora. In the elephant and gorilla countries she had several narrow escapes, traveling frequently up the rivers and through the bush with only native attendants. She traveled through the Niger Coast Protectorate, Kamerun, and Gabun. The

results of her journeys were published in the exceedingly interesting *Travels in West Africa* (1897) and *West African Studies* (1899). Early in 1900 she went to South Africa and was attached to the military hospital at Simons Town, where, after nursing Boer prisoners, she became ill and died.

KING'S LYNN, or **LYNN REGIS**, lin rē'jis. A seaport in the County of Norfolk, England, 3 miles from the mouth of the Great Ouse, and 41 miles northwest of Norwich (Map: England, G 4). The harbor of Lynn is connected with the sea by a waterway and has large docks covering more than 100 acres. It has fine ecclesiastical buildings, St. Margaret's Church, containing the finest brasses in England, national schools, and charitable institutions. Its grammar school (where Eugene Aram was usher) was founded in 1510 and completely rebuilt in 1906. The town was formerly fortified and defended by a moat, which, with ruins of the walls and the handsome Gothic "South Gates," still exists. The town owns real estate, a water supply, electric works, and a cemetery, and maintains baths, free library, fire brigade, and a technical school. The industrial establishments include shipyards, oil mills, machine shops, iron foundries, breweries, malt houses, etc. Lynn received its first charter from King John in 1204. It was known as Lynn Episcopi, Bishop's Lynn, which at the Reformation was changed to Lynn Regis, or King's Lynn. Frances Burney (Madame d'Arblay) was a native of the town. During the European War of 1914 King's Lynn was attacked by a German aerial fleet. The presumable objective, Sandringham House, a residence of Queen Alexandra, was not damaged. Pop. 1901, 20,300, 1911, 20,201. Consult: Richards, *History of Lynn* (Lynn, 1812); Harrod, *Records of King's Lynn* (ib., 1874).

KING'S MOUNTAIN, BATTLE OF A battle fought on Oct. 7, 1780, during the Revolutionary War, between an English and Loyalist force of about 1100 under Lieutenant Colonel Ferguson and less than 1000 Georgia, North Carolina, and South Carolina backwoodsmen under William Campbell, James Williams, Benjamin Cleveland, Isaac Shelby, and John Sevier. King's Mountain is a ridge more than a mile long, rising nearly 100 feet above the surrounding level, just within the limits of Charlotte, N. C. Here Ferguson, hard pressed by the infuriated militia, intrenched himself and was soon afterward attacked with the greatest gallantry by the Americans. The engagement lasted for about an hour, and the English, whose commander was mortally wounded, were finally forced to surrender, after having lost about 250 killed and wounded and 664 prisoners. The Americans lost 28 killed and 60 wounded. This victory, besides demonstrating the fighting capacity of the backwoodsmen, forced Cornwallis to postpone for a time his invasion of North Carolina. Consult Draper, *King's Mountain and its Heroes* (Cincinnati, 1881), and McCrady, *South Carolina in the Revolution* (New York, 1801).

KING SNAKE. 1. The name in the United States of a variety of snakes believed to make war successfully on the rattlesnake and copperhead. The snake most usually meant by it in the Northern and Middle States is the chain snake (q.v.), but the whole of the genus *Ophibolus* is properly so designated, and perhaps

more generally than as chain snakes. They sometimes reach 10 feet in length and undoubtedly do occasionally attack and eat the poisonous as well as some other snakes. The king snake of the South is more commonly *Ophibolus dolatus*, the analogue of the Northern milk snake (q.v.), and the beautiful red, black-banded Southwestern relative of this (*Ophibolus coccineus*) is the red king snake. This snake is exceedingly variable in its coloration and in the pattern of its markings, as is displayed in the accompanying illustration

VARIATIONS IN THE KING SNAKE

Six out of 10 varieties of coloration and relative size of the king snake (*Ophibolus dolatus*), as distinguished by E. D. Cope. 1, variety *triangula* (milk snake, q.v.), dull chestnut and black on a gray ground, Northeastern States. 2, variety *dolatus* (typical king snake), ground color ashen to yellowish, saddles red brown with black borders; southern United States and eastern Mexico. 3, variety *clericus*, blotches chocolate, ground color yellow, southeastern United States. 4, variety *annulata*, saddles bright red, intervening spaces clear yellow, Texas and Mexico. 5, variety *coccineus* (corn snake, q.v.), large saddles of bright red, broadly bordered with black and separated by yellow rings, Florida to New Mexico.

2. In India, the banded krait (q.v.), in translation of the native name raj samp.

KING'S NORTON AND NORTHFIELD. Formerly a town in Worcestershire, England, now incorporated with Birmingham. It is a growing manufacturing centre, with paper and rolling mills, chocolate factory, and screw works. Pop., 1901, 57,100, 1911, 81,153.

KING'S QUHAIR, kwir. A sentimental poem by King James I of Scotland, in honor of Lady Jane Beaufort, a daughter of the Earl of Somerset. The poem has six cantos and is written in seven-line stanzas, afterward called the "rhyme royal" from its use in this poem.

KING'S REGULATIONS. The regulations

for the organization, government, and discipline of the British army. The occupant of the British throne is the nominal head of the defensive and offensive forces of the Empire, the governing rules of which are published and issued in the ruler's name, as *King's Regulations*—or, during the lifetime of Queen Victoria, *Queen's Regulations*.

KING'S SILVER. An ancient fine paid to the crown in the Court of Common Pleas, in England, as an incident of the alienation of lands by the process known as levying a fine (q.v.).

KINGSTON. The capital of Frontenac Co., Ontario, Canada, on the northeast shore of Lake Ontario, at the mouth of the Cataraqui River and at the east end of the Bay of Quinte, where the waters of the Canadian lakes issue into the St. Lawrence (Map: Ontario, H 5). It is distant 172 miles by rail from Montreal, from Toronto 163, and from New York 274 (direct). The Rideau Canal connects it with Ottawa, and, besides its outlet by water, Kingston communicates with all parts of the country by means of the Grand Trunk, the Canadian Northern, and the Canadian Pacific railways. The city is the seat of a United States consul, and of the Roman Catholic Archbishop of Kingston and Anglican Bishop of Ontario; it returns one member each to the Dominion House of Commons and the Provincial Legislature and is a port of entry with large commercial interests. Its harbor is sheltered by Wolfe and Simcoe islands and has a dry dock 280 feet long. It is one of the most important grain-transshipping ports in the Great Lakes. Its proximity to the Thousand Islands makes it a much frequented summer resort. Next to Quebec and Halifax, Kingston is the most strongly fortified place in Canada. Several accessible points are secured by batteries, and two permanent forces of artillery are maintained. The noteworthy buildings and institutions include the Anglican and Roman Catholic cathedrals, the well-known Queen's University, School of Mining and Agriculture, Eastern Dairy School, Royal Military College, School of Gunnery, three large hospitals with several buildings each, two old people's homes, four orphanages, the provincial penitentiary, and the Rockwood lunatic asylum. The public buildings, all of stone, are a striking feature of the city's architecture. The city is electrically lighted, has street railways and gas and water works, and four public parks. Boat and ship building is carried on to a considerable extent. There are some large foundries for the manufacture of engines, locomotives, railway rolling stock, and also cotton and woolen factories. There are also tanneries, breweries, piano factories, smelters, tile works, etc. The value of the manufactured output in 1910 was \$3,860,142, as compared with \$2,045,173 in 1900. A gathering ground of old for the neighboring Indian tribes, the site of a French fort from 1673 till 1758, the place fell into the hands of the British in 1762, was laid out in 1793, and was incorporated as a city in 1838. After the American Revolution its original name of Fort Frontenac was changed to Kingston by the United Empire Loyalists. During the War of 1812 it was the headquarters of the naval force in Lake Ontario. On the union of the two Canadas, in 1841, the seat of government was established at Kingston, but was removed in 1845. Pop., in 1901, 17,961; 1911, 18,874.

KINGSTON. The capital and chief seaport of the island of Jamaica, situated on a small, arid plain, on the southeast coast of the island (Map: West Indies, C 3). There are clean streets and a good water supply and a sewage system. It is lighted by electricity and has electric street railways. The town is strongly fortified. The suburbs are remarkable for their natural beauty, and many of the wealthier residents, including the Governor, live outside of the city limits. The harbor admits the largest vessels, and an active import and export trade is carried on. The railways of the island centre here. Near Kingston are the ruins of the old town of Port Royal, which was destroyed by an earthquake in 1693. Pop., 1891, 46,540; 1911, 57,379. On Jan. 15, 1907, an earthquake in Kingston and neighboring towns caused the death of over 600 persons and the destruction of several million dollars' worth of property.

KINGSTON. A city and the county seat of Ulster Co., N. Y., 88 miles north of New York City, beautifully situated on the Hudson River and on the north shore of Rondout Creek. It is a stopping point on all the river steamship lines and is on the West Shore, the Ulster and Delaware, and the New York, Ontario, and Western railroads (Map: New York, F 7).

The city contains Kingston Point Park, the West Shore Railroad bridge (150 feet above tidewater), and fine city-hall, courthouse, library, and other buildings. Other noteworthy features are the Senate House, with a collection of relics (New York State's first capitol), the tuberculosis hospital, a large sanitarium, the Industrial Home, and the Roman Catholic Orphanage.

Kingston, with its excellent transportation facilities, is the centre for a large trade in coal, stone, brick, lime, lumber, grain, and cement, has extensive railroad shops, steamboat plants, automobile works, lace mills, and foundries; and manufactures cigars, cement and stone, shirts, hardware, bricks, etc. The government is administered by a mayor, who controls appointments to most of the important municipal offices, and a unicameral council. The recorder and city judge are chosen by popular election. The water works are owned by the city. Pop., 1900, 24,535; 1910, 25,908; 1914 (U. S. est.), 26,493.

The first settlement here was made in 1652 by the Dutch, who called it Esopus, after the Esopus Indians. Until 1661, when it was organized with a separate jurisdiction as Wiltwyck, it was a dependency of Fort Orange (Albany). In 1667 the English took control and in 1669 changed the name to Kingston. On April 20, 1777, New York's first State constitution was adopted here, and on September 9 Chief Justice Jay opened the first State court. On Oct. 16, 1777, an English force under General Vaughn entered the town and burned down every building except the Centennial House, which still stands. In 1805 Kingston was incorporated as a village, and in 1872 it received a city charter and was enlarged by the addition of two adjoining villages, Rondout and Wilbur. Consult Schoonmaker, *The History of Kingston to 1820* (New York, 1888).

KINGSTON. A borough in Luzerne Co., Pa., on the Susquehanna River, opposite Wilkes-Barre, and on the Lackawanna and the Lehigh Valley railroads (Map: Pennsylvania, K 4). Wyoming Seminary (Methodist Episcopal) is

situated here. The borough is essentially a residential place, but has a large adding-machine factory, car and machine shops, and manufactures of hosiery. The coal mines in the vicinity also afford employment for many of its inhabitants. Pop., 1900, 3846; 1910, 6449. Near Kingston stood Forty Fort, prominent in the Pennamite-Yankee War and in the Revolution. In the vicinity of this fort occurred, in 1778, the famous Wyoming Massacre. (See WYOMING VALLEY.) A monument 60 feet high has been erected on the site of the fort to commemorate the battle and massacre. Kingston was incorporated as a borough in 1858. Consult Pearce, *Annals of Luzerne County, Pennsylvania* (Philadelphia, 1860).

KINGSTON, CHARLES CAMERON (1850-1908). An Australian statesman, born in Adelaide. He was educated in his native city and in 1873 was called to the bar. After 1881 he represented West Adelaide in the South Australian House of Assembly; he was thrice Attorney-General of South Australia and from 1893 to 1899 was Premier. As an advanced Liberal, he favored radical measures in regard to the franchise, land, and labor questions. During his administration woman suffrage was enacted into law, the Labor party was conciliated by factory legislation in behalf of workmen, and progressive income taxation and death duties were imposed. He took part in the discussions preceding the establishment of the Australian commonwealth and in 1897-98 presided over the convention which framed the bill for that purpose. He was Minister of Trade and Customs in the first Federal cabinet (1901-03) and from 1901 to his death represented Adelaide in the commonwealth House of Representatives.

KINGSTON, ELIZABETH (CHUDLEIGH), DUCHESS OF (1720-88). An English adventuress, daughter of Thomas Chudleigh, who died in 1726, leaving his family in poverty. In 1743 her remarkable beauty led to her appointment as maid of honor to the Princess of Wales, mother of George III. She was privately married in 1744 to Captain Hervey, a grandson of the first Earl of Bristol, but did not long live with him and for many years led a dissolute life. In 1769 the court granted her freedom from Hervey, after she had sworn that she was not married, and the same year Evelyn Pierrepont, the second Duke of Kingston, whose mistress she had been for some time, married her, and upon his death, in 1773, she succeeded to his large fortune. An attempt was made by the Duke's relatives to set aside the will on the ground of bigamy, of which offense she was declared guilty by the House of Lords in 1776; but her right to retain the property was conceded on the ground that she received it by bequest. She spent much of her time on the Continent to avoid further litigation, lived for a while after 1777 in St. Petersburg, and died in Paris. She is said to have been the original of Beatrice in Thackeray's *Esmond* and of his Baroness Bernstein in *The Virginians*. Consult: Whitehead, *Original Anecdotes of the Late Duke of Kingston and Miss Chudleigh* (London, 1792); Trowbridge, *Seven Splendid Sinners* (ib., 1908); Pearce, *The Amazing Duchess* (ib., 1911).

KINGSTON, WILLIAM HENRY GILES (1814-80). An English novelist, famed as a writer of books for boys. A Londoner by birth, he lived long in Oporto, assisting his father in business

there and writing political articles that were translated for the Portuguese press and helped to conclude the commercial treaty with England (1842). For this he was knighted and pensioned by the government of Portugal, but he returned to his native land two years afterward, edited the *Colonist* and the *Colonial Magazine and East India Review*, lectured also on emigration, and strove to lighten the lot of seafaring men. *The Circassian Chief* (1844) was his first book. Out of his interest in emigration grew his *How to Emigrate* (1850). From 1850 he was chiefly engaged in writing books for boys and in editing juvenile annuals and periodicals. Among the best of his stories, which are more than 100 in number, may be mentioned *Peter the Whaler* (1851); *The Crusac of the Frolic* (1860); *The Fireships* (1862); *Ben Burton* (1872); *The Three Midshipmen* (1873); *The Three Lieutenants* (1875); *The Three Commanders* (1876); *The Three Admirals* (1878); *Kidnapping in the Pacific* (1879). Besides accounts of his own travels in Europe and America, he published books about noted explorers—Columbus, Captain Cook, Livingstone, and others—about the *Kings and Queens of England* (1876), and about other historical personages.

KINGSTON-ON-THAMES, tēmz. A market town in Surrey, England, on the Thames, 11 miles southwest of Charing Cross (Map: England, F 5). It is a favorite residential district for London and has a free library, an asylum for soldiers' widows, a recreation ground of 14 acres, an industrial school for girls, and an endowed grammar school founded in the reign of Queen Elizabeth. The town owns a profitable market which occupies the ground floor of the town hall, an electric-lighting plant, and baths. Much garden produce is raised in the vicinity, and there are flour and oil mills, breweries, brick and tile works. Numerous Roman remains have been discovered in the vicinity; during the Saxon period the West Saxon kings were crowned at Kingston. The name is said to be derived from a stone in the market place upon which are inscribed the names of seven Anglo-Saxon kings who were crowned upon it, in the ancient chapel of St. Mary's, which existed until 1779. Pop., 1901, 34,375; 1911, 37,975.

KINGSTON-UPON-HULL. A town of England. See HULL.

KING STORK. In Æsop's fables, the king sent by Jupiter to the frogs when they were dissatisfied with King Log.

KINGS TOWN. An important seaport and favorite watering place of Ireland, on the south shore of Dublin Bay, 6½ miles southeast of Dublin (Map Ireland, E 5). At the visit of George IV in September, 1821, its former name, Dunleary, was changed to Kingstown. Its fine harbor, with an area of 250 acres, accommodates vessels drawing 24 feet. There is steamship service to Holyhead and the principal Irish and British seaports. Coal, iron, and timber are imported, and cattle, corn, lead ore, and granite are exported. Pop., 1901, 17,356; 1911, 16,941.

KINGSTOWN. Capital of the island of St. Vincent, British West Indies (Map: West Indies, G 4). It is picturesquely situated at the foot of Mount St. Andrew, on the southwest coast, and has handsome public buildings and a good harbor. Pop., 1891, 4547; 1911, 4300.

KINGSWOOD. A town in Gloucestershire, England, 3½ miles northeast of Bristol. It is

an important shoemaking centre. Pop., 1901, 11,961; 1911, 12,700.

KING'S YELLOW. A term applied to a pigment which is a mixture of orpiment (ter-sulphide of arsenic) and arsenious acid. It is not a desirable color to use, as it is fugitive.

KINGTEHCHEN, king'té-chén', or **CHINGTECHEN** (originally Changnan). A large and important town in the Chinese Province of Kiangsi, 85 miles southeast of Kiukiang, and one of the *Five Chin*, or great marts of the country. It is specially noted for its potteries and as the seat of the porcelain manufactories, first established here in the reign period *Kingteh* (1004-07), when it received its present name. It is situated along the Ch'ang-an River, in a small plain surrounded by mountains, which supply the kaolin, petuntse, and fuel required in its 3000 furnaces. It was taken by the Taiping rebels in 1855 and was almost depopulated during their stay, which lasted until 1864. The population a century ago was estimated at 1,000,000, at present it is about 250,000. The Taiping rebels destroyed the former porcelain factories, and the present product is inferior in design, coloring, and workmanship. One of the factories, rebuilt in 1868, has a circuit of a mile, and consists of 72 buildings. The town itself is governed by a subprefect. The inhabitants are turbulent, and few foreigners visit the place. Consult: Medhurst, *A Glance at the Interior of China* (London, 1850); Julien, *Histoire et fabrication de la porcelaine chinoise* (Paris, 1856); E. R. Seidmore, *China: The Long-Lived Empire* (New York, 1900).

KING VULTURE. See CONDOR.

KING WILLIAM'S WAR. The name commonly given to that part of the struggle known in European history as the War of the League of Augsburg which was fought in America. From one point of view the War of the League of Augsburg was a war waged by the Grand Alliance against the ambitious schemes of Louis XIV for the territorial aggrandizement of France in Europe; from another it was the first of a series of conflicts, sometimes called the Second Hundred Years' War, between France and England for colonial supremacy. (See FRANCE; LOUIS XIV.) In America the active operations of the war were begun by Frontenac, then Governor of New France, who in the winter of 1689-90 sent out three expeditions, composed largely of Indians, against the border towns of New York and New England. One of these expeditions surprised and destroyed the town of Schenectady, near Albany, and massacred or carried into captivity many of the inhabitants; another brought a like fate to the village of Salmon Falls in New Hampshire; the third took in Casco in southwestern Maine and harried other settlements in northern New England. Aroused by the common danger, Massachusetts Bay, Plymouth, Connecticut, and New York, by invitation of Jacob Leisler (q.v.), de facto Governor of New York, sent delegates to a Colonial Congress, which met at New York in May, 1690, and discussed plans of attack and defense. The Congress determined to attempt the conquest of Canada and planned expeditions both by sea and land. The land expedition, composed chiefly of troops from Connecticut and New York under Fitz John Winthrop, failed miserably; the main body got no farther than the head of Lake Champlain, though a small detachment pushed on and raided La Prairie, opposite Montreal. The

fleet, under command of Sir William Phipps, who earlier in the year had led a successful expedition against Port Royal in Acadia, appeared before Quebec in October, 1690; but, owing to the failure of the English land expedition, the French were able to garrison the town with so strong a force that the English attack was easily repulsed. Phipps then gave up the attempt and with forces much diminished by disease and shipwreck returned home. The remainder of the war consisted chiefly of border raids, by which the French inflicted the greater suffering and loss, but without any substantial results being gained by either side. The struggle was brought to a brief pause in 1697 by the Peace of Ryswick. By its terms Louis XIV gave up, with a few exceptions, all the conquests he had made in Europe since 1678 and recognized William III as King of Great Britain, while there was to be a mutual restitution in America of all conquered territory. Consult: Francis Parkman, "Frontenac and New France under Louis XIV," in his *France and England in North America*, part v (Boston, 1877; new ed., 1903); Ernest Myrand, *Sir William Phipps devant Québec* (Quebec, 1893); S. A. Drake, *The Border Wars of New England, Commonly Called King William's and Queen Anne's Wars* (New York, 1897).

KINGWOOD. A very beautiful wood, used for ornamental work. It is exported from Brazil and is believed to be the wood of a species of *Dalbergia* of the family Leguminosæ. See DALBERGIA.

KIN'IC, or QUIN'IC, ACID (from Quichua *kina*, *quina*, bark, quinine), $C_6H_7(OH)_2COOH$. A hydroaromatic acid (see CARBON COMPOUNDS), occurring in cinchona bark, the coffee bean, and other vegetable products. It is soluble in water, crystallizes in large colorless prisms, and is optically active.

KINKAJOU (probably local native name), or **POTRO**, A South American tropical carnivore (*Potos*, or *Cercopithecus, caudivolutus*) of the raccoon family (Procyonidae), formerly classed with lemurs on account of its woolly aspect, monkey-like dexterity, and strong prehensile tail. Its body is about 18 inches long, and its tail 12 inches; and it is clothed in soft fur, uniform yellowish brown in color, giving it a lemur-like prettiness, which, with its tamability, makes the little animal an attractive pet. It feeds on the eggs and young of birds, small animals, insects, honey and bees, fruits, and the like; and uses its forepaws with a deftness almost equal to that of a monkey. It is found from central Mexico to southern Brazil.

KINKEL, kin'kel, GOTTFRIED (1815-82). A German poet and art critic. He was born at Oberkassel, near Bonn, Aug. 11, 1815, studied theology at Bonn, and was for some time a distinguished Protestant preacher. He lectured at various times, beginning with 1836, in the University of Bonn, first on ecclesiastical history and later on poetry and the history of art. Becoming involved in the revolutionary movements of 1848, he was imprisoned in the fortress of Spandau, whence, however, he escaped in November, 1850, with the assistance of Carl Schurz. Kinkel then came to America, but soon after returned to London, where he resided as a public teacher. In 1866 he went as professor of archaeology and the history of art to Zürich, where he remained till his death, Nov. 13, 1882. His principal works are two volumes of *Gedichte*

(1843; 7th ed., 1872); *Otto der Schütz, eine rheinische Geschichte in zwölf Abenteuern* (1846; 73d ed., 1894), a narrative poem; *Die altchristliche Kunst* (1845), which forms the first part of the unfinished *Geschichte der bildenden Künste bei den christlichen Völkern*; *Die Ahr, Landschaft, Geschichte und Volksleben* (1845); *Nimrod, ein Trauerspiel* (1857); *Mosaik zur Kunstgeschichte* (1876); *Tanagra, Idyll aus Griechenland* (1883).—Kinkel's wife, JOHANNA KINKEL, born at Bonn, July 8, 1810, a distinguished musician, wrote *Acht Briefe über den Clavierunterricht* (1852), and, together with her husband, *Erzählungen* (1849). She died in London, Nov. 15, 1858. Her novel, *Hans Ibeles in London*, was published posthumously in 1860. Consult: Strodtmann, *Gottfried Kinkel* (Hamburg, 1851); Henne am Rhyn, *Gottfried Kinkel, ein Lebensbild* (Zurich, 1883); Martin Bollert, *Georg Kinkels Kampfe um Beruf und Weltanschauung bis zur Revolution* (Bonn, 1913); id., "Kinkel vor dem Kriegsgericht," in *Preussische Jahrbücher*, vol. clv (Berlin, 1914).

KIN'LEY, DAVID (1861—). An American economist, born in Dundee, Scotland. He came to the United States with his father in 1872, graduated at Yale in 1884, and was principal of the high school at North Andover, Mass., for six years. While carrying on graduate work at Johns Hopkins (1890-92), he taught there and in the Woman's College of Baltimore (later Goucher College). He took his Ph D degree at the University of Wisconsin in 1893 and thereafter was connected with the University of Illinois as assistant professor of economics (1893-94), professor of economics, dean of the College of Literature and Arts, and director of the School of Commerce (1894-1906), and dean of the Graduate School. He was a member of the Illinois Industrial Insurance Commission in 1906-07 and of the Illinois Tax Commission after 1910 and in 1913 was president of the American Economic Association. His publications include: *The Independent Treasury of the United States* (1893), *Money* (1904); and monographs, prepared for the National Monetary Commission, on *The Use of Credit Instruments in Payments in the United States* and *The Independent Treasury and the Banks*.

KIN'NEY, COATES (1826-1904). An American journalist and poet, born at Kinney's Corners, N. Y., Nov. 24, 1826. He was educated at Antioch College, Ohio, but did not graduate. He was admitted to the bar (1856) and became connected editorially with journals in Xenia and Cincinnati, Ohio, Springfield, Ill., and elsewhere. He served in the Civil War as major and paymaster and was active in Ohio Republican politics, being a Senator in the State Legislature (1882-83). His verses were collected in *Ke-u-ka and Other Poems* (1855) and *Lyrics of the Ideal and the Real* (1888). One of his lyrics, "Rain on the Roof," as set to music was widely popular.

KINNEY, WILLIAM BURNET (1799-1880). An American politician and diplomat, born in Speedwell, N. J. He studied law after graduating at Princeton, became an editor in Newark, where he founded the *Advertiser* in 1832, and was a prominent Whig. In 1851 he went to Turin as Minister to Sardinia. There and in Florence, where he lived for some time after the close of his mission, he worked on a history of Tuscany, which was not completed. He married

in 1841 Elizabeth Clementine Stedman (q.v.) the author.

KINNICUTT, FRANCIS PARKER (1846-1913). An American physician, brother of Leonard Parker Kinnicutt. Born at Worcester, Mass., he graduated in 1868 from Harvard University and in 1871 from the College of Physicians and Surgeons (Columbia), where he became professor of clinical medicine in 1893. He served as consulting physician to a number of New York hospitals, as director of the Cancer Hospital and of the Children's Aid Society, and trustee of the General Memorial Hospital. He was president of the Association of American Physicians for the year 1906-07. With Dr N. B. Potter he edited the English translation of Sahl's *Clinical Diagnosis* (1905).

KINNICUTT, LEONARD PARKER (1854-1911). An American chemist and sanitarian, brother of Francis Parker Kinnicutt. Born at Worcester, Mass., he graduated from Massachusetts Institute of Technology in 1875 and studied at Heidelberg and Bonn (1875-79), at Johns Hopkins (1879-80), and at Harvard (Sc.D., 1882), where he was an instructor (1880-83), assistant professor (1883-85), and professor of chemistry (1885-90). Thereafter he was director of the chemistry department of Worcester Polytechnic Institute. In 1903 he was appointed consulting chemist of the Connecticut Sewage Commission. He came to be one of the best-known experts in the United States on sewage disposal and water supply. Besides serving as associate editor of the *Journal of Industrial and Engineering Chemistry* after 1908, he published *Sewage Disposal* (1910).

KIN'NOR (Heb. *kinnor*, harp, lyre). A musical instrument of the ancient Hebrews, similar to the zither or harp and provided with 32 strings.

KINO (apparently of East Indian origin). The concrete exudation of certain tropical trees, especially the *Pterocarpus marsupium* (natural order Leguminosae), growing in the East Indies, which yields East Indian kino. East Indian kino is the kind which now chiefly occurs in commerce and is the ordinary kino or gum kino of the shops. It is in small, angular, glistening fragments—the smaller reddish, the larger almost black. Thin pieces are ruby red. It is brittle and easily powdered, has no smell, but a very astringent taste. Bengal kino is a similar astringent substance, produced by *Butca frondosa*. Botany Bay kino is the produce of *Eucalyptus resinifera*.

Kino is soluble in alcohol, but very sparingly soluble in ether and in cold water. Its chief constituents are: kinotannic acid, $C_{18}H_{18}O_8$, pyrocatechin, $C_6H_4(OH)_2$, and kino red, $C_{25}H_{22}O_{11}$, a product of oxidation of kinotannic acid. The astringency of kino is mainly due to its containing kinotannic acid, and in consequence of this property it is employed in medicine in certain forms of diarrhoea. The medicinal tincture of kino forms an excellent gargle for the relaxation of the uvula; it contains kino, glycerin, alcohol, and water. Kino is employed in the East Indies as a cotton dye, giving to the cotton the yellowish-brown color known as nankeen.

KINO. See KENO.

KINO, kē'nō. The Italian form of the name of Eusebius Kühn (q.v.).

KINROSS-SHIRE. The second smallest county of Scotland, lying between the counties

of Perth and Fife (Map: Scotland, E 3). Area, 82 square miles. It is a level plain, almost surrounded by hills. It is well cultivated and has coal, limestone, and sandstone. It manufactures plaids, shawls, and linen goods. Capital, Kinross. Pop., 1801, 6700, 1851, 9000; 1901, 6981; 1911, 7527.

KINSALE. A seaport town and summer resort of County Cork, Ireland, picturesquely situated at the head of Kinsale harbor, on the Bandon estuary, 14 miles south of Cork (Map: Ireland, C 8). It is partly built on the slope of Compass Hill and has steep, irregular streets. The chief relics are Charles Fort, built in 1677, and the church of St. Multose. The harbor will take vessels of 20 feet draft. Kinsale is the headquarters of a large mackerel-fishing fleet. It dates from the Norse invasion. It was captured by the Spaniards in 1601 and was regained by the English in 1602. Pop., 1901, 4250; 1911, 4020.

KIN'STON. A city and the county seat of Lenoir Co., N. C., 77 miles by rail southeast of Raleigh, on the Neuse River, and on the Atlantic Coast, the Carolina, the Norfolk Southern, and the Kinston railroads (Map: North Carolina, E 2). It has the Rhodes Military Institute, a public library, fine post-office and high-school buildings, and the Hermitage Mansion, once the State capitol. The city is surrounded by a productive agricultural region, largely devoted to cotton and tobacco cultivation, and is an important tobacco market, with several large warehouses, packing establishments, stemmeries, etc. There are also cotton mills, carriage and wagon works, a turpentine distillery, foundry and machine shops, lumber, knitting and silk mills, and manufactures of boxes, barrels, shingles, etc. The water works and electric-light plant are owned by the municipality. Pop., 1900, 4106; 1910, 6995.

KINTYRE, kin'tir'. A peninsula in Scotland. See CANTIRE.

KINYOUN, kin'yūn, JOSEPH JAMES (1860-). An American pathologist. He was born at East Bend, N. C., and graduated from Bellevue Hospital Medical College (New York University) in 1882. From 1886 to 1902 he served in the United States Marine Hospital Service. At Georgetown University he was professor of hygiene and bacteriology (1890-92), professor of pathology and bacteriology (1892-99), and after 1903 special lecturer on immunity, serum therapy, and preventive inoculations. In 1896 Georgetown gave him the degree of Ph.D. He served as professor of pathology at George Washington University in 1907-09 and was afterward pathologist of the Washington Tuberculosis Hospital.

KINZIE, kin'zi, JOHN (1763-1828). An American pioneer, born in the city of Quebec, Canada. When he was very young, his father died and left the family in great poverty. John left home as a boy of 10 and went to New York City. After a wandering life, during which he traded with the Indians in the West and Middle West, he finally (1804) settled in Illinois on the site of the city of Chicago. There he bought out the French fur trader Le Mai and established himself, the first white man to make his home permanently at this point, in a cabin built in 1779 by a native of San Domingo, Jean Baptiste Point de Saible. Consult Kinzie, *Wau-bun, or the Early Day in the Northwest* (New York, 1856).

KIOPRILI. See KIUPRILI.

KIOSK, kē-ōsk'. Primarily, in Oriental architecture, a pavilion of a permanent character; by extension, in Turkish usage, any small palace of light and elegant architecture, as distinguished from a *serai*, or great palace. The group of buildings forming the residence of the former Sultan Hamid II as the Bosphorus is known as the Yildiz Kiosk. The Bagdad Kiosk in the Seraglio Park at Constantinople is a charming summer palace, decorated with Persian tiles both outside and inside; the Chinili Kiosk, another small palace in the same park, built c.1463, is now a museum of Ottoman art. In European architecture the word designates an open pavilion of a decorative character; in Paris it is applied to the permanent newspaper stands along the boulevards and similar structures.

KIOTO. See KYOTO.

KIOWA, kē'ō-wā. An important plains tribe, apparently constituting a distinct linguistic stock. The popular name is a corruption of *Kā-v-gwā*, the name by which they call themselves. According to their own traditions, which are borne out by those of other tribes, they at one time lived in the Rocky Mountains of western Montana on the headwaters of the Missouri and Columbia rivers. From this position they moved out into the plains and formed an alliance with the Crow. Following the buffalo herds and pressed by the Sioux and Cheyenne, they moved southward, halting for a time in the Black Hills, then making their camps upon the Platte, and later still upon the upper Arkansas. Here they first came into contact with the Comanche farther to the south, with whom they carried on war for some time, but with whom they became confederated in 1790. At a later period the Kiowa made peace with the Cheyenne and Arapahoe. They were noted as one of the most hostile and unruly tribes of the plains and maintained almost constant warfare along the American and Mexican frontiers until the great Treaty of Medicine Lodge, Kans., in 1867, when, with the Cheyenne, Arapahoe, Comanche, and Kiowa Apache, they consented to give up their free range and come upon reservations in what is now Oklahoma. They were slow to move, however, and it required a winter campaign by Custer the next year to bring them in. In 1874 they again broke out, together with most of the other four tribes, but were subdued the next year by Mackenzie, who shot their ponies, confiscated their arms, and deported a number of their chiefs and warriors to Florida. Since then they have remained quietly upon their reservation, which was thrown open by treaty in 1901, so that they are now in law American citizens. Their great annual ceremony was the sun dance (q.v.), and their great tribal palladium was the Taimé, a stone image somewhat resembling a human figure. They were subdivided into six recognized bands and had a well-organized military order of six degrees. They have also a pictograph calendar running back some 70 years. Associated with them, and constituting one of the six bands of their tribal circle, is a small tribe of Athapascan stock, locally known as Kiowa Apache. The term is a misnomer, however, excepting as it indicates the remote stock affinity; for these people, who call themselves *Nadishah-dina*, have come down along the plains and have no tradition of a time when they were not associated

with the Kiowa. The greatest strength of the Kiowa at any time within a century was probably less than 1800. They number now about 1100, while the Kiowa Apache number 160. Consult Mooney, "Calendar History of the Kiowa Indians," in *Seventeenth Report of Bureau of American Ethnology* (Washington, 1898).

KIOWA APACHE. See KIOWA.

KIP, LEONARD (1826-1906). An American author, born in New York, and educated at Trinity College, Hartford. He studied law and long practiced in Albany, where he was for 10 years president of the institute. Besides contributing to periodicals, he published *California Sketches* (1850); *Volcano Diggings* (1851); *Enone* (1868); *The Dead Marquise* (1873); *Hannibal's War* (1878); *Under the Bells* (1879); *Nestlenook* (1880).

KIP, WILLIAM INGRAHAM (1811-93). An American Protestant Episcopal bishop. He was born in New York City, of Breton ancestry, graduated at Yale in 1831 and at the General Theological Seminary in 1835, was rector of St. Peter's, Albany, from 1838 to 1853, and in the latter year was chosen Missionary Bishop of California. He became Bishop four years later. Among his works are: *The Lenten Fast* (1843); *Early Jesuit Missions in North America* (1846); *The Catacombs of Rome* (1854); *The Olden Time in New York* (1872); *The Church and the Apostles* (1877); *Double Witness of the Church* (22d ed., 1904).

KIPCHAK, kip-chāk'. A Mongol khanate. See KIPTCHAK.

KIPLING, (JOSEPH) RUDYARD (1865-). An English novelist, short-story writer, and poet. He was born in Bombay, India, Dec. 30, 1865, the son of John Lockwood Kipling, who was for many years connected with the schools of art at Bombay and Lahore. His mother, Alice Macdonald, whom Kipling called "the wittiest woman in India," was the daughter of a Methodist clergyman at Endon, Staffordshire. Her two sisters married Sir Edward Poynter and Sir Edward Burne-Jones (qq.v.). At the age of five Kipling was brought to England, and in 1878 he entered the United Services College at Westward Ho, Devonshire. While there he edited the *College Chronicle*, for which he wrote verse and prose. On his school life he drew freely for the incidents narrated in *Stalky & Co.* (1899). Returning to India, he was on the editorial staff of the *Lahore Civil and Military Gazette* (1882-87) and afterward assistant editor of the *Pioneer* at Allahabad (1887-89). To these and other papers he contributed satirical verses and sketches of Anglo-Indian life. *Schoolboy Lyrics* (1881) was followed by *Echoes* (1884), *Departmental Duties* (1886), and *Plain Tales from the Hills* (1887). The last two represent the best of his early work in verse and prose. *Soldiers Three*, *The Story of the Gadsbys*, *In Black and White*, *Under the Deodars*, *The Phantom 'Rackshaw* and *Other Tales*, and *Wee Willie Winkie* and *Other Child Stories*, all published at Allahabad during 1888-89, collectively assured the author high rank as a short-story writer. His travel sketches written at this time were collected in 1899 in two volumes as *From Sea to Sea*.

Having now become well known in India, Kipling visited England and the United States in search of a publisher, but failed at first. His impressions of America, originally contributed

to the *Pioneer*, were afterward published in New York, under the title *American Notes* (1891). It was in 1890 that Kipling, arriving in London, suddenly found himself famous. From 1892, when he married the daughter of H. Wolcott Balestier of New York and settled in Vermont, he remained in the United States until 1896. To this second period of his life belong *Barrack Room Ballads* (1892) and *The Seven Seas*, poems (1896), and these stories: *Life's Handicap* (1890); *The Light that Failed* (1891); *The Naulahka*, written in collaboration with Wolcott Balestier, Kipling's brother-in-law (1891); *Many Inventions* (1893); the two *Jungle Books* (1894-95), stories; *Captains Courageous* (1897); *The Day's Work* (1898). While again in the United States in 1899, Kipling suffered an acute attack of pneumonia and was not expected to live. After his recovery he visited the scene of war in South Africa. In 1907, during travel in Canada, especially in the Canadian Northwest, he was enthusiastically received. His two poems "The Recessional" (1897), written on the occasion of Queen Victoria's Diamond Jubilee (included in *The Five Nations*, 1903), and "The White Man's Burden" became especially famous. Kipling's later fiction writing includes *Kim* (1901), a story of life in India; *The Just-So Stories*, a book for children (1902); *Traffics and Discoveries* (1904); *Puck of Pook's Hill* (1906); *Actions and Reactions* (1909); *Rewards and Fairies* (1910). *A History of England*, written with C R L Fletcher, appeared in 1911. *Songs from Books*, including some of his earliest verse, in 1912, and *The Harbor Watch*, a play, in 1913. The complete *Writings in Prose and Verse of Rudyard Kipling*, the Outward Bound edition, began to appear in New York in 1897. Up to 1915, 25 volumes had been published, the twenty-fifth in 1911. The illustrations for this edition were modeled in clay by Kipling's father and photographed for reproduction. In the Seven Seas edition (Garden City, N Y) 18 volumes out of 23 had appeared up to 1915. This edition contains, among other material not previously in book form, Kipling's "Letters to the Family," written during his Canadian tour in 1907.

Perhaps the most original genius among English writing novelists of the later nineteenth and early twentieth century, for more than a decade Kipling enjoyed an extraordinary and world-wide popularity. Although before he was 40 years old his work began to decline in freshness and power, much of his earlier writing has the qualities of permanency. He represents admirably certain phases of the spirit of his age and of the Anglo-Saxon race. Vigor, audacity, and efficiency are the virtues that most appeal to him, and they characterize his own thought and his literary style to a remarkable degree. A genuine master of language, though with certain limitations, he ranges, according to his theme, from the brutal speech of the barracks and the vivid slang of the smoking room to a diction that is noble and majestic. He has an almost inspired instinct for the essential thing, for that which stands out as typical of the whole, and he can flash it upon the minds of his readers in startling and impressive felicity of phrasing.

In his prose he is at his best in telling of India, whether it be the India of the Anglo-Indian or the mysterious India of the native; he has, in fact, done for India what Sir Walter

Scott in his own entirely different way did for the Scottish Highlands: he has peopled the country of his birth with scores of men and women who will long be remembered. His *Soldiers Three* are as sure of immortality as the *Three Musketeers* of Dumas, with whom they have often been compared, and his *Gadsbys*, *Hauksbees*, and *Stricklands* are hardly inferior. Such stories as "The Man who Would be King," "The Drums of the Fore and Aft," and "Without Benefit of Clergy" are in a fair way to become classics. The long romance *Kim* will stand among Kipling's great achievements. No one else could have written it, and it displays the whole of India—its vagueness, its multitudinous vastness, and its incomprehensibility—in one great panoramic revelation. The two *Jungle Books* represent a tour de force of another kind, but no less extraordinary. They take us back to the older India of unbroken jungle, haunted by memories of the world's long infancy when man and brute were not yet clearly differentiated, but still crouched down together on the breast of mother earth. As a poet, Kipling has written with a spirit and a lyric swing that have caught and held the world's attention. In many of his poems he has so accurately voiced the feelings and aspirations of British imperialism as to have been styled "the Laureate of the Empire." Many of his stanzas and lines and burning phrases are graven in the national memory. Because of his past glory, if not his present fame, and in to the poet-laureateship, the British government was severely criticized in 1913 for failing to appoint him to the post instead of Robert Bridges (q.v.). In 1907, however, fitting recognition of his distinction had come in the award of the Nobel prize for literature, and he received honorary degrees from McGill, Durham, Oxford, and Cambridge universities.

Kipling's imperialistic propaganda and his practice of giving the government advice on every subject relating to the colonies eventually drew him into the shallower waters of political life. For the Liberal Unionists he made his first stump speech in 1912. It was not a striking success from the standpoint of originality, which apparently was all that his critics were looking for; but it may have helped induce the Bordesley Liberal Unionist Association in June, 1914, to seek Mr. Kipling as their candidate for Parliament. The offer was not accepted. Because he had given offense as a violent Ulsterite, Kipling twice aroused Nationalist comment in the House of Commons. In 1911 certain members held that the Fletcher-Kipling *History of England* should be proscribed as a textbook for use in the schools because it contained "libels on the Irish race." The President of the Board of Education declined to take the action suggested, and in 1912 Sir Rufus Isaacs, the Attorney-General, refused before Parliament to prosecute Kipling for sedition because of his verses entitled "Ulster." At an Anti-Home Rule demonstration on Tunbridge Wells Common in May, 1914, Kipling was the principal speaker, and in the same month he contributed a sonnet to the first issue of the *Covenanter*, the organ of the League of British Covenanters. His attitude on woman suffrage, certainly on the militant variety, was declared in 1911 by a poem which, with its refrain of "The female of the species is more deadly than the male," cre-

ated a great stir. At the time of England's entrance into the European War in 1914 Kipling's poem "For All we Have and Are" compared favorably with other verse produced by the occasion. Early in 1915 it was announced that Kipling would write marching songs for the soldiers, to be set to old English tunes. A war story, *Swept and Garnished*, which appeared in the *Century* magazine, was highly praised.

Bibliography. J. M. Barrie, "Mr. Kipling's Short Stories," in *Contemporary Review* (London, 1891); Edmund Gosse, *Questions at Issue* (ib., 1893); F. L. Knowles, *A Kipling Primer* (Boston, 1899); Richard Le Gallienne, *Rudyard Kipling: A Criticism* (New York, 1900), not wholly sympathetic, but interesting, and containing a bibliography with much information, William Archer, "Mr. Kipling's Stories," in *Poets of the Younger Generation* (London, 1902); "Bibliography of Kipling to 1903," in *English Illustrated Magazine* (new series, vol. xxx, ib., 1904); P. E. More, "Kipling," in *Shelburne Essays* (2d series, New York, 1905); W. A. Young, *Dictionary of the Characters and Scenes in the Stories and Poems of Rudyard Kipling, 1886-1911* (ib., 1911); Ralph Durand, *Handbook to the Poetry of Rudyard Kipling* (ib., 1914); R. T. Hopkins, *Rudyard Kipling: A Survey of his Literary Art* (London, 1914).

KIPPER (probably from Scotch *kyp*, putting point, hook, a variant of *cop*, Ger. *Kopf*, head, in allusion to the projecting gristle on the lower jaw of a male salmon after spawning; less probably from *kyp*, hide of a young beast, from ME *kyp*, Icel. *kippa*, to snatch, Dutch *kypen*, to snatch, hatch). Originally, in Scotland, a salmon after the spawning period; but as fish at this time are not good for food if fresh, they are usually split open, salted, and dried; hence kipper or kippered salmon came to be generally used to denote smoked or pickled salmon. The transfer of this process to the herring caused the term to mean, in England, and especially about Yarmouth, the headquarters of the herring fishery, a herring so treated.

KIPTCHAK, kèp-chàk', or **KAPTCHAK**. A Mongol khanate, better known as the Kingdom of the Golden Horde, ruled by the successors of Genghis Khan (died 1227). At the time of its greatest expansion it extended from the Dnieper in Europe far into Central Asia. Its capital, Sarai, founded in 1242, was situated on the Volga near the modern Tsaritsyn. It was plundered by Timur in 1395. In the course of time the Kingdom of the Golden Horde split up into independent khanates, which fell one by one into the power of the Russians. See GOLDEN HORDE.

KIRBY, kër'bi, WILLIAM (1759-1850). An English entomologist, born at Winesham Hall, Suffolk. He graduated from Gonville and Caius College, Cambridge (B.A., 1781; M.A., 1815), and, having been ordained, obtained the living of Barham, Suffolk, where he spent his life. One of the first fellows of the Linnean Society, to whose *Transactions* he made many important contributions, he became famous for his entomological writings, of which the most notable are a monograph on English bees, *Monographia Apium Angliæ* (2 vols., 1802); *Introduction to Entomology* (1825-26), with William Spence; and one of the Bridgewater Treatises, *The History, Habits, and Instincts of Animals* (1835). In 1837 he was elected honorary president of the Entomological Society of London.

KIRBY, kër'bi, WILLIAM (1817-1906). A Canadian author, born at Kingston-upon-Hull, England. He came to Canada with his parents in 1832. Settling at Niagara, Ontario, in 1839 he conducted the *Niagara Mail* for 20 years and was collector of customs there from 1871 to his retirement in 1895. Kirby was the author of the best Canadian historical romance yet written, *Le Chien d'Or*, or *The Golden Dog* (1877; new ed., Boston, 1896). The romance takes its name from a tablet on the façade of a building in Quebec, representing a couchant dog gnawing the thigh bone of a man, and deals with the great struggle of the French to hold the Canadas against the English. Besides other prose works, Kirby also published *U. E.* (1859), an epic poem in Spenserian stanzas depicting incident and character in the times of the United Empire Loyalists, and *Canadian Idylls* (new ed., 1894). Consult T. G. Marquis, "English-Canadian Literature," in *Canada and its Provinces*, vol. vi (Toronto, 1914). See also CANADIAN LITERATURE.

KIRCHBACH, kër'bac, HUGO EWALD, COUNT (1809-87). A German soldier, born at Neumarkt, Silesia. In 1826 he entered the Prussian infantry service as an ensign, distinguished himself during the campaign of 1866 by his successes at Nachod, Skalitz, and Schweinschadel, and in 1870 was appointed general commanding the Fifth Army Corps. In the Franco-Prussian War he played an important part, particularly at Weissenburg, Wörth, Sedan, and in the siege of Paris, when he repulsed the French at the last great sortie of Jan. 19, 1871. He retired from the army in 1880 and was ennobled in the same year.

KIRCHBACH, WOLFGANG (1857-1906). A German poet and critic. He was born in London, but was educated at Dresden and Leipzig, studying music first and then history and philosophy. In 1888 he settled in Dresden, where he was editor of the *Magazin für Literatur des In- und Auslandes*. From 1896 he resided in Berlin. He was one of the beginners in the literary movement called *Das jüngste Deutschland*, largely influenced by foreign literature. Among his works may be mentioned *Salvator Rosa* (1880), a novel; *Die letzten Menschen* (1889), a drama; *Das Leben auf der Walze* (1892, 20th ed., 1907), a novel; *Die Lieder vom Zweirad* (1900). Consult A. Stoessel's article in *Nord und Süd* (Breslau, 1895).

KIRCHENTAG, kër'ken-tag, EVANGELISCHER (Ger., evangelical church day). An association of ministers and laymen of the Lutheran, German Reformed, United Evangelical, and Moravian churches in Germany, for the promotion of the interests of religion, without reference to their denominational differences. The first meeting took place in 1848, at Wittenberg, in the church to which Luther affixed his theses. Subsequent meetings were held, at first annually, later at irregular intervals, till 1872. The strict Lutherans never joined the movement; Hengstenberg, Stahl, and their followers withdrew in 1857, and some years later Lipsius, Schenkel, and their group. No conferences have been held since 1872.

KIRCHER, kër'ër, ATHANASIUS (1601-80). A Roman Catholic scholar. He was born at Geisa, near Fulda, May 2, 1601, became a Jesuit (1618), and professor of mathematics, philosophy, and Oriental languages at the University of Würzburg. In 1633 he fled from the disorder

ders of the Thirty Years' War to France and spent two years in the Jesuits' college at Avignon in the study of antiquities. He was preparing to return to Austria as professor of mathematics at Vienna when he received an order to repair to Rome and obeyed. In 1637 he accompanied Cardinal Frederick of Saxony to Malta and was received with great honor by the Knights of St. John. For eight years he was professor of the Collegium Romanum at Rome, and then, without a professorship, continued his archaeological studies. He died in Rome, Nov. 28, 1680. He collected a splendid museum of antiquities, which he left to the Roman College. He was a man of extensive and varied erudition and a copious writer, his works written in Rome occupying 44 folio volumes. Of his works the most important are *Prodromus Coptus sive Ægyptiacus* (1636), *Edipus Ægyptiacus* (1652-55), *Mundus Subterraneus* (1664), *China Illustrata* (1667); *Latium* (1671), with maps and figures. Consult his *Life* by Behlan (Heiligenstadt, 1874) and Brischar (Wurzburg, 1876).

KIRCHHOFF, kĕrk'hōf, ALFRED (1838-1906). A German geographer, born at Erfurt. He was educated at Jena and Bonn, from 1871 to 1873 was lecturer on geography at the Kriegsakademie of Berlin, and in the latter year was appointed to the chair of geography in the University of Halle. In 1904 he retired. His writings include *Schulbotanik* (1865), *Pflanzen- und Tierverbreitung* (1890), *Unser Wissen von der Erde* (1886-93), *Menschen und Erde* (1901); *Schulgeographie* (20th ed., 1908); *Erdkunde für Schulen* (2 parts, 17th ed., 1912-13).

KIRCHHOFF, GUSTAV ROBERT (1824-87). A German physicist, born at Königsberg. He studied natural philosophy and mathematics at the University of Königsberg. In 1850 he became professor of physics at Breslau, in 1854 at Heidelberg, and from 1875 until his death filled the chair of physics at the University of Berlin. His researches in thermodynamics and in several other branches of physical science have been of great value. For example, a widely known theorem, referred to as "Kirchhoff's equation," shows how the change of the vapor pressures of mixtures with the temperature is influenced by the heat evolved or absorbed when the given mixture is first formed from its components. But Kirchhoff's principal achievement was the discovery, jointly with Bunsen, of the spectroscopy. The discovery was perfected in 1859 and was published under the title *Untersuchungen über das Sonnenspektrum und die Spektren der chemischen Elemente*. Kirchhoff's *Gesammelte Abhandlungen* were published in 1882 and 1891.

KIRCHHOFF, kĕrk'hōf, JOHANN WILHELM ADOLF (1826-1908). An eminent German classical scholar, born at Berlin. He was professor in the University of Berlin from 1865 till his death. Kirchhoff's scientific studies covered a wide range in linguistics, antiquities, and Greek epigraphy. In each field his work was distinguished. Of his very numerous publications the most important are: *Umbrische Sprachdenkmäler* (1849-51); *Die Stadtrecht von Bantia* (1853); *Euripides* (1855), the first critical edition based on a careful collation of all the manuscripts; *Die homerische Odyssee und ihre Entstehung* (1859); *Die Composition der Odyssee* (1869); *Ueber die Entstehungszeit des herodotischen Geschichtswerkes* (2d ed., 1878); *Studien zur Geschichte des griechischen Alphabets*

(4th ed., 1887), the most important work on the subject; *Thucydides und sein Urkundenmaterial* (1895). His works further include many monographs on Athenian financial administration, Greek literature, etc. He edited Plotinus (1856), Æschylus (1880), the Pseudo-Xenophontic *Respublica Atheniensium* (3d ed., 1889), etc. He was editor of the Christian inscriptions in the fourth volume of the *Corpus Inscriptionum Græcarum* (1859) and of the *Corpus Inscriptionum Atticarum*, vols. 1 and iv (Berlin, 1873-), and was an editor of *Hermes* (1866-81).

KIRCHMANN, kĕrk'mān, JULIUS VON (1802-84). A German jurist and philosopher, born near Merseburg. He was educated at Leipzig and Halle. In 1846 he was made state's attorney in the Criminal Court of Berlin and two years afterward was chosen to the Prussian National Assembly, where he played a prominent part as a member of the left centre. He was soon made vice president of the Court of Appeals at Ratibor. From 1871 to 1876 he was a member of the German Reichstag. He first attracted attention as a philosopher by his brochure *Die Wertlosigkeit der Jurisprudenz als Wissenschaft* (1848). His other philosophical writings include: *Ueber Unsterblichkeit* (1865); *Ästhetik auf realistischer Grundlage* (1868); translations of and comments on parts of Aristotle, Bacon, Grotius, Hume, Leibnitz, and Spinoza, and a remarkable edition of Kant in the *Philosophische Bibliothek*, edited by him (1868 et seq.), and of Hobbes, *De Cive* (1873). His philosophy was an attempt to mediate between realism and idealism. Consult Lasson and Meineke, *Julius von Kirchmann als Philosoph* (Halle, 1885).

KIRCHNER, kĕrk'nĕr, THEODOR (1824-1903). A German composer, born at Neukirchen, Saxony. From 1838 to 1842 he studied in Leipzig under J. Knorr (piano) and K. F. Becker (organ and theory). He subsequently was a pupil of J. Schneider in Dresden and of the Leipzig Conservatory for a short time, becoming in 1843 organist at Winterthur. From 1862 to 1872 he was a teacher in the music school at Zurich, then became director of the Würzburg Conservatory (1873-75), and finally in 1890 settled in Hamburg. Schumann and Mendelssohn were his friends, and Kirchner was especially influenced by the former's music. His compositions are mostly for the piano, and his preludes, caprices, and nocturnes are charming.

KIRCHWEY, GEORGE WASHINGTON (1855-) An American legal scholar, born at Detroit, Mich. In 1879 he graduated from Yale University, in 1882 was admitted to the bar, and for 10 years practiced law at Albany, N. Y. He was professor of law in Union University, and dean of the Albany Law School (1889-91); and in Columbia University professor of law (1891-1901), dean of the School of Law (1901-10), and Kent professor of law after 1902. Professor Kirchwey was a pioneer in the introduction of the case method of studying law. In 1912 he had an important part in the organization of the Progressive party. He became an associate editor of the *American Journal of International Law*, president of the New York Society of Criminal Law and Sociology, and a commissioner on prison reform for the State of New York. In 1915 he delivered the Clark memorial lectures at Amherst College, on "The Relation of Law and Legislation to Social Con-

tol." He edited *Historical Manuscripts, State of New York* (1887-89), had charge of the law department of the *New International Encyclopedia*, and published *Readings in the Law of Real Property* (1900) and *Select Cases and Other Authorities on the Law of Mortgage* (3 parts, 1900-02).

KIRGHIZ, kër-gëz', or **KIRGHIZ-KAZAKS**. The chief part of the Central Asiatic group of Turko-Tataric (Mongolian) peoples. They number, altogether, some 3,000,000, ranging over the great steppe and marshy area from the borders of European Russia to those of western China, northward beyond the Sir-Darya. The ancient division of the Kirghiz into hordes is still retained. The Great Horde has its habitat partly in Russian and partly in Chinese territory in the Yarkand-Tashkent-Alatau region; the Middle Horde, or Siberian Kirghiz, chiefly in the Balkash-Irtish-Tobol region; the Little Horde, in the steppes north of the Aral and Caspian seas, to the west of the Middle Horde. To the Little Horde belong the Kirghiz of the Volga-Ural steppes in European Russia, who for the last century have wandered over that country. The Kirghiz are for the most part characteristically a nomadic, tent-dwelling people, living by their flocks and herds, though recently some of them (e.g., a part of the Little Horde) have taken somewhat to agriculture. By language the Kirghiz belong to the Indo-European stock, and the folk literature of the various hordes evidences no little poetical spirit and a marked sense of humor. They preserve some of the old characters of the Turko-Tataric race, and beneath the creed of Islam, which so many of them have accepted, the more ancient Shamanism is often scarcely hidden. Some few of the western Kirghiz are Buddhists. The Kara-Kirghiz (black Kirghiz) of the Thian Shan region between the Lake of Issik Kul and the Kuen-lun Mountains, who number some 350,000, are known to the Russians as Diko-kamenije Kirgisi (wild mountain Kirghiz), and have a less favorable reputation than some of the other sections of this widely distributed people. Their language is thought to be more archaic, their folk poetry more sui generis, while they have also retained more perfectly some of the ancient customs and beliefs of the stock. The name Kirghiz has often been loosely employed in the sense of 'nomad,' and not all of the tribes and fractions of tribes thus denominated are of Turko-Tataric ancestry. The Kirghiz also possess, in all probability, not a little Aryan and other non-Mongolian blood. The Kara-Kirghiz are, perhaps, the most Mongolian of all, representing best the Turko-Tataric type of the milieu of Turkestan—brachycephalic, medium-statured (or a little taller), and of somewhat darker complexion.

Bibliography. Besides the Russian studies of Grodekow (1889), Kharuzin (1889-95), etc., reference may be made to Seeland, "Les Kirghis," in the *Revue d'Anthropologie* (Paris, 1886), which summarizes a good deal of the Russian literature on the subject; also to Shaw, *Visits to High Tartary* (London, 1871), Vambéry, *Die primitive Kultur des turko-tatarischen Volkes* (Leipzig, 1879); Hellwald, *Centralasien* (ib., 1880); Vambéry, *Das Türkenvolk* (ib., 1885); Jules Brocherel, "The Kirghiz," in *Scottish Geographical Magazine*, vol. xviii (Edinburgh, 1902); Richard Karutz, *Unter Kirgisen und Turkmenen, aus dem Leben der Steppe* (Leipzig, 1911), containing a bibliography.

KIRILLITSA, kè-ril'it-sa, or **CYRILLITSA**. See **CYRILLIC ALPHABET**.

KIRIN, kè-rén' (Chin. *Ki-lin*, lucky forest). The central one of the three provinces of Manchuria, bounded on the north by the Sungari River, on the east by the Usuri and the Russian Maritime Province, on the south by Chosen and the Province of Szechwan, and on the west by the Sungari. Area 110,000 square miles (Map: China, N 3). It consists of two parts—a prairie or level part lying within the loop of the Sungari, and a mountainous part. The chief mountain is the Shan-a-lin (otherwise known as the Ch'ang Peh Shan, or Ever-White Mountain) with peaks from 8000 to 10,000 feet high and covered with snow. In general the trend of the ranges in this mountainous part is from northeast to southwest, as in China proper. The chief rivers are the Sungari, the Hurka, and the Usuri. The first of these is the most important. It rises on the northwest side of the Shan-a-lin, flows north by west, receives many tributaries, passes the city of Kirin, then west to about lat. 44° 30' N., where it enters Mongolia and takes a northwest direction, passes Petuna, where it receives the Nonni, flows east and finally northeast, tending to north until it reaches the Amur. The Usuri River, in lat. 44° N., long. 131° E., receives numerous tributaries and after a course of 500 miles also joins the Amur. The Hurka River, not far from the source of the Sungari, takes a northerly direction past Ninguta, receives two important tributaries from the west, and joins the Sungari at the city of Sansing (which lies on the south bank of the Sungari, east bank of the Hurka, and southwest bank of the Kung-ho, which here joins the others). From Petuna east the country is a level plain, broken with insignificant undulations, cultivated in the vicinity of the villages, but elsewhere covered with a sea of waving tall grass.

The soil of the province is fertile, the chief products are pulse, millet, maize, barley, potatoes, and the poppy. Tigers abound in the mountainous part, and black bears, wild boars, panthers, and polecats are numerous, eagles are also found, and the game includes pheasants, quail, and grouse. The population of Kirin is estimated at 2,060,700. The city of Kirin (q.v.) is the capital; pop., about 80,000. Sansing (q.v.) is an open port. Other treaty ports are Harbin (q.v.), Hunchun (pop., 3700), Lungchingtsun (pop., 500), and Suifenho (pop., 2000). The total trade of Hunchun in 1912 amounted to 766,798 taels, of Lungchingtsun 472,381 taels, and of Suifenho 22,276,587 taels. (See **MANCHURIA**.) The province on the north is called Tsitsihar, or in Chinese Heilungkiang, or Black Dragon River.

KIRIN. The capital of the province of the same name in Manchuria, beautifully situated at the foot of hills and on the Sungari River, about 250 miles west of Vladivostok (Map: China, N 3). The chief article of trade is tobacco, raised in that region and exported to China. Timber and furs are important. There are many squares beautifully ornamented with flowers in pots. The streets are paved with wood blocks; wood is abundant and cheap, and boats and small junks are built here. There is a large lumber trade. Kirin is called by the Chinese Ch'uen Chang (navy yard). Silver is mined, and there are powder works and an arsenal. The population is variously estimated at 80,000 to 120,000.

KIRIBI, kâ-ré-ré. See **CARIBI**.

KIRIU, kâ-ré-oo. A town of Japan. See **KIRYU**.

KIRJATH-SEPHER, kâr-jâth-sê'fêr. According to Josh. xv. 15 (Judg. i. 11), the older name of a Canaanitish town, which the Hebrews called Debir. It was located in the hill country of Judah. An attempt has been made to identify it with the modern el-Dhabariyeh, four or five hours southwest of Hebron, but there are serious objections to this identification. Kirjath-Sepher, explained as a Hebrew name, would seem to mean 'book-city.' It has therefore been claimed that the city contained the public records of the Canaanites or of earlier history or was the location of a great library. The analogy of Sippara in Babylonia, which seems to mean 'book-(city),' has been quoted, and there is nothing impossible in a Judean town having had a library of some sort in connection with its sanctuary long before the Hebrew invasion. But old manuscripts of the Greek version give the second part of the name as *Sophar*, and this is in harmony with the Egyptian *shu-pa-ra*, which corresponds to Hebrew *Sopher*, and would give the meaning 'town of the Scribe.' The city is said to have been inhabited by the Anakim (Josh. xi. 21) and to have been the seat of a king (x. 39; xii. 13) before it was conquered by Othniel (Judg. i. 23; cf. Josh. xv. 17) or Joshua (Josh. x. 38 f.). It was included among the cities of refuge (Josh. xxi. 25). Consult: W. Max Müller, *Asien und Europa* (Leipzig, 1893); G. F. Moore, *The Book of Judges* (New York, 1895); T. K. Cheyne, in *Encyclopædia Biblica*, vol. ii (ib., 1901); Eduard Meyer, *Die Israeliten und ihre Nachbarstämme* (Halle, 1906).

KIRK, kêrk, EDWARD NORRIS (1802-74). An American Congregational clergyman. He was born in New York City, Aug. 14, 1802, graduated at Princeton in 1820, and, after studying law for 18 months, entered the 'law school' at the same place, where he was employed for some time as an agent of the American Board of Commissioners for Foreign Missions and in 1828 became pastor of a newly organized Presbyterian church in Albany, N. Y. In 1839 he became secretary of the American and Foreign Evangelical Society; in 1842, pastor of the newly organized Mount Vernon Congregational Church in Boston, where he preached until 1871, when ill health compelled him to retire from active service. In 1856 he visited Paris, as an agent of the American and Foreign Christian Union, to establish Protestant worship there. His style of preaching was fervent and pungent, and he was unusually successful in developing and directing revivals. He published *Memorial of Dr. Chester* (1829), *Canon of Holy Scriptures* (1862), and two volumes of *Sermons* (1840, 1860). He died March 27, 1874. Consult D. O. Mears, *Life of Edward Norris Kirk* (Boston, 1877).

KIRK, ELLEN WARNER OLNEY (1842-). An American novelist, sometimes writing under the pen name Henry Hayes, born at Southington, Conn., the daughter of Jesse Olney the geographer. She was married in 1879 to John Foster Kirk (q.v.), and settled in Germantown, Pa. Her novels, which deal chiefly with Eastern American life, include: *Love in Idleness* (1876); *Through Winding Ways* (1880); *A Lesson in Love* (1883); *A Midsummer Madness* (1884); *The Story of Margaret Kent* (1886); *Sons and Daughters* (1887); *A Daughter of Eve*

(1889); *Walford* (1890); *Ciphers* (1891); *Maidens Choosing* (1892); *The Story of Lawrence Garth* (1895); *A Revolutionary Love Story* (1898); *Dorothy Deane* (1899); *Dorothy and her Friends* (1900); *Our Lady Vanity* (1901); *A Remedy for Love* (1902); *The Apology of Ayliffe* (1904); *Marcia* (1907).

KIRK, JOHN FOSTER (1824-1904). An American bibliographer and historian, born at Frederickton, N. B. He was educated at Halifax and Quebec, came in 1842 to Boston, and was secretary of the historian W. H. Prescott from 1847 to 1859, accompanying him to Europe. At that time and afterward he contributed frequently to the *North American Review* and the *Atlantic Monthly*. From 1870 to 1886 he edited *Lippincott's Magazine* and from 1885 to 1888 lectured on European history in the University of Pennsylvania. He wrote a *History of Charles the Bold* (3 vols., 1863-68), edited the *Works of W. H. Prescott* (1870-74), and compiled a supplement to *Allibone's Dictionary of Authors* (1891).

KIRKBRIDE, THOMAS STORY (1809-83). An American neurologist born in Morrisville, Bucks Co., Pa. He graduated from the medical department of the University of Pennsylvania in 1832 and became in the same year resident physician to the Friends' Asylum for the Insane at Frankfort. In 1833 he was appointed to the ward for the insane in the Pennsylvania Hospital in Philadelphia. Upon the establishment of the New Pennsylvania Hospital for the Insane he was made its first superintendent. He raised more than \$350,000 for a hospital for male patients, which was completed in 1859. He was the first physician in the country to place the sexes in separate institutions and in his annual reports made many suggestions for the improvement of hospital construction and organization. He published: *Rules and Regulations of the Pennsylvania Hospital for the Insane* (1850); *The Construction, Organization, and General Management of Hospitals for the Insane* (1854); *Appeal for the Insane* (1854).

KIRKBY KENDAL. See **KENDAL**.

KIRKBY-LUNN, kêrk'bi-lûn, LOUISA (1873-). A noted English dramatic contralto, born at Manchester. She began her vocal studies with the organist Dr. Greenwood, and in 1893 entered the Royal College of Music, where she completed her training under Albert Visetti. While still a pupil, she made her debut at Drury Lane as Margaret in Schumann's *Genoëva*. In 1897-99 she was a member of the Carl Rosa Opera Company. For two years after her marriage to W. J. K. Pearson, in 1899, she appeared only on the concert platform, but in 1901 she returned to the stage. The following year she sang at the Metropolitan Opera House, where her Ortrud and Bruch's created a particularly deep impression. In 1904 she sang the rôle of Kundry in Savage's production in English of Parsifal. During the season of 1907-08 she was again at the Metropolitan. During the years 1912-14 she made a tour of Australasia and New Zealand.

KIRKCALDY, kêr-ka'di. A seaport and market town in Fifeshire, Scotland, on the Firth of Forth, 15 miles north of Edinburgh (Map: Scotland, E 3). Its industries are flourishing and owe prosperity to the abundance of water power; they include the spinning of flax, tow, and jute, the bleaching and weaving of linen yarns, mechanical and marine engineering, iron founding,

and the manufacture of oilcloth and wax cloth (linoleum), nets, leather, pottery, flour, and beer. The manufacture of oilcloth was begun at Kirkcaldy in 1847 and was for a time a monopoly. Its harbor and wet-dock accommodations are commodious; it has an important coasting trade and direct export trade with the United States, which is represented by a consular agent. Its chief exports are coal, coke, and patent fuel; its imports, timber, paper-making materials, cottonseed, flaxseed, flax, stone, cork, etc. With its suburbs it extends for nearly 4 miles and is called the "lang town." It has several fine churches, a town hall, public library, and memorial hall to Adam Smith, who was born here. Kirkcaldy is mentioned as early as 1176 and was created a royal burgh in 1450. Pop., 1901, 34,079; 1911, 39,601.

KIRKCALDY OF GRANGE, SIR WILLIAM (c.1620-73). A Scottish politician. He assisted in the murder of Cardinal Beaton at St. Andrews in 1546, was captured by the French in 1547 and imprisoned in Normandy until 1550, and he then served as the secret agent of Edward VI. After the accession of Mary to the English throne he took up arms for the King of France. In 1557 he was allowed to return to Scotland, where he became one of the best known Protestant leaders. He was concerned in the murder of Rizzio, contributed to the Queen's defeat at Langside, but later took up Mary's cause. He was denounced by John Knox, who had been his friend, as a "murderer and throat cutter." The Regent Morton with the aid of English troops captured Kirkcaldy in his fortified castle, and he was subsequently hanged.

KIRKCUDBRIGHTSHIRE, kër-kōō'brī-shēr. A county of southwest Scotland, bounded north and northeast by the counties of Ayr and Dumfries, east and south by the Solway Firth and west by the County of Wigton (Map: Scotland, D 4). Area, 899 square miles. The land is chiefly given to oats and grass for pasture. Great attention is paid to the rearing of cattle. The county produces much granite. Principal towns, Kirkeudbright (the county town), Maxwelltown, Castle Douglas, and Dalbeattie. Pop., 1901, 39,383; 1911, 38,367.

KIRK'DALE CAVE. A locality in Yorkshire, England, famous for fossil mammals. The cave, discovered in 1821, was described by Buckland in his *Reliquiæ Diluvianæ*. The remains of the rhinoceros, tiger, bear, hyena, and of many other animals long since extinct in England have been found in the stalagmitic deposit lining the floor. See CAVE

KIRKE, kërK, SIR DAVID (1596-c.1656). An English adventurer, born at Dieppe, France. His father, Gervase Kirke, a wine dealer, returned to England on account of the religious wars in France and became one of the "merchant adventurers" of London. He was associated with Sir William Alexander in a project to capture New France and settle Nova Scotia. The exclusive right to the fur trade was given to them, and letters of marque to prey upon French commerce were issued. In 1627 three privateers were fitted out under the command of David Kirke and his brothers Lewis and Thomas. These made a demonstration before Quebec and captured about 20 French ships filled with settlers and supplies for the relief of the colony. In 1629, with a larger fleet, he captured another French vessel and forced Champlain to surrender Quebec. Charles I, however, had made peace

with France and gave back the conquests, though Kirke was knighted for his services. In 1637 Kirke received a grant of all Newfoundland, which had been abandoned by Lord Baltimore, and removed there to develop the fisheries. After the execution of Charles I the grant was revoked by the Council. By the assistance of Claypole, Cromwell's son-in-law, Kirke regained part of the grant. Consult Henry Kirke, *First English Conquest of Canada* (London, 1871).

KIRKE, EDMUND. See GILMORE, JAMES ROBERTS

KIRKE, PERCY (c.1646-91). An English soldier. He was an ensign in the army by 1666, seven years afterward was with the Duke of Monmouth in France, and by 1680 was colonel of the Second Tangier Regiment, enlisted in London largely by himself. He was Governor of Tangier (1682-84) and on its evacuation returned to England with his soldiers, whom, as brigadier general, he led at the battle of Sedgemoor (1685). He became notorious for his hanging of Monmouth sympathizers and his troops were called, from their badge, Kirke's Lambs. In the revolution of 1688 he supported William III, who made him a major general, and the following year he was sent to the relief of Londonderry, of which he was made Governor. He upheld the Orange standard also at the battle of the Boyne and the siege of Limerick and was made lieutenant general in 1690. In 1691 he died in Brussels, having been sent to carry on a campaign in Flanders.

KIRKE'S LAMBS. See KIRKE, PERCY.

KIRKINTILLOCH, kërK'in-til'lok. A municipal and police burgh and market town in Dumbartonshire, Scotland, on the Forth and Clyde Canal, 7 miles northeast of Glasgow (Map: Scotland, D 4). It manufactures chemicals, muslin, print, and bleached goods, lumber and machinery; there are coal and iron mines near by. The town owns the water supply. The burgh had its origin in a fort on Antoninus' Wall, called Caerpentulach (the fort at the end of the ridge), of which the present name is supposed to be a corruption. It became a burgh of barony in 1170 under William the Lion. Pop., 1901, 10,502; 1911, 11,932

KIRK-KILISSEH, kërK'-kë'lë-sä' (the forty churches). A town of European Turkey, in the Vilayet of Edirneh (Adrianople), in an agricultural district, 35 miles east-northeast of Adrianople (Map: Balkan Peninsula, F 4). It is a chief point on the route of traffic between Constantinople and the Balkans. There are a number of mosques and Greek churches. The estimated population is 16,000, consisting of Bulgarians, Turks, Greeks, and Jews. It was the scene of the first important Bulgarian victory over the Turks (Oct. 24, 1912) in the Balkan War (q.v.). Ceded by Turkey to the Balkan allies in accordance with the Treaty of London (May 30, 1913), it was easily reoccupied by the Turks in the course of the Second Balkan War (July, 1913) and formally restored to them by the Treaty of Constantinople (Sept. 29, 1913).

KIRK'LAND, CAROLINE MATILDA STANSBURY (1801-64). An American author, born in New York City. She was married in 1827 to Prof. William Kirkland, of Hamilton College, Clinton, N. Y. With her husband she migrated to Michigan in 1839 and as the results of her pioneer life wrote: *A New Home, Who'll Follow* (1839), *Forest Life* (1842), and *Western Clearings* (1846), published under the pseudonym Mrs.

Mary Clavers. In 1842 she returned to New York, where she established a boarding school and contributed to the magazines. Her chief work, besides those already cited, was *Holidays Abroad, or Europe from the West* (1849). Mrs. Kirkland's best book is *A New Home*, which is written in the style of Miss Mitford's *Our Village*. It possesses considerable charm and gives a valuable picture of frontier life.

KIRKLAND, JAMES HAMPTON (1859–). An American educator. He was born at Spartanburg, S. C., and graduated (A. B., 1877, A. M., 1878) from Wofford College, where he was afterward tutor in Greek and Latin for three years and professor of Greek and German for two years. He then traveled and studied in Europe, receiving the degree of Ph.D. from Leipzig in 1885. In 1886 he was made professor of Latin at Vanderbilt University and in 1893 became chancellor of that institution. Besides monographs and contributions to educational periodicals, he published *Study of the Anglo-Saxon Poem Called by Grem "Die Hollenfahrt Christi"* (1885) and edited the satires and epistles of Horace (1893). He received the degree of LL.D. from the universities of North Carolina and Missouri and from Wesleyan University and the degree of D. C. L. from the University of the South (1902).

KIRKLAND, JOSEPH (1830–94). An American novelist, the son of Caroline Matilda Kirkland (q.v.), born in Geneva, N. Y. He was educated in the schools of Michigan, then went with his parents to New York, and after 1856 resided in Illinois. He served in the Civil War and was promoted to be major. He then engaged in coal mining in Illinois and Indiana and used his experience for writing fiction on social subjects while practicing law in Chicago. Two novels of pioneer life in Illinois, *Zury, the Meanest Man in Spring County* (1887), and *The McVeys* (1888), are graphic studies. Noteworthy, also, are *The Captain of Company K* (1889) and *The Story of Chicago* (2 vols., new ed., 1904).

KIRKLAND, SAMUEL (1741–1808). An American missionary to the Iroquois Indians, born at Norwich, Conn. He studied at Princeton and received his degree in 1765, though he had left college the previous autumn to visit the Senecas and learn their language. After living among them for a year and a half he was ordained at Lebanon in 1766 and was given a commission by the Congregational church as missionary to the Indians. He then took up his residence among the Oneidas, who occupied a central position among the Six Nations and whom he considered the noblest of the Iroquois. His mission was highly successful, and so great did his influence among the Indians become that at the outbreak of the Revolution he persuaded the Oneidas and Tuscaroras to remain neutral, despite the efforts of Sir William Johnson and of the other Indian nations to make them join the British, and finally when, during the second year of the war, they would remain quiet no longer, he prevailed upon them to support the Americans. He became an army chaplain, served at Fort Schuyler, undertook many dangerous missions, and was with General Sullivan on the Susquehanna in 1779. At the close of the war he returned to the Oneidas and in 1793 founded the Hamilton Oneida Academy at Clinton, N. Y., an institution for the education of American and Indian youth. In 1810 the academy was chartered as Hamilton College (q.v.). Kirkland's letters, journals, and a vindication,

which he wrote in answer to a complaint from the Indians in 1794, contain much valuable information concerning the Iroquois. Consult S. K. Lothrop, "Life of Samuel Kirkland, Missionary to the Indians," in Jared Sparks, *Library of American Biography*, vol. xxv (N. S., Boston, 1848).

KIRKMAN, kĕrk'man, MARSHALL MONROE (1842–). An American authority on railways. Born in Illinois, in 1856 he entered the service of the Chicago and Northwestern Railway, of which he was made vice president in 1889. His numerous writings are for the most part grouped in a series known as *The Science of Railways* (1894, revised and republished in 17 vols and 3 portfolios, 1909 et seq.). The titles of the various volumes are: *Locomotive, Engine Failures, and Motive Power Department; Engineer's and Fireman's Handbook; Air Brake: Its Construction and Working; Shops and Shop Practice* (2 vols.), *Cars: Their Construction, Handling, and Supervision; Organization of Railways, and Financing, Passenger Train Traffic and Accounts; Freight Traffic; Building and Repairing Railways; Operating Trains, Electricity Applied to Railways; Locomotive Appliances, Collection of Revenue, General Accounts and Cash; Safeguarding Railway Expenditures; Railway Rates and Government Ownership. Locomotive Portfolio; Car Portfolio; Air Brake Portfolio*. Kirkman wrote also: *The Romance of Gilbert Holmes* (1900); *Iskander* (1903); *The Alexandrian Novels* (3 vols., 1909); and a *History of Alexander the Great* (1913).

KIRKPATRICK, kĕrk-păt'rik, ALEXANDER FRANCIS (1849–). An English theologian and Old Testament scholar. He was born in Lewes, the son of a clergyman, and was educated at Haileybury and at Trinity College, Cambridge, of which he was assistant tutor in 1871–82 and junior dean in 1876–82. He was Cambridge Whitehall preacher in 1878–80 and Lady Margaret preacher in 1882 and 1893, examining chaplain to the Bishop of Winchester in 1878–90 and in 1895–1903 and to the Bishop of Rochester in 1890–95, regius professor of Hebrew and canon of Ely in 1882–1903, and Lady Margaret professor of divinity in 1903–06. In 1906 he became dean of Ely. He was general editor for Old Testament and Apocrypha of the *Cambridge Bible* and contributed to it commentaries on Samuel (1880–81) and Psalms (5 vols., 1880–1901) and also published *The Divine Library of the Old Testament* (1891) and *The Doctrine of the Prophets* (1892).

KIRK'S ANTELOPE. See BENI-ISRAEL.

KIRKSVILLE, kĕrks'vil. A city and the county seat of Adair Co., Mo., 203 miles northwest of St. Louis, on the Wabash and the Quincy, Omaha, and Kansas City railroads (Map: Missouri, D 1). The city is the commercial centre for a fertile agricultural district, has coal mines, and manufactories of shoes. It has a fine courthouse, a government building, and a State normal school. It is the seat of the original school of osteopathy. Kirksville was first settled in 1840 and adopted the commission form of government in 1914. The water works are owned and operated by the municipality. Pop., 1900, 5966; 1910, 6347.

KIRKTON, kĕr'ton. See CREDITON.

KIRKUP, kĕrk'up, THOMAS (1844–1912). An English economist. He was educated at Edinburgh University and at the universities of Göttingen, Berlin, Tübingen, Geneva, and Paris.

He contributed extensively on Socialism, history, and economics to the *Encyclopædia Britannica*, to *Chambers's Encyclopædia*, and to other works of reference; he edited many educational works and wrote: *An Inquiry into Socialism* (1887; new ed., 1909); *History of Socialism* (1892; 5th ed., rev., 1913); *South Africa, Old and New* (1903); *Progress and the Fiscal Problem* (1905); *Primer of Socialism* (1908). Kirkup was regarded as an authority on Socialism.

KIRK WALL, kĕrk'wāl. A municipal and police burgh and market town of Scotland, capital of the Orkney Islands, on the northeast coast of Mainland (Map: Scotland, F 2). It is the seat of the superior courts of law for Orkney, and its harbor accommodates an important shipping trade. It has an annual fair, libraries, and a museum; also regular steam communication with Leith, Aberdeen, and Lerwick, the chief town of the Shetland Islands. Its chief imports are timber and flour, and herring is the principal article of export. Its chief building, the cathedral of St. Magnus, a fine cruciform (1138) structure in mixed Norman and Gothic, is excellently preserved. In the choir of this cathedral service is still held. Around it are the ruins of the King's castle, and the Bishop's palace. Pop., 1901, 3711; 1911, 3810.

KIRKWOOD, kĕrk'wud, DANIEL (1814-95). An American astronomer, born in Maryland. He was a teacher of mathematics in the Academy of York Co., Pa., from 1838 to 1843, when he was appointed principal of the Lancaster High School, where he remained until 1848, resigning to accept a position in the Pottsville Academy. In 1849 he announced his recently discovered analogy between the periods of rotation of the primary planets. In 1851 he was appointed professor of mathematics in Delaware College, and in 1854 he was chosen president of the same institution. He served in this capacity until 1856, when he resigned to take the chair of mathematics in the University of Indiana at Bloomington. His researches in regard to the nebular hypothesis attracted wide attention among scientific men. His published works include *Comets and Meteors: Their Phenomena in All Ages and their Mutual Relations and the Theory of their Origin*, and a valuable paper on *The Nebular Hypothesis and the Approximate Commensurability of the Planetary Periods*.

KIRKWOOD, SAMUEL JORDAN (1813-94). An American political leader and cabinet officer, born in Harford Co., Md. He was educated in the John McLeod Academy at Washington, D. C., and in 1835 settled in Richland Co., Ohio, where, after studying law, he was admitted to the bar in 1843. His first official position was that of prosecuting attorney of Richland County (1845-49), and in 1850-51 he was a member of the Ohio Constitutional Convention. In 1855 he removed to Johnson Co., Iowa, where for a time he devoted himself to various manufacturing enterprises. He was elected in 1856 to the State Senate and in 1860-64, during the Civil War, was Governor. Under his supervision 50 regiments of infantry and cavalry were enlisted, and the State's quota kept always more than filled. In 1866 he was elected to the United States Senate to fill the unexpired term of James Harlan (q.v.), who had resigned to enter Lincoln's cabinet. In 1876-77 he was for a third time Governor of Iowa; was again United States Senator until March, 1881; and

from then until April, 1882, when he retired from public life, was Secretary of the Interior in President Garfield's cabinet.

KIRMAN, kĕr-mā', or **KERMAN** (Lat. *Caramania*). A southern province of Persia, bounded by the provinces of Yezd and Khorasan on the north, Seistan and Baluchistan on the east, the Gulf of Oman on the south, and Farsistan on the west (Map. Asia, G 5). The area is estimated at 65,000 square miles. The north and northeast parts are occupied by the Desert of Kirman, which forms a part of the great central Desert of Lut. The southern portion, although mountainous, is equally arid and barren, save in narrow valleys and the small tract of Nurmanshir. The climate is cold and damp in the mountains and hot in the lower parts and not generally healthful. Cattle raising is extensively pursued, and the camels and goats of Kirman breed are celebrated for their long hair. Cotton, gum, and dates are raised; silk and wool weaving and the making of fine shawls are the chief occupations. The population, estimated at about 500,000, is largely Persian. The capital is Kirman (pop., 60,000).

KIRMAN, kĕr-mān', or **KERMAN**. The capital of the Persian province of the same name, situated in a fertile region at an altitude of nearly 6000 feet (Map: Asia, G 6). It is fortified, has extensive bazars, the remnants of its once flourishing trade; also post and telegraph offices, and two mosques, the Masjid i Jama (fourteenth century) and Masjid i Malik (eleventh century). It has manufactures of silk and woolen goods, especially shawls, carpets, and felts, and has some trade, being a centre for several caravan routes. The population is estimated at 40,000, consisting of Persians, Armenians, Hindus, Kurds, and Jews.

KIRMANSHAH, or **KERMANSHAH**, kĕr'mān'shā'. An important town of Persia, capital of the Province of Kirmanshah, on a small river at an altitude of 5100 feet (Map: Asia, Central, B 5). It is 250 miles west-southwest of Teheran. Surrounded by half-ruined walls, Kirmanshah is noted for its extensive bazars, carpets, and horses. In the vicinity are larger gardens; opium is produced. The commercial importance of the town is greatly increased by its location between Bagdad and Hamadan. It carries on a good trade in wheat, barley, fruit, and gum. About 21 miles from Kirmanshah is the ruined city of Behistun (q.v.). Population, once estimated at 80,000, is now about 40,000.

KIRMESSE, or **KERMESSE**. See **KERMIS**. **KIRNBERGER**, kĕrn'bĕrk-ĕr, JOHANN PHILIPP (1721-83). A German musical theorist, born at Saalfeld, Thuringia. His studies included the violin, organ, and theory, and were carried on under J. P. Kellner, H. N. Gerber, Meil, and J. S. Bach. From 1741 to 1750 he was a private teacher in Poland; but on his return to Germany in 1751 he became a member of the royal band in Berlin, and three years later kapellmeister to Princess Amalie, a post which he retained till his death. He had many distinguished pupils and was famous for his extensive musical researches. Most of his somewhat elaborate theories have been disproved, but his best work, *Die Kunst des reinen Satzes* (1774-76), still retains some interesting material. As a composer, he is unimportant. He died in Berlin.

KIROUMBO. See **KIRUMBO**.

KIRSCH, or **KIRSCHWASSER**, kërsh'väs-sër (Ger., cherry water). A liqueur produced in the Black Forest and Switzerland and much used in Germany. It is made from cherries, gathered when quite ripe, freed from their stalks, and pounded in a wooden vessel, but without breaking the stones. They are then left to ferment, and when fermentation has begun, the mass is stirred two or three times a day. Later the kernels are crushed and added. By distillation kirschwasser is obtained. Kirschwasser is sometimes called cherry brandy, but the common cherry brandy is made by mixing brandy with the juice of cherries. See LIQUEUR.

KIRSCH, JOHANN PETER (1861-). A German Catholic Church historian, born at Dippach in Luxemburg. He was educated at Luxemburg and in Rome, where in 1888 he became head of the newly established Historical Institute of the Gorresgesellschaft. In 1890 he became professor in the University of Fribourg. Kirsch revised Hefele's work on Church history (1891, 1892, 1893) and with Dreyer, Grimme, Büchi, De Waal, and Ehrhard edited periodicals on Church history, especially of Switzerland. Among his books are: *Die christlichen Kultusgebäude im Altertum* (1893); *Die Rückkehr der Päpste Urban V. und Gregor XI. von Avignon nach Rom* (1898); *Lehre von der Gemeinschaft der Heiligen im christlichen Altertum* (1900); *Illustrierte Geschichte der katholischen Kirche* (1903 et seq.), with Luksch, *Die heilige Cäcilia* (1910).

KIRSCHNER, Kërsh'nër, ALOISIA (1854-). An Austrian novelist, born in Prague and favorably known under her pseudonym Ossip Schubin, which she borrowed from Turgenyev's novel *Ihena*. Brought up on her parents' estate at Lochkov, she afterward spent several winters in Brussels, Paris, and Rome, receiving there, undoubtedly, many inspirations for her clever descriptions of artistic Bohemianism and international fashionable society, which are her favorite themes. An uncommonly keen observer, her great gift for striking characterization, frequently seasoned with sarcasm, is especially apparent in her delineations of the military and aristocratic circles in Austria. Owing to rapid production, her works are of unequal merit, the earlier being the best. The more important of her novels and stories include: *Ehre* (1882; 7th ed., 1893); *Die Geschichte eines Genies: Die Galbruzzi* (1884); *Unter uns* (1884; 4th ed., 1892); *Gloria Victis* (1885; 3d ed., 1892); *Erlachhof* (1887); *Es fiel ein Reif in der Frühlingsnacht* (4th ed., 1901); *Asbein, aus dem Leben eines Virtuosen* (1888; 4th ed., 1901), and its sequel, *Boris Lensky* (1889; 3d ed., 1897), probably her most meritorious work; *Unheimliche Geschichten* (1889); *O du mein Oesterreich!* (1890; 3d ed., 1897); *Einis Poloniae* (1893); *Toter Frühling* (1893); *Gebrochene Flügel* (1894); *Die Heimkehr* (1897); *Slawische Liebe* (1900); *Marska* (1902); *Refugium Peccatorum* (1903); *Der Gnadenschuss* (1905); *Der arme Nocki* (1906); *Primavera* (1908); *Miserere nobis* (1910). Consult Erich Schmidt's article, in the *Deutsche Literaturzeitung* (Berlin, 1892). Several have been translated into English, including *Peterkins: The Story of a Dog* (1906).

KIRTLAND, kër'tland, JARED POTTER (1793-1877). An American physician and naturalist, born in Wallingford, Conn. In 1815 he completed the medical course at Yale, while there

having also studied botany under Ives and mineralogy and zoölogy under Silliman. He practiced at Durham, Conn., until the death of his wife and daughter, in 1823, and afterward in Poland, Ohio, became professor of the theory and practice of medicine in the Ohio Medical College and in 1837 an assistant on the geological survey; and from 1843 to 1864 was professor in the Cleveland Medical College, of which he was a founder. Kirtland was a skilled taxidermist and an enthusiastic fruit grower, but he is best known for his zoölogical studies. He discovered parthenogenesis in insects and the distinction of sex in the Unionidæ and made valuable researches on the fresh-water fishes of Ohio. During the Civil War he served as an examining surgeon for recruits at Columbus and Cleveland.

KIRTON, kër'ton. See CREDITON.

KIRUMBO, kër-rûm'bô, or **KIROUMBO** (Malagasy name). A remarkable picarian bird of Madagascar and adjacent islands, of which one species exists, constituting the genus *Leptosoma* and the family Leptosomatidæ. They are roller-like in their appearance and habits, have brilliant plumage, especially in the male, and are inhabitants of forests. See PLATE OF KINGFISHERS, MOTMOTS, ETC.

KIRWAN, kër'wan, RICHARD (1733-1812). An Irish scientist, born in Cloughballymore, County Galway. He was educated at Poitiers, France, and in the Jesuit College at Saint-Omer and was called to the Irish bar in 1766, but after two years' practice devoted himself to the study of the natural sciences and was made a member of the Royal Society in 1780. For a series of papers read before the Royal Society he received the Copley medal in 1782 and was presented with a gold medal by the Royal Dublin Society for obtaining the Leskeyan minerals for the society's museum. Besides contributions on chemistry, mineralogy, and agriculture to the *Proceedings* of many scientific societies, he published: *Elements of Mineralogy* (1784); *An Estimate of the Temperature of Different Latitudes* (1787); *Geological Essays* (1799); *An Essay on the Analysis of Mineral Waters* (1799); *Logick* (1807); *Metaphysical Essays* (1811). At first an adherent and defender of the theories of the phlogistic school (see CHEMISTRY, History), Kirwan had by 1791 adopted the truer views of Lavoisier.

KIRYU, kër-yôô'. A town of Japan, situated in the Prefecture of Gumma, 81 miles by rail north-northwest of Tokyo (Map: Japan, F 5). Its chief product is silk, and there is a large satin mill, equipped with French machinery. Pop. estimated at 35,000.

KIS-BECSKEREK. See BECSKEREK.

KISFALUDY, kish'fô-lu-di, KÁROLY (CHARLES) (1788-1830). An Hungarian dramatist, younger brother of Sándor Kisfaludy. He was born at Tét, Feb. 5, 1788. His first enterprise in literature was the editing of a periodical, *Aurora*. After a few years spent in military service he took to painting, but was unsuccessful. In 1817 he took up his residence in Pest and published in rapid succession a series of poems, tales, dramas, and comedies, which secured for him the highest popularity as an author. His comedies, as *The Suitors*, *The Murderer*, etc., gave humorous scenes from contemporary life. The best of them were translated by Gaál (*Theater der Magyaren*, Bonn, 1820). Of his tragedies the

best is *Irene* (1820; Ger. trans. by J. Hornvánszky, 1868). Kisfaludy founded the periodical *Szepirodalmi Szemle* (Belletristic Review), which exerted great influence on Hungarian writers. He is considered the founder of the modern national drama of Hungary. The Kisfaludy Society, so named in honor of the brothers, was established in 1836 and has rendered important services to Hungarian literature. For Kisfaludy's life, consult Bánóczy (Budapest, 1882), who also edited the seventh edition of his *Works* (6 vols., Budapest, 1893).

KISFALUDY, SÁNDOR (ALEXANDER) (1772-1844). An Hungarian poet, who exercised a great influence on the development of the language and literature of his native country. He was born at Sümeg, County of Zala, Sept. 27, 1772; studied at Raab and Pressburg and, after serving in several campaigns in the Austrian army and passing through a period of captivity in Provence, retired to his paternal estate to devote himself to literature and farming. The first part of his lyrical masterpiece, *Himfy szerelme* (Himfy's Loves; translated into German by Máilath), which appeared anonymously in 1801, was received with unbounded applause. It won him the name of the Hungarian Petrarch. On the publication of the second part, in 1807, the author threw aside his mask. In the same year he published his *Regék a magyar elődöböl* (Legends of the Olden Time in Hungary; trans. into German by Gaál, Vienna, 1820, and by F. Machik, Budapest, 1863). These are marked by depth of feeling and by elegance and simplicity of style. His epic poem *Gyula szerelme* (Julius's Love, 1825) was also translated into German by Gebell-Ennsburg (Dresden, 1893). Kisfaludy attempted tragedy and took Schiller as his model. Some of his historical dramas are worthy of mention, e.g., his *Hunyadi János* and *Kún László* (Ladislás the Cumanian). The best edition of his works appeared in Budapest, 1892. He died at Sümeg, Oct. 28, 1844.

KISH, DYNASTY OF. See **BABYLONIA, History.**

KISHINEV, kě'shě-nyěf. The capital of the Government of Bessarabia, Russia, situated on the Byk, a tributary of the Dniester, 86 miles northwest of Odessa (Map: Russia, C 5). It is built on an uneven site. It has two Gymnasias, a seminary for priests, a library, and a botanical garden. It is the residence of a bishop. The population is very mixed, consisting of Moldavians, Russians, Jews, Bulgarians, Tatars, etc. In 1912 it amounted to 125,876, of whom 41 per cent were Jews. The city, which owes its prosperity to the fact that it is the centre of the rich Province of Bessarabia, contains a magnificent statue of Alexander II, erected in 1886, and a monument to the poet Pushkin. The extensive gardens produce great quantities of plums, which are dried and exported, and there is a flourishing trade in wine, tobacco, tallow, grain, wool, soap, and flour, all locally produced. Kishinev is first mentioned in the beginning of the fifteenth century. It was annexed to Russia in 1812. The town was the scene of an unprovoked massacre of Jewish inhabitants, April 19-20, 1903, by a mob with the connivance of the authorities. The slaughter at Kishinev was the first of a series extending throughout Russia for several years. A second massacre took place in November, 1905. See **RUSSIA.**

KISHM, kě'sh'm. An island off the south coast of Persia, situated in the Strait of Ormuz

(Map: Asia, Central, F 9). It is oblong in shape and has an area of over 500 square miles. The surface is mostly rocky and barren, but in some parts grain, dates, grapes, and melons are produced. There are deposits of sulphur and rock salt. The inhabitants are engaged chiefly in fishing. The population is about 20,000. The capital, Kishm, situated at the east end, has a population of about 500.

KISH'ON (Heb. *Kishōn*; perhaps connected with Ar. *kāsa*, to bend, though a derivation from *kish*, or *kais*, the name of a god, is not impossible). The ancient name of a river of central Palestine, called El-Mukatta by the modern Arabs (Map: Palestine, C 2). The river rises on Mount Gilboa and, after running northwest through the Plain of Esdraelon (q.v.), falls into the Mediterranean at the southern end of the Bay of Acre. Its upper portion is dry during the summer, the perennial stream forming but a small part of its course near the sea. In the rainy season, however, the river often acquires the force of a torrent, sweeping all before it. The Kishon was the scene of two notable events recorded in the Old Testament—the overthrow of Sisera and his army (Judg. iv. 7 et seq.) and the destruction of the prophets of Baal by Elijah (1 Kings xviii. 19-40). In 1799 a battle was fought on its banks between the French and the Turks.

KISKÖRÖS, kish-kě'rěsh. A town of Hungary. See **KÖRÖS.**

KISKÚNFÉLEGYHÁZA, kish'kúon-fá'led-y'-há-ző. A town of Hungary. See **FÉLEGYHÁZA.**

KISMARTON, kish'mór'tón. See **EISENSTADT.**

KISS. See **SALUTATION.**

KISS, kis, AUGUST (1802-65). A German sculptor. He was born near Pless in Upper Silesia and studied at the Berlin Academy and under Rauch. He first acquired fame by the model of his "Mounted Amazon Attacked by a Tiger," executed in marble in 1842 for Louis I of Bavaria, afterward cast in bronze by Fischer and erected on the portico of the Museum of Berlin. This is his masterpiece and shows the best qualities of his work—dramatic action and the fine treatment of animals. His other principal works are as follows: an equestrian statue of Frederick the Great (1847), at Breslau; two statues of Frederick William III, at Potsdam and Königsberg (1851); "St. Michael Overthrowing the Dragon," in the castle of Babelsberg; a colossal statue of "St. George Slaying the Dragon," in the courtyard of the Old Palace (Schlosshof) at Berlin. The six bronze statues of Prussian generals in the Wilhelmsplatz, Berlin, are by him—four after former marble statues, two (those of Winterfeldt and Schwerin) after his own designs. His last work was a marble group of "Faith, Hope, and Charity," completed by Bläser and presented by his widow to the National Gallery of Berlin, which possesses other important works by him.

KISS, kish, JÓZSEF (former name, KLEIN) (1843-). An Hungarian poet, born of a Jewish family in Mező-Csát. After many wanderings he reached Temesvár, where he became notary among his coreligionists. His first poetic attempt (1868) met with little success, but with a collection of lyrics (1878) his popularity began, and it was increased, another decade later, by his ballads, whose subjects were borrowed from Jewish legend or Jewish-Magyar life. He also published a volume of religious

poems (1888). One of his best-known poems is that translated by Neugebauer under the title *Lied von der Nähmaschine*. During 1890-1912 Kiss was editor of the literary periodical, *A hét* (The Week). In 1913, on the occasion of his seventieth birthday, he was received as honorary member of the Hungarian Academy of Sciences, being already a member of the Kisfaludy Society.

KISSAR, kis'ar. See CITHARA.

KIS'SIMMEE'. A city and the county seat of Osceola Co., Fla., 75 miles by rail northwest of Tampa, on Tohopekaliga Lake, at the source of the Kissimmee River, and on the Atlantic Coast Line (Map: Florida, E 3). It is known as a resort popular for its good hunting and fishing, has important fruit and gardening interests, and is the headquarters of the cattle-raising industry of Florida. The water works and electric-light plant are owned by the city. Pop., 1900, 1132; 1910, 2157.

KISSING BUG. See CONE-NOSE; INSECTS, *Poisonous Insects*.

KISSINGEN, kis'ing-en. A famous watering place of Bavaria, situated on the Saale, 43 miles northeast of Würzburg (Map: Germany, D 3). It has a number of establishments, including the Royal Bath House, and a Kurhaus with extensive garden. The chief springs are the Rakoczy, with a temperature of over 48°; the water, containing carbonic acid and iron, is extensively exported. The Pandur spring, with a temperature of 47° and containing a large proportion of carbonic acid, was discovered in the sixteenth century. About 1½ miles to the north are saline springs, used chiefly for bathing. Kissingen was visited in 1910 by 28,000 guests, including many Russians and English. It also manufactures vehicles and wine and extracts salt from the waters. Pop., 1900, 4757; 1910, 5831.

KIST'NA, or **KRISH'NA**. A river of south India, rising in the Western Ghats at an altitude of 4500 feet, about 40 miles from the west coast (Map. India, C 6). Its head spring issues from the temple of Mahadeo in the hill resort of Mahabaleshwar, Bombay; as one of the holy places of India, it is annually visited by large numbers of pilgrims. The Kistna crosses the peninsula in a southeasterly direction, breaks through a gorge of the Eastern Ghats at Bez-wada, and, after a course of 800 miles, flows by two principal and several minor mouths into the Bay of Bengal south of Masulipatam. Its chief tributaries are the Sina, the Bhima, and the Musi from the left, and the Tungabhadra from the right. Owing to its rapid stream and rocky channel, it is not navigable except in its lowest reach, which has been artificially deepened. Its waters are largely used for irrigation purposes, furnishing water for 700,000 acres, and a canal, 90 miles long, with ramifying channels, connects it with the Godavari River.

KISTS. One of the tribes of the Tchetchen group of peoples of the Caucasus, on the upper Terek. After them Brinton, in his *Races and Peoples* (1890), denominates one of the Caucasian stocks the Kistic. Kisti is said to be only the Georgian name for the people known to the Russians as Tchetchens. See TCHETCHENS.

KISTVAEN, kist'vin, or **CIST**. See MOR-TUARY CUSTOMS.

KISUTCH, kē'sūch. The native name in Alaska and Kamchatka of the silver salmon (*Oncorhynchus kisutch*). See SALMON.

KIT (probably from AS. *cytere*, from Lat.

cithara, Gk. *κίθάρα*, *kithara*, guitar). A small, narrow-bodied violin, about 16 inches long, capable of being carried in the coat pocket and used chiefly by teachers of dancing. It is now obsolete.

KIT (MDutch *kitte*, Dutch *kit*, beaker). A military term, signifying articles of clothing, arms, and equipments, ammunition, rations, and intrenching tools carried on the person or mount of the soldier.

In the United States army the service kit is composed of the field kit and the surplus kit. The field kit, besides the clothing worn on the person, is composed of the following articles: (1) a blanket, comb, poncho (rubber), a cake of soap, a pair of stockings, a toothbrush, and towel; (2) the personal arms and ammunition pertaining to the arm of the service, also a first-aid packet, a canteen, haversack, mess outfit, half of a shelter tent, and intrenching tool; (3) two days' rations. The surplus kit, not carried on the person but in the company wagon or other transportation, consists of a pair of drawers, a pair of shoes, two pairs of stockings, an undershirt. The overcoat is worn or carried in the wagon. The total weight, including arms and ammunition, carried by the United States infantry soldier, is 46 pounds. With two extra bandoleers of cartridges the weight is about 54 pounds.

The kit carried by European troops varies in weight from about 50 pounds in the English army to 62 pounds carried by the German soldier. In heavy marching order British infantrymen carry coat and cap, mess tin (comprising plate, frying pan, and kettle); haversack, or bread and rations; valise or knapsack, containing spare uniform; shirts, socks, boots, brushes, etc.; and a water bottle. With rifle, belt, pouches, ammunition, and bayonet, the total weight is about 50 pounds.

The German is provided with greatcoat, blanket, ground sheet, a quarter of a tent and pole, a mess tin, and an axe. His knapsack contains a spare pair of boots, three pairs of socks—or, if he is a Bavarian, foot cloths—spare uniform, brushes, etc.; when the rifle and bayonet, ammunition, etc., are added, 62 pounds is its lowest estimate. French soldiers are similarly burdened, except that, in place of waterproof sheet or haversack, the company cooking pots are distributed, which brings the weight carried by each man fully up to that of his German neighbors. The Russian carries about 60 pounds of kit, having neither blanket nor waterproof sheet. See KNAPSACK.

KITAMAT, kē'tā-māt'. See WAKASHAN STOCK.

KITAO, kē'tā'ō, **DIRO** (or **JIRO**; originally **ROKUJIRO MATSUMARA**) (1853-1907). A Japanese meteorologist, born in Matsuye, Izumo, the son of a physician. In 1870 he went to Germany, where he studied at Berlin and Göttingen, and married a German wife. In 1884 he returned to Japan and became a lecturer (and immediately a professor of physics) in the Imperial University at Tokyo. He took the same chair in the Agricultural College in 1886 and in 1888 became professor of meteorology in the Naval Staff College. His meteorological work was definitely mathematical in its bases. Kitao invented a leucoscope and wrote *Zur Farbenlehre* (1879) and the very important *Beiträge zur Theorie der Erdatmosphäre und der Wirbelstürme* (3 vols., 1887-95).

KIT-CAT CLUB. A famous London club, founded (it is said, in 1703) for the encouragement of art and literature. Its members—originally 39, but afterward 48 in number—were all Whigs. The publisher Jacob Tonson was made secretary. The club derived its name from having met for some time at the tavern of Christopher Cat, near Temple Bar. It was dissolved about 1720.

KITCHEN. A place specially arranged and equipped for cooking food. We know little of the arrangements for cooking in pre-Roman antiquity; the kitchens extant in Pompeii show very primitive arrangements, much like those still commonly used in Oriental countries. The cooking was mostly done over charcoal fires in small recesses or holes provided in a bench or range of masonry. The larger dishes and roasts were prepared most probably over an open hearth fire, and hot water was supplied by large open caldrons. During the Middle Ages the great monasteries and castles were often provided with isolated buildings to serve as kitchens; the octagonal vaulted kitchens at Durham and Glastonbury are famous. In the Seraglio Park at Constantinople the kitchens that served the former palace of the Sultans are visible with their masonry hoods and chimneys. Modern kitchens vary greatly in size and elaborateness of equipment, from the tiny kitchenette of a small flat to the vast kitchens of a metropolitan hotel; but the fundamentals are the same. There is, first, the range or stove, for fuel of wood, coal, or gas, usually provided with water back and adjacent boiler for hot water, and its ovens for baking; the sink for washing pans and dishes, the dresser or kitchen cabinet for utensils and immediate supplies; the table or tables for the preparation of the dishes. Adjacent should be pantries, store closets, and in large kitchens a scullery. Steam cookers, steam tables, broiler stoves, toasters, and various mechanical and electrical appliances are found in kitchens of hotels and large institutions. Electricity, however, has not yet found its way into general kitchen use. The kitchen should be light, airy, dry, and planned with especial regard to convenience. The kitchen of a ship is called the galley.

KITCHEN CABINET. In American political history, the name applied to a small group of men who, during the administration of President Jackson, without holding any important offices, were generally supposed to influence the action of the President more than did the members of the cabinet themselves. Of these unofficial advisers the five most prominent were Major William B. Lewis, Second Auditor of the Treasury; Isaac Hill, editor of the *New Hampshire Patriot* and elected Senator from New Hampshire in 1783; Amos Kendall, Fourth Auditor of the Treasury; Duff Green, editor of the *United States Telegraph*, who, however, became alienated from Jackson in 1830, during the latter's quarrel with Calhoun; and Francis P. Blair, Sr., editor of the *Globe*, which in 1831 superseded the *United States Telegraph* as the organ of the administration. Consult James Parton, *The Life of Andrew Jackson*, vol. iii (New York, 1860).

KITCHENER (kitch'en-er) **OF KHARTUM,** HORATIO HERBERT, first EARL (1850-1918). A famous British soldier and administrator, the eldest son of Lieut. Col. Henry Horatio Kitchener, of Leicestershire, and Anne

Frances, daughter of the Rev. Dr. Chevallier, of Aspell Hall, Suffolk. He was born June 24, 1850, at Crotter House, Ballylongford, County Kerry, Ireland. After education at the Royal Military Academy, Woolwich, he entered the army as second lieutenant of royal engineers in 1871. Earlier in the same year, while on a visit to Dinan and without the permission of the British army officials, he had enlisted in the Sixth Battalion of the French Mobile Guard (attached to the Second Army of the Loire), under General Chanzy, and had participated in the disastrous retreat after the defeat at Le Mans. At 21 and at 64 he fought on the side of France against Germany—at 21 as a private, at 64 as British Secretary of State for War, with 2,000,000 men at his disposal.

From 1874 to 1882 he was engaged in survey work and civil organization in Palestine and Cyprus, with a brief interval of residence at Erzerum as Vice Consul of Anatolia from 1879 to 1880. In 1882 Sir Evelyn Wood appointed Kitchener, as a volunteer, to one of the two majorships of Egyptian cavalry, in 1884, as quartermaster-general and deputy assistant adjutant, he was actively engaged in the vain attempt to keep open communication for the Nile expedition to relieve Gen. Charles George Gordon (qv) at Khartum; and in 1885 he was commissioner in the delimitation of Zanzibar as a British protectorate. The following year he was brevetted lieutenant colonel and received various decorations. Returning to Egypt, he became Pasha in the native army and until 1888 was Governor of Suakin. Throughout his service in north Africa Kitchener's intimate knowledge of Arabic was one of his greatest assets. In April, 1888, he attained the rank of colonel in the British army and in December of that year, while leading the troops at the battle of Handub, was seriously wounded. He received special mention in the dispatches and was created C.B. for his part in the action at Toski under General Grenfell (1889); after the conclusion of the eastern Sudan campaign he was engaged for four years as adjutant general and second in command of the Egyptian army, and also as inspector general of police; and in 1892 he was made sirdar (commander) of the Egyptian forces, with the British rank of brigadier general. During several years he was steadily engaged in completing preparations for the recovery of the lost provinces of Upper Egypt, which had been under Mahdist rule since 1883. The campaign commenced in 1896 with the capture of Dongola, which brought Kitchener the rank of major general and the K.C.B. With the overthrow of the Khalifa, the Mahdi's successor, at the battle of Omdurman, and the capture of Khartum on Sept. 2, 1898, he completed the defeat of the Dervishes. (See *SUDAN, History*.) On his return to England he received a peerage, with the title of Baron Kitchener of Khartum and of Aspell (Suffolk), and a grant of £30,000. During this home visit he raised £100,000 to found at Khartum a college in memory of General Gordon.

In 1900, as chief of staff to Lord Roberts, newly appointed commander in chief in South Africa, Kitchener was responsible in large measure for the success of British arms against the hitherto victorious Boer generals. While maintaining the lines of communication with Cape Colony, he was in frequent contact with Boer contingents and on one occasion narrowly es-

caped capture at the hands of General De Wet, whom he defeated towards the close of the year. In December, 1900, Field Marshal Roberts returned to England, and Kitchener assumed chief command. His measures resulted in the acceptance of peace conditions by the Boers on May 31, 1902. (See *SOUTH AFRICAN WAR*.) For his services Kitchener was created Viscount, with a grant of £50,000, was admitted to the Order of Merit, and received ovations on his return to England. As commander in chief of the army in India, (appointed 1902), he did meritorious work in strengthening the defenses of the northern frontier and in effecting a reorganization of the army, thereby greatly increasing its efficiency. During 1905, in pursuance of his scheme to obtain a larger share of autonomy for the head of the army, he came into conflict with the Viceroy, Lord Curzon (q.v.), whose resignation in the same year was a direct result of his disagreement with Kitchener.

In August, 1909, after he had resigned his Indian post, it was announced that Lord Kitchener had been appointed to succeed the Duke of Connaught as commander in chief of the Mediterranean forces. In political circles this was taken to mean that a soldier's influence was not needed near the War Office. About this time he was also created field marshal. Before the end of 1909 he visited China and Japan (where he received the Order of the Rising Sun) and then spent some time (1910) in Australia and New Zealand, inspecting colonial forces and promoting plans for improved Imperial defense. When passing through the United States on his return, he was invited to inspect the barracks at West Point; these he pronounced superior to anything he had seen in Europe. In July, 1911, he was appointed British Consul General and agent in Egypt, . . . Sir Eldon Gorst, whose tenure of . . . marked with increased freedom for native aspirations in Egypt, was none the less a failure from the British point of view. The command of British troops in the Mediterranean was also intrusted to Lord Kitchener at Cairo. Called upon to crush the growing disaffection of the Egyptian natives, he placed severe restrictions on the native press and introduced important economic reforms. In a short time he had won the good will of the Khedive and the masses, yet secret societies continued to flourish, and in 1912 several arrests were made in connection with a plot aimed at the lives of the Khedive and Kitchener.

While Kitchener was in England in the summer of 1914, after being made Earl by King George, the European situation became acute; but he had already set out for Cairo before the British cabinet saw the need of his services at home. When England entered the war in August, one of the first names in the new cabinet was that of Earl Kitchener as Secretary of State for War. The acclaim with which the appointment was greeted showed how truly the people had gauged the value of the man who had seen them safely through the South African troubles. In September he was made lord rector of Edinburgh University, President Poincaré of France being honored in the same way by the Glasgow students. Kitchener predicted that the war would be a long one. "My term of office is for the duration of the war, or for three years if the war should last longer than that," he said in the House of Lords. Straightway he began building up an army, with the

same nerve and machine-like mind that planned the advance on Khartum, pacified the Transvaal, and organized the Indian army. So well did he succeed that in November he could inform the public that he had 1,250,000 men in training in England, and that he looked to the people to supply another 1,000,000. Under him troops were brought to Europe from Canada, India, and Australia and successfully provided for. Kitchener was retained as Secretary for War in Asquith's coalition cabinet, formed May, 1915. See *WAR IN EUROPE*.

Wheeler, *Life of Lord Kitchener* (ib., 1914); Sketch in the *London Times Illustrated History of the War*, part viii (ib., 1914).

KITCH'EN MID'DEN (*kitchen* + *midden*, refuse heap, after the equivalent Dan. *kjokkenmødding*). Ancient refuse of a camp or village in which are found buried relics of human industry and art. If they are on the seashore, they are called shell heaps, because mollusks enter largely into their mass. All over the world, wherever the camps of primitive peoples were located with any permanency, the huts or tents were set up on the site of the refuse pile of former villages and were abandoned and rebuilt repeatedly until the whole mass was often as much as 100 feet in depth. The Danish *kjokkenmøddings* were at first thought to be natural formations on the beach. When, however, their artificial composition was made evident, only a few efforts with pick and shovel were needed to reveal piercers, knives, scrapers, axes, hammers, slingstones, pottery, horns, bone needles, and flakes. The bones of mammals were mixed with the shells—stag, roedeer, wild boar, urus, dog, wolf, fox, marten, otter, seal, water rat, beaver, lynx, wildcat, hedgehog, bear, and even the mouse. There too are found mingled bones of birds and fish and more than a dozen kinds of shells. Here and there a hearth made up of flat stones showed the marks of fire and proved the existence of domestic life. In some places this débris was as much as 10 feet thick and stretched along the beach 1000 feet. The width varied with the shore line, being at times 200 feet, but growing narrower in both directions. The excavation of the Danish kitchen middens gave the impulse for the exploration of similar formations in many parts of the world. In the shell heaps of Omori, Japan, evidence has been found of the existence of a far more primitive people than now dwell in those islands. In the shell heaps of the Aleutian Islands layers of different species were found which lead to the conviction that the present Aleuts were preceded by a much ruder race. Shell heaps on the coast of British Columbia, Oregon, and southern California, of vast size, have been explored and have shown the character of the true savage life here before the centuries of Spanish acculturation. The Atlantic coast of America, from Nova Scotia to Tierra del Fuego, and even the inland waters, wherever fresh-water mollusks abounded, are full of similar evidence. In the Straits of Magellan the almost naked savages are still in the kitchen-midden epoch, just as seen by early ex-

plorers. On the Atlantic coast of Brazil, wherever there is a favorable spot, is the *sambaqui*, or ancient shell heap, of such enormous proportions that the accumulation of some of them must have required thousands of years. Huge forests have grown over them, and river drifts have hidden others from view. Farther north, on the Florida Keys, hundreds of specimens have been recovered from the water which identify the ancient key dwellers with aborigines of Yucatan and Central America. Farther north the waters of Florida on both sides and along the St. John's are a vast repository of kitchen middens or shell heaps, which have been accumulating for ages. The Chesapeake Bay and its tributaries are now vast reservoirs of marine food, but in aboriginal times they were still richer. Some of the heaps are many acres in extent, from 10 to 20 feet deep in places, and rich in relics of the makers. These heaps do not disappear from the coast until the St. Lawrence is reached.

A comparison of relics in the shell heaps with those of inland tribes and with other peoples of the same grade of culture throughout the world leads to the conclusion that in none of them is it a matter of a unique race or culture. As the shell heaps were for temporary abode, there was little industry characteristic of residence there.

KITE (AS. *cyta*, kite). A diurnal bird of prey of the subfamily *Milvinae*, which contains about 30 species, widely distributed over the world, but most frequent in the tropics. The kites have much weaker bills and talons than the falcons and hawks, but the wings are much longer, and the tail is rather long and usually forked. They are remarkable for their gracefulness of flight and power of sailing and wheeling about or gliding in the air. The common European kite (*Milvus milvus*, or *ictinus*), or glebe, is found in almost all parts of Europe, Asia, and the north of Africa. It is fully 2 feet in length,

the plumage mostly brown mixed with gray. It feeds on reptiles, mice, moles, and other small quadrupeds, and the young of gallinaceous birds, searching for its prey on the ground, but often from high in the air. It sometimes catches fish. In former times, when more plentiful, it was the scourge of poultry yards, pouncing on young chickens, and it was highly regarded by medieval falconers, though more recently it has not been used at all in that sport. It was also the scavenger of London and other English towns, devouring the offal, as it still does in some of the towns of eastern Europe, but in England it is now nearly extinct. In India the goond, chil, or pariah kite (*Milvus govinda*) is one of the recognized and important scavenging birds of the country and abounds everywhere in the towns, going about tame and unharmed and often making a nuisance of itself by its impudent familiarity.

In the United States four birds are called kites, but they are all Southern, only one of them reaching the Northern States. The Everglades kite (*Rostrhamus sociabilis*) is found in Florida and far southward, the Mississippi kite (*Ictinia mississippiensis*) occurs as far north as South Carolina and southern Illinois; the white-tailed kite (*Elanus leucurus*) has about the same range, but extends westward to California; lastly, the swallow-tailed kite (*Elanoides forficatus*) is found in summer as far north as Minnesota and Dakota. This last species is the largest and finest of the group, measuring 4 feet or more across the wings, head, neck, and under parts pure white; rest of upper parts, wings, and tail, glossy, lustrous black; tail, 14 inches or more in length, forked for 7 inches or so. Consult Fisher, *Hawks and Owls of the United States* (Washington, 1893). See PLATE OF EAGLES AND HAWKS.

KITE (so called apparently because soaring in the air like a bird). A contrivance consisting of a light framework, covered with paper or cloth and held by a string in such a way that the wind acting upon it, as upon a sail, raises it to a greater or less height above the ground. The origin of the kite is doubtful, but it has been used for many centuries as a toy, particularly by the Japanese and Chinese, and has recently come into quite extended use in meteorological observations and for other useful purposes. Kites are made in various forms, the favorite form being perhaps an isosceles triangle, the base of which becomes the top of the kite and is surmounted by a curved rib. This framework is covered with tightly stretched paper or cloth and has at its pointed end a tail composed of twisted scraps of paper, tied to a long string. The string for holding the kite during flight is attached near its top. In China and Japan the form of kite is more diversified than elsewhere, birds, bats, dragons, and other creatures being imitated, and the framework being covered with silk or paper having various painted ornamental designs. Modern kites for scientific purposes are generally tailless and constructed in one of two forms, known as the Malay and the Hargrave.

One of the first attempts to use a kite for scientific purposes was made in 1749 by Dr. Alexander Wilson, an Edinburgh astronomer, who attached thermometers, probably of his own make, to kites, in order to determine the temperature in the clouds. After this came the familiar experiment of Benjamin Franklin, who

demonstrated the identity of electricity and lightning. He constructed a kite whose framework consisted of a cross made of two light strips of cedar; over this was stretched a silk handkerchief, tied to the four extremities; a sharp-pointed wire extended a foot from the top of the upright stick of the cross; the kite string terminated in a silk ribbon held by the observer, and a key was suspended at the junction of the twine and silk. The kite was raised by Franklin during a thunderstorm in June, 1752, and almost immediately he had the satisfaction of experiencing a spark on applying his knuckles to the key, and when the string became wet by a passing shower, the electricity became abundant. A Leyden jar was charged at the key, and by the spark thus obtained spirits were ignited and other experiments performed.

Since the remarkable experiment of Franklin the use of the kite for scientific purposes has been greatly extended. Self-recording anemometers were sent up to a height of 2500 feet by E. D. Archibald in England in 1882-86. (Consult the volumes of *Nature* for those years.)

of the midrib. It is necessary for the kite to lift its own weight, eight pounds; that of the meteorograph, two pounds; and that of the kite line, or fine steel wire, which may amount to 20 or 30 pounds in high ascensions. But the principal obstacle to high flights is the pressure of the wind on the wire. Some authorities prefer to fly several kites at tandem, but the Weather Bureau experience is in favor of one kite for elevations up to 7000 feet. Among the highest flights hitherto recorded at Blue Hill is a vertical height of about 14,000 feet, when seven kites were flown tandem and five miles of wire were used. In the United States, meteorological observations by means of kites and balloons have been carried on continuously by the Weather Bureau at Mount Weather, Va., and elsewhere since 1905. The greatest altitude to which instruments were raised by kites at Mount Weather was 23,835 feet, when 10 kites and 8.5 miles of wire were used on May 5, 1910. A number of other flights at Mount Weather were almost as high as the above. For several years the force stationed there, under W. R.

FIG 1. UNITED STATES WEATHER BUREAU BOX KITE (AFTER MARVIN)

In 1885 and 1887 Alexander McAdie used the kite to explore the electrical conditions of the air up to 1000 feet above Blue Hill Observatory. In 1890 William A. Eddy began adapting his Malay kite to meteorological work, and thermometers were thus sent up by him at Bayonne, N. J., in 1891. In 1894 a Richard thermograph was sent up to an altitude of 1000 feet above ground by Eddy and S. P. Ferguson, at the Blue Hill Observatory of A. L. Rotch, and from that date onward Rotch made kite work a prominent feature in the meteorological investigations carried on at this observatory. The subject was taken up in 1895 by Prof. W. L. Moore, as Chief of the United States Weather Bureau, where Prof. C. F. Marvin developed the mechanics of the kite and so improved the construction of the Hargrave or cellular kite, of the meteorograph that goes up with it, and of the reeling apparatus on the ground, that his complete outfit for daily work at any station was generally recognized as the best that had as yet been made. In 1898 17 Weather Bureau stations were equipped for daily kite ascensions. The Hargrave kite, as made by Professor Marvin, consists of a light framework of wood, so covered with cloth as to form two rectangular cells in front and one larger rectangular cell in the rear: the meteorograph hangs from the centre

Blair, carried out repeatedly continuous kite flights of 24 to 36 hours' duration

In Europe the late L. Teisserenc de Bort, at Trappes, near Paris, and R. Assmann, at Berlin, were the pioneers in the systematic use of the kite as a means of obtaining observations in the free air at moderate elevations. For all greater heights the balloon, especially the so-called sounding balloon, must be used. The kite can be used in windy weather when the balloon cannot; but the special advantage of the kite lies in the fact that the self-recording apparatus is thoroughly ventilated by the wind that supports the kite, and must therefore give the temperature and moisture of the free air with the least possible error introduced by solar heat or instrumental radiation.

The use of kites to carry lines across streams or deep chasms and to convey life lines to stranded ships is a familiar practice in engineering and life-saving work. Kites have also recently been used to hold suspended in midair banners for advertising and other purposes and for taking photographs. For all of these purposes, as has been stated, either Hargrave or Malay tailless kites are employed. The Malay kite is shown in the illustration on the following page, taken from a paper by J. B. Millet published in the *Aéronautical Annual* for 1896;

this illustration also gives Mr. Millet's ideas as to the proper proportions for kites of this type.

The military use of kites has been especially developed by the Aéronautic Division of the German army, which used the kite balloon invented by Parseval and perfected by Captain

FIG. 2. MALAY KITE.

von Siegsfeld. This consists essentially of a cylindrical gas bag filled with hydrogen and bridled as a kite. When the wind blows, its pressure tends to keep the kite up by the reaction of the cord attached to the balloon and does not bear it down to the ground, as in the case of a captive spherical balloon. When there is no wind, the buoyancy of the hydrogen suffices to keep the balloon up. For military purposes the kite balloon is not expected to rise more than a few hundred yards above the ground, and when in that position a signal officer can be raised sufficiently high to scrutinize the surrounding country.

KI-TSE, k'è'tse', or CHI-TSE, or KI-JA, k'è'jà', VISCOUNT KI. A Chinese statesman, ancestor of Confucius, and reputed founder of the civilization of Korea. He was one of the feudal barons of the Shang dynasty, and one of the nobles of the Empire during the reign of the abandoned tyrant Chow-sin, who came to the throne in 1154 B.C. and showed himself one of the most licentious and cruel monarchs who ever sat on the throne of China. Viscount Ki vainly endeavored to turn him from his evil ways and for his pains was thrown into prison, from which he was released when Wu-wang defeated the tyrant and ended the Shang dynasty (1123 B.C.). Despite his sufferings, the loyalty of the Viscount was so great that he could not acknowledge the sovereignty of the conqueror, whom he regarded as a usurper. He asked permission to emigrate, and with 5000 followers he retired to Korea, where (1122 B.C.) he set up a kingdom which had its capital at Ping-yang (q.v.), on the Ta-dong River. Ki-ja was a successful colonizer, and his company contained artisans of every description, together with the evidences of culture and civilization of China, which up to that time were entirely lacking in Korea. He found the natives in a barbarous state, but he adopted their language and began a peaceful reign. His government was good, and he introduced a penal code of eight laws and a financial system. He is said to have taught the Koreans propriety, integrity, agriculture, the rearing of silkworms, and the spinning and weaving of silk. One of the most important sections of the great Chinese classic, *The Shu-king* (or Book of History) entitled *The Great Plan*, is attributed to him. Outside of the present new city of Ping-yang is the site of Ki-ja's capital, with a well dug by him, a monument describing his virtues, and his reputed tomb. The dynasty he founded, consisting of 42 kings, is said to have endured 1000 years; but, as Korean tradition is dependent on Chinese history, critical scholarship does not see in the modern Koreans the descendants of Ki and his settlers, nor in their claims the exact truth. Consult Hulbert, *The Passing of Korea* (New York, 1906). For *The Great Plan* in *The Shu-king*, consult Legge, *Chinese Classics*, vol. iii (Hongkong, 1865). See KOREA.

KIT'SON, HENRY HUDSON (1865-). An American sculptor. He was born at Huddersfield, England, and studied under his brother Samuel in Boston and at the Ecole des Beaux-Arts, Paris, under Bonnaisieux. One of his earliest works, "Music of the Sea" (Boston Museum), is unusually charming and spontaneous. Among his important public monuments are that of Major Doyle in Providence, R. I.; the Iowa State Monument and the statue of General Lee, at Vicksburg, Miss.; "The Minute Man," at Lexington, Mass.; the Hayes Memorial Fountain, at Providence; the W. H. Hunt Memorial, in Boston; and the statue of Roger Conant at Salem, Mass. He received various medals, and a decoration from the King of Rumania.

KITSON, THEO ALICE RUGGLES (1871-). An American sculptor, the wife and most talented pupil of Henry Hudson Kitson. She was born at Brookline, Mass., and studied first under Mr. Kitson in Boston and then under Dagnan-

Bouveret in Paris. She became one of the few women members of the National Sculpture Society, and, at the time she received honors at the Paris salon, was the only American woman to have gained such distinction. The monumental statues which are her chief productions are spirited, robust, and simple both in conception and execution. Among the best are the Massachusetts State Monument at Vicksburg; "The Minute Man of '76," Framingham, Mass.; the "Mother Bickerdyke" group, for Illinois; the monument to the students of the University of Minnesota who served in the Spanish-American War; and various soldiers' monuments. She collaborated with her husband in the Patrick Collins Monument in Boston and in the Stephen D Lee Monument in Mississippi.

KITTANNING. A borough and the county seat of Armstrong Co., Pa., 44 miles by rail northeast of Pittsburgh, on the Allegheny River, and on the Pennsylvania and the Pittsburgh, Shawmut, and Northern railroads (Map: Pennsylvania, C 5). It has large iron and steel works, foundries, coal mines, glassworks, flour and lumber mills, china, pottery, brick, lime, and clay works, mirror and typewriter factories, breweries, etc. Besides coal, iron ore and other mineral deposits are found in the vicinity, and the borough is supplied with natural gas. Pop., 1900, 3902; 1910, 4311. The boroughs of Kittanning and Wickbore were consolidated, giving the former a population of about 10,000 in 1914.

KITTATINNY. A mountain ridge, averaging 1200 to 1800 feet in height, which begins in Ulster Co., N. Y., and extends southwestward through northwest New Jersey. It forms the east ridge of the Appalachian system in this section, and after passing the Delaware Water-gap it is continued through eastern Pennsylvania in the uplift known as Blue Mountain. See APPALACHIANS.

KITTEL, RUDOLF (1853-). A German Old Testament scholar, born in Eningen, Württemberg. Educated at Tübingen, he was an instructor there (1879), a professor in a secondary school in Stuttgart (1881-88) and professor in the University of Breslau (of which in 1896 he was rector) from 1888 to 1898, and thereafter professor of Old Testament exegesis at the University of Leipzig. Among his many important contributions to the study of the Old Testament are: *Geschichte der Hebräer* (1888-92; Eng. trans., *A History of the Hebrews*, 1895), *Judges and Samuel* (1892), in Kautzsch's German translation of the Old Testament; *The Books of Chronicles* (1895); Hebrew text with notes, in Haupt's "Sacred Books of the Old Testament"; *Zur Theologie des alten Testaments* (1899); *Prophetie und Weissagung* (1899); a German commentary on the Book of Kings (1900) and one on Chronicles (1902); *Die orientalische Ausgrabungen und die ältere biblische Geschichte* (5th ed., 1908, Eng. trans., *The Babylonian Excavations and Early Biblical History*, 1903, 3d ed., 1908); *Der Babel-Bibel-Streit und die Offenbarungsfrage* (1903); *Biblia Hebraica* (1905-06; abbreviated ed., 1913), a new critical text which he had planned for several years and in which he was assisted by Beer, Buhl, and Dalman; *Studien zu hebräischer Archäologie und Religionsgeschichte* (1908); *Geschichte des Volkes Israel* (2d ed., 1909-12); *The Scientific Research of the Old Testament Text* (1912); *Kommentar zum Psalter* (1914).

KITTELSEN, THEODOR (1857-1914). A Norwegian artist, born at Kragerø. He studied at Munich, painting "Streik" (1879), which attracted much attention, and later in Paris. He excels in pen-and-ink drawings, as is shown in his fantastic and grotesquely humorous illustrations to Asbjørnsen's and Moe's fairy tales, and the bizarre stories of his friend Skeibrok the sculptor, and in his caricatures *Fra livet i de smaa forholde* (2 series, 1889-90). The mystic and awe-inspiring in Norwegian nature and traditions he portrayed in *Fra Lofoten* (2 series, 1890-91) and in the paintings "Echo," "The Water Spirit," "The Witch," "Witchcraft" (1892), and "In the Deer Park" (1896), in Berlin. He also furnished pictures for *Simplissimus* and other periodicals. In the Christiania Gallery he is represented with these paintings: "The Twelve Wild Ducks" (1897), "Soria Moria Castle" (12 pictures), "From Jomfruland" (15 pictures), together with numerous drawings.

KITTERY. A town in York Co., Me., on the Atlantic Ocean and the Piscataqua River, opposite Portsmouth, N. H., on the Boston and Maine Railroad (Map: Maine, B 5). It has the Rice Public Library, the Trape Academy, and several hotels. On an island in the river is the naval station known officially as the Portsmouth Navy Yard, the scene of the Russo-Japanese Treaty of 1905 (q.v.). Settled in 1624, Kittery was incorporated under its present name in 1647. It was the birthplace and home of Sir William Pepperell (q.v.) and formerly carried on an extensive shipping trade. Pop., 1900, 2872; 1910, 3533.

KITTIM (Authorized Version sometimes CHITTIM). The third son of Javan and the brother of Elisha, Tarshish, and Dodanim (Rodanim, or possibly Dardanim), according to Gen. x. 4. It is evidently the name of a people, as the plural form and the context show. The clearest indication of where this people lived would seem to be the description of Alexander as coming from "the land of the Kittim" (1 Macc. i. 1) and of Perseus as "king of the Kittim" (viii. 5), consequently Macedonia. But, on the one hand, it apparently applies to Italy in Dan. xi. 30, suggesting that it was sometimes used loosely for the West in general; on the other hand, Josephus (*Ant.*, i, 6, 1) maintains that it originally referred to Cyprus, where Kiton, the present Larnaka, was an indication of the old name of the island. The identifications of Josephus are often dictated by a more or less striking similarity of sound, and there is no evidence that unmistakably points to a connection between Kiton on Cyprus and the Kittim. Alashia is manifestly the name of Cyprus, or a part of the island, in the Tell el-Amarna tablets (xxv-xxxiii, lxxxi, 52), and this name has been thought to be identical with Elisha (Gen. x. 4). However that may be, Kittim cannot be limited to the Greek settlement on Cyprus; the phrase "isles [or coastlands] of Kittim" in Jer. ii. 10; Ezek. xxvii. 6, indicates a wider significance, and the plural "Kittim" also seems to suggest something more than the population of a single locality. It would be easier to understand how the name could become a designation of the Macedonians, if it originally referred to a people settled on the coasts of the Aegean as well as on some of the islands in the Mediterranean. Such an expansion of meaning Josephus indeed suggests. It is not

easy to determine what people this can have been. Knobel conjectured that it was the Carians, also called Macarians. The Macedonians are more likely to have been a Hellenic people than the Carians; it has been thought that there was a shorter form (Keta) as well as a longer (Maketa) of their name; there is no reason why they should not have been known in Syria at an early time, and, if the similarity of sound between Citium and Kittim is accidental, there is no necessity for bringing the Macedonians to Cyprus. We do not know whether the Aegean invaders of Cyprus in the late Minoan age were Greeks or not. Modern critics have, as a rule, abandoned the attempts of earlier scholars to find in Gen. x. 4 the names of well-known tribes who could have been regarded as kindred, such as Aelians, Etruscans, Macedonians, Dardaniens, and seek for Greek settlements, of which some rumor may have come to the Hebrews, at Carthage and Tartessus, on Cyprus and Rhodes. Future research and discovery may enable us, on grounds not known to-day, to reach a decision as to whether this was a move in the right direction. Meanwhile the identification of Kittim with Cyprus is tentatively held by most scholars. Consult: Knobel, *Die Volkertafel der Genesis* (Giessen, 1850), W. Max Müller, *Asien und Europa* (Leipzig, 1893); and the commentaries on Genesis by Gunkel (3d ed., Leipzig, 1910), S. R. Driver (7th ed., London, 1909), John Skinner (New York, 1912), and H. E. Ryle (ib., 1914).

KITTIWAKE (so called in imitation of its cry). A medium-sized gull of the genus *Rissa*, characterized by the rudimentary or very small hind toe and the peculiar pattern of coloration of the primaries. It is confined to the Northern Hemisphere and breeds in immense numbers along the rocky coasts of the northern oceans, building its nests on ledges and inaccessible cliff. The nests are made of seaweeds, grass, moss, and the like, and the eggs, usually three, are, like those of other gulls, buffy or grayish brown marked with chocolate brown. The kittiwakes do not differ essentially from the other gulls in their food or habits. Only two species are known, of which the common kittiwake (*Rissa tridactyla*) is the most widely distributed. It occupies during the summer the entire circumpolar region in America and breeds as far south as the Magdalen Islands and northern Minnesota, while in winter it wanders south to the Caspian Sea and Mediterranean, and in the western Atlantic to the coasts of Virginia. The same species occurs in winter about the Great Lakes and on the Pacific coast as far south as Puget Sound. It is a curious fact that Pacific coast specimens have the hind toe much better developed and provided with a small claw, and they are accordingly recognized as a subspecies (*pollucaris*). The second species of kittiwake (*Rissa brevirostris*) is an inhabitant of Bering Sea, where it is a permanent resident and breeds in vast numbers on the inaccessible crags of rocky islands. It is easily distinguished from the common kittiwake by the shorter bill, longer wing, and the color of the feet, which in life are coral red but when dry are yellow; the feet of the common species are blackish. Consult H. K. Job, *Among the Waterfowl* (New York, 1902), and standard authorities. See GULL.

KITTO, JOHN (1804-54). An English biblical scholar, born at Plymouth, Dec. 4, 1804. In his thirteenth year he lost his power of hear-

ing in consequence of a fall. His father's circumstances at this time were so wretched that young Kitto was soon after sent to the workhouse. Here he learned the trade of shoemaking. In 1824 he went to Exeter to learn dentistry with Anthony Norris Groves, one of the founders of the Plymouth Brethren, and later a devoted independent missionary in the East. Mr Groves encouraged Kitto in his literary aspirations, and in 1825 he published *Essays and Letters by John Kitto*. In the same year Kitto was sent by the kindness of various friends to the missionary college at Islington, to be trained as a printer on one of the Church Missionary Society's foreign presses. In 1827 he went in that capacity to Malta, but was recalled in 1829 because he neglected his duties in his devotion to literature. In June, 1829, he accompanied Mr. Groves and family on a tour to the East, visiting in the course of his travels St. Petersburg, Astrakhan, the Kalmuck Tatars, the Caucasus, Armenia, Persia, and Bagdad. He returned to England in 1833. The rest of his life was spent in the service of the booksellers. He died at Cannstadt in Württemberg, Nov. 25, 1854. His principal works are: *The Pictorial Bible* (1838; new ed., 1855); *Pictorial History of Palestine* (1839-40); *History of Palestine* (1843); *The Lost Senses—Deafness and Blindness* (1845); *Journal of Sacred Literature* (1848-53), *Daily Bible Illustrations* (8 vols., 1849-53; new ed. by Porter, 1866-67). He also edited the *Cyclopædia of Biblical Literature* (2 vols., 1845; 3d ed., 3 vols., by W. L. Alexander, 1862-70). Consult his biography by Ryland (London, 1856) and by J. Eadie (Edinburgh, 1857).

KITTREDGE, GEORGE LYMAN (?-). An American English philologist, who graduated from Harvard University in 1882 and, after passing from instructor to assistant professor of English in his alma mater, became full professor in that institution in 1894. In 1901 he was honored with the degree of LL.D. by the University of Chicago, in 1907 with that of Litt.D. from his own university. He was a fellow of the American Academy of Arts and Sciences and a member of various learned societies. His work includes: *The Mother Tongue* (1900), with Sarah Louise Arnold; *Words and their Ways in English Speech* (1901), with James B. Greenough; *Old Farmer and his Almanach* (1905), *Essays on Chaucer* (1914); *Chaucer and his Poetry*, six lectures delivered at Johns Hopkins (1915).

KITUNAHAN, kē'tōō-nā'han. A North American Indian stock. See KUTENAI.

KIUH FOW, kyōō' fou', KEUHFOW, KUFOU, or CHUFOW. A small prefectural city in the Department of Yenchow, Shantung, China, situated about 10 miles northeast of Yenchowfu. It is noted as the birthplace of Confucius and the residence of Duke K'ung, his lineal descendant of the seventy-sixth generation. The city is walled, has five gates, and is about 1 mile in length and ½ mile in width. Two of the gates are in the south wall; the more westerly one formerly opened only on the occasion of an Imperial visit. A beautiful avenue of cypresses and other fine old trees leads from this to the main entrance of the Great Temple, or rather series of temples, erected here in honor of Confucius. The main building is a gorgeous affair, of impressive proportions, built of the heaviest teakwood from Burma, with elaborate, massive, gorgeously colored eaves, and roofed with yellow

glazed tiles. The front veranda is supported by 10 great stone pillars, 22 feet high, 2 feet in diameter, each of one piece, and very deeply cut in relief with coiling dragons. Within the building stands a statue of the saint, with his favorite disciples ranged on either side. On a high table in front are some very ancient relics. In a separate inclosure a little distance to the north of the city is the Sage's grave, surrounded by the graves of the K'ung family. It is approached by a fine avenue of cypresses and stands in a little forest of oak, cypress, pine, etc. The mound is 25 feet high. The graves of generation after generation are scattered all around, with monuments and imposing pailous. The Taiping rebels spared Kiuh Fow. Pop., about 20,000.

KIUKIANG, kyōō'kyāng' (Chin., nine rivers). A departmental city of the Province of Kiangsi, China, opened by treaty in 1861 as a place of foreign residence and trade. It is situated on the right bank of the Yang-tse, about 130 miles southeast of Hankow (q.v.), 445 above Shanghai, and 12 above the entrance to the Poyang Lake (Map. China, L 6). The circuit of the city is about 5 miles. The principal gates are those on the east and west. Outside the west gate lies the principal suburb, and to the west of this is the foreign settlement, which stretches along the Yang-tse for 500 yards, with a fine "bund" or esplanade along the river bank. At Kuling (blue ridge), 13 miles from Kiukiang, a foreign mountain resort has been established by the foreign population of Shanghai and the Yang-tse. Over 1000 foreigners congregated here in the summer months. Behind the city and the settlement lie large shallow lakes, which in some places skirt the city walls, and to the west of the settlement flows a little river called the P'un. The native city presents no feature of special interest. It was taken by the Taiping rebels and held by them for five years and was utterly destroyed before they left it. The foreign population is small. There are an Episcopal church (the British government having formerly maintained a consular chapel here) and a Roman Catholic cathedral, and there are several successful Protestant missions. The settlement is managed by a municipal council, elected by the land renters, and is well laid out, lighted, drained, and watched. The climate is pleasant, though the heat in summer is frequently as high as 100° F. The trade is not extensive, owing largely to the upstream distance from the entrance to the Po-yang Lake, the current being too strong for native cargo boats to stem. In 1912 net imports amounted to 16,557,235 taels, and exports to 18,014,415 taels, a total trade value of 34,571,650 taels. Imports are mainly cotton yarn, kerosene, and sugar; exports, porcelain, rice, tea, cotton, hemp, paper, and tobacco. There is no direct foreign trade, and communication with the Po-yang ports is maintained by means of native-owned steam launches. Kiukiang was opened mainly to accommodate the tea trade, but Hankow (q.v.) has become the tea mart of the region. Near Kiukiang is the grave of Chu-fu-tse the philosopher (1130-1200 A.D.). The population is estimated from 36,000 to 55,000.

KI'UN. See CHUEN.

KIUNGCHOW, kyōōng'chou', or CHIUNG-CHOU. A department of the Chinese Province of Kwangtung, made up entirely of the island of Hainan (q.v.) (Map: China, K 8). It

contains three prefectural cities of the rank of *chow*, and 10 of *hien* (or *hsien*) rank. The departmental city is also called Kiungchow and is distant about 3 miles from the sea, where its "port," called Hoihow (lit., seaport), is situated. The city was opened to foreign residence and trade in 1876. Net foreign imports in 1912 amounted to 2,727,739 taels, net Chinese imports, 215,242 taels, a total of imports of 5,333,651 taels. Exports amounted to 2,390,870 taels. Kerosene from Borneo, Sumatra, and Burma (a little from the United States) is the chief import. The chief exports are pigs, cattle, eggs, betel nuts, poultry, grass cloth, hemp, galangal, and sesamum seeds.

Ten miles south of the city are the Kiung Mountains, where a particular kind of jade is said to be found. This gives name to the department and its chief city. The name dates from the year 654 A.D. Population of the city, 42,000, and of the department, about 2,000,000.

KIUPRILI, ku-prē'lē (variously spelled). The name of a family of grand viziers of Turkey of Albanian origin.—**MOHAMMED KIUPRILI** (1585-1661) entered the palace in a menial position, but by his ability he became in time Governor of Damascus, Tripoli, and Jerusalem. In the troubles which followed the death of Sultan Ibrahim, and while Mohammed IV was still a minor, the Sultana, Valideh, appointed him Grand Vizier, Sept. 15, 1656, but he accepted the office only after he had been given full authority. He ruled with great energy and severity, suppressing religious fanatics and rebels. He also restored order in the administration. Against Austria and Venice he waged successful war, and the islands of Lemnos and Tenedos were recovered from the latter. He left his power to his son **AHMED** (1630-76). Like his father, the latter antagonized the ultra-orthodox and in 1663 took command of the armies against Austria. He overran Hungary and Transylvania and captured several strong towns. Christian Europe, however, was alarmed, and France sent aid to Austria, and on Aug. 1, 1664, the Turks were decisively defeated at the battle of St. Gotthard by the Imperial forces under the Count of Montecuccoli (q.v.). Nevertheless Kiuprili was able to conclude an advantageous peace. In 1669 Candia was captured, and peace made with Venice. His last years were spent in war with Poland, during which he was several times defeated by Sobieski (q.v.).—**MUSTAPHA** (died 1691) was a brother of Ahmed. He had sufficient influence over Mohammed IV to induce him not to kill his brother Solyman, and hence, when the latter in 1687 overthrew Mohammed and became Sultan as Solyman III, he remembered the service and in 1689 made Mustapha Grand Vizier. He re-established order in internal affairs, but in the war against Austria he was killed in the battle of Salankamen, Aug. 19, 1691. Consult Creasy, *History of the Ottoman Turks* (London, 1877), and Brosch, *Geschichten aus dem Leben dreier Grosswesire* (Gotha, 1899). See **TURKEY**.

KIUSHU, kyōō'shōō, KYUSHU (Sinico-Japanese, nine provinces). One of the five large islands which form the main part of the Empire of Japan and the most southerly of the three which form Japan proper. It is separated from Hondo, or the main island, by the Straits of Shimonoseki, and from Shikoku, the smallest of the three, by the Straits of Bungo (Map: Japan, B 8). Area, 16,840 square miles; pop., 1898,

6,357,551; 1903, 7,260,834; 1908, 7,726,934. It takes its name from the fact that it consists of nine provinces: Chikuzen, Chikugo, Buzen, Bungo, Hizuri, Higo, Hyūga, Osumi, and Satsuma. For administrative purposes it has been divided since 1874 into seven *ken*, or prefectures: Nagasaki, Fukuoka, Oita, Saga, Kumamoto, Miyazaki, and Kagoshima.

The island is mountainous and volcanic; the highest peak, Aso-yama, in Higo, has a height of 5240 feet and is an active volcano. Many hot springs and solfataras are found in the island. Coal is found in many places and is extensively mined at Takashima, Karatsu, etc. Copper and antimony are also found. Hizen and Satsuma are noted for their potteries, and Arita and Imari ware are well known. Besides the usual rice, wheat, millet, hemp, and beans, Kiushu produces tea, tobacco, and vegetable wax. The island is remarkable for the broken character of its coasts, especially on the west side. It has many good harbors. Nagasaki (q.v.) is the treaty port, but in 1889 five special ports of export were opened: Moji, Hakata, Karatsu, Misumi, and Kuchinotsu. Railways have been introduced and run from Moji, a new town built by the railway, opposite Shimonoseki, to Kumamoto and Kagoshima, with several short branch lines, chiefly coal roads, that to Nagasaki (80 miles) being the longest. Kiushu is rich in historical associations. It was from Hyūga that Jimmu-Tenno (q.v.) set out on his conquering and civilizing mission; Jingō-Kōgo (q.v.) started from Kiushu on her expedition to Korea, and it was from this island that Taikōsaka's expedition for the conquest of Korea set out in 1592. In 1542, when Pinto discovered Japan, it was into a Kiushu harbor he sailed. Christianity was first proclaimed here by the Jesuits, and here was their sorest persecution; and until the opening of the country by treaty, Japan's commercial transactions with Europe were conducted here.

KIUSTENDIL. See KOSTENDIL.

KIVA, kē'vā. The Hopi name for the ceremonial chamber in an Indian pueblo. In the older ruins of the Southwest the kiva is usually a circular underground room, but in the modern villages they are most frequently rectangular and above ground. The entrance is always through the roof. Consult Victor Mindeff, "Study of Pueblo Architecture," in *Eighth Report of the Bureau of American Ethnology* (Washington, 1891), and P. E. Goddard, *Indians of the Southwest* (New York, 1913).

KIWI, kē'wē (Maori name, and in native speech usually doubled, *kiwi-kiwi*, in imitation of the bird's repetitive notes). One of the small, wingless, archaic birds of New Zealand composing the genus *Apteryx*, which is considered by some a family (Apterygidae) or as an ordinal group (Apteryges) of the subclass Ratitae (q.v.), and by others only a genus of an order (*Megistanes*), which includes the moas, emus, and cassowaries. For full account, see **APTERYX**.

KIZILBASH, kiz'il-bāsh' (Turk., red head). A nickname applied by the orthodox Turks to some of the more or less heretical peoples of western and Central Asia. It is said to have been first used in the sixteenth century to distinguish in Persia the "Persianized Turks" (the ruling class), who were Shiites and wore red caps, from the orthodox Sunnites, who wore green caps and were known as Yefhilbash. Soon

after, it was applied to the Shiite Turks from Persia settled in Asia Minor and elsewhere. Today the word is used of peoples of doubtful ethnic stock from the Mediterranean to the Hindu Kush. The Kizilbash of Afghanistan, where they settled during the reign of Nadir Shah (1737), are generally spoken of as "Persianized Turks." Their physical type seems to be largely Aryan. The physical type, religion, social institutions, etc., of these people vary not a little in the different parts of the country, but all are chiefly pre-Osmanli and perhaps even pre-Islamic. With certain other groups, such as the Taktadji, Yezidi, Ansariyeh, etc., they may represent the older Aryan population of these regions. Among their Christian neighbors the Kizilbash of Asia Minor have a good reputation, but they are more or less hated and despised by the orthodox Turks. Among them hero worship still survives, and their marriage customs are of the pre-Islamic Aryans, some of them suggesting old Hellenic affiliations. Consult Petersen and Von Luschan, *Reisen in Lykien* (Vienna, 1889), and Chantre, *Recherches anthropologiques dans l'Asie occidentale* (Lyons, 1895).

KIZIL IRMAK, kiz'il ēr-māk' (Lat. *Halys*) The longest river of Asia Minor, rising in the Karabel Dag east of the town of Sivas (Map. Turkey in Asia, C 2). It flows at first southwest and then, describing a semicircle, empties into the Black Sea by a large delta. Its length is over 500 miles, but its varying width and depth render it all but useless for navigation. Its chief tributaries are the Delidje and the Gök.

KJELLMAN, kyēl'mān, FRANS REINHOLD (1846-1907). A Swedish botanist. He studied at the University of Upsala, where in 1883 he became professor of botany and senior member of the faculty of philosophy. He accompanied Nordenskjöld on his exploration of the Arctic Ocean and reported the results of his numerous studies of plants which grow in the extreme north in the scientific report of the Vega expedition. In 1881 he was elected to membership in the Academy of Sciences of Stockholm.

KJERULF, kyā'rulf, HALFDAN (1815-68). A noted Norwegian composer, born in Christiania. He was at first intended for the law, but gave up his legal studies and took up music in Leipzig. His compositions were mainly songs, in many instances written for and sung by Sontag, Jenny Lind, and Christine Nilsson, who made them popular throughout the world. Apart from the value of his songs and piano-forte compositions, which are typically Scandinavian and in many instances models of great melodic excellence, he has exercised a powerful influence in the development of the purely national Norwegian type and inspired Nordraak and the young Grieg (q.v.). He died in Christiania, where a monument to his memory was erected in 1874.

KJERULF, THEODOR (1825-88). A Norwegian geologist, born in Christiania and educated there and at Kongsberg. In 1850 he studied the volcanos in Iceland. From 1851 to 1853 he studied in Germany, under Bischoff at Bonn and Bunsen at Heidelberg. He made a special study of the disputed Christiania region, and wrote *Das Christiania Silurbecken* (1855) and *Veiviser i Christiania Omegn* (1857). In 1857 he began his valuable charts and profiles, and he was appointed professor of geology at Christiania, and director

of the Geological Survey in 1858. In the latter post he continued his studies of southern Norway and in 1879 published *Udsigt over det sydlige Norges Geologi*. He held the old catastrophic theory in geology. Kjerulf was a contributor to belles-lettres also; his *Digte og Skitser* were edited by H. Lassen in 1896.

KJÖBENHAVN, kē'ben-häv'n. The Danish form of the name Copenhagen.

KLACZKO, kläch'kò, JULIAN (1828-1906). A Polish publicist and critic, born of Jewish parents in Vilna. He made his literary début in 1839 and published his *Sonnets* in 1843. He became famous through his political pamphlet, *Die deutschen Hegemonen* (published in Berlin in 1849). In 1849 he went to Paris and became a contributor to the *Revue des Deux Mondes* and coeditor of *Wiadomości polskie*, a Polish periodical. In his many essays, a number of which appeared in the latter periodical, he tried to prove the possibility of a restoration of Poland and, actuated by hatred of Prussia, advocated an alliance between Austria and France. As a result of the war of 1866, he was appointed Court Councilor in the Austrian Ministry of Foreign Affairs in 1869, but retired in 1870 and, after a sojourn in Italy, returned to Paris in 1875. The most important of his works are: *L'Agitation unitaire en Pologne* (1862); *La poésie polonaise au 19ème siècle* (1862); *Les préliminaires de Sadowa* (1868-69); *L'Union de la Pologne et de la Lithuanie* (1869); *Causeries florentines* (1880; Polish trans., 1884); *Rome et la renaissance* (1898; Polish trans., 1900). The political disclosures in his *Deux chance-liers*, *Gortchakoff et Bismarck* (3d ed., 1877), created a sensation. The articles published in his *Polish Gazette* appeared in four volumes under the title *Polish Annals* (Paris, 1865).

KLADDERADATSCH, klä'de-rä-düch'. A popular comic paper, founded in 1848 by David Kalisch and issued weekly at Berlin. Its name is taken from a North German expression intended to convey the effect of a clattering fall. The paper is especially devoted to political satire and attracted attention through its series of caricatures of Napoleon III and Bismarck.

KLADSKO, kläts'kò. See GLATZ

KLAFSKY, kläfs'kè, KATHARINA (1855-96).

A celebrated Hungarian dramatic soprano, born in St. Johann. She began her career as a chorus singer at the Comic Opera of Vienna. In 1875 she joined the Salzburg Opera in a similar capacity, but also appeared occasionally in minor parts. Angelo Neumann (q.v.) discovered her talent and engaged her for the Leipzig Opera in 1876. As she had never studied singing, her duties there were at first the same as at Salzburg, but at the same time she was trained by Sucher and Geisler. After three years she appeared in more important rôles, and when Neumann in 1882 organized his Wagner company he engaged her as alternate with the famous Reicher-Kindermann. Her success as Brünnhilde at once placed her in the front rank of the great Wagner singers. From 1886 till her death she was the principal star of the Hamburg Opera. In 1895-96, as a member of Mr. Damrosch's company, she took New York by storm and signed a contract with the Metropolitan Opera House. Just before embarking for America she died at Hamburg. Bülow (q.v.) considered her the greatest *Fidelio* of the century.

KLAGENFURT, klä'gen-furt. The capital of the Crownland of Carinthia, Austria, and

seat of the Bishopric of Gurk, situated near the Glan River, 2 miles east of Lake Wörther, and 40 miles north-northwest of Laibach (Map: Austria, D 3). Among the prominent buildings are the old cathedral, dating from the beginning of the seventeenth century, the House of Estates, with its armorial hall containing the ancient stone on which the dukes of Carinthia sat while receiving the homage of their vassals; the parish church; the Museum Rudolfinum, with a number of collections; a library of 65,000 volumes, the episcopal palace; the town hall, and the new hall of the Musical Union. The principal square is adorned with a stone fountain of a dragon dating from 1590 and a bronze statue of Maria Theresa. Klagenfurt has a Gymnasium, a Realschule, a teachers' college, trade schools, a theological seminary, and a school of agriculture and mining. The chief manufactures are leather, white lead, machines, tobacco, and cloth. Much commerce passes by way of the Lend Canal to Wörther Lake. Pop., 1900, 24,314; 1910, 28,911, mostly Germans.

KLAMATH, klä'mat. A tribe centring about the lakes and river of the same name in southern Oregon, which, with the adjoining Modoc (q.v.) of California, makes up the Lutuamian linguistic stock. Their present reservation of 1360 square miles, confirmed by Treaty of 1864, is occupied jointly with several other tribal remnants, including adopted former slaves. Their former subsistence was derived chiefly from hunting, fishing, and the gathering of camas and other roots. They were expert basket weavers, brave fighters, and, like other tribes of the region, made slaves of their captives. They are now almost all fairly civilized stock raisers. They are reported to number about 696. The most complete account of the tribe is Gatschet's monograph, "The Klamath Indians of Oregon," published as vol. iii of *Contributions to North American Ethnology* (Washington, 1883).

KLAMATH FALLS. A city and the county seat of Klamath Co., Ore., 32 miles northeast of Pokegama, on the Southern Pacific Railroad, on Sink River, and on Lake Ewanna (Map: Oregon, D 5). It is the site of the Klamath Irrigation Project, carried on by the United States Reclamation Service, has abundant water power (the river here having a fall of 85 feet in a mile and a half); and is the distributing centre for a rich agricultural, lumbering, and sheep and cattle raising region. There are large saw mills, cereal factories, and mineral-water bottling works. The city is a summer resort, popular for its fine fishing and hunting, and contains a Carnegie library and the lava beds, which were the scene of the Modoc Indian War of 1873. In the vicinity is the Klamath Indian Reservation, having about 1100 inhabitants. Pop., 1900, 447; 1910, 2758.

KLAMATH RIVER. A river of Oregon and northern California. It rises in Upper Klamath Lake, Klamath Co., Ore., and flows in a generally southwesterly direction to the northeastern part of California, where it turns sharply to the northwest, entering the Pacific Ocean near Requa in Del Norte Co., Cal. (Map: California, B 1). Its length, following its major windings, is 180 miles. Klamath Lake is 4141 feet above sea level. For about the first 20 miles the stream flows through a flat, swampy country. It then breaks over a rocky ledge and begins a precipitous descent of from 100 to 200 feet a mile to its mouth. The principal tribu-

tarries are the Shasta, Scott, Salmon, and Trinity rivers. The drainage area is 11,850 square miles.

KLAPKA, klöp'kó, GRÖGEY (GEORGE) (1820-92). A general of the Hungarian revolution of 1848. He was born at Temesvár, being the son of the burgomaster of that town. He entered the Austrian army in 1838 and rose to be lieutenant. In 1848 he left the service, but upon the outbreak of the revolution joined the cause of the Hungarians and was sent into Transylvania and then against the Serbs. After the defeat of Mészáros at Kaschau (Jan. 4, 1849) Klapka was appointed to succeed him. The plan of the Hungarian campaign in the beginning of 1849, which was carried out with such great success, was largely his work. He distinguished himself in several battles in the winter and early spring of 1849 and after acting as Minister of War for a short time took the field again in May and attained a splendid reputation by his defense of Komorn. The series of battles which he fought from July 30 to August 5 was perhaps the most brilliant episode of the whole war. After the surrender of Görgey at Világos (Aug. 13, 1849) Klapka held out until September 27, when he capitulated to General Haynau. He proceeded to England and afterward to France and Italy and settled finally in Geneva, working always for the independence of his country. In 1859 he was requested by the Sardinian government to organize an Hungarian legion, to be used against Austria, but the armistice of Villafranca destroyed his hopes of active service. After the War of 1866, in which he organized a Hungarian legion as a Prussian major general, he returned to Hungary and was elected to the Diet as a member of the Deak party. (See DEAK, FERENCZ) In 1873-74 he undertook the reorganization of the Turkish army. Late in life he started various industrial enterprises with little success. He died at Budapest, May 17, 1892. His *Memoirs* were published at Leipzig in 1850. He also wrote: *The War of Independence in Hungary and Transylvania* (1851); *The War in the East* (1855); *Recollections* (1887).

KLAPP, kláp, MICHAEL (1834-88). An Austrian journalist and author, born and educated in Prague, whence he went to Vienna in 1855. Connected with the *Ostdeutsche Post* in 1859-66, then special correspondent in Italy, Spain, and other countries for the *Neue Freie Presse*, he became in 1870 editor of the *Montagsrevue*. He gave offense by an article on the sojourn of Empress Elizabeth in Hungary, contributed by him to the *Gartenlaube*, and was obliged to resign from his position in 1877. Besides several comedies, one of which, *Rosenkranz und Guldenstern* (1878), brought out at the Burgtheatre in Vienna, was produced on all important stages of Germany, he wrote: *Komische Geschichten aus dem jüdischen Volksleben* (1859); *Vom grünen Tisch* (1865); *Bilder vom Marsfeld* (1868); *In London und unter den Feniern* (1869); *Revolutionsbilder aus Spanien* (1869), and other sketches; also the novel, *Die Bankgrafen. Roman aus der Schwundelzeit* (1877).

KLAPROTH, kláp'rót, HEINRICH JULIUS (1783-1835). A German Oriental scholar and traveler, born in Berlin. While yet in the Gymnasium, at the age of 14, he began the study of the Chinese language, a task then rendered particularly difficult by inadequate material. In 1804 he was appointed by the St. Petersburg

Academy an adjunct in Oriental languages and literatures. In the year following, under commission from the academy, he accompanied Count Golovkin's embassy to China and during a two years' absence amassed a great quantity of material for Chinese studies, including important vocabularies and extensive observations of usages and customs. A journey to Georgia and the Caucasus region was accomplished for the academy in 1807-08. From 1811 to 1814 he lived in Berlin, and, after being dismissed from his post in Russia, he went in 1815 to Paris. Through the instrumentality of Wilhelm von Humboldt, he was appointed by Frederick William III of Prussia a professor of Asiatic languages and literatures (with residence at Paris) in 1816 and was also financially aided by the King in the publication of his works. They include: *Reise in den Kaukasus und nach Georgien in den Jahren 1807 und 1808* (2 vols., 1812-14); *Geographisch-historische Beschreibung des ostlichen Kaukasus* (1814); *Asia Polyglotta* (1823); *Mémoires relatifs à l'Asie* (1824); *Tableaux historiques de l'Asie* (1826); *Collection d'antiquités égyptiennes* (1829); *Aperçu général des trois royaumes* (1833), the last valuable for the study of Japanese history. His *Lettre à M. le Baron A. de Humboldt sur l'invention de la boussole* was edited by Wittstein (Leipzig, 1885). Consult Landresse, "Notice sur M. Klaproth," in *Nouveau Journal Asiatique*, vol. xvi (Paris, 1835), and Larenaudière, "Notice sur M. Klaproth," in *Nouvelles Annales des Voyages*, vol. iv (ib., 1835).

KLAPROTH, MARTIN HEINRICH (1743-1817). A German chemist, born at Wernigerode. He was member of the Academy of Sciences and professor of chemistry at the School of Artillery and the University of Berlin. He discovered the elements uranium, zirconium, and titanium, and was one of the first chemists in Germany to recognize the value of Lavoisier's discoveries. He is also known for his analyses of minerals, published in his *Beiträge zur chemischen Kenntnis der Mineralkörper* (6 vols., 1793-1815).

KLATTAU, klát'ou (Boh. *Klatovy*). A town of Bohemia, Austria, situated in a fertile district, 30 miles by rail south of Pilsen (Map: Austria, C 2). It has a thirteenth-century Gothic church, a former Jesuit church with fine frescoes, an interesting town hall with a high tower, barracks, a museum, an agricultural school, and a Gymnasium. It carries on manufactures of woolen cloth, machinery, leather, lumber, wadding, chicory, and matches. Flowers are cultivated for commercial purposes. Pop., 1900, 12,793; 1910, 14,387, mostly Czechs.

KLAUS, BROTHER, OF FLUE. See FLÜE, NIKOLAUS VON.

KLAUS, klous, PETER. In German legend, a goatherd of Sittendorf, the story of whose 20 years' sleep in the mountains closely resembles the adventures later attributed to Rip Van Winkle. The tale is found in Otmar's *Volks-Sagen*.

KLAUSENBURG, klou'zen-burk (Hung. *Kolozsvár*). A royal free town of Hungary, capital of the County of Klausenburg and former capital of Transylvania (Map: Hungary, H 3). It is situated on the Little Szamos, 123 miles by rail north-northwest of Hermannstadt, and consists of the old inner town and five suburbs. In one of the suburbs, on a hill covered with gypsy huts, rises the citadel erected by General Steinville in 1715. In the inner town

are a fifteenth-century Franciscan church, a Reformed church built by Matthias Corvinus in 1486, and the house in which he was born. There are also a Unitarian church, several synagogues, many quaint old dwellings, the Bánffy Palace, the industrial building, and the national theatre. The western suburb contains the botanical garden, with an Italian villa and a museum. A statue of King Corvinus by Fadrusz was erected in 1902. Here is the Francis Joseph University (founded 1872), with four faculties, an attendance (1913) of 2124, and a library of 133,883 volumes. In 1902 the university opened a fine new central building. Other institutions include two higher Gymnasias, a Unitarian theological seminary with a library of 32,000 volumes, a Reformed theological academy with 19,000 volumes, an agricultural academy, a Fröbel Institute, a girls' high school, a number of special schools, an industrial museum, an ethnographic museum, a museum of technology, and a public library of 51,000 volumes. The city has the chief scientific and art organizations of Transylvania. It is the seat of a Unitarian and of a Reformed bishop. The charitable institutions are noteworthy. Klausenburg has an extensive government cigar factory (employing 1500 hands), a government railway shop, a number of distilleries, and flour mills, manufactures of farm machinery, beet sugar, cloth, paper, soap, bricks, and candles. The Transylvania nobility frequent Klausenburg in winter. Gypsy bands furnish much of the music for the public parks in summer. The town was founded by German colonists in 1173 and became a free royal town in 1405. In 1848 it was captured by the Hungarian revolutionists under Bem. Pop., 1900, 49,295; 1910, 60,808, mostly Protestant Magyars.

KLAUSTHAL, klous'tal. A town of Prussia. See CLAUSTHAL.

KLAUWELL, klou'vél, OTTO (1861-). A German composer and writer on music, born at Langensalza. He was educated at the Dresden Kreuzschule, served in the Franco-German War, and subsequently studied mathematics at the University of Leipzig. In 1872 he entered the conservatory of that city and devoted himself to music. He became a teacher at the Cologne Conservatory (1875) and in 1885 was made director of the teachers' seminary classes (for pianoforte) in connection with that institution. He is a well-known composer of chamber music and piano pieces and has written two operas: *Das Mädchen vom See* (1889) and *Die heimlichen Richter* (1902). His books include: *Der Vortrag in der Musik* (1883; Eng. trans., 1890); *Der Fingersatz des Klavierspiels* (1885); *Formen der Instrumental-Musik* (1896); *Geschichte der Sonate* (1899); and a biography of Th. Gouvy (1902).

KLAVIATUR-HARFE, klá'vè-à-tsoor'-här'fe (Ger., keyboard harp). A harp with piano keyboard, invented in 1893 by Ignaz Lutz, of Vienna. The strings are plucked by plectra, which are substituted for the ordinary hammers of the pianoforte. The tones of the instrument are full and rich, resembling those of the double-action harp. The Klaviatur-Zither, also invented by Lutz, is an instrument of similar construction.

KLAW, MARO (1858-). An American theatrical manager, born at Paducah, Ky. He studied law and was admitted to the bar, but after 1881 was engaged in theatrical management. He became a member of the firm of Klaw

and Erlanger and of other firms, coming into control of important theatres throughout the United States. In 1907 Klaw and Erlanger acquired interests in the Shubert Brothers' theatres, incorporating them as the United States Amusement Company. Later the two firms separated, but by 1913 a working agreement covering Boston and Chicago had been made, and by 1915 an agreement intended to end competition elsewhere, except in New York City.

KLEBER, klá'bar', JEAN BAPTISTE (1753-1800). A distinguished general of the French Revolution. He was born at Strassburg, the son of a builder, and after studying in the military academy at Munich, entered the Austrian army. He abandoned the military career in 1783 because, not being an aristocrat, the Austrian army offered him no promotion. He returned to France and worked as an architect till the Revolution. Joining the National Guard, he rose rapidly, being made brigadier general in 1793 for his services in the defense of Mainz. He fought bravely in La Vendée and under Jourdan as general of division at Charleroi and Fleurus (1794). He also took Maestricht and directed the siege of Mainz. After beating the Austrians repeatedly and capturing Frankfurt, he held for a brief time the command of the French armies under the Directory. In 1798, however, he accompanied Bonaparte to Egypt, was dangerously wounded at the capture of Alexandria, but recovered so as to take part in the expedition to Syria, and won the battle of Mount Tabor. When Bonaparte left Egypt, he intrusted the chief command there to Kléber, who concluded a convention with Commodore Sidney Smith for the evacuation of the country; but, on Admiral Keith's refusal to ratify this convention, Kléber, adopting the bold resolution of reconquering the country, attacked and destroyed the Turkish army at Heliopolis, March 20, 1800, and retook Cairo. During an attempt to conclude a treaty with the Turks Kléber was assassinated by a Turkish fanatic at Cairo, June 14, 1800. This murder ended the career of a man who had shown himself not only a distinguished general but also a gifted administrator in his management of affairs in Egypt with discontented troops and inadequate financial support. His heart is buried under his monument in Strassburg. Consult: Ernouf, *Le général Kléber* (Paris, 1867); Pajol, *Kléber, sa vie, sa correspondance* (ib., 1877); Teicher, *General Kleber* (Strassburg, 1890); Rousseau, *Kléber et Menou en Egypte* (Paris, 1900); Klæber, *Leben und Taten des französischen Generals, J. B. Kleber* (Dresden, 1900).

KLEBS, kläps, EDWIN (1834-1913). A German pathologist, born at Königsberg. He studied at the universities of Königsberg, Würzburg, Jena, and Berlin, in 1861 was appointed assistant to Virchow at Berlin, and in 1866 became professor of pathological anatomy at Bern. After service in the Franco-Prussian War he held professorships at Würzburg (1872-73), Prague (1873-82), and Zurich (1882-92). In 1895 he became director of a bacteriological laboratory in Asheville, N. C.; in 1896 he was a professor at the Rush Medical College in Chicago; and afterward was connected with the universities of Hanover, Lausanne, and Berlin. His contributions to pathological science are very important. With Tomasi-Crudeli he announced in 1879 the discovery of a bacillus of malaria. It was later discovered, however, that this germ

had no connection with malaria, the cause of which was traced to the organism discovered by Laveran, another investigator. His publications include: *Handbuch der pathologischen Anatomie* (1867-80); *Beiträge zur pathologischen Anatomie der Schusswunden* (1872); *Studien über die Verbreitung des Kretinismus in Oesterreich* (1877); *Allgemeine Pathologie* (1887-89); *Kausale Behandlung der Diphtherie* (1894).

KLEBS, GEORG (1857-). A German botanist. He was born at Neidenburg, East Prussia, and studied at the universities of Königsberg, Strassburg, Würzburg, and Tübingen; was assistant in the Botanical Institute at Strassburg and at Tübingen; and became professor of botany at Basel in 1887, at Halle in 1898, and at Heidelberg in 1908. Klebs wrote *Die Bedingungen der Fortpflanzung bei Algen und Pilzen* (1896) and *Willkürliche Entwicklungsänderungen bei Pflanzen* (1903).

KLEENEBOK, klën'bök (Dutch, little goat). Dutch name for a duiker (q.v.).

KLEIN, klin, BERNHARD (1793-1832). A German composer, born at Cologne. He gained some musical education from his father, who was a double-bass player, and in 1812 went to Paris, where he studied under Cherubini and did considerable research work at the conservatory library. Upon returning to Cologne he was made musical director at the cathedral and in 1819 was sent to Berlin as government inspector of the music schools there. In that city he became connected with the school for organists, was made director of music at the university and teacher of singing at the Hochschule. In 1823 he went to Rome, but after a few years returned to Berlin, where he died. He wrote two operas, *Dido* (1823) and *Ariadne* (1825), but was better known for his oratorios, *Job* (1820), *David* (1830), and *Jephtha* (1828), and for his masses, psalms, and hymns.

KLEIN, BRUNO OSCAR (1858-1911). A German-American composer, born in Osnabrück, Germany. His earliest instruction he received from his father, who was the organist of the cathedral. After having completed the course at the Gymnasium of his native town Klein was sent to the Königliche Musikschule in Munich, where he studied under Rheinberger, Carl Baermann, and Willner. In 1878, after his graduation from the conservatory, Klein came to the United States. He married Miss Emily Schaefer, a talented young pianist, and together they made a tour of the principal cities. In 1884 he settled permanently in New York, where he was appointed organist at St. Francis Xavier's and became head of the piano department at the convent of the Sacred Heart. He was also elected professor of counterpoint and composition at the National Conservatory in 1888. He died in New York. Among his principal compositions are the opera *Kensilworth* (Hamburg, 1895); for orchestra, *Scènes de ballet*, op. 19; *Liebesleid und Hochzeitsklänge*, op. 29; *Concerto-overture*, op. 31; *American Dances* (two series); *Theme and Variations*; two piano concertos; vocal works with orchestra: *Columbus Cantata*; *Wallfahrt nach Kevlaar*, op. 17; *Ingeborg's Klage*, op. 27; five masses; excellent chamber music; piano pieces; songs.

KLEIN, CHARLES (1867-1915). An American playwright, born in London, England. He was educated at North London College and early came to New York City, where for a time he was play censor for Charles Frohman. His plays

include: *A Mile a Minute* (1890); *By Proxy* (1892); *The District Attorney* (1895); *Two Little Vagrants* (1896); *Heartsease* (1897); *The Charlatan* (1898); *A Royal Rogue* (1900); *The Auctioneer* (1901); *The Hon John Grigsby* (1902); *Mr. Pickwick* (1903); *The Music Master* (1904); *The Lion and the Mouse* (1905); *The Daughters of Men* (1906); *The Step-Sister* (1907); *The Third Degree* (1908); *The Nest of Kin* (1909); *The Gamblers* (1910); *Maggie Pepper* (1911); *The Outsiders* (1911); *The Ne'er Do Well* (1912); *The Money-makers* (1914). In *The Auctioneer* and *The Music Master* David Warfield had great success, and *The Lion and the Mouse* was of unusual power.

KLEIN, FELIX (1849-). One of the most eminent German mathematicians of his time. He was born April 25, 1849, at Düsseldorf, studied at Bonn, and when only 17 was made assistant to Plücker in the Physical Institute. The following year (1868) he took his doctor's degree and then went to Berlin and later to Göttingen, where he assisted in editing Plücker's works. He entered the Göttingen faculty in 1871, became professor of mathematics at Erlangen in 1872, and subsequently held professorships at the Munich Technical Institute (1875-80) and at the universities of Leipzig (1880-86) and Göttingen (1886-1912). He was sent by the Prussian government to represent the university interests at the World's Fair, Chicago, in 1893, and his colloquium held at that time was attended by some of the leading American mathematicians. No one else in Germany has exercised so great an influence on American mathematics, Klein's pupils being found in most of the leading institutions of this country. Professor Klein was made president of the International Commission on the Teaching of Mathematics in 1908, the commission having been appointed by the fourth International Congress of Mathematicians, held at Rome in that year. His contributions to mathematics have been too extensive to admit of more than a brief list. The following are a few of his important works: *Ueber Riemanns Theorie der algebraischen Funktionen und ihrer Integrale* (1882); *Vorlesungen über das Ikosaeder und die Auflösung der Gleichungen vom 5ten Grade* (1884; Eng. trans. by G. G. Morrice, *Lectures on the Icosahedron; and the Solution of Equations of the Fifth Degree*, 2d rev. ed., New York, 1914); *Ueber die hypergeometrische Funktion* (1894); *Ueber lineare Differentialgleichungen der 2. Ordnung* (1894); *Theorie des Kreuzels* (2 vols., 1897-98), with Sommerfeld; *Vorlesungen über die Theorie der elliptischen Modulfunktionen* (1890-1912); *Mathematical Theory of the Top* (Princeton address, New York, 1897); *Vorträge über ausgewählte Fragen der Elementargeometrie* (1895; Eng. trans. by W. W. Beman and D. E. Smith, *Famous Problems of Elementary Geometry*, Boston, 1897); *Evanston Colloquium* (1893) before the Congress of Mathematics, reported and published by Ziwet (New York, 1894); *Elementarmathematik vom höheren Standpunkte aus* (Leipzig, 1908). Klein also edited the works of Möbius (1865-87). In 1875 he became one of the editors of the *Mathematische Annalen*, and in 1898 one of the editors of the *Encyclopädie der mathematischen Wissenschaften* (chief editor of vol. iv, "Mechanik"). In 1897 he began, jointly with Fricke, the publication of *Vorlesungen über die Theorie der automorphen Funktionen*.

KLEIN, JAKOB THEODOR (1685-1750). A German zoölogist, born at Königsberg. He studied law at the University of Königsberg and then traveled in Germany, England, Holland, and the Tirol. Elected municipal secretary of Danzig, which city he represented for a time at the Polish court, he established at Danzig a natural-history cabinet and a botanical garden and was a founder there of the Natural Society. His natural-history cabinet, together with many valuable drawings, was transferred from Danzig to Bayreuth in 1740. He devised a formal system of classification, based on the number, form, and manner of disposal of the limbs. His *Summa Dubiorum circa Classes Quadrupedum et Amphibiorum in Caroli Linnei Systemate Naturæ* (1743) was a violent attack on the Swedish naturalist.

KLEIN, JULIUS LEOPOLD (1804-76). An Austrian dramatist and literary historian, born at Miskolcz, Hungary. He was educated at Vienna and Berlin, where he studied medicine. He did not practice, however, but devoted himself instead to the production of plays, such as the historical tragedies, *Maria von Medici* (1841), *Luises* (1842), *Zenobia* (1847), *Moreto* (1859), *Maria* (1860), *Strafford* (1862), *Voltaire* (1862), and *Heliodora* (1867), and the comedies *Die Herzogin* (1848) and *Ein Schutzling* (1850). He died before the completion of his greatest work, *Geschichte des Dramas* (13 vols., 1865-76), the most exhaustive that had yet appeared upon the evolution of the drama from Greece and Rome to Spain, Italy, and England. His dramatic works appeared in seven volumes (1871-72).

KLEINERT, KLIN'ERT, PAUL (1837-) A German . . . He was born at Vielguth in Silesia. . . to 1857 he studied at the universities of Breslau and Halle. In 1861 he became deacon and teacher of religion at the . . . school at Oppeln. In 1864 he went . . . where he was for some time teacher at a grammar school and lecturer at the university. He was appointed in 1868 extraordinary professor of the Old Testament and of practical theology at the University of Berlin. In 1885-86 he was rector of the University of Berlin. Kleinert published. *Obadiah-Zephanjah wissenschaftlich und für den Gebrauch der Kirche dargestellt* (2d ed., 1893), *Ueber das Buch Koheleth* (Berlin, 1864); *Augustin und Goethes Faust* (1866); *Das Deuteronomium und die Deuteronomiker* (1872), *Untersuchungen zur alttestamentlichen Rechts- und Litteraturgeschichte* (1872), *Abriss der Einleitung zum alten Testament in Tabellenform* (1878), *Abhandlungen zur christlichen Kultus- und Kulturgeschichte* (1889); *Der preussische Agendenentwurf* (1894), *Die Propheten Israels in sozialer Beziehung* (1905), *Homiletik* (1907); *Musik und Religion* (1908). In 1892 he was appointed counselor in chief of the consistory for Prussia.

KLEINMICHEL, klin'mik'el, RICHARD (1846-1901). A German composer and pianist, born in Posen. He received his first instruction from his father, who was a bandmaster and later conductor at the Hamburg Opera. From 1863 to 1866 he was a pupil of the Leipzig Conservatory. After graduation he settled in Hamburg as a teacher and concert pianist and removed in 1876 to Leipzig, where in 1882 he was appointed conductor of the opera. The last years of his life he spent in Berlin. His piano

scores of Wagner's *Tetralogy*, *Meistersinger*, and *Parsifal* are models of their kind. His original works include two operas, *Manon* (1883) and *Der Pfeifer von Dusenbach* (1891); two symphonies, piano pieces, among them some studies of exceptional merit.

KLEIST, klist, EWALD CHRISTIAN VON (1715-59). A German poet, born at Zeblin, near Köslin, in Pomerania and educated at Königsberg. He entered the Danish army in 1736, but four years afterward was appointed a lieutenant in the Prussian service. Soon after he became acquainted with Gleim, who encouraged him in his poetic attempts, and in 1749 with Ramler, who did much to cultivate his style. In the first Silesian war he advanced rapidly, he became major in 1757 and two years later was fatally wounded at Kunersdorf. While stationed at Leipzig, Kleist made the acquaintance of Lessing, and a very close friendship sprang up between the two men. The character of Von Tellheim in Lessing's *Minna von Barnhelm* is supposed to have been modeled on that of Kleist, whose death deeply affected Lessing. His style is simple and correct, and his treatment of nature beautiful and fresh. His best work was *Der Frühling* (1749), a descriptive poem after the manner of Pope and Thomson. He published two editions of his *Gedichte* (1756-58), and Ramler edited his complete works (1760). The best edition is by Sauer (1880-82). Consult: Chuquet, *De Ewaldi Kleistii Vita et Scriptis* (Paris, 1887); Pröhle, *Friedrich der grosse und die deutsche Literatur* (1872); T. Baechtold, *Kleine Schriften* (1899).

KLEIST, HEINRICH VON (1777-1811). A talented German dramatist, born in Frankfort-on-the-Oder, Oct. 18, 1777, the son of a Prussian officer. Left an orphan at 11, he entered the army at 16; left it in 1799; studied history, literature, and philosophy; obtained a civil post which he lost after the battle of Jena (1806); and during the next five years, in an environment of literary indifference and national disgrace, produced several dramas of great merit and greater promise. The full realization of his powers he denied himself and Germany by killing Henriette Vogel, the wife of a Berlin merchant, and himself by a mutual agreement. The tragedy took place at Wannsee, near Potsdam, Nov. 21, 1811. Kleist's dramas still hold the stage. *Der zerbrochene Krug* (1811), portraying German village life, is regarded by many as the best one-act comedy in German. Noteworthy also are his tragedies, *Die Familie Schroffenstein* (1803), *Amphitryon* (1807), *Penthesilea* (1808), and the posthumously printed *Prinz von Homburg* (1821), the romantic drama *Kathchen von Heilbronn* (1810), and the patriotic *Hermannsschlacht* (1821). Kleist wrote also a volume of *Erzählungen* (1810-11), among them the masterly story *Michael Kohlhaas* (1810); a few poems; and parts of another tragedy, *Robert Guiscard*. Kleist's fame ripened slowly. During his lifetime only *Der zerbrochene Krug* and *Kathchen von Heilbronn* were put on the stage. He emulated Shakespeare and the Greeks. His *Works* were first collected incompletely (3 vols., Berlin, 1826). There are several modern editions, the best of which is the critical edition by Schmidt, Minde-Pouet, and Steig (5 vols., 1904). His letters have been edited by Bulow (Berlin, 1848), Koberstein (ib., 1860), and Biedermann (Breslau, 1888). Consult: Wilbrandt, *Heinrich von Kleist* (Nörd-

Hagen, 1863); Zölling, *Heinrich von Kleist in der Schweiz* (1882); Lloyd and Newton, *Prussia's Representative Men* (London, 1875); E. Schmidt, *Charakteristiken* (1886); T. Minor, "Studien zu H. von Kleist," in *Euphoriion* (1894); K. H. Becker, *Kleist and Hebbel* (1904); Roettcker, *H. von Kleist* (1907); Herzog, *Heinrich von Kleist* (1911); Julius Hart, *Das Kleist-Buch* (1912); Brahm, *Heinrich von Kleist* (new ed., Berlin, 1913).

KLEIST VON NOLLENDORF, fön nöl'len-dorf, FRIEDRICH HEINRICH FERDINAND EMIL, Count (1762-1823). A Prussian general. He was born in Berlin, acted as court page, and in 1778 entered the army. He served as captain in the war with the French revolutionary government and in 1803 had risen high in the King's favor and was promoted adjutant general. He served under York in the war with Russia (1812). A year afterward he served against France with the rank of lieutenant general, and he distinguished himself at Halle and Bautzen and was Prussian Plenipotentiary in the negotiation of the truce of Poischwitz. His title was a reward for great bravery at Nollendorf. He fought at Dresden and Leipzig and in 1814 was appointed general of infantry. After the war he was commander in Saxony and on his retirement in 1821 was promoted to the rank of field marshal.

KLEMM, klēm, FRIEDRICH GUSTAV (1802-67). A German culture historian, born at Chemnitz. He studied at Leipzig and later went to Dresden, where he was appointed assistant and finally (1852) chief librarian at the Royal Library. Among his publications are a *Geschichte von Bayern* (1820); *Attila nach der Geschichte, Sage und Legende* (1827); a *Handbuch der germanischen Altertumskunde* (1835); *Allgemeine Kulturgeschichte der Menschheit* (10 vols., 1842-53); *Allgemeine Kulturwissenschaft* (1854-55); *Vor fünfzig Jahren* (1865).

KLEMM, HEINRICH (1819-86). A German publisher, born at Zöllmen, near Willsdruff, Saxony, and a tailor by trade. He founded in 1849 with G. A. Müller the *Europäische Modezeitung* in Dresden and in 1850 the publishing firm of H. Klemms Verlag. He was the author of *Illustriertes Handbuch der höheren Bekleidungskunst* (53d ed., 1899) and was known particularly through his large collection of incunabula, which was bought by the Saxon government.

KLENGEL, klēng'el, AUGUST ALEXANDER (1783-1852). A German composer, born at Dresden. He studied with Milchmeyer and Clementi, traveling with the latter in Germany and Russia. He lived in St. Petersburg (1805-11) and then, after a two years' stay in Paris, went to Italy and England. In 1816 he returned to Dresden, where he was made organist of the Roman Catholic church. Klengel was an accomplished pianist and organist, but was better known as a composer. His strict contrapuntal style gained for him the nickname Kanon-Klengel. *Les avant-coureurs* (canons) and a series of 48 fugues and 48 canons were his best works, but he also wrote some excellent salon music.

KLENGEL, Jt lius (1859-). A celebrated German violoncellist, born at Leipzig. He studied the cello with Emil Hegar and composition with Jadassohn. In 1874 he joined the Gewandhaus Orchestra, of which he subsequently became first cellist. While retaining this post, he made extensive concert tours of

Germany, Holland, England, and Russia. In 1881 he was appointed professor at the Leipzig Conservatory. As a virtuoso, he is unsurpassed, possessing all the qualities of an artist of the first rank. On the merely technical side he has, perhaps, never been equaled for the rapid and clear execution of passages that would seem possible only on the violin. As a member of the Gewandhaus Quartet, he soon established his reputation as one of the world's greatest ensemble players. His compositions, many of which are works of sterling merit, include four concertos for his instrument; two string quartets; a sonata for violoncello; a piano trio; concert pieces for one, two, and four cello.

KLENZE, klēnt'se, LEO VON (1784-1864). A German architect, born in the Principality of Hildesheim. He was a pupil of the Academy of Architecture in Berlin and later of Durand and Percier in Paris, where he specialized in decorative painting. Afterward he spent some time traveling in England and Italy. On his return to Germany he was appointed architect to Jerome Bonaparte, King of Westphalia, and from 1815 to 1839 held a similar position at Munich. His buildings in Munich show that he worked in many styles, one of which, the Florentine, he introduced into Germany, but his chief distinction was won in the field of Neo-Greek design. His works include the Pinakothek (1826), Glyptothek (1830), Odeon and Propylaea at Munich, and the Temple of Walhalla (which recalls the Parthenon), near Regensburg (Ratisbon) on the Danube. In 1839 he went to St. Petersburg, where he built the Art Museum, known as the Hermitage, for the Emperor of Russia. Klenze was also successful in the field of landscape painting, both with oil and water colors. He was the author of various works on architecture, all of which reveal his admiration for Hellenic art. Among them are: *Versuch einer Wiederherstellung des toscanischen Tempels nach seiner historischen und technischen Analogie* (1822), *Der Tempel des olympischen Jupiter zu Agrigent* (1827); *Aphoristische Bemerkungen, gesammelt auf einer Reise nach Griechenland* (1838); *Die Walhalla in artistischer und technischer Beziehung* (1843).

KLEPHTS, klēfts (NGk. κλέφτης, *klephtēs*, variant of NGk., Gk. κλέπτης, *kleptēs*, thief, from κλέπειν, *klepein*, to steal). The Greeks who fortified themselves in the mountain strongholds of Macedonia and northern Greece after the conquest of Greece by the Turks in the fifteenth century and gradually, with accessions of Albanians, developed into communities of brigands. In the Greek War of Independence the klephts were important allies of the patriots. Their existence as a class came to an end with the suppression of Greek brigandage.

KLEPTOMANIA (from Gk. κλέπειν, *klepein*, to steal + *μανία*, *mania*, madness). An impulsive appropriation of the property of others, due to mental impairment. Medically the term denotes a disorder of volition termed an impulsion and constituting a symptom of insanity. In the old nomenclature the term was restricted to a variety of partial degenerative insanity of the impulsive type, which included in the same category dipsomania and pyromania. Properly kleptomania is characterized by impulsive acts done without a clear reasoning process, under stress of an imperative idea. Kleptomaniacs appropriate, generally, bright or attractive and useless articles, stowing

them away often without concealment, never putting them to any use or obtaining any gain from them. Frequently the articles are stolen openly, in the presence of others. Largely the kleptomaniac is held accountable for his theft; irresistible impulse alone not constituting a legal defense. Consult: Spitzka, *Manual of Insanity* (New York, 1887); Kirchhoff, *Handbook of Insanity* (ib., 1895); Defendorf, *Clinical Psychiatry* (ib., 1906); White, *Outlines of Psychiatry* (ib., 1914). See INSANITY.

KLESEL, M. See KILLES, M.

KLETTENBERG, klēt'ten-bĕrk, SUSANNE KATHARINE VON (1723-74). A German Pietist, born in Frankfurt. She was a close friend of Goethe's mother and exercised considerable influence upon the youthful poet, who became interested in the alchemistic studies to which her mystic tendencies had led her. Her life and character are reflected in "Bekanntnisse einer schönen Seele," in Goethe's *Wilhelm Meisters Lehrjahre*. She entered into relations with the Herrnhuters and through Goethe became acquainted with Lavater. Several of her spiritual songs and religious essays are preserved in Sappenberg, *Reliquien des Frauleins Susanne Katherina von Klettenberg* (Hamburg, 1849). Consult Dechent, *Goethes schöne Seele* (Gotha, 1896).

KLEVE. See CLEVES.

KLIEFOTH, klē'fōt, THEODOR FRIEDRICH DETLEV (1810-95). A German Lutheran theologian born at Korchow in Mecklenburg. After studying theology in Berlin and Rostock, he became preacher in Ludwigslust in 1840 and from 1850 until his death was associated with the superior ecclesiastical council in Mecklenburg-Schwerin and was its president (1886-95). He was instrumental in forcing Michael Baumgarten (q.v.) to leave his chair at Rostock. He wrote: *Einleitung in die Dogmengeschichte* (1839); *Theorie des Kultus der evangelischen Kirche* (1844); *Liturgische Abhandlungen* (2d ed., 1858-69); *Christliche Eschatologie* (1886), a posthumous work, edited by Witte; *Lehre von den letzten Dingen* (1895); and numerous commentaries on the Old Testament prophets.

KLIK'ITAT. A Shahaptian tribe, formerly residing about the river of the same name, a northern affluent of the Columbia, in southern Washington. Their common name is of Chinookan origin and signifies 'beyond,' i.e., east of the Cascade Mountains. They call themselves by a name signifying 'prairie people.' Although few in number, they were enterprising and aggressive and were the traders between the tribes east of the Cascades and those on the west. About 70 years ago they crossed the Columbia and overran the Willamette region as far south as the Umpqua, but afterward withdrew to their proper country. They joined in the Yakima Treaty of 1855 and are now chiefly on the Yakima reservation in Washington; their number is given as 405. Consult Lewis, *Tribes of the Columbia Valley and the Coast of Washington and Oregon* (Lancaster, Pa., 1906).

KLINCKOWSTRÖM, klīnk'ō-strēm, AXEL ALEXANDER CAMILLE RUDOLF EMANUEL, BARON (1887-). A Swedish explorer and author, born in Darmstadt, the son of a member of the Swedish Lower House. He was educated at Stockholm, Ultuna, and Würzburg. He was zoologist to the Nordenskjöld expedition of 1890 to Spitzbergen, explored Surinam in 1891-2, taught zoology at the University of Stock-

holm in 1895-1903, took part in the Swedish south-polar expedition of 1903-04, traveled in Iceland in 1909-10, was a member of the Stackhouse expedition of 1911, and explored Greenland in 1913. Besides important technical works, notably *Zur Anatomie der Lidentaten*, he wrote: *Tre månaders dag* (1891); several volumes of verse, including *Sagner och sånger* (1893) and *Fornsånger* (1895); a dramatic poem, *Frödis* (1898), the text of an opera, *Valdemarskatten*, for which Hallén composed music; a play, *Olof Trätälja* (1908), *Bland vulkaner och fågelberg* (1911). In 1907 he received a prize for literature from the Swedish Academy.

KLINDWORTH, klīnt'vōrt, KARL (1830-1916). A German pianist and teacher, born at Hanover. His father was a proficient amateur musician; but, aside from his home advantages, the boy was largely self-taught, although he studied the violin under a careful master. At the age of 17 he became the conductor of a traveling opera troupe. In 1849 he taught the violin in his native city of Hanover, but soon gave it up and devoted himself to the pianoforte. He studied for two years with Liszt. From 1854 to 1868 he met with great success in England as a pianoforte teacher and concert pianist, after which he accepted Rubinstein's invitation to become the professor of pianoforte at the Imperial Conservatory at Moscow. It was during this period that he completed his splendid pianoforte scores of Wagner's *Ring des Nibelungen* and brought out a complete revised edition of the compositions of Chopin. In 1882 he took up his residence in Berlin and up to 1892 was conductor of the Wagnerverein and, together with Joachim and Wullner, led the Philharmonic concerts. He established a conservatory of music in the German capital, which experienced considerable success. In 1893 he moved to Potsdam. Subsequently he spent his time between that city and Berlin, devoting himself entirely to private teaching and editorial work. As a teacher, he had remarkable success, pupils going to him from all parts of the world. His compositions, besides those already mentioned, include pieces for the pianoforte, arrangements of Schubert's *C Major Symphony*, and Tchaikowsky's symphonic poem *Francesca da Rimini*.

KLINGER, klīng'ĕr, FRIEDRICH MAXIMILIAN VON (1752-1831). A German writer, born of poor parents at Frankfurt-on-the-Main. He was educated at Giessen and in 1775 appeared as the author of the tragedy *Die Zwillinge*, which won the Schroeder prize. He was a contemporary of J. M. R. Lenz, "Maler" (Friedrich) Müller, and C. F. D. Schubart, and one of the most conspicuous figures in the "Sturm und Drang" period of German literature—which period, furthermore, obtained its name from his drama of that title, published in 1776. In 1780 he went to St. Petersburg, where he entered the Russian army. Previous military experience, as a lieutenant in Wolter's volunteer corps during the War of the Bavarian Succession, proved valuable; by 1798 he was a major general and by 1811 lieutenant general. He married a natural daughter of Empress Catharine. His works of prose fiction assert an ethical purpose, but offend by want of taste. The same may be said of his dramas. His prose *Faust*—or, in full, *Fausts Leben, Thaten und Höllenfahrt* (1791)—in which the hero is represented as the

inventor of printing, has some historical value. His later volumes, such as *Der Weltmann und der Dichter* (1798) and *Betrachtungen und Gedanken über verschiedene Gegenstände der Welt und der Litteratur* (3 vols., 1802-05—a selection of which appeared in Reclam's *Universalbibliothek*), though at times bitter and disappointed in tone, are more rational and stimulating. The *Sturm und Drang* may be found in reprint as No. 248 of the *Reclamsche Universalbibliothek*. The last edition of the collected works was published at Stuttgart in 1841. A selection (8 vols.) was published also at Stuttgart in 1878-80. Consult further: Erdmann, *Klingers dramatische Dichtungen* (1877); Schmidt, *Lenz und Klinger* (Berlin, 1878); the study by Rieger (2 vols., Darmstadt, 1880-96); Prosch, *Klingers philosophische Romane* (Vienna, 1883); vol. i of *Stürmer und Dranger* (Stuttgart, 1883) in Kürschner's *Deutsche Nationallitteratur*; Philipp, *Beiträge zur Kenntnis von Klingers Sprache und Stil* (1909).

KLINGER, Max (1857-). A German painter, etcher, and sculptor, one of the most eminent artists of his time. He was born in Leipzig, Feb. 13, 1857, studied under Gussow in Karlsruhe and later at Berlin, and made his debut in 1878 with a painting and drawings then severely criticized, but afterward bought for the National Gallery. Meanwhile he learned etching and aquatint by himself, then studied in Brussels and in Munich, in Paris (1883 et seq.), and from 1888 to 1892 in Rome, whence he returned to Leipzig. His activity falls into three periods, which, however, sometimes overlap. In the earliest (1879-86) his most important works were cycles of etchings, which, apart from the classical subjects from Ovid and from Apuleius' *Cupid and Psyche*, and a few clever modern scenes, such as the "History of a Glove" and the "Intermezzi," were mystical and allegorical. Among these are the famous "A Life" (1882); "Eve and the Future" (1880); above all, "Death" (1889), which is reminiscent at times of Dürer, but strikes many original notes; and the wonderful series "Brahms-Phantasie" (1894). In all these series the richness of his imagination is equaled only by a marvelous dexterity in combining graphic techniques. The middle period, from about 1883, was devoted chiefly to painting, in which he displayed no less originality of treatment. About 1883, for a villa at Steglitz, near Berlin, he began a series of about 50 decorative paintings, six of which are now in the National Gallery, Berlin, six in the Hamburg Kunsthalle. These were followed by a series of monumental paintings with polychrome or sculptured frames to continue or heighten the effect of the canvas. The principal of these are the "Judgment of Paris" (1886), Vienna Gallery; "L'Heure bleue" (1889); then, in fifteenth-century style, a "Crucifixion" (1890), Hanover Museum, and a "Pietà" (1893), Dresden Gallery; and "Christ on Olympus" (1897), Vienna, all of heroic size and showing marked psychological insight, but somewhat lacking in pictorial qualities. During later years Klinger was engaged upon mural paintings for the Leipzig Museum and University. From 1894 his chief activity was in polychromatic sculpture, in which his genius found its highest expression. Among his earlier subjects are "Salome" (1894) and "Cassandra" (1895), followed by studies of the nude, "Bathing" (1898) and "Amphitrite" (1899), and by

the statue of Beethoven (1902). In this statue the marble figure, nude to the knee (which is covered with an onyx mantle), leans forward in an elaborately decorated bronze chair. The chair, its upper arms decorated with white marble angel heads, is set on great masses of cloud, with a black marble eagle at the front. All these statues are in the Leipzig Museum, except "Amphitrite," which is in the National Gallery, Berlin. The chief of Klinger's more recent plastic achievements are a colossal marble group, "The Drama" (1904), Albertinum, Dresden; a "Crouching Diana," Jacobsen Museum, Copenhagen; a tragic bust of Nietzsche, at Weimar; a colossal bronze "Athlete"; a table service for the Leipzig City Hall; the Brahms monument for Hamburg; and designs for the Wagner monument in Leipzig and for a Brahms monument in Vienna. Klinger stands unrivaled among modern artists in the universality of his gifts and achievements, in which he may be compared to the great Florentines of the Renaissance. His originality is no less striking, and, though a modern among moderns, his work has met with general approval. He wrote *Malerei und Zeichnung* (3d ed., 1899). Gold medals were awarded him at Vienna and Dresden, and he became honorary member of the Munich Academy, member of the academies of Berlin, Dresden, and Stockholm, a commander of the Albrecht Order of Saxony, Knight of the Maximilian Order of Bavaria, etc.

Bibliography. The literature on Klinger is an extensive one. Good biographies have been written by Vogel (Leipzig, 1897), Stern (Berlin, 1898), Händcke (Strassburg, 1899), and Brieger-Wasservogel (Leipzig, 1902). Consult also: Treu, *Klinger als Bildhauer* (ib., 1900); Brille, *Klingers Beethoven* (Munich, 1903); Heyne, *Klinger im Rahmen der modernen Weltanschauung und Kunst* (Leipzig, 1907); Vogel, in *Kunst für Alle* (Munich, 1908-09), Rean, in *Gazette des Beaux-Arts* (Paris, 1908). For reproductions of his works, see Meissener, *Klingerwerk* (Munich, 1901); his drawings were published under the title *Zeichnungen von Max Klinger*, with an introduction by Max Singer (Leipzig, 1912).

KLINGS. The so-called "Klings," or "Kalingas," of the seaports of Malacca, Farther India, and certain parts of the East Indies, are said to be descendants of Hinduized Dravidians, especially of the Telinga. They are also known as Telings, Talaings, and Telingas.

KLIP'DAS, klip'däs', or **KLIPDACHS**, -däks' (Dutch, cliff badger). The South African coney, or rock badger. See **HYRAX**.

KLIPSPRINGER (Dutch, cliff springer). A small, agile, cliff-haunting South African antelope (*Oreotragus saltator*). It stands about 22 inches high and is olive-hued above and whitish on the abdomen and inside of the legs and tail. Its hairs are peculiarly stiff and brittle. Its ears are very large, roundish, and furry; and between them, on the head of the male, rise two short spike horns, curving gently forward. They haunt rocky hills, go about in pairs, and leap from ledge to ledge with amazing agility. It is the only African antelope which has attempted to take the place of the sheep, goats, and chamois of the northern hemisphere, and has become somewhat specialized in consequence. The tenderness of their flesh has led to their disappearance from most of Cape Colony. This antelope is known in Swaziland

as ikoka and elsewhere by various tribal names. Closely related races, such as *O. oreotragus aureus* and *O. o. schillingsi*, occur to the northward in equatorial Africa. See Plate of GAZELLES.

KLÖDEN, klö'den, KARL FRIEDRICH VON (1786-1856). A German educator, historian, and geographer. He was born at Berlin and got his education with difficulty while he was working with a gold-mith learning engraving, and giving lessons. In 1817 he was made director of the normal school at Potsdam and seven years afterward of a commercial school in Berlin. His most important work was geographical; besides his maps of Europe, mention should be made of *Grundlinien zu einer neuen Theorie der Erdgestaltung* (1824) and *Landeskunde von Palästina* (1816). His historical works include: *Ueber die Entstehung, das Alter und die früheste Geschichte der Städte Berlin und Kolln* (1839), *Lebens- und Regierungsgeschichte Friedrich Wilhelms III.* (1840); *Die Quitzows und ihre Zeit* (3d ed., 1889). Consult his *Jugenderinnerungen Karl Friedrichs von Kloden* (Leipzig, 1874).

KLONDIKE. A region in the Canadian Territory of Yukon, lying chiefly to the east of the Yukon River, where it receives the Klondike Creek, near the middle of the Alaskan boundary line. The mining district includes the basins of the Klondike, Indian, and McQuestion rivers, about 800 square miles in area. It was on Bonanza Creek, a tributary of the Klondike, that a prospecting miner, G. W. Cormack, discovered rich gold deposits, Aug. 16, 1896. The following year saw an almost unprecedented rush of gold miners, and the Klondike was converted from a barren waste to a populous and lively mining district. The exhaustion of the bonanza placers has been followed by the installation of modern mining plants, which now annually produce gold to the value of \$5,000,000 or more. The climate is typically continental—very hot in the short summer and extremely cold during the long winter, the mean temperatures being -20° F in December, and 60° F in July. Facilities for communication with the coast were at first very poor, but a railroad line was built from Skagway to White Horse, at the headwaters of the Yukon, whence travel is easy to Dawson, the capital of the Klondike, by frequent steamboats from May to September and by stage in winter. Consult: L. A. Coolidge, *Klondike and the Yukon Country: A Description of our Alaskan Land of Gold from Scientific Sources* (Philadelphia, 1897); Lynch, *Three Years in the Klondike* (New York, 1904); McLain, *Alaska and the Klondike* (ib., 1905); W. S. Mason, *Frozen Northland: Life with the Eskimo in his Own Country* (Cincinnati, 1910); A. W. Greely, *Handbook of Alaska* (New York, 1914). See ALASKA; YUKON GOLD FIELDS.

KLONOWICZ, klō-nō'vich, SEBASTIAN (1545-1602). A Polish satirist, also called by the Latin name Acernus. He was born of middle-class parents at Sulmierzyce and studied at the University of Cracow. He lived at Lublin, where he was an official in the Jewish community. His wife was a drunken wanton, who brought his fortunes so low that he was forced to live his last years on the charity of the Jesuits, whom he had previously bitterly assailed. Besides these attacks in Latin, *Equitis Poloni in Jesuitas Actio Prima*, he wrote a poem called *Victoria Deorum*, in which he protests

against the oppression of the poor by the rich, and the famous *Roxolania*, a satire on Russia, which might be ranked as a great national poem were it in the vernacular. His Latin poems were filled with Latinized Polish words, and on the other hand his Polish poems are often made unintelligible by the use of Latinisms and Hellenisms literally translated. The Polish poems include *Worek Judaszów* (Judas's Knapsack), in which he portrays the venality and avarice of the time; and *Flus*, a sketch of a fortnight's travel, with mythology and digressions rivaling Ausonius. Consult Mierzynski, *De Vita, Moribus, Scriptisque Latinis S. F. Acerni* (Berlin, 1857). Klonowicz's death in the Jesuit hospital of Lublin was made the theme of one of the most beautiful poems of Kondratowicz (q.v.).

KLOOTZ, JEAN. See CLOOTS, JEAN BAPTISTE DU VAL-DE-GRACE, BARON.

KLOPP, klōp, ONNO (1822-1903). A German historian, born in Leer, East Friesland. He studied at Bonn, Berlin, and Göttingen (1841-45); taught in the Osnabrück Gymnasium (1845-58), and became the confidential friend of King George V of Hanover, whose exile in 1866 he shared. His dislike of the Prussians was intensified after he turned Roman Catholic (1873), and the Catholic spirit pervades his *Geschichte Ostfrieslands* (1854-58); *König Friedrich II von Preussen und die deutsche Nation* (1860, 2d ed., 1867); *Der König Friedrich II. von Preussen und seine Politik* and *Tilly im Dreissigjährigen Kriege* (1861); *Der Fall des Hauses Stuart* (14 vols., 1875-83), one of his best works, *Das Jahr 1683* (1882); *König Georg V.* (1878); *Der Dreissigjährige Krieg bis zum Tode Gustav Adolfs, 1632* (1891-96). Klopp also edited the correspondence of Emperor Leopold I with Father Marco d'Aviano (1888).

KLOPSCH, klōpsh, LOUIS (1852-1910). An American publisher and humanitarian, born in Germany. He was proprietor of the *New York Daily Reporter* in 1877-90, of the *Pictorial Associated Press* in 1884-90, and after 1892 of the *Christian Herald*, a connection through which he raised more than \$3,500,000 for international charities. The money was used in relieving sufferers from famine in Russia (1892), India (1897-98, 1900), Cuba (1898), China (1901, 1907), Finland and Sweden (1903), and Japan (1906).

KLOPSTOCK, klōp'stōk, FRIEDRICH GOTTLIEB (1724-1803). A German poet of great fame and popularity in the latter half of the eighteenth century, now hardly read or readable. He was one of the pioneers of the classic age. He was born in Quedlinburg, July 2, 1724, and died in Hamburg, March 14, 1803. Educated at Quedlinburg and the famous school at Schulpforta, Klopstock went in 1745 to Jena to study theology, but left in 1746 for Leipzig, where he made the acquaintance of Gellert (q.v.). Going then as private tutor to Langensalza, in 1748 he published the first three cantos of *Der Messias*, intended to be a Miltonic epic, but really only a series of lyric outbursts, and so won the attention of Bodmer (q.v.), the translator of Milton, who invited him in 1750 to Zurich. Thence he went in 1751 to Copenhagen by invitation of the Danish King, who gave him a yearly pension of 400 thalers. Political changes brought him back to Germany in 1771, and he remained there, chiefly in Hamburg, where he finished the *Messias* in 1773, till his death.

Klopstock wrote also odes, many of which are admirable, an artificial *Art of Poetry* (*Die Gelehrtenrepublik*, 1744); *Bardiehe*, antiquated in patriotism and obsolete in mythology, interspersed with unactable dramas (*Hermanns-schlacht*, 1769; *Hermann und die Fursten*, 1784; and *Hermanns Tod*, 1787), all sentimental and overwrought. Though Klopstock's contributions to German thought and poetry were not small, his enrichment of the poetic vocabulary, his attention to prosody, and his making poetry the vehicle of genuine feeling were of greater service to the poets that immediately followed him. He banished rhyme and tried to introduce Germanic mythology into German literature. Klopstock's Works were first collected in 12 volumes (Leipzig, 1798 1817). One of the best editions is that edited by Muncker (4 vols., 1887). There is an English translation of the *Messias* that does fair justice to the nebulous earnestness of the original. Consult: Muncker, *Friedrich Gottlieb Klopstock, Geschichte seines Lebens und seiner Schriften* (2d ed., Berlin, 1900). K. Heinemann, *Klopstocks Leben und Werke* (1890); Bailly, *Étude sur la vie et les œuvres de Klopstock* (1898); Lyon, *Ueber Klopstocks Verhältnis zu Goethe* (Leipzig, 1882); Lappen-berg, *Briefe von und an Klopstock* (Brunswick, 1867); E. Schmidt, *Charakteristiken*, vol. i (1886); Jenny, *Miltons Einfluss auf die deutsche Litteratur* (1890); Häbler, *Milton und Klopstock* (1893).

KLOSS, klós, GEORG BURKHARD FRANZ (1787-1854). A German historian of Freemasonry. He was born in Frankfurt, studied medicine in Göttingen and Heidelberg, and practiced medicine in his native city. His works, based on his unusually complete Masonic library and quite fundamental to the history of the order, include: *Bibliographie der Freimaurerei* (1844); *Freimaurerei in ihrer wahren Bedeutung* (2d ed., 1855); *Geschichte der Freimaurerei in England, Irland und Schottland* (1848); *Geschichte der Freimaurerei in Frankreich* (1852-53). After his death his valuable Masonic library passed into the possession of Prince Friedrich of the Netherlands, who opened it in The Hague to all Freemasons.

KLOSTERMANN, klōs'tēr-màn, ERICH (1870-). A German New Testament scholar, born in Kiel, the son of Heinrich August Klostermann. He studied at the universities of Neuchâtel, Leipzig, Kiel, Berlin, and Erlangen, and in 1901 became docent at Kiel, where he was made titular professor in 1905 and whence he went in 1911 to Strassburg as professor of New Testament. His early training was in classical philology, and an important part of his work was editing (especially in *Texte und Untersuchungen zur Geschichte der altchristlichen Literatur*) the text of Origen (1899 et seq.) and Eusebius (1902 et seq.). He also published: *Jesus Stellung zum alten Testament* (1904); *Markus* (1907); *Matthäus* (1909); *Die neuesten Angriffen an der Geschichtlichkeit Jesu* (1912).

KLOSTERMANN, HEINRICH AUGUST (1837-1905). A German Lutheran theologian, born at Steinhude and educated at Erlangen and Berlin. He was repentant and docent of theology at Göttingen until 1868, when he accepted the chair of Old Testament exegesis at Kiel. Among his works are: *Die bibl. Archäologie* (1866), *Das Markusevangelium* (1867); *Lehrbuch der alttestamentlichen Theologie* (1868), *Probleme*

im Apostelamt neu erörtert (1883); Zur Theorie der biblischen Weissagung und zur Charakteristik des Hebräerbriefes (1889); Der Pentateuch (1893); Geschichte des Volkes Israel (1896); Der Pentateuch, neue Folge (1907).

KLOSTERNEUBURG, klo'stər-noi'burg. A town of Lower Austria, on the right bank of the Danube, 6 miles west-northwest of Vienna (Map: Austria, E 2). It is the seat of the oldest Augustinian monastery in Austria, founded in 1108. The palatial abbey buildings, erected (1730-50) by Charles VI, contain a library of more than 80,000 volumes (900 incunabula). In the museum is the Austrian archducal hat used in the ceremony of swearing allegiance. The old German monastery church of St. Maria (1136) contains a number of fine paintings and a magnificent high altar. Pop., 1900, 11,595, 1910, 14,787. It has a vintner's training school, contains several charitable institutions of Vienna, and is an outpost of the metropolis. It manufactures wine, lacquer, varnish, and electrical apparatus. The town was built by Charlemagne on the site of a Roman castle and made a city by Duke Albert I (1298) under the name of Neuburg-Klosterholzen.

KLOSTER ZEVEN, klôs'tēr tsā'ven. See
WILLIAM ALGUSTUS, DUKE OF CUMBERLAND

KLOTZ, klôts, CHRISTIAN ADOLF (1738-71). A German Latinist and literary critic, born at Bischofswerda. He was educated at Halle, Leipzig, and Jena, qualified as docent and became professor at Jena when only 24 years old. A year afterward (1763) he was chosen professor of philosophy at Göttingen, and in 1765 became professor of oratory at Halle. He is remembered chiefly on account of his quarrel with Pieter Burmann the Younger and of his criticism of Lessing's *Laokoon*, in the brochure *Ueber den Nutzen und Gebrauch der alten geschuhten Steme* (1768), which Lessing answered in his *Briefe antiquarischen Inhalts* (1768-69). Klotz had a remarkably pure Latin style, which is best shown in his satiric works, *Mores Eruditum*, in his *Opuscula Latina* (1760), and in his journal, the *Acta Literaria* (1764-72). His other works on classical subjects include editions of Tyrtæus (1764) and of Vida's *De Arte Poetica* (1776), *Opuscula Philologica et Oratoria* (1772), *Vindiciæ Horatianæ* (1764), and *Lectiones Venusinæ* (1771). Consult Hausen, *Leben und Charakter Herrn Klotz* (Halle, 1772); Hagen, *Briefe deutscher Gelehrten an Klotz* (1773); *Sandys, A History of Classical Scholarship*, vol. iii (Cambridge, 1908).

KLOTZ, KLOZ, or CLOTZ, MATTHIAS (1653-1743). A well-known Bavarian violin maker and head of the celebrated family of violin makers of that name. He was born at Mittenwald and was probably a pupil of Jakob Stainer (q.v.). Although he was the maker of several very excellent specimens, he did not, as a rule, exercise sufficient skill or care in the selection of his wood. His varnish is considered by modern experts to have been of good quality, but this, like the undoubted beauty of his model, was more than discounted by his negligence in the respect above mentioned.—His two sons, **GEORG** (born in 1687) and **SEBASTIAN** (born in 1696), were also makers of violins and greatly surpassed their father in every way, although the work of **Georg** is noticeable for the same fault that marred that of his father **Sebastian** was the best workman of the entire family. He marked his violins with a secret mark only dis-

tinguishable, as a rule, by connoisseurs. It consists of the initials S. K. marked in some obscure part of the instrument.

KLOTZ, OTTO JULIUS (1852-). A Canadian civil engineer and astronomer. He was born at Preston, Ontario, and was educated at Toronto University and at the University of Michigan. In 1879 he entered the service of the Dominion government at Ottawa in connection with the topographical surveys branch of the Department of the Interior. Besides extended surveys over the Northwest prairies, he undertook in 1884 an exploration along the Saskatchewan and Nelson rivers to Hudson Bay, making magnetic observations. In 1885 he began transcontinental longitude determinations at Seattle, Wash., and was largely instrumental in establishing geographic points of reference in British Columbia and the Northwest Provinces. The delimitation of the 40-mile railway belt granted by British Columbia to the Dominion was made on the basis of his survey in 1886, and he determined the heights of the principal mountain peaks along the railway. In 1892-94 he was engaged in transatlantic longitude work and the Alaska boundary survey and later determined the longitude of the Pacific islands between Vancouver and Brisbane, Australia. In 1908 he was appointed assistant chief astronomer in the Department of the Interior and was elected president of the Royal Astronomical Society of Canada. He became a member of several American and foreign scientific societies. He published many papers on subjects relating to terrestrial magnetism, geodesy, and astronomy.

KLOTZ, REINHOLD (1807-70). A German classical scholar, born at Stollberg. He was educated at the University of Leipzig, where he became assistant professor in 1832 and full professor in 1849, after Hermann's death. From 1831 to 1856 he was one of the editors of Jahn's *Jahrbuch für Philologie*. In Greek philology he made a name by his edition of Clement of Alexandria (1831-34), his completion of Pflugk's *Euripides* (1841-60), and his revision of Devarius' *Liber de Græca Linguae Particulis* (1835-42). Even more important was his work in Latin, including a complete edition of Cicero (1851-56; 2d ed., 1863-71; with *Index Ciceronianus*, 1872), one of Nepos (1846), and a valuable text of Terence (1838-40, supplemented by a separate edition of the *Andria* in 1865), manuals of Latin literature (1846; never finished) and of Latin style (1874), and an abridged Latin lexicon (1847-54; later eds.) prepared with the aid of Lübker and Hudemann. Consult the notice in Jahn's *Jahrbuch*, pp. 154-163 (1871).

KLÜBER, KLU'BER, JOHANN LUDWIG (1762-1837). A German publicist, born at Tann, near Fulda. He was professor of law at the universities of Erlangen (1786-1804) and Heidelberg (1807-08), held high positions in the government service at Karlsruhe (1804-07 and 1808-17), and was in Vienna during the Congress of 1814-15, collecting the *Akten des Wiener Kongresses in den Jahren 1814 und 1815* (8 vols., 1815-19), of which the most important portions were reprinted separately under the title *Quellensammlung zu dem öffentlichen Rechte des Deutschen Bundes* (1830). In 1817 he entered the Prussian service and was appointed Privy Councillor in the Ministry of Foreign Affairs under Hardenberg, whom he

accompanied to the Congress at Aix-la-Chapelle (1818), and he took an important part in other political negotiations at Frankfurt and St. Petersburg. When, at the appearance of the second edition of his *Öffentliches Recht des Deutschen Bundes und der Bundesstaaten*, in 1822, book and author became the objects of political vilification, he resigned his post and retired to Frankfurt. The more important of his other writings are: *Le droit des gens moderne de l'Europe* (1819; 2d ed., 1874); *Abhandlungen und Beobachtungen für Geschichtskunde, Staats- und Rechtswissenschaften* (1830-34); *Pragmatische Geschichte der nationalen und politischen Wiedergeburt Griechenlands* (1835).

KLUCK, KLUK, ALEXANDER VON (1846-). A German soldier, born in Münster. He entered the army in 1865, saw active service and became a lieutenant in 1866, was in the war with France and was twice wounded at Metz. He was promoted major in 1887 and in the next year was commander of the preliminary school for officers at Neubreisach, having held a similar post at Annaburg in 1884. In 1899, as major general, he commanded the 23d Brigade of Infantry, and in 1902, as lieutenant general, the Thirty-seventh Division. In 1906 he was made a general of infantry and was put in command of the Fifth Army Corps, from which he was transferred to the First in 1907. In 1913 he was appointed inspector general of the Eighth Army Corps, and he commanded one of the three main bodies of German troops in France in 1914, taking part in the battles of the Marne and the Aisne. See WAR IN EUROPE.

KLUCKHOHN, KLUK'hön, AUGUST (1832-93). A German historian. He was born at Bavenhausen and studied at Heidelberg and Göttingen. In 1858 he went to Munich to become one of the editors of Sybel's *Historische Zeitschrift*. In 1865 he was appointed professor of history at the Polytechnic School in Munich, became honorary professor at the University, and in 1883 he went to the University of Göttingen. His works include: *Geschichte des Gottesfriedens* (1857); *Wilhelm III., Herzog von Bayern-München* (1861); *Ludwig der Reiche, Herzog von Bayern-Landshut* (1865); *Friedrich der Fromme, Kurfürst von der Pfalz* (1876-79); *Luise, Königin von Preussen* (1876); *Blücher* (1879); *Ueber L. von Westenrieders Leben und Schriften* (1890); and the posthumous *Vorträge und Aufsätze* (1894).

KLUGE, KLU'ge, FRIEDRICH (1856-). A Germanic scholar, born at Cologne. He studied at Leipzig, Strassburg, and Freiburg; began teaching at Strassburg in 1880; was made assistant professor at Jena in 1884; became full professor of English and Germanic philology there in 1886; and then in 1893 went to Freiburg as full professor of the German languages and literature. He became editor of the *Zeitschrift für Wortforschung*, a member of the Saxon Royal Academy of Sciences, honorary member of the Royal Academy of Ghent, and member of the academies at Munich and Heidelberg. Besides his very valuable *Germanisches Wörterbuch der deutschen Sprache* (7th ed., 1910), he wrote *Stammbildungslehre der altgermanischen Dialekte* (2d ed., 1899); *Von Luther bis Lessing, sprachgeschichtlich Aufsätze* (4th ed., 1904); *Angelsächsisches Lesebuch* (3d ed., 1902); *Deutsche Studentensprache* (1895). With Lutz he published *English Etymology* (1898), and to Paul's *Grundriss der germa-*

nischen Philologie he contributed "Vorgeschichte der germanischen Sprachen" and "Geschichte der englischen Sprache" (2d ed., 1899). Among his other important works are *Rotwelsch Quellen und Wortschatz der Gaunersprache* (1901); *Mittelenglisches Lesebuch* (1904; 2d ed., 1912); *Unser Deutsch* (2d ed., 1910); *Seemannssprache* (1911); *Wortforschung und Wortgeschichte* (1912); *Vorgeschichte der altgermanische Sprache* (1913).

KNABL, knä'b'l, JOSEPH (1819-81). An Austrian sculptor, born at Fliess, Tirol. The son of a poor peasant, he tended cattle when a boy, was first instructed by the wood carver Franz Renn at Imst, and afterward in Munich by Entres and Anselm Sickinger. Deeply interested in mediæval German wood sculpture, the revival of which he made his chief aim, he studied its best specimens in Bavaria, Tirol, and on the Rhine, and afterward produced in Munich a series of sterling works in wood and marble, the most remarkable of which is the "Coronation of the Virgin," on the high altar in the Frauenkirche. He was a member of the academy, at which a special chair was created for him in 1863, and for many years was director of Meyer's Institute for Ecclesiastical Art.

KNACKFUSS, knäk'fuss, HERMANN (1848-). A German painter and writer on art. He was born at Wissen (Rhenish Prussia) and studied at the Düsseldorf Academy and later under Bendemann and Gebhardt. He is best known as the editor of the *Kunstlermonographien*, a popular illustrated series of monographs of the great artists, published at Bielefeld, and as the author of several of these monographs, viz., Holbein the Younger (4th ed., 1902), Velazquez (6th ed., 1906), Rubens (9th ed., 1909), Rembrandt (11th ed., 1909), Dürer (10th ed., 1909), Titian (1910), Van Dyck (5th ed., 1910), Raphael (12th ed., 1912), Michelangelo (11th ed., 1912), Menzel (9th ed., 1912), Murillo (new ed., 1913), Frans Hals (new ed., 1913). He also wrote a *History of German Art* (1888) and collaborated with M. G. Zimmermann in a *Universal History of Art* (Bielefeld, 1900). His best-known paintings are the mural decorations of the High School at Wohrlau, the Ruhmeshalle, Berlin, and the Court House of Cassel; and the large historical composition, "Entry of the German Emperor into Jerusalem" (1902). Knackfuss was appointed professor in the Academy of Arts in Cassel in 1880 and lecturer on the history of art in 1890.

KNAPP, knäp, ALBERT (1798-1864). A German poet, author of many of the best modern German hymns. He studied theology and after holding various positions in the Protestant church became in 1836 the principal clergyman in Stuttgart, where he remained until his death. As a poet, Knapp worked chiefly in the religious field and did much to revive that long-neglected branch of poetry. Many of his hymns are to be found in the *Christoterpe*, a periodical edited by him from 1833 to 1853. His other works include: *Christliche Gedichte* (1829); *Gedichte, neueste Folge* (1843); the cycles, *Hohenstaufen* (1839) and *Bilder der Vorwelt* (1862). To hymnology Knapp contributed his *Evangelischer Liederschatz für Kirche und Haus* (1837), a valuable collection of Christian hymns of all ages, to which his *Christenlieder* (1841) forms a splendid supplement. Consult Karl Gerok, *Albert Knapp als*

schwäbischer Dichter (Stuttgart, 1881), and Martin Knapp, *A. Knapp als Dichter und Schriftsteller* (Tubingen, 1913).

KNAPP, năp, CHARLES (1868-). An American classical scholar, born in New York City. He graduated in 1887 from Columbia University, where he was afterward for three years prize fellow in classical philology, receiving the degree of Ph.D. in 1890, and then tutorial fellow (1890-91). In 1891 he became instructor in classical philology at Barnard College, Columbia, in 1902 adjunct professor, and in 1906 professor. He contributed, especially on Roman life and Latin literature, to the *American Journal of Philology*, the *Classical Journal*, *Classical Philology*, the *Classical Review*, and the *Classical Weekly* (of which he became managing editor in 1906). In 1906 also he was elected secretary treasurer of the Classical Association of the Atlantic States. He edited *Stories from Aulus Gellius* (1894): *Selections from Viri Romæ* (1896), with R. Arrow-smith; and, with introduction, notes, and index, Vergil's *Æneid*, i-vi, with selections from books vii-xii (1901). For the second edition of the NEW INTERNATIONAL ENCYCLOPEDIA he had charge of the department of classical philology.

KNAPP, knäp, GEORG FRIEDRICH (1842-). A German economist and statistician, born at Giessen. He was educated at Munich, Berlin, and Göttingen. At the age of 25 he became head of the statistical bureau of Leipzig and two years later (1869) became assistant professor of economics at the University of Leipzig. In 1874 he went to Strassburg as professor of political economy. His works are mostly on the subject of population and on the history of agriculture. *Ueber die Ermittlung der Sterblichkeit* (1860); *Theorie des Bevölkerungswechsels* (1874); *Die Bauernbefreiung und der Ursprung der Landarbeiter in den ältern Teilen Preussens* (1887); *Die Landarbeiter in Knechtschaft und Freiheit* (1891); *Grundherrschaft und Rittergut* (1897); *Staatliche Theorie des Geldes* (1905).

KNAPP, (JAKOB) HERMAN (1832-1911). A German-American oculist and aurist, born in Dauborn, Prussia. He graduated at the University of Giessen in 1854; studied in Berlin, Paris, and London; was professor of ophthalmology in the University of Heidelberg from 1864 to 1868, emigrated to New York in the latter year and in 1869 founded the New York Ophthalmic and Aural Institute. He was professor of ophthalmology in the New York University Medical College from 1882 to 1888, when he accepted the corresponding chair in the College of Physicians and Surgeons (Columbia). Dr. Knapp was made professor emeritus in 1902. He wrote a number of excellent monographs on the diseases of the ear and eye, established the *Archives of Ophthalmology and Otolaryngology* in 1869, and published: *Die intraokularen Geschwülste* (1868); *Cocaine and its Uses in Ophthalmic and General Surgery* (1885); *Investigation on Fermentation, Putrefaction, and Suppuration* (1886); *Cataract Extraction without Irrectomy* (1887).

KNAPP, năp, MARTIN AUGUSTINE (1843-). An American commerce specialist, born at Spofford, Onondaga Co., N. Y. He graduated at Wesleyan University in 1868, was admitted to the New York bar in 1869, and in 1870 began the practice of the law at Syracuse, N. Y. From 1877 to 1883 he was city attorney of

Syracuse. He made a particular study of corporation law. From 1891 to 1910 he was a member of the Interstate Commerce Commission, of which he was chairman after 1898. He resigned in 1910 when appointed additional circuit judge by President Taft, who assigned him for five years to the United States Commerce Court as presiding judge. Upon the dissolution of this court, in 1913, he was assigned to the Circuit Court of Appeals of the fourth judicial circuit. Under the original and the amended Erdman Act Knapp had served as mediator in numerous railway labor disputes, and when the Erdman Act was superseded in 1913 by the Newlands Act, he was appointed by President Wilson to the Board of Mediation and Conciliation created thereby. For the year 1910-11 he was a vice president of the American Statistical Association. He wrote a monograph on *Railroad Pooling* (1896), No. 179 of the *Publications of the American Academy of Political and Social Science*, and *National Regulation of Railroads* (1905).

KNAPP, SAMUEL LORENZO (1784-1838). An American lawyer and author. He was born in Newburyport, Mass., graduated at Dartmouth College in 1804, was admitted to the bar in Massachusetts, served as colonel in the coast-guard militia in the War of 1812, and later became a journalist in Boston. He edited the *Boston Gazette* and the *Boston Monthly Magazine* and in 1826 founded the *National Republican*. The *Republican* not proving a success, he resumed the practice of law in 1828 in New York. His writings include: *Travels in North America, by Ah Bey* (1818); *Memoirs of General Lafayette* (1824); *The Genius of Freemasonry* (1828); *American Biography* (1833); *Life of Aaron Burr* (1835); *Life of Andrew Jackson* (1835); *The Bachelor, and Other Tales* (1836).

KNAPP, WILLIAM IRELAND (1835-1908). An American writer, born at Greenport, L. I. He studied at New York University and graduated at Madison, now Colgate, University in 1860. From 1860 to 1865 he was professor of modern languages at Madison, and during the two years immediately following taught the same subjects at Vassar. He spent the greater part of the next 11 years in Spain, where he collected a valuable library. Upon his return (1879) he accepted the Street professorship of modern languages at Yale, in 1892 became professor at the University of Chicago, and after 1895 lived chiefly in England and France. His works include: *Obras Pictas de Don Diego Hurtado de Mendoza* (2 vols., 1876-77); *Grammar of the Modern Spanish Language* (1882); *Life, Writings, and Correspondence of George Borrow* (2 vols., 1899); *Borrow's Lavengro and the Romany Rye* (1900); *Pascual López, by Mme. Pardo Bazán* (1905).

KNAPSACK, năp'săk (Dutch *knapzak*, from *knappen*, to eat + *zak*, sack). The bag or case in which the soldier carries his kit when on the march, usually worn suspended between the shoulders. The new United States model haversack and new pack carrier (1914) have replaced the old knapsack and haversack in the United States army. The new devices are carried as a back pack, however. See KIT; HAVERSACK.

KNAUS, knous, LUDWIG (1829-1910). A German genre painter of the younger Düsseldorf school. He was born at Wiesbaden and studied from 1845 to 1852 under Sohn and

Schadow in Düsseldorf. His early works, like "The Gamblers," in the Düsseldorf Gallery, are in the manner of that school, being dark and heavy in color. This deficiency was remedied by study at Paris, whither he went in 1852 and enrolled as a pupil of Couture. In 1853 his "Morning after the Kermess" received the second gold medal of the Salon and made him a celebrated painter. Except for a year's study in Italy, he remained in Paris until 1860. His chief works of this period include "The Golden Wedding," "The Baptism," and "The Promenade," purchased for the Luxembourg. From 1861 to 1866 he practiced at Berlin, producing such works as "Boys Playing Cards," "Looking for a Bride" (Wiesbaden Museum), and "His Highness on his Travels." The next eight years of his life saw the production of much of his best work, including "The Children's Festival" (National Gallery, Berlin), "In Great Distress," and "The Village Prince." From 1874 to 1883 he was professor at the Academy of Berlin, continuing to reside in that city until his death. His color was at this time improved by the study of Dutch masters. Among the most important works of his last period were: "The Holy Family" and "The Road to Ruin," both painted in 1876 and now in the Metropolitan Museum of Art, New York, "Behind the Curtain" (1880), Dresden Gallery; "The Rag Baby" (1880) and "A Village Festival" (1881), both in the Vanderbilt collection, Metropolitan Museum, New York; and "A Duel." During his last period Knaus also painted a series of "Idyls," with nudes in a rather classical style, of which an important example is in the Wiesbaden Museum. The most famous examples of his portraits, which are genre in character, are those of the scientist Helmholtz and the historian Mommsen, both in the National Gallery, Berlin. The art of Knaus is best represented in the public collections of Germany and in some of the United States—the Metropolitan Museum, New York, possessing eight examples; the Walters collection, Baltimore, two. Among his many distinctions were the great gold medal of the Berlin Exhibition of 1861 and the grand medal of honor at the Paris Exposition of 1867. He was a member of the Berlin, Munich, and many other academies, an Officer of the Legion of Honor and a Knight of the Prussian Order Pour le Mérite.

As admirable illustrations of popular life, the paintings of Knaus are pleasing to the general public, but they are no less so to connoisseurs by reason of their excellent color and sound drawing. He was the first to pass from mere illustration to genre pictures, which were at the same time excellent paintings and as such occupied an important position in the history of German painting. They abound in humor and excel particularly in the portrayal of childhood; but the figures are not always natural, the posing being sometimes obvious. Consult the chief authority on Knaus, Pietsch, who wrote a volume of the *Künstlermonographien* (Bielefeld, 1896), a comprehensive article in *Die Kunst unserer Zeit*, vol. xiii (Munich, 1902), and edited an album of his works published by the Berlin Photographic Society.

KNEBEL, knä'bel, KARL LUDWIG VON (1744-1834). A German poet and translator, born at the castle of Wallerstein, Bavaria. After studying law at the University of Halle, he served

for 10 years as an officer in the Prussian army and in 1774 became tutor to Prince Konstantin at Weimar and accompanied him and his brother on a journey to France. On this occasion he called upon Goethe at Frankfurt and thus first introduced him to the hereditary Prince Karl August. After the early death of his pupil he retired in 1779 with the rank of major at Karl August's court at Weimar and a pension for life, and henceforth lived in intimate association with that famous literary circle of which Goethe, Schiller, Herder, and Wieland were the guiding stars. In 1798 he married Luise Rudorff, chamber singer to the Duchess Amalie, retired to Ilmenau, and in 1805 removed to Jena. Although his own poems—*Hymnen*, *Elegien*, *Lebensblüten in Distichen*, and others—are to be commended for their classical purity of form, he is more especially remembered for his excellent translations of the *Elegiæ* of Propertius (1798), of the *De Rerum Natura* of Lucretius (1821), and of Alfieri's tragedy *Saul* (1829). His highly interesting correspondence with Goethe, *Briefwechsel mit Goethe*, was edited by Guhrauer (Leipzig, 1851). Consult C. F. Beauhieu-Marconnay, *Anna Amalia, Karl August und der Minister von Frisch* (Weimar, 1874), and Hugo von Knebel-Doberitz, *Karl Ludwig von Knebel* (ib., 1890).

KNEE, HOUSEMAID'S. See HOUSEMAID'S KNEE.

KNEE/CAP'. See PATELLA.

KNEE JERK, or PATELLAR REFLEX. The name given to the phenomenon resulting from striking lightly the tendon uniting the patella to the tibia. The knee jerk is elicited by having the patient cross the knees, relaxing the upper leg, and then with the finger tip or a special hammer striking the tendon named just below the kneecap. A slight involuntary kick results, in a person in normal condition. The knee jerk is increased in certain diseases, as hysteria, neurasthenia, spastic paraplegia, hemiplegia, etc. It is diminished or entirely absent in lead poisoning; locomotor ataxia, chronic alcoholism, etc. The nerves involved are the fourth lumbar pair; the peripheral nerve is the anterior crural. The muscles taking part in the sudden contraction are those constituting the quadriceps extensor femoris. This phenomenon is of great importance in the diagnosis of nervous diseases.

KNEE JOINT. The articulation between the femur or thigh bone above and the tibia or shin bone below. A third bone, the patella or kneecap—one of the sesamoid bones (see SESAMOID BONE) and not a true bone of the skeleton—also enters into the structure of this joint anteriorly. The articular surfaces of these bones are covered with cartilage, lined by a synovial membrane, which is the most extensive in the body, and connected together by ligaments, some of which lie external to the joint, while others occupy its interior.

The most important of the external ligaments are the anterior or ligamentum patellæ, which is in reality that portion of the quadriceps extensor cruris which is continued from the kneecap to the tubercle of the tibia; one internal and two external lateral ligaments; a posterior ligament; and a capsular ligament, which surrounds the joint in the intervals left by the preceding ligaments. The positions of these ligaments are sufficiently indicated by their names. Of the internal ligaments, the two cru-

cial, so called because they cross each other, are the most important. The external and internal semilunar cartilages are two crescentic plates of cartilage; the outer part of each is thick, the inner free border thin. Each cartilage covers nearly the outer two-thirds of the corresponding

VERTICAL SECTION OF THE RIGHT KNEE JOINT IN THE ANTERO-POSTERIOR DIRECTION.

m.f.q.e., muscular fibres of quadriceps extensor; ex.syn.sac., extension of synovial sac of knee upon femur; t.q.e., tendon of quadriceps extensor forming fibrous capsule of joint; pa., patella; pre.pat.b., prepatellar bursa; con.fem., condyle of femur inner; lig.mu., ligamentum mucosum; fat.tis.tig., fatty tissue between ligamentum patellæ and synovial sac; lig.pate., ligamentum patellæ; b.lig.pate., bursa beneath ligamentum patellæ; tib., tibia; fat.tis., fatty tissue; o.syn.mem., opening in synovial membrane behind crucial ligament leading into inner half of joint; syn.mem., synovial membrane reflected off crucial ligaments; ant.cru.lig., out end of anterior crucial ligament; post.cru.lig., posterior crucial ligament; lig.win., ligament of Winslow.

articular surface of the tibia and by its form deepens these surfaces for firmer articulation with the condyles of the femur.

The chief movements of this joint are those of a hinge joint, viz., flexion and extension; but it is also capable of slight rotatory motion when the knee is half-flexed. During flexion the articular surfaces of the tibia glide backward upon the condyles of the femur, while in extension they glide forward. The whole range of motion of this joint, from extreme flexion to extreme extension, is about 150 degrees. Judging from its articular surfaces, which have comparatively little adaptation for each other, it might be inferred that this was a weak and insecure joint; and yet it is very rarely dislocated.

KNEELAND, ne'land, ADNER (1774-1844). An American Deist. He was born at Gardner, Mass., April 6, 1774, and was first a Baptist preacher, then a Universalist, and finally a Deist. From 1821 to 1823 he edited a Universalist periodical in Philadelphia, in 1828 he edited the *Olive Branch* in New York, and in 1832 founded in Boston the *Investigator*, a weekly expositor of free thought. He was also for several years in Boston the instructor of a deistical society meeting in Julien Hall, where in 1830 William Lloyd Garrison, when elsewhere prohibited, delivered his lectures against slavery. In 1836 he was tried in Boston for blasphemy. He died Aug. 27, 1844. Among his publications were:

The Deist (1822); *Lectures on Universal Salvation* (1824); *A Translation of the New Testament* (1822); *A Review of the Evidences of Christianity* (1829).

KNEELAND, SAMUEL (1821-88). An American naturalist and physician, born in Boston, Mass. He graduated from Harvard University in 1840, from its medical school in 1843, and studied medicine two years in Paris. In 1845 he began the practice of medicine in Boston, lecturing also on anatomy in Harvard University. He became professor of zoology and physiology in Massachusetts Institute of Technology in 1866 and also its secretary. During the Civil War he served as army surgeon. Kneeland traveled extensively for the study of earthquakes and volcanic phenomena in Brazil, Iceland, the Hawaiian Islands, through the copper region around Lake Superior, etc. In 1851 he edited with an introduction Smith's *History of the Human Species* and from 1866 to 1869 edited the *Annual of Scientific Discovery*. He contributed largely to scientific periodicals and wrote numerous articles on zoological and medical subjects for the *American Cyclopædia* and the *New American Cyclopædia*. His book-form publications include: *Wonders of the Yosemite Valley and of California* (1871); *An American in Ireland* (1876); *Volcanoes and Earthquakes* (1888).

KNEELAND, STILLMAN FOSTER (1845-). An American lawyer, born at South Stukeley, Quebec Province, Canada. He studied at McGill University, Montreal, and at Union College (New York State), served in the Union army in the Civil War, and, admitted to the bar in 1869, practiced in New York City from 1872 till his retirement. He framed and in 1886 secured the passage of an act which abolished perpetual imprisonment for debt in New York State. In 1894 he was elected to the State Assembly and in 1896-98 was Under-Secretary-General on the staff of Governor Black. Besides several legal treatises, he published *Law, Lawyers, and Lambs* (1910) and *Random Rhymes of a Busy Barrister* (1911).

KNEIPP, knip, SEBASTIAN (1821-97). A German priest, the inventor of a special kind of water cure. He was born in Stefansried, Bavaria, and began life as a weaver. His attention was turned to the study of medicine while preparing for the priesthood, and a trifling accident is said to have led to systematic experiments in his water-cure treatment, of which one feature is that patients are compelled to walk barefooted in the snow in winter and barefooted on the wet grass in summer. Sunshine, fresh air, water, and a definite object or routine activity at stated hours are the chief factors in the Kneipp treatment. In Wörishofen, Swabia, where Kneipp lived as a priest, many patients are treated after his methods. Societies bearing his name exist in different parts of the world. He wrote: *Meine Wasserkur* (1887; 69th ed., 1901; Eng. trans., London, 1891); *So sollt ihr leben* (1889; 25th ed., 1900); *Kinderpflege in gesunden und Kranken Tagen* (1891; 12th ed., 1906); *Mein Testament* (1894; 15th ed., 1900); *Vorträge in Wörishofen* (1894-98). His collected works were published in Kempten (1898-99). Consult: Rhein, *Das Buch vom Pfarrer Kneipp* (Kempten, 1891); Verus, *Vater Kneipp, sein Leben und Wirken* (ib., 1897); *Das grosse Kneippbuch* (Milwaukee, 1904).

KNEISEL, knä'zel, FRANZ (1865-). A

German-American violinist, born in Rumania, of German parentage. He was educated in Bucharest and studied violin under Grün and Hellmesberger in Vienna. From the position of concert master in Bille's orchestra, Berlin, he was called by Gericke in 1885 to become first violin of the Boston Symphony Orchestra. The following year he organized the famous Kneisel Quartet, which has become the best-known quartet in the United States and is a peer of any similar European organization. In 1903 he resigned from the Boston Symphony Orchestra and moved to New York, where he became head of the violin department of the Institute of Musical Art. With his quartet he made several European tours. In 1907 he acted as a member of the jury for the violin competition at the Paris Conservatory. Yale University conferred upon him the degree Mus D. in 1911.

KNELLER, nē'lār, SIR GODFREY (1646-1723). A German portrait painter, who worked chiefly in England. He was born at Lübeck, Germany, Aug. 8, 1646, the son of a portrait painter named Kniller. He studied painting under Ferdinand Bol at Amsterdam, with occasional lessons from Rembrandt. With his brother Ferdinand, who was also a painter, he then went to Italy, studying at Rome and especially at Venice. On his return to Germany he painted with success at Nuremberg, Hamburg, and elsewhere, and in 1675 he went to England. He was given an opportunity to portray Charles II at the same sitting with Sir Peter Lely and at once won favor by his superior rapidity of execution and excellent likeness. Being handsome and witty, his success at court was assured. On the death of Lely, in 1680, he was made court painter. His sitters included the persons of rank and distinction of his day. He painted 14 reigning sovereigns, among whom were Louis XIV, Peter the Great, and the kings and queens of England from Charles II to George I. After having been knighted by William III in 1693 and made Baronet by George I in 1715, he died in London, Oct. 19, 1723, and was buried in Westminster Abbey. Modern criticism does not endorse the eulogies of Kneller's painting by Dryden, Addison, and other distinguished contemporaries. His art was modeled on that of Van Dyck; his canvases are smoothly painted, with much elegance and little character. His best-known works are the "Beauties" of Hampton Court, 12 ladies of William III's court, painted as a counterpiece to Lely's series for Charles II; and the "Kit-Cat Club," now in private possession in London. Kneller himself esteemed his portrait of Francis Couplet, a converted Chinese, his best work. Consult Ackermann, *Der Porträt-Maler Kneller im Verhältnis zur Kunstbildung seiner Zeit* (Lübeck, 1845), and *Dictionary of National Biography* vol xxxi (London, 1892). See Plate of NEWTON, SIR ISAAC.

KNELLER HALL. The British army training college for bandmasters, instrumentalists, etc. The school was first instituted as a government institution in 1857, although part of the expenses was met by a tax of £10 per annum from each regiment in the service. Ten years after the government took over the entire responsibility. It is situated at Twickenham, near London, and was formerly the residence of Sir Godfrey Kneller.

KNESEBECK, knä'ze-bēk, KARL FRIEDRICH, BARON VON DEM (1768-1848). A Prussian gen-

eral, born at Karwe. He entered the army in 1782, distinguished himself in the campaigns of 1792 and 1794, rose rapidly to the rank of major on the general staff (1802), and at Auerstädt (1806) saved his King from capture. Later in the same year he served with the Russian allies and drew up the plan of the battle of Pultusk. After the Peace of Tilsit he lived in retirement until 1809, when he was sent to Bohemia on a diplomatic errand. Three years afterward he was sent to Russia to urge the Prussian policy of peace and after the failure of this mission was made adjutant general, in which post he exercised a potent and frequently unfortunate influence on the King, especially in his attempt to oust Blücher in 1815. In 1831 he succeeded Gneisenau in command of the army of observation on the Polish frontier. He was made field marshal on his retirement in 1847. He was a poet of some popularity and wrote a *Lob des Krieges* (1805), which was a favorite in his day. Consult Lehmann, *Knesebeck und Schön* (Leipzig, 1875).

KNIAZHNIN, knyāzh-nèn', YAKOV BORISOVICH (1742-91). A Russian dramatist, born in Pskov, member of the St. Petersburg Academy (1783). He was educated at home and in the University of St. Petersburg and published his first poems while still a student. He entered the army and rose to be adjutant general. His tragedy *Didon* (1769) was only an imitation of Metastasio and Lefranc de Pompignan, but it brought him under the notice of the Empress Catharine II, whom he afterward assisted in translation. Through his acquaintance with the poet Sumarokov, his future father-in-law, he was induced to leave military life and to devote himself to literature. His more noteworthy tragedies are: *Vladimir i Iaropolk* (1779); *Roslav* (1784); *Vladshah* (1786). In these, as in his comedies, he adhered too closely to French models. His *Vadim*, written in 1789, was not published for four years, because of some passages sufficiently original and patriotic to alarm the Empress Catharine, who caused it to be destroyed. Kniazhnin brought out a complete edition of his works (4 vols., 1787), and they have been frequently reprinted, notably in two volumes (1847-48).

KNIAZIEWICZ, knyā-zév'ich, KARÓL (1762-1842). A Polish general, born in Courland, of noble family. He joined a corps of cadets at Warsaw and in 1778 entered the artillery of the Polish Republic. Decorated for bravery at Dubienka (1792), he distinguished himself at Chelm and Gorkov (1794) and in the defense of Warsaw and rose rapidly to the grade of major general. At the ill-fated battle of Maciejowice he was in command of the left wing, was captured, and not set free till the accession of Paul. Then he joined the French army, fought against Rome and Naples in the Polish legion, was made corps commander, and sent to Paris with the captured standards of the campaign. After Marengo he raised a new Polish legion, commanded it at Hohenlinden, but left the French service after the Peace of Luneville as soon as it became plain that Bonaparte intended to do nothing for Poland. He lived in retirement until 1812, then fought again for the King of Westphalia under Poniatowski at Smolensk, and showed himself a brilliant tactician by his masterly retreat from Yoronova. At Beresina he was so severely wounded that he had to leave the service. After the Peace of Paris he lived at

Dresden, but in 1822 his popularity among the Poles made him suspicious in the eyes of the Russian government, and he was imprisoned for eight months. He returned to Dresden, only to leave his retirement again in 1830 to plead for the cause of Poland in Paris, and remained there till his death.

KNIAZNIN, knē-āzh'nèn, FRANCISZEK DYONIZY (1750-1807). A Polish poet, born at Vitebsk. Upon the dissolution of the Order of the Jesuits, of which he was a member, in 1773, he became secretary to Prince Adam Czartoryski. Learned, upright, sociable, and witty, he spent his life in eulogizing, under classical names, in numerous odes his patron and that Prince's family. Besides making translations of Horace and Ossian, he wrote many dramas, of which *The Spartan Mother* and *The Gypsies* achieved great vogue. His works were published in seven volumes (Leipzig, 1835). With Karpinski (q.v.) and Naruszewicz (q.v.) he belongs to that group of sentimental Polish poets who sought the most artificial phraseology and forms for the expression of their feelings.

KNICKERBOCKER, nīk'ēr-bōk-ēr. A name used of residents of New York descended from the old Dutch settlers. It is sometimes extended to include old New Yorkers of other stock. Though Washington Irving made the names famous in his *History of New York*, the Knickerbockers were among the oldest Dutch families of the State. The name appears in public records as early as 1709.

KNICKERBOCKER'S HISTORY OF NEW YORK. An historical work by Washington Irving (1809). It is a burlesque on the early history of New York City, purporting to have been written by one Diedrich Knickerbocker, and gives an amusing account of the early Dutch citizens. It is said to have bitterly offended their descendants in Irving's day.

KNIFE. See CUTLERY.

KNIGGE, knīg'ge, ADOLF, BARON VON (1752-96). A German author, born at Bredenbeck, near Hanover. After having studied law at Göttingen, he became assessor at Cassel; but, owing to official and social dissensions, soon left that city and led a wandering life. He lived for short periods successively at Hanau, Frankfurt, Heidelberg, and Hanover until 1791, when he made his home in Bremen and was appointed provost. His connection there with the secret society of the Illuminati involved him in unpleasant complications, and after its suspension he published, under the pseudonym Philo, a pamphlet (1788) which attracted much attention. He is best known through his *Ueber den Umgang mit Menschen* (16th ed., 1878), a collection of rules and maxims for a happy and useful life, once widely read and showing great observation and worldly wisdom. All his plays and most of his numerous novels are now forgotten, and only *Der Roman meines Lebens* (1781-87), the comical romance *Die Reise nach Braunschweig* (1792; new reprint in Kürschner's *Deutsche Nationallitteratur*), and *Des seligen Etaterates von Schafskopf hinterlassene Papiere* (1792) deserve to be saved from oblivion. Consult Goedeke, *Adolf Freiherr Knigge* (1844).

KNIGHT (AS. *cniht*, *cnyht*, *cneoht*, youth, hero, OHG. *kneht*, Ger. *Knecht*, boy, servant; probably connected ultimately with Lat. *genus*, Gk. *gēnos*, *genos*, Skt. *janas*, family, as well as with AS. *cnyning*, Eng. *king*). Originally a man

at arms bound to the performance of certain duties. A knight was usually, if not always, in the early Middle Ages, necessarily soldier, landholder, and noble. In the armies he served on horseback; therefore in other languages the equivalent term is frequently indicative of this fact—French *chevalier*, German *Ritter*, Spanish *caballero*. He was bound to serve his lord for a fixed time each year, usually 40 days, but in the Kingdom of Jerusalem continuously. (See section on *Military Organizations* under FEUDALISM.) As a landholder he held a fief from his superior; the theoretical unit in the feudal system was a knight's fee, which meant the land sufficient for maintaining one knight. This came to be merely a unit of measure, and instances are common in which a man performed service for a fraction of a knight's fee, e.g., one-fifteenth or two-thirds. All knights were nobles, although all nobles were not necessarily knights. The institution of knighthood, as conferred by investiture and with certain oaths and ceremonies, arose gradually throughout Europe as an adjunct of the feudal system. The character of the knight, as it was finally developed, was at once military and religious. The defense and recovery of the holy sepulchre and the protection of pilgrims were objects to which, in the early times of the institution, he was often supposed to devote himself. Later a code of knightly etiquette was developed, of which the most prominent features were an exalted sense of class honor and a reverence for ladies amounting almost, in theory, to religious worship. Though this high sense of honor towards the members of one's class was by no means inconsistent with a contempt for, and often a total disregard of, the rights of the lower classes, knighthood at its best was an influence for the refinement of life in the Dark Ages.

The system of knight service, introduced into England by William the Conqueror, empowered the King, or even a superior lord who was a subject, to compel every holder of a knight's fee to become a member of the knightly order, his investiture being accounted proof that he possessed the requisite knightly arms and was sufficiently trained in their use. In England, in the time of Henry III, the institution seems to have been based on a property qualification, since all persons possessed of a certain yearly income were forced to be knighted under a penalty of a fine. The Statute of Knights of the first year of Edward II, regulating the causes that were to be held valid to excuse a man from knightly service, shows that in the fourteenth century the knightly office was not always eagerly coveted; yet its social dignity was very considerable, for even dukes, if not admitted into the order, were obliged to yield precedence to a knight in any royal pageant or public ceremony. In France, where knighthood reached its greatest perfection, statutes of the thirteenth century show that there was the same unwillingness to incur the burden of knighthood. After the long war between France and England (see HUNDRED YEARS' WAR) it became the practice for the sovereign in England to receive money compensations from subjects who were unwilling to receive knighthood, a system out of which grew a series of grievances, leading eventually to the total abolition of knight service in the reign of Charles II.

Knighthood, originally a military distinction, came, in the sixteenth century, to be occasionally

conferred on civilians as a reward for valuable services rendered to the crown or community. The first civil knight in England was Sir William Walworth, Lord Mayor of London, who won that distinction by slaying the rebel Wat Tyler in the presence of the King (1381). Since the abolition of knight service, knighthood has been conferred, without any regard to property, as a mark of the sovereign's esteem or as a reward for services of any kind, civil or military. For the ceremonies practiced in conferring knighthood at different periods, see CHIVALRY.

Knighthood could, theoretically, be conferred by any person of knightly condition; but the right to bestow it was early restricted to persons of rank and afterward to the sovereign or his representative as the commander of an army. In England the sovereign now bestows knighthood by a verbal declaration, accompanied with a simple ceremony of imposition of the sword, or by patent, when the persons knighted cannot conveniently come into the presence of royalty. The Lord Lieutenant of Ireland also occasionally, but rarely, exercises a delegated power of conferring knighthood. In England the orders of knighthood are the Garter, the Thistle, St. Patrick, the Bath, St. Michael and St. George, Star of India, Indian Empire, and Royal Victorian. Consult: Sir N. H. Nicholas, *History of the Orders of Knighthood of the British Empire* (4 vols., London, 1842); Gautier, *La chevalerie* (Paris, 1884); J. H. L. Archer, *Orders of Chivalry from the Original Statutes of the Various Orders of Knighthood* (London, 1887), contains a bibliography; Luchaire, *Manuel des institutions françaises* (Paris, 1892); Round, *Feudal England* (London, 1895); Baldwin, *Scutage and Knight Service in England* (Chicago, 1897); W. H. Schofield, "Chivalry in English Literature," in *Harvard Studies in Comparative Literature*, vol. ii (Cambridge, Mass., 1912). See (in addition to FEUDALISM and CHIVALRY) BACHELOR, BANNERET; TOURNAMENTS; and separate orders, such as TEMPLARS, KNIGHTS; HOSPITALERS; ETC.

KNIGHT, AUSTIN MELVIN (1854-). An American naval officer, born at Ware, Mass. He graduated from the United States Naval Academy in 1873 and rose to the ranks of captain in 1907 and rear admiral in 1911. He served at various stations, had charge of the ordnance proving ground at Annapolis in 1885-89, participated in the Cuban blockade and in the Porto Rico expedition during the war with Spain, was head of the department of seamanship at the Naval Academy from 1898 to 1901, and served as president of the special board on naval ordnance and president of the joint army and navy board on smokeless powders in 1904-07 and in 1909. Later he became commandant of the Narragansett Bay (R. I.) Naval Station and in 1913 also president of the Naval War College. He is author of *Modern Seamanship* (1901; 5th ed., 1910).

KNIGHT, CHARLES (1791-1873). An English author, born at Windsor, where his father was a bookseller. He was sent to school at Ealing, where he gained some knowledge of the classics, but he was educated mostly in his father's bookshop. When a young man, he set himself to educate the masses by raising the tone of popular literature. In conjunction with Hawke Locker he founded the *Plain Englishman*, a magazine of original and selected articles (1820-22); edited the *Guardian*, a liter-

ary and political miscellany (1820-22); and, with the encouragement of Macaulay and others, started *Knight's Quarterly Magazine* (1823-24). In 1825 Birmingham established the Society for the Diffusion of Useful Knowledge. The idea originated with Knight, who was subsequently called in to take charge of the society's publications. For the rest of his life Knight wielded immense influence as a popular instructor. Among the works which he published or edited are the *Penny Magazine* (1832-45), which at one time enjoyed a circulation of nearly 200,000 copies weekly; *Penny Cyclopædia* (30 vols., 1833-44); *Library of Entertaining Knowledge*, the volume on the elephant (1831) being written by himself, *Pictorial History of England* (1837-44), *London Pictorially Illustrated* (6 vols., 1841-44), *Old England, a Pictorial Museum of National Antiquities* (2 vols., 1845), *Half Hours with the Best Authors* (4 vols., 1847-48); *The English Cyclopædia* (22 vols., 1864-61); *Pictorial Shakespeare* (8 vols., 1838-41); *Life of Caxton* (1844); *Knowledge is Power* (1855); and, above all, the *Popular History of England* (1856-62). Knight died at Addlestone, March 9, 1873. Consult his autobiography, entitled *Passages of a Working Life during Half a Century* (3 vols., London, 1864-65).

KNIGHT, EDWARD HENRY (1824-83). An American mechanical expert. He was born in London, England, studied surgery, engraving, mechanics, and civil engineering, and came to the United States in 1815. He settled in Cincinnati, where he became a patent lawyer. In 1863 he accepted a position in the government patent office in Washington. He was a member of the international juries at the World's Fairs in Philadelphia and Atlanta, was United States Commissioner to the World's Fair in Paris in 1875, and was made Chevalier of the Legion of Honor by the French government. He founded the *Official Gazette of the United States Patent Office*, edited the *Reports of the Paris Exposition*, and published, besides many official reports of value, the *American Mechanical Dictionary* (1876) and the *New Mechanical Dictionary* (1884).

KNIGHT, LILLIS CORNELIA (1757-1817). An English author, daughter of Rear Admiral Sir Joseph Knight. At his death (1775) his widow and child went to live in Italy, and, when her mother also died, Cornelia returned to England in charge of her friends, Lady Hamilton and Admiral Nelson (1799). She was companion to Queen Charlotte (1805-13), afterward to the Princess of Wales, and her autobiography, not written to gratify the craving for details of court life, is valuable on account of its reliable narration of facts. It was edited and published posthumously (1861). Other books of hers are: *Dinorbas* (1790), a kind of supplement to *Raselas*; two heavy romances, *Marcus Flaminius* (1792), a didactic romance aiming to give a picture of Roman military, political, and social life, and *Sir Guy de Lusignan* (1833); her chief work, *A Description of Latium or La Campagna di Roma* (1805); besides a volume of prayer and hymns from the German (1832). The last 20 years of her life were spent abroad, and she died in Paris.

KNIGHT, JOHN PRESCOTT (1803-81). An English portrait and genre painter. He was born at Stafford, son of the comedian, Edward Knight, who placed him as clerk with a West

India merchant. The merchant having failed, young Knight amused himself by copying from Benjamin West's work, which he did so well that his father allowed him to become a pupil of Sass and of George Clint and in 1823 at the Royal Academy. His best-known works are his portraits of the Duke of Wellington for the London City Club, the Duke of Cambridge for Christ's Hospital, Sir George Burrows for St. Bartholomew's Hospital, and the group portraits "Waterloo Banquet" and "Peninsular Heroes." His "Sacking a Church in the Time of John Knox" is in the Tate Gallery, London. He was elected a member of the Royal Academy in 1844, was professor of perspective there, and served as secretary from 1848 to 1873.

KNIGHT, RICHARD PAYNE (1760-1824). An English archaeologist and philologist. Owing to ill health, he had but a few years of actual schooling, which, however, his vast fortune enabled him to supplement by extensive travel. In Italy (1767 and subsequently) he interested himself in the study of art and of classical antiquities and upon his return devoted himself to the enlarging of the archaeological collection he had made in Italy and to publishing his memoirs. He was returned to Parliament, but, though serving from 1780 to 1806, seldom participated in the debates. From 1814 he was a trustee of the British Museum, to which at his death he left his magnificent collection of ancient bronzes and Greek coins, valued at £50,000. In addition to this bequest, the results of his extensive travels and researches appeared in numerous publications, including his *Account of the Remains of the Worship of Priapus Lateley Existing at Isernia in the Kingdom of Naples* (1786). His *Analytical Essay on the Greek Alphabet* (1791) created a sensation, because in it Knight was the first to question the authenticity of certain Greek inscriptions which Fourmont had claimed to have found in Laconia, and which such eminent scholars as Winckelmann and Heyne had accepted as genuine; later, Knight's suspicions were proved to be correct. While his best work is that on the *Principles of Taste* (1805), he expended much careful study on an edition of Homer (1816).

KNIGHT, RIDGWAY (DANIEL RIDGWAY) (c.1850-). An American figure and landscape painter, born in Philadelphia. He was a pupil of Gleyre and Meissonier, made his home in France, with his studio at Poissy, and exhibited chiefly at the Paris Salon. His subjects are French peasant scenes, painted with a certain refinement of color, sound in drawing, and of ideal conception, but are without real power or inspiration. He received several awards at the Salon, a gold medal at Munich in 1888, the cross of the French Legion of Honor in 1892 (Officer, 1909), the grand medal of honor at Philadelphia in 1893, and the Bavarian Order of St. Michael. Among his chief paintings are "The Veteran"; "The Old Beau Woman"; "Harvest Scene"; "Sans dot"; "Chat-boxes"; "L'Appel au passeur"; "Hailing the Ferry" (Pennsylvania Academy of Fine Arts); "The Shepherdess" (Brooklyn Institute Museum).

KNIGHT, SARAH KEMBLE (1666-1727). A preacher and traveler, born in Boston, the daughter of Thomas Kemble, a merchant. Having been left a widow, in middle life she opened a school which gained some reputation in Boston and included among its pupils Benjamin Franklin. Before opening this school, Madame Knight,

as she was generally called, took a journey in 1704 on horseback from Boston to New York—for those days an unparalleled feat for a woman. She recounted her experiences in the "journals" which have made her known to students of Colonial literature and history. The discomforts of primitive traveling are described with much sprightliness and not a little humor. The writer's personality emerges also as that of a modern American woman in embryo. Little is known of her later life. She seems to have removed to Norwalk, Conn., and there to have got into trouble for selling liquors to the Indians—an offense which she herself charged to her maid. The small diary of her Boston to New York journey was first edited in 1825 by Theodore Dwight. Forty years later it was reprinted with additional biographical information, and there is a recent edition (Norwich, Conn.). Consult M. C. Tyler, *History of American Literature*, vol. ii (New York, 1897-99).

KNIGHT, THOMAS ANDREW (1759-1838). An English horticulturist, born near Ludlow, in Shropshire. He was educated at Balliol College, Oxford, and subsequently devoted himself to researches in vegetable and animal physiology. In 1795 he published his views on the transmission of diseases among fruit trees, which attracted much attention. In addition to many papers he published a *Treatise on the Culture of the Apple and Pear*, and on the *Manufacture of Cider and Perry* (1797), a work which passed through several editions. The catalogue of "British Works on Gardening" in London's Encyclopædia of the year 1824 contains a list of 116 treatises or papers on various subjects connected with theoretic or practical horticulture which are attributed to this writer. Many of his papers, with a biographical memoir, were published posthumously under the editorship of Bentham and Lindley, as *A Selection from the Physiological and Horticultural Papers Published in the Transactions of the Royal and Horticultural Societies by the Late Thomas Andrew Knight* (1841).

KNIGHT, WILLIAM ANGUS (1836-1916). A British writer. He was born at Modrington, Scotland, and was educated at the University of Edinburgh. From 1876 to 1902 he was professor of moral philosophy in the University of St. Andrews. In the field of philosophy his work, editorial and other, includes his collection of *Philosophical Classics for English Readers* (15 vols., 1880-90), for which he wrote: *Hume* (1886); *Essays in Philosophy, Old and New* (1890); *The Philosophy of the Beautiful* (2 vols., 1891-93); *The Christian Ethic* (1894); *Aspects of Theism* (1894). He is probably best known, however, for his works on Wordsworth. Besides his edition of *Wordsworth's Works and Life* (11 vols., 1881-89) and *The Transactions of the Wordsworth Society* (1880-86), mention should be made of his *Selections from Wordsworth* (1889); *Wordsworthiana* (1889); *Through the Wordsworth Country* (1892); *Wordsworth's Prose* (1893); *The English Lake District, as Interpreted in the Poems of Wordsworth* (1878-91); *The Works of William Wordsworth and Dorothy Wordsworth* (12 vols., 1896-97). He presented to the trustees of Dove Cottage, Grasmere, the poet's former home, all the editions of Wordsworth's poems which he possessed. His later works are: *Dove Cottage from 1800 to 1900* (1900); *Lord Monboddo and Some of his Contemporaries* (1900); *Inter Amicos* (1901);

Pro Patria et Regina (1901); *Retrospects* (1903); *The Poets on Christmas* (1906); *Things New and Old* (1909); *The Golden Wisdom of the Apocrypha* (1910); *The Glamour of Oxford* (1911); *The Browning Centenary* (1912); *An Eastern Anthology* (1912); *Coleridge and Wordsworth in the West Country: Their Friendship, Work, and Surroundings* (1914).

KNIGHTHOOD. See **KNIGHT**.

KNIGHT OF LA MANCHA. Don Quixote, the hero of Cervantes' novel of that name.

KNIGHT OF THE CHARRETTE. See **CHARRETTE, KNIGHT OF THE**.

KNIGHT OF THE SWAN. See **SWAN, KNIGHT OF THE, CHEVALIER AU CYGNE**.

KNIGHTS, THE. See **ARISTOPHANES**.

KNIGHTS AND LADIES OF HONOR.

A fraternal society organized in Kentucky in 1877 for social and beneficial purposes. Men and women are admitted to membership on equal terms. The central authority is the supreme lodge, and the chief officer has the title of supreme protector. The order had in 1914 15 grand lodges and 1230 subordinate lodges, representing a total membership of 70,000. Since its organization it has dispensed benefits to the beneficiaries of deceased members amounting to over \$34,000,000.

KNIGHTS ERRANT. Wandering knights, who, after the definite object offered by the Crusades had been removed, traveled through France and Spain in search of adventure.

KNIGHTS OF CHRIST IN PORTUGAL, ORDER OF. See **CHRIST, ORDER OF KNIGHTS OF, IN PORTUGAL**.

KNIGHTS OF COLUMBUS. A Roman Catholic fraternal benevolent society, founded in New Haven, Conn., in February, 1882, to render pecuniary aid to its members and their beneficiaries, to assist its sick and disabled members, and to promote mutual social and intellectual intercourse. It is governed by a supreme council, the members of which are elected by the various State councils. On July 1, 1914, there were 326,858 members, of whom 106,281 were insured with benefit certificates in force at that date amounting to \$112,286,750. The death claims paid during the fiscal year ending June 30, 1914, amounted to \$723,475, and from the beginning of the organization up to the latter date all death claims paid totaled \$7,308,682. The supreme headquarters are at New Haven, Conn. The society is thoroughly organized in every State in the United States, in every province in the Dominion of Canada, in Cuba, Porto Rico, Newfoundland, the Philippine Islands, and Alaska.

KNIGHTS OF HONOR. A fraternal benefit society in the United States, organized at Louisville, Ky., June 30, 1873, by the institution of Golden Lodge No. 1 with 17 charter members. Its objects are the social, moral, and intellectual elevation of its members, the establishment of bonds of fellowship between them, and the payment of death benefits to the widows and orphans of deceased members. It is incorporated under the laws of the State of Missouri, with headquarters at St. Louis. The supreme lodge is the executive head of the order and is composed of the officers and of representatives from the various grand lodges. The grand lodges are composed of representatives from subordinate lodges, are governed by officers elected by the representatives, and they control the subordinate lodges in accordance with the laws of the

supreme lodge. The order has paid to beneficiaries since its organization about \$100,000,000. The benefits disbursed during the year ending in 1913 amounted to \$1,203,875. There were in existence, in 1914, 30 grand lodges and 1031 subordinate lodges, representing a membership of about 17,000.

KNIGHTS OF LABOR. A national labor organization in the United States, formed in December, 1869, by leaders of a dissolved local union of garment cutters in Philadelphia. Until 1882 the name and purpose of the order were kept secret, its only official representation being a line of five stars. This secrecy was instituted on the ground of the dislike of employers to organized labor and on the alleged ground that open associations of workmen had hitherto proved failures. Admittance to the order was granted to all persons over 16, except liquor dealers, gamblers, bankers, and lawyers. The government of the Knights of Labor is vested in local assemblies, district assemblies, national trade assemblies, State assemblies, and a general assembly. The administrative power is given to a general master workman, a general worthy foreman, a general secretary treasurer, and a general executive board, consisting of the master workman, the worthy foreman, and three other members. Until 1886, when the order became involved in the Missouri Pacific strike, the membership increased, at first slowly and then rapidly, until it numbered, as was claimed, over 700,000. Thereafter, split by internal dissension and weakened by failing strikes, the membership and influence declined. In 1914 it had less than 100,000 members. The political platform adopted by the Knights of Labor advocated the unlimited coinage of silver, compulsory arbitration, equal rights for both sexes, the ownership by the government of telegraphs, telephones, and railroads, and the common ownership of land. Coöperative enterprises, such as joint partnerships and mutual-benefit funds, were started by the order. The order formerly published the *Journal of United Labor* as its official organ. Consult: Ely, *The Labor Movement in America* (New York, 1886); *The Quarterly Journal of Economics*, vol. i (Boston, 1887); William Kirk, *Knights of Labor and the American Federation of Labor* (New York, 1906). See LABOR, AMERICAN FEDERATION OF; LABOR ORGANIZATIONS; TRADE UNIONS.

KNIGHTS OF MALTA. See SAINT JOHN OF JERUSALEM, KNIGHTS OF.

KNIGHTS OF THE GOLDEN CIRCLE. In American history, a secret society whose object was to bring the Civil War to a close and restore the "Union as it was." Its strength lay chiefly in Ohio, Indiana, and Illinois. There are those who trace the movement to an organization of the same name which existed before the Civil War, composed of Democrats whose purpose was to further the interests of the South by securing an extension of the area devoted to slavery. Each castle, or lodge, of the order was said to be divided into an outer and an inner temple, and only those persons were admitted who were known to be thoroughly "sound on the nigger." In the presidential campaign of 1860 the Knights took an active part in bringing about the disruption of the Democratic party over the question of slavery. In the latter part of 1860 castles were established in some of the States north of the Ohio River, and the order spread so rapidly that in May, 1862, a United

States grand jury estimated that there were 40,000 members in Indiana alone. In May, 1863, the Knights and other disaffected persons attempted an armed demonstration at Indianapolis, but it resulted in a ridiculous fiasco that was known as the Battle of Pogue's Run. In the fall of 1863, owing to the publicity given to the treasonable purposes of the organization by Gov. O. P. Morton (q.v.), General Carrington, and other Union authorities, who employed spies to ferret out its secrets, the Order of the Knights of the Golden Circle was disbanded and was succeeded by the Order of American Knights, which in the early part of 1864 in turn gave place to the Sons of Liberty. This last-named order had a large membership in Ohio, Kentucky, Indiana, Illinois, and Missouri. Its supreme commander was Clement Vallandigham (q.v.), of Ohio. Its ritual asserted that the Constitution is a compact and denied the right of the national government to coerce a sovereign State. The order consisted of two organizations, one within the other. Those who entered the outer organization were told that the object of the order was to secure the success of the Democratic party at the coming presidential election, the inner organization was a military one, whose aim was to give aid and comfort to the South. Large quantities of arms were purchased, and hand grenades, clockwork machines for setting fire to government property, and Greek fire were manufactured. At Indianapolis 32 boxes labeled "Sunday-school books," but containing arms and ammunition, were seized by the police, and numerous seizures were made elsewhere. In some places, both at this time and previously, the draft was resisted by force of arms, and deserters and escaped prisoners were protected against the United States officers. In Indiana some of the Democratic State officials were members of the order, while others were in sympathy with it. The most important project of the Sons of Liberty was one for an uprising throughout Ohio, Indiana, Illinois, and Missouri, which should free the Confederate prisoners in those States and set up a Northwestern Confederacy. A day was set for the accomplishment of the enterprise, but the attempt was never made. A number of the leaders were arrested, and three (Bowles, Milligan, and Horsey) were condemned to death by a military commission, but after an imprisonment of 18 months were set free by the United States Supreme Court on the ground that the military commission had no jurisdiction. Consult: *An Authentic Exposition of the Knights of the Golden Circle* (Indianapolis, 1861); Holt, "Report on Secret Orders," in McPherson's *History of the Rebellion* (Washington, 1876); Foulke's *Life of Oliver P. Morton* (2 vols., New York, 1898); Rhodes, *History of the United States from the Compromise of 1850*, vol. v (ib., 1904).

KNIGHTS OF THE GOLDEN EAGLE. A fraternal organization, founded in 1873. There were, in 1914, 14 grand castles, 6 grand temples, 727 castles, and 318 temples. The members numbered about 83,000. The order has disbursed since its organization about \$6,000,000 and during the fiscal year 1913 had disbursed benefit amounting to about \$325,000.

KNIGHTS OF THE HOLY SEPULCHRE. See HOLY SEPULCHRE, KNIGHTS OF THE.

KNIGHTS OF THE MACCABEES. See MACCABEES, KNIGHTS OF THE.

KNIGHTS OF THE SHIRE, or KNIGHTS

OF PARLIAMENT. Knights formerly chosen by the freeholders of every county to represent the county in Parliament and originally inhabitants of the places for which they were chosen.

KNIGHT'S SERVICE. See KNIGHT.

KNIGHT'S TALE. One of the poems composing Chaucer's *Canterbury Tales* and containing the story of Palamon and Arcite (q.v.).

KNIGHTS' TEMPLARS. See TEMPLARS.

KNIGHTSTOWN. A town in Henry Co., Ind., 34 miles east of Indianapolis, on the Blue River and on the Pittsburgh, Cincinnati, Chicago, and St. Louis and the Cleveland, Cincinnati, Chicago, and St. Louis railroads (Map: Indiana, F 5). The State Soldiers and Sailors Orphans Home is a short distance south of the town, and there is a Carnegie library here. Knightstown has good water power and natural gas. There are flour mills, saw and planing mills, two large poultry-packing establishments, automobile works, machine shops, a wire-fence factory, a buggy factory, etc. The water works and electric-light and power plant are owned by the municipality. Pop., 1900, 1942; 1910, 2008.

KNIK. See IDITAROD.

KNILLE, knil'le, OTTO (1832-98). A German historical painter, born at Osnabrück. He studied at the Düsseldorf Academy under Karl Sohn, Hildebrandt, and Schadow, then in Paris under Couture, spent four years in Munich (1854-58), where he painted "The Moors Frightened by the Dead Body of the Cid" (1858, Hanover Museum), and after a stay of three years in Italy settled in Berlin. In 1865 he executed mural paintings in the castle of Marienburg, near Hildesheim, representing scenes from the legendary lore of Thuringia, and in 1873-84 decorated the staircase of the University Library in Berlin with four frieze paintings, personating in animated groups of famous men "Education in Antiquity," "Scholastic Science," "The Humanists and Reformers," and "The New Classics of Germany." For this meritorious work he was awarded the great gold medal at the Berlin Exhibition in 1886. Among his other works the brilliant "Tannhäuser and Venus" (1873) and "Disputation of Professors of the Sorbonne before St. Louis," both in the National Gallery, Berlin, commend themselves to special attention. He was also known as an illustrator and wrote *Grubeleuten eines Malers über seine Kunst* (1887) and *Wollen und Können in der Malerei* (1897). In 1874 he was appointed professor at the Berlin Academy. He became a member of the Academy in 1880.

KNIPOVITCH, k'ni-pó'vich, NIKOLAI MIKHAILOVITCH (1862-). A Russian zoölogist and hydrographer. He was born at Sveaborg and was educated at St. Petersburg University. In 1892 he was appointed junior zoölogist at the Imperial Museum of Natural History (senior zoölogist, 1900), in 1895 he made important biological and hydrographical studies in the northwestern region of the White Sea, and two years later he organized an expedition to explore the shores of Lake Morat. He was the Russian delegate to the International Hydrographic Commission after 1901, a member of the International Polar Commission, department editor of the Russian *Encyclopedic Dictionary* for many years, and professor of physiological chemistry at a Polish women's medical institute. His published works include: *The State of the Maritime, Fishing, and Animal Industries of Archangel* (1895); *An Account of the Navigation of*

the Arctic Ocean (1896); *Scientific-Commercial Studies of the Lake Morat Region* (1897-99); *Zoologische Ergebnisse der russisch Expedition nach Spitzbergen* (1901), *Oceanography of the European Arctic Ocean* (1905).

KNIPPERDOLLINCK, kníp'pér-dól'lipk, BERNARD (?-1536). A leader of the Anabaptists of the sixteenth century. He was born in Münster, of a prominent family, became a merchant, embraced the Reformation, and joined the Anabaptists in 1527. He was elected burgo-master of Münster in 1534 and upheld John of Leyden (q.v.) in his excesses. In the kingdom John set up he was Vice Regent. Consequently involved in the ruin that befell John, he was tortured and killed Jan. 23, 1536. See ANABAPTISTS.

KNITCHANIN, kné'chá-nén', STEPHAN PETROKNITCH (1807-55). A Servian general, born at Knitch. He was a merchant and early gained great political influence with Prince Miloš, who promoted him in 1839 to the head of the Provincial Government of Semendria. When his patron fell, Knitchanin was exiled, but two years later (1842) he returned, on the invitation of Prince Alexander Karageorgievitch and became Councilor of State. He held command in the war with Hungary (1848) at the head of a Servian army of volunteers, but was unsuccessful and had to retreat, and in 1849 was recalled to Servia, where in 1854 Prince Alexander made him Minister of War and head of the Council.

KNITTING (from the verb *knit*, AS. *cnyttan*, Ger. *knutten*). The art of building up a solid fabric from yarn by looping with knitting needles or by machinery modeled on the knitting-needle process. *Crocheting* resembles knitting, except that it is executed with the crochet hook. *Netting* is a more ancient art. (See NETS.) In *braiding*, the threads or braids, all longitudinal, are twisted diagonally over and under one another. *Weaving* is more formal than any of these processes, having two complete sets of threads that intersect at right angles to each other, except in lace and leno weaves. The qualities that distinguish *knit goods* are their superior elasticity, that makes them fit irregular shapes snugly, and their porousness, that makes them particularly suitable for use as underwear.

Hand Knitting. In knitting by hand the yarn is formed on a knitting needle in a row of loops, through each of which a second row of loops is successively passed by means of a second needle, which then adds a third row to the second row, and so on till the fabric is completed. The needles used are of steel, wood, bone, or rubber. Those of steel are usually slender and pointed at each end, while those of other materials are thicker, and pointed at one end with a round knob at the other. Technical terms of hand knitting are: To *cast on* is to make the first row of loops. To *cast off* is to knit two stitches and then pass the first over the second, securing the last stitch by drawing the yarn through it. A *purl, seam*, or *rib* is formed by bringing the yarn in front of the needle. To *slip a stitch* is to take it off the needle without either knitting or purling.

Hand Machine. The first knitting machine was invented in 1589 by the Rev William Lee (q.v.), of Nottinghamshire, and by the middle of the eighteenth century had become so widely used as to be an important feeder of British commerce. It was a very simple affair, modeled

after the process whose work it attempted to reproduce; but its complicated modern successor depends for its efficiency on the same essential principle.

In Lee's stocking frame, instead of one needle to hold the stationary loop while those of the moving row are being inserted, there are as many needles as there are to be loops in the breadth of the web, and these are so made as to form and give off the loops alternately. Each needle terminates in a hook or small indentation. The other end of the needle is fixed into a casting formed to fit into a frame and be securely fastened, side by side with the rest of the needles. Between the needles are placed thin plates, called *sinkers*, in two rows, in one row the sinkers move freely on an axis, in the other they are all fixed to a bar and move with it. The object of the loose ones, or *jack sinkers*, is to make loops by pressing the thread down beneath the needles. The other row on the bar, or *lead sinkers*, is brought down so as to press simultaneously on the hooks of the needles and press their points down into the little depression so that they will pass through the loops without catching one way, and take them up when opened and drawn in the contrary direction. The great ingenuity of Lee's invention lies in this arrangement for closing the hook in the needle so that one loop can be drawn through another.

Like many inventors, Lee failed to profit largely by his genius, although, in the expectation of realizing a fortune, he resigned his activities as clergyman, giving up his living at Calverton that paid him £40 a year. His own freehold enabled him to meet the cost of experiments. In the portrait, now lost but copied in the arms of the London Framework Knitters Company, he appears in the gown and cap of a master of arts, pointing to a hose on his stocking frame; while on the other side a female is showing her empty and therefore useless knitting pins. The original painting was inscribed: "In the year 1589, the ingenious William Lee, M.A. of St. John's College, Cambridge, devised the profitable art for stockings (but being despised went to France), yet of iron to himself, but to us and to others of good; in memory of which this is painted."

Accompanied by his brother James, who had helped him much in the construction of the machine, and who was always his most skillful operator, Lee took the frame to London in the hope of winning the patronage of the sovereign. Queen Elizabeth's kinsman Hunsdon thought it was a miraculous invention and brought her to see it at Lee's lodgings in Bunhill Row. She expressed her approval of its ingenious construction, but was disappointed because the product was a coarse worsted stocking instead of fine silk hose. Lord Hunsdon begged her to give Lee a patent for its use, but she refused. In order to please the Queen Lee constructed a frame, with 20 needles to the inch instead of the previous eight, on which in 1598 was made a pair of silk stockings, which the Queen was gracious enough to accept and praise, but that was all. After her death, not receiving any encouragement from King James or the English court, Lee accepted the invitation of Sully, Ambassador of Henry IV, to transfer himself and his invention to France. He settled in Rouen, with James Lee and eight other operators and eight frames, and "wrought there with great applause." But his expectations of a special patent were ended

by the assassination of the French King, and he died, a disappointed man, in 1610.

On his death his brother James and six workmen with seven of the machines returned to London, the other two workmen with the machine continuing to work at Rouen. Before long the London Framework Knitters Company was formed for regulating wages and production and in 1657 was incorporated by Cromwell. By 1695 there were 1500 machines active in and near London. The first stockings of cotton yarn were made in 1730.

No important improvement was made in Lee's machine until 1758, when Jedediah Strutt added a second series of needles, by the use of which it became possible to produce ribbed fabrics. In 1816 Marc L. Brunel invented a circular machine that produced a tubular web instead of the previous flat one.

Power Machine. Power was first applied to the knitting machine by Bailey in 1831. The machinery used in power knitting is noteworthy. While the spindle is necessary in the preparation of yarn for either weaving or knitting, there is no comparison between the simplicity of looms—even such looms as work on the most elaborate fabrics—and the complexity of knitting machines. In the weaving industry only one loom is required to produce a particular fabric. In statements of the capacity of knitting mills it would be clearer to specify, not the number of machines, but the number of *sets of machines*, since as many as five are often required in the production of a single garment. Furthermore, the work of every three knitting machines has to be supplemented by that of a sewing machine. Then, too, improvements in knitting machinery are frequent and important, and machines but little worn often have to be replaced by newer inventions. Unfortunately the patents on knitting machinery are in a confused state, and some manufacturers operate their new machines secretly, without taking out patents, in order to avoid infringement by rivals.

The latch needle was first patented in France in 1806 by Jandeau, and a modification of it in the United States in 1863 by Hibbert. In the latch-needle machine a hinged latch folds back on the needle so that the hook may take up the thread, and then closes down over the hook so that it may pass the hoop through the preceding loop. The movement of the latch is regulated by the movement of the yarn as it passes through.

On account of their greater speed and capacity circular machines have largely superseded all others. In these machines "a circular series of vertical parallel needles slide in grooves in a cylinder and are raised and lowered successively by an external rotating cylinder, that has on the inner side cams acting on the needles." In 1900 the total number of knitting machines in the United States was 115,019, over 96 per cent of which were power machines and 81 per cent circular and circular-hosiery machines. Of the total, 15 per cent were spring-beard-needle machines, and 85 per cent latch-needle machines. The remarkable increase in popularity of all kinds of knitted fabrics—"hosiery and knit goods," as they are termed popularly and in the census reports—including underwear, sweaters and cardigan jackets, gloves and mittens, hoods, scarfs and nubbies, shawls, leggings and gaiters, fancy knit goods, wristers, jerseys and tights,

stockings, and astrakhan fabrics, is shown not only by the number of machines invented to produce them (over 3000), but also by the enormous increase in production. In 1849 there were only 49 establishments in the United States, with an annual product of \$1,028,102. During the next decade the annual product increased 700 per cent, and in succeeding decades 61, 128, 42, 43, 46, and 108 per cent respectively. In 1909 the number of factories producing-knit goods was 1374, with an annual product valued at \$200,143,527. In 1869 the number of knitting machines reported was 5625; 69,047 in 1889; 88,374 in 1904; 115,019 in 1909. In the early days of the industry in the United States wool was used almost exclusively. But in 1909 the value of the cotton yarn purchased was \$48,165,749; of woolen yarn, \$3,834,094; of worsted, \$10,116,325; of merino (cotton mixed), \$2,667,051; of silk, \$3,606,599; of linen, jute and other, \$180,818. This serves as a fair basis of comparison, as most of the mills buy their yarn instead of spinning it for themselves, the amount of cotton purchased in the form of yarn being three times that purchased unspun. Among the States New York leads, with a production of knit goods in 1909 of \$67,130,296; Pennsylvania being second, with \$49,657,506; Massachusetts, third, with \$14,736,025.

Bibliography. William Felkin, *Hosiery and Lace*, in Bevan's series of books entitled "British Manufacturing Industries" (London, 1876); M. A. Metcalf, *Knitting* (Chicago, 1909), with a wealth of illustrations and text describing power-machine knitting in all its forms, Quilter and Chamberlain, *Framework Knitting and Hosiery Manufacture* (Leicester, England, 1911); Ernest Tompkins, *The Science of Knitting* (New York, 1914).

KNOBEL, knô'bel, KARL AUGUST (1807-63). A German Old Testament scholar. He was born near Sorau in Silesia and was educated there and at Breslau. In 1831 he became docent and four years later professor extraordinary of theology at Breslau, and in 1839 became professor at Giessen, where he spent the remainder of his life. His greatest service was the preparation of the commentaries upon the books of Ecclesiastes (1836), Isaiah (1843; 3d ed., 1861), Genesis (1852; 2d ed., 1860), Exodus and Leviticus (1857), and Numbers, Deuteronomy, and Joshua (1861), in the series known as *Kurzgefasstes exegetisches Handbuch zum alten Testament*, edited by Hirzel. The commentaries upon Isaiah and the books of the Pentateuch were rewritten by August Dillmann (q.v.).

KNOBELSDORFF, knô'bels-dôrf, GEORG WENZESLAUS VON (1807-1753). A German architect, born at Kuckschüdel, near Krossen. He served in the army for some years, but retired to study architecture and to travel in Italy and France. He was appointed director of royal buildings in Prussia by Frederick II, who, when Crown Prince, had been his patron. His best-known works are the Berlin Opera House, the Sans Souci Palace at Potsdam, and the extension of the palace at Charlottenburg, all in the classic style. He also laid out part of the town, and the park at Potsdam, and the Thiergarten in Berlin.

KNOBELSDORFF-BRENKENHOFF, brêp'eu-hôf, NATALY VON (1860-). A German novelist, known under her maiden name, Nataly von Eschstruth, born at Hofgeismar, Hesse-Cassel, the daughter of an officer, and

educated at Berlin. She traveled widely, in 1890 married Capt. Franz Knobelsdorff-Brenkenhoff, and later settled for a time at Schwerin. She began early to write plays, e.g., *In des Königs Rook* (1882). Among her novels, which are popular but not very deep, may be mentioned: *Wolfsburg* (1885); *Gänselesee, eine Hofgeschichte* (1886; 5th ed., 1891); *Polnisch Blut* (1887; 4th ed., 1894); *Hofluft* (1889; 5th ed., 1894); *Sternschnuppen* (1890); *Von Gottes Gnaden* (1895); *Jung gefreit* (1897); *Der Majoratsherr* (1898); *Aus vollem Leben* (1900); *Sonnenfunken* (1901); *Der verlorene Sohn* (1902); *Jedem das Seine* (1903); *Frieden* (1905); *Die Roggenmuhme* (1910); *Væ Victis* (1911). Of some little dramas, *Karl Augusts Brautfahrt* and *Die Sturmsee* (3d ed., 1888) were performed. In 1887 appeared a volume of her poems under the title *Wegekraut*, and in 1899 the publication of an edition of her collected works was begun.

KNOBKERRIE, nób'kêr'i. A short knobbed club, used by the Zulu and other South African tribes, mainly as a missile against smaller animals and birds, which are often brought down on the wing with marvelous dexterity. It was also employed as a weapon, e.g., in hand-to-hand encounters. Similar missile clubs occur in Fiji.

KNOBLAUCH, knôp'louk, EDWARD (1874-). An American dramatist, born in New York City. He graduated from Harvard University in 1896, studied the drama in Paris for a year, and then settled in London as a playwright. In *The Partikler Pet*, an adaptation from the French, Cyril Maude starred in 1905, and in 1906 Lena Ashwell played Deborah in his play *The Shulamite*. In 1910 *The Cottage in the Air* was given in New York City. The season of 1911 was marked by his two successes, *The Faun* in America and *Kismet* in London and later in the United States. He collaborated with Arnold Bennett on *Milestones* (1912) and with Wilfred T. Coleby on *The Headmaster* (1913). His play *My Lady's Dress* was produced in New York in 1914 and *Marie-Odile* in 1915.

KNOBLAUCH, HERMANN (1820-95). A German physicist, born in Berlin. Having finished his studies, he became privatdocent at the University of Berlin, then professor at Marburg (1849), and in 1854 was appointed professor at the University of Halle. In 1878 he was appointed president of the Leopoldinisch-Karolinische Akademie at Halle. He retired in 1895. His publications, which are to be found mostly in the *Monateschriften* of the Berlin Academy and in the *Abhandlungen der naturforschenden Gesellschaft zu Halle*, treat especially of radiation of heat. His experiments verified and extended Mellani's work on radiant energy. He was one of the first who demonstrated that the warmth we experience when we stand before a fire reaches us in the same way as the rays of the sun, i.e., by radiation, without affecting the temperature of the vacuum or the intervening material medium through which the heat is transmitted.

KNOCKE, knô'ke, WALTER ALFRED (1881-). A German meteorologist, born in Berlin and educated at the universities of Geneva and Berlin. In 1906 he became an assistant in the Royal Prussian Meteorological Institute and in 1907 first assistant in the public weather service. In 1908 he studied the climate of the Bolivian plateaus and in 1910 undertook the work

which made him famous, the direction of the Central Meteorological Institute of Chile. He brought out three important publications of this institute: *Observaciones en la Mina Aguila 5200*, *Observaciones de provincias* (1910), and *Anuario meteorológico de Chile* (1911).

KNOCKE, knók'e. A seaside resort in Belgium, 9 miles north of Bruges, with a population of 1363 (1910). It has a monument erected to the celebrated animal painter, Alfred Verwee. During the European War of 1914 Knocke was occupied by the Germans and used as a base for advances on Nieuport (q.v.) and Calais. It was heavily bombarded by a British fleet, which destroyed the greater part of the town and a German military base. See WAR IN EUROPE.

KNOCK-KNEE, or **IN-KNEE**. A deformity consisting of such inclination inward of both knees that they are in contact when the person is walking or in a position for walking. There is naturally a slight inclination towards each other of both knees, which is accentuated in the adult female because of the width of the female pelvis; but the legs remain perpendicular in spite of the line of the thighs. In knock-knee the tibiae incline outward, and the feet are separated when standing or walking. The deformity is due to weakness and is usually a development of childhood. It may be caused by rickets (q.v.) or by an injury, or may be secondary to a deformity of the hip joint or ankle joint. It may be followed by a clubfoot (q.v.) of the variety *valgus* or by flat foot. The treatment includes massage and straightening, practicing walking with the feet parallel, and correction with braces. Immediate correction may be secured by operative treatment, either osteotomy (cutting the thigh bone) or osteoclasia (breaking the thigh bone), and putting the joint for a time in a plaster splint. See LEG.

KNOLLES, nölz, **RICHARD** (c.1550-1610). An English historian of the Turks, born probably at Cold Ashby, Northamptonshire. After graduating at Lincoln College, Oxford (1565), he became a fellow there and then head master of the grammar school, Sandwich, Kent, for the remainder of his life. His *Generall Historie of the Turkes from the First Beginning of that Nation* (1604) was reprinted half a dozen times before the end of the century and issued in an abridged form in two volumes in 1701. Dr. Johnson gave high praise to the clearness and purity of its elaborately arranged English, while both Byron and Southey owned Knolles a master of prose composition.

KNOLLYS, nölz, **SIR FRANCIS** (c.1514-96). An English statesman. He was a gentleman pensioner at the court of Henry VIII, and entered Parliament for Horsham in 1542. His aggressive Puritanism rendered the Continent safer for him than England during Queen Mary's reign, but Elizabeth called him to her Privy Council (1558), making him also vice chamberlain of her household and captain of halberdiers, while Lady Knollys, who was the Queen's first cousin, became a woman of the privy chamber. He was made Governor of Portsmouth in 1563, was sent on diplomatic service in Ireland in 1566, and from 1572 until his death was treasurer of the royal household. He was elected to Parliament from Arundel in 1559, from Oxford in 1562, and from Oxfordshire in 1572. The most interesting part of Knollys's career relates to his association with Mary, Queen of Scots, whose custodian he was at Carlisle Castle

(1568) and afterward at Bolton. He conscientiously strove to make a Protestant of her and as conscientiously warned Elizabeth against holding her in prison without a trial, but finally voted for her speedy execution (1587). The following year he took command of the Hertfordshire and Cambridgeshire troops assembled to oppose a landing of Spaniards from the Armada. He was knighted three years before his death. His letters are of more historical importance than his parliamentary speeches or his religious tracts.

KNOLLYS, HANSEED (c.1599-1691). An English Baptist clergyman. He was born at Cawwell, Lincolnshire, was educated at Cambridge, and was compelled to flee to the American Colonies, where his vigorous attacks on infant baptism speedily involved him in controversy with the authorities. Cotton Mather nicknamed him Mr. Absurd Knowless, although he mentioned him as "godly Ana-baptist." He preached at Dover, N. H., 1638-41, and in the latter year, after a brief stay on Long Island, he returned to London, where, though frequently in trouble with the authorities, he was popular as a preacher. He published several works on theological subjects, and a Hebrew grammar, and left an autobiography, edited by Kiffin (1692). The Hanserd Knollys Society, founded in London in 1845 for the publication of early Baptist writings, issued 10 volumes and then disbanded.

KNOLLYS, or **KNOLLES**, **SIR ROBERT** (c.1317-1407). An English soldier, born in Cheshire. His deserved reputation as a famous fighter was first acquired in Brittany, where he was remarked at the siege of La Roche d'Orient (1346), and he was one of the knights in the Combat of the Thirty in March, 1351, when he was taken prisoner. On his speedy release he took command of a body of freebooters, was custodian to certain Breton castles, and made marauding expeditions into Normandy with Henry of Lancaster (1356-57). As leader of the Great Company, he plundered 40 castles in the valley of the Loire, pillaged Auxerre in 1359, supported John de Montfort at the siege of Auray in 1364, and went with the Black Prince to Spain in 1367, but was recalled in 1370 to England, whose King, Edward III, was planning an invasion of France. Knollys was given charge of the expedition, which, with Calais as a starting point, laid waste the country as far as Rheims and to the environs of Paris itself, but it was unsuccessful in drawing the French into a battle, though they were deterred from invading Wales. Knollys returned to England in time to take the leadership in London at the suppression of the Wat Tyler rebellion, and for this he was given the freedom of the city. Part of the great wealth he had acquired through his raids he spent in endowing colleges and hospitals and in rebuilding churches after his retirement to England.

KNOORHAAN, knör'hän (Dutch *gurnet*, lit., gristle cock). In South Africa, a bustard (q.v.).

KNOFF, nöpf, **S(TEGMUND) ADOLPHUS** (1867-). An American specialist in tuberculosis, born at Halle-on-the-Saale, Germany. He graduated from Bellevue Hospital Medical College (New York University) in 1888 and from the Sorbonne (A.B.) in 1890. He became visiting physician of the New York Health Department's Riverside Sanatorium for Consumptives and director of the National Association for the Study

and Prevention of Tuberculosis. In 1908 he accepted the professorship of medicine in the department of phthisiotherapy in the New York Post-Graduate Hospital and Medical School. His most important work is his prize essay, *Die Tuberkulose als Volks Krankheit und deren Bekämpfung*, published in 1900 by the committee of the International Tuberculosis Congress. It appeared eventually in 27 languages and was translated into English by Dr. Knopf under the title *Tuberculosis as a Disease of the Masses and how to Fight it* (1901; 8th ed., 1911). He published also *Tuberculosis a Preventable and Curable Disease* (1909).

KNORR, knör, IVAN (1853-). A German composer, born at Mewe (West Prussia). When four years old, he was taken by his parents to Russia, where he lived for 11 years and became thoroughly imbued with the spirit of Russian folk music. When in 1868 his parents settled in Leipzig, he entered the conservatory, studying under Moscheles, Richter, and Reinecke. From 1874 to 1883 he taught theory at the conservatory in Charkov, Russia. Upon the recommendation of Brahms he was in 1883 called to the Hoch Conservatory in Frankfort, succeeding B. Scholz as director of that institution in 1908. His long residence in Russia strongly influenced his music, which has a decidedly Slavic character. He wrote three operas, *Dunja* (1904), *Die Hochzeit* (1907), *Durchs Fenster* (1908); a symphonic phantasy; two orchestral suites; orchestral variations on a folk song from the Ukraine; Ukrainische Liebeslieder; chamber music.

KNORR, LUDWIG (1859-). A German chemist. Born at Munich, he studied there, at Heidelberg, and at Erlangen, and was appointed professor at Würzburg in 1888 and in 1889 professor and director of the laboratories at Jena. He became best known for his work in organic synthesis, especially for his discovery of the pyrazol compounds, of which antipyrine is most commonly used. He also contributed extensively to the chemistry of the alkaloids.

KNORTZ, knörts, KARL (1841-). A German-American author and educator, born at Wetzlar, Prussia, where he studied at the Royal Gymnasium. He took his Ph.D. at Heidelberg in 1863 and came the same year to the United States. He taught at Detroit, Oshkosh, Wis., and Cincinnati, and from 1892 to 1905 was superintendent of the German department in the public schools of Evansville, Ind. He then removed to North Tarrytown, N. Y., where he devoted his time to comparative literature and folklore. He translated into German poems of Whittier, . . . and Walt Whitman, and published *Geschichte der nordamerikanischen Litteratur* (1891). Besides literary essays and works upon child education, he wrote. *Marchen und Sagen der nordamerikanischen Indianer* (1871); *Amerikanische Skizzen* (1876); *Modern American Lyrics* (1880), *Aus dem Wigwam* (1880); *Kapital und Arbeit in Amerika* (1881); *Amerikanische Lebensbilder* (1884). Among his other works may be mentioned: *Gedichte*, of which a volume appeared in Reclam's *Universalsbibliothek*; *Representative German Poems* (1885; 2d ed., 1889); *Ein amerikanischer Diogenes* (Thoreau) (1898); *Poetischer Hausschatz der Nordamerikaner* (1902); *Nacktklänge germanischer Glaubens und Brauchs in Amerika* (1903); *Streifzüge auf dem Gebiete amerikanischer Volkskunde* (1903); *Friedrich Nietzsche*,

der Unzeitgemässe (1909); *Die Insekten in Sage, Brauch, und Literatur* (1910); *Walt Whitman und seine Nachfolger* (1910); *Reptilien und Amphibien in Sitte, Sage, und Literatur* (1911); *Teufel, Heeze, und Blocksbergspuk* (1913); *Die Vogel im Sage, Sitte, und Literatur* (1913).

KNOSOS, or **KNOSUS**. See **CNOSUS**.

KNOT (also *gnat*, dialectic *knat*, *knet*; derived, according to popular etymology, from A.S. *Cnūt*, Canute, who was said to have been very fond of the bird). A cosmopolitan snipe (*Tringa canutus*), 10 or 11 inches long, and more than 20 across the wings. The upper parts are black, white, and rufous; in summer the underparts are rufous, while in winter they are white. The breeding habits are almost unknown, and until 1901 the eggs were known only from a single, not very well authenticated, specimen collected by Gen. A. W. Greely, U. S. A. In the year mentioned Dr. Walter, a Russian surgeon, on the exploring vessel *Sarya*, found the knot breeding on the Taimyr Peninsula on the northern coast of Siberia. The nuptial flight was elaborate, the bird circling high in air, now with vibrating, now with motionless wings, uttering a loud, varied whistle. The nests were on the grassy tundra, in shallow depressions. The eggs are usually four in number and vary considerably in form and coloration. The ground color is pale green or yellowish white, marked, more or less densely, with spots of yellowish brown. Knots are generally found in flocks, feeding on small crustaceans and mollusks, and probing the ground like snipes. In summer the knot is to be found only in the Far North, where it seems to be circumpolar, but in winter it migrates far to the south in all directions from its summer home, so that it is found along the shores of all the continents. It is a favorite shore bird with gunners, who know it as robin snipe and gray snipe, and its flesh is delicious.

KNOT, GORDIAN. See **GORDIAN KNOT**.

KNOTE, knö'te, HEINRICH (1870-). A German dramatic tenor, born in Munich. Upon the completion of his studies with Kirchner at Munster, he became (1892) a member of the Munich Court Opera, where he won his great reputation, and where he has remained, with frequent leaves of absence to fill guest engagements. In 1903 he sang at the Metropolitan Opera House and proved one of the most powerful drawing cards, though appearing there at the same time as Caruso. Critics compared his interpretations with those of De Reszke (q.v.). He is unsurpassed in his delineations of Wagner's heroes. He was heard again, with undiminished success, during several subsequent seasons.

KNOT'GRASS. A trailing weed. See **POLY-GONACEÆ**.

KNOTHORN. Any one of the large assemblage of moths included in the family Phycitidæ. The name is derived from the fact that the males frequently have the last joint of the antennæ swollen. The Phycitidæ are usually sombre-colored little moths with rather narrow fore wings and broad hind wings. Their larvæ are very diverse in their habits. Some, like the larvæ of *Ephestia*, infest groceries, feeding upon dried figs, or in flour mills upon flour and grain. Others inhabit silken cases on the bark of trees. Still others attack living fruit. One is the cranberry fruit worm (*Mineola vacinii*). Others web leaves together, as the rascal leaf crumpler

(*Mineola indiginella*). Still others, like *Dakrums coccidiocora*, feed upon living scale insects. One member of this group (*Brasira scitula*) preys upon the black scale of the olive and orange in southern Europe and has recently been introduced into California for the purpose of helping fruit growers to destroy injurious scale insects.

KNOTT, not, CARGILL GILSTON (1856-). A British physicist, born in Penicuik, Scotland. He studied at Edinburgh University, where he taught natural philosophy from 1879 to 1883. Then until 1891 he was professor of physics at Tokyo in the Imperial University of Japan. In 1887 he conducted a magnetic survey of Japan. After his return to Scotland he became lecturer on applied mathematics at Edinburgh in 1892 and was Thomson lecturer (on earthquakes) at the United Free Church College of Aberdeen in 1905-06. He made elaborate mathematical studies of earthquakes in Japan and wrote *The Physics of Earthquake Phenomena* (1908). His work on magnetic strains (published in *Transactions of the Royal Society of Edinburgh* for 1882-83, 1889, 1891; supplemented in its *Proceedings* for 1899) won him the Keith prize of the Royal Society and was followed by the important work on the same subject by Nagaoka, Honda, Shimizu, and Terada of Tokyo University. Knott revised Kelland and Tait's *Quaternions* (3d ed., 1904) and wrote a memoir of P. G. Tait (Oxford, 1911).

KNOTT, JAMES PROCTOR (1830-1911). An American lawyer and politician, born in Marion Co., Ky. Admitted to the bar in 1851, he practiced at Memphis, Mo., until 1862. In 1858 he served in the State House of Representatives, from 1859 to 1862 was Attorney-General, and then returned to Kentucky and practiced law at Lebanon. He was a member of Congress (1867-71, 1877-83) and became noted for his humorous speeches, in one of which he referred to Duluth as "the zenith city of the unsalted seas." From 1883 to 1887 he was Governor of Kentucky. He was a delegate to the Constitutional Convention of the State in 1891 and the following year took the chair of civics and economics in Centre College, Danville, Ky., where in 1894 he was appointed law professor and dean of the law faculty. He resigned in 1901.

KNOTTING AND SPLICING. A knot is a loop or combination of loops and turns joining different parts of a rope or parts of two or more ropes. A splice is a more intimate junction of parts than a knot, the *lay* of the rope being opened, and the ends tucked in so that the size and character of the rope at the place where the splice is made are not greatly changed. Knots are of many kinds and have many uses, but their employment elsewhere is insignificant compared with that on board ship, where they have obtained their full development. They owe their importance to the frictional resistance of the rope, which prevents the parts of the rope from slipping and thus untying the knot.

Knots may be divided into two principal types, those which are tied without separating the strands of a rope and those made by opening out the strands. The first type may be divided into: (a) knots made with two ends of the same or of different ropes knotted together; (b) knots made with the end of a rope passed around or knotted about some object; (c) knots made with the end of a rope knotted about itself; (d) seiz-

ings, in which a small rope is tied around a large one. The second type of knots is divided into (a) knots made in the lay of the rope by separating the strands; and (b) splices, in which two parts of a rope, or the ends of a rope, or two ropes, are joined.

The simplest knot is the *overhand* (Fig. 1) its use is chiefly to hold temporarily the end of a rope from slipping away from the man who intends to knot it permanently at the proper time. Overhand knots are also tied in the ends of rope to prevent their slipping through a block or sheave, i.e., unreeving. In its ordinary use it therefore belongs to class b of the first group but it may be made in the ends of a rope passed about a spar, placing it in classes a and c simultaneously. By making a second overhand knot on top of the first, we get the *square* or *reef* knot (Fig. 2), the commonest and most useful knot known. It differs from the *granny* knot (Fig. 3) in the manner of making the second overhand knot on top of the first. The square knot holds firmly and is quite easily untied, as it does not crush down when subjected to strain. The *granny* knot does not hold nearly so well, almost invariably slipping a little and frequently pulling apart; and when it does hold, the parts jam together so tightly that it is untied with great difficulty. The *sheet* or *becket bend* (Fig. 4) is first cousin to a square knot; instead of slipping one end through the bight of the other rope, it is pushed across underneath its own bends. *Car rick bends* (Figs. 5, 6) are not much used, but are occasionally employed in bending two hawsers together. The *blackwall hitch* (Fig. 8) is used to attach quickly a rope to a hook; the *double blackwall* (Fig. 11) is more secure if the rope is stiff or large in proportion to the hook and therefore liable to slip.

The *bowline* (Fig. 12) is a very useful knot. It serves to form a loop in the end of a rope which will not slip or draw down and yet which can be instantly untied; this latter property is due to the fact that it will not jam tightly, and the parts are free to be separated the instant the strain is removed. The *running bowline* (Fig. 13a) is simply a bowline so made that its loop incloses the rope on which it is made. A *bowline on a bight* (Fig. 13b) is made, as its name indicates, on the bight or loop of a rope. In making it the first part of the operation is the same as tying a bowline, but instead of carrying the bight around the parts on which the knot is made, the loop is opened out and slipped over its own parts. The *cat's-paw* (Fig. 9) is used to shorten up the loop of a rope for the purpose of hooking a tackle to it. When neither end of a rope can be reached, and it is desirable to shorten it between two points, the *sheepshank* (Fig. 17) is used. The *figure-of-eight* knot is rarely used except for ornamental work. The *midshipman's hitch* (Fig. 18) is also rarely used. The *marlinespike hitch* (Fig. 19) is very common and is used in passing seizings and the like. It is an easy way to attach temporarily the ends of a rope to a heavier or marlinespike for pulling on it; the spike or heavier may be quickly withdrawn when the pull is finished.

The *studding-sail* (pronounced *stu'n's'l*) *tack bend* (Fig. 7) is used to bend the tack to the sail and for other purposes as a slipping hitch; the *studding-sail halyard bend* (Fig. 20) is used to bend the halyards to the studding-sail yard and to bend other ropes to spars. The *fisherman's bend* (Fig. 21) and the *magnus hitch*

(Fig. 16) have a great variety of uses. The *timber hitch* (Fig. 14b) is used in hoisting timber and similar articles; the *timber and half hitch* (Fig. 15) is used for hoisting or towing heavy timbers. The *two half hitches* form a convenient slipping hitch. The *clove hitch* (Fig. 14c) is one of the most useful knots known and is used more than any other knot except the square knot. The *inside* and *outside clinches* (Figs. 10a, 10b) are used when the end of a rope is to be made fast to a heavy object and yet leave the rope clear to work through a pulley or sheave close up to the object; clinches were much used in bending hawsers and cables to anchors.

Seizings are used to tie two parts of a rope together or to secure a rope to another object. The common forms are shown in the sketches (Figs. 23a, 23b, 23c), but there are modifications of these forms too numerous to mention. The *Turk's-head* (Fig. 24) is a variety of seizing put around a single part of rope; it is used on foot ropes to keep them from slipping through the eyes of the stirrups.

Wall knots, tail and crown, manrope knots, and all the other knots of class *a* of the second type are used to form a solid and more or less ornamental knot in a rope to prevent its slipping through a block, hole, or eye.

Splices are used to join two pieces of rope together or form an eye at the end of a rope. The principal kinds are the *eye-splice* (Figs. 22a, 22b), *short splice* (Figs. 24a, 24b, 24c), and *long splice* (Figs. 25a, 25b, 25c, which are shown progressively). A *selvagee* (Fig. 27) is made of rope yarns laid up loosely and held together with marline hitches. A *grommet* (Fig. 26) is made of a single long strand of rope laid up on itself to form a three-stranded ring. A *cringle* (Fig. 28) is a form of grommet made on a rope. Consult: *Book of Knots: Being a Complete Treatise on the Art of Cordage* (5th ed., London, 1887); P. N. Hasluck (ed.), *Knotting and Splicing Ropes and Cordage* (Philadelphia, 1905); J. M. Jutsum, *Knots, Bends, Splices, Shown in Colours, with Tables of Strengths of Ropes, etc., and Wire Rigging* (3d ed., Glasgow, 1906).

KNOT'WEED', GIANT. See SACHALINE.

KNOUT (Fr. *knout*, from Russ. *knout*, scourge, from Icel. *knutr*, AS. *cnotta*, Eng. *knot*). A scourge composed of many thongs of skin, plaited and interwoven with wire, which was formerly the customary instrument of punishment in Russia for all kinds of criminals. The offender would be tied to two stakes, stripped, and given the specified number of lashes on the back. The number to be administered corresponded to the degree of crime. Thus, 100 or 120 were equivalent to a death sentence. So severe was this mode of punishment that the most hardened criminals rarely survived the ordeal, the victim commonly dying long before the full count would be reached. The nobility were exempt from the knout by law, but this privilege was not always respected. The knout was abolished by the Emperor Nicholas, who replaced it with the *pleti*, a kind of lash.

KNOWER, HENRY McELDERBY (1868-). An American anatomist, born at Baltimore, Md. He was educated at Johns Hopkins University (A.B., 1890; Ph.D., 1896), where he was assistant in biology (1891-93), fellow (1895-96), instructor in anatomy (1899-1903),

and associate (1903-09). In 1896-97 he taught biology at Williams College, and he served as an assistant in zoology in 1897 and as librarian after 1900 at the Marine Biological Laboratory, Woods Hole, Mass. He lectured at the University of Toronto in 1909-10 and thereafter was professor of anatomy at the University of Cincinnati, and became coeditor and secretary of the *American Journal of Anatomy*. His researches deal particularly with the lymphatic and vascular systems of frogs, with the muscles of the human heart, and with the anatomy and embryology of the Termites.

KNOWLEDGE (from ME. *knowan*, AS. *cná-wan*, Icel. *kná*, OHG. *cnān*; connected with OChurch Slav. *znati*, Lat. *noscere*, Gk. *γινώσκειν*, *gignōskein*, Skt. *jñā*, to know + ME. *-leche*, from Icel. *-leikr*, *-leik*, an abstract suffix), **THEORY OF, or EPISTEMOLOGY.** The science which is concerned with questions about the existence, the validity, and the extent of knowledge. Because of its fundamental character, dealing as it does with a fact that every other science unquestioningly takes for granted, it is considered a philosophical discipline.

In one sense it can be said that any inquiry into knowledge is a circular procedure. In other words, there must be knowledge to begin with, before inquiry of any sort can be entered upon. In this respect, however, epistemology is not so different from any other science, for every science starts with actually given facts and with some degree of actual knowledge of these facts. The facts that the epistemologist takes as given are the facts that go by the name of knowledge. Everybody knows something, whether much or little, and everybody recognizes that everybody else knows something. In other words, the existence of knowledge is on a par with the existence of *truth*. Knowledge is the name given to a certain class of facts of experience as indubitable and as verifiable as any other fact whatever. Just at this point the skeptic puts an objection. He either says that there is no knowledge, or else that if there is we cannot know of it, and that therefore the epistemologist begs the whole question. This objection is not so serious as at first blush it seems to be. Indeed, it has done more than anything else to put epistemology on a scientific basis. For when the objection is scrutinized it will be seen to mean, not that there is no fact in experience answering to the name of knowledge, but that the fact of knowledge is not what it is usually taken to be. In other words, the skeptic—if he knows what he is about—does not deny the existence of knowledge as a fact of experience; but he doubts certain theories of knowledge—e.g., among others the theory that there are objects, styled real, which are in some way represented or copied by other objects styled ideas. He doubts these theories because he knows, or thinks he knows, that they give an account of knowledge which is incompatible with the facts of the case or inconsistent with itself. That is, the skeptic has a theory of his own about knowledge; he is an epistemologist and as such enters upon the arena of scientific discussion.

This analysis of the attitude of the skeptic towards knowledge is so important that it must be dwelt upon at greater length. No man is born a skeptic. No young child is a skeptic. If he becomes one later, the experiences that have brought about the revolution in his view

of the world should help us to a clear insight into the real meaning of this new view. In other words, the rational philosophical skeptic has and gives reasons for his new attitude. He adduces proofs, taken from his own experience, and presumably verified in the experience of others, to establish either the certainty or the probability, or at least the irrefutable possibility, of his ignorance. The stock arguments of skeptics are gathered up into the famous tropes of *Enesidemus* (q.v.); and they are further condensed in the five tropes of Agrippa, a skeptic of the second century of our era. It is worth our while to examine these arguments, as they help us to understand the methods, the assumptions, and therefore the real significance of skepticism in general. The tropes of Agrippa are as follows: 1. The same object gives rise to different impressions. 2. All knowledge presupposes an infinite series of premises, since any disputed proposition must be proved by some other, this latter by still a third, and so *ad infinitum*. 3. All knowledge is relative, since every object presents an appearance that differs according to the differences in the constitutions of the percipients and according to the relations in which the object stands to other objects. 4. All axioms are arbitrary, since dogmatists, to escape the *regressus ad infinitum*, start their argument from some premise which they assume without justification. 5. There is a circle in all reasoning, since the conclusion rests upon the premises, and, contrariwise, the premises rest upon the conclusion.

A survey of these proofs shows that in every one some fact is categorically asserted. No one can venture to say, e.g., that the same object gives rise to different impressions, unless his own experience has furnished him with this knowledge. Once question or deny the reason assigned, and the skeptical conclusion can no longer be maintained by the skeptic without dogmatic assertion of his view as self-evident or without the production of a new reason, which, when disputed, shares the fate of its predecessor. In other words, upon examination it is clear that skepticism cannot recommend itself as an escape from the danger of dogmatic assertion or of an infinite regress of proofs; for we cannot reasonably accept skepticism without proof, and if the skeptic is right, proof involves either unwarranted dogmatism or impossible regress of argument to infinity. The philosophical skeptic assumes the validity of his own argument by which he seeks to prove the fallacy of all argument.

But it may be asked: Why may not the skeptic hold to his skepticism without attempting to establish his position or to dislodge his opponent? The answer is that to cherish any view without proof is to be dogmatic, and this is what the skeptic is, above all things, anxious to avoid. But still, again, it may be urged that, instead of believing in the impossibility of knowledge, one may merely doubt its possibility. It is often said by writers against skepticism that a *skeptical* skepticism is unassailable. In one sense it is. If a man will persist in listening to no reason and in observing no laws of thought, then no argument directed against him will reach him, so long as he takes refuge behind the bulwark of unthinkingness. But what we can do is to convince *ourselves* by valid reasoning that skepticism, whether dogmatic or doubting, is untenable by a reasonable being.

That is, if we follow the laws of thought we cannot become skeptical with regard to all our knowledge, however skeptical we may be on *some* of its details. To summarize our argument so far, let us say that we cannot reasonably doubt anything without good reason, and good reason is known reason, and known reason implies the validity of knowledge.

This is not to say that universal doubt is impossible; it is perhaps possible as a disease. Certain abnormal nervous conditions result in a general sense of unreality. Everything seems to be an illusion, a dream. Such pathological skepticism is an undoubted fact and cannot be argued away. Not due to reason, it cannot be removed by reason. Such skepticism belongs to the province not of the philosopher but of the physician.

Now, while what is thus immediately experienced may have for pathological reasons the feeling of unreality attached to it, no theorist or philosopher has ever denied or doubted the presence of facts in immediate experience. The actual existence of what is experienced while it is experienced is perhaps not susceptible of philosophical doubt. The only possible doubt about it pertains to the *significance* of what is thus experienced, i.e., to the implications it may have with reference to what lies beyond immediate experience. If we use the term "immediate knowledge" to designate the presence of fact in experience, it will thus have to be said that immediate knowledge is infallible, indubitable knowledge. But such knowledge is limited to the narrow span of the present moment; when we transcend the present, as we apparently do in memory, we begin to step upon possibly doubtful ground. And even what is generally called perception, as distinct from sensation, is open to doubt, just because in such perception there is always some element of reference to what is not present in immediate experience. It will thus be seen that, if immediate knowledge is infallible, it is likewise practically empty. It is the vision of the "mentally blind." Because of the insignificance of such knowledge, usage has generally declined to call it knowledge. To know, in common parlance, is to experience the significance and meaning of things; it is not merely to experience things in meaningless fashion. At the very least, important knowledge involves the recognition of the identity of things known (the knowledge of acquaintance), and such recognition of identity is in its lowest form the recognition of what is now present in experience as the same with what is remembered to have been present in the past; and this involves a reference beyond present immediate experience; such a "trans-subjective" reference is the very gist of meaning. So we may say that all knowledge as differentiated from dull stupid experiencing is the experience of things as having implications and meanings which point beyond what is actually experienced in the momentary present. Now, all theories of knowledge concern themselves with the nature of these implications, with their tenability, with their source, and with their proper range.

Theories of knowledge are always very closely connected with theories of reality. The nature of this connection has been much discussed. Many philosophers have maintained that a valid metaphysics presupposes an adequate theory of knowledge: thus, Kant wrote "*Prolegomena to*

any Future Metaphysics," and this work consisted in a defense of epistemology as logically prior to any other valid science. On the other hand, Descartes had a metaphysical view as to the relation between the physical and the spiritual, and this view apparently determined his doctrine that knowledge is the existence of clear and distinct ideas. But the very doubt, slight though it be, involved in the last statement shows that it is not always obvious whether a philosopher's metaphysics is determined by his epistemology or whether his epistemology is determined by a previously adopted metaphysics. Ever since Kant's day it has been the contention of many thinkers that epistemology is the logically predetermining discipline; while many thinkers before and since Kant's time have held the opposite view. The critical adjudication of this question is impossible in such an article as this.

It would seem, however, as if Kant's persistent effort to make epistemology fundamental was due to his previously adopted metaphysical view that the contents of experience are purely mental in nature. At any rate, Kant begins his theory of knowledge with the assumption that what is experienced is constituted materially of "sensations." On this assumption no wonder there is difficulty in seeing how there can be knowledge of an objective world. If one were willing to assume some sort of correspondence by way of preestablished harmony between our ideas and the real world, the difficulty would disappear; but such an assumption of preestablished harmony involves the giving up of the attempt to solve the problem, for the harmony between our minds and the world is really the problem over again. Now, Kant thought that a posteriori knowledge, i.e., knowledge of what has actually been experienced, constitutes no difficulty. If we have experienced anything, why should we not know it? But Kant also thought that as a matter of fact we have synthetic knowledge a priori, i.e., constructive knowledge of what has not been experienced and knowledge that is not due to experience. Such knowledge for Kant can be possible on the hypothesis that the knowing mind imposes upon its sensations an order which it afterward in its a priori judgments pronounces to be necessary. In other words, we take out of experience in the act of judgment what we have previously put into experience in the way of construction. This, then, is the famous critical theory of knowledge scientific knowledge is possible only because the understanding creates nature after its own laws. What is not thus the handiwork of intelligence is not knowable by intellectual beings subject to human limitations.

Now, over against this critical theory of knowledge there stood the naive confidence of reason in its ability to fathom the nature of independent reality. This confidence Kant called dogmatism. For dogmatism needs no mandate from some higher authority, such as Kantian criticism, to prosecute its ends. What it regards as necessary and universal is necessary and universal. All that is required for scientific assurance is that reason should be well advised and clear-headed. This is probably the attitude even yet taken by most persons who have never given much thought to philosophy. Now, this position is perfectly tenable, but only on condition that one is willing to make and acknowledge the assumption involved,

viz., that reason is a unique function equal to its peculiar task of knowing the universe. The difficulty is that this function is so often unsuccessful. In other words, the problem of knowledge is closely connected with the problem of error and ignorance. It would seem, then, that dogmatism is possible only to reason untried by real difficulties.

Now, there was in the field, when Kant attacked this dogmatic philosophy, another theory of knowledge, which went by the name of empiricism. For the empiricist all knowledge comes from experience. The reason, as we have seen, why Kant was unwilling to accept this empiricist position was that he was convinced that there is synthetic knowledge a priori. Once grant that there is no such thing, and Kant's sole reason for his critical philosophy is removed. It is to be noted that Kant never undertook to prove that there actually is a priori synthetic knowledge; he merely took this alleged fact for granted, thinking that he found in mathematical judgments instances of such knowledge. Now, this fact is exactly what the empiricist denies. Most thinkers up to Kant's time had thought that mathematical knowledge was analytic; that mathematical judgment such as that $7 + 5 = 12$ is merely a statement that results from careful analysis of the numbers involved. Into the question whether analyticists or Kantians are correct in their characterization of mathematical judgments we cannot go here. Even at the present time there is difference of opinion among mathematical philosophers on this point. Likewise there is difference of opinion as to whether mathematical judgment are a priori or a posteriori.

The development of evolutionistic theories in the latter half of the nineteenth century made it possible to undertake a reconciliation of the empiricist and aprioristic theories of the origin of knowledge, because, on the assumption that acquired characteristics are acquired, it is possible that what is not due to one's own experience but is congenital in the way of knowledge may still be due to the experience of remote ancestors, transmitted to us their offspring. Spencer was the first to make any significant use of this suggestion. He maintained that at our stage of evolution many judgments are a priori from the point of view of ontogenesis, i.e., that we make such judgments without personally having had the experience of their truth; but that this ability to judge independently of our individual experience is due to inherited tendencies: our progenitors had experiences which produced in them habits of judging, and these habits appear in us as instincts. Of course this attempt to mediate between the empiricist and the apriorist position is involved in all the risk that attends the theory that acquired characteristics are hereditary. See *USE INHERITANCE*.

This view of Spencer is in principle adopted by some pragmatists. (See *PRAGMATISM*.) Thus, James writes: "New truths are the resultants of new experiences and of old truths combined and mutually modifying one another. And since this is the case in the changes of opinion to-day, there is no reason to assume that it has not been so at all times. It follows that very ancient modes of thought may have survived through all the later changes in men's opinions. The most primitive way of thinking may not yet be wholly expunged. Like our five fingers,

our ear bones, our rudimentary caudal appendage, or our other 'vestigial' peculiarities, they may remain as indelible tokens of events in our race history. Our ancestors may at certain moments have struck into ways of thinking which they might conceivably not have found. But once they did so, and after the fact, the inheritance continues. . . . My thesis is this, that our fundamental ways of thinking about things are discoveries of exceedingly remote ancestors, which have been able to preserve themselves throughout the experience of all subsequent times."

But not only does James's pragmatism maintain that our so-called a priori conceptions are transmitted from the experience of our remote ancestors, it also maintains that such conceptions do not give any metaphysical insight into the nature of the reality they enable us to comprehend. "All our conceptions are what the Germans call *Denkmittel*, means by which we handle facts by thinking them. Experience merely as such doesn't come ticketed and labeled, we have first to discover what it is. . . . What we usually do is first to frame some system of concepts mentally classified, serialized, or connected in some intellectual way, and then to use this as a tally by which we 'keep tab' on the impressions that present themselves. When each is referred to some possible place in the conceptual system, it is thereby 'understood.'" Thus, the pragmatic view is "that all our theories are *instrumental*, are mental modes of adaptation to reality, rather than revelations or gnostic answers to some divinely instituted world-enigma." Reality shows itself to us undiluted and untransformed in our life of immediate feeling. "The perceptual flux as such . . . means nothing, and is but what it immediately is. No matter how small a tract of it be taken, it is always a much-at-once, and contains innumerable aspects and characters, which conception can pick out, isolate, and thereafter always intend . . . whatever we distinguish and isolate conceptually is found perceptually to telescope and compenetrates and diffuse into its neighbors. The cuts we make are purely ideal. . . . Out of [sensible] times we cut 'days' and 'nights,' 'summers' and 'winters.'" We say *what* each part of the sensible continuum is, and all these abstract *whats* are concepts. The intellectual life of man consists almost wholly in his substitution of a conceptual order for the perceptual order in which his experience originally comes." So far, then, as knowledge is intellectual, it is falsifying provided it is taken as reproducing the essence and nature of reality. It does not introduce us into the presence of what is known, but palms off upon us a substitute, with which we can manage our business better. The only knowledge which reveals existence to us is the knowledge of acquaintance, the knowledge that surpasses and also underlies all understanding, the knowledge which is lost in immediate vision. But while all intellectual knowledge is falsifying when judged by the test of adequate representation, it is true in the only sense in which such knowledge can be true. Inasmuch as the function of intellect is instrumental, intellect is excellent if it performs its instrumental satisfactorily. This it does when it leads us to immediate experience again. True intellectual knowledge, then, is not open vision, but an aid to securing this vision.

Another interesting theory of knowledge re-

lated to pragmatism is that propounded by Bergson, who agrees with the pragmatist that intellectual knowledge does not present us with the real; but whereas the pragmatist is willing nevertheless to call, in fact insists upon calling, such knowledge true if it performs its instrumental function adequately, Bergson is unwilling so to do. For him all intellectual knowledge is absolutely falsifying when it is directed towards life and spirit. The intellect is a function that has developed with a view to handling matter; and in matter only the geometrical is capable of being comprehended by intellect. The knowledge of intellect is not "speculative," but practical. The only knowledge that can compass life and spirit is intuition. This is capable of being cultivated and will grow when all men combine to secure its development.

The realists of the present have no common distinctive theory of knowledge; some are pragmatistic in their epistemology, while others have individual views which they are endeavoring to develop and maintain. Other views of knowledge admit first something knowable and a faculty, sense, or intellect grasping the objective knowable according to the nature of the knowing powers. They define knowledge as the reproduction of the thing known in the faculty knowing according to the nature of the power knowing; hence sense and mental knowledge.

The bibliography of epistemology includes nearly all the philosophical works of modern times. Specially to be mentioned are: John Locke, *Essay Concerning Human Understanding* (London, 1690; new ed., ib., 1909); George Berkeley, *Treatise Concerning the Principles of Human Knowledge* (ib., 1710; new ed., Philadelphia, 1874); David Hume, *Treatise of Human Nature* (3 vols., London, 1739-40; new ed., Oxford, 1896); id., *Enquiry Concerning Human Understanding* (London, 1748; new ed., Oxford, 1894); Immanuel Kant, *Kritik der reinen Vernunft* (Leipzig, 1781; new ed., Berlin, 1907; trans. by Max Müller, 2d ed., London, 1896); J. G. Fichte, *Grundlage der gesamten Wissenschaftslehre* (Leipzig, 1794; new ed., Bonn, 1834); G. W. F. Hegel, *Wissenschaft der Logik*, vols. iii, v (Berlin, 1841); John Stuart Mill, *Logic, Ratiocinative and Inductive* (London, 1843; 8th ed., 1872); G. W. F. Hegel, "Encyclopädie der philosophischen Wissenschaften im Grundrisse," in *Werke*, vol. vii (Berlin, 1847); R. H. Lotze, *Mikrokosmos* (Leipzig, 1856-64); J. S. Mill, *Examination of Sir William Hamilton's Philosophy* (London, 1865); T. H. Green, *Introduction to Hume* (ib., 1874); R. H. Lotze, *Logik* (Leipzig, 1874); id., *Metaphysik* (ib., 1879); T. H. Green, *Prolegomena to Ethics* (London, 1883); Bradley, *Principles of Logic* (ib., 1883); Bernard Bosanquet, *Knowledge and Reality* (ib., 1885); id., *Logic* (ib., 1888); Edward Caird, *Critical Philosophy of Kant* (ib., 1889); L. T. Hobhouse, *Theory of Knowledge* (ib., 1896); G. T. Ladd, *Philosophy of Knowledge* (New York, 1896); B. P. Bowne, *Theory of Thought and Knowledge* (ib., 1897); Bradley, *Appearance and Reality* (2d ed., London, 1897); James Ward, *Naturalism and Agnosticism* (ib., 1899); Karl Pearson, *Grammar of Science* (2d ed., ib., 1900); A. T. Ormond, *Foundations of Knowledge* (New York, 1901); John Dewey, *Studies in Logical Theory* (Chicago, 1903); J. H. Hyslop, *Problems of Philosophy, or Principles of Epistemology and Metaphysics* (New York, 1905); J. I. Beare, *Greek Theories of*

Elementary Cognition from Alomæon to Aristotle (Oxford, 1908); William James, *Pragmatism* (New York, 1907); id., *Meaning of Truth* (ib., 1909); Ernst Cassirer, *Substanzbegriff und Funktionsbegriff* (Berlin, 1910); William James, *Essays in Radical Empiricism* (New York, 1910); Henri Bergson, *Creative Evolution* (ib., 1911); William James, *Some Problems of Philosophy* (ib., 1911); John Dewey, *Influence of Darwin* (ib., 1912); Holt and others, *The New Realism* (ib., 1912).
